The Muslim authors mention the following works: 1. *Kitāb fī a'lām nubuwwat nabīyinā Muḥammad*, a work on the proofs of the divine mission of the Prophet; 2. *Shifā' 'alīl al-'arabīyāt*, on the incorrectness of certain expressions current in the Arabic of his time; 3. a commentary on the Book of Proverbs of Abū 'Ubaid al-Ḳāsim b. Sallām entitled *al-amthāl al-sā'irāt*; 4. *Kitāb al-la'āli 'alā kitāb al-amālī*, a commentary on Abū 'Alī al-Ḳālī al-Baghdādī's *Kitāb al-amālī* (unique MS. in Tübingen); 5. *Kitāb mu'djam mā 'sta'djam*; 6. *Kitāb al-masālik wa 'l-mamālik*.

The first mentioned work was probably written to defend himself from the charge of heresy and religious indifference, which was so often brought against scholars in the early Almoravid period, an accusation, which at that time threatened such disastrous consequences. The three next works are philological treatises or commentaries. The *Mu'djam* is a work on ancient geography, a sort of lexicon of place-names of uncertain orthography, names which are found in the *Ḥadīth*, the ancient historical works and the pre-Islamic Arabic poems. The most of these names refer to Arabia; other districts are only touched on occasionally. The work has been edited by Wüstenfeld (Göttingen—Paris, 2 Vols, 1876-1877). It is however on the *Kitāb al-masālik wa 'l-mamālik* that al-Bakrī's reputation is chiefly based. The work has not survived in its entirety. This geography, which like most geographical works of the middle ages is written in the form of an itinerary, is in part a compilation from important older works now lost. The author, however, also gives information which is the result of his own investigations. The book originally comprised several volumes and besides the account of the world as known to the Muslims of the vth century, contained separate valuable historical and ethnographical essays. Later authors have drawn on it very largely. There have survived to us the accounts of North Africa, the description of Egypt (not equal to al-Maḳrīzī's notices of 'Irāḳ and Transoxania), and a few pages on Spain. The part dealing with Africa was edited by de Slane in 1857 and translated in 1858. An improved reprint of the edition of 1857 appeared in Algiers in 1910 under the auspices of the Gouvernement Général de l'Algérie. Fragments treating of the Russians and Slavs have been published and translated by Kunik and von Rosen (*Izvestiya al-Bekri i drugich avtorov o Rusi i Slavjanach*, St. Petersburg, 1878).

AL-**BAKRĪ**, MUḤAMMAD IBN 'ABD AL-RAḤMĀN AL-ṢIDDĪḲĪ AL-SHĀFI'Ī AL-ASH'ARĪ ABU 'L-MAKĀRIM SHAMS AL-DĪN, Arab poet and mystic, born 898 (1492) lived a year alternately in Cairo and a year in Mecca, and died in 952 (1545). Besides his *Dīwān* (Bibl. Nationale, *Catalogue des mss. ar.* by de Slane, N°. 3229—3233; *Descriptive Catalogue of the Arabic, Pers. and Turk. Mss. in the Library of Trinity College*, Cambridge, 1870, N°. 55—7), a collection of mystical poems entitled *Tardjumān al-Asrār* (Vollers, *Katalog der islam. usw. Hdss. der Universitätsbibliothek zu Leipzig*, N°. 573; Derenbourg, *Les mss. ar. de l'Escurial*, N°. 439), and several small Ṣūfī treatises (of which the MS. Gotha N°. 865 contains a collection) he composed a romantic history of the conquest of Mecca in verse, called *al-Durra al-Mukallala fī fatḥ Mekka al-mubadjdjala*, (Cairo 1278 (1861), 1282 (1865), 1293 (1876), 1297 (1879), 1300 (1882), 1301, 1303, 1304); as well as a work the contents of which are real history entitled *Dhakhā'ir al-'Ulūm wa Natā'idj al-Fuhūm* (Pertsch, *Die ar. Hdss. zu Gotha*, N°. 1578).

Bibliography: 'Alī Bāshā Mubārak, *al-Khiṭaṭ al-Djadīda* (Būlāḳ, 1306), iii. 127; Wüstenfeld, *Die Geschichtschreiber der Araber*, N°. 520; Brockelmann, *Gesch. d. ar. Lit.*, ii. 334, 382. (C. BROCKELMANN.)

AL-**BAKRĪ**, MUḤAMMAD B. MUḤAMMAD B. ABU 'L-SURŪR SHAMS AL-DĪN AL-ṢIDDĪḲĪ AL-MIṢRĪ ABŪ 'ABDALLĀH, Arab historian, born 1005 (1596)? in Cairo and died there about 1060 (1650). He wrote 1.) a history of the Conquest of Egypt by the Osmanli Sulṭān Selīm I and of the Beglerbegs down to the year 1038 (1625) or 1045 (1634) (cf. Flügel, *Die ar., pers. und türk. Hdss. der Hofbibliotk. zu Wien*, N°. 925-926 and Mehren, *Codd. ar. bibl. reg. Hafniensis*, N°. 158) entitled *al-Tuḥfa al-Bahiya fī Tamalluk Āl 'Othmān al-Diyār al-Miṣrīya*; 2.) a history of Egypt from the beginning to 1035 (1625) entitled *al-Rawḍa al-Zakiya fī wulāt Miṣr wal-Ḳāhira al-Mu'izzīya* (Pertsch, *Die ar. Hdss. der herz. Bibliothek zu Gotha*, N°. 1638), till 1041 (1631) (*Bibl. Bodleianae codd. mss. orient. Catalogus*, i. N°. 832) till 1061 (1651) (*Bibl. apostol. Vaticanae cod. mss. cat.*, i. N°. 129). A synopsis of this work in 20 chapters to the year 1053 (1645) is called *al-Kawākib al-Sā'ira fī Akhbār Miṣr wal-Ḳāhira* (Aumer, *Die arab. und pers. Hdss. der Hof- und Staatsbibl. in München*, N°. 398), to 1060 (1650) (*Catalogus codd. mss. qui in Mus. Britt. asserv.* pars ii. N°. 324), to 1063 (1653) (*Bibl. Nationale Depart. des mss. Cat. des mss. arabes* par de Slane, N°. 1852; a fragment Gotha N°. 1646, cf. de Sacy, *Not. et Extraits*, i. 165). On an anonymous continuation to the year 1168 (1754) cf. Aumer *op. cit.*, N°. 399 (cf. J. Marcel, *Hist. de l'Égypte*, p. xxv.); 3.) an abstract of Maḳrīzī's *Khiṭaṭ* called *Ḳaṭf al-Azhār* (*Catalogus codd. arab. bibl. Academiae Lugduno Batavae* ed. ii. auct. M. J. de Goeje et Th. W. Juynboll, ii. N°. 974, Bibl. Nationale, N°. 1765-1766, V. Rosen, *Notices sommaires des mss. ar. du Musée Asiatique de St. Pétersbourg*, i. N°. 237) cf. C. Vollers, *Note sur un ms. ar. abrégé de Makrizi* in *Bull. Soc. Khéd. géogr.*, iii. série, N°. 2, p. 131—139; 4. a Ṣūfī work, the *Durar al-Ma'ānī al-Djalīya* (v. Nūrī 'Othmānīye, N°. 2378).

AL-**BAKRĪ**, MUṢṬAFĀ B. KAMĀL AL-DĪN B. 'ALĪ AL-ṢIDDĪḲĪ AL-ḤANAFĪ AL-KHALWATĪ MUḤYĪ 'L-DĪN, Arab author and mystic, born in Dhu 'l-Ḳa'da 1099 (Sept. 1688) at Damascus, being left an orphan at an early age, was brought up by his uncle and entered the Darvish order of the Khalwatiya. In the year 1122 (1710) he made his first pilgrimage to Jerusalem; there he wrote his prayer-book *al-Fatḥ al-Ḳudsī* and procured a certificate from 'Alī Ḳarabāsh of Adrianople, that it was not a *bid'a*, as one of his opponents had said to read this book aloud at the end of the night. He returned in Sha'bān of the same year (October 1710) to Damascus, but repeated this pilgrimage more frequently in succeeding years and made the acquaintance in Jerusalem of the vizier Rāghib Pasha, whom he accompanied on a journey to Cairo. Under the protection of this patron he set out from Jerusalem early in 1135 (Oct. 1422) to Stambul and reached it on the 17[th] Sha'bān (24[th] May 1423). Four years later he returned to Jerusalem. After making the pilgrimage to Mecca in 1148 (1735) which he had planned as early as 1129 (1717) but had given up on account of a quarrel with his uncle, he went to Stambul for the second time in 1148 (1735). From there he returned by ship, via Alexandria and Cairo. In the following year in connection with a second pilgrimage he went to Diyār Bakr where he stayed 8 months. After spending other 11 months in Nābulus, he again returned to Jerusalem in Shawwāl 1152 (Jan. 1740). He died in 1162 (1749) in Cairo when about to set out on his third pilgrimage. His numerous mystic treatises, prayers and poems which are given by Brockelmann (see *infra*, cf. also *al-Ḥikam al-Ilāhiya wal-Mawārid al-Bahīya*, see Vollers, *Katalog der islam. usw. Hdds. der Universitätsbibliothek zu Leipzig* N°. 850 ii., and *al-Waṣīya al-Djalīla lil-Sālikīn Ṭarīḳat al-Khalwatiya*, ibd. iv.; E. Littmann, *A List of Arabic Mss. in Princeton University Library*, N°. 351 b.) are still all unprinted except a *Madjmū' Ṣalawāt wa Awrād* (Cairo, 1308). He also wrote an account of his first journey from Damascus to Jerusalem in 1122 (1710) entitled *al-Khamra al-Ḥasīya fi 'l-Riḥla al-Ḳudsīya* (Ahlwardt, *Verzeichnis der Hdss. zu Berlin*, N°. 6149). A journey to Damascus and his stay there was described in his *al-Mudāma 'al-Sha'mīya fi 'l-Muḳāma al-Sha'mīya* (ibd. 6148).

Bibliography: al-Murādī, *Silk al-Durar fī A'yān al-Ḳarn al-Thānī 'Ashar* (Cairo, 1291—1301), iv. 190—200; al-Djabartī, *'Adjā'ib al-Āthār fi 'l-Tarādjim wal-Akhbār*, (Būlāḳ, 1297), i. 125-126; 'Alī Bāshā Mubārak, *al-Khiṭaṭ al-Djadīda* (Būlāḳ, 1306), iii. 129; Brockelmann, *Gesch. d. ar. Litt.*, ii. 348.

(C. BROCKELMANN.)

BAKRĪYA (BEKRĪYA), an order of Darvishes, which according to d'Ohsson took its name from Pīr Abū Wafā'ī, who died in Aleppo in 902 (1496) or 909 (1503-1804). According to Rinn, *Marabouts et Khouan*, p. 271, they are a branch of the Shādhilīya [q. v.]. — Bakrīya is however also the common name of those who claim descent from the first Caliph Abū Bakr. The head of this family, the Shaikh al-Bakrī, is at the head of all the dervish orders in Egypt and also bears the title *Naḳīb al-Ashrāf*. On Bakrīya in this sense cf. *Revue du Monde Musulman*, iv. 241 *et seq.*

BAḲT, the Nubian tribute. Baḳt, probably an ancient Egyptian word meaning slave, appears in Arabic literature as the technical term for the tribute which the Christian kingdom of Nubia had to deliver to the Egyptian governor for the Caliph by a treaty of Ramaḍān 31 (April—May 652). This tribute at first consisted of 360 slaves, a number and form of payment, which we frequently meet with in the levies of tribute in ancient Islām. In addition there were 40 slaves for the intermediary officials and other presents, especially rare animals like elephants, giraffes and leopards, which at that period contributed to the glory of a court. In later times Ibn Taghrībirdī (*Annales*, i. 725) notes the delivery of 500 slaves. These Nubian payments were not really tribute, as the Muslims had to give in return 1000 artabs of wheat, as many of barley, 1000 vessels of wine, two fine horses, 100 robes and a number of very valuable articles of clothing, quite apart from the presents which had to be given to the Nubian envoys in addition. The Baḳt was therefore really a primitive form of political exchange; indeed on one occasion under the Caliph Mu'taṣim it was noticed that the presents of the Muslims were more valuable

than the Nubian "tribute". Down to the time of the Fāṭimids the Baḳṭ appears to have been regularly delivered. With the decline of Nubia and the Muḥammadan occupation of the upper valley of the Nile, the Baḳṭ ceased, though we have no particulars on this point.

(C. H. Becker.)

BĀKŪ, in the Arab geographers Bākūh, Bākūh and Bākūya, a town with the finest harbour on the shore of the Caspian Sea. The explanation of the name, which is nowadays accepted in Bākū itself and is probably due to a popular etymology (Bādkūba "a place where the wind strikes") appears to have arisen at a very late period and the same applies to the story of the founding of the town by Khusraw Anūshirwān. The assumption, that the naphtha wells of Bākū with their "eternal fire" played an important part in the fire-worship of Persia, likewise rests on no historical foundations; fire-worship was not brought here till the xviiith century by Indians and Indian Parsees. The naphtha springs are first described by the Arab geographers, most thoroughly by Mas'ūdī (*Murūdj*, ii. 25 *et seq.*) and Yāḳūt (s. v. Bākūya). There were two large springs, one of which yielded yellow or white naphtha (according to Mas'ūdī, the only spring of this kind known to him in the whole world) and the other black or green; each of the two springs yielded 1000 dirhems a day; in the ixth (xvth) century Bākuwī estimates the amount of black naphtha obtained daily at 200 mule-loads. According to the *Darband Nāma*, (ed. Kazem-Beg, p. 136 *et seq.*) the naphtha springs and the salt-deposits of Bākū formed a Waḳf of the inhabitants of Darband. At a later period, as an inscription of the year 1003 (1594-1595) shows, they were assigned to the Saiyids as Waḳf; Bākū is first mentioned as a harbour (*furḍa*) by Muḳaddasī (ed. de Goeje, p. 376, *c*), but at that time the town in spite of its having much the better harbour was of no importance in comparison with Darband, at that time the second largest town in Caucasia. We have practically no information on the history of the town; it is not once mentioned by Ṭabarī nor by Ibn al-Athīr. The Russians are said to have advanced as far as the naphtha springs about 301 (913-914). At a later period Bākū belonged to the kingdom of the Shirwān Shāh and is mentioned in the vith (xiith) century as the residence of this prince. The Shirwān Shāhs lived more frequently then and later at Shamākhī. The ancient chief mosque of Bākū was, according to an inscription, built in 471 (1078-1079).

During the Mongol period and afterwards Bākū appears to have attained greater importance as a harbour; after this period the Caspian Sea is frequently called "Sea of Bākū". The authorities for this period also give us but scanty information concerning the town; Ḥamd Allāh Ḳazwīnī in the viiith (xivth) century gives rather more than the other authorities and most information is given by 'Abd al-Rashīd al-Bākuwī in the ixth (xvth) century. According to Ḥamd Allāh Ḳazwīnī there was at this period still only a village at Bākū with a fort lying high above it; there lived a "Head of the Priests" (*buzurg-i kashīshān*) called Mar-Djāthiyā (*Agathias?*). Bākuwī speaks of two fortresses, one high-lying, which in his time was almost entirely destroyed, and the other on the sea-shore; the latter was considered unusually strong and could not be taken even by the Mongols. The surface of the sea was then much higher than before so that a large part of the town had been submerged. The district immediately surrounding the town was then as now a dreary desert; the gardens of its inhabitants were at a considerable distance; everything necessary to maintain life was brought from Shirwān and Mūghān. Besides naphtha and salt, silk was also produced. To the ixth (xvth) century belongs the palace of the Shirwān Shāh, as well as the two tombs (inscription of the year 869 = 1464-1465) lying near the palace. The palace is now used as a regimental depôt and is in an utterly neglected state. In 1901 an ancient cemetery with an epitaph of Radjab 818 (September—October 1415) and older (from the forms of the letters) undated tombstones were found by accident.

In 906 (1500-1501) Bākū was besieged and captured by Shāh Ismā'īl, the founder of the modern Persian kingdom, and the treasures of the Shirwān Shāh carried off. In 1583 the town had to surrender to the Turks under 'Othmān Pasha, and remained under Turkish rule till 1606. When Persian rule was again restored, Shāh 'Abbās I had the town walls repaired, as an inscription of the year 1017 (1608-1609) proves. In July 1723 Bākū surrendered, after a brief resistance, to the Russian General Matjuschkin, but was given back to the Persians in 1735. After the death of Nādir Shāh (1747) the princes of Bākū became practically independent. During the fights for Caucasia between Russia and Persia in the latter years of the xviiith and early years of the xixth century, Ḥusain Ḳulī Khān, the prince of Bākū allied himself sometimes with one and sometimes with the other. On the 8/20 February 1806 the keys of the town were to have been given up to the Russian General Prince Tsitsianow, but the General was treacherously murdered at his interview with the Khān and his head sent to Tabrīz. When in the autumn of the same year General Bulgakow advanced against Bākū, the Khān fled to Persia and the town surrendered without resistance on the 3/15 October and was finally incorporated in the Russian Empire.

The management of the naphtha-springs was a monopoly of the last rulers of Bākū, who obtained a revenue of 40,000 roubles annually from it, according to the account of the Traveller Gmelin. Under Russian rule the springs were proclaimed Crown property; it was not till 1872 that the trade was thrown open and springs sold by public auction. Since that time the trade and thereby the town has received a great impetus, especially since Bākū has been connected by railway with Batum on the Black Sea as well as with the interior of Russia. In Ritter's *Geographisch-statistisches Lexikon* (5th edition 1864) Bākū is described as a town with only 10,600 inhabitants; even in 1888 in the guide officially published in that year the number is given as only 45,679; now Bākū is an up-to-date modern city with over 100,000 inhabitants.

(W. Barthold.)

BAʿḲŪBA (also baʿḳūbā) a town in ʿIrāḳ, according to Yāḳūt a station on the ancient caravan route from the Babylonian plains to the Iranian highlands (the Khurāsān road of the Arab geographers) 10 parasangs = about 40 miles east (to be more accurate northeast) of Baghdād on the west bank of the Diyāla whose course, from here to Djisr Nahrawān, as is clear from Ibn Serapion's account, formed that part of the great Ḳāṭūl-Nahrawān-Canal, which was called Tāmarrā; cf. on this point Streck, *Babylon. n. den Arab. Geogr.*, i. 37. The place still exists; location: 30° 45′ n. Lat., 44° 40′ e. L. (Gr.). It is a pleasant palm oasis in the midst of the desert, watered by numerous small canals; the excellent dates and citrons, which grow here, had become proverbial even in the middle ages. The town, famous for its pleasant climate, is of some importance on account of the traffic which passes through it, and has some not inconsiderable bazaars. Accounts differ as to the number of its inhabitants; Clément (see Reclus *op. cit.*) put the number at 3000 in 1866; Cuinet's estimate of 2000 is accepted as the most reliable by Supan in *Petermann's Mitteil.*, Ergänz.-Heft, N°. 135 (1901), p. 22. Aubin's estimate (6000) is obviously too high. According to the latter the inhabitants are all Arabs, with the exception of a small proportion of Jews and Lurs. Fleischer (in Juynboll, *Marāṣid*, iv. 350) rightly interprets the Aramaic name of this place as a contraction from Bayaʿkūbā = בֵּית יַעֲקוֹבָא i. e. Jacob's house.

BĀKUSĀYĀ, a place and administrative district in ʿIrāḳ, with Bādarāyā [q. v.] and the three districts of the great Nahrawān-Canal, it formed the East Tigris circle (*astān*) of Bāzīyān Khusraw; cf. Streck, *Babylonien nach d. Arab. Geogr.*, i. 15. Like Bādarāyā, in conjunction with which it is usually mentioned by the Arab geographers, Bākusāyā still exists under the name Bakasaieh (Bakṣā) southeast of Bedrē (= Bādarāyā) below 46° 25′ e. L. (Greenw.), quite near the Persian frontier; see e. g. Stieler's *Handatlas*, sheet N°. 59 (1910). In Kusāyā is concealed the name of a people as G. Hoffmann has suggested and it = Syr. Kussāyē; Bākusāyā therefore = house of the Kassāyē, the Κοσσαῖοι, and the Kaššu of the cuneiform inscriptions. The situation of Bākusāyā, close to Zagros the land of the ancient Kossaioi, agrees perfectly with this explanation.

(M. Streck.)

BAʿL. The common Semitic word *baʿal*, "owner" (of a thing; cf. the articles thereon in Cheyne's *Encycl. Bibl.*, Hastings' *Dict. of the Bible* and *Encycl. of Relig.*) has survived in living Muslim usage at two points only. On account of Ḳorʾānic usage (ii, 228; xi, 75; xxiv, 31) *baʿl* is still a possible, if archaic, expression for husband (for the chattel type of marriage and the conceptions involved cf. Robertson Smith, *Kinship and Marriage*[2], by index, especially pp. 92 *et seq.*) and (2) even in the colloquial (e. g. Spiro, *Vocabulary of Coll. Ar. of Egypt*) *baʿlī* still means a plant which does not need artificial irrigation. For classical Arabic usage on this latter point, which goes back to Baʿl as a divine landlord, see Lane, *Lexicon* p. 228, b & c; de Sacy, *Chrest. ar.*, i. 224 ff. and, still fuller, *Lisān*, xiii, 59 *et seq.* Of Baʿl, as a divine title, another slight trace remains in *baʿila* and its derivatives, "to be bewildered" really "Baʿl-struck", but in neither of these cases did any consciousness of the derivation survive (cf. Nöldeke on *Arabs (Ancient)* in Hastings' *Encycl. of Rel.*, i. 664). It is true that the lexicons give *baʿl* with the sense "owner", "lord" (*mālik*, *rabb*); but this usage goes back, apparently, to South Arabia (where — as opposed to North Arabia — *baʿal* had been common as a divine title) and was introduced into Arabic to explain a passage in the Ḳurʾān. In Ḳur. xxxvii, 123—132, the story of Elijah (Ilyās) is touched, and he is made to say to his people (v. 125), "Do ye supplicate *baʿlan* and forsake the Best of Creators?" It is very possible that by "baʿlan" here Muḥammad meant simply Baʿal as he had heard the word in some form of the Biblical story (*I. Kings*, xviii), but the oldest exegetes have three explanations. Thus Ṭabarī (*Tafsīr*, xxiii, 53) says that *baʿl* is a word meaning *rabb*, "owner", in the dialect of Yemen; you can say, "Who is the *baʿl* of this ox?" — or that it was the proper name of an idol (*ṣanam*) and that thence the place anciently called Bakk came to be called Baʿlabakk — or that it was a woman whom they used to worship. Accordingly, we

would have to translate either "an owner" or Baʿl, as a proper name. The woman reference is difficult unless it is because *baʿl* can mean wife as well as husband; or it may be an allusion to the worship of Astarte at Baʿalbek. Yet, even in Ṭabarī, Ibn ʿAbbās regards the usage of *baʿl*, in the sense "owner" as true Arabic, though rare, and in the story from the *Aghānī* (vii. 43), referred to in *Kamṣliṣ*[4], p. 92. there seems certainly a play upon such a sense. The *Lisān*, also, (l. c.) has at least one quotation which does not go back to Ibn ʿAbbās, but the usage must, at least, have been obsolescent in his day. Rāzī, in the *Mafātīḥ* (vii, 109 of ed. of Cairo, 1308) gives only the two explanations, as a proper name and this Yemenitic use. So, too, Baiḍāwī and the commentaries generally. But that Baʿl, here, is the proper name of a god worshipped at Baʿalbek, or Heliopolis, is now the accepted Muslim position, and a mass of semi-Biblical legend has grown up round the Ḳurʾānic passages. This is given in greatest fulness by Thaʿlabī in his *Ḳiṣaṣ* (pp. 142 *et seq.* of ed. of 1314); see, too, Pseudo-Balkhī, iii. 99 *et seq.* of Arabic text, and Yāḳūt s. v. Baʿlabakk. For an abstract, see *Jewish Encycl.*, ii, 381. (D. B. Macdonald.)

BĀLĀ, (P.) "height", "high", also a preposition "over", is frequently found in composition in place-names; examples will be found below. — The word comes to be the name of a Turkish government official, corresponding to the rank of general of a division of the first class, immediately below the *Mushīr* and *Wazīr*; in correspondence, officials of this rank are addressed as follows: *ʿOṭūfetlü efendim ḥazretleri* (To his Gracious Excellency, my lord etc.).

BĀLĀ, Ḳaza of the Wilāyet and Sandjaḳ of Angora (Asia Minor) with the village of Karali (Kara ʿAlī) as capital, comprises a Nāḥiye, Ḏabānlī, and 91 villages with a total population of 21,593 inhabitants. There are manufactures of carpets and wallets, and coal-mines in Ḳara-Bel: near Ḳarali is a beautiful forest, which is used by the people of the village as a summer dwelling.

BĀLĀ-GHĀT ("above the *ghāts* or passes"), a word of several applications in Indian geography. Early European travellers meant by it the plateau of the Deccan, behind the Sahyādri range now known as the Western Ghats. The Muḥammadans applied it to part of their conquests in the extreme south, as the Bidjāpur Bālā-Ghāt or plateau, opposed to the Carnatic Pāyin-Ghāt or lowland. In Berār it means the upland tract above the Adjanta pass, and in Ḥaidarābād a plateau in the west of the state enclosed by hill ranges. In 1867, the name was given to a newly formed district in the Central Provinces, consisting of part of the Satpurā plateau (area: 3132 sq. m.; population (1901) 325 371). The name was likewise given to the head quarters, though the town itself lies below the hills.

Bibliography: *Imperial Gazetteer of India*. (J. S. Cotton.)

BĀLĀ ḤIṢĀR is frequently used in India and elsewhere to denote a citadel; among the most famous are the fort in Peshāwar and that in Kābul, the capital of Afghanistan.

BĀLĀ ḤIṢĀR, popularly called Bāl-lu Ḥiṣār (Turk. "honey feast"), a market-town in Asia Minor in the Wilāyet and Sandjaḳ of Angora, Ḳaẓā of Siwri-Ḥiṣār, three hours' journey distant from it, has 3000 inhabitants. There are the ruins of Pessinus with a Roman temple of Cybele.

BALAD (A.) Land, town. Cf. art. Bilād. — al-Balad is the title of Sūra xc.

al-**BALĀDHURĪ**, Aḥmad b. Yaḥyā b. Djābir al-Balādhurī was one of the greatest Arab historians of the third century. Little is known of his life. He was an intimate friend of the caliphs Mutawakkil and Mustaʿīn and educated ʿAbd Allāh the brilliant son of the caliph al-Muʿtazz. Aḥmad b. Yaḥyā is said to have died mentally deranged in 279 (892), after drinking the juice of the anacardia, (*balādhur*) not knowing its effect, and from the manner of his death has received the name Balādhurī. This is probably only an etiological legend and besides, it is not certain that the story does not refer to his grandfather. Balādhurī was famous as a translator from the Persian; for this reason he may have been of Persian descent, but his grandfather was an official in Egypt and in any case the famous historian was quite arabicised. He received his education partly in Damascus and Emesa, but also studied in ʿIrāḳ under Ibn Saʿd amongst others.

Two great historical works by him have survived; his reliability and critical powers have been emphasised on all sides.

1. His *Futūḥ al-Buldān* (*Liber Expugnationis Regionum auctore ... al-Beládsorí* quem ... edidit M. J. de Goeje, Leiden, 1866 and a Cairo reprint of A. H. 1318). This valuable work is only a synopsis of a more comprehensive work of like scope. The history begins with the wars of Muḥammad against the Jews, Mecca, Ṭāʾif and his other undertakings, then follows an account of the *ridda*, the conquest of Syria, Djazīra, Armenia, Egypt, and the Maghrib and lastly the occupation of ʿIrāḳ and Persia. Remarks of importance for the history of culture and social conditions are interwoven with the historical narrative, such as on the equivalents of terms used in the Dīwāns, the quarrel with Byzantium in regard to official documents, questions of taxation, the use of the signet-rings, coinage and currency and the history of the Arab script. This work is one of the most valuable sources for the history of the Arab conquests.

2. His *Ansāb al-ashrāf* (*wa-akhbāruhā*), a very comprehensive work, which was never completed. It is genealogically arranged and begins with the *sīra* of the Prophet and the biographies of his kinsmen. The ʿAbbāsids follow the ʿAlids. The ʿAbd Shams, among whom the Umaiyads claim a disproportionate amount of space, follow the Banū Hāshim. Next the rest of the Ḳoraish are dealt with and other divisions of the Muḍar. The Ḳais, in particular the Thaḳīf, occupy the closing portion of the work; the last biography of any size is that devoted to al-Ḥadjdjādj. Though a genealogical work in outward form, the *Ansāb* are really *Ṭabaḳāt*, arranged genealogically in the style of Ibn Saʿd. This method of arrangement is not rigidly adhered to: for the most important events of the reigns of

individual rulers are always added to the corresponding chapters. The *Ansāb* are therefore one of the most important sources for the history of the Khawāridj. An edition of this work is being prepared by the author of this article in conjunction with several colleagues, based on a complete manuscript in Constantinople (ʿĀshir Efendi 597-598). The Paris fragment (cf. de Goeje in *Zeitschrift d. Deutsch. Morgenl. Ges.*, XXXVIII) is based on the Constantinople manuscript. A later redaction divided the great work into 20 books (Ḥādjdjī Khalīfa, i. 1346) of which the eleventh volume has survived (W. Ahlwardt, *Anonyme Arabische Chronik*, Leipzic, 1883). This anonymous fragment was rightly recognised by Ahlwardt as a portion of the *Ansāb*.

In spite of all al-Balādhurī's merits, his value as a historian has in recent times been occasionally over-estimated. It is not correct to say that he gives the original texts, which later writers embellish and expand; it may be with much more truth presumed, from the agreement of essential portions with later more detailed sources, that al-Balādhurī has abbreviated. Al-Balādhurī's whole style is influenced by *īkhtiṣār*, compression, whereby it gains a certain conciseness but loses in artistic effect. We seldom meet with a fairly long story; the good old chroniclers whom he utilises (e. g. Abū Mikhnaf) divide their works into rather disjointed sections on apparently "scientific" principles, but documents and various versions seriously encumber the narrative. The arrangement of his literary material is thus circumscribed in that he applies the methods of the books of classes (*Ṭabaḳāt*), with their separate articles to the writing of history (*Futūḥ*) and attempts to combine the material of the books of classes (Ibn Saʿd) and of the older chronicles (Ibn Isḥāḳ, Abū Mikhnaf) into a third sort of style, namely the genealogical literature (al-Kalbī), *Ansāb*.

On the Bibliography cf. the introduction to the edition cited and Brockelmann, *Gesch. der Arab. Lit.* i. 141; Yāḳūt, *Irshād*, ed. Margoliouth (*Gibb Memorial*, vi), ii. 127 *et seq.* (C. H. BECKER.)

BALĀGHA (A.), Abstract noun, from *balīgh* active, eloquent (from *balagha* "to attain something"), meaning therefore eloquence. The *ʿIlm al-Balāgha*, Rhetoric, comprises three branches: the *ʿIlm al-Maʿānī*, the *ʿIlm al-Bayān* and the *ʿIlm al-Badīʿ*. The first branch ("Notions"), treats of the different kinds of sentence and their use; the second part ("Modes of Representation") teaches the art of expressing oneself eloquently and without ambiguity i. e. *faṣīḥ* and treats of similes, metaphors and metonymies; third part ("Tropes"), deals with the embellishment of speech and treats of a large number of different figures of speech (Zeugma, Inversion, Hyperbola etc.).

This third branch of Rhetoric, the *ʿIlm al-Badīʿ*, is the oldest and the one that has been longest studied. As early as 274 (887-888) Prince ʿAbd Allāh b. al-Muʿtazz published a *Kitāb al-Badīʿ*, with 17 categories of elegant modes of expressions, which appear in the Ḳorʾān and in the ancient poems and so-called *Badīʿiyas*. Poems composed to illustrate various figures of speech have been composed down to quite modern times. — A good systematic account of the whole science of *Balāgha* was given by al-Sakkākī (died 623 = 1226 or 626 = 1229) in the third part of his encyclopaedic work *Miftāḥ al-ʿUlūm*; Djalāl al-Dīn Muḥammad al-Ḳazwīnī, the "Khaṭīb Dimashḳ" (died 739 = 1338) made an abridgment of it with a commentary, the *Talkhīṣ al-Miftāḥ*; this *Talkhīṣ* was not only often commented on but even put into verse by al-Suyūṭī. — Voluminous extracts from the last-named works are given by Mehren in his *Rhetorik der Araber*; this article is based on his researches. Cf. also Brockelmann, *Gesch. d. Arab. Litter.*, i. 80 *et seq.*, 294—296; ii. 22.

(A. SCHAADE.)

BALAK (BALAG) B. BAHRĀM, with the honorary title of NŪR AL-DAWLA, the Urtuḳid, fought with great success against the Crusaders. Though he lost the town of Sarūdj, which with Kharthart (Kharput) was the bulwark of this power, to Balduin, as a set off he gained ʿĀna in 497 (1103). In 514 (1120) he defeated Theodore Gabras, Count of Trebizond in a battle near Arrangān and took him prisoner. Two years later in 1122 while besieging Edessa he succeeded in capturing the Crusaders Joscelin and Waleran and imprisoning them in Kharthart. In 517 (1123) he turned his attention to Karkar but raised the siege, when a considerable army of Crusaders led by Baldwin advanced to release Joscelin. He then had the good fortune to surprise his opponent at the bridge over the river Sendja (Nahr al-Azraḳ, now called Bolam Ṣū) and to take Baldwin himself prisoner; the latter was sent to Kharthart while Balak advanced against Ḥarrān and Ḥalab and seized these towns. He then married a daughter of Malik Riḍwān and frustrated an attempt, which had a successful beginning, by the imprisoned Crusaders to seize the citadel of Kharthart. Joscelin had meanwhile escaped, though Baldwin was taken and brought to Ḥarrān. Balak now advanced against Manbidj and took the lord of this town prisoner, but his brother defended the fortress and called in the help of Joscelin. The latter lost no time in coming to his help but was put to flight by Balak. Soon afterwards, however, Balak was mortally wounded by an arrow and died before Manbidj, on the 19th April 1124.

BĀLAḲ B. ṢAFŪN. [See ʿŪDJ B. ʿANĀḲ.]

BALAKLAVA (BALACLAVA), Tatar BALIKLAVA, a small seaport town in the southwest of the Crimean peninsula (Government of Taurus), 8 miles from Sebastopol. The town is mentioned as early as Strabo (Chap. 312) under the name of Palakion and is said to have received this name from Palakos, the son of the Scythian prince Skiluros (second or first century B. C.). There are only popular etymologies in explanation of the name at the present day: 1. Turk. *balīḳ* "fish" + Greek λαβὰ or λαβὴ "catching"; 2. Ital. *bella chiava* "beautiful spring". The town lies on a bay which is called by Strabo (Ch. 308) Συμβόλων λιμήν (mariners driven into this bay were attacked and plundered by the Scythian Taurians). The later Genoese name of the town Cembalo or Cembaro (also Cimbaldi and later also Jamboldum and Jamboli) is apparently derived from this. Somewhat to the north at the modern Inkerman, lay the Bay of Ktenūs according to Strabo which was seperated from the Symbolōn limēn by an isthmus only 40 stadia (5 miles) broad.

Like other places on the southern shores of the peninsula, Balaklava belonged for a long period to the Roman Empire and afterwards to the Byzantine, remaining in possession of the Greeks even in the period of the Latin Kingdoms. It was not till the fourteenth century that the Genoese gained a footing here; in 1380 the whole south shore of Kafa (the modern Theodosia) was granted to the Genoese by a treaty with the Tatars; the country near Inkerman and north of it remained in possession of the Greeks. Balaklava was strongly fortified during this period as the frontier post of the Genoese possessions; fortifications were also placed on the "Isthmus" mentioned by Strabo, between Balaklava and Inkerman, the remains of which could still be seen in the nineteenth century. Balaklava was, during this period, the seat of a Catholic bishop. In 1433 the Greek inhabitants of Balaklava succeeded in driving the Genoese from their town, and placed themselves under the Greek prince of the town of Theodora (probably to be sought for near Inkerman). The next year however a Genoese fleet under Carlo Lomellino appeared before Balaklava; the town was taken by storm but soon afterwards the Genoese force was defeated at Iski-Krim by the Tatars and almost exterminated. In 1475 the land was conquered by the Turks; Balaklava belonged to the kingdom of the Girāy from the xvith to the xviiith century and is mentioned in the time of Ṣāḥib Girāy (939—957 = 1532—1550) as the most southerly point of the kingdom (Muḥammad Riḍā, ed. Kazim-Beg, p. 92); the coast lands to the south were incorporated in the Ottoman kingdom and governed by a Turkish Pasha. During the Tatar rule, Balaklava is only mentioned as a harbour and does not appear to have had any military importance; the fortifications of the Genoese period were left in ruins. After the union of the Crimea with Russia in 1783, the Tatar population emigrated to Turkey. In their place Greek emigrants from the islands of the Aegean sea, who had attached themselves to the Russians during the war of 1768—1774, were settled here. Till 1860 Balaklava was used by the Russians as a naval station; on the 26/14 September 1854, the town was taken by the English and remained the head quarters of the allies during the siege of Sebastopol and is especially famous for the battle there on the 25/13 October 1854. Though regarded as a town as late as the xviiith century, Balaklava is now an unimportant place, visited only by coasting craft.

(W. BARTHOLD.)

BAL'AM or BAL'ĀM B. BĀ'ŪR(Ā) is the form which the name Balaam (Bil'ām b. Be'ōr) has assumed in Arabic. It is probable, however, that this is a later, post-Muḥammadan, transfer of the name and story, and that before Muḥammad, Balaam had already been naturalized in Arabic with a partial translation of his name as Luḳmān b. Bā'ūr. See the similar genealogies in Tha'labī's *Ḳiṣaṣ* (pp. 133 and 196 of ed. of Cairo, 1314); the article in the *Lisān* on *bal'am* (xiv, 322) which (without mention of Balaam) brings together the roots BL' and LḲM and the white mark on an ass's nose; the remark by Petrus Alphonsus (Migne, *Patr. Lat.*, clvii, 673), "Balaam, qui lingua arabica vocatur Lucaman"; and the bibliography in Chauvin, *Bibl. ar.*, iii, 7. Some commentators find a reference to Balaam in Ḳur'ān vii, 175. "And recite to them the story of him to whom we gave our signs; then he was stripped of them, and the devil overtook him; so he became one of those that err. And if we had willed, we had raised him by means of them, but he turned to the earth and followed his lust. So he was like a dog; if you attack it, it pants, and if you leave it, it pants." According to various traditions given by Ṭabarī (*Tafsīr*, ix, 76 *et seq.*) this was a man named Bal'am, or Bal'ām, b. باعر or باعورا, of the Sons of Israel or of the City of Giants or of the people of Yemen or of the Canaanites. Others held that the allusion was to Umaiya b. Abi 'l-Ṣalt (cf. Sprenger, *Leben Moh.*, i, 78 and, opposed, Schulthess in *Nöldeke-Festschrift*, i, 89): others to Abū 'Āmir b. al-Nu'mān, called the *Rāhib* (Tha'labī, p. 135, and Sprenger, i, 74; iii, 32 *etc.*). There was similar uncertainty as to the Signs. Some held that they were the Most Great Name of Allāh. He was an Israelite who deserted to the Giants; whatever he asked, Allāh gave to him. Others that they were the prophetic office; he was a prophet who had given up his mission. Others that they were only arguments and proofs derived from things past; he may have studied the former Books. Long and varying stories about Bal'am are then given by Ṭabarī (cf. also his *Annales*, i, 508 *et seq.* of Leyden ed.; i, 226 of Cairo ed.; Tha'labī, pp. 133 *et seq.*; Pseudo-Balkhī, i, 145 (read *al-kimār*); iii, 5, 89 of Arabic text) based partly on the Ḳur'ānic passage, partly on the Biblical narratives and partly on Rabbinic legend. He is associated with the plague at Baal-peor and Rabelaisian details are added, suggestive of the Rabbinic exhortation to tell of him whatever evil was possible (cf. *Jewish Encycl.*, ii, 467 *et seq.*). But for later Muslim thought, the idea that a prophet could ever fall away from the faith became quite impossible. So we find Rāzī (*Mafātīḥ*, iv, 313 *et seq.* of Cairo ed. of 1308) deciding that Bal'am was only a man who had been taught by Allāh and knew the religion of Allāh and who thereafter left it for unbelief. A quite different attitude, going back to Wahb b. Munabbih, is found in Ibn Ḳutaiba's *Ma'ārif* (p. 21; cf. also Pseudo-Balkhī, iii, 51, 75 of Arabic text) according to which Bal'am was one of a company, including also al-Khaḍir and Shu'aib, who believed in Abraham and migrated with him to Syria. Bal'am was also married by him to one of the daughters of Lot. All this may be only a sardonic Jewish jest at Muslim expense. Finally, Bal'am figures in Pseudo-Balkhī (iii, 141), but apparently through some strange confusion of name, as a philosopher. His view was that the world was from all eternity and had a controller (*mudabbir*), controlling it and other than it in all respects. He accepted also movements (*ḥarakāt*) and said that the first movement was repeated in the second movement, because he held that movement went with the world fundamentally, and that the world was from all eternity.

(D. B. MACDONALD.)

BAL'AMĪ, family name (Nisba) of two ministers (father and son) in the Sāmānid kingdom. Of the origin of the name two ac-

counts are given in the *Kitāb al-Ansāb* of Sam'ānī: according to some the founder of the house is said to have taken a town (otherwise unknown, it seems) of Bal'am in Asia Minor under the Umaiyad Maslama b. 'Abd al-Malik while others derive the name from the village of Bal'amān near Marw. The family is said to have been of Arab origin and to have belonged to the tribe of Banū Tamīm.

The father, Abu 'l-Faḍl Muḥammad b. 'Obaid Allāh, is wrongly described by Sam'ānī as the vizier of the Sāmānid Ismā'īl b. Aḥmad (died 295 = 907); in the historical notices of the Sāmānids he is first mentioned as vizier in the time of Naṣr b. Aḥmad (301—331 = 914—943) and appears to have been the successor of this ruler's first minister Abū 'Abd Allāh Djaihānī. In what year he took up office is not stated. The release of the rebel Ḥusain b. 'Alī who had been defeated in Rabī' II 306 (August—September 918) and taken prisoner soon afterwards, is attributed to Djaihānī by Ibn al-Athīr (ed. Tornberg, viii. 66); on the other hand a poem by this Ḥusain is given by Tha'ālibī (*Journ. As.*, 5 Ser., i. p. 204) in which the poet thanks the vizier Bal'amī for his release. In 326 (937-938) Bal'amī was deprived of his office (Ibn al-Athīr, viii. 285) and died in the night of the 10th Ṣafar 329 (14th November 940) according to Sam'ānī.

His son Abū 'Alī Muḥammad b. Muḥammad, called "Emīrek Bal'amī" by Muḳaddasī (ed. de Goeje, p. 338) was appointed vizier by 'Abd al-Malik b. Nūḥ (343—350 = 954—961) towards the end of his reign and held the same rank under his successor Manṣūr b. Nūḥ (350—365 = 961—976). His appointment is said to have been due to the influence of Ḥādjib Alp-Tegin [see this article p. 321a]; according to an agreement between Alp-Tegin and Bal'amī each was to regard the other as his representative (*nā'ib*); Bal'amī did nothing then without obtaining his friend's advice. After the accession of Manṣūr he must have cancelled his agreement with Alp-Tegin for he was able to remain in office after the latter's fall; according to Muḳaddasī (*loc. cit.*) he was deposed, then reappointed vizier. In 352 (963) he composed the famous Persian version of Ṭabarī's History of the World, the oldest historical work in modern Persian. According to Gardīzī he died in Djumādā 363 (27th Febr.—27th March 974) while still vizier; on the other hand 'Otbī (*Ta'rīkh Yamīnī*, edition with commentary by Manīnī, Cairo, 1286, i. 176) says he was again appointed vizier in 382 (992) in the reign of Nūḥ ibn Manṣūr (365—387 = 976—997) and shortly afterwards in the same year, resigned, because he did not feel strong enough to deal with the critical state of affairs (the Sāmānids were then hard pressed by the Turkish Ilek-princes, into whose power even the capital Bukhārā had fallen. The date of his death is not given by 'Otbī; the date 386 (996) given by Rieu (*Catalogue Brit. Mus.*, i. 70) and following him Ethé (*Grundriss der Iranischen Philologie*, ii. 355) and Browne (*A Literary History of Persia*, i. 356) is due to a misunderstanding as the text quoted by Rieu (*Notices et Extraits*, iv. 363) refers to another person, Abū 'Alī Simdjūrī [see the article p. 77].

Niẓām al-Mulk (*Siyāsat-Nāme*, ed. Schefer, p. 150) mentions "the Bal'amī" (*bal'amiyān*) among the most famous examples of Oriental ministers. The reputation of a great minister seems to be attached particularly to the elder Bal'amī (cf. e.g. Baihaḳī, ed. Morley, p. 117), who like his predecessor Djaihānī and his sovereign Naṣr b. Aḥmad, is regarded as typical of the best period of the Sāmānids. He is extolled by Sam'ānī as an enlightened patron of scholars and poets; he is said to have specially appreciated the poet Rūdagī and to have preferred him to all other Arab and Persian poets. Buildings by him in Marw and Bukhārā are mentioned by Iṣṭakhrī (ed. de Goeje, pp. 260 and 307) who calls him the "glorious Shaikh" (*al-shaikh al-djalīl*). His memory was kept green in Bukhārā for a long period; his descendants were living in Bukhārā as late as the time of Sam'ānī (about 550 = 1155). The modern name of the gate "Shaikh Djalāl" in Bukhārā is probably to be referred to this vizier. On the other hand Abū 'Alī Bal'amī is not particularly mentioned by Sam'ānī; the historical writers also have no information to give as to his acts as a minister. His fame seems to be due partly to his father but particularly to his historical work.

Bibliography. The extract from the *Kitāb al-Ansāb* of Sam'ānī is given by Barthold, *Turkestan v epochu mongolskago našestviya*, i. 54; he also gives (p. 58) the part referring to the poet Rūdagī (also given by Mīrzā Muḥammad Ḳazwīnī in the appendix to Part i. of the *Lubāb al-albāb* of Muḥammad 'Awfī, ed. E. G. Browne, London—Leiden, 1906, p. 291, translated by Browne, *A Literary History of Persia*, i. 356), extracts from the *Zain al-Akhbār* of Gardīzī (p. 7 *et seq.*, 11 *et seq.*) and discusses the notices of both Bal'amī in Vol. ii. 252 *et seq.*, 262 *et seq.* (W. BARTHOLD.)

BAL-'ANBAR, [See 'ANBAR, p. 349b].

BALĀSĀGHŪN, a town in Central Asia, whose situation cannot now be exactly determined. In Muḳaddasī (ed. de Goeje, pp. 264 and 275) Balāsaķūn (sic) or Walāsaķūn is mentioned among the towns dependent on Asbīdjāb (the modern Sairam, east of Čimkent). According to Yāḳūt, i. 708 Balāsāghūn lay "on the other side of the Saiḥūn (Sir Daryā) not far from Kāshghar"; on the other hand Yāḳūt, iii. 835, says that the town of Fārāb (the modern ruined site of Otrar), not far from the confluence of the Aris and the Sir Daryā, (i. e. northwest of Shāsh or Tāshkent) was "farther than Shāsh (or farthest from Shāsh near Balāsāghūn". Both statements are taken by Yāḳūt from the *Kitāb al-Ansāb* of Sam'ānī; in place of "farther than Shāsh" the phrase used by Sam'ānī is "above Shāsh" (*fawḳa 'l-Shāsh*). Ibn al-Athīr (ed. Tornberg, xi. 356) mentions a Turkish people, who adopted Islām in Ṣafar 435 (9th Sept.—8th October 1043); the summer dwellings of these Turks were near the lands of the Bolghār (of course the Bolghār on the Volga are here referred to, not the Bolghār on the Donau) and their winter dwellings not far from Balāsāghūn. The town must be sought for in the western part of the Russian territory now called "Semirječje", probably on the Ču, where several ruined sites may still be seen at the present day. The latitude and longitude given by Abu 'l-Fidā' (ed. Reinaud, p. 500) seem to point in the same direction: 91° 35' or 91° 50' east Long. and 47° 40' north Lat., while Ṭarāz (the modern Awliya-Ata on the River Talas), was in 89° 51' east Long. and 44° 25' or 43° 35' north Lat. (ibid., p. 496). These astro-

nomical data are of course quite inaccurate (the town of Awliya-Ata lies a considerable distance farther south in 42° 53′ 42″ North Lat.) but they seem to show that Balāsāghūn was situated to the northeast of Awliya-Ata. Whether the name, as has been stated, is connected with the Mongol *balasghun* = "fortification, town" remains doubtful, especially as this word has not yet been found in any Turkish dialect.

According to a story in Niẓām al-Mulk (*Siyāsat-Nāma*, ed. Schefer, p. 189) a religious war was planned about 330 or 331 (942-943) against "the infidel Turks" who had conquered Balāsāghūn; it would therefore appear that even at that early period, although outside the dominions of Islām, Balāsāghūn was regarded as a Muḥammadan town. The conquerors must have adopted Islām soon afterwards. The Ilek chiefs, having Balāsāghūn as their head quarters, conquered Mā warā' al-Nahr; the first Muḥammadan chief of this dynasty was Saṭuḳ Bughrā-Khān 'Abd al-Karīm, who died about 344 (955-956). According to Ibn al-Athīr (viii. 396) in 349 (960-961) a Turkish people numbering 200,000 tents adopted Islām; this story might refer to the Turks of this district, the neighbours of the Sāmānids.

Notices of Balāsāghūn under the Ilek-chiefs are exceedingly scanty. The town is mentioned as the headquarters of the first conqueror of Mā warā' al-Nahr, Bughrā-Khān b. Mūsā (died 382 = 992-993). Shortly after 416 (1026-1026) the prince of Balāsāghūn, Ṭughān Khān, brother of the prince of Mā warā' al-Nahr, 'Alī Tegin [q. v.], was driven out of his territory by members of the same dynasty who ruled in Kāshghar. (Baihaḳī, ed. Morley, pp. 98 and 655). Balāsāghūn appears to have afterwards belonged to the same prince as Kāshghar. The poet Yūsuf Khāṣṣ-Ḥādjib, author of the Ḳudatḳu Bilik, the oldest poem in the Turki language was born in Balāsāghūn (462 = 1069-1070); Prince Bughrā Khān of Kāshghar, to whom the work is dedicated, must be the Bughra Khān Hārūn, mentioned by Ibn al-Athīr (ix. 213) who ruled over Kāshghar, Khotan and Balāsāghūn, first with his brother Toghrul Khān and afterwards for 29 years alone till 496 = 1102-1103.

About 1130 Balāsāghūn was conquered by the Ḳarā Khiṭāi, a pagan tribe; the prince of the town, who had himself invited the leader (Gürkhān) of the Ḳarā Khiṭāi to help him against his enemies, the Ḳanghlī Ḳarlugh, was deposed and given the title "Ilek-Turkmen". The real seat of the Ḳarā Khiṭāi still remained the territory on the Ču while native princes ruled as vassals of the Gürkhān in Mā warā' al-Nahr and Kāshghar as well as in those districts of Semirječje lying north of the Ili.

When the army of the Gürkhān was defeated by Muḥammad Shāh of Khwārizm in Rabī' I 607 (August—September 1210) on the Talas, the inhabitants of Balāsāghūn expected the speedy arrival of the victor and therefore refused the defeated army admittance to the town. After a 16 days' siege the town was taken by the Ḳarā Khiṭāi and plundered for three days during which time 47,000 inhabitants are said to have perished. In the following year the Gürkhān was taken prisoner by Küčlük, the chief of the Naiman who had fled from Mongolia; Küčlük conquered Kāshghar as well as the land north of Tienshan as far as the Sir Daryā. In 1218 Balāsāghūn was taken without resistance by Čingiz Khān's general Djebe Noyon and received from the Mongols the name Ghū-bālīḳ which according to Mirkhond (*Vie de Djenghiz Khan*, ed. Jaubert, p. 91) means "good town" (*shahr-i khūb*) (apparently Mongol "*gou*" = good + "*bālīḳ*" = town). The earlier name must have been still retained by its inhabitants.

Balāsāghūn is seldom mentioned during the Mongol suzerainty. Amongst the natives of Balāsāghūn who knew the Ḳor'ān by heart (*Ḥāfiẓ*) was the father of Djamāl al-Dīn al-Ḳurashī, who was born in Almālīgh (near Kuldja) about 628 (1230-1231), translator of the dictionary *al-Ṣaḥāḥ* (cf. Brockelmann, i. 128, where the date is given wrongly). According to Muḥammad Ḥaidar (*Ta'rīkh-i Rashīdī*, transl. E. D. Ross, p. 364) this Djamāl al-Dīn mentioned a large number of scholars belonging to Balāsāghūn in the appendix to his work (*Mulḥaḳāt al-Ṣurāḥ*); the two manuscripts of the *Mulḥaḳāt* at present known contain no information of this kind. In the time of Muḥammad Ḥaidar the tomb of an Imām Muḥammad Faḳīh Balāsāghūnī, who died in 711 (1311-1312) was still visible on the Ču; the town of Balāsāghūn was therefore still known by its earlier name in the first decade of the viiith (xivth) century. In the accounts of Timur's campaigns, Balāsāghūn is never mentioned; like all the towns on the Ču, Ili and Talas, Balāsāghūn must have been destroyed during the endless wars and struggles for the throne in the xivth century. Even Muḥammad Ḥaidar (about the middle of the xvith century only knew the names Balāsāghūn and Ghūbālīḳ from books, so that the site of the town was as little known then as now.

Bibliography: The information available on the site of the town has been collected by W. Barthold, *Otčet o poězdkě v Srednjuju Aziju*, St. Petersburg, 1897 (*Mémoires de l'Acad. des Sciences de St. Pétersbourg*, viii. Serie, classe hist.-phil., Vol. i. Nº. 4), p. 35 *et seq.*, where an extract from the *Kitāb al-Ansāb* of Sam'ānī is also given. The historical notices have been collected by W. Barthold in *Pamjatnaja knižka Semirječenskago Obl. Statist. Komiteta*, ii. Viernij 1898, p. 93 *et seq.*; A translation (not quite free from errors) of the passage referring to the Ḳarā Khiṭāi from the *Ta'rīkh-i Djihān Kushāi* is also given by d'Ohsson in his *Histoire des Mongols*, i. 441 *et seq.* On the reference by Muḥammad Ḥaidar to Djamāl al-Dīn's work: Baron V. Rosen in the *Zapiski vost. otd. arch. obshč.*, viii. 353; on the two manuscripts of the *Mulḥaḳāt al-Ṣurāḥ*: W. Barthold, *Zapiski*, xi. 283 *et seq.*; xv. 271 *et seq.*; extracts from this work are given by W. Barthold, *Turkestan w epochu mongolskago našestvija*, i. 128 *et seq.*

(W. BARTHOLD.)

BALĀṬ is a loanword in Arabic from Latin or Greek: it appears to represent *platea* as well as *palatium*. As a noun (noun of unity: *Balāṭa*) it means "a smooth, paved square", "a paved road", "a paving stone". With this last meaning of the jasper slab Balāṭat al-Djanna on the "Dome of the Rock" in Jerusalem (Bädeker, p. 52 *et seq.*). Yāḳūt (i. 709) mentions a square paved with stones, called al-Balāṭ, in Medina between the mosque of the prophet and the market-place. The battle field of Tours and Poitiers is called Balāṭ al-Shuhadā' after the Roman road on which the battle took place. — The word is

common in place-names especially in Asia Minor and Spain (cf. the many modern Albalats). Idrīsī (ed. Dozy and de Goeje, p. 175) mentions a town (and province) of al-Balāṭ in Spanish Estremadura, the name of which has survived in a village south-east of Caceres; the Portuguese province, which comprised Lissabon, Santarem and Cintra, was in his time called al-Balāṭa. In Syria also the word appears in place-names, cf. Bait al-Bilāṭ in the Ghūṭa of Damascus (Yāḳūt, *op. cit.*); al-Balāṭa (Yāḳūt: al-Bulāṭa) is the name of a village near Nābulus not far from Joseph's Grave and Jacob's Well; the fact that the early Christian pilgrims mention a plane-tree grove here, suggests the derivation of the Arabic name from *platanus*. — In Constantinople there was a place called al-Balāṭ, where in the time of the Ḥamdānid Saif al-Dawla prisoners were interned. At the present day it is the name of a suburb on the Golden Horn between Fanār and Aiwānserāī. It is chiefly inhabited by Jews and is notorious for its dirt and its unhealthy climate.

(F. Giese).

BALĀṬUNUS, the Latin Platanus was according to Yāḳūt, i. 710, a fortified place on the Syrian coast opposite al-Lādhiḳīya; according to al-Ḳalḳashandī (*Ḍaw' al-Ṣubḥ*) it lay two days' journey north of Ṭarābulus and one west of Maṣyāf. The fortress was erected, according to al-Nuwairī, by the Banu 'l-Aḥmar but taken from them in 422 (1031) by Niketas, the Katepan of Antioch. In 512 (1118) it was taken by Roger of Antioch and remained in the possession of the Crusaders till Ṣalāḥ al-Dīn took it in 584 (1188). Subsequently Nāṣir al-Dīn Mankūrus (Mengulars) b. Khumartegin and his successors ruled here till 667 (1296) when Baibars gained possession of it. — As the fortress has since then been laid waste, its exact situation was unknown till Martin Hartmann found inscriptions at the modern Ḳal'at al-Muhelba, south-east of al-Lādhiḳīya, which proved the identity of this fortress with Balāṭunus.

BALĀWĀT, a village, 16 miles south-east of Mosul and 10 north-east of the ruins of Nimrūd (Assyr. Kalḫu); cf. the map by R. Kiepert based on the survey by F. Jones (see *Journ. of the Roy. Asiat. Soc.*, xv. 1855) in v. Oppenheim, *Vom Mittelm. z. Pers. Golf* (1900), ii. 182, where the name is written Bellawat. Yāḳūt mentions the place as a caravan station situated in the district of Ninuwai (Nineveh), a short day's journey from Mosul, under the name Balābādh, possibly = "foundation (*ābādh*) of Bal" (Bardiya Smerdis); cf. on this point G. Hoffmann, *Auszüge aus Syr. Akt. Pers. Märtyrer* (1880) p. 219, Note 1740, and in the *Zeitschr. f. Assyriol.*, ii. 57. Balāwāt owes its fame to the mounds of ruins (Tell) there, in which H. Rassam in 1878 discovered the bronze gates belonging to a palace of the Assyrian king Salmanassar II (859—824), one of the most important finds that had hitherto been made in Assyria, not only from the archaeological but also from the historical point of view. To be more accurate, it consisted of the two wings of a door, made of bronze bands, which had been rivetted on cedar wood; these are covered with figures, arranged in two rows, and show artistically executed basreliefs with scenes of war and peace (partly accompanied by inscriptions) illustrating in a striking fashion the history of the first third of the reign of the above-mentioned king, and the culture of the ninth century B. C. generally. The historical inscription on the small plates of metal, which covered the edges of the wings of the door, is only loosely connected with these scenes. The importance of the latter cuneiform inscription lies in its detailed description of the great Babylonian campaign of Salmanassar II. With the exception of a few fragments the whole of the bronze outer panelling of the gate, discovered by Rassam, has been in the British Museum since 1879. From an inscription of Assurnasirpal (884—859), giving an account of the foundation of a temple in Imgur-Bēl, which Rassam states to have been dug out of the Tell of Balāwāt, it has generally been supposed that this Assyrian town is to be sought for in the mounds of ruins at Balāwāt. This identification is however not quite certain; cf. also L. W. King, *The Annals of the Kings of Assyria*, (i. 1902) p. 169 note 2 and A. Hermann in the *Orient. Litter. Zeit.*, ix. 594.

Jones, *Records of the Bombay Government*, N°. 43, p. 471. — On the excavations and discoveries there cf. H. Rassam, *Asshur and the land of Nimrod* (New York, 1897), p. 200 *et seq.*; K. Bezold, *Überblick über die Babyl.-Assyr. Litter.* (1886), p. 74 *et seq.*; Hilprecht, *Explorations in Bible Lands* (1903), p. 296 *et seq.*; *British Museum, guide to the Babyl. and Assyr. Antiqu.*[2] (1908), p. 35 *et seq.*; Birch and Pinches have published a volume *The Bronze ornaments ... of Balawat* (1880—1903); Billerbeck and Fr. Delitzsch give an exhaustive description of the gates in *Die PalasttHore Salmanassars II zu B.* = *Beitr. z. Assyriologie*, vi. Heft 1 (1908). (M. Streck.)

BALBAN, Ghiyāth al-Dīn Ulugh Khān, Wazīr of Nāṣir al-Dīn Maḥmūd, King of Delhi (1246—65) and afterwards his successor. As Nāṣir al-Dīn was of a quiet and studious disposition, he left the management of affairs, for the greater part of his reign, in the hands of Ulugh Khān, who was at once his brother-in-law and father-in-law. His energetic administration did much to extend and consolidate Muhammadan rule in Northern India. He succeeded to the throne in 1265 and proved himself to be a stern but enlightened ruler; he was particularly successful in protecting his kingdom from the inroads of Mongol invaders. His court was the refuge of many exiled rulers and men of letters, among whom was the poet Amīr Khusraw. In 1285 his eldest son was slain in battle against the Mongols, and the aged king (he is said to have been more than 80 years old), broken down with grief, died in the following year, leaving the throne to his grandson, Kai Ḳubād, a youth of 17 or 18 years.

BALDA (A.), "Town", "district"; Plural *Bilād*

[q. v.] and *Buldān* "lands" which frequently appear in the titles of geographical works.

BALDJ b. Bishr b. ʿIyāḍ al-Kushairī, an Arab general, the valiant, though haughty, commander of the Syrian cavalry in the army, which the Caliph Hishām b. ʿAbd al-Malik sent against the Berbers in 123 (741) under the command of Kulthūm b. ʿIyāḍ, uncle of Baldj. On their arrival in Ifrīkiya (in Ramaḍān 123 = 20 July—18 Aug. 741) Baldj and his Syrians soon made themselves thoroughly hated through their arrogance and barbarity by the African Arabs, especially the Anṣārs, who after the battle in the Ḥarra (63 = 683) had fled in large bodies to the west. After the Syrian army had united with the African at Tlemcen (about 60,000 in all) in consequence of the arrogance of the Syrians and a quarrel between Baldj and the commander of the African troops, the two armies nearly came to blows. The Berbers retreated as far as the River Sebū in the extreme Maghrib, in order to weaken the enemy. Shortly before the encounter with the Berber host, Kulthūm dismissed Ḥabīb, who was experienced in Berber warfare, but whose advice Baldj insolently despised, from the command of the African troops and entrusted it to two Syrian officers, which still farther increased the bitterness among the African soldiers. The consequence was the total defeat of the Arabs at Baḳdūra (or Nabdūra on the Sebū, north of Fās, cf. Fournel, *Les Berbers*, i. 294, note 1) the blame for which must be laid on Baldj, not only for his arrogance but for his impetuous advance, which separated him from the foot-soldiers (in Dhu ʾl-Ḥidjdja 123 = 17th Oct.—14th Nov. 741). With about 7,000 horsemen he fought his way to Ceuta, where he endured a long siege by the Berbers till ʿAbd al-Malik b. Ḳaṭan [q. v.], Governor of Cordova, an Anṣār, brought him and his Syrians to Spain to use them against the rebel Berbers there. The latter were annihilated by Baldj and ʿAbd al-Malik in a great battle at Wādī Selīṭ (Guadacelete) above Toledo. In the civil war which soon afterwards broke out between the Spanish Anṣārs and the Syrians, the latter were victorious. They appointed Baldj Governor of Spain, in place of ʿAbd al-Malik, who had been driven out of Cordova and afterwards murdered, but after a brief rule Baldj fell in a battle against the Spanish Arabs by the hand of ʿAbd al-Raḥmān b. Alḳama al-Lakhmī, Governor of Narbonne (in Shawwāl 124 = 8 Aug.—5 Sept. 742).

BALEARIC ISLANDS, Greek Βαλιαρεῖς, Latin Baliares, which form has more authority than Baleares, usually but falsely derived from βάλλειν "to throw", because the ancient inhabitants were good slingers and as such served in the Roman and Carthaginian armies, earlier called Gymnesiae Insulae after the almost naked horsemen, a group of islands in the western Mediterranean. The name includes in the narrower sense, the two principal islands, lying to the north-east: Mallorca (Insula Major, since the time of Procopius Majorica, Majorca) and Minorca (Insula Minor, Minorica) with the smaller islands south of Mallorca: Cabrera (Capraria, Isle of Goats) and Conejera (Cunicularia, Isle of Rabbits) and to the west Dragonera (Triguadra); in the wider sense the name comprises, as at the present day the Provincia de las Islas Baleares and in the middle ages the "Kingdom of Mallorca", Reino de M. 1276—1343, the property of the younger son of the House of Aragon, the south-western group also, of the Pityusae, Isles of Figs; Ibiza (Ebusus, Phoenician אִיבְּשִׁים) and Formentera (Ophiusa). Among the Arabs they were called *djazāʾir sharḳ al-Andalus*, the Islands of Eastern Spain or *al-djazāʾir al-sharḳiya* the Eastern Islands. The name *djazāʾir Bālyāra* (*Encyclopédie arabe, Dāʾirat al-maʿārif* by Bistānī, v. 149; Sāmī, *Ḳāmūs al-aʿlām* 1218), *djazāʾir al-Bālyār* in Aḥmad Zekī Bey's *Ḳāmūs al-djoghrāfiya al-ḳadīma* (Būlāḳ 1317 = 1899), p. 31, is quite modern. The larger islands are known in Arabic as Mayūrḳa or Mayorḳa, Manūrḳa or Manorḳa (often confused by merely changing the pointing ميورقة, منورقة; ميرقة, منرقة) and Ibiza Yābisa. After having been subject in ancient times to Phoenicians (Greeks from Rhodes) and Carthaginians the Balearic Islands were ultimately subjected to Rome by Q. Caecilius Metellus Balearicus, the founder of Palma and Pollentia on Mallorca. Mago = Mahon and Jamo (Jamna) = Ciudadela on Minorca are of Carthaginian origin. In 465 the Balearics were conquered by Geiserich the Vandal, in 534 by Belisarius for the Byzantine Empire but they never were Visigothic. In 707-708 Mūsā b. Nuṣair's son ʿAbd Allāh is said to have plundered and conquered (?) them. In 797-798 they were exposed to repeated Arab raids but were freed from this scourge in 799 by Charlemagne. Soon afterwards they again suffered from the visits of the Normans and Arabs and it was not till 290 (903) that they were permanently attached to the Spanish Umaiyad Emirate by ʿIṣām al-Khawlānī. In 405 (1014-1015) the Balearics fell into the hands of the Ṭāʾifa prince Abu ʾl-Djaish Mudjāhid al-Muwaffaḳ al-ʿĀmirī of Denia (Dāniya), which lay to the west opposite them, and were held by his son and successor ʿAlī Iḳbāl al-Dawla from 436 (1044-1045) to 468 (1076). The latter was dethroned by his father-in-law, the Hūdid al-Muḳtadir of Saragossa, to whose lot Denia fell, while the Balearic Islands became independent under Murtaḍā ʿAbd Allāh 468—486 = 1075—1093, Mubashshir b. Sulaimān 484—509 = 1091—1115 and Abū Rabīʿ Sulaimān in the last named year when the Balearics were conquered by the Almoravids (Governor b. Abū Bakr till 520 = 1131). From 525—599 = 1131—1202 follow the independent Almoravid princes, the Banu Ghāniya, of whom the chief were Muḥammad b. ʿAlī b. Ghāniya 520—596 = 1131—1151 and his son Abū Ibrāhīm Isḥāḳ b. Muḥammad 546—581 = 1151—1185. From 601—627 = 1204—1229 the islands weer under various Almohad governors till their final conquest by James = Jaime I of Aragon (al-Conquistador) in 1228 *et seq.*; the clever Abū ʿOthmān Saʿīd b. al-Ḥakīm al-Ḳorashī continued to rule in Minorca however from 630—685 = 1232—1286, a puppet king with the title al-Mojarife, as vassal of Aragon

till the Arabs were entirely driven out. The most famous Mayorkī is the historian al-Ḥumaidī [q. v.].

BĀLFURŪSH. [See BĀRFURŪSH.]

BALHARĀ (A.), an Indian title said by Ibn Khurdādhbeh (ed. de Goeje, *Bibl. Geogr. Arab.*, vi., 16) to mean "king of kings"; al-Idrīsī adopts this explanation, and adds that the title was hereditary (*Géographie d'Édrisi*, trad. P. A. Jaubert, i. 173); al-Mas'ūdī (*Murūdj al-Dhahab*, i. 177, 372, 382), al-Iṣṭakhrī (*Bibl. Geogr. Arab.*, i. 173), and Ibn Ḥawḳal (id. ii. 227) describe the Balharā as the ruler of Mānkir and as the greatest of the kings of India; al-Mas'ūdī (*ib.* 162) adds that the Balharā was the name of the founder of a dynasty in this city and that his successors in turn adopted the name of this prince. Mānkir has been identified with Malkhet (about 60 miles to the south-east of Sholapur in the Bombay Presidency), the site of the ancient Mānyakheṭa, the capital city of the later Rāshṭrakūṭa dynasty (about 630—972 A. D.). The Arab geographers knew the Rāshṭrakūṭas by their Sanskrit title Vallabha "*beloved*"; thus Indra III (a contemporary of al-Mas'ūdī) had the title of Pṛthivīvallabha "*beloved of the earth*" (*Gazetteer of the Bombay Presidency*, I, Part I, 120-121, 519, 525). The destruction of Mānyakheṭa by the Western Cālukya king, Tailapa, in 972 A. D., explains why no Arab geographer after Ibn Ḥawḳal mentions Mānkir. The identification of the Balharā with the Valabhi (Ballabhi) dynasty, 509—766 A. D. (Elliot—Dowson, i., 354-355), and Reinaud's explanation (*Mémoire sur l'Inde*, 138, 144) of Balharā as Mālwa Rāi (king of Mālwā) are historically inaccurate.

(T. W. ARNOLD.)

BAL-ḤĀRITH. [See ḤĀRITH.]

BALĪ, an Arab tribe, belonging to the Yaman group. Its genealogy is: Balī b. 'Amr b. al-Ḥāfī b. Ḳuḍā'a. The Bahrā and Haidān are given as consanguineous tribes and the Hani and Farān as subordinate.

Their dwellings were on the Syrian frontier near Taimā between the lands of the Djuhaina and the Djudhām. In the time of Ptolemy the Thamūd (Θαμυδῆται) inhabited their land.

Of districts belonging to the Balī there are mentioned: al-Djazl, al-Ruḥba, al-Saḳyā, Hadjashān(?) Ma'din Farān (called after the subordinate tribe of Farān) at the mines of the Sulaim, east of Mecca (whence the precious stone Pharanitis in Pliny), Shaghb and Badan. A family of the Balī, the Hishna b. 'Ukārima, fled from the two latter on account of a quarrel with their fellow tribesmen to the neighbouring Jews at Taimā, adopted Judaism and remained there for a long period till the Jews were banished from Taimā. Khabīn and Shar' were common to the Balī and Djuhaina. Of Wādīs are mentioned: the Amadj and Ghurān which run from the Ḥarra of the Sulaim and flow into the sea; of wells: al-Hadhm (behind the Wādī 'l-Ḳurā) and Dhāt al-Salāsil (in common with the Djudhām). At Bi'r Ghadaḳ in Mecca there was a citadel of the Balī called Ḳā'. Besides these there were scattered settlements of the Balī on the so-called Nadjd road (the route of the Syrian pilgrims to Mecca), in Ḥigr and Wādī 'l-Ḳurā.

History. In the year 8 (629-630) Muḥammad sent 'Amr b. al-'Āṣ, whose mother belonged to the tribe of Balī, with 300 men against the Balī and Ḳuḍā'a tribes related to them. On arriving at Dhāt al-Salāsil, the well mentioned above as being common to the Balī and the Djudhām (the so-called "expedition to Dhāt al-Salāsil"), 'Amr felt his forces too weak against the tribes and sent to Muḥammad for reinforcements; the latter sent him new troops under Abū 'Ubaida b. al-Djarrāḥ, amongst whom were Abū Bakr and 'Omar. In the same year we find the Balī in alliance with the Ḳuḍā'ī tribes Lakhm, Djudhām and Balḳain with a total strength of 100,000 men led by one of the tribe of Balī, fighting against Muḥammad in the army of Heraclius in Syria at Ma'āb (Battle of Mūta). After the conquest of Mecca by Muḥammad, in the so-called "year of the deputations" (9 = 630) the Balī also appeared before the Prophet, under the leadership of Ruwaifi' b. Thābit to tender their submission. After Muḥammad's death they appear to have seceded again for in the year 11 (632) Abū Bakr sent against them and the other apostate Ḳuḍā'ī tribes, the already mentioned 'Amr b. al-'Āṣ. In the year 14-15 (635-636) we again find them with the Lakhm, Djudhām and Balḳain in the train of Heraclius at Yarmūk, where they, with the Greeks, were defeated by the Muslims. They then emigrated to Egypt (Miṣr) with the permission of the Caliph 'Omar. Here they at first fell into conflict over their settlements with their former neighbours, the Djuhaina, who had followed them here, but soon came to terms. In later times we hear almost nothing of them. According to the accounts of the explorers Rüppel, Burckhardt, Fresnel and Wellstedt, who have visited them and call them Billi (Fresnel: Beli), they live at the present day in the mountains south-east of Muila near the harbour of Wadjh. In Wadjh itself lives the chief Shaikh of all the Balī tribes, who receives an annual stipend from the Khedive of Egypt. His dominion is said to extend from the coast, six days' journey inland.

BALI. This, the most important, of the Little Sunda Islands is 105.5 square miles in area, and is a mountainous island of volcanic origin with the volcanoes Gunung Agung (11,000 feet) Batur and Tabanan, rising sheer out of the sea to the east of Java. Only the western half of the south coast is flat; the eastern consists of chalk cliffs. The fauna and the rich flora form a transition between the Asiatic and Australian portions of Indonesia; the tiger, the dwarf antelope and two kinds of ape, for example, are found here but the cockatoo only appears in the east of the island. The island with the neighbouring island of Lombok forms a "residency" under an official of high rank in the civil service, a "resident" whose head quarters are in Singa Rādja (Bulelèng). In the years 1906 and 1907 the principalities of Klunkung, Badung, Tabanan, Mengwi and Gyanjar were quite subjected by the Dutch; in Karang Asem and Bangli the princes are still semi-independent; Bulèlèng and Djembrana were incorporated after the wars of 1846-1849.

As to its history, Bali is mentioned by the Chinese historians of the T'ang dynasty in the year 647 A. D. and again in 992; the island is later mentioned as a part of the great Hindu kingdom of Modjopait in East Java, which was conquered in 1518 by the Muḥammadan princes of Dĕmak. The Hindus retained their independence in Balambagan in East Java; another section fled to Bali where their leader set himself up as independent prince of the whole island under the title of Dewa Agung Kĕtut in Gĕgĕl (Klungkung). The governors of these princes afterwards made themselves independent in their own districts. Balambagan, supported by Bali, remained independent till the Dutch subdued it in the xviii[th] century.

The above events account for the fact that the population of the island, estimated at about 500,000 souls, has remained Brahmanical with a few Buddhist tribes and that the original native-stock of Bali (Bali aga) has been strongly mixed with Javanese and this section calls itself Wong Modjopait; and further that language, alphabet and literature are closely related to those of East Java. Among the numerous foreign elements in the coast districts are many Chinese and Muḥammadans of the most diverse origins. Centuries ago a section of the people of Bali, both men and women, allied themselves in marriage with the strangers and adopted Islām: their descendants live together in the interior in separate villages or collections of villages and are as a rule prosperous. It also happens that evil-doers among the Balians attempt to escape from the stringent native laws by becoming Muḥammadans. In spite of a constant increase the number of Muḥammadans is still relatively small. With the increase in personal security, immigration of foreigners into the recently subdued principalities is encouraged; the spread of Islām is also favoured by the transference thither of Dutch officials with their subordinates.

The agriculture of the Balians, chiefly the growing of rice in wet fields (*sawah*) is the most highly developed of Indonesia. Rice is the principal food, there are also grown tuberous plants and all the other foodstuffs of the archipelago; the following were the values of the exports in 1908: copra ƒ 1,250,000, coffee ƒ 650,000, earth-nuts ƒ 200,000, rice ƒ 200,000, cattle ƒ 315,000 etc., in all ƒ 2,700,000. The imports amount to ƒ 1,050,000. The centre of foreign trade is Bulèlèng; the native trade is carried on at markets held regularly. Supported by the many splendour-loving princes and the cult of Hinduism, native industry has maintained a high level: gold- and silverwork, the armourer's art, wood-carving, sculpture and the weaving (by knitting, *ikat*) of beautiful decorated cloths. The people of Bali are relatively far advanced: many of them can read and write.

As an example of an Indonesian Hindu civilisation, on the basis of which Islām has been developing, in Java for example, for four centuries, that of Bali is very important. The four chief castes of Brahmanism are to be found here: Brahmana, Ksattria, Wesya and the great mass of the people: their members cannot enter another caste, have the right to bear the titles *ida*, *dewa* and *gusti* respectively and, if they are women, may not marry into a lower caste. The priesthood is composed of the highest caste, the Brahmans; amongst these are those initiated to a knowledge of the sacred, chiefly Old Javanese, literature and the judges (*kerta*) are also chosen from the priesthood. Only a few, and not the great number of the subordinate castes, that appear in the Brahmanism of the Asiatic continent, are to be found in Bali; besides the members of all four castes are often farmers, merchants etc. It is only for the most highly developed that the outer forms of Brahmanism have a definite, religious value; the great mass of the people is still entirely influenced in its daily life by its ancient Indonesian animism, although the gods are known by Hindu names and worshipped in temples; inspired persons (*balian*), Shamans (*permas*) and the guardians of temples (*pamangku*) play an important part in their worship. The Sun-god of the eastern archipelago appears in a curious fashion as Batara Suria, the chief deity of Bali. The *pĕdanda* only appear at great religious festivals or when the prince of the land is giving a feast, and at cremations; they bless consecrated water and weapons, sell amulets, appoint new priests and inspire great reverence.

BĀLIGH (A.) "having attained maturity". [See BULŪGH.]

BALIḲ, Turki-Mongol word for "town" (also written BĀLIḲ and BĀLIGH); appears frequently in compound names of towns, such as Bishbaliḳ ("Five Towns", at the present day in ruins at Gučen in Chinese Turkestan), Khānbaliḳ (the "Khān's Town"), Turko-Mongol name (also frequently used by European travellers in the middle ages as a name of Pekin (Cambalu)), Ilibaliḳ (on the River Ili, the modern Ilijak) amongst others. As the town of Bishbaliḳ is mentioned as early as the Orkhon inscriptions (viii[th] century A. D.), Baliḳ, in the meaning of town, is one of the oldest of Turki words, as is the word Bāliḳ "fish", which is similarly pronounced and is common to all Turki dialects. (W. BARTHOLD.)

BĀLIKESRĪ, BĀLIKESR, a town in Turkey in Asia, capital of the Sandjak of Ḳarasi in the Wilāyet of Khudāwendigār, with 13,118 inhabitants, of whom 9175 are Muhammadans, 1266 Orthodox Greeks and 1941 Gregorian Armenians. Built at the foot of the Yilān-dāgh, Bālikesrī is watered in winter by a brook. In summer when this is dried up, water has to be brought from Batlāḳ. It was the ancient capital of the Princes of Ḳarasi and was conquered in 737 (1336) by ʿAdjlān-zāde in the time of Sulṭān Orkhān. It has a weekly market and an annual fair, and manufactures a coarse kind of cloth called *ʿaba* [q. v.]. The town has 91 mosques of which some are fairly old. We may further mention an old clock tower, a monastery of the Bairamiya as well as the grave and some pious foundations of the Bairami Shaikh Luṭfallāh. The Ḳazā Bālikesri comprises 5 Nāḥiya and 328 villages with about 90,000 inhabitants. Its chief productions are opium, cotton, cereals and fruit, including excellent melons called *Ḥasan-bey*, and honey, which is famous.

BALĪNŪS. In the scientific literature of the Arabs we meet with a name, which is written BALĪNŪS, BALĪNĀS and BALĪS and sometimes denotes Apollonius of Tyana and sometimes Apollonius of Pergamon. It appears most rarely under the correct form Abuluniyūs. To Apollonius of Tyana is to be ascribed a book on the "Secret of Creation" by the sage Balīnūs (MS. in Paris) which has previously been given to Pliny; for it is therein stated that the author belonged to *Ṭuwānī*, which is clearly to be emended to *Ṭuwāna* = Tyana. A sort of natural history called *Liber de Causis* (MS. in Leiden) and a treatise on astrology, translated by Ḥunain b. Isḥāḳ, must also be credited to the philosopher of Tyana, as well as a book on the seven bodies which Ḥādjdjī Khalfa mentions as being by Balīnūs.

But on the whole, Apollonius of Tyana was little known to the Arabs. On the other hand the works of the great mathematician of Pergamon were well-known and diligently studied by Eastern scholars. The author of the *Kitāb al-Ḥukamā* devotes an interesting notice to him in which he gives a sketch of his famous treatise on conic sections. This treatise contained eight books of which the last has been lost with the exception of four propositions. The first four books were translated by Hilāl b. Abī Hilāl of Ḥimṣ (died 270 A. H.), the next three and the four surviving propositions of the last book by Thābit b. Ḳurra. There is a manuscript of these translations in Oxford; the part translated by Thābit is to be found in several libraries. Other Arab scholars have studied his Conic Sections and given versions of it, such as Aḥmad b. Mūsā, Abu 'l-Fatḥ al-Iṣfahānī, Naṣīr al-Dīn al-Ṭūsī, Yaḥyā b. Abi 'l-Shukr, Muḥyi 'l-Dīn al-Maghribī.

Besides this, his chief work, the Arabs were acquainted with other treatises by Apollonius; the treatise on the intersections of straight lines or planes in a given ratio (*de ratione determinata*) on which Thābit b. Ḳorra has written an excellent commentary, a treatise on variables, one on tangent circles and some theorems.

BĀLIS, a town in North Syria, on the Euphrates, where the stream turns to the east from its southern course, situated in 35° 59' n. Lat. and 38° 12' East Long. Greenw.

The name is the Aramaic בית בלש, which is usually given by classical authors in the form Barbalissos. The oldest mention of the town appears to be in Xenophon, who mentions a palace and pleasure-grounds of Belesys, Governor of Syria, here. Ptolemy gives Barbarissos in its right place and the *Tabula Peutingeriana* mentions it as station on the Euphrates road. According to the *Notitia Dignitatum*, about 425 A. D., it belonged to the Augusta Eufratensis, held a garrison of the Equites Dalmatae Illyriciani and was under the Dux Syriae. Stephan of Byzantium mentions it before the time of Justinian as a walled castle. According to Procopius, Khusraw II Anūshirwān must have destroyed the town in his devastating campaign into Syria about 540. The fortifications were therefore rebuilt by Justinian.

The Arabs call the town Bālis. It was taken by the Muslims under Abū ʿUbaida without fighting but most of its inhabitants emigrated from it. Under ʿOmar and ʿOthmān, Bālis was one of the frontier fortresses against the Byzantines. Hārūn incorporated it in the Djund al-ʿAwāṣim, to which Ḳūrus, Djawma, Manbidj, Anṭākiya, Tīzīn, Bālis and Ruṣāfat Hishām belonged. When in later times the frontier had been advanced nearer Asia

Minor, Bālis belonged to the district of Ḳinnasrīn, one of the six districts of Syria. In 245 (859) an earthquake visited Bālis, which also affected Raḳḳa, Ḥarrān, Rās al-ʿAin, Urfa, Ḥimṣ, Damascus, the Syrian coast and the Cilician lowlands. In 269 (882-883) Bālis was under the suzerainty of Aḥmad Ibn Ṭūlūn. In 287 (900) it was a military station of the Caliph Muʿtaḍid in his campaign against Cilicia. After the time of the Ḥamdānid Saif al-Dawla 333—356 (944—967) Bālis began to decline and caravans visited it less frequently than before. Iṣṭakhrī describes it about 309 (921) as a little town and Yāḳūt about 621 (1224) as still a village. In the Crusading period, about 1111, Bālis was for a while in possession of the Franks under Tancred of Antioch. Benjamin of Tudela visited it in 1163. When he regards Bālis as the town of Bileam ben Beor, we have here a Jewish version of the legend which the Arabs attach to Balʿam in the Balḳāʾ. To the Arabs Bālis is the town of Bālis Ibn Rūm Ibn Yakan Ibn Sām Ibn Nūḥ. In this is preserved a memory of the pre-Muḥammadan age of the town. According to Ibn Shaddād, Bālis belonged to the Aiyūbid of Aleppo, al-Malik al-Ẓāhir Ghāzī, who died in 613 (1216) and after him to the famous brother of Saladin, al-Malik al-ʿĀdil Abū Bakr, who built a minaret there with his inscription. He gave it to his son al-Malik al-Ḥāfiẓ in fief. Yāḳūt and after him the *Marāṣid* and Ḳazwīnī assert that the Euphrates, which formerly washed the town, has gradually retreated from it so that in his time it was 4 miles distant. At the present day the distance is only about 2 miles and the river appears to be again approaching the town. The change in the direction of the river must have hastened the decline of the town. After Yāḳūt, first hand notices of the town cease. Abu ʾl-Fidā quotes only older passages. The final destruction of the town was wrought by the armies of Čingiz Khān.

Bālis lies on the great road which leads from Baghdād or from Mosul via Raḳḳa to Syria. It is the first Syrian town on this road. On account of this prominent situation the geographers use it as a centre in describing the boundaries of the land. It also lies on the dividing line between two strikingly different climates. The raw climate of the plateau of Aleppo here gives way to the more equable climate of the Djazīra. The flora and fauna change here completely also. Bālis is called the harbour of Syria on the Euphrates. In spite of its favourable situation it has never been able to recover from the Mongol inroads.

At the present day Bālis bears the name of Eski Meskene, after the quite modern military and post-station in its neighbourhood. The ruins of the town 5 acres in area lie on a cape of the higher bank that stretches out into the Euphrates-valley. The walls around are still recognizable. One can still recognise three gates for the roads to Aleppo, to Ḥimṣ and Damascus, and to Baghdād. A deep ditch separates it from the hilly hinterland. On this still stand the ruins of the fortress of the time of Justinian: a praetorium and a strong bastion. This ancient fortification must have been used throughout the whole Muḥammadan epoch. The area of the town is full of fragments of pottery, which lead us to conclude that it once had a flourishing ceramic industry. From its midst rises a high octagonal minaret, renewed in the time of al-Malik al-ʿĀdil Abū Bakr as the inscription tells us. The name of the Amīr who had charge of the operations and the date have disappeared; the architect calls himself ʿAbd Allāh. In the south of the town there still are the remains of a nameless, mediaeval tomb of a saint with two graves.

(Ernst Herzfeld.)

BĀLISH, a unit of money among the Mongols; it is mentioned as early as the time of Čingiz Khān; after the break up of the Mongol Kingdom into several independent states, the word appears to have remained in use in China only, where they still reckoned by the *bālish* in the viiith (xivth) century. It is very difficult to reconcile the various passages from Oriental sources collected by Quatremère (*Histoire des Mongols de la Perse par Rashīd al-Dīn* p. 320 *et seq.*); to what is given there one can only add Djūzdjānī's notice (*Ṭabaḳāt-i Nāṣirī*, transl. by Raverty, p. 1110) according to which the *bālish* was worth $60^1/_3$ dirhems. The statement in the *Taʾrīkh-i Waṣṣāf* (lithogr. ed. Bombay 1269 = 1853, p. 22) that the gold and silver *bālish*, each weighed 500 mithḳāl (about $4^1/_3$ lbs.) is very important (Djuwainī tells us the same thing). According to Waṣṣāf, a *bālish* in gold was worth 2000 dīnārs, in silver 200 dīnārs, in paper-money 10 dīnārs; in another passage (p. 506) in his account of the embassy of 697—704 (1297-1298—1304-1305) — cf. on this embassy d'Ohsson *Histoire des Mongols*, iv. 320 *et seq.*; Elliot, *History of India*, iii. 45 *et seq.* — Waṣṣāf estimates the value of the *bālish* in paper-money at only 6 dīnārs. The word "dīnār" clearly does not here mean a gold coin, but the silver coin weighing 3 mithḳāls (about 196 grains) also mentioned by Rashīd al-Dīn (cf. d'Ohsson, *Histoire des Mongols*, iv. 464 on this point).

(W. Barthold.)

BALĪYA (A.) In pre-Muḥammadan times, a female camel, a mare, or other beast of burden was frequently tethered at the grave of a warrior or noble, and left without food or water till it perished. The original reason for this custom must have been the belief that the dead man at his resurrection from the dead would not have a steed at his disposal, unless one were given him at his death; otherwise he would have to go on foot like the common people. Another tradition mentions that the Balīya might also be a cow, a sheep or a goat and that the animal was slain at the grave.

The original symbol of a belief in a resurrection seems, in consequence of the disappearance of this belief, to have become an offering to the dead.

al-**BALḲĀ'**, the Arabic name of the southern half of the eastern Jordan district. In the narrative of the unfortunate Mu'ta expedition, it also comprises the land south of Arnon, for both Ma'āb (Rabbat Moab) and Mu'ta and the village of Mashārif (this however is identified with Mu'ta by al-Mubarrad *Kāmil* 639 *et seq.*) were included in it. According to Wāḳidī its southern boundary was a day's journey distant from Dhāt Aṭlāḥ. The whole eastern Jordan district is often (e. g. Ṭabarī, *Annales*, 1, 2646; 3, 52) designated by al-Balḳā', Bathaniya [q. v.] and Ḥawrān. The town of Arbad (Irbid), where Yazīd II died, is also mentioned as belonging to al-Balḳā' (Ṭabarī, *Annales*, 2, 1463). On the other hand among the geographers al-Balḳā' in the narrower sense signifies the district, the capital of which was 'Ammān. As a rule it belonged to the province of Damascus though Muḳaddasī includes 'Ammān among the towns of the province of Filasṭīn. It formed a separate jurisdiction as (e. g. Ṭabarī, *Annales*, 2, 1975; 3, 416) an *'Āmil* of al-Balḳā' is sometimes mentioned. About 1300 it belonged to the Mamlaka of Karak as Dimishḳī tells us. In the later Mamlūk-period, it was again given to Damascus and had Ḥusbān (Hesbon) as its capital. The geographers often speak of Ẓāhir al-Balḳā' (the outer, surrounding territory of al-Balḳā'), so that al-Ẓāhir is sometimes used instead of Balḳā'. At the present day al-Balḳā' in the narrower sense denotes the land between Zarḳā' 'Ammān and Zarḳā' Mā'in (corresponding roughly to the ancient Peraea) and has al-Salṭ as its capital. But in practice it is still always also used of the districts south of Arnon.

BALḲAIN. [See ḲAIN.]

BALKAN (T.) high, steep wooded hills (according to others from the Pers. Bālākhāna, see art. BALAKHĀN), a mountain system which forms the southern boundary wall of the lowest basin of the Donau from the valley of the Timok to Cape Emine. Its highest peaks attain in the Kodja Balkan (Central Balkan) a height of 7000 to 8000 feet, while the eastern part only rises above 3000 feet at certain points. In antiquity this mountain system was called Hæmus. The Balkan passes are historically important, viz. the Aḳ Boghāz on the road from Varna to Burgas and farther to the west the Čaliḳawāḳ Boghāz, the Demirḳāpū (Iron Gate), the Shipka Boghāz (the Shipka Pass) etc.

Bibliography: Kanitz, *Donau-Bulgarien und der Balkan*; Reclus, *Nouv. géogr. univ.*, i. 206—212.

BALKĀRS, a Turkish tribe in the Caucasus. [See KAUKASUS.]

BALKH, the BAKTRA of the Greeks, Old Persian BĀKHTRISH (really the name of a country) middle Persian BĀXHL, BAHL, with the epithet I BĀMIK "the glittering", situated on the south side of the Āmū Daryā, on its tributary the Dahās, which now no longer reaches it, in the flat northern outlying part of the Kōh-i Bābā on the important commercial route from the mountain passes to the Oxus, was the political metropolis of the ancient satrapy of Khorāsān, the intellectual and religious capital of the later kingdom of Tokhāristān.

In the Iranian saga, which ascribes the founding of the town to Kai Lohrāsp — the form of the name and description of its bearer as king points to Bactria as the home and the Kushān period as the period of origin of this myth — and connects its origins with the rise of the Zoroastrian religion, there is an echo of the fact that Balkh owes its historical importance to the Achaemenid period, in which it was the seat of the satrap of Khorāsān, and early took the character of the holy city. It is quite possible that the tradition which ascribes the refounding of Balkh under the name of Alexandria to Alexander, contains some historical truth. As the seat of the Graeco-Bactrian kings, Balkh was a centre of Hellenic culture. Balkh lost its historical importance in the following Tokhārī, Kushān and Ephthalite periods, but remained, especially after the spread of the doctrine of Buddha under the Kushān kings, the intellectual and religious capital (whence its epithet "the little town of the king" Pers. *Shāhsawārū*). The teaching of Zoroaster however certainly survived alongside of Buddhism down to the Arab invasion; besides these religions there were also Manichaeism and Nestorian Christianity.

Buddhism was predominant however. The venerated Nawbahār, as its name tells us, a Buddhist monastery, was visited by pilgrims from all lands, often even by Chinese. The descriptions, given by the Arab authors of the famous sanctuary (360 cells around a high pagoda) are too hazy and as a rule too overlaid with fantastic extravagances, for us to obtain a clear picture of the building from them. The head of the Nawbahār, the Barmak, at the time of the Arab conquest held the highest position in Balkh. From this priestly family the famous dynasty of ministers, the Barmakids [q. v.], were descended.

As early as 32 A. H. (653) Ṣakhr (or al-Ḍaḥḥāk) b. Ḳais al-Aḥnaf [see AL-AḤNAF] is said to have advanced as far as Balkh and to have forced the town to surrender. But at first there appear to have only been temporary raids into the Hindu Kūsh as the "revolts" which followed, show. According to the Arab chronicles Ḳais b. al-Haitham again took Balkh in 42 (663) and destroyed the Nawbahār. From J. Marquart's researches (cf. also his *Wehrōt und Arang*, p. 42 *et seq.*) in Chinese sources it appears certain that

Arab raids were renewed in 661, which necessitated a strengthening of the opposing forces. By their own request the Ṭokhari principalities were turned into Chinese provinces and the princes were appointed governors for the Chinese. The Sāsānian kingdom was to be restored under Pērōz the son of Yazdigard with the help of the Chinese. But as the Chinese government did not allow the undertaking of the necessary military support, the first revolt of Tarkhān Nēzak was put down in 51 (671). By the year 90 however Ḳutaiba b. Muslim had put an end to this unrest and striving for independence. The insecure state of the country forced the Arabs to place the Buddhists on an equal footing with the *Ahl al-Kitāb* and even in the various "revolts" not to proceed against apostates with the full vigour of the Muslim Law. Ḳutaiba appears to have been the first to pacify the country and to convert it to Islām. But tribal feuds among the Arabs and religious divisions in Islām began to bring new confusion. Asad al-Ḳasrī [q. v.], Governor of Khurāsān ordered Balkh, which had been destroyed in these wars, to be rebuilt by the Dihḳān Barmak in 107 (726) and transported the seat of the government from Merwrūdh thither. About 130 A. H. Abū Dā'ūd al-Bakrī, commissioned by Abū Muslim, began to stir up rebellion in favour of the 'Abbāsids in Ṭokhāristān and Balkh. How long the native dynasties could retain their position and authority in spite of all the revolutions in the northern frontier lands of Islām, may be seen from the fact that about the middle of the third (ninth) century, we find a certain Dā'ūd b. al-'Abbās of the princely house of Khottal, as governor of Balkh (cf. Marquart, *Ērānšahr*, p. 300 *et seq.*) who built a palace, the Nawshād, which Ya'ḳūb b. al-Laith, the founder of the Ṣaffārid dynasty, destroyed about 257 (870). The Ṣaffārids were succeeded in 287 (900) by the Sāmānids in ownership of Balkh. From the description of the town which Iṣṭakhrī (or rather Balkhī) has left us from this period, Balkh with its clay-walls pierced by numerous doors (Ya'ḳūbī gives 12; Iṣṭakhrī 7 with their names) cannot have presented a very stately appearance.

The town suffered severely during the wars between the Sāmānids and the Ilig-Khāns, in which Fā'iḳ, the governor of Balkh played a part. The ancient regal city received new importance as the temporary residence of Subuktigin and the great Maḥmūd of Ghazni. Soon after the latter's death Balkh fell to the Seldjūḳs in 432 (1040) of whom Caghrïbeg was chief. About the middle of the vi[th] (xii[th]) century the Ghōrids began to contest the possession of Balkh with the Seldjūḳs. Their advance was impeded by the invasion of new hordes of the Oghuz (Ghuzz-Turks); but in 594 (1198) the Ghōrid Bahā' al-Dīn Sām of Bāmiyān seized the town of Balkh. In 603 (1206) it was incorporated in the kingdom of Muḥammad Shāh of Khwārizm. Finally in 617 (1227) Balkh was devastated by the hordes of Čingiz Khān and it was doomed never to recover from the blow. How thoroughly destroyed the town was, is shown by Ibn Baṭūṭa's description of it. After Čingiz Khān's death, Balkh and Transoxiana fell to his son Čagatai and remained in the latter's family till Tīmūr deprived it of its power. Various branches of the Tīmūrids ruled in succession over Balkh till 900 (1500). During the following centuries it several times formed a bone of contention between the Uzbegs, more particularly the Djānids and the Mughal Emperors of India, sometimes it was independent. After the death of the Afshārī Nādir Shāh in 1160 (1747), who had incorporated Afghānistān and the adjoining lands in the Persian Ṣafawī kingdom, Balkh remained continuously in possession of the Durrānī chiefs till 1243 (1826) when the Emirs of Bukhārā seized it. In 1257 (1841) it was again gained by Afghānistān, to which it still belongs.

The modern town with its some 500 houses is scarcely a shadow of the ancient Balkh, to which the Arabs gave the name of *Umm al-Bilād* or "Mother of the Cities". If it has preserved a certain importance in spite of all its vicissitudes, this is due to the wealth, praised by Muḳaddasī, of its plains, watered by the Dehās. The ruins of the city are noteworthy, of which those of the Buddhist period, which are associated in characteristic fashion with names from the Iranian saga-cycles (cf. Takht-i Rustam), are better preserved than the Muslim ones. The sacredness of the place survives in the tomb Mazār-i Sharīf, said to be that of 'Alī, which is first mentioned in the xii[th] century.

BALKHĀN, a mountain range on the Caspian Sea, where the dry riverbed of the Uzboi (supposed to be the ancient bed of the Oxus) flows into the Sea. The mountains to the north of the riverbed, rising to a height of 5500 feet, are at the present day called "the Great Balkhān" range; quite separate from them are the "Little Balkhāns" (to the south of the Uzboi) which are quite close to the Küren-Dagh. The Balkhān Bay on the Caspian Sea has taken its name from the "Great Balkhāns"; in it is the best harbour on the eastern shores of the Sea north of the Russo-Persian frontier.

On the story of an "ancient Khwārizm" on the Balkhāns cf. above p. 341[a], article ĀMŪ DARYĀ. According to Muḳaddasī (ed. de Goeje, p. 285), there were cows and horses running wild there; he was also told in Nasā and Abīward that the inhabitants of these towns used sometimes to go to the Balkhāns and find many eggs there; but no ruins in this district are mentioned in Muḳaddasī or in other sources. About 420 (1029) the Turkomans who had immigrated into Khorāsān from Mā warā' al-nahr retreated into the Balkhāns; they had made themselves obnoxious in Khorāsān by their robberies and were therefore driven out by Arslān-Djādhib, the general of the Ghaznawid Maḥmūd (Ibn al-Athīr, ed. Tornberg, ix. 267). After Maḥmūd's death, their leaders, Ḳizil, Buḳa, and Kūktash were summoned with their followers to Mas'ūd and taken into his army (Baihaḳī, ed. Morley, p. 71).

After the viii[th] (xiv[th]) century we find the little

harbour of Aghrīča, at the mouth of the river-bed (which was at that time filled with water), mentioned; this place does not however seem ever to have been of any great importance. The name of the mountains is written Abu 'l-Khān by Abu 'l-Ghāzī, following an unfortunate learned etymology; in his time several Turkoman tribes lived there. When the river Uzboi became finally dried up (about 1570) the district of the Balkhāns gradually became deserted; in later times we find there only a few Turkomans of the tribe of Yomut. In the trade with Khīwa, the harbour of the peninsula of Manghishlaķ had, at that period as in the middle ages, an incomparably greater importance than the Bay of Balkhān.

It was only in connection with the "Oxus question" that attention was again drawn to the Bay of Balkhān, when the idea was conceived, by Peter the Great first of all, of leading the Oxus back to its ancient riverbed and thereby making an uninterrupted waterway from India to the Caspian Sea. It was several times proposed in the xviii^th^ and xix^th^ centuries to build a Russian fortress on the Bay but the plan was not put into execution till 1869, when not only the district around the Bay of Balkhān but also the harbour of Michailowsk lying to the south of it, was occupied from the Caucasus. A railway was built from the latter harbour as far as Kizil-Arwat in 1881, thence continued in 1885-1888 to Samarķand and in 1897-1898 as far as Andidjān [q. v.]; the Balkhān district has thereby become the most important commercial centre on the eastern shores of the Caspian Sea. The starting point of the line was till 1887 Michailowskoje, from 1887 till 1897, Uzun-Ada, and since 1897 it has been Krasnowodowsk. Since the opening of the Orenburg-Tashkent line (1905) the "Transcaspian" line has no longer the same importance as before for through traffic and is only of value for traffic between the Caucasus and Central Asia. These mountains, almost waterless, and bare of almost all vegetation are of no importance for agriculture; the only industry of importance is the obtaining of gypsum from pits about 5 miles from Krasnowodsk.

The same name Balkhān (it is said to be derived from the Pers. Balā-Khāna) was brought to Europe by the Turks and applied to the Haemus mountains of the ancients; this is the origin of the names "Balkan" (for the mountains) and "Balkan Peninsula", usual in modern geography.

(W. Barthold.)

BALKHASH, next to the Aral [q. v.] the largest inland sea in Central Asia (6144 sq. m.) into which flow the Ili and several smaller rivers. The lake remained unknown to the Muḥammadan geographers of the middle ages; the anonymous author of the *Ḥudūd al-ʿĀlam* (372 = 982-983; cf. J. Marquart, *Osteuropäische und ostasiatische Streifzüge*, p. xxx) makes the Ili (Ilā) flow into the Issiķ-Kul. A description of Balkhash is, as far as is known, only given among Muḥammadan authors by Muḥammad Ḥaidar, about the middle of the xth (xvith) century (*Taʾrīkh-i Rashīdī*, transl. by E. D. Ross, p. 366). In this book the lake, which then formed the boundary between the land of the Uzbegs (Uzbegistān) and the land of the Mongols (Moghūlistān) is called Kökčä-Teñiz ("blue lake") and described as a fresh water lake. The dimensions given for its length and breadth are much exaggerated and Muḥammad Ḥaidar also regards the Volga (Itil) as flowing out of Lake Balkhash. Of importance is the statement regarding the taste of the water; modern geographers have always regarded Balkhash as a salt lake; it was only as a result of explorations carried out in 1903 by the Turkestān division of the Imperial Russian Geographical Society, that it was finally found to be a freshwater lake. As was pointed out by the leader of the expedition (L. Berg) the existence of a freshwater lake without an outflow in a district where the annual amount of precipitate scarcely amounts to 200 mm. forms a "geographical paradox". What is said on p. 420^a^ of Lake Aral is also true of Balkhash: an unmistakable advance of the coast line was first noticed here in the xix^th^ century, and it was on this account that observations of the drying up of the lake were taken in the last decades of the same century; distinct signs of an increase in the volume of water in the lake have been proved here also so that, as over Central Asia generally, we must not presume a permanent exsiccation but rather a periodic rise and fall in the surface of the lake. Cf. L. Berg, *Predvaritelnyi otčet ob issledovaniji ozera Balkhash letom 1903 g.* (*Izvestija Imp. Russ. Geogr. Obshč.*, t. xl. p. 584—599, with a very complete map).

The Lake first received the Mongol name of Balkhash from the Kalmucks, who ruled this district in the xvii^th^ and first half of the xviii^th^ century. The name of "Balchas", with a description of the lake, very accurate for the period, is given on the map by the Swedish officer J. G. Renat, who spent 17 years (1716—1733) in the land of the Kalmucks. Cf. *Carte de la Dzoungarie dressée par le suédois Renat pendant sa captivité chez les Kalmouks de 1716—1733, Id. de la Soc. Imp. Russe de Géographie*, St. Petersburg 1881. The Kirghiz tribes who lead a nomadic life in the same country to-day call the lake Aķ-Teñiz ("White Sea"). The immediate neighbourhood of Balkhash has always been, as it still is, a dreary desert, so that the lake, as far as is known, has never attained any economic importance; neither have its shores ever been peopled by a civilised race. The shores of the Balkhash, which are covered with reeds, are used by the nomads as a winter-settlement; in summer the district around the Balkhash is quite deserted.

(W. Barthold.)

al-**BALKHĪ**, Abū Zaid Aḥmad b. Sahl, Arab writer on geography, born in Shāmistiyān (in the province of Balkh), was a teacher in his native country, at first adopting the principles of the Imāmiya-sect and afterwards studying philosophy with al-Kindī. He found a patron in Abū ʿAlī al-Djaihānī, a Sāmānid minister, but afterwards quarrelled with him. He was invited to Bukhārā, but had not the courage to cross the Oxus. He died on the 19th Dhu'l-Ķaʿda 322 = 31st Oct. 934. The *Fihrist* (vol. I. p. 138) gives a list of forty-three works by him, all of which were early lost; Ḥādjdjī Khalīfa was only acquainted with six of them including a *Ṣuwar al-Aķālīm* which is quoted by Muķaddasī and Ḥamdallāh Mustawfī, and the *Kitāb al-badʾ wal-taʾrīkh*, which was wrongly attributed to him at quite an early period (before the xiii^th^ century) and was really composed by Muṭahhar b. Ṭāhir al-Maķdisī.

BALŌČISTĀN.

General Description.

The term Balōčistān in its widest significance includes the whole country over which the Balōč race is spread without regard to modern political boundaries. This tract is comprised between long. 58° and 70° E. and Lat. 25° and 32° N. Politically it comprises:

1. the Khānat of Kalāt, often spoken of specially as Balōčistān;

2. the Persian province of Balōčistān, now included in the Government of Karmān;

3. the province of British Balōčistān;

4. the territory occupied by Balōč tribes in the British Indian provinces of the Pandjāb and Sindh, comprising the districts of Dēra Ghāzī Khān and Jacobabad as far as the Balōč tribes extend.

With the exception of the Indus valley and the narrow coast district the whole of these tracts are comprised in the Iranian plateau, of which they form the south-eastern portion. It may be noted here that the northern part of the province of British Balōčistān (comprising the districts of Peshīn, Zhōb and the Sulaimān Mountains as far north as the Gomal River) forms ethnologically part of Afghānistān. The furthest northern extension of the Balōč race is 31° N. in the Sulaimān Mountains, but in no other part of the territory do they spread so far north.

Mountain system. In the Eastern part of the country the mountains are an extension of the system of eastern Afghānistān. The Sulaimān range culminating in the peaks of the Kaisar-ghar 11,300 ft. and Takht-Sulaimān runs nearly north and south forming the eastern edge of the tableland from 32° to 29° N., when it turns westward as far as the Bōlān Pass, thence the mountain boundary runs nearly due south towards the Indian Ocean, under the names of the Hāla and Kirthār Mountains. From these eastern mountains westward the plateau is traversed by numerous ridges with a general north-east and south-west tendency. Proceeding westward through the Khānat of Kalāt into Persian Balōčistān these ranges assume a nearly east and west direction, and in Persian Balōčistān they take a north-west and south-east direction till they join either the mountains of Karmān or those of Khorāsān west of Sīstān. At the northern end of the Bōlān Pass in the neighbourhood of Quetta the ranges from the east and south meet in a tangled knot of mountains, among which are the highest peaks Čihl-tan (11,390 ft.), and Takatu, Murdār and Zarghūn, all over 10,000 ft. This part of the plateau is of considerable height, the plain of Quetta having an altitude of 5500 ft. and Kalat of 6780 ft. The long valleys which follow the trend of the mountains through Makrān are of less elevation, and the mountains themselves seldom rise above 5000 ft. until in Persian Balōčistān they rise again into high peaks, among which the volcano Kōh-i-Taftān (or Čihl-tan) 13,500 ft., and Kōh-i Bazmān 11,200 ft. are the most remarkable. West of the mountains of Quetta along the northern boundary of Balōčistān the level of the country falls towards the Helmand desert which separates it from the more fertile parts of Afghānistān. The average level of this barren plain is 2000 ft. which falls still lower in Sīstān to 1580 ft. at the Gōd-i-Zirah depression. Immediately to the west of this is the Siyāhān range running south-east and north-west along the boundary of the Khānat of Kalāt and Persian Balōčistān till it culminates in the peak of Malik-Siyāh (5300 ft.), the trijunctional point of Persia, Afghānistān and Kalāt. On the sea coast the mountain ranges frequently end in majestic cliffs; especially that known as Rās-Malān.

Geological formation. The formation of the country is mainly late. Rocks of the earlier periods are unknown, cretaceous formations being the earliest. Nummulitic limestones and sandstones abound. There are occasional intrusive basaltic rocks, and in Persian Balōčistān there are two lofty volcanoes, of which one, the Kōh-i-Taftān, is still active.

River system. The rivers of Balōčistān are small and unimportant. Owing to the very scanty rainfall and the parched nature of most of the mountain ranges their volume is very small, and many of them are dry through a great part of the year. On the east flank the most considerable are the Kundar and Zhōb which unite with the Gomal flowing towards the Indus. The Nārī, Bōlān and Mūlā streams also run towards the Indus, but their water is used up in irrigation before they reach it. On the south coast flowing into the Indian ocean are the Habb, forming near its mouth the boundary of Sindh, the Purālī (Greek Arabios) draining Las-Bēla, the Hingol and the Dasht in Makrān, and the Rapsh and Aimint in Persian Balōčistān. Inland the principal streams flow into depressions containing salt swamps known by the name of Hāmūn. The two chief streams of Central Makrān, the Rakhshān flowing west and the Mashkēl flowing east unite and follow a northerly course to the Mashkēl Hāmūn (1600 ft.) where they are lost. The Lōra river flowing from Peshīn is lost in the Lōra Hāmūn near Čaghai. In Persian Balōčistān also the Karwanda river flows by Bampūr into the Djāz Mōriān Hāmūn. Many of the smaller streams are salt or brackish and generally there is a great lack of good water.

Principal places. The inhospitable nature of the country makes the growth of large towns an impossibility. The population is mainly nomadic, and it is only at a centre of Government like Kalāt or Bēla, or a military station like Quetta that anything like a town exists. Even Kalāt and Bēla have under 5000 inhabitants each. Pandjgūr is only the centre of the date-trade of the Rakhshān valley, and Sibī and Dhādhar are old centres of trade below the Bōlān Pass. Shāl or Quetta owes its modern importance to its being an important military centre. Other military stations in British Balōčistān are Lōralai and Fort Sandeman. Fahradj or Pahra is the capital of the Persian province. The seaports are also unimportant, and much impeded by sandbanks. Sōnmiānī, Ormara and Pasnī are the principal ports in Makrān and Las-Bēla. Gwādar on the same coast belongs to the Arabs of Maskat. Gwātar and Čāhbār are in Persian Balōčistān, and Tīz on the same coast has now lost its old importance.

Political Divisions. With the exception

of Persian Balūčistān the whole country is included within the limits of the British Empire in India, but the political status varies considerably, and the following is the official classification.

I. British Balūčistān. This includes districts formerly part of Afghānistān and ceded by the treaty of Gandamak in 1879. These are Shāhrigh, Sibī, Dukī, Peshīn, Čaman and Shōrarūd.

II. Territories administered by the Agent to the Governor General:

a. directly administered;

b. native states;

c. tribal areas.

a. These districts are either leased from the Khān of Kalāt or are tribal areas, or territories obtained by rectification of boundaries with Afghānistān. They comprise the political agencies of Zhōb and Čaghai, the eastern part of Quetta, Sindjawī, Kōhlū and Bārkhān, as well as strips of land along the railways.

These areas are administered in the same manner as British Balūčistān; the whole area aggregating 45,804 Eng. square miles.

b. The native states are the Kalāt Khānat and its feudatory states Las Bēla and Khārān.

c. The tribal areas are the country of the Marī and Bugṭī tribes, which are governed by their own chiefs under the Governor General's agent, and not through the Khān of Kalāt. The country near the railway in Kaččhī, belonging to the Dōmbkī, Kahīrī and Umarānī tribes, is administered in a similar way.

Las-Bēla is under its own chief or Djām, a territorial not a tribal ruler, of Indian Rādjpūt origin. It occupies the south-eastern corner of Balūčistān as far as the Sindh border and the Indian ocean.

The Khānat of Kalāt occupies the greater part of the country including the hill country of Kalāt itself with all the Brahōī tribes divided into Sarawān and Djahlawān (upper and lower), all Makrān up to the Persian border and the Indian Ocean and Khārān on the north. It also includes the plain of Kaččhī below the mountains of Kalāt. Khārān, the territory of the Nawshirwānī tribe, is feudatory, but administered by its own chief.

The Khān himself is the chief of the Kambarānī tribe of Brahōīs, and is the head of a confederation of Balōč and Brahōī tribes and of other races which occupy a subordinate position.

Persian Balūčistān originally formed part of the Khānat of Kalāt, but was gradually conquered by Persia after the rise of the Ḳādjār dynasty. The frontier was demarcated by an Anglo-Persian Commission in 1870—1872 and finally surveyed in 1895-1896 under Sir T. Holdich. This province is strictly speaking the western portion of Makrān, and shares its physical characteristics.

Area. The total area of the territories under British administration is 45,804 Eng. square miles, of the Marī and Bugṭī hills 7129. The states of Kalāt and Las-Bēla occupy 79,382 sq. miles. The area of the Persian province cannot be accurately stated but is certainly not less than 50,000 sq. m.

Climate. The climate is extremely severe with great extremes of heat and cold. Makrān probably is one of the hottest districts in the world, but the climate is generally dry; on the coast the heat is aggravated by the humidity of the atmosphere. In the cold season icy storms are prevalent especially on the high lands around Quetta and Kalāt. Makrān, Khārān and the desert tract near Sīstān are always liable to violent winds from the north. The rainfall is everywhere small, being at its highest in the mountainous country of British Balūčistān and the hills north and east of the Kaččhī plain. The highest record for Shāhrigh (average of five years) is 12¹/₄ inches. No other place has so much. In Kaččhī it is only 2 to 3 inches, at Kalāt 5 inches. There are no records for Makrān and the Persian province, but it is certain that the rainfall is less than in the eastern mountains. The whole country is very dry, and cultivation is only possible in the limited areas in which water is available for irrigation. There is good reason to believe that the process of desiccation is in progress and that cultivation was more extensive at some former time than it is now, but its substantial characteristics seem to have been the same in Alexander's time as they are now.

Population. The census of 1901 extended to 76,977 sq. miles only. This tract contained a population of 810,746; and the excluded tracts Makrān, Khārān and West Sindjrānī are roughly estimated at 229,655 souls (at 5 persons to the square mile). This gives a total for Balūčistān within the boundaries of the Indian empire of 1,049,808. Persian Balūčistān may be reckoned at about 250,000. There is a large population of Balōč origin in the Pandjāb and Sindh together with some Brahōīs in the last named province, the total being 1,017,307 Balōčes and 48,180 Brahōīs. In Balūčistān itself the enumerated Balōčes number only 10,4498, but as the population of Makrān and Persian Balūčistān is largely Balōč, it may be estimated at 300,000. Even so the Balōč population of Balūčistān is less than half the number of the same race settled in the Indus valley. The Brahōīs are mainly settled in the Kalāt province and number nearly 300,000.

Flora and Fauna. The greater part of the mountain ranges are barren rock, without forests. There are a few limited tracts in the mountains of British Balūčistān where some small forests are found. There are patches of *Pinus Gerardiana* and *Pinus Longifolia*, also of *Quercus Ilex* on the Sulaimān Range, a forest of olive (*Olea cuspidata*) on Mount Shinghar, a tract covered with wild pistachio (*Pistacia Khinjuk*) on Mount Čiltan, and a juniper forest (*Juniperus excelsa*) at Ziyārat, but throughout the greater part of the country there is nothing that can be called a forest. The dwarf-palm (*Chamaerops Ritchiana*) is common everywhere up to 5000 ft., and its leaves are much used for matting and sandals, the central stem is eaten as a vegetable and the woolly tomentum is made into tinder. The shisham-tree (*Dalbergia sissoo*) and the pukht (*Populus Euphratica*) are often found near river banks. *Acacia Arabica* is also found occasionally in the valleys, and *Acacia Modesta* and *Jacquemontii* on the hill sides. Some varieties of tamarisk, especially *Tamarix Gallica*, also grow near water, and the oleander (*Nerium odorum*) grows in dry watercourses, where also are found occasional willows (*Salix acmophylla*). The yellow flowered pharphugh (*Tecoma undulata*) is not uncommon in some of the valleys.

The date-palm is abundant in parts of Makrān, especially Pandjgūr and Mashkēl. In Pandjgūr it is cultivated and artificially fertilised; the dates

are of excellent quality. In Mashkēl it is apparently wild, and the fruit is collected by the nomad population. Fruit trees generally are few. The climate of the uplands produces the finest fruit of every kind as has been proved at Quetta, but generally speaking no attention is given to the cultivation of fruit trees. Aromatic plants are frequent in the dry hills, and Makrān was of old famous for the production of myrrh, spikenard and bdellium. The latter, now known as 'gūgal', is produced by the 'bōdh' bush (*Balsamodendron Mukul*).

The animals are mainly of the desert and Indian types throughout Makrān and Persian Balōčistān, but in the higher mountains and plains of the north-east they rather belong to the Iranian plateau. The larger Mammalia are scarce. The most important are the leopard (*Felis pardus*), the wolf (*Canis lupus*), the fox (probably *Vulpes Persicus*), the hyaena (*H. Striata*), the badger (*Meles Canescens*), the black bear (*Ursus labiatus*, the black bear of India), the gazelle (*Gazella Bennetti* and *G. fuscifrons*), the wild sheep (*Ovis cycloceros*), and two wild goats viz. the ibex (*capra aegagrus*) and the markhor — locally pāčhin — (*capra megaceros*), the former of which is found on the borders of Sindh and in Makrān and the latter in the Sulaimān Mts. The wild ass or gōr is probably identical with that of Persia and the Indus valley (*Equus hemiones*). The cattle are the humped cattle of India, sheep are both fat-tailed and long-tailed, the buffalo is also of the Indian type; the camel or dromedary is the usual beast of burden, the two-humped camel being unknown except as an imported curiosity. Horses are much bred and are of good quality, spirited and hardy, with a strain of Arab blood. The Balōčes generally ride the mares only.

Whales and porpoises are common on the coast.

Among the larger birds the lammergeier of the mountains (*Gypaëtus barbatus*) is the most remarkable. Common vultures, hawks and falcons are also found. Among game-birds there are four species of sand-grouse (*Pterocles*), the francolin or black partridge, three species of partridge and the common quail. The lesser bustard (*Otis houbara*) is found in the hotter parts in winter, and in summer migrates to the cooler parts of the plateau. The flamingo is common on the coast, and several varieties of ducks and teal make their appearance in the winter.

Crocodiles (*crocodilus palustris*) are found on the eastern side of the country, in the Habb River, and in the streams of the Marī and Bugṭī hills and the Sulaimāns, but are unknown further west. Snakes are numerous, the commonest poisonous snake being the small viper (*Echis carinata*). Cobras are also found in many places especially in the province of British Balōčistān.

Sea-fish abound on the Makrān coast. The inland streams are too small to admit of any abundance of freshwater fish, but mahseer (*Barbus tor*) are found wherever there is a sufficient flow of water.

Ethnography.

The population of Balōčistān may be broadly classified, according to the system based on anthropometry adopted in the Indian census of 1901, as belonging to the Turko-Iranian branch. They are generally tall, the average height in various tribes ranging from 5 ft. 5 in. to 5 ft. 7 in. (160 cm. to 170 cm.): broad-headedness prevails, the cerebral index being 80 or 81; noses are long and prominent, hair and beard abundant, hair and eyes generally black with occasional blue or grey eyes and brown hair, complexion light brown but darker on the coast. These characteristics apply more especially to the Balōč and to some extent to the Brahōī. The Afghāns in this province have a strong resemblance to the Balōč, but have been dealt with under the head Afghānistān. The Indian elements also are to some extent modified by Indian characteristics such as narrower heads, and shorter noses.

Omitting the Afghāns of British Balōčistān the population falls under the heads of Balōč, Brahōī, Indians, and Persians.

The Indian element consists of the Lāsīs of Las-Bēla and the Djaṭs who are mixed up with Balōčes in Kaččhī, probably also the Mēds and other tribes of low social position in Makrān should be included under this head. There are also a certain number of Hindu traders, descendants of more modern immigrants from India.

The Persian or Tādjīk element consists mainly of the Dēhwārs or Cultivators of the Kalāt and Quetta plateau. The large and warlike tribe known as Nawshērwānī of Khārān is also asserted to be of Persian origin, but it is doubtful whether there is any real distinction between them and the Balōč.

The Balōč proper are divided into two groups which are separated from each other by the central mass of Brahōīs. That of the north-east occupies the plain of Kaččhī and the hills to the north of it which merge into the Sulaimān Mts. In these mountains they spread to the north as far as lat. 31° and below the mountains eastwards towards the Indus. A large number inhabits the plains of the southern Pandjāb and northern Sindh, especially the districts of Dēra Ghāzī Khān and Jacobabad. The Balōč of Makrān and Persian Balōčistān, lying to the west of the Brahōī tribes, form the other group.

The Brahōīs are not so scattered but occupy a compact block of country around Kalāt, mostly lying very high, and stretching from Quetta in the north to Las-Bēla in the south, thus completely separating the north-eastern from the Makrānī Balōč.

The Balōč probably, as will be shown below, entered Makrān from Karmān and Sīstān about the period of the Seldjūk invasion of Persia, and soon spread as far as the Indian frontier, from which time the country began to be known as the land of the Balōč, Balōčistān. The name was unknown to earlier writers. The term Balōč has sometimes been loosely employed to include all residents in the country; thus Nasir Khān the Brahōī chief who rose to power in the 18th century is generally alluded to in history as a Balōč.

The nature of the early inhabitants can only be surmised, but they were probably mainly of Indian stock. The earliest name for the country of which we have any knowledge is the Maka of the Behistūn inscription, the Mekia of Herodotus (or the Country of the Mykians), which was included in the 14th satrapy. The Mykians are elsewhere associated by Herodotos with the Utians and Parikanians who were armed like the Paktyans. The frontier between India and Persia is

drawn by Ptolemy so as to leave the eastern part of Balōčistān in India, and Arrian's account of Ora and its inhabitants, the Oreitai, who lived on the river Arabios, now the Purālī, shows that they were Indians, as are the inhabitants of Las-Bēla at the present day. West of them, the inland valleys were occupied by the Gadrosioi, from whom the country was called Gadrosia or Gedrosia, and the maritime territory by the Ichthyophagoi, fishermen now represented by the Mēds and other coast-tribes. Gedrosia remained the recognized name of the country through the classical period; we do not meet with Maka or Mekla again, but it evidently survived in popular use, for the first Arab invaders in the 1st century of the Hidjra found the name to be Mukrān, the modern Makrān. (Possibly the correct reading should rather be Makurān, and this is the modern Balōč pronunciation). The last syllable *-rān* is conjectured by Molesworth Sykes to be the Skr. '*araṇya*', a waste, (which is found also in the Rann of Kačč̄h). Various places along the coast have been identified by Holdich, Mockler and others with places mentioned by the Greek historians. Such are

Rās Mālān — Malana (Arrian),
Puragh, Rampūr — Poura (Arrian),
Gwādar — Barna, Badara.
Kalmat — Kalama.
Astola Island — Nosala.

In Poura we see no doubt the Indian *pura*, a city, but the names given as a rule furnish no certain guide as to whether an Indian or Iranian language was at that time spoken by the population. The Gadrosioi have been identified by Mockler with the Balōč, but there seems no philological justification for this. An original *a* might give rise either to a modern *b* or *g* or *gw* (as in the case of Gwādar) but an original *g* could hardly be represented by a modern *b*. There is besides good ground for believing that the Balōč are immigrants of much later date. Holdich thinks the name of the Gadrosioi is to be found in the modern Gadur a clan of Las-Bēla, but the Gador as shown by the recent census are an insignificant clan of Indian origin, numbering not more than 2000 persons, and it seems impossible to identify them with a wide spread race like the Gadrosioi.

The Djaṭ of the lower Indus comprise both true Djaṭs and Rādjpūts, and the same rule applies to Las-Bēla where descendants of former ruling races like the Sumra and Sammā of Sindh, and the Langāh of Multān are found. At the time of the first appearance of the Arabs they found the whole of Makrān in possession of the Djaṭṭ (Zuṭṭ).

Mas'ūdī indeed brings them as far west as Karmān, but in general they are alluded to as occupying Makrān. The Balōč at that time are described by Mas'ūdī and Iṣṭakhrī as occupying the mountains of Karmān and are associated with the Kōč (*Kufṣ wa Bulūṣ* or *Kūdj wa Bulūdj*), but al-Balādhurī and Ṭabarī only mention the Kōč. It seems therefore possible that the Balōč, although they were certainly in Karmān, when these chroniclers wrote, had not arrived there so early as 23 A. H. when the first Arab invasion took place. Their earlier location seems to have been near the shores of the Caspian sea, and we learn from Firdawsī that Nawshīrwān made war against them. They are associated in this story with the men of Gīlān. Mockler (*Journ. of the As. Soc. of Beng.* 1895. p. 32) says that Firdawsī relates that "Nawshīrwān punished them in Makrān", and from this argues that the Balōč must have been in Makrān at least a hundred years before the Muhammadan conquest, but a reference to Firdawsī's text shows that there was no mention of Makrān.

All these early legends preserved by Firdawsī, and the exploits of Nawshīrwān which are mainly historical, show that the associations of the Balōč up to the time of the Arab conquest were entirely with Northern Persia, but that they were considered to belong to Īrān and not to Tūrān. The name Balōč is frequently coupled in the *Shāhnāma* with Kōč but also often occurs alone, and in many cases it is not found in the older MSS., from which fact it may be argued that the association of the two tribes, which existed when Firdawsī wrote, did not occur in the legends on which he drew. The southward migration to Karmān and the movement into Sīstān and Makrān and thence to the Sindh frontier may be connected with various invasions from Central Asia commencing with that of the Ephthalites or White Huns in Nawshīrwān's time. In the fourth century of the Hidjra the Balōč were certainly established in the Karmān mountains side by side with the Ḳufṣ or Kōč, and had also spread into Sīstān, while Makrān was still mainly in the hands of the Zuṭṭ or Djaṭṭs. The Balōč had a bad reputation as plunderers and infested the desert of the Lūt, which lies between Karmān and Khorāsān. They were consequently frequently attacked by the neighbouring powers such as the Buwaihī 'Aḍud al-dawla, who destroyed great numbers of them, and by Mas'ūd son of Maḥmūd Ghaznawī, who defeated them near Khabīs. All these wars, culminating in the Seldjūḳ invasion and occupation of Karmān and Sīstān, doubtless drove the mass of the Balōč tribes southwards and eastwards into Makrān, and they soon spread up to the Indian border. They are first heard of in Sindh about 650 A. H. (the middle of the 13th century A. D.). They seem to have been at this time in possession of the highlands of Kalāt now held by the Brahōīs, and the further migration of a great part of the race into the plains of the Indus valley may be attributed, in part at least, to the development of Brahōī power. Another cause was no doubt the decay of all central government in India, which followed on Tīmūr's invasions. This tempted adventurers of all classes; the Afghān Lōdīs, the Emperor Bābar and the Arghūns, who found themselves unable to hold Ḳandahār, were among these. The Balōč tribes participated in the Arghūns' invasion of Sindh, sometimes fighting for them and sometimes against them, and also spread under their leaders Mīr Čākur Rind and Mīr Sohrāb Dōdāī into the kingdom of the Langāh Rādjpūts at Multān and up the valleys of the Indus, Djehlam and Čenāb as far north as Bhēra. The Balōčs seem to have absorbed and assimilated some tribes of Indian origin during their stay in Makrān and on the Sindh border, and probably some Arab families may have risen to positions of influence among them, but there is no sufficient ground for supposing that any considerable body of Balōč is of Arab blood, nor that the Rinds are in this respect different from the rest of the Balōč. The theory

of Arab origin seems to have been derived from the Balōč tradition that they are descended from Mīr Ḥamza, and that they came from Ḥalab, that they fought against Yazīd at Karbalā under Ḥusain; but no more importance should be attached to this story than to other similar legends of descent found among many races. Mockler considers that the name Ḥalab or Aleppo in the legends is derived from an actual descent from the Arab tribe of ʿAlāfī, descendants of ʿAlāf, who were in Makrān about 65 A. H. and kept possession of the country after killing Saʿīd b. Aslam who had been appointed there by Ḥadjdjādj. This theory is not supported by any evidence, and though it might apply to certain families of Arab origin could hardly have been adopted by the whole Balōč race, which did not settle in Makrān till four or five hundred years later. It also takes no account of the part of the legend which locates the Balōč in Sīstān before their move into Makrān. Their settlement in Sīstān is put down in this legend to the time of a ruler named Shams al-Dīn, who may perhaps be identified with the Malik of Sīstān of that name who died in 559 H., and their expulsion is attributed to Badr al-Dīn, who has not been identified. Their leader, Djalāl Khān is said to have left four sons Rind, Lāshār, Hōt and Kōrāī and a daughter named Djatō, who was married to his nephew Murād. These five are the eponymous founders from whom the five principal divisions of the Balōč claim their origin. The original forty clans or bolaks (with four servile tribes) who followed Djalāl Khān, mustered under the standard of one or other of the sons, and all Balōčes of the true blood are classed now as Rinds, Lāshārīs, Hōts, Kōrāīs and Djatōīs. Some other tribes which do not fit into the genealogy, are generally classed as Balōč, and of these the most important are the Bulēdī or Balōdhī (called also Burdī in Sindh), who are found both in Makrān, where their original home the valley of Bulēda is situated, and in upper Sindh on the Indus, the Gičkī of Makrān who are believed to be of Indian origin, and the Dōdāī, a mixed Balōč and Rādjpūt race, who claim descent from Dōdā, a Sumrā king of Sindh, and are now found in the South Pandjāb. Their principal existing branch is the Gurčānī tribe of Dēra Ghāzī Khān. The Rinds under Čākur seem to have been the principals in the migration into India, but their supremacy was contested by the Lāshārīs under Gwaharām, and the wars between these two and their dealings with the Turks under Zunū (that is the Arghūns under Dhu'l-nūn Beg), form the subject of many heroic ballads. At the present day Rinds, Lāshārīs and Hōts are found in Makrān. In Kaččhī also there is a large clan of Rinds and a branch of Lāshārīs known as Maghassī.

The Hōts and Dōdāīs in the beginning of the 16[th] century spread northwards along the Indus. The Dōdāīs were under Sohrāb a rival of Čākur, and spread up the Djehlam river as far as Bhērā where Bābar met them in 1519 A. D. At the present day a number of tribes mainly of Rind descent, but with sections derived from Hōts and Lāshārīs occupy the Sulaimān Mountains, and the adjacent plains in the Dēra Ghāzī Khān District and Nothern Sindh. The Gurčānīs (Dōdāīs) are in the same neighbourhood, and the Mīrānī Nawābs of Dēra Ghāzī Khān were also of Dōdāī stock. The towns of Dēra Ghāzī Khān, Dēra Ismāʿīl Khān and Dēra Fatḥ Khān (which give its present name of Dēradjāt, i.e. the Dēras, to this province), were founded by Ghāzī Khān, Ismāʿīl Khān and Fatḥ Khān, sons of Sohrāb according to tradition, and these three men were actually leaders of the Dōdāīs in the 16[th] century, and met Shēr Shāh near Bhērā in 1546 A. D. Raverty is mistaken in speaking of the 'Dūdāī Hūts', as the two tribes were then and are still quite distinct (*Mihrān of Sind*, p. 389). The Rinds are now found mixed with Djaṭ and Rādjpūt cultivating tribes all over the districts of Multān, Djhang, Muzaffargarh, Montgomery and Shāhpur, and the Djatōīs and Kōrāīs, who accompanied them, are found in the same districts; but none of these form organized tribes, and east of the Indus they have lost their language and speak dialects of Pandjābī. West of the Indus, in and near the mountains, the tribes retain their organization under their chiefs and their language. These tribes are (from north to south) the following: Kasrānī, Bozdār, Nutkānī, Lund, Khōsa, Leghārī, Gurčānī, Drīshak, Bugṭī (including Shambānī), Mazārī, Marī, Dōmbkī Umarānī, Bulēdī or Burdī, Djakrānī and Čāndya, to which may be added the Rind and Maghassī tribes of Kaččhī above alluded to.

Most of these tribes are made up of several clans originally distinct, which have collected round a nucleus which gave its name to the tribe. In this way a tribe which is mainly Rind may contain Lāghārī or Hōt clans, or a Dōdāī tribe like the Gurčānīs may have Rind and Lāghārī clans. Not only does this happen but in some cases Indian, Afghān and servile elements have been absorbed.

The Djakrānī are believed to be mainly Djaṭ and the Kahīrī are by some supposed to be of Saiyid origin. The Marī are notoriously a mixed race, and certainly contain Afghān elements. In certain clans among the Bugṭī and others as well as the Marī tribe we find the Indian patronymic *-ija* and the Afghān *-zai* as in Shahēdja, Rahēdja, Kiazai, Mīrozai, Bahāwalzai, which takes the place of the usual Balōč patronymic in *-ānī*. Among the Mazārīs there is a clan known as Kird or Kurd. Nevertheless in most cases these foreign elements have been thoroughly assimilated and cannot be distinguished from Balōčes of unmixed blood.

The origin of the name Balōč and of the names of the principal tribes or clans has been much discussed. It seems probable that all the more recent names of tribes and of most of their subdivisions are really patronymics, but the older names cannot be accounted for in this way. Some of the principal are undoubtedly nicknames, terms implying either praise or abuse.

The word Balōč itself, for which many impossible derivations have been proposed, seems to be an old Persian word meaning cockscomb or crest, as Firdawsī describes them as wearing such crests. Rind and Lund mean knave or vagabond, Mazārī means tigerlike, Lāghār means dirty, Khōsa a robber and Marī a plague (but Mockler suggests the Arab al-Marrī as the origin). Other names seem to be of local origin, thus the Lāshārīs and Maghassīs are the people of the districts known as Lāshār and Maghas in Persian Balōčistān, the Gishkhawrī of the Gishkhawr valley, the Bulēdī come from the Bulēda valley, the Kalmatī from Kalmat.

The name Hōt means hero or warrior, and it seems unnecessary, with Mockler, to seek the origin of this tribe in the Utii of Herodotus. Hughes Buller would with more probability derive the name Hōt from the Oreitai or Horeitai of Arrian. He finds in Makrān a tradition that the Hōt are an old local race, and if they are like the Dōdāī, of Rādjput origin, their association with this tribe in the invasion of India would be explained. Drīshak may perhaps be connected with the place name Dizak of Persian Balōčistān. Gorgēdj is probably also a nickname meaning grave-digger or grave-opener. It is a word of purely Balōč formation, and Mockler's derivation from 'Georgian' seems far-fetched and without historical justification.

The Brahōī although a less important race than the Balōč, if Balōčistān as a whole is considered, form the most numerous and strongest body in the Khānat of Kalāt, to which they are almost entirely confined. They are spread over the highlands of Kalāt from Quetta as far south as the border of Las-Bēla. Some tribes winter in the plains of Kačči. Physically the Brahōī are of the same general type as the Balōč, but differ to some extent in features. Their noses are less aquiline and broader, and the face is of a coarser type. Many are of a broader and thicker build, but there are also many of the pure Balōč type.

The tribes form a confederacy under the leadership of the Khān of Kalāt and are divided into two large groups, the Sarawān or upper and the Djahlawān or lower Brahōīs. This confederacy is of modern origin and comprises some tribes such as the Rinds and Magh̲asīs of Kačči which are purely Balōč. Nearly all the tribes composing it are however now considered to be Brahōīs, but many of these are of Afghān, Balōč or Indian origin. Mr. Hughes Buller on the authority of the Ex-Khān of Kalāt states that the true Brahōīs who form the nucleus of the whole race are the following:

Kambarānī, divided into Aḥmadzai (The Khāns' clan) and Iltāzai;
Mīrwānī;
Gurgnārī;
Sumālānī;
Ḳalandarānī (or Ḳalandrī).

These, like the Balōč, claim to come from Halab, that is Aleppo in Syria. It is probable that they really are immigrants from the west, and it is possible that they should be identified with the Kōč who were associated with the Balōč in Karmān before they moved into Makrān. The name Kōč meant simply 'nomad', and Idrīsī stated that they were a sort of Kurds. It will be seen below that there is still an important tribe of Kurds among the Brahōī, and the name by which all Brahōī are known in Las Bēla is Kurd-gālī or 'men of Kurd speech'. There seems therefore some ground for supposing that this original core of the Brahōī race consisted of immigrants of Iranian blood akin to the Kurds of Western Persia.

The next group given by the Khān consists of the tribes believed to be of Balōč origin, and to have been in the country before the arrival of the Brahōīs. These are the

Bangulzai (the Garrani clan of this tribe speak Balōčī);
Lāngav (probably originally a servile clan);
Lēhrī;

then follow tribes said to be Afghāns, viz. the

Raīsānī;
Sarparrā;
Shāhwānī (sometimes said to be Balōč);

then tribes said to have come from Persia, viz. the

Kurds;
Mamasānī (or Muḥammad Ḥasanī);

and those said to be of Djaṭ origin, viz. the

Bizandjō;
Mīngal;
Sādjdī;
Zēhrī.

The last in the list are supposed to be the old inhabitants of the country before either Balōč or Brahōī entered it, but are distinct from the Djaṭṭ; these are the

Muḥammad Shāhī;
Nīčārī.

In addition to the distinction of blood between the tribes there are also internal distinctions within each tribe. In most tribes there are certain sections claiming to form the original tribe and others said to be accretions from outside.

The Brahōī language, as will be seen below, is of Dravidian origin, and may be supposed to be the language of the aboriginal tribes found on the Kalāt highlands before either the Balōč tribes (speaking Balōčī) or the Brahōī tribes (speaking a tongue known then as Kurd-gāl) arrived. This language seems to have been adopted by the incomers who settled on the plateau, the Brahōī tribes, the remnants of the Balōč who had settled there before them, and the sections of the Tarīn Afghāns who joined with them in expelling the Balōč. Some of the original inhabitants were absorbed among the newcomers and some, whether Dravidian or Djaṭ, kept up an independent tribal organization. The whole were bound together by a common language, the old language of the country, and form the modern Brahōī race. This seems to be the most probable history of the formation of this complex organization.

The name Brahōī is evidently modern, and, as Hughes Buller suggests, is probably a patronymic like most of the tribal names. It is a derivative from Brāho a popular form of Ibrāhīm. The derivation from *ba-rōhī* 'on the mountains' is impossible. This hybrid word is supposed to be made up of the Persian *ba* with the Sindhī *rōh* mountain, but such a formation is unknown. The adjective from *rōh* is *rōhēla*, *rōhīlā* mountaineer a term often applied to Afghāns, the Persian equivalent to which would be Kōhī or Kōhistānī.

The Dēhwārs are a branch of the Tādjīk or Eastern Persian race so widely spread in South Afghānistān. They are found mainly on the Kalāt plateau. They speak Persian and are occupied in agriculture. They are a settled race living in permanent *dēhs* or villages, from which they get their name of Dēhwār or villager, in distinction from the nomad Brahōīs. They hold a subordinate position under the Brahōīs.

The populations of Indian origin may be classified as follows:

the Lāsīs of Las Bēla;
the Djaṭṭs of Makrān and Persian Balōčistān;
the Djaṭṭs of Kačči;
the Khētrāns.

Lāsīs. The tribes of Las Bēla were formerly classed as Numrīs or Lumrīs, but according to

Hughes Buller this name is not now in use except as a contemptuous term for the menial classes. It appears to be derived from the Namurdī Balōč tribe formerly important on the Sindh frontier but now lost. (There is however a clan still bearing the name among the Bozdārs of the Sulaimān Range). The word Lāsī is now used for all the tribes of Las, the greater part of which are Rādjpūt and Djaṭṭ tribes akin to those of the Indus valley.

The leading tribes, which are probably of Rādjpūt origin are the

Djāmot, to which the Djām or ruler of Las belongs;
Rūndjhā, the most numerous tribe;
Langah;
Čatta, connected with the Sammā of Sindh;
Shēkh, a mixed tribe;
Siāhr, a partly Brahōī tribe;
Gongā.

Of a lower social position are the

Babbar;
Gadrā;
Mēd.

These are servile or subject races, of dark complexions and broad noses, many of them showing negroid features. The Mēds are the fishing population living near the sea, and spread also along the Makrān coast.

The language of the Lāsīs generally is Djadgālī (or Djagdālī) that is the language (gālhᵘ) of the Djaṭs, which is a form of Sindhī: but the Siāhr tribe speak Brahōī, and some of the coast Mēds speak Makrānī Balōčī.

The Djaṭs of Makrān. These seem to be akin to the tribes of Bēla. They are scattered throughout the province and are subordinate to the Balōč who are the ruling class. The Djaṭs, called Zuṭṭ by the Arab chroniclers, held the whole country up to Karmān at the time of the first Arab invasion in the first century of the Hidjra. There can be little doubt that some of the leading clans have been absorbed among the Balōč, and now speak Balōčī and are not to be distinguished from other Balōčes by their appearance. The Dōdā tribe for instance are probably akin to the Balōč Dōdāī, and some admixture may be suspected in the tribes whose names are derived from localities in Makrān and Persian Balōčistān, such as Bolēda, Gish-Kawr and Kolānč in the former from which the names of the Bolēdī, Gishkawrī and Kulāčī tribes are derived; and Maghas, Lāshār and Dōmbak in the latter from which come the names of the Maghassī, Lāshārī and Dōmbkī tribes. The derivation of Bugṭī from Bug is doubtful, the ṭ is the Indian cerebral, and is not accounted for by this explanation. Possibly Drishak may be connected with Dirak, as in Sindhī dialects initial d passes into dr. In all such cases, where a tribe was so thoroughly identified with a locality as to take its name from it, it is at least probable that some local elements were absorbed. The Balōč invaders were however sufficiently numerous and powerful to impose their language on the whole of Makrān, and it is only in Las Bēla, where the Djaṭs and Rādjpūts remained comparatively pure, that an Indian dialect maintained itself.

The Djaṭs of Kaččhī. Here the Djaṭ cultivating population are contiguous to and practically identical with their kinsmen of the Indus valley, from whom they are separated by no natural barrier. They are in a subordinate position to Brahōī and Balōč overlords, and pay them a share of the crops. The term Djaṭṭ here as in the South Pandjāb comprises tribes of Rādjpūt origin such as the Somrās, as well as true Djaṭs. Other important clans are the Khōkhars (also Rādjpūts) and the Abrās. The name Djaṭṭ (with the Indian cerebral) has sometimes been confused with the Balōčī word djat (with dental t) which means a camel-herd only, independent of race or tribe. Among these tribes also the language is Indian, the dialect being akin to the Lahndā of the West Pandjāb.

The Khētrāns. It is certain that the whole of the triangular block of hill country now occupied by the Marīs and Bugṭīs was in the possession of Indian tribes before the Balōč invasion. They were gradually destroyed or absorbed by the Balōč from the south and the Afghans from the north, and such names as Shahēdja among the Marīs, Rahēdja among the Bugṭīs and Haripāl among the Afghāns to the north indicate that fragments of these tribes remain among Balōč and Afghān. The Khētrāns, however between Afghān and Balōč have preserved their identity and their peculiar Indian dialect (of the Sindhī type) to the present day. The process of assimilation was in progress, and the Khētrāns would probably have been absorbed or converted into a Balōč tribe in a few generations if the advent of British rule had not saved them. There is even now a good deal of mixture among them; in organisation they are like a Balōč tuman, and certain sections are perhaps of Balōč blood, although the Hasanīs, who speak Balōč, are probably the remains of an Indian tribe which had been assimilated and afterward destroyed by Marī and Bugṭī. The Nāhars too, who are asserted by Raverty and others to be the Afghān Nāghar, are probably really Indian. The name Nāhar means a tiger in Lahndā, and there is no proof of the identity of the tribe with the Nāghar. The medial gh might have become g in Indian mouths, but scarcely h. It is probable therefore that both Hasanī and Nāhar are really of similar origin to the Khētran among whom they live. A similar tribe, the Dja'afir, speaking a language like Khētrānī, occupies the valley of Drug in the Sulaimān Mts.

Patronymics. It was noticed above that the ordinary Balōč termination — ānī sometimes gives way to — zaī and djā. We find a similar admixture among the Brahōī who make use of the Balōčī -ānī, the Afghān -zaī, and the Sindhī -djā for the subdivisions of their tribes, — zaī being much more usual than among the Balōč. The Afghān -khēl is not used. It seems impossible to draw any trustworthy deductions as to race from these terminations which are mostly modern. Similar terminations are found among the Lāsī tribes.

Social organization. The modern tribe both among Balōčes and Brahōīs is an aggregation of clans around a central nucleus. These clans seem to be the original elements into which the population was divided, and the names of the oldest clans, the 'bolaks' of the old ballads, are seldom among Balōčes found as tribal names at the present day, but are frequently found among the component clans. The whole tribe (tuman) is under the rule of a chief or *Tumandār*, whose authority is generally respected, and under him each

clan (*phāra* or *pakar*) is presided over by a head man or *Muḳaddam*. These offices are hereditary, and the chief's family always belongs to a particular section of a certain clan, which section is known as the *phāgh-tagh* or "home of the turban", the binding-on of the turban being the ceremony which denotes accession to the chiefship. It often happens that certain tribal sections of alien blood to the majority of the tribe show great independence of the chief, and a tendency to split off and join another, perhaps a hostile tribe, but in modern times the existing constitution of each tribe tends to become fixed owing to a more settled system of government. Among the Lāsī tribes the unions of clans are more fluctuating and temporary than among the Balōč and Brahōī tribes.

Among the Brahōīs a further tendency to concentration showed itself in the formation of a confederacy of tribes by Naṣīr Khān in the eighteenth century. They were grouped into two divisions, the Upper or Northern (Sarāwān) and the Lower or Southern (Djahlāwān), the chief of the Raisānīs was appointed to be head-chief of the Sarāwān coalition, and the chief of the Zēhrīs to be head-chief of the Djahlāwān coalition. Over the whole was the Khān of Kalāt. This arrangement has contained till the present day. No purely Balōč tribes except the Rinds and Maghassīs of Kač̄čhī were included in this arrangement, and the Khān's relations with these tribes both to the north east and in Makrān depended solely on his power to enforce his authority.

Most of the Balōč and Brahōī tribes are nomadic, they depend but little on cultivation and must find pasture for their herds of sheep, goats, cattle and camels. Wherever it is possible the tribes move into the plains either of Kač̄čhī or Sindh in the winter and return to the hills as the hot weather comes on. The stationary population occupying fixed villages are seldom either Balōč or Brahōī, but are Djat in the plains and Dēhwār on the uplands. Settled government does not increase the tendency to live in villages, on the contrary, as the danger of attack by enemies becomes less, the necessity of congregating in walled villages disappears, and the nomadic instinct can be indulged in safety. On the other hand the development of irrigation has increased the population in tracts where water is available, but most villages are very small. Land fit for cultivation is found only in small and scattered areas, and the majority of the population will always be dependant on pastoral pursuits.

Both among Balōč and Brahōī the blood-feud is one of the principal features of tribal life. The feud generally originates in the abduction of a woman or a murder when the injurer and the injured person belong to different families, clans or tribes. Such feuds are most persistent, but in modern times under British superintendence it has been found possible to deal with them on principles of compensation, and important cases are settled by tribal or inter-tribal councils, which fix terms of compensation, and use their influence to bring the combatants to terms. A feud is often terminated by a marriage between the hostile factions.

Although the Brahōī long held the central power in the country their social position was never regarded as equal to that of the Balōč. The feeling is shared by the Brahōīs themselves, who often try to prove Balōč descent, and the fact that the Balōč will not marry their daughters to Brahōīs is a sign of the relative social rank of the two races. It may be added that Brahōīs often adopt the Balōčī language, and that it is generally used in the Khān's family.

Religion, Education, Language, Literature.

Religion. The great mass of the population of Balōčistān is Musalmān, the Hindūs are few, and are mostly immigrants occupied in trade. The Balōčes, Brahōīs, Lāsīs, Dēhwārs and Djat are all Musalmāns, and all call themselves Sunnī. There are probably no admitted Shī'as among the tribes, but at the same time it must be recognized that they cherish many Shī'a practices, especially the extreme devotion to Ḥasan and Ḥusain. The ten days of the Muḥarram are observed except among Afghāns who are stricter in their Sunnī creed, and keep only the last day. There is also a very wide spread adoration of *Pīrs* or Saints, and celebrated shrines are much resorted to, many of which no doubt are ancient seats of pre-Islāmic worship. The shrine of Hinglādj near the coast in eastern Makrān is resorted to by Hindūs as well as Musalmāns, and the same may be said of Sakhī-sarwar on the skirt of the Sulaimān Mts. near Dēra Ghāzī Khān and of the shrine of Lāl Shāhbāz or Djīve Lāl at Sehwān in Sindh, both of which the Balōčes hold in great honour. The more modern shrine of Taunsa in Dēra Ghāzī Khān has also attained great celebrity among the northern tribes. Older shrines in the north are that of Pīr Sohrī at Sohrī-Khushtagh in the Bugṭī country, and Zinda Pīr in the Lūnd country where hot springs of great efficacy mark the scene of the saint's translation to heaven. Mount Čihl-tan near Quetta gets its name from the shrine of Ḥaẓrat Ghauth, whose forty children were exposed on the mountain, Četan Shāh near Kalāt also marks the site of a spring miraculously produced by the saint. A sacred spring in Mangōčar is efficacious for bites of mad dogs, and the shrine of Sulṭān Shāh in Zehrī is resorted to by fever patients. At the shrine of Pīr 'Umar near Khosdār the ordeal by water is applied in a neighbouring stream. Shāh Bilāwal in Las-Bēla is also resorted to by Hindūs as well as Musalmāns. In addition to the ordeal by water the ordeal of fire is occasionally resorted to but not in connection with any shrine. Fanaticism is not common, and in this respect the Balōč and Brahōī contrast favourably with the Afghān. There is considerable laxity in the outward observances of religion, but nevertheless there is often a strong religious feeling among the more thoughtful persons, as is clearly shown in some of the religious poems which I have published.

The Dhikrī sect has great vogue in Makrān, especially among the Sangharṣ, in Las-Bēla and among certain tribes of Brahōīs such as the Sādjdī and Bīzandjō. Naṣīr Khān persecuted this sect in the 18th century, but it regained its position after his time. The Dhikrīs consider their founder Dōst Muḥammad to be the twelfth Mahdī and resort to his shrine at Turbat in Khorāsān. No other heretical sect has attained to any influence in the country.

It is possible that the Ḳarāmiṭa or Karmaṭians

heretics who had great influence in northern Sindh, Kaččhī and Multān in the 4th and 5th centuries of the Hidjra and were attacked at Multān by Maḥmūd of Ghaznī are represented in the present day by the Kalmati tribe of Kaččhī who are classed among Balōčes, but are not considered to be of Balōč origin. They are believed to possess magical powers of healing the sick. Similar powers are attributed to the Kahirī who are believed to be of Saiyid origin. The story in the *Ta'rīkh-i Ma'ṣūmī* (about 1600 A.D.) derives their name from the tree called *Kahīr*, which their ancestor is said to have ridden like a horse. (The Kahir is the *Prosopis Spicigera*). The real origin of the name is probably from a place name, as Kahīrī is applied to many valleys where this tree is abundant. Certain tribes also possess levitical clans to whom similar magical powers are attributed, as the Nothānī clan among the Bugṭīs.

Certain racial customs have almost the force of religious observances. Most Balōč for instance will not touch fish, and the principal clan among the Kaččhī Rinds object to camel's flesh. The Lāshāris will not touch the *kaungh* or *ūzo*, a milky juiced plant generally eaten by hillmen. All Balōčes consider it a disgrace to cut the hair or beard except to perform the sunnat, or clipping of the moustache usual among Sunnīs. Eggs are often considered objectionable, the reason assigned being that they cannot be killed in the orthodox fashion. Signs and omens are much observed and the usual method of augury is to examine the blood-vessels on the shoulder-blade of a newly killed sheep. A similar practice was followed by the Mughals in the time of Čingīz Khān.

Of all virtues that of hospitality and affording shelter to refugees is the most prized, and it is considered one of the first duties of a man to punish conjugal infidelity by the death of the woman and her paramour, a fertile cause of blood feuds.

Religious poetry is by no means uncommon. The poets are ordinary Balōčes, not Mullās nor persons with any special religious character. The plain doctrines of Islām, the delights of heaven and the terrors of hell are set forth in simple and vivid language.

Saiyids or reputed Saiyids though common among the Afghāns are not numerous in Balōčistān proper. There are a few families classed as Shaikhs who appear to be of Kuraishī blood, but most of the so called Shaikhs of Las-Bēla are descended from converts from Hinduism.

Education. There is little education except in the schools at important centres such as Quetta and Sibī established by Government in recent years, and these schools are used more by the immigrant than the indigenous population. Sons of chiefs and persons of importance generally learn Persian or Urdū. Otherwise few Balōčes and Brahōīs receive any education in Balōčistān proper, but in Dēra Ghāzī Khān and North Sindh education has made greater progress. Religious schools can hardly be said to exist. The Afghān districts depend on the schools at Kandahār and Peshāwar. As a rule the Mullās in Balōčistān are drawn from the subordinate classes, Dēhwār or Djaṭ.

Language and literature. The Afghān population of British Balōčistān speak the South-western or Kandahārī variety of the Pashto language, which has been dealt with under Afghānistān. In the remainder of the country including the Khānat of Kalāt, Persian Balōčistān and the Balōčī districts of the Pandjāb and Sindh the languages are Balōčī, Brahōī, Persian and Djadgālī (or Djaghdālī).

Balōčī is an Iranian tongue belonging in the main to the East Iranian branch, although in some points it shows greater affinity with the Old-Persian than with the Avesta.

The language is divided into two very distinct dialects:

1. The northern dialect spoken by the tribes of Kaččhī and the adjacent hills, the Sulaimān Mts., and parts of the Dēra Ghāzī Khān District in the Pandjāb and the Jacobabad District in Upper Sindh. It extends occasionally to the Indus, and even among the Mazārīs to the left bank of that river. It is also made use of by some of the Sarāwān Brahōī;

2. The Makrānī, or southern Dialect which is spoken in Makrān and Persian Balōčistān, and also by the family of the Khān of Kalāt. It is possible that the dialect spoken in Khārān, the northern desert and by the Balōčes of Sīstān should be classified as a distinct dialect from either of the above but sufficient information regarding it is not forthcoming.

Within the above dialects there are also minor differences; the northern falls into a southern group with fuller grammatical forms and a northern group in which phonetic decay has made more progress. Makrānī also has eastern and western varieties, the western being more affected by modern Persian.

Northern and Makrānī Balōčī differ considerably in pronunciation, but are mutually intelligible.

The following are the distinctive points in Balōčī when compared with other Iranian languages:

1. the vowel system is on the whole well maintained;

2. the distinction between *ē* and *ī*, between *ō* and *ū* is persistent, and not lost as in Modern Persian. There is however a strong tendency for *ū*, *u* to become *ī*, *i*. This is more common in the northern than in the Makrānī dialect.

Geiger considers the following the principal points in the consonant-system which denote the antiquity and originality of Balōčī:

1. the preservation of medial and final surds which are weakened to sonants in Modern Persian;

2. the preservation of medial and final *ď*, which often is weakened to *y*, *i* in Modern Persian;

3. the hardening of spirants such as *kh*, *f*, *th* into *k*, *p*, *t*. (This is more distinctive of Makrānī than of North. Bal. in which this process is confined to initials which are aspirated and become *kh*, *ph*, *th*);

4. original *hv* (M. Pers. *khw*) becomes *w*, (sometimes in N. Bal. *hw*);

5. original *v* becomes *gw* (or *g*: before *i* vowels);

6. original *dj* and *z* are kept separate, and not confounded in a common *z* as in M. Pers.

There are also other minor points.

The chief phonetic points of difference between the two dialects are the following:

1. the tendency to aspirate surd consonants as *k*, *t*, *č*, *p* is confined to N. Bal.;

2. the termination *-ag* which is so common in Makrānī is *-agh* in N. Bal.;

3. medial and final letters in Makrānī have a tendency to become the corresponding spirants in N. Bal., thus *k* becomes *kh*, *g* becomes *gh*, *t* be-

comes *th*, *d* becomes *dh*, *p* becomes *f*, *t* becomes *th*, *d* becomes *dh*. These transformations make North Balōčī a softer and more harmonious dialect than Makrānī.

The Balōčī vocabulary has borrowed a large number of foreign words, the proportion of which varies in the different dialects. The principal loans are from Persian and Sindhī (or dialects related to Sindhī). The Persian words are very common, but are more so in western Makrān than elsewhere. In the same way, while a certain number of Sindhī words are universally used, the proportion is larger in N. Bal. Arabic words appear to be not direct loans, but through the medium of Persian. These are the principal sources from which the foreign vocabulary is derived. A few words come from Brahōī, and in modern times Urdu has furnished a few. Pashto has hardly had any effect.

Balōčī has no written literature, but possesses a great body of popular poetry, including a number of heroic ballads dealing with the wars and migrations of the 15th—16th centuries, other more modern ballads and romantic tales, didactic and religious poems and love songs. These poems and a number of prose tales and legends have been reduced to writing by modern students. The whole of the poetic material hitherto made available and the greater part of the prose is in the N. Bal. dialect and but little has so far been published in Makrānī.

Brahōī. Brahōī is now recognized as belonging to the Dravidian family of central and southern India. The structure of the language leaves no room for doubt on this point, which was established by Trumpp in 1880 and is recognized by Grierson in the recent *Linguistic Survey of India*. The doubts which were entertained on this point were due chiefly to the fact that the vocabulary is overlaid with a mass of Persian, Balōčī and Sindhī words, and that the grammar has also been affected occasionally by forms borrowed from Balōčī. Instances of the latter process are not however so numerous as has been imagined. In some cases the borrowing has been on the side of Balōčī. The affinity is with the southern group of Dravidian languages rather than with the Muṇḍā languages of Central India. It is probably the original language of the tribes recognized as the old Brahōī stock who are believed to have been driven out of the Indus valley into the hill country before the appearance of the Balōč or of the other tribes now classed as Brahōī. Some of these tribes have not adopted the Brahōī language as noted above. In the present day the Brahōī speakers occupy a compact block of country separating the northern from the Makrānī Balōč, and touching also on the Djagdalī and Sindhī dialects of Kačchī and Las-Bēla, and in the north meeting Pashto in the neighbourhood of Quetta and Sibī.

There is no literature, the language never having been written till modern times. A good many tales and one or two poems are found in the text books of the language compiled by Allāh-Bakhsh and Mayer.

Persian. The Dēhwār cultivators make use of the Persian language, in a form probably very much the same as that used by the Tādjīks of Southern Afghānistān, but no special study has been made of the dialect.

Lāsī. The greater number of the inhabitants of Las-Bēla speak dialects which are known as Djadgālī or Djagdālī, that is the language of the Djats. These are dialects of Sindhī and may be considered as belonging to the Lāṛī or southern branch of the language.

Dialects of Kačchī. With these may be classed the dialects spoken by the mixed population of Kačchī, Djaṭs, Hindū traders and some scattered Balōč, Brahōī and Afghān who are detached from the main body of the tribes. These belong to the Sirāī or northern Sindhī and are in some respects more like the southern dialect of the Lahndā or Western Pandjābī known as Djaṭkī. The Balōčī name for it is Djagdālī, another form of the word used for Lāsī.

Khētrānī. With this language must be classed that spoken by the Khētrāns, which although geographically nearer to the Djaṭkī of the Pandjāb has some features more in accordance with Sindhī.

History.

Karmān was conquered in 23 H. by ʿAbd Allāh under the orders of the Khalīfa ʿUmar, and he found the mountains of that province occupied by savage tribes called by some Ḳufṣ or Kōč and by others Kurds, with whom are coupled the Balūṣ or Balōč by certain chroniclers. The conquest did not go beyond the frontiers of Karmān where the Zuṭṭ or Djāṭs, who occupied the whole of Makrān, were encountered. But no Arab army actually traversed Makrān until later.

Al-Balādhurī states that the Caliph ʿUthmān had sent an explorer to the confines of Hind to obtain information regarding the land, and his route must have been through Makrān. He reported that the country was barren and the inhabitants brave, so that a small army would be destroyed, while a large one would die of starvation; and this was no doubt the reason why the conquest was so long deferred. In the time of Muʿāwiya, about 44 (664) the towns of Makrān were occupied, war made against the Mēds of the coast, and expeditions were pushed up to the Sindh frontier. Certain unidentified districts named Nūḳān and Ḳīḳān were also occupied, and Ḳuṣdār, (the modern Khozdār). Nūḳān possibly was the hill country of Kalāt, of which Ḳuṣdār was the capital. Al-Balādhurī says that in his time the people of Nūḳān were Musulmāns. In the time of Ḥadjdjādj there was fighting in Makrān between Arab factions, when Saʿīd b. Aslam was killed by the sons of al-Ḥārith the ʿAlāfī, who were afterwards driven into Sindh by Ḥadjdjādj 85 (705). It is to these ʿAlāfīs that Mockler attributes the origin of the Kind Balōčes, alluded to above. Ḳandāʾīl (or Ḳandābīl), generally identified with Gandāva, is also said to have been taken at this time. Muḥammad son of Ḳāsim was then despatched by Ḥadjdjādj to his celebrated invasion of Sindh in 89 (707). This would have been impossible unless Makrān had been first subdued, for the northern routes to India through the passes of Afghānistān were not yet open to the Muḥammadan invaders, and they had not made any attempts at expeditions by sea. We find that Muḥammad b. Ḳāsim spent some time in Makrān before advancing further and took the towns of قنزبور and ارمائيل, which are generally transliterated Ḳanazbūr or Kanazbūn and Armāʾīl or Armābīl. From Armābīl he advanced into Sindh and

attacked Daibul. The correct form of these names is very doubtful. Ḳanazbūr or Ḳanazbūn is certainly a corrupt form, and it is possible we should read پنجگور Pandjgūr, as the fertile Pandjgūr valley is a position which must have been occupied by the invaders. Armābēl is perhaps the most probable form of the name of the latter town, which was the last halting-place before Sindh was entered, and the syllable bēl suggests the name of Bēla the capital of Las-Bēla. The form Armā'il might be represented by the modern Urmara, but the distance from Daibul is too great. If we could read Adha-bēl for Arma-bēl we might see in it the Adhyavakīla or Atyanabakēla of Hiuen Thsang, which also seems to correspond with Bēla. The author of the *Čač-nāma* too, who was a native of Sindh, describes how Čač (a king of Sindh before the Arab conquest) took Armābēl which he found occupied by Buddhists (in accordance with what Hiuen Thsang says), and then advanced through Makrān visiting Ḳanarpūr (Pandjgūr?) and finally fixed the boundary between Makrān and Karmān. Ḳandābēl although, as Raverty points out, it is stated in the *Masālik wa Mamālik* to be only five farsangs from Ḳuṣdār, is shown in the map given by the same authority (also reproduced by Raverty in the *Journ. of the As. Soc. of Bengal*, 1892, p. 222) as distant from Ḳuṣdār, and all authorities agree in placing it in the desert country of Nudhiya of which it was the capital. This was undoubtedly the plain of Kaččhi, and Ḳuṣdār was the capital of the Kalāt plateau, generally called Tūrān.

From these accounts we may gather that Makrān was probably slightly better watered and more populous than at the present time, but still it had a bad reputation as a desert and inhospitable country, and it does not appear probable that it ever supported large towns or a dense population. The Arabs write the name of this province Mukrān, but the Balōč of the present day call it Makurān and this was perhaps intended by the Arab writers. Marco Polo (circ. 1300 A. D.) writes it Kesmacoran, i. e. Kēdj-Makurān, the first syllable being the province of Kēdj, Kedj or Kēč. In modern times it is often called Kēč-Makrān.

The Arabian influence was probably maintained on the coast through the sea trade, which necessitated a hold upon the ports, but inland it no doubt decayed as the central Khilāfat Government weakened; and during the following centuries we have very little information regarding it. Maḥmūd of Ghazni no doubt extended his power from Multān over the plain of Nudhiya which extended through northern Sindh and Kaččhi to the foot of the Bōlān, and he also held the Kalāt plateau, for we are informed in the *Ṭabaḳāt-i Nāṣirī* that Ḳuṣdār was subject to him. The population of Kaččhi (Nudhiya), Kalāt (Tūrān) and Makrān continued to be mainly Indian, and we may suppose that in Tūrān and the adjacent parts of Sind the Dravidian tribes continued to hold their own.

Meanwhile the Balōč tribes and their neighbours the Kōč continued to occupy the mountains of Karmān; whence the Balōč raided far and wide, and crossed the Lūt desert into Khorāsān, and also spread into Sīstān. Al-Balādhurī who died 279 (892) and Ṭabarī circa 320 (932) only mention the Kōč or Ḳufṣ, but Mas'ūdī circa 332 (943) and Iṣṭakhrī circa 340 (951) give the name of both Kōč and Balōč, as do the later authorities such as Idrīsī and Yāḳūt. Idrīsī, about 543 (1151) says that the Kōč mountains were inhabited by a wild race like the Kurds, and that the Balōč were to the north and west of them, were prosperous, owners of cattle, and did not infest the roads so much as their neighbours. Yāḳūt also confirms this statement, and quotes an Arabic poem about this country which says 'What wild regions we have traversed, occupied by Zuṭṭ, Kurds and barbarous Ḳufṣ'. The Ḳufṣ are described as claiming Arab descent and also as being inclined to the Shī'a heresy. The Balōč, he says, were formerly the most terrible of all these races, but had been destroyed by 'Aḍud al-Dawla Dailamī (338—372 = 949—982): it may be added that Mu'izz al-Dawla of the same family lost his hand when fighting against Kōč and Balōč. Iṣṭakhrī mentions that even in his time two provinces of Sīstān were known as Balōč country, and soon afterwards their plunderings in the Lūt between Tabbas and Khabīṣ brought the anger of Maḥmūd Ghaznawī down on them, and he sent his son Mas'ūd against them, who defeated them near Khabīṣ. They become numerous in Sīstān about this time, and it seems probable that the Shams al-Dīn of Sīstān of their legends is the Malik Shams al-Dīn of Ṣaffārī descent, who is recorded in the *Ṭabaḳāt-i Nāṣirī* to have been an oppressive ruler. He died in 559 (1164). The Balōč are said in the legends to have been expelled from Sīstān in his successor's time. Certain it is that a great eastward movement of the Balōč race began about this period. They seem to have abandoned Karmān altogether, and moved in a mass into Makrān, which became and has remained a Balōč country ever since, many of the more warlike Djaṭ tribes and the remains of the Arab settlers being probably absorbed among them during the next three hundred years. The movement from Karmān corresponds with the occupation of Persia by the Seldjūḳs and it may be surmised that the Balōč found that strong governments like those of the Seldjūḳs and Ghaznawīs rendered it impossible for them to live by plunder as they had hitherto done. (Houtsma, *Recueil de textes relatifs à l'histoire des Seldjoucides*, i. 5—7). Many of them no doubt pressed on towards the Sindh border, and thence began to raid from the mountain barrier. About the middle of the thirteenth century in the time of the Sōmrā kings of Sindh Khafīf, Dōda iv. and 'Umar, we find Balōčes in Sindh allied with Sōdhās and Djharēdja Djaṭs.

In the year 618 (1221) the Khwārizmī King of Ghaznī Djalāl al-Dīn Mangbarnī after his defeat on the Indus by Čingiz Khān made his way into Sindh, and thence into Makrān, and traversed the country from east to west making his way into Persia about 622 (1225); but Makrān was now seldom visited by the armies of invaders. The Mughals and Čingiz Khān, the Turkish followers of Tīmūr, the Arghūns, and Bābar all followed more northern routes, and the Balōč themselves, when they at last burst out from Makrān, avoided the coast route by Bēla, and after occupying the plateau and perhaps to some extent coalescing with its Dravidian inhabitants, poured down through the Bōlān, Mullāh and Nalī passes into Kaččhi. Tradition represents that the Brahōīs at

this period took Kalāt-i Nīčārā from the Balōč, and that the descent into the plains was caused by this loss. It seems probable that in reality the Nīčārīs and Muḥammad Shāhīs, the old Dravidian stock, had held the Ḳaydār country from early times. The old name of Kalāt-i Nīčārā seems to denote that they were its oldest inhabitants. In the disturbed period following the Saldjūḳ and Mughal irruptions other refugees than the Balōč seem to have found their way to this plateau from the west, among them probably the Kōč or Kurds who had lived side by side with the Balōč in the Karmān mountains. This is the most probable origin of the non-Dravidian Brahōīs, with whom some Balōč and Afghān clans combined to form the Brahōī confederacy. The process must have been a gradual one, as the adoption of the old Dravidian language proves. The great mass of the Balōč no doubt found these occupants of the highlands too strong to disturb and pressed eastwards into the Indus valley in search of fresh fertile lands to occupy. Something very like a national migration took place, but sufficient Balōčes remained in Makrān to make it predominantly a Balōč country ever since. Las-Bēla was out of the course of the invasion. Its population consequently remained Indian. The Balōč were true colonists, who settled in tribes where they found themselves strong enough, subduing but not exterminating the aboriginal Djaṭs. They had no central organisation, but each tribe was under its own chief; although temporary combinations under the chief of the Rinds or of the Lāshārīs were occasionally formed, if we can judge from the early ballads. This loose organisation prevented the establishment of any permanent kingdom. Each tribe fought for itself, and they often fought against each other. Their invasion of India therefore, although it has profoundly affected the population of the Indus valley, has been almost unnoticed in history, while invasions like those of Čingiz Khān, Tīmūr and Nādir Shāh, which have left no trace on the population, fill a conspicuous place in the historical drama.

The first tribes of which we have any record are the Rinds under Mīr Čākur and the Dōdāīs under Mīr Sohrāb who appeared at the court of Shāh Ḥusain Langāh, at Multān. The Langāhs are still known as a Musalmān Rādjpūt tribe in Laia, South Pandjāb, and after the break up of the Dihlī Salṭanat they formed a small kingdom at Multān. Shāh Ḥusain the second of these kings ruled from 874 to 908 (1467 to 1502). During his reign Sohrāb with his followers came to his court and obtained *djāgīrs* on condition of military service. Other Balōčes followed, among them Mīr Čākur and his Rinds who came from Sīvī (now generally called Sibī, but Sēvī by Balōčes). Great rivalry followed, and according to the ballads there was war between Rinds and Dōdāīs. These same ballads state that Čākur left Sīvī because of his war with the Lāshārīs under Gwaharām, and with the Turks under Zunū. In these legends the memory is perpetuated among Balōčes of their migrations and of their dealing with the simultaneous invasions of India by the Arghūns of Kandahār, Dhu 'l-nūn Beg (the Zunū of the legends) and his son Shāh Beg. The history of this invasion shows that Shāh Beg himself had Balōčes fighting on his side, that others fought against him on the side of Djām Nanda Sammā, and that his son Ḥusain who succeeded him in 930 = 1529, fought against the Balōč on the Indus and made an expedition against the Rinds and Maghassīs (a branch of the Lāshārīs) in Kaččhī, also that when he attacked the Langāhs at Ūččh and Multān he found their army mainly composed of Rind, Dōdāī and other Balōčes (931 = 1525). Meanwhile the Dōdāīs and Hōts had spread up the Indus and Djehlam valleys. Bābar met them as far north as Bhērā and Khushāb, in 1519, and later on, when Humāyūn was driven out by Shēr Shāh, the three sons of Sohrāb Dōdāī, Ismā'īl Khān, Fatḥ Khān and Ghāzī Khān met Shēr Shāh at Khushāb, and he confirmed their possession of 'Sindh' that is the fertile lands along the Indus. The two towns of Dēra Ismā'īl Khān and Dēra Ghāzī Khān (and also Dēra Fatḥ Khān, now destroyed by the Indus) were founded by these three. Ghāzī Khān's descendants, the Mīrṛānī Nawwābs, were local rulers of Dēra Ghāzī Khān, and maintained their power there under the Empire of Dihlī and also under Nādir Shāh and Aḥmad Shāh Durrānī till they were supplanted by the Kalhōras of Sindh in 1769. The Hōts who accompanied the Dōdāīs founded a principality in Dēra Ismā'īl Khān which after two hundred years fell before the Afghāns, and the Djaskānīs (a branch of the Lāshārīs) became chiefs of Mankēra in the middle of the sandy waste of the Sindh Sāgar Doāb. The present location of the Balōč tribes of the Pandjāb and Sindh has been alluded to in Part II. The poetical legends still current among the Balōč represent that they joined the emperor Humāyūn (who is known as Humāū Čughattā, i. e. Djagatai) in his reconquest of Dihlī from the Afghāns. There is no historical corroboration of this, but the *Ta'rīkh-i Shēr Shāhī* shows that Mīr Čākur and the Rinds as well as Fatḥ Khān Dōdāī had been at war with Shēr Shāh Sūr, who had deprived them of Multān, and therefore it is probable that they would have joined Humāyūn. Čākur and the Rinds retained their lands in the central Pandjāb, and Čākur's tomb still exists at Sathgaṛha in the Montgomery District. Humāyūn had been taken captive by Balōčes on his first journey into Persia but was well treated by them, and helped on his way. After his conquest of Kābul from Kāmrān Humāyūn bestowed the provinces of Shāl and Mustang on a Balōč chief named Lawang. His relations with them were therefore good, and it seems probable that the great extent of land which they were able to retain in the Central and Southern Pandjāb is evidence that they continued in favour after the re-establishment of the Mughal empire. It is most unlikely therefore that the persistent tradition is altogether fictitious.

The great emigration of the Balōč race left the central body, which began to be known as Brahōīs, in a comparatively strong position, and the Kambarānī chiefs gradually rose to pre-eminence. No doubt the adherence of certain foreign elements especially the Afghān Raisānīs, strengthened them greatly. In the middle of the 17th century Mīr Aḥmad Khān descended the Bōlān and took Dhādar from the Bārōzai Afghāns of Sibī. Mīr Samandar Khān who followed him is said to have held Karāčī. He was certainly at war with the Kalhōras of Sind, but the capture of Karāčī is doubtful. His successor Mīr 'Abd Allāh was a vigorous chief whose name is still famous among both Brahōīs and

Balōč. In pursuit of his war against the Kalhōras he utterly laid waste the province of Kaččhi then held by them and extended his power to the west also through Makrān and Kēč. It was during his rule that the Ghalzai invasion of Persia took place, and Maḥmūd the Ghalzai chief had many Balōčes in his army when he invaded Karmān. Afterwards when Ashraf had been defeated by Nādir Shāh in 1143 (1730), he was attacked by Balōčes in his attempt to reach Ḳandahār and slain with all his followers in or near Sīstān. This perhaps accounts for the favour with which Nādir Shāh regarded the Brahōī Khāns; for after his Indian conquests he awarded them the lands now held in Kaččhi which he took from the Kalhōras. ʿAbd Allāh Khān is said by the Balōčes of the Dēradjāt to have invaded that country with his son Muḥabbat Khān, and sacked the town of Djāmpur. He was ultimately killed in fighting against the Kalhōras at a battle between Dhādar and Mitri. He was succeeded by his son Muḥabbat Khān, who with his brother Naṣīr Khān had been a hostage at Nādir Shāh's court. He was an oppressive ruler but did service with Nādir Shāh which kept him in favour. After Nādir Shāh's death Muḥabbat Khān raided the Kandahār province, and Aḥmad Shāh Durrānī as soon as his power was established invaded the Sarāwān province, and carried away the Khān's brother Naṣīr Khān as a hostage. Before long Naṣīr Khān himself became Khān and was invested with the title of Bēglar-Bēgī. Muḥabbat Khān appears to have been killed or kept a prisoner by Aḥmad Shāh till his death. Naṣīr Khān accepted the Durrānī King as his suzerain. He established his authority firmly throughout Makrān and Kēč, and returned from an expedition to the Persian frontier by the route through Dizak and Khārān. Aḥmad Shāh bestowed on him the districts of Shāl and Mustang. He also extended his power over Las-Bēla, whose chiefs, known still by the Rādjpūt name of Djām (formerly used in Sindh and still found in Kāthiawār), admitted his authority, and he obtained the cession of Karāčī from the Kalhōras. Towards the Indus he also held the territory of Harand and Dādjil, a tract in the southern Dēradjāt irrigated by the Kahā river wich issues from the Sulaimān Mts. at Harand. His great work was the organization of the Brahōīs into the two main groups of Sarāwān and Djahlāwān, and the appointment of the Raisānī chief to be head of the northern and the Zahrī chief of the southern group. The organization was on the principle of military service. Each tribe had to supply a contingent to the Khān, and also to the head of its own group. This service was accepted in place of revenue or tribute, and the Khān also distributed among the tribes the land which he had lately acquired in Kaččhi and elsewhere. Such a system depended for its success on the character and popularity of the Khān. It succeeded under Naṣīr Khān, but rapidly fell to pieces under his weaker successors.

Naṣīr Khān became so powerful that he defied the authority of his suzerain Aḥmad Shāh who thereupon in 1172 (1758) invaded his territories and inflicted a defeat on him in Mustang. Naṣīr Khān retired into his fort of Kalāt and was there besieged by Aḥmad Shāh. It is stated by Elphinstone that the Durrānī chiefs were by no means anxious for success, as they did not wish Aḥmad Shāh's power to increase. The army also suffered severely before Kalāt, and after forty days Aḥmad Shāh agreed to accept Naṣīr Khān's nominal submission. Naṣīr Khān retained independence in his own dominions, but agreed to render military service to Aḥmad Shāh. This condition he observed faithfully, and he accompanied Aḥmad Shāh during his wars in Khorāsān in 1173 (1759) and afterwards during his wars in India. On the former occasion his troops were mainly instrumental in winning the victory, and he showed the greatest personal heroism. Pottinger who travelled through Balōčistān only fourteen years after his death gives him the highest character for bravery, justice and patience, and a strict regard for truth, as well as liberality without which no ruler can hold his own among Balōčes and Brahōīs.

Naṣīr Khān died in 1210 (1795) and was succeeded by his son Maḥmūd Khān, then a child. Bahrām Khān a grandson of Muḥabbat Khān who had already given trouble in Naṣīr Khān's life, now again broke out, but was defeated with the aid of Zamān Shāh the Durrānī King. Maḥmūd Khān however was unable to retain the extensive dominions of his father. Kēč, the western part of Makrān was lost, and the Tālpur Balōč Amīrs of Sindh, who had expelled the last of the Kalhōra rulers from that country, recovered possession of Karāčī. The Khān's half-brothers Muṣṭafā Khān and Raḥīm Khān whose energy might have upheld his authority in Sindh were both killed in a feud. Maḥmūd Khān died himself in 1821, and was succeeded by his son Miḥrāb Khān, who showed more vigour than his father, and recovered possession of Kēč, but was soon involved in hostilities with Aḥmad Yār son of Bahrām Khān, who after various vicissitudes was captured and put to death at Kalāt. Miḥrāb Khān fell very much under the influence of a Ghalzai adventurer named Dāūd Muḥammad, and discontent among the Brahōī chiefs led to an attempt to supplant the Khān. This did not succeed, but his position was much shaken, and some of the tribes such as the Mīngals and Bizandjōs of Djahlāwān threw off his authority altogether. The province of Harand and Dādjil was lost, and annexed by the Sikh ruler Randjīt Singh. Another trouble was brought upon Miḥrāb Khān by the misadventures of Shāh Shudjāʿ al-Mulk whose attempt on Ḳandahār in 1250 (1834) ended in failure. He fled to Kalāt, and Miḥrāb Khān gave him shelter and protection, which embroiled him with the Bārakzai Sardārs of Kandahār. He was also distracted by quarrels between his favourites, ending in the death of Dāūd Muḥammed and the success of Muḥammad Ḥusain. This man was instrumental in embroiling Miḥrāb Khān with Lieut. Leech, who had come to Kalāt as British agent when the expedition to restore Shāh Shudjāʿ al-Mulk was undertaken in 1254 (1838). The intrigues of Muḥammad Ḥusain and his colleagues had the effect of convincing the British authorities of the treachery of Miḥrāb Khān, and a force under Gen. Willshire was sent against Kalāt. The strongly situated fort was stormed and Miḥrāb Khān himself killed. Kaččhi, Shāl and Mustang were taken from Kalāt and added to the kingdom of the restored Durrānī king. Thus Miḥrāb Khān was badly recompensed for his hospitality to Shāh Shudjāʿ al-Mulk in 1834.

The young son of Miḥrāb Khān was set aside,

and Shāh-Nawāz Khān a descendant of Muḥabbat Khān was made Khān. The deposed son, a youth of fourteen, took refuge first in Pandjgūr with the Gičkis and afterwards with Āzād Khān chief of the Nawshirwānīs of Khārān, and a number of the Sarāwān tribes laid siege to Kalāt where the British Agent Lieut. Loveday and Masson the traveller were with Shāh-Nawāz Khān. Ultimately the town was surrendered and Shāh-Nawāz abdicated in favour of Miḥrāb Khān's son (now known as Naṣīr Khān II). Lieut. Loveday was imprisoned and Masson after a time was sent to the British Agent at Quetta. Loveday was murdered by the Brahōīs after their defeat at Dhādar in Dec. 1840. Kalāt was again occupied, and Naṣīr Khān II was finally recognised by the British Government as Khān at the end of 1841. He held to his engagements through the events of 1842 and 1843, the abandonment of Afghānistān and annexation of Sindh to the Indian empire. The position and influence of the Khāns of Kalāt had been much shaken by this time. The Brahōī tribes were rebellious and discontented, and after the loss of Harand-Dādjil, the Marīs and Bugtīs and the tribes of the Sulaimān became practically independent, and plundered the plains of the Dēradjāt, Northern Sindh and Kaččhī impartially. To the west the Ḳādjār Government of Persia encroached on Kēč and western Makrān. Kaččhī, Shāl and Mustang had been restored to the Khān by the treaty of 1841 by which he admitted the suzerainty of the Durrānī king Shāh Shudjā' al-Mulk, but after the recovery of power in Afghānistān by the Bārakzais, they were retained by the Khān without any admission of the Amīr's authority. A tract around Sibi however still acknowledged Kābul rule.

The advance of the frontiers of the British empire in India by the annexation of Sindh in 1843 and the Pandjāb in 1849 altered the position with regard to the border tribes, whose incursions were curbed by the formation first of the cantonment of Jacobabad on the Kaččhī border, and afterwards by the military posts along the foot of the Sulaimān mountains. Sir Charles Napier invaded the Bugtī hills in 1845, and in 1847 General Jacob inflicted on them a severe defeat in the plains, but no attempts were at first made to exercise any regular authority over these tribes. By a treaty signed in 1271 (1854) the Khān accepted a position of subordination to the British Government and bound himself to repress all outrages. He had not however the power to enforce the observance of this condition, and it gradually became evident that some further extension of British power was inevitable. In order to assert his power against the tribes he tried to form a permanent military force and relied on the advice of a Wazīr of servile origin. Such measures were intensely unpopular, and led to perpetual trouble with the tribes. Mīr Naṣīr Khān died in 1274 (1857), not without suspicion of poison, and was succeeded by his younger brother Mīr Khudādād Khān. The Dārogha (or Chamberlain) Gul Muḥammad was suspected in connection with the late Khān's death, and kept the young Khān practically as a prisoner in the Mīrī or fort of Kalāt, and there they were attacked by the Brahōīs with the Djām of Las-Bēla and Āzād Khān of Khārān. A temporary arrangement was come to through British influence and the Shāghāsī Walī Muḥammad became the Khān's principal adviser, but the trouble continued for several years. A successful expedition was, with the assistance of Major Green the British Agent, made against the Marīs in 1859, but no permanent stop was put to their raids. In 1863 the Khān was defeated by a Brahōī rising, and fled to Sindh; his cousin Sherdil Khān took his place but was assassinated next year, when Khudādād Khān recovered Kalāt with the assistance of the Raisānī tribe. Under such circumstances nothing like a settled government remained in the country. In 1869 the Djām of Las-Bēla assisted by the Brahōī chiefs broke into rebellion, but was defeated and finally banished; he was interned in British India for a time. In 1871 the trouble became still more serious. Djāljar at the foot of the Bōlān Pass, Bāgh, the chief town of Kaččhī, and Gandāva were taken by the revolted tribes, and Bēla was seized by a relative of the exiled Djām. Makrān was also in rebellion, and the Khān had no authority left to him. This brought about more decided intervention, and Capt. Sandeman, who had attained great influence among the Marīs, Bugtīs, Mazārīs and other Balōč tribes connected with the Pandjāb, was sent to Kalāt at the end of 1875; and by means of tact and personal influence, and the assistance of an honest and able Balōč chief, the late Sir Imām Bakhsh Khān Mazārī, succeeded after many difficulties in arranging all the disputes between the Khān and the chiefs at Mustang by the end of 1876. A treaty was concluded at Jacobabad where the Khān met the Viceroy of India Lord Lytton in October 1876. The result of this treaty was to make Kalāt a protected state, the rights of the tribal chiefs were recognized and the Government of India reserved the right of intervention to secure good government. Sandeman became first Agent to the Governor General, with his headquarters at Quetta. The post at Quetta on a plateau nearly 6000 ft. high at the head of the Bōlān Pass became a military station, and is now a very strong position. In the war with Afghānistān 1878—80 the Bolān Pass was used freely and without interruption by troops moving from India towards Ḳandahār. The treaty of Gandamak between the Amīr Ya'ḳūb and the Indian Government transferred the districts of Sibī and Peshīn up to the Khwādja Amrān Mts., to British India. These districts formed the nucleus of the new Province of British Balōčistān. A railway was commenced from the Indus valley to the Peshīn plateau by the Harnāī Pass in 1879, and, though work was stopped for a time in 1880 owing to an outbreak of the Marī tribe after the battle of Maiwand, it was completed after several years' work, the first and at present the only railway which mounts from the low lands of the Indian plain to the Iranian plateau. There was excitement also among other tribes which entailed some minor military operations, and Sir C. Macgregor led an expedition into the Marī hills.

The incorporation of Sibī and Peshīn in the Indian Empire led to the further extension of British authority through the valley of Thal Čotīālī, Bōrī and Zhōb lying between Peshīn (otherwise Pushang) and the old Indian Frontier along the Sulaimān Mts. Ultimately the whole of this country was incorporated in the Indian Empire, generally with the consent of the population, and the Military Stations of Lōralai and Fort Sandeman were formed to take the place to some extent of

the old stations of Dēra Ghāzi Khān, Rādjanpur and Jacobabad. Quetta when connected by rail with the Indian system became a military centre of more importance. The remaining history of Baločistān up to the present day is one of increasing efficiency in administration, a growth of peace and prosperity among the tribes whether those near the Pandjāb frontier, those of Makrān, the Nawshirwānis of Khārān or the state of Las-Bēla. Sir R. Sandeman, the founder of modern Baločistān died at Las-Bēla in 1892 and is buried there. The Khān of Kalāt, Mīr Khudādād Khān was deposed by the Government of India in 1893 on account of a savage and murderous outburst, and was succeeded by Mīr Maḥmūd Khān, the present Khān.

The boundary between the state of Kalāt and Persia was laid down by a boundary commission appointed by the British and Persian Governments in 1872. This was revised and rectified by the further commission presided over by Sir T. Holdich in 1895-6, in which disputes between the Persian tribes and the Nawshirwānis of Khārān were settled, and at the same time another commission under Capt. Mac Mahon laid down the boundary between Afghānistān South of the Helmand and Baločistān. The peak of Malik Syāh Kōh at the southwest corner of Sīstān has been fixed as the meeting point of Persia, Afghānistān and Baločistān. The northern strip of desert country between Khārān and the Afghānistān border, known as Čāghai and western Sindjarāni does not form part of the Khānat of Kalāt but is immediately under the British authorities. Through it runs the caravan route from Quetta to Sīstān and Karmān. The railway has been continued as far as Nushki where this route starts. Khārān, like Las-Bēla is not directly under the Khān of Kalāt, but is administered by its own chief, who admits the Khān's suzerainty. All disputes are subject to decision by the agent at Quetta.

The Baloč tribes of the Sulaimān Mts. east and north of the Marīs and Bugṭīs are not under the Baločistān Government, but are managed like those of the adjacent plains of the Deradjāt by the Deputy Commissioner of Dēra Ghāzi Khān under the Lieut. Governor of the Pandjāb. In the same way the tribes of northern Sindh are managed through the Government of Sindh. In most cases the tribes are governed through their own chiefs, to whom a good deal of authority is allowed by the British Government.

The Tālpur tribe who established a short-lived rule in Sindh were an offshoot of the Laghārī Baloč tribe of Čoṭī near Dēra Ghāzī Khān. The Amīrs of Sindh against whom war was declared in 1843 were members of this family. After the annexation of Sindh one of these Amīrs, Mīr ʿAlī Murād of Khairpur, was allowed to retain his dominions, and the state of Khairpur still exists, the only feudatory state of British India which is under a prince of Baloč nationality.

Sandeman* (London, 1895); Bruce, *The Forward Policy* (London, 1900). (Most of the general works under I also contain historical information.) (LONGWORTH DAMES.)

BĀLṬA LĪMĀNĪ, a bay on the European shore of the Bosporus between Boyadji-Köi and Rūmili Ḥiṣār, so called after Bālṭa-Oghlū Sulaimān-Bey, the first admiral of the Turkish fleet, who equipped the fleet of 420 ships here, which co-operated in 857 (1453) at the siege of Constantinople; it is the ancient Phidalia. Rashīd-Pasha's old palace stands here. The commercial treaty with France of 1838, the Treaty of the Five Powers of 1841 and the agreement of 1849 relative to the principalities of the Danube were all concluded here.

Bibliography: 'Alī Djewād, *Djoghrāfyā lūghāti*, p. 150; Hammer-Purgstall, *Constantinopel und der Bosporus*, ii. 227; do., *Histoire de l'empire ottoman*, p. 401, 519; Emile Isambert, *Itinéraire de l'Orient (Guides Joanne)*, 2nd ed. 1873, p. 595. (CL. HUART.)

BĀLṬADJĪ, "Axe-bearer", the name given, in the older organisation of the Othmanli court, to a body of palace-guards, consisting of 400 men under the command of the *Kizlar-Agha*, and specially entrusted with the duty of guarding the princes and princesses of the blood as well as the Imperial Ḥarem. They wore a peaked bonnet of fawn-coloured felt, called *külāh* and were quartered in the Eski-Serāi. They accompanied the Ḥarem to the wars, marching beside the vehicles conveying it and camping around its tents; they were armed with halberts, whence their name. Their commander bore the title of *Bālṭadjilar-K'ayasi*. He transmitted the Sulṭān's orders to the Grand Vizier and at the ceremony of *Mewlūd* assisted the preachers to descend from the pulpit. — The *Zulfü-Bālṭadji* were a corps of 120 men attached to the service of the chamberlains (*Khāṣṣ-Oḍali*) taking their orders from the *Silihdār-Agha*; their bonnet, not quite so peaked, was distinguished from that of the *Bālṭadji*'s by two strips of woollen cloth which hung down over their cheeks (*zülf*) whence their name. — In the vaulting of the Siliwri gate at Constantinople may be seen a huge club which was carried on high by Deli-Pehliwān, one of the Bālṭadjis of the Eski-Serāi.

BALTISTĀN, or LITTLE TIBET, a mountain-tract on the N. W. frontier of India; subordinate to the native state of Kashmīr: area and pop. unknown. It contains some of the highest mountains and largest glaciers in the world, and includes part of the upper channel of the Indus, on which Skārdu, the capital, is situated. The inhabitants, though Tibetan by race and language, were long ago converted to the Shī'a sect of Islām. Their hereditary chiefs are known as Rādjās or Gialpos, who trace their descent to 'Alī Shīr, who conquered Ladākh and founded Skārdu about the end of the xvith cent. They were subjected to Kashmīr in 1840. Owing to pressure of population on the soil, which is said to average 1467 per sq. m. of cultivation, the Baltis emigrate in search of labour as far as the plains of India.

BĀLYOS (by metathesis, from the low Latin *bailus* Lat. *bajulus*), BAILO, the title of the representative of the Venetian Republic at the Sublime Porte. After the capture of Constantinople by the Turks, Girolamo Minotto was decapitated on the surrender of Galata: negotiations were then entered into for the resumption of relations and the sending of a new bailo with the same rights and duties as under the Eastern Roman Emperors. Bartolommeo Marcello was the first agent in this capacity in 1454. The agent was changed every two years but as he had to await the arrival of his successor his mission in practice lasted three years. By the terms of the agreement, renewed at the beginning of the reign of Sulṭān Sulaimān (926 = 1520) the bailo could not be imprisoned for debt; he administered the estates of his countrymen and made out to them the passes without which no merchant could journey into the interior of the Othmanli kingdom.

BAM (Arab. BAMM), a district and town in the province of Kermān, Irān, about 120 miles S. E. of Kermān on the western edge of the great salt desert Dasht-i Lut.

In mediaeval times Kermān consisted of five districts: Bardasir, Sīrdjān, Bam, Narmāsīr and Djīruft. Bam has long been a commercial centre of some importance, for the road from Shīrāz through Kermān to Sidjistān or through Makrān to Manṣūra in Sind forked here, whence it is often mentioned in old road-books. Bam has also been a fortified place since early times and it was used as a place of detention by Ṣaffār Ya'ḳūb b. al-Laith in his campaign against the Ṭāhirids of

Khorāsān in 259 (873). A certain Isma'īl b. Ibrāhīm, vizier of Subkurā, who had been emancipated by 'Amr b. al-Laith, and was lord of the province of Fārs in the time of al-Muḳtadir billāh, came from Bam. Iṣṭakhrī and Ibn Ḥawḳal give a more detailed account of Bam (in the ivth = xth century). It had then three chief mosques, one called al-Khawāridj with the alms-box in the bazaar beside the palace of Manṣūr b. Khurdin, Emir of Kermān, a second in the cotton merchants' bazaar (*bazzāzīn*), and the third in the citadel. The cotton industry flourished in Bam, in particular kerchiefs (*mandīl*), shawls for turbans and scarves known as *ṭailasān* were manufactured and exported to Khorāsān, 'Irāḳ and Egypt. Muḳaddasī gives similar information and also mentions the four gates of the fortress by name. The fortress was situated in the centre of the town and included a part of the bazaar. A small river and aqueducts supplied the town with water. The houses were built of mud. Of the baths, one in the *zuḳāḳ al-bīdh* was famous. The surrounding villages also were dependent on the cotton trade. In the viiith (xivth) century the fortress of Bam is mentioned again by al-Mustawfī.

In the beginning of the sixth century Bam was again a strong fortress which appears to have been built in the time of Nādir Shāh. Being a town on the Afghān frontier it was the object of frequent attacks. In 1795 it was the scene of the capture of Luṭf 'Alī Shāh, the last of the Zand dynasty. The victorious Agha Muhammad Shāh ordered a pyramid of skulls to be erected here; it was still standing when Kinneir saw it but was removed by order of Fatḥ 'Alī Khān.

The modern town may be better described as an agglomeration of houses and extensive gardens than as a town. It lies on the both sides of the river Bam and is unfortified. Its bazaar is small and mean. Its products are cotton, henna, indigo and wheat, which are exported to Bandar Abbās. The number of its inhabitants is estimated at 8000—9000 souls. The fortress at the foot of which lay the older town lies ¼ mile to the east outside the modern town: it is an oblong of 400 × 500 yards surrounded by walls without towers and a dry ditch. In it was a strongly fortified citadel with a high watch-tower.

BAMBĀRA (BAMBARRA), the, a negro people in the French Sūdān. The Bambāra country is bounded on the north by the land occupied by Moors, in the south by the Mandingo country and in the east by Masina. It lies between 12° and 14° N. Lat. and 4° and 8° W. Long. of Greenwich. Its boundaries are approximately: in the north, a line drawn from Kolodugu to Tambakara; in the south, the upper course of the Senegal from Medine to Bafalabe, the Bakoy to its confluence with the Baule and lastly the Niger from Bamako to Sansanding. The Bambāra are here found sometimes in very large bodies as in Beledugu (50,000 inhabitants), sometimes in groups scattered among a population of different race (Soninke, Fulbe etc.). They also extend beyond the boundaries of the Bambāra country proper and have planted colonies in the Masina country on the shores of the Bani and the Bafing. Mixed with the Fulbe they form the population of Wassulu south of the Niger, where they have retained their own language and customs.

The Bambāra belong to the Mande stock of which they are the most important branch. They themselves do not use the name Bambāra which is given them by Europeans: according to Binger it is synonymous with the Arabic *kāfir* "unbeliever". They call themselves Bamana or Bamanenke, from the root *bama* "cayman", the animal which is their *tenne* or totem, a custom which is also found in other branches of the Mande stock. In physique they closely resemble the other branches of the Mande except that in them the original type has been somewhat modified by crossing with foreign elements, especially with the Fulbe. The colour of their skin varies from deep black to chestnut brown. They are powerfully built and are usually tattooed with three parallel lines, burned with a hot iron, running from the corners of the eye to the corners of the mouth. They are brave and hospitable. They readily change their place of abode and since the French conquest they have spread throughout the whole Sudan as soldiers, servants, and artisans. Their sobriety and economy have earned them the title of "Auvergnats du Soudan". Although they have for centuries preferred warfare to any other occupation, leaving the practice of trades to the Sarakule and Soninke who live amongst them, they are nevertheless industrious. As agriculturists they take advantage of the rainy season, from July to October, to cultivate millet, sorgho, maize, indigo, tobacco, and hemp; as artisans they weave cotton, work in iron and make powder. Before the arrival of Europeans they were unacquainted with the use of money and paid for their purchases in cowrie shells and bars of salt. They are sedentary and live in villages, each of which consists of several *sokala* or groups of huts surrounded by an earthen wall. Their huts of hardened earth are usually rectangular and surmounted by a terrace. At the entrance to the villages are public huts called *blo* which are used as places of assembly and palaver by the inhabitants.

The social organisation of the Bambāra is still very primitive. The family is under the absolute authority of the father. The children are his slaves till they attain puberty; girls are given in marriage by their parents without being consulted, and remain the slaves of their husbands. Polygamy is allowed and divorce common. An inheritance descends from brother to brother. In former times the population was divided into three castes: 1. the nobles, warriors or *tontigi* (literally "bearers of bows"); 2. citizens or *nyamakala*; 3. slaves. At the present day the royal families, Kurubali, Diara and Massa-Si are at the head of the social hierarchy; next come the *numu* or smiths, the *garange* or leather-workers, the *griot* or sorcerers and finally the slaves. The village is under the authority of a chief entrusted with the administration of justice according to a code of common

law which is transmitted from father to son. The villages sometimes combine into groups but the bond of union is very weak and these confederations never last long unless it is a question of defending themselves against a common enemy as was the case at the time of the Tucolor domination. Union and a spirit of *entente* have almost always been wanting among the Bambāra. The states which they have founded have soon entered into conflict with one another or fallen to pieces from internal dissensions.

The language of the Bambāra is called *bamanaka*; it belongs to the Mande group of languages and is related to the languages of the Malinke, Soninke and Diula. The Bamanaka differs most of all these from the original type. It is especially characterised by its extreme conciseness and by the corruption of its words through excessive contraction. There is no declension among the substantives and in the verb no distinction of voice, mood, tense or person (Bazin, *Dictionnaire Bambara*, Introd. p. xviii.). The Arabic alphabet is used for writing, which is however little practised. There is, strictly speaking, no literature but only oral traditions which scarcely reach farther back than the last two centuries, as well as fables, legends, and narratives intermingled with songs and dances, in which the Bambāra take great delight.

The Bambāra form the anti-Musalman element of the French Sūdān. With the exception of some insignificant sections living in Kaarta they have resisted the propaganda of Islām and remained pagans. Their religious beliefs are those of primitive peoples. Each family has its own *tenne* or totem, a sacred animal which the members of the family must not kill nor eat nor even look at intentionally. Ancestors protect their descendants. The dead are buried in the entrances to the huts and are depicted on the interior walls in coloured designs (hands, arms, geometrical figures), sometimes even in relief. Sacrifices are made to them; perhaps in former times they used to sacrifice captives on the graves of their chiefs. Fetishes or *bouri* play a very considerable part in their life. Every family, every village has its own which is carefully preserved in a sacred building. The fetish is often a tree to which animals such as sheep, dogs, and hens are sacrificed, or millet and fruits brought. These sacred trees are as a rule surrounded by shrubbery in which a sorcerer resides. The sorcerers, recruited mainly from the smith caste, and organised in secret societies of which little is as yet known, are very much feared. They foretell the future by examining the entrails of sacrificial animals; by juggling and by weird practices, such as nocturnal promenades through the villages, clothed in gewgaws and wearing calabashes pierced with holes on the head, they keep the inhabitants in constant terror and wield a tremendous influence over them. Among other customs of the Bambāra may be mentioned circumcision which is performed when boys attain the age of puberty and which has the character of a proof of initiation, and the celebration of festivals, some of which may have been borrowed from the Muḥammadans but others of which, such as the festival of the end of harvest, are much more ancient in origin.

From the want of written sources the history of the Bambāra is very little known. Apparently they were numbered among the vassal peoples of the empire of Mali or Melle and certainly took advantage of the fall of this empire in the xvith century to declare their independence. Aḥmad Bābā indeed, mentions among the five states which arose out of the ruins of the empire of Melle, a kingdom peopled by the Bambāras, the Samake and the Samananke. A century later, about 1650, perhaps to escape the propaganda of Islām they moved to the upper Niger. Kaladian Kurubari, one of their chiefs, made himself master of the land inhabited by the Soninke and formed a vast kingdom on both banks of the Niger. He divided it amongst his six sons, who thus became sovereigns of independent kingdoms, often at war with one another. In the beginning of the xviiith century one of his grandsons, Bitu, again united all the lands of the Bambāra under his sway. He reigned thirty years and was succeeded by his eldest son, who founded Segu-Sikoro. The development of the kingdom of Segu was arrested for some years by civil wars (1748—1754) but its progress was resumed in the reign of Ngolo (1754—1787). After getting rid of his rivals, this chief succeeding in overcoming the Fulbe of Kalari after an eight years' war, imposed his protectorate on the Fulbe kingdom of Masina and made his word law from Bamako to Timbuctu. During the first half of the xixth century the kings of Segu, Mansong (1787—1808) and Da-Diara (1808—1830) were again very powerful. They conquered the Bambāras of Kaarta and compelled Masina and Futa to pay them tribute.

Another Bambāra kingdom had been established in Kaarta in the xviith century by Sakhaba, son of Kaladian Kurubari. In the xviiith century this state passed into the power of a new dynasty founded by Sebe Massa who reigned at Nioro about 1754. His son, Daise Kurubari, was ruling this town in 1796 when Mungo Park passed through it. His successors maintained their independence in Kaarta till the middle of the xixth century.

The kingdoms of Segu and Nioro were destroyed by the conquering Tucolor al-Ḥādjdj ʿOmar (q. v.). Kaarta was conquered in 1859. Two years later ʿAlī Diara, king of Segu, who had made an alliance with the Masina to resist the Muḥammadan invasion, also was overcome; al-Ḥādjdj ʿOmar entered Segu on the 10th March 1861 and there installed his eldest son as king. The Bambāra however were by no means ready to acknowledge the rule of the Tucolor. They rebelled in various places against al-Ḥādjdj ʿOmar and his son Aḥmadu. The people of Beledugu in particular were successful in regaining their independence. They cut the Tucolor empire up into two great divisions and cut off communication between Kaarta and Segu. This state of affairs remained till the French troops took possession of Segu and destroyed the power of the Tucolor (1890-1891). The land occupied by the Bambāra then passed under the rule of the French who have since been endeavouring to establish law and order there.

BĀMIYĀN, in the Arabic sources frequently AL-BĀMIYĀN, a town in the Hindu-Kush, north of the main range in a mountain valley lying 8480 feet above the sea-level, through which one of the most important roads between the lands in the Oxus watershed and the Indus leads; the town is therefore naturally important as a commercial centre, and was important in the middle ages as a fortress also. Although the valley really belongs to the Oxus watershed and is separated from Kābul by high mountain passes e. g. the Khulm and Kunduz, Bāmiyān politically has been more frequently associated with Kābul and Ghazna than with the lands of the Oxus territory. In the first half of the xix[th] century the pass of Aḳ-Ribāṭ lying to the north of Bāmiyān formed the boundary between the districts of Kābul and Kunduz; at the present day this pass forms the boundary between Kābulistān proper and Afghān Turkestān.

The valley as well as the town are described as early as the vii[th] century A. D. by the Chinese pilgrim Hüan-Čuang (*Mémoires sur les contrées occidentales*, trad. par Stan. Julien, i. 36 *et seq.*, *Histoire de la vie de Hiouen-Thsang*, p. 68 *et seq.*). The name is transcribed Fan-yen-na (in Marquart, *Ērānšahr*, p. 215 *et seq.* according to de Groot and G. Schlegel the ancient pronunciation was Bam-jan-na). The "Older Middle Iranian form" of the name was Bāmikān according to Marquart. Even at that period the district did not belong to the Oxus territories (Tu-ho-lo = Ṭokhāristān, cf. above p. 340[a], article ĀMŪ-DARYĀ), although the alphabet, methods of government and coins were the same; the language alone differed slightly. The oldest Arab authorities as well as Hüan-Čuang tell us that the inhabitants of Bāmiyān professed Buddhism, which at that period was widely spread through all the lands north and south of the Hindū-Kush. In the time of Hüan-Čuang there were more than ten monasteries there and more than a thousand monks. The two colossal images in relief on a rock in the north ridge of the valley, which are later described by the Arabs as unique in their kind (cf. especially Yāḳūt, i. 481) were already in existence in the time of Hüan-Čuang. The larger figure (according to later travellers 120 feet high) is that of a man, the smaller (about 200 yards distant from the other) is that of a woman; in the middle ages these figures were known as *Surkh-but* and *Khink-but* ("red idol" and "white idol"). Both figures have been disfigured in modern times by cannon-shots, — by order of the Indian Emperor Awrangzēb, it is said; nevertheless the town was called But-i Bāmiyān after them, as late as the xix[th] century as ʿAbd al-Karīm Bukhārī (ed. Schefer, p. 4 *et seq.*) and the English traveller Moorcroft (*Travels in Himalayan Provinces*, ii. 387) inform us. Only a few traces remain of the wall paintings mentioned in Yāḳūt ("all the birds created by God" are said to have been represented there). Burnes amongst others (*Travels into Bokhara*, London, 1839, ii. 159), gives a reproduction of the idols in their present condition. There was still in the iii[rd] (ix[th]) century a large Buddha-temple in Bāmiyān, in which there were idols also; the temple was destroyed in the year 256 = 870 by the Ṣaffārid Yaʿḳūb and the idols brought to Baghdād in Rabīʿ II 257 (26 Febr.—26 March 871). Cf. the comparison of Ṭabarī, iii. 1851 and *Fihrist*, p. 346 by Barthold in *Orientul. Stud.* (*Nöldeke-Festschrift*), i. 187.

The town itself was situated on a mountain; it is described as a "little town" by Hüan-Čuang as well as by the later Muḳaddasī (ed. de Goeje, p. 303); according to Iṣṭakhrī (ed. de Goeje, p. 280) it was half the size of Balkh; according to Yaʿḳūbī (*Geogr.* ed. de Goeje, p. 299) and Yāḳūt (l. c.) it had a strong fortress; the town itself however was not surrounded by a wall. A gate in Ghazna (apparently the northern one) bore the name "Gate of Bāmiyān" (Muḳaddasī, p. 304); the town must even at that time have been of some importance therefore; but the trade must have been very small in comparison with that of later times, for in the list of taxes given in Ibn Khordādhbeh (ed. de Goeje, p. 37?) the assessment of Bāmiyān is quite an insignificant sum (5000 dirhems).

The prince of Bāmiyān bore the title *Shēr* (written *Shīr* and *Shār*) which Yaʿḳūbī (*Geogr.* p. 289) erroneously translates "lion"; the word means "king" and is to be derived from the old Persian *khshathriya* (Marquart, *Ērānšahr*). Islām was first adopted by these princes in the time of the ʿAbbāsids, according to Yaʿḳūbī's geography (l. c.) in the reign of al-Manṣūr, according to the same author's history (ed. Houtsma, ii. 479) in that of al-Mahdī. The relations of this dynasty with the lands to the north and south of the Hindū-Kush are not quite clear. According to Yaʿḳūbī Bāmiyān belonged to Ṭokhāristān, i. e. the lands of the Oxus territory, which is probably confirmed by Ṭabarī's statement (ii. 1630, 1) that about 119 = 737 a foreigner from Bāmiyān ruled in Khuttal (north of the Oxus); on the other hand Iṣṭakhrī (p. 277) says that the district (*ʿamal*) of Bāmiyān only included the lands south of the Hindū-Kush with the towns of Parwān, Kābul and Ghazna. According to a document of the year 718 A. D. quoted in Chinese sources, the prince of Bāmiyān as well as all the princes of the lands up to the Indus were vassals of the Turkish prince (Yabghu) of Ṭokhāristān (E. Chavannes, *Documents sur les Tou-kiue (Turcs) occidentaux*, St. Petersburg, 1903, p. 201 and 291). Under the later ʿAbbāsids the members of the dynasty of Bāmiyān, like many central Asian princes, held influential positions at the court of Baghdād; Ṭabarī (iii. 1335) tells us that a Shēr of Bāmiyān was appointed governor of Yaman in Rabīʿ II 229 (28[th] Dec. 843—25[th] Jan. 844).

The native dynasties seem to have been finally overcome by the Ghaznawids. A branch of the house of the Ghōrids ruled in Bāmiyān for half a century (550—609 = 1144—1212-1213). Bāmiyān was then the capital of a kingdom which comprised all Ṭokhāristān and some districts north

of the Oxus and stretched to the north east as far as the borders of Kāshghar. Like the other lands of the Ghōrids, this kingdom also was incorporated in the kingdom of Muḥammad Shāh of Khwārizm in the beginning of the viith = xiiith century; Bāmiyān was granted with Ghazna and other lands to Djalāl al-Dīn the eldest son of the Khwārizmshāh (Nasawī, ed. Houdas, text p. 25, transl. p. 44), i. e. Bāmiyān was again separated from Ṭokhāristān and united with the countries south of the Hindū-Kush. Soon afterwards (618 = 1221) followed the destruction of the town by the Mongols. Mutugen, a grandson of Čingiz Khān fell at the siege of the town; in revenge for his death the conqueror razed the town to the ground and exterminated its inhabitants; the place received the name Mo-Balīḳ (evil town) or (according to Rashīd al-Dīn) Mo-Ḳurghān (evil fortress) and was still uninhabited 40 years later in the time of the historian Djuwainī. The town built on a hill and destroyed by Čingiz-Khān is apparently identical with the ruins now called "Gulgula". These ruins are situated on a hill in the southern ridge, opposite the rock with the two idols.

The modern Bāmiyān lies a few miles to the west of the ruined town and is no longer of any political importance; it is usually described by recent travellers as a "considerable village". For the last few centuries Bāmiyān has always been combined with Kābul and Ghazna; like these towns it belonged down to the xiith = xviiith century to the empire of the Mughals and afterwards to the newly founded Afghān kingdom. According to ʿAbd al-Karīm Bukhārī (ed. Schefer, p. 4 *et seq.*) 100,000 rupees were yearly levied on Bāmiyān for the rulers of Afghānistān in the beginning of the xixth century; the Indian traveller Munshī Mohan Lal (*Journal of a Tour through the Panjab*, Calcutta, 1835, p. 37) reckons the receipts from customs alone at 70,000 rupees. The same authority informs us that the inhabitants of Bāmiyān speak two languages, Persian and Pushtu (Afghān). The population of the valley mostly belongs to the Hazāra stock.

Bibliography: The Chinese and Arab notices have been collected by J. Marquart, *Ērānshahr*, Berlin, 1901 (see Index). Le Strange, *The Lands of the Eastern Caliphate* (Cambridge 1905), p. 418 is to be used with caution; what Muḳaddasī, p. 303 *et seq.* tells us about Ghazna is there erroneously applied to Bāmiyān. On the history of the Ghōrids of Bāmiyān cf. *Ṭabaḳāt-i Nāṣirī* (ed. Nassau Lees), p. 101 *et seq.*; *id.* (transl. Raverty), p. 421 *et seq.* On the Mongol conquest see the text of Djuwainī (*Taʾrīkh-i Djahān-Kushāy*) in Schefer, *Chrestomathie persane*, ii. 142 *et seq.*; the text of Rashīd al-Dīn (*Djāmiʿ al-tawārīkh*) in Berezin, *Trudi vost. otd. (W. Barthold.)

BAMPŪR, a district and town in the centre of Persian Balōčistān, the seat of a governor, who is under the Governor-General of Kermān. In the older literature it is only mentioned by Muḳaddasī 52 (wrongly Barbūr for Banbūr) and in the *Djihān nāma*. It lies at the intersection of several trade routes; from Shīrāz or Kermān (town) to British Balōčistān and India, and from the harbours of Djask, Gwattar, Gwadur to Sīstān. Till about 1750 it belonged to Persia and latterly under Nādir Shāh to the Beglerbeg of all Balōčistān, Naṣīr Khān Brahōī. On Nādir Shāh's death he placed himself under Aḥmad Shāh Durrānī of Afghānistān and became independent after the latter's death; he died in 1795. Balōčistān then broke up into various divisions each with its own chief. In the reign of Muḥammad Shāh (1834—1844) Persia again attempted to acquire the suzerainty. When a chief of Bampūr attempted a raid into Kermān he was overcome by the Persians. In 1849 a rising again took place after which Bampūr itself was taken by the Persians. Since that time it has been held by Persia under Persian governors.

The town itself is rather a camp of soldiers with their families than a town. It has a fort on a mound 100 feet high which protects the cultivated valley of the stream of Bampūr from the advance of the sand dunes of the desert. The fort is substantially built with walls of brick. The river valley is covered with gardens and date groves belonging to Balōčīs, which present a striking contrast to the wide barren plain of Bampūr. This land is crown property and produces corn and dates. A small garrison of Persian infantry, artillery, and cavalry, is stationed in the fort while a standing militia of Balōčīs is encamped in the neighbourhood.

(E. Herzfeld.)

BĀN (A. and P. from the Indian *Bahan*). According to Abū Ḥanīfa and Dioscorides the Bān tree is, like the Oriental tamarisk, tall and slender, with soft wood and supple green branches. Ancient writers tell us that the tree was principally to be found in Arabia Felix; at the present day it is identified with the *Moringa aptera* (Sickenberger), indigenous from Upper Egypt to India, the seeds of which yield the finest of all vegetable oils; it was highly prized even in antiquity and was well known to the Romans as *glans unguentaria* and to the Greeks as βάλανος μυρεψική (Dioscorides). The bright, green, bean-like fruit (*Ḥabb al-bān*, *Djawz al-bān*, *Fustuḳ al-bān*) was bruised in a mortar, strained and then put into a press. The oil obtained in this way was considered an effective remedy against various skin-diseases (cicatrices, leprosy) in mediaeval Arab medicine; a mithḳāl of the seed (92 grains) taken in honey and water was used as an aperient and emetic; in another connection it was given (with vinegar and water) to horses as a remedy for cardalgia. In addition to its use in medicine the oil of the bān was much used in cosmetics.

(J. Hell.)

BANĀKIT, a town in Central Asia, on the right bank of the Sir-Daryā, not far from the mouth of the "river of Ilāḳ" i. e. the

modern Angren (properly Āhengerān). The name is written Binākath in Mukaddasī (ed. de Goeje, p. 277, 1); this form is doubtless more correct than that given by Yākūt (i. 740), for the name like many others such as Akhsīkath, Binkath, Tūnkath, is evidently compounded with *kat* or *kath* "village, town, or fort". In later times the name is also written Fināket and Fināken. In Mukaddasī's description of the town (*l. c.*) we are only told that it had no walls and that the Friday mosque stood on the market-place; there seems to be no other description of the town in any of the sources that have as yet come to light. In 617 = 1220 the town had to surrender after a three days' siege by a small division (5000 men) of a Mongol army; cf. d'Ohsson, *Histoire des Mongols*, i. 224, and the text of Djuwainī (the only authority for this siege) in Schefer, *Chrestomathie Persane*, ii. 115. In Timur's time the town was in ruins; it was rebuilt by his orders in 794 (Ape year, 1392) and named Shāhrukhiya after his son Shāhrukh (*Ẓafar-Nāmah*, Indian edition, ii. 636). In this connection it is related that the town had been destroyed by Čingiz-Khān and remained in ruins till the time of Timur; Djuwainī however says nothing about any such destruction; the state, in which the town was towards the end of the viii^th^ = xiv^th^ century, was perhaps brought about by some later event. At the present day Shāhrukhiya is in ruins, and nothing is known of the date of its final destruction; in accounts of the Timūrids and Uzbegs, Shāhrukhiya is frequently, including the xi^th^ (= xvii^th^) century, mentioned as a strong fortress. The site of the ruins (now called Sharkiya) was fixed by Russian explorers in 1876. Cf. Le Strange, *The Lands of the Eastern Caliphate*, p. 482, where the date of the restoration of the town is wrongly given. (W. Barthold.)

BANĀKITĪ, Fakhr al-Dīn Abū Sulaimān Dāwūd b. Muḥammad, Persian poet and historian (died 730 = 1329-1330). According to his own statement he was appointed "king of poets" (*malik al-shu'arā'*) by Ghāzān-Khān, Mongol ruler of Persia, in the year 701 (1301-1302); one of his poems is given by Dawlatshāh (ed. Browne, p. 227). His history bears the title *Rawḍat ūli 'l-albāb fī tawārīkh al-akābir wa 'l-ansāb* and was composed in 717 (1317-1318) in the reign of Khān Abū Sa'īd [q. v., p. 103]; the preface is dated 25th Shawwāl of this year (31st Dec. 1317). With the exception of some short notes on events of later years the work only gives the contents of the *Djāmi' al-tawārīkh* of Rashīd al-Dīn in a briefer form, with the material in a different order and is of no independent value. Blochet (*Introduction à l'histoire des Mongols par Fadl Allah Rashid ed-din* (Leyden-London, 1910, p. 98) erroneously states that the Chinese sources for the *Djāmi' al-tawārīkh* are not given in Rashīd al-Dīn but only in Banākitī; the text of Rashīd al-Dīn, in which these are given was published in 1886 by Baron V. Rosen (*Collections scientifiques de l'Institut des langues orientales du ministère des affaires étrangères, iii. Manuscrits Persans*, St. Petersburg, 1886, p. 106 *et seq.*). Banākitī's work is divided into nine sections; the 8th part which contains the history of China was edited in Persian and Latin in 1677 by A. Müller with the erroneous title of *Abdallae Beidawaei Historia Sinensis*; Quatremère has since proved that this extract comes, not from the *Niẓām al-tawārīkh* of Baiḍāwī but from Banākitī's *Rawḍat ūli 'l-albāb*.

(W. Barthold.)

BANĀT, a frontier province of Hungary, which only received this name after the Peace of Passarowitz (1718), without having ever been ruled by a Ban, more correctly Temesar Banāt, so-called after the town of Temesvār, which was under Turkish rule 1552—1716.

BAND (*p.*) meaning "band", "bond" and signifying anything used for tying, binding or closing; it is applied, *inter alia*, to the barrages constructed across a valley from one hill to the other and converting the upper part of the valley into a lake used as a reservoir. There are for example the *band-Emīr* near Shīrāz built by the Buwaihid 'Aḍud al-dawla Fannā-Khosraw, the *band-i Kohrūd* built under the Ṣafawīs, which supplies the town of Kāshān with water and the *bands* of the forest of Belgrade, to the north of Constantinople built to assure the water supply of the city. These are nine in number, amongst them being the great *band* and the little *band* flanked by two smaller ones, the waters from which supply the *Bōsḳ-Ḥāmmaḳ* built by Andronicus Comnenus and repaired by 'Othmān II; to the north of Pasha-Dere is the *Aiwāt-band*, built in 1766 by Muṣṭafā III; to the north of Baghče-K'öi is the ancient and the modern *band* of Sulṭān Maḥmūd I, built in 1731 and restored by 'Abd al-Ḥamīd I in 1784 and the *band* of the Wālida, built by Maḥmūd's mother.

Dast-band, "band on the fore-arm" is a bracelet; *gardan-band* is exactly equivalent to the English "neck-tie".

Rū-band "face-band" is the veil worn by Persian women, of white cotton pierced with holes like a sieve and tied behind the head above the *ẓader* which covers the whole body.

Band-i Shahriyār is a musical melody. — For farther meanings see the dictionaries.

(Cl. Huart.)

BĀNDĀ, a town and district of India, in Bundelkhand, United Provinces. Area of district: 3,060 sq. m.; pop. (1901): 631,058, of whom only 6% are Muḥammadans. The town near the Ken river, has a pop. (1901) of 22,565. At the beginning of the 19th cent., it was the capital of Shamshīr Bahādur, grandson of Bādjī Rao, the Marāṭhā Peshwā, by a Muḥammadan woman. The last Nawwāb of Bāndā, 'Alī Bahādur, rebelled in the Mutiny of 1857, and the family now receives a pension from the British Government.

BANDA ISLANDS. This group of islands is formed by the peaks of a submarine volcanic mountain which rises up from the bottom of the sea (which is here about 2200 fathoms in depth) south of the island of Ceram in the east of the Malay Archipelago: it consists of three inhabited islands: Lontar, Banda Neira, and the volcano of Gunung Api (2000 feet high) with seven not or rarely inhabited islands: Pulu Run, P. Ai, P. Pisang, P. Batukapal, P. Krakah, P. Manukan and P. Rozengain. Since the middle ages these islands have attracted the attention of Europeans, not by their size (about 13 square miles), but by their chief product, the nutmeg. Immediately after their occupation of Malacca in 1511, the Portuguese set out under Antonio d'Abreu to the Banda Islands and began commercial relations which still existed when the Dutch arrived there under J. van Heemskerk and W. van Warwijck in 1599 and the English soon afterwards. The population, mainly Muḥammadan, of Banda Islands then numbered about 15,000 souls, who were living in independent settlements and organised on a patriarchal basis. The enmity of the Europeans, competing with one another in commerce, who mixed themselves up with the interminable feuds of the Bandanese was fatal to the latter for in order to assure for themselves the monopoly of the nutmeg trade, the Dutch made themselves masters of these islands in 1620. During these wars the natives of the islands, much decreased in number, had taken refuge in the neighbouring islands; those who remained were ultimately transported to Batavia, only a portion of them being afterwards brought back. The two islands on which the nutmeg is cultivated, Lontar and Banda Neira, were divided into farms (Perken) and these were allotted to immigrant Europeans who were to grow this spice with the help of slaves from the adjacent islands; it could however only be sold at a fixed price to the "Nederlandsche Oostindische Compagnie". This monopoly remained under one form or another till 1864, although the nutmeg tree had also been cultivated in other islands of the Archipelago since the end of the xviii[th] century: after that year the occupiers (Perkeniers) were allowed to acquire their plantations from the government free from restrictions and this transference was completed in 1873.

These Christian descendants of mixed blood from early European immigrants form, with the Dutch officials, the aristocracy of the country and live in the capital Neira (Europeans 677, Chinese 92, Arabs 306, natives 3051) in the assistant-residency which belongs to the residency of Ambon. The Chinese mercantile families, many of whom have been settled on Banda for a long time, and various Arab merchants (often contractors for Javanese labourers) belong to the same level of society. The less prosperous inhabitants form the "burgers" and are some Christian and some Muḥammadan, who have been settled there for centuries: the "burgers" therefore have arisen out of immigrant elements. In their daily life the "burgers" are all dressed in similar fashion, only the Muḥammadans shave the hair of their heads and wear a head cloth, at festivals the Christians are dressed in European fashion and the Muḥammadans in Malay.

The lowest stratum of society consists of Muḥammadans and pagans, the latter immigrants from the neighbouring islands (e. g. Timor), the former descendants of the slaves who were set free in 1860, of political exiles etc. The Muḥammadan population is being considerably increased by the Javanese who work on the nutmeg plantations as contract-coolies. The number of inhabitants is about 6500. The sole export is nutmegs; the foodstuff such as rice, sago, maize, cattle and European luxuries and wearing apparel are imported. There is no industry worthy of mention. In earlier years these glorious islands were very unhealthy for Europeans but through better hygiene they are now among the healthiest in the Archipelago.

BANDAR. [See BENDER.]

BANDJARMASIN is at the present day the name of a town at the mouth of the river Barito in the south of the island of Borneo; in early times however the name was better known as that of a Muḥammadan kingdom which extended along the west, south, and east coasts. The district east of the mouth of the Barito was its centre. According to a Malay Ms., Javanese Hindus settled in the Negara valley at the end of the xiv[th] century and in later times the Sultans claimed descent from Maharadja Suria Nata, a prince of Modjopait. In the vicinity of Martapura and in Kutei (on the east coast) there have been found however Hindu remains of the same age as those of Western Java i. e. the fifth century of our era. In Book 323 of the history of the Ming dynasty (1368—1643) a comparatively detailed account is given of Bandjarmasin as a commercial centre and of the neighbouring Bandjudajah. With the help of the Muḥammadan kingdom of Demak in Central Java, Sultan Suria Angsa ascended the throne as first Muḥammadan Sultan in the beginning of the xvii[th] century and removed the capital from Negara to Martapura, both of which lie on tributaries of the same name of the Barito. Tribute was paid by the coast countries; the Beadju and other Dayak tribes in the interior asserted their independence and remained pagans. From the latter the Bandjarese obtained wax, rotan, bezoar-stones

and gold; they themselves had pepper plantations, gold and diamond washings, so that in the xvii[th] and xviii[th] century Bandjarmasin was an important port much visited by foreign merchants, European, Chinese, Arabs, Buginese and Javanese. On account of feuds within the Sultan's family, which from the practice of polygamy was a very numerous one, the kingdom was much weakened and the sultans were often helpless against their relatives; Portuguese, Dutch and English attempted to found trading settlements here but they all had to withdraw on account of the treacherous behaviour of the princely robbers. In 1787 Sulṭān Tamdjīd Allāh ceded his kingdom to the Dutch East India Company so as to be able to assert his right to the kingdom, as their vassal instead of his brother's. After years of turmoil and fighting caused by the disputed succession to the throne, the sultanate was finally incorporated in the Dutch possessions in 1859. In 1853 the number of Bandjarese was reckoned at 280,000 souls, who were divided into five classes: the nobility, the priesthood, the headmen, the freemen and the slaves (debtors). The nobility consisted of descendants of the Sultan's family; they lived on their appanages and held the highest offices. Although there were native laws (*undang undang*), the government of the land was carried on in the most arbitrary fashion and the people ruthlessly plundered; offices were filled with an equal disregard to the law.

Levying taxes was regarded as the main duty of government; the following were levied on the Muḥammadan population: The poll-tax, duties (about $^1/_{10}$ of the value), on rice-crops over 30 *pikol* ($9^1/_2$ stones) *padi* a tenth (*djakat* for the Sulṭān as head of the priesthood), ground-tax, a tenth on washed gold and all diamonds found must be surrendered to the Sulṭān at 33 shillings per carat. Besides there were taxes on passports, fish-ponds etc. Finally the people were frequently oppressed by compulsory presents at festivals; personal service as soldiers, artisans and oarsmen had also to be supplied.

The sultan was regarded as head of the priesthood with a Mufti under him in Martapura; the personnel of each Missigit consisted of a *penghulu*, *kalifa*, *lebai*, *katip*, *bilal* and a *kaum*. The *penghulu* filled the office of Ḳāḍī but in the administration of justice also there was the greatest arbitrariness and extortion; crimes, even murder, could be atoned for. A criminal condemned to death was stabbed with a spear or kris. The priests drew their revenues from the *pitrah*, a share in the *djakat*, from fines and presents; many of them also engaged in trade.

The chiefs bore Javanese names from *lurah* (the head of a village) to *adipati*, the highest title. The officials not endowed with appanages were paid by the people.

Agriculture, especially the growing of rice on wet and dry fields, forms the chief means of sustenance of the people, cotton and indigo have also been planted for industrial purposes. In the very marshy plains, e. g. in Negara, industry flourishes: gold, silver and copperwork, pottery and diamond-cutting of high quality; the merchants also were numerous and prosperous. They owned most of the slaves who led a hard life. The Bandjarese are industrious and docile and have therefore tolerated the extortions of their princes without much complaint. There is evidence of an admixture of Javanese culture in the character, customs and industry of the people.

The modern Bandjarmasin is the most important commercial town in Borneo and capital of residency "Zuider- en Oosterafdeeling" which comprises the basins of the rivers of the south and east coast. Accessible to sea-going ships, Bandjarmasin lies on a very swampy island at the confluence of the Martapura and the Barito; the houses are therefore built on piles or floats. Besides the Dutch officials and the military, Chinese and Arab wholesale merchants, who export guttapercha, India rubber, rotan, damar, wax, copra and pepper to Singapore chiefly, and import European and the industrial products of Eastern Asia, live in Bandjarmasin. The number of inhabitants in 1900 was 52,685 souls, European, Bandjarese, Chinese and Arabs. These classes of the population have their own rulers.

(J. S. Cotton.)

BANĪ ḤASAN, a small town in Egypt, lying on the eastern bank of the Nile between Minia and Mallawi somewhat south of 28° N. lat.; it is famous for its Egyptian antiquities, the so called Speos Artemidos (Arab. *Iṣṭabl 'Antar*) and the rock tombs of the Middle kingdom. The present Banī Ḥasan al-Shurūḳ was founded about the end of the xviii[th] century by the inhabitants of the now abandoned Banī Ḥasan al-Ḳadīm and now has about 1800 inhabitants. For administrative purposes it belongs to the district of Abū Ḳerḳāṣ in the province of Minia. Not far to the north is an unimportant place of the same name, distinguished by the epithet al-Ashraf, which belongs to the district of Minia.

(C. H. Becker.)

BANĪ SUĒF (written Banī Suaif) a town in Egypt, on the west bank of the Nile opposite the Faiyūm; it has only attained importance in recent

times. According to Sakhawī (902 = 1497) the old name of the town was Binimsawaih, from which the form Banī Suaif arose through a popular etymology. This name بنمسويه may be compared with منمسويه in Ibn Djīʿān, *al-Tuḥfa al-saniya*, 172 and the false reading منقوسة given by Ibn Duḳmāḳ, *Kitāb al-intiṣār*, v. 10, whereby a considerable age would be proved for the town. In still more ancient times Ahnās (Heracleopolis Magna) was the capital of this district, which lies a few miles west of Banī Suēf. Banī Suēf appears to have first attained greater importance in the time of Muḥammad ʿAlī.

On the institution of the division into provinces (Mudīrīyas) Banī Suēf became the capital of the second Upper Egyptian Province, which took its name from it. This province is divided into three districts (*merkez*) and has over 315,000 inhabitants in 161 villages and 259 smaller settlements. The Merkez Banī Suēf has over 140,000, the town itself somewhat over 15,000, with 15 suburbs 18,000 inhabitants. It has a railway, post and telegraph service and is a flourishing place without any very great economic importance. A caravan route leads from it to the Coptic monasteries on the Red Sea. A local sanctuary is the *maḳām* of the Shaikha Ḥūrīya. In the most important mosque of the town, the ancient Djāmiʿ al-Baḥr, built of stone. A variegated marble is quarried near the town.

(C. H. BECKER.)

BĀNIYĀS, the ancient Paneas, so called from Panaion, a grotto sacred to Pan above the main source of the Jordan at the foot of Hermon; its later name Caesarea Philippi was, as was so often the case, ousted by its more ancient one. The grotto and the town of Paneas (and the surrounding district also of the same name) are first mentioned in the Hellenistic period, although it is probable that a predecessor of this place is concealed in a name given to this district in the Old Testament. Herod the Great built a splendid temple of Augustus in the neighbourhood of the grotto, and his son Philip increased and improved the town to which he gave the name of Caesarea in honour of Augustus. In the ivth century it was the seat of a bishop. In the Arab period the town of Bāniyās, inhabited chiefly by Kaisīs, according to Yaʿḳūbī, was the capital of Djawlān. Muḳaddasī includes the town, which lay in the Ghōr territory on the borders between Hūla and the mountains, in the district of Damascus and describes it as a town well supplied with provisions, a storehouse for Damascus; in his time the number of inhabitants was increasing because the population of the frontier districts had moved there after the conquest of Tarsus in 963. In the year 1126 it was one of the centres of the Ismāʿīlīs, when the Atabeg Toghtegin of Damascus handed it over to Bahram. In the time of the Crusades Bāniyās with the fortress of al-Ṣubaiba somewhat higher up on a spur of rock, was the centre of much fighting. In 1130 the Ismāʿīlīs ceded it to the Franks who granted it to the knight Renier Brus as a fief. Shams al-Mulūk, Atabeg of Damascus, regained it soon after in 1132 and it was next handed over to Zangī; but in 1139 the united Franks and Damascenes regained it and again gave it to Brus. It then became the seat of a bishop again. After an unsuccessful attempt in 1154 Nūr al-Dīn conquered the town in 1157 without however being able to take from the Franks the strongly fortified citadel of Ṣubaiba; he had to give it up again soon afterwards on the approach of Balduin III with an army. In 1164 he was successful in gaining not only the town but the fortress also and from then onwards all attempts by the Franks (e. g. in 1174) to regain possession of the town came to naught. Salāḥ al-Dīn presented it to his son al-Afḍal. At a later period it was taken by al-Muʿaẓẓam (1218—1227) who granted it to his brother al-ʿAzīz ʿOthmān, after whose death it fell to his son al-Saʿīd. The fortifications destroyed by al-Muʿaẓẓam were restored by ʿOthmān and al-Saʿīd as some inscriptions still extant prove. The Mongols somewhat later laid al-Ṣubaiba waste but Baibars had the fortress rebuilt on his conquest of the town in 1260. Dimishḳī describes Bāniyās about 1300 as an old, strongly fortified town and mentions as does Abu 'l-Fidā, the adjacent al-Ṣubaiba; in the xvth century al-Ẓāhirī calls it a handsome town and speaks of the rice grown there and exported. The relatively well preserved remains of this town still show clearly the buildings of the Franks and the additions of the Saracens.

There is another Bāniyās on the Syrian coast, north of Tripolis; it is the ancient Balaneas which was changed by the Arabs to Bulunyās and then (e. g. in Ibn al-Athīr, x. 334) to Bāniyās.

BANJALUKA (BANĀLUḲA), Circle and town in Bosnia (q. v.).

BANKA (BANCA), an island in the south of the Chinese Sea, lying to the east of Sumatra, a mountainous land, 206 geogr. square miles in area, formed of the oldest rocks such as schists, quarzites and massive eruptions of granite, much denuded and weathered to laterite, surrounded by coral reefs and small islands. The surf on the east side has prevented the formation of alluvial plains; on the quiet west side these cover great areas hemmed in by a coast of rhizophors. In these deposits heavy tin ore is found as stream tin; in the visible stone-formation, little is found. The highlands of undulating hills

rise to a height of 2200 feet in the north, and like the alluvial plains are almost entirely covered with thick bush and underwood of modern growth though the primeval forest still survives in a few parts. The flora and fauna agree with those of Malacca and Sumatra; large mammals like the tiger, elephant and urang utang are not found however. Its history begins with the discovery of tin and it is to this metal that the island owes its whole importance. After the beginning of the xviii[th] century the Sulṭāns of Palembang, as owners of Banka, began to work the tin-mines with natives and Chinese; they are now worked by the Dutch government.

With a few small islands Banka forms a residency with Muntok as capital. The administrative division into nine districts is based on the working of the mines. Under the Dutch resident, settled in Muntok, the administrators are the chiefs of a district; under these there stands a *kapitan* (in Muntok and Blinju) or *lieutenant* as head of the Chinese and a *dĕmang* as head of the Muḥammadans.

The population of Banka (in 1909: 115,189 souls), in addition to the Dutch officials (517 souls) and military consists of two sharply defined elements: the native Malay population (70,853) and the foreigners: Chinese (43,723), Arabs (261) etc. The Malays are Muḥammadans with the exception of a few pagans, who live in the interior, and the majority of the Orang Sĕkah, a fisher people who live on the coasts or in their boats. Islām is continually spreading among the latter, Christian missions have been unable to make headway on Banka either among the Chinese or the natives.

The Malay population (Orang Darat) consists of a little developed, mild, unenterprising race of men, who were formerly not sedentary but were forced by the Dutch government, in the middle of the xix[th] century, to settle in villages on the roads connecting the chief towns of the districts. Here they derive a miserable livelihood from agriculture on dry fields (*ladang*); in recent years the government has again been trying to teach them cattle-rearing and the cultivation of irrigated fields (*sawaḥ*). Each village has a Muḥammadan house of prayer and a priest; they observe Muḥammadan customs at marriages and deaths; in consequence of their poverty the annual number of Ḥadjdjīs is however very small (6—30). It has been specially noted of the Bankanese, to how high a degree they are still guided by animistic beliefs in their daily life. In accordance with their primitive Indonesian development their village constitution is patriarchal; trade among them is quite unimportant; their industries are only exercised for their own needs and their matting alone is worthy of mention. They spend much time in fishing and hunting wild swine and deer.

The Arabs, being merchants and seafarers, are chiefly settled in Muntok, which is the centre of foreign trade though they are also to be found in Blinju and the chief towns of other districts.

The Chinese population consists in the first place of Hakka- and other Chinese who are connected with the mines as labourers, traders or contractors, and ultimately return home again. They work the mines allotted to them by the Dutch engineers in *kongsi's*, who have to deliver the tin up to the Dutch government at a fixed price. Secondly there is a large number of Chinese of mixed blood, born of native women, who are settled in Banka and live by trading, industry, fishing, pig-breeding and a little agriculture. Their children are educated in 45 Chinese schools. As the natives at most only supply their own requirements in the necessities of life, rice, fish, cattle, and wearing materials also must be imported; the total imports amount to £ 146,000 and the exports to £ 26,000 of which £ 23,500 is pepper.

BĀNKIPŪR, the western suburb of the city of Patna, situated in 25° 37′ N. and 85° 8′ E., on the right bank of the Ganges. The Public Library of this town contains one of the finest collections of Arabic and Persian MSS. in India, to the number of upwards of 6000; it owes its origin to Mawlawī Muḥammad Bakhsh Khān (died 1876), who was a diligent collector of rare manuscripts.

Bibliography: *Catalogue of the Arabic and Persian Manuscripts in the Oriental Public Library at Bankipore* (Calcutta, 1908 . . . .).

BANNU, a town and district of India, in the N. W. Frontier Province. Area of district 1,670 sq. m.; pop. (1901) 226,776, of whom nearly 90% are Muḥammadans. It consists of a basin, watered by the Kurram and Tochi rivers, and entirely shut in by mountains. More than half of the inhabitants are Paṭhāns, speaking Pashtu, the chief tribes being Marwats, Bannūčīs, and Wazīrs. The crops are wheat, gram, maize, and millet, grown by irrigation from petty canals. Except for frontier raids the district has never been disturbed since British occupation. The town of Bannu, formerly called Edwardesābād, was founded by Sir Herbert Edwardes in 1848; pop. (1901), including cantonment, 14,291. It is the centre of an important medical mission for the frontier tribes.

(J. S. Cotton.)

BANTAM or **BANTEN** is the name of the western residency of Java; it was also the name of an earlier Muḥammadan kingdom in this district, the capital of which, Bantam, still exists on the north coast. Sĕrang is now the capital of the residency which covers an area of 143 geogr. square miles and is divided into five assistant residencies, Sĕrang, Anjer, Pandeglang, Tjaringin and Lĕbak and in 1905 had a population of 895,390 souls including 537 Europeans, 3155 Chinese, 82 Arabs, 75 other foreigners from outside Java, and 891,541 Sundanese and Javanese. The northern half is mainly flat country,

the southern covered by the chalk hills of G. Kendeng. In the centre rise the volcanoes Karang and Pulosari, on the eastern border the Halimun. The coasts are flat except the northwest and the west and the east of the south coast. In the north the deep Bay of Bantam, running far inland, used to form a good harbour. Little was known of Bantam before the beginning of the XVIth century. It then belonged to the Hindu kingdom of Padjadjaran of West Java of which the most important harbour was Sunda Kalapa and afterwards Jakatra and Batavia. The Hindu figures of Brahma, Śiva and Ganeśa found in Central Bantam on the volcanoes of Karang and Pulosari afford ample evidence of the widespread influence of Hinduism. Soon after 1522 Bantam was conquered by the Muḥammadans of Demak in Central Java and Sunda Kalapa fell soon after. Bantam then became the great commercial port of West Java whither Chinese and other merchants of the Indies, since Malacca had become a Portuguese possession in 1511, brought the wares of the archipelago. Bantam was also the first harbour in the archipelago to be visited by the Dutch in 1596.

Mulana Hasan-Uddin, a son of the Susuhunan Gunung Djati of Cheribon, is said to have been the first Muḥammadan prince; he conquered South Sumatra, and was succeeded in the middle of the xvith century by Pangeran Yūsuf, whose son P. Muḥammad built the great Missigit of Bantam. On the decline of the Muḥammadan kingdom of Demak, Bantam became independent early in the XVIIth century and its princes took the title of Sulṭān. In West Java their power was gradually extended to the south and east and in the process they came in contact with the kingdom of Mataram in Central Java which had subdued Demak. The consequences were the spread of Islām in West Java and the settlement of Javanese from North Bantam under the Sundanese there. West Borneo also was for a time subject to Bantam.

In 1619 the Dutch Governor General J. P. Koen conquered Jakatra, and Batavia was founded there as a commercial emporium and centre of the colonial possessions of the Dutch East India Company. This caused the warfare among the neighbouring states which was practically continuous except for brief intervals after treaties of peace. The boundaries of the present districts were defined in 1659; Sulṭān Abu 'l-Fatḥ had to conclude a, for him very disadvantageous, treaty in 1684 and the power of the Bantam kingdom gradually declined from that day forward till it ultimately became a dependency of the Netherlands. The main provisions were that a certain quantity of pepper had to be delivered to the Dutch trading Company at a definite price and all claim had to be abandoned to certain districts. The suzerainty of the Company had to be recognised in 1752, and in 1813, when the English ruled in Java, they abolished the Sultanate altogether. But it was not until soon after the banishment of the Sultan's family in 1832 and the introduction of a regular government whereby some restrictions could be placed on the exploitation of the people by the nobles and priesthood that peace was finally restored among this relatively fanatical people (especially the Javanese section).

In consequence of these events the Sundanese form the population of Bantam; in the north however they are largely mixed with Javanese, whose language is predominant there and there are also settlements of Lampongers from South Sumatra. At the present day the only adherents to Hinduism are the Bāduwi, a small tribe in the desert highlands of Lebak; the remaining inhabitants of this residency are all zealous Muḥammadans, whose customs, especially family law, have been more strongly influenced by the regulations of Islām than has been the case in Central Java for example. They engage only in agriculture (growing rice). Commerce and industry are very little developed and the trade with native ships from Anjer and Bantam to South Sumatra is of very little importance. Copra and Arachis hypogea are exported. As the land does not provide sufficient sustenance for its thick population, many men find temporary employment in Batavia and other places.

The town of Bantam is now only a small trading-place with a native population without foreigners. Most of the larger buildings of earlier times have fallen to pieces or quite disappeared. The famous mosque alone, with detached minaret is in a good state of preservation (there is also a mosque in Kanari and in Kasunjatan). A holy well which is said to be connected with the Zamzam well in Mecca, is beside it. The steady decline in the depth of the Bay of Bantam causes great inconvenience to navigation. The town of Karangantu which has arisen in the northeast has therefore attracted most of the traffic to itself. A railway connects it with Serang and Anjer in the west and Batavia in the east.

BANU 'L-AṢFAR. [See Aṣfar].

BANŪ ISRĀ'ĪL, the children of Israel, title of Sūra xvii.

BĀONI, the only Muḥammadan State in Bundelkhand, Central India, lying between 25° 34′ and 26° 10′ N. and 79° 45′ and 80° 2′ E., with an area of about 122 square miles. The population in 1901 was 19,780, of whom only 2,415 were Muḥammadans. The chief is descended from 'Imād al-mulk Ghāzī al-dīn, the grandson of Āṣaf Djāh Niẓām al-Mulk (viceroy of the Dakhin, 1720—1748). He obtained a grant of 52 (Hindi *bāwan*, hence the name of the State) villages from the Marāṭhā Peshwā in 1784. During the Mutiny of 1857, Nawwāb Muḥammad Ḥusain Khān

and his son were instrumental in saving the lives of several Europeans at great risk to themselves.

AL-BARĀ' B. 'ĀZIB, a Muslim general. With his contemporary 'Abd Allāh b. 'Omar b. al-Khaṭṭāb and several others he was turned back by Muḥammad on the departure for Badr because he was too young; he took part however in many other battles under the Prophet. When the latter sent Khālid b. al-Walīd into Yaman to demand the adoption of Islām by an Arab tribe, al-Barā' also took part in the expedition. During the reign of 'Omar he was sent by the governor of Kūfa, al-Mughīra b. Shu'ba with Ḥanẓala b. Zaid against Ḳazwīn. The district of Abhar was first conquered. The people of Ḳazwīn called in the help of the Dailamīs but had to give in soon after and the Dailamīs were forced to pay tribute. Al-Barā' then advanced against Gīlān, al-Babr and al-Ṭailasān and conquered Zandjān. He also fought in the Battle of the Camel, at Ṣiffīn and al-Nahrawān under 'Alī. Al-Barā', after living some time in Kūfa, went to Medina and died there or in Kūfa in the time of Muṣ'ab b. al-Zubair.

AL-BARĀ' B. MA'RŪR, a companion of Muḥammad. Among the seventy five proselytes who appeared at the 'Aḳaba in the summer of 622 at the pilgrims' festival to enter into alliance with the Prophet, the aged Shaikh al-Barā' b. Ma'rūr of Khazradj was one of the most important and when Muḥammad declared he wished to make a compact with them that they should protect him as they would their wives and children, al-Barā' seized his hand, promised him protection in the name of all present and sealed the compact. In the same assembly, the so called second 'Aḳaba, twelve men were chosen as preliminary representatives (*naḳīb*) of the new community in Yathrib, and on this occasion al-Barā' was appointed chief of the Banū Salima. He is also famous in the history of Islām, for having changed the direction of praying even before Muḥammad and turning towards the sanctuary of Mecca. When Muḥammad reproved him, saying that Jerusalem was the true Ḳibla, he obeyed him, but on his deathbed ordained that his corpse should be turned towards Mecca. He died in Medina in Ṣafar, a month before Muḥammad's arrival there, after bequeathing to the Prophet one third of his estate.

BĀRĀ WAFĀT is the Indian name of the 12[th] day of the Rabī' al-Awwal. It is a compound word of *Bārā*, "twelve", and *Wafāt*, "death". It is observed as a holy day in commemoration of the death of the prophet Muḥammad. His life and teachings are on that day generally recited in private houses and mosques throughout India, and is a great day of rejoicing for the Muslims of the whole world, who consider it at the same time as the day of his birth. For more details see Art. MAWLID.

(M. HIDAYET HOSAIN.)

BARĀ'A (A.) means "discharge", "liberation", "enfranchisement". In Syrian Arabic it means "privilege, passport" or "diploma"; thus the bishops approved by the Ottoman Government receive a *berāt* of investiture, that is permission to exercise their office.

The word appears in an important passage of the Ḳor'ān, at the beginning of Sūra ix, where the Prophet commands his followers to make pilgrimages and proclaims that a truce should be observed during the holy months. This passage is not expressed with absolute clearness and its interpretation gives some trouble. On a first reading the most simple explanation appears to be that Muḥammadans should give one another safe-conduct during the sacred months devoted to the pilgrimage to Mecca. This is not however the meaning admitted by the most authoritative commentators: Zamakhsharī explains that a truce had been made with the pagans of Mecca and other Arabs and that they broke it with the exception of the Banū Ḍamra and the Banū Kināna; the Prophet then announced to the believers the following revelation from God: "You are free from any obligation to the heathen who have broken their pledge". Mas'ūdī (*Livre de l'avertissement*, p. 360) thus paraphrases this important passage: Abū Bakr al-Ṣiddīḳ was entrusted in Dhu 'l-Ḥidjdja with the command of the pilgrimage and Sūra *barā'a* was revealed to the Prophet at the same time. He had the first seven verses announced by 'Alī b. Abī Ṭālib, ordering him to proclaim them before the Moslems when they would be assembled at Minā: "Let them know", he said, "that no unbeliever shall enter into Paradise, that after this year no idolator shall make the pilgrimage, that no one shall again run naked round the Ka'ba, and that whosoever has a compact with the Prophet shall take note of the period named in it; allow *four* months from the day of assembling for each one to return to security, after which there shall be no obligation binding with the idolators nor any compact made with them." These events are referred by tradition to the ninth year of the Hidjra.

(B. CARRA DE VAUX.)

BARABA, a steppe in Western Siberia, between 52° and 57° N. lat., is bounded on the west and east by the ranges of hills on the banks of the Irtish and Ob (Obi). The largest of the numerous salt lakes of this steppe is the Čani. The ground is as a rule marshy, so that traffic is rendered very difficult in the wet season, but not generally unfertile; the Russian villages on the border districts of the steppe are described as being particularly prosperous. The native Tatar (Turkish) population is called Barabintsi by the

Russians; in the xviith century they were driven into the unfertile parts of the steppe; since then their numbers have been decreasing. According to statistics collected by Radloff in 1865, there were then only 4635 "Baraba-Tatars"; for the most part Islām was not adopted by them till the xixth century. Radloff saw some old men who remembered that their fathers, like the Altaians offered heathen sacrifices and did not dress like the Muhammadans. Specimens of the popular literature of the Baraba-Tatars have been collected by Radloff. Hunting and fishing as well as agriculture are practised by both Russians and Tatars. The yield from the fisheries and from the fur trade has considerably increased in the last century, the latter in particular. In the time of Middendorf the ermine and the wolf were the only fur-yielding animals to be found here.

The Turkish population emigrated into these lands probably in the Mongol period in connection with the foundation of the "Siberian Kingdom". From the conquest of this kingdom to the time of Peter the Great this steppe formed the boundary between Russia and the Calmucks. The frontier territory between the towns of Tara (on the Irtish) and Tomsk (east of Ob) was then known as the "District of Baraba" (*Barabinskaya volost'*); the native population spoke Calmuck in addition to their native Turkī and paid tribute to the Russians and Calmucks and later to the Russians only. In the xviiith century a considerable number of exiles from European Russia were settled in Baraba.

Geogr. Obšč. po otd. etnografii*, Vol. x. Part i., p. 44 (account of the journey of the Russian envoy N. S. Nikolai Spafari in the year 1675). (W. Barthold.)

BARABRA (Barābira) is the plural of Barbarī and in Egypt denotes the Nubians or as they are now usually called, Berbers. Their home is the upper valley of the Nile from the neighbourhood of Aswan to Dongola. The visitor to any portion of this district is struck by the small number of men met with; one sees only women, children and old men. The fertile area is not large but the population is numerous, so the men go to Egypt where they find employment as domestic servants, cooks, coachmen, doorkeepers, running footmen, and in suchlike posts. After a few years they return home with their savings. The Berbers are a genial race of men, versatile and reliable and soon master Arabic or a European language also. In speaking Arabic however they cannot conceal their origin and this explains their name Barabra i.e. Barbarians, particularly in their pronunciation of Arabic. Their mother tongue is Nubian, the connection of which with the languages of the Sūdān has now been proved. It is at present the object of scientific investigation. In Cairo and Alexandria the Berbers unite into guildlike organisations according to their callings and are in general very clannish. Their religion is Islām; as to Madhhab they are Mālikīs. Their clannishness is also shown in the fact that they, for the most part, belong to a certain brotherhood, the Ṭarīḳa al-Khatmīya, a branch of the Egyptian Aḥmadīya. Their present head is the Shaikh Mirghanī, after whom the order in Cairo is also called Mirghanīya. As their fondness for company is strong, they live together as a rule; whence the Egyptian proverb, said of a heavy rainfall: *maṭṭarat barābra* "it rains Barabra". On their land and copious history see the article nubia.

BARADĀ, a famous river of Damascus, often mentioned in modern poetry; the older poets, even those of the Umaiyad period, mention it more rarely. Its real source, as the Arab geographers well knew, is in Antilebanon, immediately below the watershed, west of Zabadānī; it traverses with many windings the fertile plain to the east of this district, forms the waterfall of Takkīya and plunges into the deep ravine of Sūḳ Wādī Baradā, the ancient Abila. The waters of the abundant spring ʿAin Fīdja double its volume and support luxurious orchards on its banks. Then on entering the plain of Damascus it breaks through an exit for itself which has been artificially enlarged. There it is divided into five arms or main channels — they are called *nahr* —: on the right, uppermost, Yazīd (probably widened by the Caliph Yazīd I), Thawrā, on the left Bāniyās or Bānās (a form attested by poetry) and Ḳanawāt, the middle arm preserving the name Baradā. Arculf (about 670) only mentions "magna IV flumina", the Nahr Yazīd having been made after his visit.

After this division into five branches the Baradā, like a miniature delta flows in and around Damascus, spreading fertility and freshness everywhere. The rich oasis of Ghūṭa owes its existence to it; in Damascus it fills the tanks which are found in every house. Below the town it collects its forces again and about 14 miles below Damascus is lost in the lake of ʿAtaiba, on the verge of the Syrian desert. A double confusion with the Aʿwadj and with one of the tributaries of the Yarmūk has probably led the usually so careful Muḳaddasī to say that one of the arms of the Baradā flows into the Jordan, a mistake easily arising from the fact that Bāniyās is the name both of the source of the Jordan and of one of the canals of the Baradā. A village named Baradā is mentioned by Yāḳūt to the east of Aleppo; it is probably the Barad in the Djabal Simʿān.

BARADĀN, a town in the ʿIrāḳ. According to the Arab geographers it was situated 4 parasangs (= about 16 miles) north of Baghdād on the main road to Sāmarrā and at some distance from the east bank of the Tigris, a little above the confluence of the Nahr al-Khāliṣ and the

latter. The Khāliṣ canal, a branch of the Nahrawān (or Diyāla) flowed immediately past Baradān. The Caliph al-Manṣūr held his court here for a brief period, before he definitely resolved on building a new capital on the site of the modern Baghdād (Cf. Ya'ḳūbī, *Bibl. geogr. arab.*, ed. de Goeje, vii. 256). There was a bridge in Baghdād, a street and a gate (after this a cemetery also) in the eastern half of the town called after Baradān which was two post stations distant; cf. le Strange, *Baghdād during the Abbasid Caliphate*, (1900), p. 360 (Index). When the author of the *Marāṣid* made his extract from Yāḳūt (about 700 = 1300) Baradān was quite desolate and unknown. It is doubtless to be sought for in the present mound of ruins at Bedrān, the position of which agrees admirably with the statements of Arab authors. According to R. Kiepert's map in v. Oppenheim's *Vom Mittelmeer zum Persisch. Golf* Bedrān is situated under 33° 30′ N. lat; it is also given by Petermann and the name is corrupted from Berdān (Baradān) — as Černik actually corrects it —.

The Arabs tell us that the name Baradān is arabicised from the Persian *Bardah-dān* = "The place of the prisoners"; cf. e.g. also Djawālīḳī's *al-Mu'arrab* (*Zeitschr. d. Deutsch. Morgenl. Ges.* xxxiii. 219); this appellation has suggested that there was a Jewish colony settled here presumably by Nebuchadnezzar. A town in the basin of the central Diyāla near Ḳyzrobāṭ (so Herzfeld, not Ḳyzylrobāṭ) with a considerable area of ruins (Baradan-Tepe) is likewise called Baradān (Baradān); see Ritter, *Erdkunde*, ix. 491 *et seq.*; Černik in *Petermann's Geogr. Mitteil.*, Erg.-Heft 44, p. 38.

(M. STRECK.)

BARĀHIMA, BRAHMANS. The Arab author who was best acquainted with, indeed one might almost say the only one who was acquainted with Brahmanical India, was al-Bīrūnī. His great work on India (*India*, ed. and transl. Sachau 1888; new edition of transl. 1910) testifies to his study of this country, a study for which he was qualified by exceptional gifts in the diverse realms of philosophy, literature and science. He speaks as an authority on the Indian castes, or "colours", on the Brahmans and their manner of living, their books, their religion and their science. Al-Bīrūnī had studied Sanskrit and translated several works from Sanskrit into Arabic. He knows what the Vedas and Purāṇas are; he even understands Sanskrit prosody. He is familiar with the metaphysics of Brahmanism as well as with some of its myths. He has interesting notices of the egg of Brahma, the life of Brahma, the periods in the life of the world, Kalpa and Yoga, metempsychosis, the rewards of actions in the various worlds and salvation. Al-Bīrūnī wrote his book in Ghazna, that is to say in a centre where the Hindu population was numerous (about 1030 A. D.); he had previously travelled in the Pandjāb.

Excluding this fine work, the information of Arab authors on Brahmanism and on India is very meagre. Exact details, accurate information are lacking where one would expect to find them. They are not to be found in a good historian like Mas'ūdī nor in a specialist in the science of religion like Shahrastānī, who however knows something of Buddhism, nor in the tales which are of evident Indian origin like the *Kalīla wa Dimna*, nor in the narratives of voyages, specially devoted to India such as the *'Adjā'ib al-Hind* or the *Silsilat al-Tawārīkh*. It must however be mentioned that the part of India least unknown to the Arab voyagers is Ceylon which is a Buddhist country.

Mas'ūdī mentions two Arab authors as having written on Indian sects, Abu 'l-Ḳāsim al-Balkhī and al-Ḥasan b. Mūsā al-Nawbakhtī. This historian says that the Brahmans are descended from Brahmān, a kind of priest-king and scholar who, having assembled a congress of sages, established religion with their help, laid down the theory of astronomical cycles, invented figures and calculated the procession of the equinoxes. The life of the world, according to his teaching, lasts for 12,000 times 36,000 years; it develops in the earlier periods and declines in the later periods. In another passage the cycle is estimated at 70,000 years and is called *Azarwān*.

According to Shahrastānī, Barhām disclaimed prophecy for several reasons which are given. His summary which gives no information about the Hindu religions is probably the resumé of some controversy between a Mussulman and an unbeliever on the doctrine of prophecy.

In Arabic literature, the Brahmans are placed between the philosophers and the soothsayers; in the *Kalīla*, the Brahman Baidaba is depicted merely as a man of good counsel, sagacity and foresight. "He had so great a reputation for wisdom that he was consulted on all difficult questions". — "The Indians", says the author, "have men who devote their lives to religion and men of learning called Brahmans; they have poets who live at the courts of kings, astronomers, philosophers and soothsayers." Shahrastānī makes the astrologers and soothsayers a class of Brahmans.

In the descriptions of voyages it is ascetics rather than Brahmans who are particularly noted. The ascetics whose manner of livings is well described and who have "human skulls for bowls" are called *Bikardjī* or *Bīkār*; this word is a corruption of Bhikshu (see *Merveilles de l'Inde*, ed. van der Lith, Index). — The Persian poet Sa'dī and others give the name *Brahman* to fire-worshippers (*Bustān*, trad. Barbier de Meynard, p. 331).

(B. CARRA DE VAUX.)

BARAHŪT (BALAHŪT, also written BURHŪT), a Wādī in Ḥaḍramawt, on the verge of which, at the foot of a volcanic mountain, is the famous *Bi'r Barahūt*, the spring of Barahūt. According to the native accounts this is a fissure 53 feet long by 25 broad, at its entrance filled with burning sulphur. The stink of the sulphur and the bubbling of the spring (the noise of the volcano?) have given rise to the story that the souls of unbelievers predestined to hell are waiting here and cry out in the night time: "O Dūma! O Dūma!" in tones of woe. There used to be a proverb, as Hamdānī tells us in his *Djazīra* among proverbial phrases current in the various districts (probably said of one who had

died an unbeliever): "God has obliterated his footsteps, annihilated him and placed his soul with the souls of the unbelievers of Barahūt." The Greeks connected this spring with the Styx; whence the geographer Ptolemy calls it Στυγὸς ὕδατος πηγή. The Romans expanded the legend and located here the two brothers from Crete, Minos and Rhadamantys, the judges of the underworld and Pliny mentions as two of the most prominent, in his list of hundreds of the tribes of Arabia Felix, the Minaei and Rhadamaei in the neighbourhood of the "Stygis aquae fons".

Not far from Bi'r Barahūt is Ḳabr Hūd, the tomb of the patriarch Hūd who was sent by God as a prophet to the unbelieving people of 'Ād and was slain by them. The natives say it is a great heap of stones near which is a simple mosque which is said to contain the ashes of the prophet Hūd. It may be said to be the most important place of pilgrimage in the whole of South Arabia, to which pilgrims go from all parts of Ḥaḍramawt on the 11th of the month of Sha'bān and offer prayers in which mention is made of the prophets Nūḥ, Ibrāhīm and others. At the same time a great market is held. For the remainder of the year the place is quite deserted.

Barahūt has not yet been visited by any modern traveller. The explorers Adolph v. Wrede, who was in Wādī Daw'an not far from Barahūt in 1843 on his famous journey of discovery, and Leo Hirsch, who travelled in Ḥaḍramawt fifty years later, were both unable to carry out their plan of visiting this valley.

BARAKA (a.) Blessing. The idea associated with this word plays an important part in Muḥammadan superstitions. It has become a magic means of obtaining all sorts of good fortune, in particular the healing of diseases and infirmities, not only from God but also from holy men and objects which are supposed to possess the power of conferring blessings. By the mere touch these may be transferred to others. This is the origin of the eastern *li 'l-Tabarruk* (to seek a blessing) of touching, kissing, stroking the holy objects. The relics of saints, the clothes, which they wore in their lifetime and of course also holy men who are still alive and everything connected with them, are particularly powerful. This also explains the custom occasionally found of the head of a derwish order spitting in the mouth of newly initiated members.

BARAKĀT was the name of several Sharīfs of Mecca. — Barakāt b. Ḥasan b. 'Adjlān ruled with his father from 809 (1406), and alone from 829 (1426) till 859 (1455) with a few brief intervals. This clever and accomplished prince followed a cautious policy towards the Circassian Mamlūk Sulṭāns of Egypt; nevertheless the most important in its consequences of the events of his long reign was the despatch by Djaḳmaḳ of a *Nāẓir al-Ḥaramain* and a permanent Turkish garrison to Mecca. The foundation was thereby laid for the dual control of the government: Sharīf and Governor, cf. *Chroniken der Stadt Mekka*, ed. by Wüstenfeld, ii. 230 *et seq.*, 299 *et seq.*; iii. 216; C. Snouck Hurgronje, *Mekka*, i. 98—100. — The ruling power passed from father to son to Barakāt b. Muḥammed 903—931 (1497—1525), grandson of the above mentioned Sharīf. The first fifteen years of the reign of this prudent and cultivated Sharīf were much disturbed by the wars and intrigues of his brothers; more peaceful times afterwards set in. His friendship with the Egyptian Sulṭān al-Ghūrī did not prevent him from at once recognising the suzerainty of the Ottomans in 922 = 1516, so that this year, so important in the history of the world, had no sudden disturbing effect on the Ḥidjāz. On the death of Barakāt he was succeeded peacefully by his son Abū Numaiy. Cf. *Chroniken der Stadt Mekka*, ii. 342 *et seq.*; iii. 244 *et seq.*; C. Snouck Hurgronje, *op. cit.*, i. 101—104.

Among the sons of Abū Numaiy another Barakāt deserves mention as giving his name to the Dhawī Barakāt, one of the "three families around whose rivalry the further history of Mecca centres" (C. Snouck Hurgronje, *op. cit.*, i. 119). — In 1082 = 1671 a scion of this house, Barakāt b. Muḥammad b. Ibrāhīm, was set up against the Dhawī Zaid, the ruling branch of the Sharīfs, by the Maghribī Muḥammad b. Sulaimān who had been sent with full powers by the government of Constantinople to restore order in Mecca. He was only a prince in name; the foreign plenipotentiary had the real authority. The fall of the latter was followed soon after Barakāt's death in 1093 (1682) by the overthrow of the Dhawī Barakāt; they still continued to play a part as claimants to the throne for over a century. Cf. Muḥibbī (Cairo 1284), i. 436—450; F. Wüstenfeld, *Die Scherife von Mekka*, p. 72 and 75—80; C. Snouck Hurgronje, *op. cit.*, i. 125 *et seq.*

BĀRAKZAI, the clan name of the branch of the Durrānī tribe now ruling in Afghānistān [q. v.]. The clan first became prominent at the beginning of the xixth cent., in the person of Fatḥ Khān, Wazīr under Shāh Maḥmūd Sadōzai, who caused him to be blinded and ultimately murdered in 1818. Fatḥ Khān's half-brother, Dōst Muḥammad, after many years of fighting, assumed the title of Amīr in 1835, and founded the existing dynasty.

Bibliography: [See art. AFGHĀNISTĀN].

(J. S. Cotton.)

BARĀMIKA, the name given to certain Egyptian dancers, see GHAWĀZĪ.

BARAN, the ancient name of the town of Bulandshahr [q. v.].

BARANĪ, Ḍiyā' al-Dīn, author of *Ta'rīkh-i Fīrūzshāhī*, a history of the kings of Dihlī from the accession of Ghiyāth al-Dīn Balban (664 = 1265) to the sixth year (758 = 1357) of the reign of Fīrūz Shāh; he was born about 684, and owing to his exten-

sive reading, retentive memory and the charm of his conversation, he became a favourite companion of Sulṭān Muḥammad Taghlaḳ (725—752 = 1324—1351). He was an intimate friend of the poets Amīr Khusraw and Ḥasan Dihlawī, and like them both, a spiritual disciple of the saint Niẓām al-Dīn Awliyā [q. v.]. Baranī did not commence the writing of his history until he was upwards of 70 years old and completed only 11 out of the 101 sections that he proposed to devote to the reign of Fīrūz Shāh. Though he writes in terms of high praise of this prince, he does not appear to have enjoyed his favour, as he died in great poverty, — probably shortly after the date (758) to which he brought his history. He was buried near the shrine of Niẓām al-Dīn Awliyā, though local legend indicates a tomb in Baran (the modern Bulandshahr) as being his.

III (1868), 441 sq.); Rieu, *Catalogue of Persian MSS. in the British Museum*, 333, 919; Elliot-Dowson, III, 93—268.

BARANTA. A Central Asian Turkī word of uncertain etymology (it does not seem to appear in other dialects), which is applied to the predatory raids of Turkish nomads. The importance of this peculiar feature of nomad life as well as the conditions of warfare (*Djaw*) necessitated thereby has been most fully described by W. Radloff (*Aus Sibirien*, 2nd ed., Leipzig, 1893, i. 509 *et seq.* and *Kudatku Bilik*, Part i., St. Petersburg, 1891, p. LII *et seq.*). As long as there was no strong governing authority in the steppes, as long as the force of legal decisions depended only on the personal authority of the judge and the goodwill of the parties concerned, the nomads had frequently no other means of redress than carrying out the law themselves. As the whole tribe is held responsible for the trespasses of an individual or group of members of the tribe, the tribe whose rights have been infringed, revenges itself not on the guilty ones themselves but on other members of the same tribe more accessible to it; the victims of such a "Baranta" consider themselves justified in retaliating on whatever section of the "Barantachi" they please and so on. Such feuds may last for decades without the general prosperity of the tribe being prejudiced by these continual "skirmishes". Radloff observes that it is just "in the most troubled times that the nomads increase in numbers and riches". As a regular system of administering justice finds no place in nomadic life and there can be no organised provision against unforeseen natural calamities, the *Djaw* is often the only means whereby "a cattle-breeding people entirely dependent on nature can compensate for sudden calamities". Under the rule of a regular system of government like the Russian, where individuals are not allowed to take the law into their own hands, it is becoming more and more difficult for the Turkī tribes to remain faithful to their nomadic life, and to retain their prosperity. (W. BARTHOLD.)

BARĀTHA, the name of a place prominent in pre-Muhammadan times within the area covered in later times by Baghdād with which it was naturally later almost entirely absorbed (see also the article BAGHDĀD). It lay a short distance from the little town of Muḥawwal (to the southeast of it), just below the point where the Nahr Karkhāyā, the small canal which waters the commercial quarter of Karkh, left the great navigable ʿIsā Canal. This suburb was only separated from Baghdād proper, on the southern part of the western half of the town, by a cemetery and palmgardens. The mosque of Barātha was long celebrated as a Shīʿa sanctuary, because according to a tradition, which is not corroborated elsewhere, the Caliph ʿAlī prayed on its site and bathed near it, when he was on the campaign against the Khāridjīs (37 = 658). Another account places the place where he bathed in the old market quarter of the town (*sūḳ al-ʿatīḳa*) which lay between the Baṣra gate of the Round Town of al-Manṣūr and the bank of the Tigris. A place where ʿAlī prayed was also pointed out there. Under pressure from the orthodox party, the Caliph al-Muḳtadir (908—932) had the Shīʿa sanctuary in Barātha razed to the ground and a Sunnī mosque was built on its place during the reigns of his successors, Rāḍī and Muttaḳī. In Iṣṭakhrī's time (the middle of the ivth = xth century) the latter was one of the three great Friday-mosques of the caliph's quarter of the town. When Yāḳūt wrote (623 = 1226), Barātha, like most of the west side of Baghdād, was already desolate and only a few fragments of the walls remained of the mosque there. The name Barātha is Aramaic (Barāithā) and means "the outer"; cf. thereon Fränkel, *Die Aram. Fremdwörter im Arab.*, p. xx.

Wüstenfeld), i. 532; le Strange, *Baghdād during the Eastern Caliphate* (Oxford, 1900), p. 153—156, 320; Streck, *Babylonien nach den arab. Geographen* (1900), i. 52, 71, 90, 94—95, 152—153.

(M. STRECK.)

BARBĀ, more correctly BERBE, the Arab name for the ruins of Egyptian temples. Every pagan temple and every ancient building is called Barba (*Kull haikal wa kull maṣnaʿ ḳadīm*: Ibn Djubair, *Riḥla*, ed. de Goeje, 61, 3). The word is borrowed from Coptic in which *p'erpe* means temple. Among travellers and geographers the temples of Akhmīm are the Barābā (the plural form *barbawāt* also appears) *par excellence*. Maḳrīzī, Ibn Djubair and others use the word while describing Akhmīm. It is next applied to all temples and even to pagodas. The word has survived in Egypt in a series of place-names. We find it three times in Upper Egypt in the form al-Berbā, four times in Nubia in the form al-Berbah, but the same word is meant (Boinet Bey, *Dictionnaire Géographique*, p. 121). Collection of passages in Dozy, *Supplément*; Glossary to Idrīsī, ed. Dozy and de Goeje, with translation, p. 54, note 4; Ibn Duḳmāḳ, v. 25.

(C. H. BECKER.)

BARBAROSSA. [See KHAIR AL-DĪN].

BARBARY STATES, has since the end of the middle ages been the name applied to the various piratical States of North Africa, mostly inhabited by Berbers. [See the article BERBERS.]

BARCELONA, the Old Iberian Barcino (cf. Ruscino whence Roussillon), which has however nothing to do with Hamilcar Barcas, an ancient town of the Laeetani, gradually took the place of

Tarraco = Tarragona, the capital of the Roman northeast Spain (Hispania Tarraconensis) which lay to the southwest of it. It was captured by the Arabs as early as 713 in their first invasion under Mūsā b. Nuṣair. The Arabic name is Barghinūna and (more frequently) Barshilūna (whence the modern Barcelona) from the late Latin Barcinona (Barcilona is found in Orosius, Barcelona in the geographer of Ravenna, cf. Hübner in *Pauly Wissowa*, s. v.); Bardjelona is more rarely found, from which comes the name al-Bardjelōnī by which the king of Aragon-Catalonia is in later times frequently briefly described (cf. *Journal Asiatique*, 1907 ii. 279 *et seq.*). In 185 = 801 it was conquered by Louis, son of Charlemagne, as Viceroy of Aquitaine and henceforth was the chief town of the Spanish marches of the kingdom of the Franks and from 888 of the independent markgraves of Barcelona or Catalonia. In 242 = 856 Barcelona was temporarily occupied by the Arabs (*al-Bayān al-Moghrib*, ii. 98), and in 985 it was stormed by them for the last time by the great Almanzor but soon afterwards regained by Count Borell I. in 987 (Dozy, *Histoire des Musulmans d'Espagne*, iii. 199). In the xii[th] century (1137) it was incorporated in the kingdom of Aragon. The ecclesiastical subordination of the Mozarabic bishoprics of the Balearic Islands [q. v.], and of Denia and Orihuela to the (Arch)bishopric of Barcelona by the Muhammadan king 'Alī b. Madjāhid al-'Āmirī of Denia by a decree in 450 = 1058 is worthy of mention (Simonet, *Historia de los Mozarabes de España* = *Memoria de la Real Academia de la Historia*, tomo xiii, (Madrid 1905), 651—654); Campaner, *Bosquejo historico de la dominacion islamita en las islas Baleares*, (Palma, 1888), p. 82—84.

(C. F. SEYBOLD.)

BARDASĪR. [See KIRMĀN.]

BARDHA'A, Armenian PARTAV, once the largest town in the Caucasus, now a village and ruined site on the Terter, about 14 miles from the confluence of this river and the Kura. A strong fortress was built there under the Sāsānian Kawādh I (488—531 A. D.) and Partav (Bardha'a) gradually outstripped the ancient capital of the land of Albania (Arrān), Kawalak (Arab. Kabala). In 628 the inhabitants of Partav had to flee before the Khazars but returned to their town on the withdrawal of their enemies. Captured in the reign of the Caliph 'Othmān, destroyed soon afterwards, and rebuilt under 'Abd al-Malik, Bardha'a was during the Omaiyad and 'Abbāsid period the residence of most of the Arab governors of Armenia. Hasan b. Kaḥṭaba, governor for the Caliph al-Manṣūr had a garden laid out there, which as well as some estates (in the surrounding district) bore the name of this governor as late as the iii[rd] (ix[th]) century (Balādhorī, ed. de Goeje, p. 210). Iṣṭakhrī (ed. de Goeje, p. 182) says that the town was about a Farsakh (4—5 miles) in length and breadth; there was no larger town between 'Irāḳ and Khorāsān except Ray and Iṣfahān. The Friday-mosque with the treasury and the palace of the governor were in the town itself, the bazaars in the suburb. The Sunday bazaar at the "Kurds' gate" (*Bāb al-akrād*") was especially popular. There were numerous fruit gardens in the neighbourhood; silk was exported thence to Khūzistān and Fārs. Most of the buildings were of baked brick, the pillars of the chief mosque partly of the same material and partly of wood. Ibn al-Athīr's (ed. Tornberg, viii. 308) account of the plundering of the town by the Russians in 332 (943-944) is well known; it is also mentioned by the Armenian Moses Kalankatuatsi (x[th] century A. D.). The Russians had to leave the town six months after they had taken it because of a pestilence which broke out in their army. Bardha'a never seems to have recovered from this blow, owing, Ibn Ḥawḳal (ed. de Goeje, p. 241, 18) says, to the "unrighteousness of its rulers and the (absurd) plans of the lunatics". Muḳaddasī (ed. de Goeje, p. 375, 11) still describes Bardha'a as the "Baghdād of this country", but points out that in his time the walls of the town were in ruins, the surrounding country abandoned and desolate. In Yāḳūt's (i. 559) time, Bardha'a as at the present day was a village surrounded by numerous ruins. In the period of Mongol suzerainty the town appears to have revived somewhat; "a high ancient tower with many inscriptions" which even in 1861, during B. Dorn's stay there, were undecipherable, belongs to this period and still survives; Khanikoff thirty years previously, was quite able to read the date 722 (1322). The final destruction of the town is attributed to Nādir Shāh.

(W. BARTHOLD.)

BARDO, residence of the Beys of Tunis, lying 1¼ miles to the southwest of it. The site of Bardo, famous for its coolness in summer, appears to have been early visited by rich citizens who had gardens and country houses here. Here was the park of Abū Fahr laid out by the Ḥafṣid Emir al-Mustanṣir (1249—1277) with its groves of rare trees, its lake watered by the aqueduct of Zaghwān, which was large enough to be sailed on by the ladies of the Harem in boats, its summer-houses inlaid with mosaic and decorated with woodcarvings (see Ibn Khaldūn, *Histoire des Berbères*, transl. de Slane, ii. 339). In the xvi[th] century the rulers often resided here. The Turks continued the traditions of their predecessors. The Chevalier d'Arvieux describes with details the "house of the Bards or of Bard" built by Mehemet Pasha, in which the treaty relative to the establishment of a French factory at Cape Negro was signed (1669; d'Arvieux, *Mémoires*, iv. p. 47). The Beys of the Ḥusainī dynasty chose Bardo as their favourite residence; Ḥusain b. 'Alī (1705—1740) built a mosque and a palace there. Peyssonel who visited Tunis in 1724, thus describes their residence: "It is a great mass of building, almost square, enclosed by walls and flanked by several square towers. — The area covered by the

palace is about 1200 paces in circumference. Besides the Bey's residence there are others for the principal officers (Peyssonel, *Relation d'un voyage sur les côtes de Barbarie*, letter ii. p. 26 *et seq.*). 'Alī Pasha had the whole surrounded by a deep ditch and a wall furnished with loopholes for marksmen and embrasures for artillery. Muḥammad Bey spent enormous sums on it. In the building and ornamentation he employed foreign craftsmen, especially Italians who worked alongside of the native workmen (Cf. Muḥammad b. Yūsuf, *Mechra el-Melki*, *Chronique*, transl. by V. Serres and Muḥammad Lasram). In the xix[th] century Bardo was neglected by the Beys. When it was occupied by the French, the greater part of the buildings were falling into ruins. These were cleared away as well as the surrounding wall. Only the Bey's appartments were preserved with the mosque and the Ḥarem which has been turned into an archaeological museum (Musée Alaoui). Not far from Bardo is the palace of Kaṣr Sa'īd where the treaty of the 12[th] May 1881 was signed which established the French protectorate in Tunisia, a treaty wrongly called the Treaty of Bardo. (G. Yver.)

BĀRFURŪSH also called Bālfurūsh, properly Bār-i furūsh deh, a town in the Persian province of Māzandarān, is situated in a low lying district on the river Bābil on the road from Sari to Āmul, about 18 versts from the roadstead of Meshhed-i-sar on the shore of the Caspian Sea. The town was not known to the Arab geographers by this name; they mention a place here called Mamṭir (cf. Yāḳūt, *Mu'djam*, i. 642). The inhabitants say that the town was built in 403 (1012), but it is first mentioned by Aḥmad Rāzī under the name Bārfurūsh in the x[th] (xvi[th]) century. During the reign of Fatḥ 'Alī Shāh it attained importance although 'Abbās I had previously laid out pleasure gardens and summer palaces here, the remains of which on the south side of the town still bear the name Bāgh-i-Shāh. Bārfurūsh is one of the most important trading centres of Persia; the principal exports are silk, cotton and rice. The number of inhabitants is estimated at 50,000. Near it lies the village of Shaikh Ṭabarsī which has become famous in the history of the Bābīs.

BARGHASH b. Sa'īd b. Sulṭān, Sulṭān of Zanzibar, succeeded his elder brother Madjīd on the 7[th] October 1870 and reigned till his death on the 27[th] March 1888. On the death of his father in 1856 on his way home from 'Omān, he had attempted to seize the throne and even after the official recognition of Madjīd he again attempted in 1859 to stir up unrest with the help of discontented Arabs. He had a hair-breadth escape disguised as a woman under the protection of his sisters, one of whom, Salme, afterwards Emily Rüte, has given a very vivid account of the incident. He was finally forced to surrender by an English gunboat and was banished to Bombay where he spent nearly two years. Returning to Zanzibar, his relations to his reigning brother Madjīd were defined under English supervision. On the latter's death he succeeded him, after promising the English agent to recognise English rights there. It was during his reign that the whole anti-slavery campaign in East Africa was carried out. After years of struggling and fruitless endeavour (Sir Bartle Frere) he was forced under threat of a blockade, by the English agent, Sir John Kirk, to sign a decree on the 5[th] June 1873, forbidding the slavetrade throughout his territories. As a reward and also to let him see the relative powers of England and Zanzibar in their true perspective, he was invited to London in 1875. On this occasion he also visited France and Portugal. Soon afterwards, their colonial policy brought the Germans to his coast and in 1885 a German protectorate was declared which he had to recognise. Wide districts to which Barghash had a nominal claim were thereby lost to him. Towards the end of his reign he also came into conflict with the Portuguese and the dispute was only settled after his death by a German-Portuguese boundary commission. Shortly before his death he sought relief in 'Omān from his troubles but succumbed to them soon after his return. He was succeeded by his younger brother Khalīfa.

Barghash was from all we know of him an energetic and clever but violent man. The probably rather one-sided picture that Emily Rüte gives us of him, is anything but pleasant. Thoroughly hostile to Europeans, he had to endure the strictest European tutelage. In his reign the momentous transformation of the whole political structure of his country by the abolition of slavery was carried out. Nevertheless its possessions and its revenues have only gained by the change through the increasing trade with Europe and India.

BARGHŪTH, Pl. barāghīth, the name of the flea in Arabic, applied by the people of Syria to the little Turkish coin of 1 piastre; so called on account of the ease with which it slips out of the hand. — *Nahr Barghūth* is a stream on the Syrian coast which flows into the Mediterranean a little to the south of Ṣaidā (Sidon); it is the Asclepios of the ancients.

Bibliography: Baedeker, *Palestine and Syria*[4], pp. 271—273. (Cl. Huart).

BARHEBRAEUS (bar 'Ebhrāyā, Ibn al-'Ibrī) Gregorius Abu 'l-Faradj, Arab historian and the last classic in Syriac literature, was born in 1226 at Melitene-Malaṭiya, the son of a baptised Jewish physician; he thus received the surname, not very agreeable to him, under which he has become famous; to this also was due his knowledge of Hebrew, an accomplishment so rare among his contemporaries, which enabled him for example to study a Midrash on Joseph in the original, (cf. *Ethicon*, ed. Bedjan, 489). Although from the beginning destined for a priestly calling, which then was the only honourable career for a Christian, he also acquired a knowledge of medicine under his father's guidance and studied Arab works on profane sciences. The disastrous effects of the Mongol invasion which swept through his native district in his youth, were mitigated for him and his family by the fact that his father in his medical capacity gained the favour of a Mongol general, whom he accompanied to Kharttabirt. When the latter had dismissed him he returned

to Antioch where greater security was afforded as the town was still in the hands of the Franks. Here Barhebraeus began his ecclesiastical career as a monk but was soon appointed Bishop of Gubos on the 14th Sept. 1246.

When a schism broke out soon after in his church on the election of two rival patriarchs, he was translated to the more important diocese of Aleppo but deposed by the chief of the opposition party; by his tact he was finally able to come to an agreement with him. In 1264 he was appointed Mafreyānā or Catholicos of Tagrit by the new patriarch Ignatius and thus became head of the Jacobites in what had formerly been the Persian kingdom. His office required him to spend most of his life in travelling, for his diocese had been much afflicted by Mongol raids. He died in the night of the 29th July 1286 at Marāgha in Ādharbaidjān. In the midst of the exhausting demands of his ecclesiastical office, Barhebraeus found leisure for an extensive literary activity, which though it created nothing new, epitomised the whole intellectual culture of his people as in a mirror. We cannot here go into his works in the domains of theology, philosophy and Syriac grammar and his Syriac poems. The first part of his universal history, which treats of political history from the creation to his own times, is his work most connected with the culture of Islām. He used Arabic and Persian sources for Islāmic history; for the Mongol period he quotes (*Chronicon Syr.*, ed. Bedjan, p. 555, 11) the Persian history of Shams al-Dīn Ṣāḥib Dīwān (died 683=1284). Shortly before his death, at the request of some prominent Muḥammadans he prepared a shorter translation of this work to which however he made additions on Biblical history, a knowledge of which is presumed in the Syrian Chronicle, and on the medical and mathematical literature of the Arabs. This work is entitled *Mukhtaṣar Ta'rīkh al-Duwal* (*Historia orientalis* autore Gregorio Abu 'l-Pharagio, ed. E. Pococke, Oxoniae 1663, Suppl. 1672; ed. Ṣāliḥānī, Beyrouth, 1890). The second and third parts of the work which were not translated into Arabic, give an account of the history of the Christian Church in the West under the monophysite patriarchs to the year 1288, and in the East under the monophysite Mafreyānās of Tagrit, including the Nestorians also to the year 1286. The second section was supplied with an appendix on the life of the author by his brother Barṣawmā and a continuation to the year 1288. Later writers have continued the first part to 1495 and the second to 1496 (*Chronicon Ecclesiasticum* ed J. B. Abbeloos and Th. J. Lamy, 3 vols. Lovanii, 1872—77). His philosophical studies also were to some extent based on Muḥammadan sources: He translated into Syriac Ibn Sīnā's *Kitāb al-Ishārāt wa 'l-Tanbīhāt* and Athīr al-Dīn al-Abharī's *Zubdat al-Asrār*. His medical works, of which an incomplete translation of Ibn Sīnā's *Ḳānūn* and an abbreviated translation of al-Ghāfiḳī's *al-Adwiya al-mufrada* may be mentioned, are likewise mainly of Arab origin. His *Kethābhā dh' Thunnāyē Mghaḥkhānē* (*Laughable Stories*, Syr. text with Engl. transl. by E. W. Budge, London 1896) is connected with the Adab literature; there was an Arabic translation of it which has not survived to us, called *Kitāb Daf' al-Hamm* (Paris. anc. fonds 160 according to Wright, op. cit. 281 n. 2, not in de Slane).

AL-**BĀRI'**, one of the names of Allāh. [See ALLĀH, p. 303.]

BARĪD (A.), obviously a loanword from the Latin (*veredus*) "post-animal", "post-horse", then "courier"; it further means the institution of the "post"; and finally the distance between two post-stations, reckoned in Persia at 2, in western lands at 4 *farsakh* of 3 *mīl*.

Not only the name but the institution itself in the dominions of the Caliph was borrowed from the Byzantines and the Persians, as is confirmed by Arab tradition. Even Mu'āwiya is said to have taken an interest in the postal service. 'Abd al-Malik instituted it throughout the kingdom. Al-Walīd made use of it in connection with his building operations; 'Omar II had khāns built on the Khorāsān road for the post. The 'Abbāsids even in their revolt made good use of the post. It is naturally Hārūn al-Rashīd, who is credited by the Arab historians, with having organised the postal service on a new basis, through his famous councillor, the Barmecide Yaḥyā. Like the Roman *cursus publicus*, the state post was meant to serve only the interests of the state, not that of private individuals. Its purpose was not only the bearing of news but also the conveyance of officials and even of small bodies of troops and the transport of the baggage of the court and government officials. The animals used in the service were, besides horses, mules and camels, as occasion required. The head postmaster, *Ṣāḥib al-Barīd*, gradually acquired the office of chief supervisor of the provincial officers, a position which under tyrannical rulers was liable to be degraded to malicious espionage, but which might also in certain cases be dangerous to the princes themselves. It is to the organisation of the postal service under the 'Abbāsids that we owe their official lists of stations, some of the oldest and most valuable works of Arab geographical literature.

The Būyids are said to have closed the post-routes to Baghdād in the interests of their revolution. In any case the regular service suffered in the turmoils of the following centuries. The institution of the post did not however come to an end. The efforts of the Zangids in connection with the camel-courier service and the pigeon post are particularly mentioned. When after the Crusades, the great Mamlūk Sulṭān al-Ẓāhir Baibars I, began to unite the forces of Islām in the East, he relied on the reorganisation of the postal service as one of the most important means of closely connecting up the state with its centre. In 659 (1261) he again reorganised the post service and stationed postboys and horses at cer-

tain distances along all the principal highways of his kingdom. Still, however, the post was only used for the government service and the expediting of officials and couriers; besides it for the sending of news the government pigeon post and signalling by fire were also of great importance. A new institution was that of a regular post twice weekly from the provinces to Cairo. The courier rode from Cairo to Damascus in four, sometimes even in three, and to Ḥalab in as little as five days. It is worthy of note that in the Mamlūk period special arrangements were made to ensure the conveyance of snow from Damascus to the court. By the building of k͟hāns, the digging of wells and the security of the roads, private traffic also received a great impetus. That the later Mamlūk Sulṭāns as well as other Oriental rulers did not neglect the postal service is shown by the k͟hāns which still may be seen on the old roads e. g. on the famous *via maris* from Damascus to the west. From Ḥād̲j̲d̲j̲ī K͟halīfa's *D̲j̲ihān-Numā* it may be concluded that the Ottomans also devoted attention to public traffic.

On the modern postal service in the east cf. the article AL-BOSTA.

(R. HARTMANN.)

AL-**BARĪDĪ**. This nisba was borne by three brothers, Abū ʿAbd Allāh Aḥmad, Abū Yūsuf Yaʿḳūb and Abu ʾl-Ḥusain, who played an important part in the period of the decline of the ʿAbbāsid Caliphate under al-Muḳtadir and his successors. The head of this family was the first mentioned Abū ʿAbd Allāh, who not content with the unimportant offices which the Caliph's vizier ʿAlī b. ʿĪsā had given him and his brothers, obtained from his successor Ibn Muḳla [q. v.] the government of the province of al-Ahwāz and other important offices for his brothers in return for a present of 20,000 dirhams (316 = 928). They managed to make such good use of their opportunities that when they were involved in the fall of the vizier scarcely two years later the ransom of 400,000 dīnārs demanded for their freedom by Muḳtadir was paid without difficulty. After the assassination of al-Muḳtadir in 320 (932), Abū ʿAbd Allāh was able to do as he pleased and by unheard of extortions and deeds of violence to enrich himself, while his brothers were restored to their offices and did likewise. This continued in the reign of the Caliph al-Rāḍī (322—329 = 934—940) became their old friend, the Vizier Ibn Muḳla, had again gained power in this period. Instead of giving the revenues of the provinces governed by them, to the Caliph's treasury, they kept them to themselves by false statements and bribery. This state of affairs could not go on for ever and when Ibn Rāʾiḳ [q. v.] under the title of Amīr al-Umarāʾ had gained control of the Caliphate (324 = 936), the Caliph advanced with an army against Abū ʿAbd Allāh, after all the subterfuges contrived by that cunning man to gain the favour of Ibn Rāʾiḳ had failed. But Abū ʿAbd Allāh knew what course to take; he escaped to the Buwaihid ʿImād al-Dawla in Fārs and persuaded him without much trouble to conquer al-Ahwāz and al-ʿIrāḳ. Nevertheless he declined the help which had asked from him Muʿizz al-Dawla, when the latter took the field against the Caliph, as he much preferred to have to deal with the weak rule of the Caliph than with the new rulers. When an opponent to Ibn Rāʾiḳ arose in the Turk Bed̲j̲kem [q. v.], Abū ʿAbd Allāh took the side first of one then of the other according to circumstances and after Bed̲j̲kem's victory in 326 (938) he was appointed by him Vizier of the Caliph. He was deposed soon afterwards however, but as Bed̲j̲kem had perished early in the reign of al-Muttaḳī (329 = 941), he seized Bag̲h̲dād for a brief period but after a few weeks was forced by the mutinous troops to return to Wāsiṭ. In the following year 330 (932) he sent his brother Abu ʾl-Ḥusain with troops against Bag̲h̲dād so that the Caliph and Ibn Rāʾiḳ had to seek refuge with the Ḥamdānids of Mosul. Abu ʾl-Ḥusain made himself so detested by his oppressions there that the Ḥamdānids had no difficulty in driving him from Bag̲h̲dād and even from Wāsiṭ. The brothers were able to assert themselves in Baṣra although they had to wage a costly war with the lord of ʿOmān, who had come against Baṣra with a fleet and had already taken Obolla 331 (942). Fortunately for them the fleet was set on fire and the enemy was forced to retire to ʿOmān. These and other wars consumed Abū ʿAbd Allāh's wealth and although he did not hesitate to have his brother Abū Yūsuf murdered to gain his accumulated treasures, they availed him little, for he himself died the same year 332 (944). The third brother Abu ʾl-Ḥusain soon came into conflict with his own followers who recognised Abu ʾl-Ḳāsim, the son of Abū ʿAbd Allāh as their master, and escaped with great difficulty to the Ḳarmaṭian prince of al-Baḥrain. With the latter's help he laid siege to his nephew in Baṣra, till he came to terms with him. Soon afterwards he again began intriguing and went to Bag̲h̲dād to try to obtain the governorship of Baṣra and so far from being successful, he was executed there in 333 (945) after a trial. His nephew Abu ʾl-Ḳāsim in the following year made peace with the Būyid Muʿizz al-Dawla, though only for a brief period, for in 335 the latter sent troops against him and in 336 (947) advanced in person against Baṣra and forced him to flee to the Ḳarmaṭians of al-Baḥrain. He then ceased to play any active part in politics though he was ultimately pardoned by Muʿizz al-Dawla and did not die till 349 (960).

Bibliography: Ibn al-Athīr (ed. Tornberg), viii.

BARĪD S̲H̲ĀHĪ, a dynasty founded in 1492 by Ḳāsim Barīd, the minister of Maḥmūd S̲h̲āh (1482—1518), fourteenth king of the Bahmanī dynasty [q. v.]. Maḥmūd S̲h̲āh was a careless voluptuary, and left to his minister the administration of his kingdom, which the revolts of provincial governors had reduced to the narrow limits of the capital city, Bīdar [q. v.], and the adjacent districts; though he was succeeded by four of his descendants, the sovereignty of the Bahmanīs was from that time merely nominal, and the last of them, Kalīm Allāh S̲h̲āh, died in

exile in 1527. Ḳāsim Barīd died in 1504, and was succeeded by his son, Amīr ʿAlī Barīd, whose descendants managed to maintain their independence, until in 1619 his great-grandson, ʿAlī Barīd, was taken prisoner by Ibrāhīm ʿAdil Shāh, king of Bīdjāpūr; ʿAlī Barīd and his sons ended their days in captivity and Bīdar was annexed to the kingdom of Bīdjāpūr.

Bibliography: J. S. King, *History of the Bahmanī Dynasty, founded on the Burhān-i Maʾāthir*, 122 sqq.; Firishta, *Gulshan-i Ibrāhīmī*, Maḳālah III; T. W. Haig, *Historic Landmarks of the Deccan*, 98 sqq.

BĀRIMMĀ, the modern DJEBEL ḤAMRĪN, an isolated western chain of the mountains of the Iranian border. Its northern extremity crops up in the Djazīra, south of the Djebel Sindjār and the Tigris flows through it at al-Fatḥa. At Shahrabān it is crossed by the great road from Baghdād to Hamadān and Teherān, at Ahwāz it separates the plains of the ancient Elam, the modern Khūzistān, from those of the Shaṭṭ al-ʿArab and is finally united with the Iranian plateau in the province of Fārs. This range has had its name repeatedly changed. Its Assyrian appellation is not certain. The Syrians called it Urakh or Orakh, which appears in Polybius, v. 52 with reference to the campaign of Antiochus III against Molon, as τὰ Ὀρεικὰ ὄρη. Bārimmā is the oldest Arabic name, which may be traced to the Syriac Bēth Remmān, i. e. temple of Rimmon, probably an Assyrian sanctuary. The mountains take this name from a village on the eastern bank of the Tigris, where the river flows through the mountains. It lay on the Baghdād-Mawṣil road, was inhabited by Jacobites and for a time formed a bishopric with Bēth Wārīḳ. Ḳudāma and Yāḳūt give the Syrian name Sāūdama to the western part of the range in the Djazīra; the word means blood-drinker and appears elsewhere as the name of frontier rivers. Later in Ibn Ḥawḳal, this western part is called Djebel Shaḳāḳ, traces of which name remain in that of the modern village of al-Shaḳḳ. Iṣṭakhrī and Yāḳūt, following Abū Zaid al-Balkhī, say, that there were springs of pitch in the midst of the waters, as indeed is still the case, at the place where the Tigris breaks through the Bārimmā and that the range extended from the centre of Djazīra in the west, to the borders of Kermān in the east, where it becomes the hills of Māsabadhān (Pusht-i kūh). The range appears in Idrīsī, if the reading is correct, also as Djebel al-Kurd. The modern name of Ḥamrīn appears first in Yāḳūt under the form Ḥumrīn. The part west of the Tigris is now called Djebel Makḥūl. A parallel range is called Djebel Mukaḥḥil, i. e. coloured with Kuḥl, probably after a village on the Tigris (Assemani, *Bibl. Orient.*, ii. 218, and *Marāṣid*). Such names derived from colours are nowadays fast driving out the ancient names from Arab nomenclature; even Ḥamrīn is a modern name, the "reddish" from *aḥmar* in spite of the old Syrian ending in -īn. A place close to the Tigris bears the ancient, expressive name of Khanīḳa which means the "strangled" or "confined".

BARḲA, the district of Barḳa, a part of the Turkish Wilāyet Benghāzī (q. v.), the ancient Cyrenaica, is a wide chalk plateau from 1200—1600 feet high and about 100 miles broad. In the north its steep and rugged slopes fall abruptly towards the Mediterranean from which it is separated only by a narrow strip of lowland, while in the south it sinks very slowly down into the Libyan desert. The edge of the plateau is formed by a line of heights which under the names of Djebel Erkula and Djebel al-Dahar run from East to West for about 180 miles. At Marabut Sīdī al-Ḥomrī they attain a height of 2800 feet and around Krenna (Cyrenaica) they reach their greatest height 3300 feet. Their northern slopes are covered with red earth which has given this part the name of Barḳa al-Ḥamrā (the Red Barḳa), while the terraced southern slopes are covered with a grey sand, whence this part of the plateau is called Barḳa al-Baiḍā (the white Barḳa).

The configuration of the coastline, which describes a decidedly convex curve from Mukhtār, the most southerly point of the Gulf of Sidra, to the Gulf of Sallum, makes Cyrenaica a peninsula open on three sides to the winds from the sea and assures for it a relatively plentiful rainfall (14 to 20 inches per ann.). Although this rainfall is scarcely sufficient to keep rivers flowing perennially, it supplies numerous springs. Water filters down through the cracks in the chalk till it reaches the solid rock when it again rises to the surface; it also collects in tarns shut in by the mountains which usually dry up in the heat of summer. The coastland, and the terraces in which the land rises from the shore to the tops of the mountains are the districts most favourably watered and have a very rich flora. Fig and lotus trees, thuyas, holmoaks, cypresses etc. clothe the hills with green, justifying the name Djebel Akhḍar given by the Arabs to this range. The general aspect of this district and its climate recall, according to travellers, the finest parts of Italy. It appears highly fitted for being colonised by Europeans. On the other hand behind the rocks of the Djebel Akhḍar we have quite another picture, the trees disappear and herbaceous vegetation becomes rarer and rarer as one comes nearer the desert.

Before the Muḥammadan invasions the land of Barḳa was occupied by Berber people belonging to the Lawāta, Hawwāra and Awrigha groups, who had preserved their independence, and by the Afāriḳa, i. e. natives more or less influenced by Graeco-Roman civilisation. All these sections of the population devoted themselves to agriculture and cattle rearing. In the first century of the Hidjra, Arabs from Egypt destroyed Cyrene and the towns of the Pentapolis but did not sensibly affect the character or the manner of life of its inhabitants. In the ivth century the land of Barḳa included various flourishing towns like Lebda, Zawīla, Barḳa, Ḳaṣr-Ḥassān and its fields were well tilled.

The Hilālī invasion of the xith century A. D. brought about its ruin. The nomadic and pastoral

Arabs brought devastation everywhere and by their ruthless plundering caused the cultivated areas to become smaller and smaller. ... "All the arts and trades which provide for man's subsistance ceased to be exercised; civilisation was destroyed there and the country became a desert" (Ibn Khaldūn, *Hist. des Berb.*, translation de Slane, i. p. 164). Of the invading Arab tribes, the Banī Ḳurra and the Haib, a branch of the Sulaim, settled in the conquered district and the population has been so affected by this admixture that it is impossible at the present day to distinguish the descendants of the invaders from those of the original inhabitants. With the exception of the inhabitants of the towns (Benghāzī, Derna and Mardja) the population is entirely composed of nomads. According to Pacho they bear the general name of Hanabi and are divided into a large number of tribes. The most important are the Awāghir, whose land lies to south and east of Benghāzī, the Dorsa in the neighbourhood of Mardjah, the Hassa around the the ruins of Cyrene, the Brassa of the Djebel Akhḍar, the Abaidest in the neighbourhood of Derna, etc. Reclus estimates their total number at not more than 250,000 on an area of 25,000 square miles so that there are only 10 inhabitants to the square mile. Minutilli, who had at his disposal the Italian consular reports, estimates the the populations of Barḳa at as high as 350,000. All these tribes seem to be quite independent of Turkish authority; owing to the spread of Senūsiya doctrines since the middle of the xix[th] century they are very hostile to European influence. The Barḳa country, so long neglected, has nevertheless been the object of several European explorations in the last century. The journeys of della Cella (1817), Pacho, Beechey, Barth (1847), Hamilton (1852), Rohlfs, Camperio and Haimann etc. may be mentioned.

The town Barḳa, which has given its name to the whole plateau, replaced in the Arab epoch the town of Barke which was founded in 551 B. C. by colonists from Cyrene. Towards the end of the year 21 A. H. (641 A. D.) Barḳa was occupied by 'Amr b. al-'Āṣī who made peace with the inhabitants on a payment of 13,000 dinars of gold. Soon afterwards the conquerors chose this place as the capital of a district the government of which was entrusted to Ruwaifa, one of the companions of the Prophet, whose tomb still existed in al-Bakrī's time. Being in communication with foreign countries through its port, Ṭolmaitha, (the ancient Ptolemais) lying on the main road from Fosṭāṭ to Ḳairawān and connected by caravan routes with the oases of the Sahara, Barḳa enjoyed remarkable prosperity for four centuries. Ibn Ḥawḳal (*Description d'Afrique*, transl. de Slane in the *Journ. As.*, 1842) praises its commercial activity. "There are few towns in the Maghrib", he writes, "where the traffic is so busy; skins are brought there to be tanned, the dates of Awdjila are exported, in the bazaars there is a continual market for wool, pepper, honey, wax and foodstuffs of east and west". Al-Bakrī remarks the richness of the surrounding pastures from which the people of Egypt obtained the greater part of the animals necessary for their food-supply (al-Bakrī, *Masālik*, trad. de Slane p. 15). Idrīsī mentions plantations yielding cotton of superior quality (Idrīsī, transl. de Goeje, p. 155). The Hilālī invasion brought about the total ruin of Barḳa. Its place is now occupied by the market town of Mardja lying at the foot of a hill commanded by a Turkish Ḳaṣba in a hollow 20 miles long by 8 broad. The population of Mardja including the Turkish garrison is not more than 1000 souls.

BARḲA'ĪD, a town in the Djazīra (Mesopotamia) on the caravan route from Naṣībīn (Nisibis) to Mosul; according to the statements of the Arab geographers which vary only in a trifling degree, it was 17—19 parasangs (of 4—5 miles each) or 4 day's journey (e. g. Yāḳūt) distant from the latter town; Naṣībīn was reckoned 10 parasangs from here. According to Yāḳūt, Barḳa'īd was once the chief town of the circle of Baḳā' (probably = *biḳā'* "plain") belonging to the province of Mosul and comprising the district between Mosul and Naṣībīn. In consequence of the great amount of traffic passing through it the town became an important place, flourishing especially in the iii[th] (ix[th]) century. Yāḳūt notes its walls pierced by three gateways, the numerous springs of fresh water and the remarkably large number (200) of wine shops there. The inhabitants were nevertheless so notorious as thieves and highway robbers that a "Barḳa'īd robber" (*liṣṣ barḳa'īdī*) had become proverbial. This evil reputation of the town naturally resulted in the caravans gradually keeping away from it and going instead to the Bāshazzā station somewhat to the west. This latter place thus rose in importance while Barḳa'īd declined more and more. The site of Barḳa'īd is perhaps now marked, as v. Oppenheim and de Goeje have suggested, by the considerable mound of ruins at Tell Rumēlān and that of Bāshazzā by Čilāghā. The positions of these two places in Kiepert's map (in v. Oppenheim, *op. cit.*) are 42° E. long Greenw. 36° 55' N. lat and 41° 50', 36° 57' respectively.

According to a communication by Homes, which requires an examination on the spot (see Tuch, *op. cit.*) Barḳa'īd still exists at the present day, though now in ruins.

BARKIYĀRUḲ, ABU 'L-MUẒAFFAR RUKN AL-DĪN, a Seldjūḳ Sulṭān, eldest son of Malik Shāh. The date of his birth is variously given;

he was certainly born shortly after the year 470 A. H. and was therefore still a youth at the death of his father on the 16th Shawwāl 485 (19th November 1092). The death of Malik Shāh was concealed by his wife, the cunning and ambitious Turkān Khātūn, till she had homage paid to her son Maḥmūd, who was still a minor, and had his accession confirmed by the Caliph. She then went to Iṣfahān. At her instigation Barkiyārūḳ was thrown into prison here immediately after the death of Malik Shāh; when the decease of the Sulṭān became known however, the adherents of the murdered vizier Niẓām al-Mulk rose and set Barkiyārūḳ free; he was proclaimed Sulṭān in al-Raiy in the same year. He then advanced against Iṣfahān and Turkān's troops were defeated at Burūdjird about the end of the year 485 (January 1093); she herself remained in Iṣfahān and had to make peace after a long siege. The terms of the treaty were that she should retain Iṣfahān and Fārs for herself and her son Maḥmūd, while Barkiyārūḳ was to be recognised as Sulṭān and to remain in possession of the other provinces. Peace did not last long however. Ismā'īl b. Yāḳūtī, Barkiyārūḳ's maternal uncle, governor of Ādharbaidjān, was induced by Turkān's intrigues to rebel against him, but was defeated in 486 (1093) near al-Karadj and had to flee to Iṣfahān where he was murdered by some Emirs. Tutush b. Alp Arslan, another uncle of Barkiyārūḳ's, allied with Būzān governor of Edessa and Aḳ Sonḳor of Ḥalab, seized Mosul. When his two allies deserted him and went over to Barkiyārūḳ, he had to retreat to Damascus, while Barkiyārūḳ entered Baghdād where his name was mentioned in the mosque-prayers in Muḥarram 487 (February 1094). On the following day, the caliph al-Muḳtadī died but his successor al-Mustaẓhir still continued the Khuṭba for Barkiyārūḳ. Meanwhile Tutush had collected a new army after the secession of Aḳ Sonḳor and Būzān, with which he set out from Damascus and attacked Aḳ Sonḳor. The two renegade governors were taken prisoner and slain and Ḥalab, Ḥarrān and Edessa submitted. Tutush then marched through Mesopotamia, Armenia and Ādharbaidjān against Hamadhān and was even proclaimed Sulṭān in Baghdād in place of Barkiyārūḳ. On the death of Turkān Khātūn which took place in Ramaḍān 487 (September—October 1094) her son Maḥmūd who was still a minor remained in Iṣfahān and Barkiyārūḳ sought refuge with him from the threatening storm. Maḥmūd's adherents were planning how to get Barkiyārūḳ out of the way but on Maḥmūd's death from smallpox at the end of Shawwāl (November) of the same year the Emirs went over to Barkiyārūḳ's side. He was then able to continue the struggle with Tutush who had in the meanwhile advanced to al-Raiy. The decisive battle was fought on the 17th Ṣafar 488 (26th February 1095) not far from this town. Although many had previously gone over from the cruel and relentless Tutush to the weak and goodnatured Barkiyārūḳ, the former's army still numbered 15,000 men while the latter had over 30,000. Before the beginning of the battle most of the troops who had hitherto remained faithful to him deserted and Tutush was slain after a desperate struggle. In the same year disturbances broke out in Khorāsān. The rebel, Barkiyārūḳ's third uncle, Arslān Arghūn [q. v.] was successful at first but in 490 (1096) he was murdered by a slave; Barkiyārūḳ thereupon soon restored peace and appointed his brother Sandjar Governor of Khorāsān. In 492 (1099) Barkiyārūḳ's brother Muḥammad rebelled in Ādharbaidjān and advanced almost up to al-Raiy. Barkiyārūḳ was going to advance against him but most of his troops went over to the enemy and he had to take to flight to save himself, while his brother occupied al-Raiy and ordered Barkiyārūḳ's mother to be strangled. The Khuṭba was then read for him in Baghdād. Barkiyārūḳ was however soon successful in collecting another army, the Emirs in 'Irāḳ joined him and when he neared the capital in the middle of Ṣafar 493 (beginning of 1100), the Caliph was quite prepared to mention him in the Khuṭba. In Radjab (May/June) of the same year however he was defeated by Muḥammad and had to retire to Khorāsān. Sandjar the governor there had taken the side of his brother Muḥammad; Barkiyārūḳ, nevertheless, succeeded in raising new forces and defeated Muḥammad at Hamadhān in Djumādā II 494 (April 1101). It was now the latter's turn to seek help in Khorāsān. The war was carried on for some time with changing success till finally in Rabī' I 495 (December 1101) a treaty of peace was arranged whereby Barkiyārūḳ was recognised as Sulṭān while Muḥammad had to content himself with the title of "King" and dominion over Mesopotamia and Ādharbaidjān. The latter however broke the truce after a month or two and a bitter struggle between the brothers began again. Muḥammad had to flee and was besieged in Iṣfahān, but he managed to make his escape and raise new troops. He was again beaten however and had to make peace in 497 (end of 1103 or beginning of 1104). Muḥammad then received Ādharbaidjān, Armenia, and Mesopotamia with Mosul and the Arabian 'Irāḳ, as an independent prince with sovereignty over Sandjar in Khorāsān, while Barkiyārūḳ remained in possession of the other provinces. According to the usual statement, Barkiyārūḳ died in Rabī' II 498 (December 1104). With him begins the decline of the Seldjūḳ kingdom.

BARḲŪḲ, al-Malik al-Ẓāhir Saif al-Dīn al-'Othmānī al-Yelboghāwī, was the first, if we neglect the brief reign of Balbars II [q. v.], of the line of Burdjī Mamlūks on the throne of Egypt. The Emir Yelboghā brought him to Cairo where he afterwards became one of the Mamlūks of the sons of Sulṭān al-Ashraf Sha'bān. He was instrumental in the latter's fall and became an Atabeg (generalissimo) under his son Ḥādjdjī. After overcoming all his rivals he was proclaimed Sulṭān in 1382 (784) and was at once acknowledged on all sides. Some minor conspiracies were planned in Syria in the next few years by the governors who were always backed up by the Mongol princes, but were easily suppressed by the Sulṭān. The first real danger arose when Barḳūḳ, harassed by

constant suspicions, attempted to depose Yelboghā, governor of Aleppo. The latter, warned in time, thwarted the Sulṭān's plan, allied himself with the rebel governor of Malaṭiya, Minṭāsh, and seized the towns of Tripolis and Ḥamā. Barḳūḳ sent a great army against the rebels, and his general Itmish entered Damascus. In the spring of 1389 (791) the two armies met and through the desertion of several of the Sulṭān's lieutenants the rebels won the day; Itmish, pursued and captured, had to give up Damascus with its fortifications. Yelboghā and Minṭāsh collected all their forces and advanced against Egypt. The Sulṭān, a thorough coward, did not dare leave Cairo, so that the rebels met with no resistance. The Sulṭān's supporters deserted him and he fled from the citadel and threw himself on Yelboghā's mercy, who treated him relatively well. Barḳūḳ was sent to Karak as a prisoner by Yelboghā. Ḥādjdjī who had been deposed by Barḳūḳ now ascended the throne but without obtaining the slightest control over the actual affairs of state. Yelboghā lorded it over his ally Minṭāsh too as far as he could. A conflict thus arose between the two conspirators; Yelboghā entrenched himself in the citadel and Minṭāsh below him in the Ḥasan mosque. Yelboghā was vanquished in the struggle and had to flee; he was taken and thrown into prison in Alexandria. Minṭāsh had scarcely made his position in Egypt secure when the news arrived that Sulṭān Barḳūḳ was free and collecting the malcontents in Syria. He defeated the governors of Damascus and Gaza who advanced against him and also the Beduin chief Nu'air so that he gained new adherents daily. Minṭāsh advanced against him with a large army and met him to the south of Damascus. On the first day the greater part of Barḳūḳ's army was put to flight but he was nevertheless able to seize the chief camp of his opponents and to take prisoner the Caliph as well as the Sulṭān Ḥādjdjī. The battle was renewed next day and after heavy losses on both sides, Minṭāsh had to retreat. Barḳūḳ then went to Cairo where in the meanwhile his adherents had gained the upper hand.

Barḳūḳ was successful in appeasing his opponents in Cairo, treating the deposed Ḥādjdjī considerately and pardoning his former enemy Yelboghā. Minṭāsh's resistance continued for two years longer in Syria, chiefly supported by the Beduin chief Nu'air; Minṭāsh was finally captured and put to death by torture. Barḳūḳ was not yet to be allowed to live in peace however; conspiracies and persecutions never ceased. The Sulṭān's foreign policy was a successful one; he was on friendly terms with the Ottoman Sulṭāns Murād and Bāyazīd; while he was suspicious of the mighty Tīmūr from the outset and preferred open enmity to insecure peace. He therefore had the ambassadors of Tīmūr, who wished to conclude a friendly treaty of commerce, murdered, welcomed Sulṭān Aḥmad ibn Uwais whom Tīmūr had driven out of Baghdād. To prepare to defend himself, he restored the defences of the Syrian fortresses as we know from inscriptions; his measures were later shown to be quite insufficient against the onrush of the Mongols. Barḳūḳ and Tīmūr never actually came into conflict as the latter was too much occupied with other enemies. Always fearing for his own safety at home, Barḳūḳ did not prove himself capable of permanently defending his lands abroad. His rule, which in general is highly praised by Arab authors for his piety and charitable foundations, was of little use to his kingdom. He died in 1398 (801) leaving vast estates behind him.

BARLAAM and **JOSAPHAT**, the story of the conversion of the Indian prince Josaphat by the ascetic Barlaam, which has been recognised by Felix Liebrecht as a Christian version of an episode in the life of the Buddha. The book, which owes its popularity and influence in the first place to the tales in it, is preserved in Greek, Arabic (several versions), Hebrew, Ethiopic, Armenian and Georgian as well as in many European editions. The Greek romance of Barlaam was probably composed in Palestine at the monastery of Saint Sabas in the first half of the viith century. On this Greek original is based a Christian Arabic version from which a translation into Ethiopic was prepared. The oldest Arabic texts that have survived to us have no connection with the Greek romance however; they appear to be ultimately derived from a Pahlavi original. Mention is made in the *Fihrist* of a *Kitāb al-budd* and a *Kitāb Yūdāsaf mufrad*, both of which were probably translated from a Pahlavi original which taught the Iranians the doctrine of Buddha (Yūdāsaf, for Būdāsaf = Bodhisattva, the title of the Indian king's son before he attained the rank of Buddha). The *Kitāb Yūdāsaf wa Balauhar* mentioned in the *Fihrist* appears on the other hand to be based on a Christian version of the Buddhist story. Already composed in Pahlavi, this last, the third of the Arabic books mentioned in the *Fihrist*, is now the prototype of all the Muḥammadan versions that have survived and is substantially given in the text of the Bombay edition. All trace of Christian dogma has been obliterated in it though its tone is not specifically Muḥammadan. The Hebrew version also goes back to these Arabic texts.

(J. HOROVITZ.)

BARMAKIDS (BARMECIDES), a Persian family, which produced the first Persian ministers of the Caliphate. "Barmak" was not a personal name but denoted the rank of hereditary chief priest in the temple of Nawbahār in Balkh. The lands belonging to the temple were also in the hands of this family. These estates comprised an area of about 740 square miles (8 farsakhs long by

4 broad), or somewhat more than the principalities of Lippe and Schaumburg-Lippe together. These estates or part of them remained the property of the Barmakids at a later period; Yāḳūt (ii. 942) says of the "large and rich" village of Rāwan, east of Balkh that it was in the possession of Yaḥyā b. Khālid. As the name shows (Sanskr. *nava vihāra* = new monastery) this temple was a Buddhist monastery; it is described as such in the vii[th] century A. D. by the Chinese pilgrim Hüan-Čuang (*Mémoires sur les contrées occidentales*, trad. par St. Julien, i. 30 *et seq.*, and the *Histoire de la vie de Hiouen-Thsang*, p. 64); it was even known to some of the Arab geographers, like Ibn al-Faḳīh (ed. de Goeje, p. 322) that the Nawbahār was devoted to the worship of idols (*'ibādat al-awthān*) and not of fire; and setting aside some exaggerations, the description given by Ibn al-Faḳīh exactly fits a Buddhist vihāra. For obvious reasons the Persians wished to bring this famous family of Persian origin into connection with the traditions of the Sāsānian Empire; the Buddhist cloister was transformed into a fire temple (cf. e. g. Yāḳūt, iv. 819 *et seq.*), its foundation was attributed to the Persian kings of antiquity, and its chief priests declared to be descendants of the ministers of the Sāsānian kingdom (*Siyāsat-Nāmah*, ed. Schefer, p. 151). These notions, wide spread in the later literature, which have influenced not only local tradition (*Faḍā'il Balkh* in Schefer's *Chrestomathie persane*, i. 71) but also modern scholarship (Browne, *A Literary History of Persia*, p. 257) may not have arisen before the reign of Hārūn al-Rashīd. It is not impossible that Ibn al-Muḳaffa', being a Persian, had put forth similar statements. His contemporary Khālid of course did not possess any such power under Abu 'l-Abbās and Manṣūr as Yaḥyā afterwards did under Hārūn, but his position, from which through his generosity, his whole house derived benefits (Ibn al-Faḳīh, p. 317), was nevertheless dazzling enough to bring about a perversion of national traditions in favour of the Barmakids.

According to Balādhorī (ed. de Goeje, p. 409) Nawbahār was destroyed in the reign of Mu'āwiya probably soon after the year 42 = 663-664 (cf. Marquart, *Ērānshahr*, p. 69); Ṭabarī however makes the native prince Nīzak pray in Nawbahār as late as the year 90 (708-709). On the fate of the last Barmak, the father of Khālid, and his predecessors we possess only legendary accounts. Even Ibn Khallikān was no longer able to decide whether Barmak ever adopted Islām. According to Ibn al-Faḳīh (p. 324) Khālid was the son of this Barmak and of a daughter of the prince of Ṣaghāniyān. Ṭabarī (ii. 1181) gives an account of a campaign by Ḳutaiba b. Muslim against rebels in Balkh in the year 86 (705); the wife of the chief priest is said to have been among the prisoners and to have spent a night with 'Abd Allāh brother of Ḳutaiba and to have become pregnant with Khālid on that night: she was set free with the other prisoners the next day. What Ṭabarī adds on the origin of this story shows that it was invented by 'Abd Allāh's sons, not, as has been supposed to honour the Persian with an Arab genealogy but to obtain for the Arab family the advantages of relationship to the influential favourite of the Caliphs. It is not impossible however that in this story we have an approximately correct date for Khālid's birth; the year of his death is given as 165 (781-782); he must then have been about 75 years old. His father Barmak was skilled in astronomy and philosophy as well as in medicine and cured the prince Maslama b. 'Abd al-Malik of an illness (Ṭabarī, l. c.). This last statement shows that Barmak had gone from his home to the Caliph's court; according to later accounts this took place in the reign of 'Abd al-Malik in 86 (705), the year of the latter's death. He appears to have afterwards returned home. In 107 (725-726) by the orders of the governor Asad b. 'Abd Allāh he rebuilt Balkh which had been destroyed (Ṭabarī, ii. 1490).

We know almost as little about Khālid's birth and education; even as to when and how he won the favour of the caliph Abu 'l-'Abbās, nothing is told us. He was on such intimate terms with the Caliph that his daughter was nursed by the Caliph's wife and the latter's daughter by Khālid's wife (Ṭabarī, iii. 840). After 132 (749-750) we find him at the head of the Dīwān al-Kharādj: in some authorities he is also called vizier (Mas'ūdī, *Kitāb al-Tanbīh*, p. 340 and 342; *Fragm. hist. Arab.*, ed. de Goeje, p. 215 and 268). Khālid appears to have been the first writer (*Kātib*) in whose tenure of office the holder attained the rank of minister. Abū Salama, the first "vizier of the house of Muḥammad" is not mentioned among the "writers" and was a vizier rather in the sense in which this word is used in the Ḳor'ān (xx. 30 *et seq.*) and placed in the mouth of e. g. the Caliph Abū Bakr in historical works (cf. e. g. Ṭabarī, i. 1817, 15; 2140, 11). Even Khālid was not a vizier in the later sense of the word and distinguished himself not only by able government and wise counsels but also by warlike deeds. Under the leadership of Abū Muslim and his general Kaḥṭaba b. Shabīb he took the side of the house of the Prophet in the wars against the Omaiyads; between 148 (765) and 152 (769) as governor of Ṭabaristān he destroyed the principality of Maṣmughān at Mount Demawend (cf. Marquart, *Ērānshahr*, p. 128). After this victory the people of Ṭabaristān are said to have represented Khālid and the siege-artillery used by him in the siege, on their shields (Ibn al-Faḳīh, p. 314). Even in his old age in the year 163 (779-780) he distinguished himself at the capture of the Greek fortress of Samālū (Ṭabarī iii. 497).

We first find Khālid mentioned as the adviser of the Caliph Manṣūr in the stories of the foundation of Baghdād (146 = 763-764) and the alleged abdication of the heir to the throne, 'Īsā b. Mūsā in 147 (764-765). Besides numerous buildings in Baghdād, the foundation of the town of Manṣūra in Ṭabaristān is attributed to him during his governorship. Shortly before the death of the Caliph Manṣūr he was appointed governor of Mawṣil (Mosul) after the Caliph had asked him for 2,700,000 dirhems, and his son Yaḥyā, governor of Ādharbaidjān. It is related that the inhabitants of Mawṣil had never respected any governor so much as Khālid although he never resorted to severe punishments. According to Mas'ūdī (*Murūdj*, vi. 361) none of his descendants equalled him in noble qualities.

His son Yaḥyā, according to Ibn Khallikān, died on the 3[rd] Muḥarram 190 = 29[th] November 805 at the age of 70 or 74 so that he must have been born in 120 (738) or some years earlier.

Unlike his father he was distinguished only as a governor and minister; no warlike exploits are related of him; of his numerous public works the Sīḥān canal at Baṣra (Ṭabarī, iii. 645; Balādhorī, p. 363) is specially noted. In the reign of al-Mahdī the young prince Hārūn was entrusted to his care in 161 (777-778). After 163 (779-780), he was at the head of the chancellory (*Dīwān al-rasā'il*) of the prince, who was then appointed governor of the west (all the provinces west of the Euphrates) with Armenia and Ādharbaidjān. During the brief reign of the Caliph al-Hādī, Yaḥyā as an adherent of the young prince whom they wished to force to renounce the succession, was in danger of his life; after the accession of Hārūn al-Rashīd, Yaḥyā the Barmakid, whom the Caliph still always called "father", was appointed vizier with unrestricted powers and with the help of his sons Faḍl and Djaʿfar (his two other sons, Mūsā and Muḥammad are more rarely mentioned) ruled the kingdom for seventeen years (786—803).

Of the two sons mentioned, Faḍl, who was born in 148 (765-766) was the elder and also the more important. From 176 (792-793) till 180 (796-797) he was at the head of a governorship which comprised the provinces of Djibāl, Ṭabaristān, Dunbawand, and Kūmis and for a time also, Armenia and Ādharbaidjān; from 178 (794-795) till 179 (795-796) he was also governor of Khorāsān. Yaʿḳūbī (*Hist.*, ii. 516) says that he was unfortunate in his fighting in Armenia (strictly in Dāghestān); on the other hand he is credited with such deeds in Khorāsān as he could scarcely have performed in the brief period of his governorship. He is said to have raised an army of 500,000 (!) men from the native population for the Caliph of whom 20,000 were sent to Baghdād and the others retained in Khorāsān (Ṭabarī, iii. 631), and to have also won several great victories and built many mosques and Ribāṭ. He dug a new canal in Balkh (Schefer, *Chrestomathie persane*, i. 71 and 88) and built a new Friday-mosque in Bukhārā; he was the first to have lamps brought into the mosques in Ramaḍān (Narshakhī ed. Schefer, p. 48). Masʿūdī (*Murūdj*, vi. 363) also tells us that in the earlier days of his governorship, Faḍl was only occupied with hunting and frivolous pleasures and only reformed after receiving a letter from his father!

Of **Djaʿfar** who later became more renowned in popular story (he was 37 years old at his death and born about 150 = 767) only his beautiful writing, his eloquence and his knowledge of astronomy are praised; he is also mentioned as a leader of fashion and introduced the custom of wearing cravats as he had rather a long neck (Djāḥiẓ, *Bayān*, ii. 151). His intimacy with the Caliph, which did not at all please Yaḥyā, is attributed to a notorious Oriental vice (Ṭabarī, iii. 676). Except for a short journey to Syria in the year 180 (796-797) where he had to make peace among the Arab tribes who were fighting among themselves, as had his brother Mūsā four years earlier, he appears never to have been separated from the Caliph and even on this occasion he gave vent to his sorrow and his desire for reunion in extravagant language (Ṭabarī, iii. 642). He was several times appointed governor of large provinces by his princely patron, but these were always ruled by his deputies. It cannot be ascertained from the authorities whether he ever actually conducted the business of state as a minister or what buildings or other works were executed by him; the only trace of his influence is the fact that his name appears on the coins of the Caliph.

Even his father does not seem to have been at all as powerful during his seventeen years' rule as is stated. In the first years of his tenure of office he had to give an account of his government to Khaizurān (died 173 = 789-790), mother of the Caliph. Immediately after the death of his mother the Caliph deprived the young Djaʿfar of the seal which he carried and entrusted a great part of the business to Faḍl b. Rabīʿ, later the opponent and successor of the Barmakids; the same Faḍl was appointed head chamberlain (*ḥādjib*) in 179 (795-796) in place of the Barmakid Muḥammad b. Khālid. The appointment of ʿAlī b. ʿĪsā b. Māhān as governor of Khorāsān was also made against the will of the vizier (Ṭabarī, iii. 702). On the pilgrimage of the year 181 (beginning of 798) Yaḥyā obtained leave to resign and to remain in Mecca (Ṭabarī, iii. 646), but returned in the following year to Baghdād and seems again to have taken over the reins of government.

From these statements it is clear that the fall of the Barmakids had long been premeditated and was not due to any sudden impulse of the Caliph. In the first night of Ṣafar 187 (29th January 803) Djaʿfar was slain by command of the Caliph and immediately after, Yaḥyā and his other three sons were thrown into prison and their goods confiscated. The relatives of the minister were allowed their freedom; Muḥammad b. Khālid (brother of Yaḥyā) and his family were in no wise harmed. Hārūn had the head of the dead Djaʿfar placed on the "middle" bridge of Baghdād and the two halves of his body impaled on the other two bridges. The minister and his sons remained under supervision in the town of Raḳḳa. Both Yaḥyā and Faḍl died before the Caliph; of the fate of Mūsā and Muḥammad nothing is known. ʿImrān b. Mūsā seems to have been the only grandson of the vizier to distinguish himself. In the year 196 (811-812) he is mentioned as defending the ancient Sāsānian town of al-Madāʾin against Maʾmūn's army (Ṭabarī, iii. 859 *et seq.*) and he again appears in 216 (831) as deputy governor of the province of Sind (ibid., iii. 1105). Abu 'l-Ḳāsim ʿAbbās b. Muḥammad Barmakī is mentioned as one of the last viziers of the Sāmānids (Barthold, *Turkestan w epochu mongolskago našestwija*, ii. 278, following Gardīzī); whether this "Barmakid" belonged to the same family is not related. Again in the vth (xith) century we find a Dānishmand Ḥasan Barmakī mentioned going several times as envoy from the Ghaznawids to the court of the Caliph (Baihaḳī, ed. Morley, p. 441 *et seq.*). The famous translator of the *Khudāi-Nāma*, Muḥammad b. Djahm al-Barmakī was probably only a client of the family, as has been suggested, and so was the astrologer mentioned by Ṭabarī (iii. 497 *et seq.*) in his account of the events of the year 163 (779-780).

In the present state of our knowledge it is hardly possible to give a fair appreciation of the part played by the Barmakids or of their virtues and faults. They are traditionally represented as pious Muḥammadans, famed for their pilgrimages and buildings; on the other hand they are accused by their opponents of indifference to Islām and

its teaching. In a poem quoted by Djāḥiẓ (*Bayān*, ii. 150) from an unnamed author and ascribed by Ibn Kutaiba (*ʿUyūn al-akhbār*, p. 71, ed. Brockelmann) to the philologist Aṣmaʿī it is said: "When in an assembly any thing irreligious is said, the faces of the Barmakids light up; but when a verse from the Ḳoʾrān is quoted in their presence, they tell stories from the book of Marwak" (on this book cf. Ḥamza, ed. Gottwaldt, p. 41). Another poet (*Bayān* and *ʿUyūn*, loc. cit.) says of himself that he builds mosques only as a pastime and at heart he cares as little for such things as Yaḥyā b. Khālid. Manṣūr is said to have accused his minister Khālid of sympathy with Persian national feeling (Ṭabarī, iii. 320); Yaḥyā is said by Ṭabarī (iii. 572 *et seq.*) to have been accused by al-Hādī of infidelity (*kufr*); probably Hārūn would have justified his decision by such accusations though nothing is said by the authorities on this point; that the fall of the Barmakids is connected with a return to the traditions of the true Islām is proved by the fact that after 187 the coins do not bear the names of the Caliph or his heir as had been usual since the reign of al-Mahdī.

That the Barmakids enriched not only the state but also the clients of their house is not denied by their partisans. For reasons that are quite comprehensible historians have always been favourably inclined to the "people of the quill" (*ahl al-Kalam*); history, therefore, even apart from the accounts of patriotic Persian writers, has lavished much extravagant praise on the Barmakids, who are frequently regarded as the founders of this class, and been silent on many of their misdeeds. We should not place too much reliance on the statement that the reign of Hārūn al-Rashīd is regarded as the "golden prime" of the Caliphate (Ṭabarī, iii. 577 *et seq.*) or that Hārūn only reigned well so long as he had the Barmakids around him, as some historians further inform us (Masʿūdī, *Tanbīh*, p. 346; *Fragm. hist. Arab.*, p. 309). Yet in both instances the verdict of the historians is confirmed by popular tradition: and it is weighty testimony to the noble qualities of these Persians that they should be extolled by an Arab patriot of the old school like the author of the *Kitāb al-aghānī* and that they should have been able to create order even in a province so thoroughly Arab as Syria.

BARNIḲ (BERENICE). [See BENGHĀZĪ.]

BARODA, a native state of India, in Gudjarāt, consisting of four detached portions within the Bombay Presidency; the ruler is a Marāṭhā, bearing the family name of Gaikwār. Area: 8,099 sq. m.; pop. (1901): 1,952,692, of whom 165,014 were Muḥammadans: revenue: Rs. 1,64,86,000. The city of Baroda, on the Vishwamitri river — pop. (1901): 103,790 — was of Muḥammadan foundation, as shown by its walls. The Gaikwārs always had in their service Muḥammadan Sardārs and Arab and Rohilla mercenaries, whose descendants are supported by the state to this day. The Gaikwārs have also kept up the custom of attending the Muḥarram festival in state; and there is preserved a carpet made by the order of Khande Rao (Gaikwār 1856—1870), and intended for the tomb of Muḥammad at Medina, valued at £ 400,000. "The field is in seed pearls, the arabesque designs in blue and red being worked out in English glass beads with medallions and rosettes of diamonds, rubies, emeralds, freely dispersed" (Sir George Watt, *Indian Art at Delhi*, 1903, p. 444).

BARR (A.), "pious" "good"; with the article, one of the 99 names of Allāh: the "gracious"; for other meanings of the word see the dictionaries.

AL-**BARRĀDĪ** (ABU 'L-FAḌL ABU 'L-ḲĀSIM B. IBRĀHĪM AL-BARRĀDĪ AL-DAMMARĪ), belonged to Dammar on the Djebel-Nefūsa and lived some time there: he afterwards settled in Djerba, where he died. His biography gives no dates but as al-Barrādī had, among other teachers, Abū Sākin ʿĀmir al-Shammākhī who died in 792 (1390), it is probable that he flourished at the end of the viii[th] and beginning of the ix[th] century A. H. His chief work is the *Kitāb al-Djawāhir al-Muntakhāt* a supplement to the *Ṭabaḳāt al-ʿUlamā* of Abu 'l-ʿAbbās Aḥmad al-Saʿīd, in which he resumes, from the Abāḍī point of view, the history of the early period of Islām down to the reign of the Rostamid Imām of Tāhert (Tagdemt) Muḥammad I Aflaḥ. He closes his work with a catalogue of the books of the sect, which has been edited and translated by A. de Motylinski (*Les livres sacrés de la secte abadhite*, Algiers 1889 p. 6—20). The *Kitāb al-Djawāhir* has been lithographed in Cairo in 1306 A. H.

Bibliography: Al-Shammākhī, *Kitāb al-Siyar* (Constantinople, n. d.) p. 974-975; de Motylinski, *Les livres sacrés de la secte abadhite* p. 35—36. (RENÉ BASSET.)

BARSBEY, AL-MALIK AL-ASHRAF SAIF AL-DĪN, Sulṭān of Egypt, was enrolled among the Mamlūks of Sulṭān Barḳūḳ, under Muʾaiyad Shaikh (1412—1421 = 815—824) Governor of Tripolis; on the latter's death he was imprisoned, but was soon released by Sulṭān Ṭaṭar and appointed Dawādār and tutor to his son. Ṭaṭar died soon afterwards, having previously appointed Barsbey and Djānibey al-Ṣūfī, regents for his son who was still a minor. After disposing of Djānibey — he was thrown into prison in Alexandria — Barsbey deposed Ṭaṭar's son Muḥammad and ascended the throne in 1422 (825). At first he was very popular for he deprived the non-Moslems of their offices and laid down strict regulations as to their dress to distinguish them from Moslems. He abolished the custom of kissing the ground in front of him at an audience. Djānibey escaped from Alexandria and his partisans were severely dealt with; revolts in Syria were put down with the utmost cruelty. After overcoming the rebels, the Sulṭān resolved to put down the pirates and to deprive them of their base, the island of Cyprus. After two successful expeditions he vigorously prosecuted his efforts to obtain a permanent hold on the island. A strong force landed in Cyprus and the Egyptian troops defeated the army of King Janus sent against them in 1426 (830) and captured him while the Cypriote fleet did not dare attack the Egyptian

ships to save the king's life. Janus was brought to Cairo heavily fettered and carried through the streets in triumph to Barsbey, but afterwards released through the intermediary of the Venetian consul, for a high ransom and a promise to recognise the Sulṭān as overlord. The Sulṭān also made a treaty of peace with the Knights of St. John in Rhodes.

The Sharīf of Mecca who had declined to recognise the Sulṭān's suzerainty was conquered in 1424 (827) and had to pay tribute, as had his successor Barakāt in 1426 (829) and to hand over the revenues of the harbour of Djidda to the Sulṭān. In order to increase these the Indian merchants were well treated so that the harbour of Aden suffered heavy losses. Barsbey forbade his Egyptian merchants to bring Egyptian or European wares to Djidda and thus forced the Indians to buy these wares from his officials at prices arbitrarily fixed by himself. All merchants wherever they came from, thus had to pay custom duties to Egypt on their wares. He also levied an export duty on the Indian wares which had been bought by merchants from Syria or Egypt. The Sulṭān, always in want of money through his unbounded extravagance, tried all sorts of means of making money. He was constantly altering the rate of exchange of gold and silver to his own advantage, prohibiting the currency of foreign coins so that he might buy them cheaply and then reintroduce them as currency again. He forbade the importation of Indian spices and bought them cheaply so as to sell them again at a great profit as there was no competition. The Venetians however would not put up with this monopoly of the spice trade; they made a demonstration with their fleet and forced him to grant a more favourable treaty of commerce, only the pepper monopoly being left in his hands. The kings of Castile and Aragon whose remonstrances were of no avail, captured all Muḥammadan ships. Barsbey also monopolised the manufacture of sugar and even forebade the planting of sugar cane for a period. The enhanced price of this product by the Sulṭān was felt all the more, because it was used as a remedy against the plague. The Sulṭān gradually brought all trade to a standstill by prohibiting the sale to private individuals of Syrian manufactured products, wood and grain; the free sale of cattle was forbidden so that famine arose even in years of plenty. Egypt became in many parts almost depopulated by Barsbey's selfish rule as well as by the plague. Women were insolently treated by the Mamlūks so that the Sulṭān had to forbid them to go out on festive occasions (see article Čaḳmaḳ); the peasants were deprived of their horses by the inspectors of the War Office and enormous charges laid upon them. The plague which devastated the land was regarded by the Sulṭān as a punishment from Allāh and he therefore harassed the Christians and Jews and prohibited women from going out of doors so that they could not discharge their domestic duties.

In Syria since 1429 (832) military operations had practically never ceased. In the background was Shāh Rukh, Timur's son, exasperated by the ignominious treatment of his envoys in Cairo as well as by the refusal of the Sulṭān to allow him to share in the decoration of the Kaʿba. He therefore supported Ḳara Yelek, a prince of the Turkomans of the White Sheep against whom Barsbey had to fight continually. The princes of Dhu 'l-Ḳadr again quarrelled with the Sulṭān and his bitterest enemy was Djānibey who appeared again in 1435 (839) and constantly incited the wrath of his opponents against Barsbey. In the end however Barsbey was victorious: Ḳara Yelek lost his life in battle and the prince of Ḳaramān who was protected by Barsbey made peace with the Ottoman Sulṭān Murād so that Barsbey was easily able to overcome the princes of Dhu 'l-Ḳadr: Djānibey was slain by a son of Ḳara Yelek and the other sons submitted to the Sulṭān. Barsbey did not long survive his success. An illness carried him off in 1438 (842) after he had appointed his son Yūsuf as his successor and the Emir Čaḳmaḳ as regent.

BARSHAWĪSH, an Arabic corruption of the Greek Περσεύς (Vullers, *Lexicon pers. lat.* vocalises Parsiyāwūsh) i. e. the constellation of Perseus on which see Ḳazwīnī (ed. Wüstenfeld) i. 33 and Ideler, *Untersuchungen über den Ursprung und die Bedeutung der Sternnamen*, 86 *et seq.*

BARṢĪṢĀ. The story of Barṣīṣā is always connected with Ḳurʾān, lix, 16, . . . "like the devil when he said to the man [*or* to man]: 'Disbelieve', then, when he had disbelieved, he said, "Lo, I am clear of thee, lo, I fear Allāh, the Lord of the Worlds." This is explained by the commentators in three ways: — of man in general; of the story of how the devil misled Abū Djahl at the battle of Badr (cf. Ḳorʾān, viii, 50 and Ibn Hishām, p. 474); of a certain monk or devotee. The following commentators give the first two explanations only: — Zamakhsharī (d. 538); Rāzī (d. 606), *Mafātīḥ*, viii, 132 of Cairo ed. of 1308; Naisābūrī (d. ab. 710), margin of Ṭabarī, *Tafsīr*, xxviii, 33 — he follows Rāzī closely; Abū Saʿūd (d. 982), margin of Rāzī, viii, 258. But the older exegetical tradition prefers the third explanation, which is some form, shorter or longer, of the following story. There was a devotee (*rāhib*, *ʿābid*, *ḳass*, of the children of Israel or otherwise) living in his cell, who had long (sixty years, etc.) withstood Satan. At length he falls with a woman who is brought or comes to him (she is a shepherdess, a neighbour's daughter, a princess, sister of four or three brothers, ill, possessed, left in his charge). She becomes pregnant, and, to conceal his sin, he kills and buries her in his house or under a tree. The stories vary as to how far back the machinations of Satan extend. Some tell that he possesses the woman that she may be brought to be healed. Others, that he tempts the devotee to sin with her after she has been brought. Others, that he only points out the escape by killing her. Then Satan reveals the crime, in a dream or otherwise; this is verified by finding the body and its condition; the devotee is taken and led away to death; Satan reveals himself to the devotee as his tempter and offers deliverance if he will worship him. The devotee does so, and Satan retires, uttering the words of the Ḳorʾān. Four versions of this are given by Ṭabarī (d. 310; *Tafsīr*, xxviii, 31 *et seq.*) going back to ʿAlī, to Ibn Masʿūd, to Ibn ʿAbbās and to Ṭāʾūs. But in

the *Kanz al-ʿummāl* (ed. Hyderabad, 1312, i. p. 268, Nº. 4665) there is still earlier authority than Ṭabarī. The story is told from ʿAbd al-Razzāḳ Ibn Hammām (d. 211) in his *Djāmiʿ*, from Isḥāḳ b. Rāhawaih (d. 233) in his *Musnad*, from Aḥmad b. Ḥanbal (d. 241) on *Zuhd*, from ʿAbd b. Ḥamīd (d. 249) in his *Musnad*, from Bukhārī (d. 256) in his *Taʾrīkh*. After Ṭabarī, according to the *Kanz*, the story was told by Muḥammad b. Ibrāhīm, known as Ibn al-Mundhir (d. 318?) by Abū ʿAbd Allāh Muḥammad, known as al-Ḥākim (d. 405) in his *Mustadrak*, by Aḥmad b. Mūsā, known as Ibn Mardawaih (d. 416) and by Baihaḳī (d. 458) in his *Shuʿab al-īmān*. In a marginal note to the *Djāmiʿ al-bayān* of Muʿīn b. Ṣafī (ed. Delhi, 1296, p. 469) Baghawī (d. 516) is said to have told the story with the name Barṣīṣā, but that had already been done by Abū Laith al-Samarḳandī (d. 375 or 383) in his *Tanbīh al-ghāfilīn*. For his form of the story see Goldziher-Landberg, *Legende vom Mönch Barṣīṣā* pp. 6 *et seq.* There also is given the story as told by Ḳazwīnī (ed. Wüstenfeld, I, 368) and by Abshīhī in the *Mustaṭraf*, chap. lxiv. Baiḍāwī has a mere reference to a *rāhib*, but Suyūṭī, to judge from a marginal note to the *Djāmiʿ al-bayān*, must have much on the story in his *Durr al-manthūr*. To the Ṭabarī authorities he added, from Baihaḳī, that it was told by Ibn Umāma directly from the Prophet. By far the fullest form is in the *Sirādj al-munīr* of Sharbīnī (d. 997, iv. 243 *et seq.* of ed. of 1299) which professes to be derived, through an ʿAlī, from Ibn ʿAbbās but is quite different from the form ascribed to Ibn ʿAbbās in Ṭabarī. It is very close to the longer narrative given by Goldziher-Landberg from the *Forty Vezirs* (ed. Stambul, 1303, pp. 120—126) in which collection the legend had found a permanent resting place in 850. In that edition of the *Forty Vezirs* the story is different and much fuller than in the texts translated by Petis de la Croix and by Gibb. Finally, it forms one of the anecdotes in Ḳalyūbī's *Nawādir* (Nº. 52, p. 20 of ed. of 1324). Through different forms of the *Forty Vezirs* the story passed into Europe and became eventually the source of M. G. Lewis's *Ambrosio or the Monk*. But the pre-Muslim source of the story is still unknown. It is told all over the Muslim world. Goldziher-Landberg found it in Ḥaḍramawt; Hartmann (*Der islamische Orient*, i. 23 *et seq.*) found it localized in the province of Aleppo; Ibn Baṭṭūṭa (i. p. 26) found a *Ḳaṣr* of Barṣīṣ the *ʿābid* east of Alexandria, on the road from Tripoli. For further references see Chauvin, *Bibliographie arabe*, viii, pp. 128 *et seq.* (D. B. MACDONALD.)

BARUDJIRD (BURŪDJIRD) a town in Luristān, south of Hamadhān. Here the Seldjūḳ Barkiyāruḳ [q. v.] defeated Turkān Khātūn in 485 (1093) and he died here in 498 (1104).

Bibliography: Yāḳūt, *Muʿdjam*, i. 596; le Strange, *The Lands of the Eastern Caliphate*, 200 *et seq.*; de Bode, *Travels in Luristan and Arabistan*, ii. 302 *et seq.*

BARZAKH, a Persian and Arabic word meaning "obstacle" "hindrance" "separation". It is found three times in the Korʾān (xxiii. 102; lv. 20 and xxv. 55) and is interpreted sometimes in a moral and some times in a concrete sense. In verse 102 of Sūra xxiii the godless beg to be allowed to return to earth to accomplish the good they have left undone during their lives; but there is a *barzakh* in front of them barring the way. Zamakhsharī here explains the word by *ḥāʾil*, an obstacle and interprets it in a moral sense: a prohibition by God; other commentators take the word more in a physical sense; the *barzakh* is a barrier between hell and paradise or else the grave which lies between this life and the next. In the two other passages of the Korʾān it is a question of two seas, or great stretches of water, one fresh, the other salt, between which there is a *barzakh* which prevents their being mixed. The same thing is mentioned in verse 62 of Sūra xxvii and in this passage the word *ḥādjiz* or hindrance takes the place of *barzakh*. The commentators say that there is here an allusion to the fresh waters of the Shaṭṭ al-ʿArab which flow a great distance out into the Salt sea without mixing with it; the impediment here is the effect of a law of nature established by God.

In eschatology, the word *barzakh* is used to describe the boundary of the world of human beings which consist of the heavens, the earth and the nether regions and its separation from the world of pure spirits and God. See the pictures representing this conception in the *Maʿrifet Nāma* of Ibrāhīm Ḥaḳḳī (Būlāḳ 1251, 1255); cf. also Carra de Vaux, *Fragments d'eschatologie musulmane*.

The same expression is also found in the philosophy known as "illuminating" (*al-ḥikma al-ishrāḳiyya*). It there denotes the dark substances i. e. bodies: *the barzakh* or the body is dark by nature and only becomes light on receiving the light of the spirit. The celestial spheres are "animated" or "living" *barzakh*, inanimate bodies on the other hand are dead "*barzakh*" (Cf. our Article *La Philosophie illuminative d'après Suhrawerdi Meqtoul* in the *Journal Asiatique*, Jan.-Febr. 1902. (B. CARRA DE VAUX.)

BARZAND, a town in the north east of Adharbaidjān. According to the mediaeval Arab geographers it belonged to the district of Mūghān, the extensive marshy plain between the river al-Rās (Araxes) in the north, the Ṭālish mountains in the south and the Caspian sea in the east. Although many authorities on Arab geography (cf. e. g. Yāḳūt, *loc. cit.*) place Barzand in Armenia, this appears to be due to a confusion with Barzandj (south east of Bardhaʿa); on the latter cf. le Strange, *op. cit.* p. 178, 230. Barzand was 14 parasangs (Yāḳūt 15) = about 50 (or 54) miles distant from southern Ardabīl. When Ḥaidar b. Kāwūs Afshīn (see above p. 177), Caliph Muʿtaṣim's general, was engaged in putting down the dangerous revolt under Bābek of the Khurramiya sect in 220—222 (835—837), he made his base at Barzand then deserted and rebuilt the town. In the period following it attained considerable prosperity. Ibn Ḥawḳal (367 = 378) describes it as a large town; Muḳaddasī (375—985) praises the well frequented bazaars there, in which the wares of the surrounding districts destined for export were stored. By the time of Mustawfī (740 = 1340) Barzand had already sunk to the level of an unimportant village and as such still exists to-day (Berzend: situation: 39° N. lat.; 47⅔° E. long. Greenw.).

Goeje), p. 329; le Strange, *The Lands of the Eastern Caliphate* (1905), p. 175-176; Weil, *Gesch. des Chalifen*, ii. 298, Note 2 (reads wrongly Berzend). (M. STRECK.)

BARZŪ-NĀMAH a Persian epic poem, an imitation and continuation of Firdausī's Shāhnāmah; the author is unknown but it probably dates from the vth (xith) or the beginning of the vith (xiith) century. It belongs to the Rustam and Sidjistān cycle and describes the adventures of Barzū, son of Suhrāb and grandson of Rustam; as these are merely variants of the adventures of Suhrāb and Djahāngīr, Nöldeke has suggested that the poem is purely an invention of the poet and is not based on popular tradition. It treats at great length of the wars against the Slavs who are represented as *Dev* (their king is the *Dev* Sikāb). The episode of the Turanian singer Sūsan, who by a ruse, captures the principal Iranian heroes and sends them in chains to the camp of Afrāsiyāb has often been regarded as a separate work. Some fragments of the text have been published by Turner Macan (*Shāhnāmah*, iv. 2166—2296), Kosegarten (*Mines de l'Orient* v. 309) and Vullers (*Chrest. Schahnam.*, p. 87 *et seq.*)

AL-**BASĀSĪRĪ**, ABU 'L-ḤĀRITH ARSLĀN, called al-Muẓaffar, a Turkish general under the last Būyids and military governor of Baghdād. When the vizier of the Caliph al-Ḳā'im bi Amr Allāh, the Ibn Muslima known by the title of Ra'īs al-Ru'asā' was seeking to call in the help of the Seldjūks against the Shī'ite Būyids, he naturally came into conflict with al-Basāsīrī. The latter left Baghdād when Toghrul Beg entered it in 447 (1055) but he found an opportunity to return some years later in 450 (end of 1058) and to revenge himself on the 'Abbāsid Caliph and on his hated enemy, Ibn Muslima. He had in the interval collected around him a number of malcontents and openly declared himself in favour of the Fāṭimid Caliph al-Mustanṣir and thus succeeded in taking the capital with the help of the 'Oḳailid Ḳuraish b. Badrān [q. v.]. The Caliph and his vizier took refuge with Ḳuraish who guaranteed the safety of the former but under pressure from al-Basāsīrī handed over the vizier to him. The latter was executed with the greatest cruelty by orders of al-Basāsīrī. The latter could not hold out however when Toghrul Beg again advanced on Baghdād and was overtaken on his flight by troops sent after him and slain in 451 (1060). The *nisba* al-Basāsīrī is irregularly formed from the famous Persian town of Basā or Fasā, cf. Yāḳūt, *Mu'djam* (ed. Wüstenfeld), iii. 892.

BASDJIRT, also written BASHDJIRD, BASHDJIRT, BASHGHIRD and BASHKIRD (or BĀSHGHURD), the Arabic name for the Bāshkirs and Magyars. The Bāshkirs whose territory corresponds roughly to the modern districts of Ufa and Orenburg are first briefly mentioned by Iṣṭakhrī (ed. de Goeje, p. 225 and 227) and a more detailed account of them is given by Ibn Faḍlān (Yāḳūt, i. 468 *et seq.*). The land of the Bāshkirs was then, as it still is in part, covered with forest and their numbers very small (according to Iṣṭakhrī only 2000 men). They were subject to the Bulghār but unlike them had remained heathen; the distance between the territories of the two peoples is estimated at 25 days' journey. Ibn Faḍlān says that every one had to make an idol of wood to carry it with him always and pray to it in the hour of need or danger. Even in the xith century the Bāshkirs had not yet all become Muḥammadans; the traveller Rubruquis (1253) notes that they had been subject to the Bulghār till the arrival of the Tatars when many of them had adopted Islām. It is only in the xvith century that, when the Russians became acquainted with them, we first find the Bāshkirs a completely Muḥammadan people.

From monks of Hungarian origin (cf. the account of this mission in O. Wolff, *Geschichte der Mongolen oder Tartaren*, Breslau 1872, p. 265 *et seq.*), who had been there before the coming of the Tatars, Rubruquis had heard that the language of the Bāshkirs (Pascatur) was the same as that of the Hungarians. The dialect at present spoken by them belongs in spite of some peculiarities of inflection to the Turkish, not like the Hungarian to the Finnish family of languages: even the name itself is popularly explained as composed of *Bash* "head" and *ḳurt* "wolf" (or also *ḳurt* "worm" "bee"). Whether it was otherwise in the xiiith century is doubtful. Marquart (*Osteuropäische und ostasiatische Streifzüge*, 1907, p. 69) supposes that this connecting the Bāshkirs with the Hungarians as well as the description of the land of the Bāshkirs as "magna Hungaria" can only be explained by the Arabic usage. It is remarkable that even the Russian Cossacks are said to have called the Magyars Bāshkirs during the campaign of 1849.

After the conquest of Kazan the Bāshkirs had to submit to Russia. In the xviith century there were frequently fights between the Bāshkirs and the Calmuks and in the xviiith between the Bāshkirs and the Kirghiz; besides, the Bāshkirs have often risen against Russian rule, eight times in the xviith century, and four times in the xviiith, sometimes in conjunction with the Krim Tatars and sometimes at the instigation of native preachers against the rule of the infidel; in greater movements like the revolt of Pugačew (1773-1774) the Bāshkirs are mentioned among the rebels. The Russian Government then adopted the plan of setting one turbulent nomadic people to extirpate another; the last independent rising of the Bāshkirs (1755) was put down almost entirely by Kirghiz hordes who made the cruellest havoc among the conquered people.

Having been trained to the cavalry service since 1789 as irregulars, the Bāshkirs took part in the campaigns in Western Europe (1813-1814), though still armed only with the bow and arrow; it was not till later that they adopted European equipment. In 1874 on the introduction of compulsory service a squadron, and in 1878 a regiment of cavalry was raised from the Bāshkirs but it was disbanded again in 1882.

The wars of the xviiith century have been fatal to the prosperity of the people: besides, then and later a great part of the land has passed into the hands of Russian officials at unfairly low prices.

This acquisition of the "Bāshkir lands" has become proverbial in Russia. A great portion of these lands has been bought again from the new owners by the government and given back to the Bāshkirs as inalienable property. Now each Bāshkir is allotted 15 dessjatins (317 acres) of land which is not sufficient for the nomad: therefore a greater part of the people has gone over to a settled life. The number of Bāshkirs at the present day is estimated at a million.

Bibliography: E. Reclus, *Nouvelle géographie universelle* (Paris, 1880), v., p. 753 *et seq.*; Lewschin, *Opisanije kirgis-kaisackich ord i stepej* (St. Petersburg, 1832), ii. 212 *et seq.*; N. Aristow, *Zamětki ob etničeskom sostavě tjurkskich narodnostej i svěděnija o jich čislennosti* (St. Petersburg, 1897), p. 131 *et seq.* A small Bāshkir dictionary (*bashkirsko-russkij slovar*) has been published by W. Katarinskij in Orenburg (1899).

We find the appellation *al-madjghariya* applied to the Magyars as early as Ibn Rusta (ed. de Goeje, p. 142 *et seq.*); the word Bāshghird or Bāshkird however is used in the same sense not only by Yāķūt (i. 469 *et seq.*) but also in the accounts of Mongol campaigns (cf. d'Ohsson, *Histoire des Mongols*, ii. 620). The Arab notices of the Hungarians are naturally exceedingly scanty; the heathen Magyars are always regarded as "fire-worshippers"; it is to this that the statement in Rashīd al-Dīn (*Djāmiʿ al-tawārīkh*, section on the history of the Franks, unpublished) refers, that Otto I converted many fire-worshippers (*gabrān*) to Christianity. What is the explanation of the story of the Muḥammadan Hungarians, whom Yāķūt (*op. cit.*) saw in Ḥalab, is difficult to say.

(W. Barthold).

BĀSH (T.), head; end, summit; chief, commander; beginning, principle, basis, foundation. *Bunār bāshi*, source; *yil bāshi*, New Year's Day; *Bāsh wekīl*, prime minister, president of the council under the constitutional regime; *Bāsh kātib*, chief secretary. *Bāsh bogh* (a Turco-Bulgarian hybrid word) head of an army, commander-in-chief; more rarely commander of a fleet; sometimes the captain of a galley. *Bāsh-agha*, in Algeria, an Arab chief, who is above several *aghas*; *bāsh ʿadl*, an assistant to the Ķāḍī, clerk of the court.

BĀSHĀ, [See pasha.]

BĀSHI-BOZUĶ (T.), "one whose head is turned", is applied in Turkey to the irregular volunteers, chiefly recruited from the Albanians, Kurds and Circassians, and raised when there is a great war; a militia of undoubted bravery but quite undisciplined whose savagery and love of pillage have earned them an unenviable notoriety. The name appears to have been first used in 1853 during the war with Russia.

Ubicini, *Lettres sur la Turquie*[2], Vol. ii. p. 420; Belin, *Fiefs militaires dans l'Islamisme* (*Journal Asiatique*, 1870), p. 38, note 2.

(Cl. Huart.)

BASHĪR (A.), bringer of good news (*bishāra*, *bushrā*); among Christians an evangelist. When in an Eastern town some important news (e. g. change of reign, appointment of a governor etc.), is to be announced, individuals having some connection with the authorities go through the streets from door to door, announcing the event; they receive in return a small fee. These people are called in Turkish *Mushtuldji*. — *Al-Bashīr* is the title of a weekly paper published by the Jesuits in Beyrout since 1869.

(Cl. Huart.)

BASHĪR b. Saʿd, a companion of Muḥammad. Bashīr was born in Mecca and was one of the few Arabs of the pre-Muḥammadan period who could write. In the year 622 he took part in the second conference at ʿAķaba and in the following years took part in several battles under Muḥammad. By command of the prophet he undertook in Shaʿbān 7 (December 629) an expedition with 30 men to Fadak against the Banū Murra. When he came upon them, his men took to flight but Bashīr defended himself with the greatest valour till he was severely wounded in the foot. He was at first thought to be dead but in the evening he was brought to Fadak and tended here for several days by a Jew till he was able to return to Medina. In the month of Shawwāl of the same year (February 629), the prophet was told that a body of the tribe of Ghaṭafān was encamped at Djināb (Djabār) and Yumn between Fadak and Wādī 'l-Ķurā under the command of ʿUyaina b. Ḥiṣn and intended to advance on Medina. Bashīr was at once put at the head of 300 men; he set out, the Ghaṭafān fled, and he captured a large number of sheep and camels. After the capitulation of Ḥīra in the year 12 (633) Bashīr was, according to the usual tradition, sent by Khālid b. al-Walīd against Bāniķiyā, though others say that on this occasion Khālid himself took command. In any case in the battle with the Persian cavalry under Farrukhbandādh the Arabs were victorious but Bashīr was severely wounded and died at the siege of ʿAin al-Tamr in the same year.

(K. V. Zetterstéen.)

BASHĪR SHIHĀB, Emīr of the Lebanon district from 1789—1840, really the second of this name, for another Bashīr of the same family had previously been governor of Lebanon and died in 1708. The Shihāb are Ķuraishites on both the male and female line and were governors of Ḥawrān till the time of Nūr al-Dīn when they left their ancient home and settled under the leadership of Munķidh at the foot of Hermon where Ḥāṣbeyā became their settlement. When the last Druse chief of the tribe of Maʿn [q. v.] died in 1109 (1698) the tribe of Shihāb took its place and moved to Dair al-Ķamar. The first ruler of this family was the above-mentioned Bashīr Shihāb. He was succeeded as Emīr of Lebanon by Ḥaidar Shihāb till 1729, Melḥem II till 1756; they were followed by the brothers

Aḥmad and Manṣūr and his son Yūsuf till 1788. During the latter's reign, Bas̲h̲īr S̲h̲ihāb II was born in 1767. He early lost his father Ḳāsim and at first played a subordinate part, as his elder brother Ḥasan was in better favour with the Emīr than he was. But when Bas̲h̲īr grew up he was able to get the governorship of Lebanon from the Pas̲h̲a of ʿAkkā, D̲j̲azzār Pas̲h̲a [q. v.], in place of his uncle Yūsuf who was slain on his way to ʿAkkā (1790).

Bas̲h̲īr, whose father had been a convert to Christianity relied mainly on the Maronites and was able to hold his own after the retreat of the French, even although Buonaparte's Syrian campaign had placed him in a difficult position by ranging him against his patron D̲j̲azzār Pas̲h̲a. The sons of his predecessor took the field against him as rivals for the governorship and Bas̲h̲īr found himself forced to retire to Egypt; he here won the friendship of the powerful Muḥammad ʿAlī and after his return to Syria had both his cousins slain (1807). He then transferred his seat to Bait al-Dīn where he built a commodious Sarāi (palace). When after the death of Sulaimān Pas̲h̲a (1819) ʿAbd Allāh Pas̲h̲a the Turkish governor of ʿAkkā fell into conflict with his colleague Derwīs̲h̲ Pas̲h̲a in Damascus, Bas̲h̲īr was involved in the struggle and again forced to go to Egypt, leaving his brother ʿAbbās as his representative. Muḥammad ʿAlī was able to influence the Sublime Porte in favour of Bas̲h̲īr and ʿAbd Allāh Pas̲h̲a so that the former was able to return to Syria and to overthrow his own brothers and former friends of the powerful family of the D̲j̲ānbulāt who had in the meanwhile taken the governorship of Lebanon into their own hands.

Muḥammad ʿAlī was really influenced by motives of policy in his friendship for Bas̲h̲īr, for he required the Emīr's help in the proposed conquest of Syria, for which he thought the time had come in 1831. He then sent his son Ibrāhīm Pas̲h̲a with troops to lay siege to ʿAkkā, and was assisted by Bas̲h̲īr, who however did not openly take the side of the Egyptians till ʿAkkā surrendered in 1832. From this time he always acted in consort with Ibrāhīm Pas̲h̲a and had great territories allotted to him which he was able to rule almost as he liked. But Ibrāhīm Pas̲h̲a's wars required much money and many men and the Syrians were forced to supply their new Egyptian masters with both. This caused great discontent all round, especially among the now practically independent population of Lebanon, so that Ibrāhīm Pas̲h̲a, to avoid a dangerous revolt in his rear, ordered Bas̲h̲īr to disarm his people. Bas̲h̲īr obeyed this command and with the help of the Druses first forced the Maronites to hand over their weapons and then disarmed the former also with the help of Egyptian troops. He was not however able to prevent the Ḥawrān Druses from openly resisting Ibrāhīm Pas̲h̲a's commands and had finally to look on while the Druses again joined the Turks when the European Powers intervened in the quarrel between Muḥammad ʿAlī and the Sulṭān. The withdrawal of the Egyptians brought about Bas̲h̲īr's fall, for the hope that France would interest herself on his behalf remained unfulfilled. He went on board an English ship (12th October 1840) in Ṣaidā, that took him to Malta. There he remained about a year: he then went to Constantinople and spent the last years of his life here and in various parts of Asia Minor, till his death in Constantinople in 1851. He was buried in the Church of the Armenian Catholics in Galata.

BĀS̲H̲MAḲ (T.) Sandal, shoe (Arab. *naʿl*). The Bas̲h̲maḳi S̲h̲erīf are famous relics of the Prophet, mentioned as early as the ivth century A. H. The Egyptian Sulṭān al-As̲h̲raf (d. 635 = 1237) possessed one of them which he gave to the As̲h̲rafiya, founded by him in Damascus. At a later period one turned up in Fez and we have a detailed account of it in a treatise by al-Maḳḳarī entitled *Fatḥ al-mutaʿāl fī waṣf al-Niʿāl*. Cf. also the Turkish work: *Bas̲h̲maḳ-i s̲h̲erīf s̲h̲arḥ-iretleri birle* (Kazan, 1848). As is well known the *Bas̲h̲maḳ-i S̲h̲erīf* is also to be found among the relics of the Prophet preserved in Stambul.

BAS̲H̲MAḲLIḲ, also PAS̲H̲MAḲLIḲ, — shoe-money. It was applied to the revenues allotted to the Sulṭānas and princesses. In general there were the same limitations for the Bas̲h̲maḳliḳ as for the Arpaliḳ [q. v.] viz. that no actual fief should be given as Bas̲h̲maḳlik or Arpaliḳ and that the highest contribution should be 19,999 Akče (not 9999 as given by Hammer, *Geschichte des Osman. Reiches*, ii. 668 (see Ḳoči Beg, Const. 1303, p. 17 = *Zeitschr. der Deutsch. Morgenland Gesell.* xv. 278). These restrictions were however lost sight of at quite an early date. (F. GIESE.)

BAS̲H̲S̲H̲ĀR b. Burd, a poet of the early ʿAbbāsid period who lived in Baṣra and Baghdād. Of Persian descent and thoroughly Persian in his patriotic sentiment the poet delighted in lashing in his satires the national arrogance of the Arabs in whose language he also wrote. His relations with the Muʿtazila, his public intercession for the Zoroastrian religion and his private life, so full of amorous adventures were winked at for his panegyrics on the Caliph al-Mahdī, until he finally was rash enough to attack the minister Yaʿḳūb b. Dāʾūd. For this he was put to death in the year 167 (783). His great influence and popularity is evidenced by the very numerous anecdotes which were still current about him in the third century A. H. and were admitted into the *Kitāb al-Ag̲h̲ānī*.

AL-**BAṢĪR** the "All-seeing" one of the names of Allāh [q. v., p. 303.]

AL-**BAṢĪR**, ABŪ ʿALĪ AL-FAḌL B. D̲J̲AʿFAR B. AL-FAḌL B. YŪSUF, poet and letter-writer of the first half of the third century; although Ibn

Maiyāda rated him as a poet above Buḥturī, and his prose style was also greatly admired, he is at present known only by occasional citations and scanty references. From these we learn that his early life was spent at Kūfa, that he belonged to the circle of Abu 'l-ʿAinā and Saʿīd b. Ḥumaid, and that he was patronized by ʿUbaid Allāh b. Yaḥyā, when the latter was at the height of his power (245 A. H.); some satirical verses by him on another statesman of the time, al-Muʿallā b. Aiyūb (*ob.* 255) are frequently cited. One of his letters to ʿUbaid Allāh appears to have been written for the Caliph (Mutawakkil). His sobriquet "the seeing" is said to be a euphemism for "the blind" (*al-ḍarīr*). Among his personal acquaintances was Aḥmad b. Abī Ṭāhir. Four letters by him collected from *adab*-works (e. g. *Zahr al-Ādāb*) and addressed to ʿUbaid Allāh are printed in the work called *Miftāḥ al-Afkār* (Cairo, 1314, pp. 312—315). Selections from his verses are given in Masʿūdī's *Murūdj al-Dhahab* (ed. Barbier de Meynard, vii. 328—330, anno 348), and a few are quoted in Thaʿālibī's *Muntaḥal* (p. 74). According to the *Fihrist* his Poems and Epistles were each collected in a *dīwān*, an account of him was given in the supplement of Aḥmad b. Yaḥyā al-Munadjdjim to the *Bāhir*, and he was placed by Ibn Ḥādjib al-Nuʿmān in his list of Poet-scribes.

(D. S. MARGOLIOUTH.)

BAṢĪRĪ, Ottoman poet of the xth century A. H. According to the *Tezkere* of Ḥasan Čelebi and to Sāmī who probably borrowed from the former, he belonged to Khorāsān while Laṭīfī says he came from a place near the Persian border. He came to Constantinople in the time of Sulṭān Bāyazīd II with letters of introduction from the Persian poet Djāmī and the East Turkī Newāʾī and was the first to bring the latter's Dīwān thither. He is thus of a certain importance in the development of Ottoman poetry which has been much influenced by Newāʾī. Of his poems only a few verses are preserved in the *Tezkere*'s and from them it may be concluded that his poetry was only meant to while the time for great men by witty sallies and to amuse them by its smartness. Ḥasan and Sāmī say he died in 941 (1534-1535) while Laṭīfī gives no date.

Bibliography: Gibb, *History of Ottoman Poetry*, ii. 48 Note 2 and 365; Hammer, *Gesch. d. osm. Dichtk.* (F. GIESE.)

AL-**BĀSIṬ**, the "Outstretcher" one of the names of Allāh [q. v., p. 303].

BASĪṬ, the name of a metre, see above p. 464

BASMALA; the formula *bismi 'llāhi 'l-raḥmāni 'l-raḥīmi*, usually translated "in the name of God, the merciful and compassionate", is called the *basmala* or *tasmiya*. The readers and jurists of Medina, Baṣra and Syria, Zamakhsharī tells us, do not consider it a verse at the beginning of the *fātiḥa* or other Suras. They hold that it is only placed there to separate the Suras and as a benediction. This is also the opinion of Abū Ḥanīfa and this is why those who follow him do not pronounce these words in a loud voice in prayer. On the other hand the readers and jurists of Mecca and Kūfa consider the *basmala* a verse at the beginning of the *fātiḥa* and other Suras and utter it with a loud voice. This is Shāfiʿī's opinion and is based on the fact that these words were written on the leaves on which the Ḳorʾānic texts were collected while the word *Āmīn* was not written.

The custom of beginning every important business by invoking the name of God is found everywhere. It is particularly noted that the ancient Arabs prefaced invitations to weddings with the words: *bi 'l-rifā wa 'l-banīn*, or also: *bi 'l-yumn*; and Zamakhsharī supposes that in pagan times they said: "in the name of al-Lāt", or: "in the name of al-ʿUzzā" [cf. article ARABIA, p. 380]. In Sūra xi. verse 43 of the Ḳorʾān we have an example of the *basmala*: "in the name God", said Noah, "be its setting forth and casting anchor!"

It is usual in writing to suppress the prosthetic *alif* of *ism* in *bismi*. Tradition bases this orthography on the authority of ʿOmar, who said to his scribe: "lengthen the *bā*, make the tops of the strokes of the *sīn* prominent and make the *mīm* round". Tradition also requires that stress should be laid on the *lām* of Allāh.

Some Orientalists have raised the question, whether the terms *al-Raḥmān* and *al-Raḥīm* are not the names of gods of paganism, which have survived alongside of that of Allāh and have been reduced to mere epithets [cf. ALLĀH, p. 303 *et seq.* and ARABIA p. 377]. This is not the writer's opinion; this view would not agree with the statements of the commentators. To Zamakhsharī in particular *Raḥmān* and *Raḥīm* are certainly real epithets: the sense is "he who inclines or bends towards . . . . ., gracious"; and this meaning is stronger in *Raḥmān* than in *Raḥīm* because the word is longer. The same commentator however gives some curious uses of the words, formulae in which they are used as substantives or regarded as titles. Thus the false prophet Musailima was called the "Raḥmān of Yamāma" by the Banū Ḥanīfa; the "Raḥmān of this world and the next" or the "Raḥīm of this world" also occur.

The *basmala* has great virtues in the eyes of pious men and magicians; the latter use it in talismans; they believe that it was written on Adam's side, on Gabriel's wing, Solomon's seal and the tongue of Jesus (v. Doutté, *Magie et Religion dans l'Afrique du Nord*, p. 211). This formula is a decorative *motif* much employed in manuscripts and architectural ornamentation.

(B. CARRA DE VAUX.)

AL-**BAṢRA** (in Europe in the middle ages, called BALSORA and nowadays often written BASSORA) a commercial town on the Shaṭṭ al-ʿArab and capital of the Turkish Wilāyet of the same name, 300 miles southeast of Baghdād.

Even in antiquity there were important towns in this district where the Euphrates and the Tigris, the two great channels of traffic for their basins, flow into the sea, where the desert routes from the west from Nedjd and Syria (Boṣra) meet the routes from the Iranian highlands, on the threshold between the swampy district of al-Baṭāʾiḥ [q. v.] and the coast of the Persian Gulf. The Town of Diriditis (= Teredon) mentioned in the time of Alexander is to be sought for in this district. The Arabs found a place called Khuraiba here which is later mentioned as a suburb of Baṣra. Nevertheless the Arab town of Baṣra was a new foundation. The occupation of the point of intersection of the important system of highways which in particular commanded the approach to ʿIrāḳ from the sea, was a military necessity to the conquerors. In place of a camp pitched here as early as the year 14 (635) but deserted again, ʿUtba b. Ghazwān founded the

new town in 16 (637) or 17 (638) by order of the caliph ʿOmar. The place was designed to be a depot for the Arab army. A site was chosen to the west of the river on the borders of the steppe and the arable valley near water and grazing land. The town received the name of al-Baṣra "pale, white stone" from the nature of the ground on which it was built; at first the settlement consisted solely of primitive reed-huts. Abū Mūsā 'l-Ashʿarī built the mosque of sun-dried bricks but it was soon replaced by a building of baked bricks. Even in ʿOmar's time the settlement was connected with the river by canals. The town grew with astonishing rapidity. Its turbulent populace early take a prominent part in the history of Islām. It was from Baṣra that ʿĀʾisha, Ṭalḥa and Zubair set out against ʿAlī, who defeated them in the "battle of the camel" at Khuraiba in 36 (656); the name of Zubair, who fell there is still attached to a place in the neighbourhood which may well indicate his grave and the site of the ancient Baṣra (about 2 hours' journey from the modern town). The importance of the town in the Omaiyad period is evident from the fact that Khorāsān was governed from here. The tribal differences among the Arabs, which became so fatal to the kingdom, early broke out in Baṣra, when in the last years of Muʿāwiya the Azd emigrated hither and allied themselves with the Rabīʿa against the Tamīm and Ḳais. The most energetic officials of the Omaiyad kingdom were constantly required to keep order in the populous town, to the Arabs of which numerous Mawālīs soon attached themselves (even about the year 50 the total population was estimated at 300,000). In addition to the tribal feuds the intrigues of the Khāridjites contributed to make the insecurity complete. Like its sister town of Kūfa, Baṣra was a favourable soil for civil wars. The most important risings against Omaiyad rule had their scene in and around Baṣra. Baṣra however withheld from the victorious advance of the Omaiyads longer than did Kūfa which had always been strongly ʿAlid.

It was under the ʿAbbāsids that the town reached its highest level. It was — with its suburb al-Obolla — the centre of the Arab sea-trade, the ramifications of which extended even to China. The great canals, which connected it with the river, namely the *nahr al-Obolla* and the *nahr Maʿḳil*, branched off into numerous channels most of them navigable, in the streets and gardens of Baṣra. The quarter at the West Gate where the caravans had their quarters on the *mirbad*, developed into the business quarter. In the tales of the "1001 Nights" we have the gay life pictured which was to be found in the canals and bazaars of the commercial town. With economic prosperity intellectual culture also flourished, mosques and libraries supplied the higher interests of life. In Kūfa and Baṣra the new Arabic philology developed. Among the theologians, in addition to Ḥasan al-Baṣrī who falls within the Omaiyad period, may be mentioned as born in Baṣra, al-Ashʿarī the founder of the later orthodox system. Freethinking men held their meetings here. In the ivth = xth century the *Ikhwān al-Ṣafā* [q.v.] lived here. Even in the vth = xith century Baṣra gave to Arabic literature one of its greatest figures, al-Ḥarīrī.

The gradual decline of the central authority put an end to the prosperity of Baṣra. The rebel Zandj [q.v.] wrought great havoc in the town in 257 (871). After the beginning of the ivth = xth century the Ḳarmaṭians [q.v.] were a constant danger to ʿIrāḳ: in 311 (923) Baṣra was plundered by them. This is not the place to detail the vicissitudes of the town under rebel governors of the Caliphs [cf. BARĪDĪ], during the wars of the Būyid, Mazyadid and Saldjūḳ period and through occasional raids of neighbouring Arab tribes like the Muntafiḳ.

The Mongol invasion in 656 (1258) caused a gap in its history. It appears that the continued neglect of the canal-system in the Hulaguid period naturally resulted in the desertion of the town. Ibn Baṭṭūṭa found the greater part of Baṣra deserted, the ancient walls and mosques sometimes miles distant from the parts inhabited in his time. He describes the town as lying on the river. The traveller praises the date-groves of Baṣra but laments the decline, not only of its economic prosperity but also of its intellectual culture. The population was then Sunnī, although the famous mosque in the centre of the town bore the name of ʿAlī. In the centuries following, Baṣra practically shared the fate of Baghdād and that of ʿIrāḳ. If as Tavernier says, the town before the Turkish occupation belonged to the Arabs of the neighbourhood, this probably means that the then suzerains of Baghdād did not trouble much about it. After the conquest of Baghdād by Sulaimān I (941 = 1534) Baṣra also fell into the hands of the Turks. Early in the xviith century a powerful native, Afrāsiyāb succeeded in founding a practically independent dynasty in Baṣra, under whose protection the harbour was opened to European traffic (first to the Portuguese, then to the Dutch and English). The last independent ruler of Baṣra, Ḥusain had to take refuge with the Persians from the Turks whom he had provoked by his arrogance. At this point begins a long period of struggles for the town which ended in 1779 by the Persians vacating Baṣra in favour of the Turks. It has since remained in their hands except for its occupation by Muḥammad ʿAlī in 1832—1840.

The modern Baṣra, concealed in palm-groves, is reached from the Shaṭṭ al-ʿArab by a canal, the *Nahr al-ʿAshshār*, which has been called the *Canale grande* of the Arabian Venice. The town, the population of which had shrunk in the first half of the xixth century to a few thousands in consequence of the continual wars and epidemics, has since then recovered. The estimates of the number of its inhabitants vary from 18,000 to 60,000 of which the smaller number is probably the more correct. Since 1884 Baṣra has been the seat of a Wālī. The economic importance of the town is based on its commerce. The value of the exports, of which dates are the most important was according to the English consular reports for the years 1907—1909 about £ 1,500,000 to £ 2,000,000 and the imports about £ 1,900,000 to £ 2,400,000. The town is expected to receive a great impetus from the completion of the Baghdād railway.

(R. HARTMANN.)

BAṢRA, a town in Morocco which has now utterly disappeared. Baṣra (called Basat, Basis and Besara by Marmol) was situated on a plateau, commanding on the west the valley of the Wēd Mda, on the east the road to Wazzān and in the northeast the valley of the Wēd Lekkus, about 20 miles from Ḳsar al-Kebir and 80 from Fās (Fez). According to Tissot, it occupied the site of the Roman town of Tremulae and was founded about the same period as Aṣīla, that is to say at the end of the ix[th] century A.D., probably by Idrīs II. When Muḥammad, son of Idrīs II partitioned his kingdom Baṣra fell to the share of his brother al-Ḳāsim with Tangier, Ceuta and Tetwān. Half a century later, after the conquest of the Maghrib by Djawhar, lieutenant of the Fāṭimid Caliph al-Mu'izz (958) it became the capital of a small state comprising the Rīf and Ghomāraland, the administration of which was entrusted to the Idrīsī prince Ḥasan b. Ḳennūn; it was soon afterwards destroyed in 973 by the army of the Omaiyad Caliph of Cordova, al-Ḥākim. Yaḥyā, brother of Dja'far b. Ḥamdūn, the vizier of this sovereign, was given its governorship after the defeat of the Berghawāta by the Spanish troops. [See the article BERGHAWĀTA].

These are almost the only definite statements we have on the history of Baṣra. We only know that the town attained a certain degree of prosperity in the x[th] and xi[th] centuries. Ibn Ḥawḳal and especially al-Bakrī have left us descriptions of the town. Built on two mounds of reddish earth whence it had received the epithet of "al-Ḥamrā", it was surrounded by a wall pierced by ten gateways and included, among other buildings, two baths and a mosque with seven naves. Around it were gardens, corn and cotton fields and pastures supporting large flocks. Milk was so plentiful there that Baṣra was popularly called Baṣra al-Ḍobbān ("Baṣra of the flies"). The Arab writers note particularly the purity of the air, the beauty of the women and the courtesy of its inhabitants. This prosperity was only fleeting however; even by Idrīsī's time, its decline had set in and it was probably complete in the ix[th] (xiv[th]—xv[th]) century. In the time of Leo Africanus the walls were still standing in the midst of deserted gardens; only a few stones are left of them at the present day.

(G. YVER.)

AL-**BASŪS**, the mythical originator of the forty years' war between the closely related Taghlabites and Bakrites. — A certain Sa'd of the tribe of Djarm, who is addressed by Basūs in one of her verses (see below) is said to have enjoyed the patronage of the Bakrī Djassās b. Murra and to have been related to Basūs herself. When Kulaib b. Rabī'a of the tribe of Taghlib one day came upon a camel belonging to Basūs on his meadow, which was forbidden to strangers, he slew it — so the story goes — by shooting it in the udder with an arrow. Djassās took his obligations to his clients so seriously that he stabbed his brother-in-law Kulaib in revenge. The verses by Basūs addressed to Sa'd, in which she holds Djassās responsible for the injustice done her, were called *al-muwaththithāt*, "the inciting" for they brought about Kulaib's murder by Djassās and with it the long and bloody tribal feud.

These four short verses are an example of the *taḥrīḍ*, or "incitement", used also by women in the lament for the dead. Whoever it was that, certainly at an early period, inserted them in the story, so rich in songs, of the beginnings of the Basūs war — as this fraternal feud finally came to be called —, perhaps basing them on similar topical verses, was not only skilled in all the niceties of Arab poetry but had also a deep knowledge of human nature. As giving the motive for Djassās's fateful deed, they fill their place in the saga admirably.

The fact that the heroine of a humorous story, which originated in Jewish circles, is also called al-Basūs is probably to be explained as an ironical reaction against this tragic mythical figure. A Jew was allowed three wishes with the promise that they would certainly be granted by God. He was persuaded by his wife to ask that she should become the most beautiful woman in Israel and the request was granted. As she thereupon became vain and unbearable her husband cursed her and wished that God might change her into a bitch. His second wish was fulfilled at once and only one more could now be granted namely that which the children demanded as a third wish for their mother: that she should regain her human form again. People then said of this woman who had defrauded her husband of his three wishes: "More unlucky than al-Basūs", — the same proverbial phrase which is gravely used of the tragic Basūs in the heroic saga.

AL-**BAṬĀ'IḤ**. [See AL-BAṬĪḤA N°. 2].

AL-**BATHANIYA**, corresponds in name to the Bashan of the Old Testament, the etymology of which is given by the Arabic *bathna* "soft, fertile area". Historically however it does not coincide with the kingdom of Bashan, mentioned in the Old Testament, which comprised the whole northern half of the Eastern land of Jordan, but was first applied to the district of Batanaea which in the Graeco-Roman period only denoted one, though a central, section of this kingdom. As the districts of Gaulanitis, Trachonitis and Auranitis were then

distinguished from Batanaea the Arabs mention also Djawlān and Ḥawrān with al-Bathaniya.

The identity of Batanaea and al-Bathaniya is besides confirmed by the fact that Adraa (Adhri'āt, q. v.) which is mentioned by Eusebius as a Batanaean town, was also considered by the Arabs to belong to al-Bathaniya. When the Arabs penetrated into these regions in the year 15 A.H. Adhri'āt was the capital of the district of al-Bathaniya, for the latter was given over to the Muslims by the Ṣāḥib of Adhri'āt as Kharādj land. The Arabs here as frequently elsewhere retained the internal organisation of the district, for the geographers and historians always mention Adhri'āt as the capital of al-Bathaniya. It is as little possible to give the exact boundaries of the district for the Islāmic period as for the Greek; but it must at any rate have had its centre in the Nuḳra and the adjoining Zumal hills on the southwest. The plain west of al-Ledjā' must also have belonged to it for Tulmā (Tibnā) is mentioned as a town in Bathaniya. Towards the southeast it stretched to Ḥawrān with its capital Boṣrā [q. v.], on the northwest to al-Djaidūr, to the west of which al-Djaidūr stretches along the upper Jordan and the Sea of Tiberias. The Arabs, like the writers of the Greek period, employ some of those names of districts in a wider sense. Thus "Bathaniya and Ḥawrān" often stand for the whole northern half of the eastern Jordan district, while others, like Yāḳūt, extend the name Ḥawrān to include the other districts and the southern as far as Yarmūk. The modern Bethenīye, which is applied only to the northwest slope of the Druse mountains and the plain to the north of them, is to be distinguished from al-Bathaniya, the original form having been Bathaniya.

The extraordinary fertility of the districts of Bathaniya and Ḥawrān, where tradition places the estates of Job, is emphasised by the Arab geographers.

(FR. BUHL.)

AL-BAṬĪḤA = "the Marshland"; the name applied to a meadowlike depression with a channel bottom, which is exposed to more or less regular inundations and is therefore often swampy. In particular it is the name of two districts.

1. the small plain hemmed in by mountains on the northeast coast of the sea of Tiberias (*buḥairat Ṭabarīya*) in Palestine, south of al-Tell (the Biblical Bethsaida, Julias) which is watered by the Jordan and another perennial river (the Ḏjoramāya). At the present day it is inhabited by Ghawr (Ghōr) Arabs, the Ghawārina, agriculturists, who keep large herds of the Indian buffalo here as well as in the swampy plain to the north of Lake Hūla. The modern name Baṭīḥa (popularly al-Eḥṭēḥa, which may be traced to the diminutive form) does not appear, as far as I know, in the Arab geographers of the middle ages, but first appears in modern European travellers (Seetzen, Burckhardt etc.).

Bibliography: Ritter, *Erdkunde*, xv. 270 *et seq.*; Baedeker, *Palestine and Syria*, 4th ed. 1906 p. 251; E. Robinson, *Palästina*, iii. (1842), p. 559—564, 569; do. *Phys. Geogr. d. heil. Landes* (1865), p. 257; F. Buhl. *Geogr. d. alt. Palästina* (1896), p. 56, 241; Seetzen, *Reisen durch Syrien etc.*, i. (1854), p. 345.

2. In Arab authors the name of the very extensive swampy area on the lower course of the Euphrates and the Tigris, between Wāsiṭ in the north and Baṣra in the south, also frequently called *al-Baṭā'iḥ* (plur. of *al-Baṭīḥa*) and occasionally from the two adjoining towns, the Baṭīḥa (Baṭā'iḥ) of Wāsiṭ or of Baṣra.

The Arabs are of the erroneous opinion that these marshes were first formed in the Sāsānian period in the place of a fertile and cultivated land covered with villages and fields. This is only so far correct in that during the last centuries of Sāsānian rule the marshy area was considerably increased in consequence of several unusually severe inundations, and the bursting of the dams caused by them and the partial neglect to repair them promptly and energetically. But the existence of considerable swamps in South Babylonia generally, stretches back to a great antiquity. The continual raising of the banks of the Euphrates and the Tigris by great deposits of mud gradually prevented the water, which overflowed during inundations, from returning to the river and caused the swamps, which would have soon disappeared but for the annual overflow in times of flood. Even in the cuneiform inscriptions the *agammē* (swamps) and *appārāte* (reedlands) are often mentioned; cf. the quotations in Delitzsch, *Assyr. Handwörterb.*, p. 17, 115. At that period the whole district of Muḥammara in the south to above Ḳurna (Gorna) and eastwards as far as the other side of the river Kārūn must have been filled by a large swampy lake, into which the Euphrates and the Tigris (both had then separate mouths), Kerkha and Kārūn poured their waters. A narrow tongue of land separated it from the Persian Gulf. From Kuyunjik comes an interesting bas-relief which represents king Sennacherib fighting with the inhabitants of these marshes amid high jungle: cf. the reproduction in Layard, *Monuments of Nineveh*, ii. 25—28.

The Assyrians usually call this swampy lake (*nār*)*marratu* = "bitter(water)" or *tâmdu ša mât Kaldi* = "sea of the (land) of Kaldu", and also "swamp (*raḳḳatu*) of Bît-Ḥaimar" or "of the Tigrisbank"; on the latter name, cf. Delitzsch, *op. cit.*, p. 627. The Greek and Roman writers are likewise acquainted with it (as λίμνη or *Chaldaicus lacus*); Nearch's account is peculiarly instructive for he crossed this area of water and gives its breadth as 600 stadia (80 miles). The Tabula Peutingeriana also defines the Babylonian swamps; on it, besides *paludes*, is mentioned the name *Dortahi*, probably to be emended to Biotahi = Baṭā'iḥ. On the notices in cuneiform inscriptions and classical authors cf. Andreas in Pauly-Wissowa, *Realencykl. d. klass. Altertums-*

mis., i. 736, 815, 1878 *et seq.*; 2812; Weissbach, *ibid.*, iii. 2044; vi. 1201 *et seq.*; Streck, v. 1147 (s. v. Diotahi).

Since ancient times the great marshy lake has been gradually filled up by the depositing of sediment brought down by the rivers, except in a few places, and the modern delta has arisen. As isolated remnants of the original lake may be mentioned the Khōr (= swamp) Abū Kelān (west of Ḳurna), the Khōr al-Djazā'ir on the west bank of the upper Shaṭṭ al-ʿArab as well as the marshes in the neighbourhood of Ḥuwaiza (the modern Ḥawīza) called the Khōr al-Aʿẓam = "the great Khōr"; the latter is apparently identical with the *Agmā rabtā* (Aramaic) = "the great swamp" (a reminiscence of former conditions), mentioned by al-Balādhorī (293), and Ḳudāma (241).

The Sāsānians as a rule devoted a good deal of attention to draining the swamps of Babylonia. They instituted drainage and canal works to a great extent and transformed the ground regained from the water into gardens. Under the later kings of this dynasty however, large areas of flourishing country were swallowed up by the floods and the region of swamps grew to such an extent that the Arabs, as has already been mentioned, wrongly date the beginning of the Baṭīḥa to this period. The notices of the Arab authors, (cf. especially Balādhorī, Ḳudāma, Masʿūdī and Yāḳūt) which are on the whole quite in agreement, give the following account of the alteration in the hydrographic conditions brought about by the forces of nature. During the reign of Ḳubādh Fairuz (Fērōz, 457—484), a large dam burst in the lowlying country south of Baṣra and a large area of cultivated land was inundated. It was not till the reign of Khusraw I Anōsharwān (531—578), that the damage was made good; this king soon after his accession was successful after using his utmost efforts in reclaiming the land for agriculture. His institution of new administrative districts in this area, mentioned by Dīnawarī, is no doubt connected with this; cf. Nöldeke, *Gesch. der Perser u. Araber zur Zeit der Sasaniden* (1879), p. 164. But in the last year of the reign of Khusraw II Aberwīz (Parwīz), 627 = 6 or 7 A. H. the waters of the Euphrates and the Tigris swelled at the same time to such an unusual height that the dams burst and a large area was again transformed into lake and swamp. All Parwīz's efforts to drive back the devastating element proved in vain. During the confusion that followed during the Arab invasion the swamps continued to gain ground. In the first period after their occupation of the ʿIrāḳ, the Arabs likewise paid no attention to the Baṭīḥa. It was only in the Caliphate of Muʿāwiya and more particularly in that of Walīd I and Hishām that they began to take an interest in the work of reclamation. Muʿāwiya sent his client, ʿAbd Allāh b. Darrādj as administrator of taxes to the ʿIrāḳ and he made 5,000,000 dirhems out of the swamp lands by cutting down the reeds and drying considerable portions of land, by making little channels through which the water could be drained off: these portions of land, reclaimed for cultivation again, were called *al-Djawāmid* (Sg. *al-Djāmida*) = "the dry strips". Al-Ḥadjdjādj, the vigorous governor of Babylonia under ʿAbd al-Malik and Walīd I brought about a decided turn for the better.

Ḥadjdjādj built just above the Baṭīḥa the "central" town of Wāsiṭ (= the middle"), which, built to command the Baṭīḥa as a new bulwark of Arab power in these lands, soon rose to prosperity. The restoration of the neglected system of canals, on the proper working of which alone the fertility of the lowlying plain on the lower Euphrates and Tigris depended, and the erection of dams and sluices were carefully attended to by him. He dug the two canals of Nīl and Zābī, to lead away part of the superfluous water of these two large rivers before they flowed into the Baṭīḥa, and at the same time to water and fertilise dry areas; cf. Streck, *Babylonien*, i. 29—32; ii. 303—304. The engineer who carried out these works under Ḥadjdjādj and thus rendered great service to ʿIrāḳ was a native Aramaean (Nabaṭī) named Ḥasan. Ḥadjdjādj also settled in the marshes the Zuṭṭ [q. v.], an Indian people with their buffalo herds numbering thousands, who had been sent him by Muḥammad b. al-Ḳāsim the conqueror of India; his limited means prevented Ḥadjdjādj from doing still more for the cultivation of the Baṭīḥa. The sum of 3,000,000 dirhems, asked by him for the rebuilding of all the dams etc. was thought too high by Walīd. Maslama, the Caliph's brother then offered to undertake the task at his own expense, and made it quite a good business financially. To lead away the water he made two new canals called *Sīb*. Cf. in particular Ḳudāma, 240—241. Wellhausen, *Das arab. Reich u. sein Sturz* (1902), p. 156—158.

Of the immediate successors of Ḥadjdjādj in his post of governor of ʿIrāḳ, Khālid al-Ḳasrī was the most prominent in his zeal for agriculture. He energetically continued the work of drainage begun by Ḥadjdjādj, the engineering operations being still under the direction of the above mentioned Ḥasan al-Nabaṭī and obtained for himself considerable estates from the drained areas, from which he drew enormous revenues; he aroused great discontent in the province however by his arbitrary seizure of large tracts of virgin soil. Cf. Wellhausen, *op. cit.*, p. 207.

The area of the Baṭīḥa on the conclusion of these great drainage works by the Arabs is estimated by Ibn Rosta (c. 290 = 903) at 30 parasangs (each of 4 miles) in length and breadth. Ḳudāma (died 310 = 922) speaks of an area of more than 60 Arab miles (each $1^1/_2$ English miles) which taken as square measure (although Ḳudāma says nothing about this) would give 5,184 square miles. In any case Masʿūdī's estimate of the swamp lands at 2,500 square parasangs used by A. Sprenger (*Babylonien, das reichste Land der Vorzeit*, Heidelberg, 1886, p. 47 *et seq.*) in his estimate, based on false premises, of the area of the cultivated land of Babylonia, is much too large and may be simply explained, as by H. Wagner (*op. cit.*, p. 239, see *Bibl.*) by substituting miles for parasangs; for according to Masʿūdī the swamps must have measured not less than 35,000 square miles while the whole of Babylonia only measured 45,000 square miles!

In the northwest the Baṭīḥa stretched nearly to Kūfa and Niffar, while it began farther to the east at a considerable distance from Wāsiṭ and then extended to the southeast as far as the district of Baṣra. The banks of the modern course of the Euphrates as well as the greater part of the district between it and the modern (as well

as pre-Islamic?) chief branch of the Tigris as well as the land for a considerable distance farther over were in the middle ages more or less marshes. The Euphrates, the principal branch of which then flowed past Kūfa and was much used for irrigation purposes in North and Central Babylonia, discharged the remainder of its volume into the Baṭīḥa some miles below the above-mentioned town. The Tigris from about the end of the Sāsānian period to the first half of the xvith century flowed in the western bed, the modern Shaṭṭ al-Ḥay, past Wāsiṭ (site of the modern Kūt al-Ḥay) and then, Yāḳūt tells us, flowed into the Baṭīḥa through five arms, which reunited again at Maṭāra, a day's journey from Baṣra. According to the older and more reliable account of Ibn Serapion (beginning of the ivth = xth century) the Tigris (Shaṭṭ al-Ḥay) reached the swamp area at the village of al-Ḳaṭr. It then took its course through four lakes, formed by inundations (*ḥawr*, also *hawr* and *hawl*, the modern *ḥōr*) which were connected with one another by navigable canals. The waters of the Baṭīḥa, the Nahr Abu 'l-Asad and the "one-eyed Tigris" (al-Diḏjla al-ʿawrā') flowing from Madhār (site of al-ʿUzair) united to form one large river near Ḳurna.

The following brief account may be given of the modern divisions of the swamplands of Central and South Babylonia.

Of the two swampy lakes south of Kefil on both sides of the former bed of the Euphrates, only the longer on the west side now survives, the Baḥr Nadjaf, while the Khōr Abū Nedj(e)m east of the ruins of Kūfa has been almost entirely transformed into arable land (rice-fields). West of Niffar lies the Khōr ʿAfeč (ʿAfek) and south of it extending towards Lamlūn is the Khōr Khazāʾil, both called after the Arab tribes of the same name. The extensive marshes which lie along the Euphrates from Lamlūn to beyond Samāwa and stretch eastwards to the Shaṭṭ al-Ḥay are usually referred to collectively as the Lamlūn swamps. In the angle formed by the Euphrates and the Tigris before their junction, west of Ḳurna, lie the swamps of Abū Kelām and on the west bank of the upper Shaṭṭ al-ʿArab the Khōr al-Ḏjazāʾir (i. e. the Khōr of the islands). The banks of the Shaṭṭ al-Kār (Kehr) a branch of the Euphrates (between it and the Shaṭṭ al-Ḥay) are also, according to Loftus (*op. cit.*, p. 244 *et seq.*) hemmed in by almost impassable reed-beds.

On the Tigris, even below Imām ʿAlī al-Gharbī, all the land on either side, particularly on the west, is full of stagnant water and morasses. The swamps increase as one goes down the river and on the east side have engulfed the whole country as far as beyond Kerkha and up to the outlying spurs of the Pusht-i Kūh. The whole district is nothing but a sea of swamps stretching farther than the eye can reach, out of which there rise here and there only a few date groves and isolated reeds-huts on small islets. The northern part of these marshes of the Eastern Tigris is called the Swamp of Samargha and the much larger southern part, the district liable to inundation by the Kerkha is known as al-Khōr al-Aʿẓam (= the great or chief Khōr, cf. above) along with the Samida marshes in the centre.

Generally speaking the whole land of the Baṭīḥa, particularly the district between the Euphrates, Tigris and Shaṭṭ al-Ḥay has been as yet but little explored; only the banks of the two large rivers are tolerably well known.

Seen from a distance, the marshes present the appearance of an immeasurable green plain, which owes its prairie-like appearance not to grass but to vast masses of reeds and rushes. These frequently form thickets, several feet in height pierced by labyrinths of larger and smaller channels in which the stranger is lost without a native guide. The watercourses themselves are usually so shallow that they can only be traversed by boats of very slight draught (*mashḥūf*'s and *ṭarrāda*'s) which are propelled by reed poles (*murdī*, plur. *marādī*; cf. Abu 'l-Fidā 296, 13; Meissner, *op. cit.*, p. 9: *mirdi*). This style of locomotion (*shalaha*; cf. *Zeitschr. d. Deutsch. Morgenl. Ges.*, xvii. 224), is very ancient as the above mentioned Assyrian reliefs show (cf. e.g. Layard, *Monum.*, ii. 27, and *Orient. Liter. Zeit.*, ix. 190).

On account of their inaccessibility, the Baṭīḥa has always been a welcome hiding-place for all sorts of robbers and vagabonds, as well as for rebels. For the protection of travellers watches were therefore posted in the period of the Caliphate at various points here, who had to guarantee safe passage through the channels.

Most of the tribes at the present day still have the reputation of being feared as highwaymen; at an earlier period the Banī Lām and the Abū Muḥammad had a particularly bad name. They slip out in their small skiffs to the larger boats which use the main waterways, plunder them and conceal themselves in the innumerable small channels which are impassable to the larger craft.

The above mentioned Ḥadjdjādj, in the reign of ʿAbd al-Malik, transplanted hither to the marshes, the Ḏjaṭ (Arab *Zuṭṭ*, q. v.) an Indian people, with their vast herds of buffalo. These Zuṭṭ repeatedly attracted attention in the early ʿAbbāsid period, by making themselves a nuisance to the ʿIrāḳ by robbing and plundering and it was only after strenuous efforts that the Caliph Maʾmūn succeeded in forcing them to capitulate.

Far more dangerous however proved the great rising of the Zandj [q. v.], another people settled on the edge of the Baṭīḥa. These were negro slaves, chiefly from the east coast of Africa (Arabic Zindj, name of the Zanzibar coast, Greek Zingis) who were employed on the hard task of obtaining the saltpetre from the saliferous ground, east of Baṣra. Under the leadership of ʿAlī b. Muḥammad [q. v.], presumably an ʿAlid, they stirred up a formidable rebellion, reinforced by all sorts of low characters (255—270 = 869—883). The Arab historians (Ṭabarī, Ibn al-Athīr, Ibn Khaldūn) give detailed accounts of this servile war, which afford much valuable material for the study of the topography of the Baṭīḥa (cf. also Nöldeke, *Sketches from Eastern History*, p. 146—175). In the centuries following, the Banū Shāhīn [see the article ʿIMRĀN B. SHĀHĪN] and after them the family of al-Muẓaffar [q. v.] founded a more or less independent kingdom in the swamp lands, which they shared at a later period with the Mazyadites [q. v.], who ruled from 403 till 558 in al-Ḥilla. After the decline of the Mazyadites, the Banū Muntafiḳ (see below) began to play their part, although the Caliph al-Nāṣir succeeded in destroying their leaders, the Banū Maʿrūf, in 657 (1220). The later history of these districts under the Mongols and Turks is not known in its details.

In the barren region of the Baṭīḥa, portions of the originally Aramaic (and Christian) population of Babylonia (the Nabataeans of Arab writers) found a temporary asylum after the Arab invasion, and their numbers must have been still so considerable there in the later middle ages that (Abu 'l-Fidā tells us) the "Swamps of the Nabataeans" were occasionally talked of. Their remnants, the Mandaeans (Arabic Ṣubbā', the so called Christians of St. John the Baptist) still survive in a few places in the marshes, particularly around the Khōr al-Aʿẓam, where the very unhealthy town of Ḥuwaiza (the modern Ḥawīza, q. v.) is one of their chief centres.

The greater part of the modern inhabitants is composed of wild, barbaric, Arab tribes who lead a half amphibious life and according to the accounts of travellers are among the rudest people in the whole East. As to religion they have almost entirely adopted the Shī'a and are acquainted with some of the laws of the Bedouins but on the other hand they lack many of the virtues of the latter. Only their great hospitality is favourably emphasised.

The most important of these Arab tribes, which are themselves divided into a large number of subdivisions, are:

1. The Banī Lām, east of the Tigris, between Kūt al-'Amāra in the north and 'Amāra in the south. They wander eastwards as far as the outer spurs of the Pusht-i Kūh and almost into the environs of Baghdād. Kūt al-'Amāra was the residence of their Shaikh in the early decades of the xix[th] century. A. von Kremer has given an account of this tribe in the *Sitz. Ber. der Wiener Akad.*, 1850, p. 251—254 (with specimens of their poetry).

2. The Albū Muḥammad, also called Albū (= Āl Abū i. e. family of Abū) Muḥammad, likewise east of the Tigris. They are the southern neighbours of the Banī Lām and their territory consists of the swamps south of 'Amāra (Samargha-swamp, Khōr al-A'ẓam).

3. The Zubaid (Zubēd), west of the Tigris. Their lands lie between Baghdād on the north and Kūt al-Ḥay in the south-east. In the south they adjoin the land of the Khazā'il.

4. The Khazā'il (Khuzā'il), south of the Zubaid. They dwell in the district between Kefil and the ruins of Niffar (and to the south-east of it). They extend along the Euphrates from Dīwāniya to Lamlūn where they border on the Muntafiḳ. The wild 'Afek ('Afeč, 'Afādj) are a subdivision of them (according to the *Zeitschr. d. Deutsch. Morgenl. Ges.*, xvii. 224), and dwell in the swamps that bear their name. Their chief place, the market for the products of their numerous buffalo herds, is Sūḳ al-'Afeč (south of Niffar). In Niebuhr's time (the middle of the xviii[th] century) the residence of the chief of the Khazā'il was in Lamlūn.

5. The Muntafiḳ (Muntafič, q. v.), now by far the most powerful tribe in Southern Babylonia, which exercises a sort of suzerainty over the smaller confederacies there. They are (according to Moritz, *op. cit.*, p. 200) not so much a tribe in the proper sense of the word, as rather the very numerous followers of a powerful chief's family. Their lands lie below Lamlūn and comprise the banks of the Euphrates, almost down to Ḳurna (with Sūḳ al-Shiyūkh as their centre). In the east they extend beyond the Shaṭṭ al-Ḥay nearly to the Tigris and thus comprise the greater part of the Baṭīḥa proper.

6. The Ma'dān (Mu'dān, sing. Me'ēdī), who pitch their tents between Shaṭra and Ḳurna, are undoubtedly on the lowest level of culture of all the tribes of Babylonia. The chief authority on them is Loftus, *op. cit.*, p. 120 *et seq.*

There must also be mentioned the Khafādja-Arabs (cf. e. g. Weil, *Gesch. d. Chalifen*, iii. 92), who are known to have existed in mediaeval times and in Ibn Baṭṭūṭa's time commanded the road from Kūfa to Baṣra; see Ibn Baṭṭūṭa (ed. Paris), ii. 1, 94. At the present day on account of altered conditions of relationship or dependence they, like the above-mentioned Albū Muḥammad, sometimes appear as a family of the Banī Lām (cf. v. Kremer, *op. cit.*, 1850, p. 253) and sometimes as a branch of the Muntafiḳ (Chiha, *op. cit.*, p. 241).

On the Arab tribes of the portions of South and Central Babylonia dealt with in this article, cf. besides the travellers' accounts in Ritter, *op. cit.*, Vol. xi., Layard and Loftus, *op. cit.*, the list published by Sprenger, from an Arab MS. in the British Museum, in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, xvii. 223 *et seq.*, as well as the lists given in Freiherr von Oppenheim, *Vom Mittelmeer zum Persischen Golf*, ii. 67—76 and in Chiha, *La province de Bagdad* (Cairo, 1908), p. 239, 245 *et seq.*

The settlements of the inhabitants of the swamps are usually on terraces and islands, which are not entirely submerged by the annual inundations, and are sometimes collected in villages. They consist of long huts built of reeds and reed matting (*ṣerīfa's, ṣrīfa's*); we find these rush houses mentioned under the same name as early as the Babylonian Talmud (cf. Nöldeke in the *Wien. Zeitschr. f. die Kunde des Morgenl.*, xvi. 198, note 1).

Ricefields alone are cultivated. A not inconsiderable source of revenue is the reed which is used for all household purposes and from ancient times has been much used for writing implements (see *Orient. Lit. Zeit.*, ix. 190); the reed pens which used to be made of this material in Wāsiṭ and are now manufactured in Dizfūl are considered the best in the east; cf. Cl. Huart, *Les calligraphes et les miniaturistes de l'Orient Musulm.* (1908), p. 13; H. Petermann, *Reisen im Orient* (1861), ii. 134; Stolze-Andreas in *Petermann's Mitteilungen*, Erg. Heft. 77, p. 19. In addition there is a great abundance of fishes which not only afford a continual food supply to the natives but are salted and sent to the surrounding countries. Even in mediaeval times Ibn Rosta (*op. cit.*) says the Baṭīḥa as a producer of reeds and fish formed a real treasury for the people of Baṣra.

The chief wealth of the modern inhabitants of the marshes consists in their enormous herds of buffalo which yield great quantities of milk and butter; the latter is exported (particularly to Baghdād) and is an important article of commerce which brings in much profit. The buffalo, though originally imported from India (cf. above) thrives exceedingly in this land so suited to their requirements; some districts literally swarm with them. Sheep are also reared to a moderate extent. Camels naturally are not found at all.

As to the remaining fauna of the Baṭīḥa, water-

fowl of all sorts are of course innumerable: gulls, wild-duck, geese, swans etc.; there are flocks of cranes, pelicans, flamingoes, storks, bustards and bitterns. There is also no lack of carnivorous animals. The lion is still very frequently to be met with in the reed-beds, according to the accounts of modern travellers, just as it was in antiquity (cf. e.g. Streck, *Die Inschriften Assurbanipals*, p. 213, K. 2867, Rs. 3 *et seq.*); cf. Ritter, *op. cit.*, xi. 940, 941; Layard, *op. cit.*, 566, 567; Loftus, *op. cit.*, 242 *et seq.*, 259 *et seq.*; Moritz, *op. cit.*, p. 191. In addition, large numbers of leopards, jackals, wolves, lynxes and wild cats have their lairs here. Wild swine wallow in large herds in the marshes. The countless swarms of mosquitoes and midges form a terrible plague on the land. Some districts like that of Umm al-Baḳḳ (= "mother of bugs") south of Kūt al-ʿAmara on the Shaṭṭ al-Ḥay (cf. Ritter, x. 190; xi. 935, 1015) have an unenviable reputation far and wide for their intolerable numbers of these obnoxious little pests.

In conclusion we need hardly emphasise the fact that, chiefly on account of the dangerous fevers which are epidemic everywhere, the climatic conditions of the swamp areas of Babylonia are exceedingly unhealthy.

BĀṬIN (A.) inner, in the esoteric sense in opposition to *ẓāhir*, obvious, outer. In exegesis these conceptions play an important part, cf. the articles *Bāṭinīya* and *Ẓāhirīya*. — With the article: *al-Bāṭin*, the "Hidden One" one of the names of God (Sūra 57, 3).

BĀṬINĪYA. As the name, derived from *bāṭin*, inner, indicates, the Bāṭinites are those who seek the inner or hidden meaning of the Scriptures. Instead of taking the literal meaning of the revealed word, they interpret it; this interpretation is called *taʾwīl*.

The name Bāṭinites has been applied by Arab authors to several quite distinct sects, almost all of which have played a prominent part in history. The most important of these sects are the Khurramites, the Ḳarmaṭians and the Ismaʿīlites [see those articles]. The application of the name has been extended beyond Islām; for among the Bāṭinites are reckoned the Mazdakites, a Manichaean sect founded by Mazdak, who appeared in the reign of the Sāsānian king Ḳobād, son of Fīrūz (Kawādh, son of Pērōz). Shahrastānī says that in the ʿIrāḳ, the Bāṭinites are called Ḳarmaṭians and Mazdakites, while in Khorāsān they are called Taʿlīmites and Malāḥida. The epithet Bāṭinite is also applied to certain Ṣūfīs.

There is then no general doctrine corresponding to this name, but each sect has a doctrine of its own. Shahrastānī however gives us under the title *Bāṭinīya* an exposition of a certain system which is fairly closely connected with that of the Ismāʿīlites. He points out rightly that this system borrows many features from that of the philosophers in the strict sense of the word. The following are some of the ideas which belong to it.

Every external has an internal: every revelation (*tanzīl*) has an interpretation (*taʾwīl*). — One cannot speak of the qualities of God as one speaks of those of men; one cannot say that he is wise or that he is ignorant, that he is, or that he is not, for that would be to fall into the error of likening him to his creatures (*tashbīh*). This doctrine like the system of Avicenna and the philosophers admits of the procession of celestial spheres, distinction between the intelligence and the soul, the latter being inferior to the former, the existence in the upper world of a general or universal intelligence and of a soul equally universal. These two principles are represented in mankind by the *Nāṭiḳ* and the *Asās*, the prophet and his assistant who are entrusted with the duty of guiding the intelligences and the souls of men in the motion of the world. The end of this motion is to guide the soul to a degree of perfection where it attains the level of the intelligence and is confused with it. At the end of time all creatures are to be called upon to give an account of themselves.

All that proceeds from truth will be united in the universal soul and all that partakes of the nature of evil will return to Satan, that is to nothingness. This is what sectarians call the Resurrection. Here we have an example of the interpretation or investigation of the inner meaning of a dogma. (B. CARRA DE VAUX.)

AL-**BĀṬIYA** (A.), the goblet (crater), the name of a constellation in the southern heavens, also called *al-Miʿlaf*; cf. Ḳazwīnī (ed. Wüstenfeld), i. 40; Ideler, *Untersuchungen über den Urspr. u. d. Bed. der Sternnamen*, p. 271.

BATJAN, a fertile, volcanic island 50 square miles in area, in the Moluccas and the centre of the Sultanate of Batjan; it is a mountainous land rising to a height of about 5000 feet. The Sultanate with those of Ternate and Tidore belongs to the Dutch residency of Ternate.

As a spice (cloves) island Batjan early attracted foreign traders and in consequence the population were converted in the xvth century from the island of Java and adopted Muḥammadanism. For the spice trade the Portuguese settled here in later times (about 1524) and the Spaniards and Dutch (about 1609) as merchants and allies of the prince, had children by native women and thereby spread Christianity, which is professed at the present day by that part of the inhabitants (about 350 in number) which is settled in the chief village, Labuha. The number of Muḥammadans in Batjan, who are of a very mixed stock does not exceed 3000 and they live in various settlements on the coast. The interior is uninhabited and entirely covered with forest.

The Sultanate of Batjan consists of this island and several smaller uninhabited islands in the neighbourhood; before the arrival of Europeans and during the first century after their coming, its power extended as far as Ceram; it gradually became less important than Ternate and Tidore. The clove-trade was the mainstay of its prosperity; Batjan became of no importance after the Dutch forced the princes of the Moluccas to give up the growing of this shrub on payment of an indemnity in the xviith century. Since the year 1780 it has been entirely subject to Holland. European exploitation of the island in recent times has not been successful; the principal products are copra and damar resin.

(A. W. NIEUWENHUIS.)

BATMAN, usually written BAṬMAN or BĀTMAN, in Ḳirghiz BATPAN, a Turkī word, applied to a "heavy weight" (*batpanlai* = "weighing a hundredweight"); it is probably connected with the verbal root *bat* "to sink" although F. W. K. Müller (*Sitzungsberichte Preuss. Akad.*, 1907, p. 847) says that the word is Middle Persian and "like many other Iranian words has reached Mongolian through Uigur" (examples are not given). What weight was originally meant by this word, is unknown; at the present day in the Turkī dialects as elsewhere (cf. the European "pound", the Arabic "*mann*" and "*riṭl*" etc.), the same word is applied to measures of very different weight. The heaviest batman is that of Bukhārā (300 lbs.), the lightest, the Persian (two different batmans of 11½ and 5¾ lbs). In Bukhārā the batman is considered a unit of weight. The different meanings of the word in the spoken dialects of the present day have been most thoroughly collected in Budagow's Turki-Russian Dictionary (*Sravnitel'nyi slovar' turecko-tatarskich narěčij*, i. 231); and in a more incomplete fashion in Radloff's "*Versuch eines Wörterbuchs der Türk-Dialecte*" (iv. 1517). As is shown by the work of an unknown Arab philologist edited by Melioranskij (*Arab filolog o turečkom jazykě*, St. Petersburg, 1900, p. 82, 10) the Turki *batman* had been equated to the Arabic (really primitive Semitic) *mann* by mediaeval times; at the present day also in Bukhārā the Arabic word denotes the same weight as the Turkī. (W. BARTHOLD.)

BAṬN (A.), belly, trough, depression. In the last meaning the word is not uncommon in geographical names; cf. Yāḳūt, *Mu'djam*, i. 665 *et seq.*

AL-**BATRŪN**, as it is now written, the *Botrys* of the Byzantine writers; Arab geographers prefer to omit the article and frequently write Bathrūn; it was a small fortress in Syria on the coast between Djubail and Tripolis. Under the Mamlūks of Egypt, the district gained importance from the *niyāba* of the latter town. The absence of a harbour and the proximity of the lofty summits of Lebanon did not allow it to develop. A modest village at the beginning of the xixth century, Batrūn has since the creation of the autonomous mutaṣarriflik of Lebanon become the chief place of the Ḳaimaḳāmat of the same name. The town is increasing and has now about 6000 inhabitants, among them some Muḥammadan families.

Rey, *Familles d'Outremer*, 257—259; Dimashḳī, *Cosmographie*, 213. (H. LAMMENS.)

BAṬṬĀL, SAIYID BAṬṬĀL GHĀZĪ is the name of a legendary Turkish national hero and warrior of the faith, whose presumed grave in the village of Saiyid Ghāzī south of Eski-Shehr (Dorylaeum) is held in great reverence. At the tomb is a monastery (Tekke) of Bektāshī dervishes with a mosque and 'Imāret. The historical original of this hero is a Muḥammadan warrior named 'Abd Allāh al-Baṭṭāl, who, according to Ṭabarī, ii. 1716, met his death in the year 122 (740) in battle with the Byzantines. According to later historians (al-Djannābī and Hazārfenn) his real name was Abū Muḥammad Dja'far b. Sulṭān Ḥusain b. Kabī' b. 'Abbās al-Hāshimī, he was born in Malatia and flourished about the year 1000; these statements are of a legendary character as they are found in the well-known popular romance of Saiyid Baṭṭāl. This romance has been edited in various versions in prose and poetry, and fully discussed by Fleischer in the *Berichte der Kön. Sächs. Gesellsch.*, 1848, iii. 35 *et seq.*, 150 *et seq.* (*Kleine Schriften*, iii. 226 *et seq.*). Ethé has published a German translation entitled: *Die Fahrten des Sajjid Batthâl. Ein alttürkischer Volks- und Sittenroman*, Leipzig, 1871. The prose version has been several times printed under the title: *Menāḳib-i Ghazawāt-i Saiyid Baṭṭāl*; in the year 1287 (1870) for example.

Bibliography: Cf. besides the above mentioned works, *Zeitschr. der Deutsch. Morgenl. Gesellsch.* xxx. 408 *et seq.*

AL-**BATTĀNĪ** (his full name is ABŪ 'ABD ALLĀH MUḤAMMAD B. DJĀBIR B. SINĀN AL-BATTĀNĪ AL-ḤARRĀNĪ AL-ṢĀBI'), the Albategni or Albatenius of our mediaeval authors, one of the greatest of Arab astronomers, was born before 244 (858) very probably at Ḥarrān or in its

neighbourhood; the origin of the *nisba* al-Battānī is quite uncertain. His family formerly professed the Sabian religion, whence the name al-Ṣābi' although our author was a Muslim. He spent almost his whole life at al-Raḳḳa on the left bank of the Euphrates, where several families from Ḥarrān had taken up their abode; from 264 (877) he devoted himself to astronomical observations which he regularly pursued for the rest of his life. Having had occasion to go on business to Baghdād he died on his return journey at Ḳaṣr al-Djiṣṣ, a little to the east of the Tigris and not far from Sāmarrā in 317 (929).

He wrote: 1. *Kitāb ma'rifat maṭāli' al-burūdj fī mā baina arbā' al-falak*, "the book of the science of the ascensions of the signs of the zodiac in the spaces between the quadrants of the celestial sphere"; i.e. of the ascensions of the points of the ecliptic which are not, at the given moment, one of the four "*awtād*" or pivots [see the article ASTROLOGY]; it deals with the mathematical solution of the astrological problem of the "direction" of the significator. 2. *Risāla fī taḥḳīḳ aḳdār al-ittiṣālāt*, "a letter on the exact determination of the quantities of the astrological *applications*", i.e. the rigorous trigonometrical solution of the astrological problem of the *projectio radiorum* [see the article ASTROLOGY] when the stars in question have latitude (i.e. lie outside the ecliptic). 3. *Sharḥ al-maḳālāt al-arba' li Baṭlamyūs*, "commentary on Ptolemy's Tetrabiblon". 4. *al-Zīdj* "Astronomical treatise and tables", his principal work and the only one that has survived to us; it contains the results of his observations and had a considerable influence, not only on Arab astronomy but also on the development of astronomy and spherical trigonometry in Europe in the middle ages and beginning of the Renaissance. It was translated into Latin by Robertus Retinensis or Ketenensis (died at Pamplona in Spain after 1143 A.D.; the version is lost) and by Plato Tiburtinus in the first half of the xii[th] century (an edition of the text without the mathematical tables was published at Nürnberg in 1537 and at Bologna in 1645). Alphonso X of Castile (1252—1282) had it translated directly from the Arabic into Spanish (incomplete MSS. in Paris). Three insignificant astrological pamphlets, of which a Latin version exists in several manuscripts, which give their author's name as Bethem, Boetem, Bereni, Bareni, have been wrongly attributed to al-Battānī.

Al-Battānī determined with great accuracy the obliquity of the ecliptic, the length of the tropic year and of the seasons and the true and mean orbit of the sun, he definitely exploded the Ptolemaic dogma of the immobility of the solar apogee by demonstrating that it is subject to the precession of the equinoxes and that in consequence the equation of time is subject to a slow secular variation: he proved, contrary to Ptolemy, the variation of the apparent angular diameter of the sun and the possibility of annular eclipses; he rectified several orbits of the moon and the planets; he propounded a new and very ingenious theory to determine the conditions of visibility of the new moon; he emended the Ptolemaic value of the precession of the equinoxes. His excellent observations of lunar and solar eclipses were used by Dunthorne in 1749 to determine the secular acceleration of motion of the moon. Finally he gave very neat solutions by means of orthographic projection for some problems of spherical trigonometry; solutions which were known to and in part imitated by the celebrated Regiomontanus (1436—1476).

Bibliography: al-Battānī sive Albatenii *Opus astronomicum ..... Arabice editum, Latine versum, adnotationibus instructum a C. A. Nallino*, Mediolani Insubrum, 1899—1907, 3 vols. in-4°.

(C. A. NALLINO)

BĀTŪ-KHĀN, a Mongol prince, the conqueror of Russia and founder of the "Golden Horde" (1227—1255), born in the early years of the xiii[th] century, the second son of the chief Djōči. Čingiz Khān had, while still alive, granted separate portions of his vast empire to his three elder sons, Djōči, Čaghatai and Ögedei; the youngest son, Tului did not receive his share till the death of his father when he received the eastern part of Mongolia, the latter's ancestral country. According to the provisions of Mongol tribal law (still followed at the present day by some Turki nomads) the youngest son was regarded as heir to the paternal "house", and the father had to provide for his elder sons in his lifetime, which he did, it appears, by allowing the eldest son that part of his property which was most distant from his house and the others the nearer portions. This explains why, with the successes of Čingiz Khān's arms, the *Yurt* (estates) of his eldest son was continually being moved westwards. In the year of the conqueror's death (1227) the whole steppe country west of the Irtish "as far as the land has been trampled under the foot of Mongol horse", with the adjoining arable lands like Kh"ārizm and the Persian provinces on the southern shores of the Caspian Sea were regarded as the property of Djōči and his descendants. Djōči himself had died six months before his father (about February 1227); of his fourteen sons, the second, Bātū was recognised by the hordes in the west as his father's successor and this choice was afterwards confirmed by Čingiz Khān or his successor Ögedei. The boundaries of his lands from those of Čaghatai and Ögedei were not defined by any agreements or arrangements; still less could the question be answered, what rights Bātū could claim against the other sons of Djōči or against the Great Khān ruling on the Orkhon (in Mongolia). In spite of the division carried out by Čingiz Khān, the empire founded by him continued to be regarded as a single state after his death as before. In accordance with the nomadic conceptions of the law of property the empire was regarded as the possession of the whole family of the ruler, whose individual members had certain portions of the common estate allotted to them for their own subsistence.

Of the first ten years of Bātū's reign we only know that he was present at the Ḳuriltai (parliament) of the year 1229 (or 1228, as in the Mongol epic which dates back to about the year 1241), in Mongolia, at which Ögedei was chosen as Great Khān, probably also at the Ḳuriltai of 1235 at which it was decided to renew the war against the Russians and neighbouring peoples; he was never in eastern Asia at a later period. In the army which set out in the spring of 1236, there were also sons of Čaghatai, Ögedei and Tului; like all enterprises of the period, this campaign was entered upon for its importance to the whole empire and not to any individual section of it;

the whole army, however, naturally was under the supreme command of Bātū. The army is said to have reached the land of the Volga Bulghārs by the autumn of the same year; the destruction of the important commercial town of Bulghār is mentioned by Djuwainī and also in the Russian annals but according to Russian accounts it did not take place till the autumn of 1237. The campaigns of the following years are only known to us from the accounts by the historians of Russia and western Europe (most fully treated by O. Wolff, *Geschichte der Mongolen oder Tataren*, Breslau, 1872); the Muḥammadan chroniclers give but the scantiest accounts (cf. d'Ohsson, *Histoire des Mongols*, ii. 613 *et seq.*, and Hammer-Purgstall, *Geschichte der Goldenen Horde*, p. 102 *et seq.*). From 1237 (in November of this year the Tatars crossed the ice-covered Volga) till 1240 Russia, and in 1241-1242 Poland, Hungary and Dalmatia were ravaged; Bātū himself on Christmas Day 1241 crossed the Donau which was frozen on account of the unusually cold winter and soon afterwards took the town of Gran, turned in the spring of 1242 against Bulgaria and went from there in the winter of 1242-3 through Wallachia and Moldavia back to the Volga country again. His army was never defeated anywhere in Russia or Western Europe; the retreat of the Mongols was brought about partly by differences in their own camp (Guyūk son of Ügedei and Būri, grandson of Čaghatai had rebelled against Bātū and on this account are said to have been recalled by Ügedei) and partly the news of the death of the Great Khān which took place in December 1241.

After 1243 Bātū took no further part in warlike campaigns. Of the lands ravaged in the years 1237—1242 only Russia remained subject to the Tatars; even in 1243 the Grand Prince Jaroslaw presented himself in Bātū's camp and was confirmed by him in the rank of "Senior over all princes of the Russian people"; in 1250 the independent prince (king after 1255) Daniel of Galicia had to be confirmed in the same way and do homage to the Khān.

By the events of these years Bātū's attention was drawn to the east. Ügedei's eldest son Guyūk, a personal enemy of Bātū, had been chosen to succeed his father and raised to the throne by the Kurultai of 1246. Five brothers of Bātū had also appeared at this ceremony; Bātū himself had stayed away, pleading his physical infirmities (*dard-i pā* = pain in the foot, probably gout) as his excuse. In the next year the new Great Khān announced his intention of going to his ancestral estates on the Imil (a river in the modern district of Tarbagatai on the frontier between Russia and China) the climate of which was more beneficial to his health. Bātū had been informed that the Great Khān had hostile designs against him and therefore advanced against the latter at the head of an army. While still in Mongolia, five or six days' journey (apparently in a northerly direction) from Bishbalik (the modern Gučen) at a place which is called Kamastaki by Abu 'l-Faradj (ed. Pocock, p. 492), Samarkand by Djuwainī and the writers who follow him (not, of course, identical with the famous town on the Zarafshān), and by the Chinese, Hongsiang-yi-erh (apparently on the Urungu), Guyūk died suddenly (according to Abu 'l-Faradj on the 9th Rabī' II 647 = 22nd July 1249, according to the Chinese in the third month i.e. the spring of 1248). Bātū received this intelligence in Alā-Kamāk, seven days' journey from the town of Kayāligh (the Cailac of Rubruquis not far from the modern town of Kopal), probably at the mountain of Ala-tau south of the Ili.

Although his elder brother Orda was still alive, Bātū was looked upon as senior member of the ruling house; all the princes are said to have therefore paid homage to him and declared their readiness to submit the succession to his decision. The assembly which was to settle this question was summoned by Bātū to Alā-Kamāk; homage was there paid to prince Möngke (Turkī Mangū), the eldest son of Tului, as Great Khān, on Bātū's proposal. The sons and grandson of Čaghatai and Ügedei either did not appear at all or had left Alā-Kamāk before the settlement of the question; when they heard what result had been come to, they resolutely declined to recognise the decision. The coronation ceremony had to take place at a Kurultai held in Mongolia; it was not till 1251 that Berke, brother of Bātū, at his brother's request, succeeded in assembling the Kurultai at which the ceremony was completed on the 9th Rabī' II 649 = 30th July 1251.

The princes of the houses of Čaghatai and Ügedei did not attend the coronation but appeared soon after it to pay homage to the new sovereign. The Great Khān was told that they had made preparations to take his camp by surprise and cut down him and his adherents; on this accusation they were arrested and on trial found guilty, whereupon a fearful punishment was meted out to them, their families and clients. Almost all the grown-up members of the two houses were either put to death or condemned to banishment; the prince Būri was also handed over to Bātū, whom he had injured, and executed by his orders.

After this event, the Mongol empire was practically divided between Möngke and Bātū although only the name of the Great Khān appeared on the coins throughout the whole empire and in Bulghār also. The Franciscan Rubruquis (Ruysbroek) says that he heard the following words from Möngke in 1254: "As the sun sends its rays everywhere, so extends my power and the power of Bātū over all lands". The boundary between the lands of Möngke and Bātū was, according to the same Rubruquis, in the steppes between the rivers Talas and Ču. According to the same traveller's narrative, more respect was shown to Bātū's people in the Great Khān's kingdom than *vice versa*. It is certain that Bātū who was regarded as senior member of the ruling house and to whom the Great Khān owed his throne, then enjoyed considerable prestige. Even in such lands as, like Mā warā' al-nahr, did not belong to the ancestral territory of Djūčī and his descendants, he exercised some sovereign rights; thus for example, according to Djuwainī (cf. the Persian text in Schefer, *Chrestomathie Persane*, II, 117) he confirmed the son of Timūr-Malik, the famous defender of Khodjend, as heir to the goods and estates of his father.

Rubruquis tells us that Bātū had twenty-six wives and Rashīd al-Dīn that he had four sons. According to the Russian annals the homage of the Russian princes was usually received after 1249 by his eldest son Sartāk, to whom his father appears to have handed over a share of his power in his life time. The year 650 (March 1252-1253)

is given by Rashīd al-Dīn as the year of Bātū's death (he is said to have then been 48 years old); but this date cannot be correct: for Rubruquis was received by Bātū as late as August 1253; on the same traveller's return journey (October—November 1254) also the Khān was still alive. We must therefore prefer Djuwainī's story according to which Sartāk was sent to Mongolia by Bātū in the year 653 (10th February 1255—29th January 1256) to the Great Khān and received news of his father's death while on the way thither. From Rubruquis's narrative, it is plain that Bātū lived during the latter years of his life on the left (eastern) bank of the Volga, going in the summer months as far up the river as Lat. 52° north, and spending the winter near the mouth of the river, where the town of Sarāi was founded by him on the Achtuba during this period.

Bātū, whom the Russians only know as a cruel conqueror, received the epithet of *Sayin-Khān* = "the good Khān" from his contemporaries of his own people. He is praised as a just, mild, and wise ruler even by such historians as the Persian Djūzdjānī (*Ṭabaḳāt-i Nāṣirī*, transl. Raverty, p. 1171 *et seq.*) and the Armenian Maghakiya (Russian translation by Patkanow, p. 18) who are by no means prejudiced in favour of the Mongols; according to the narrative of the Franciscan Johannes de Plano Carpino he was terrible in war but a gracious ruler to his subjects. According to a report, given by Djūzdjānī, he was said to have secretly adopted Islām; Waṣṣāf (lithogr. edition, p. 579) says he was a Christian (this story may well have arisen through confusion with his son Sartāk); it is much more probable that, as Djuwainī tells us, he gave no preference to any one of the (revealed) religions and adhered to the ancestral faith of "knowledge of God" (*Yazdān-Shināsī*) i. e. to the worship of heaven.

Bibliography: The portions concerned of the most important original authorities, viz. the *Ta'rīkh-i Djihān-Kushāi* of Djuwainī and the *Djāmi' al-Tawārīkh* of Rashīd al-Dīn, are still only accessible in manuscript; cf. the digest of the original sources in d'Ohsson, *Histoire des Mongols*, ii. 120 *et seq.*, and (not always reliable) in Hammer-Purgstall, *Geschichte der Goldenen Horde*, p. 95 *et seq.* The Oriental sources were not directly accessible to the authors of the later works (among which may be mentioned Howorth, *History of the Mongols*, ii. 36 *et seq.*). The Russian annals (*Lětopis' po Lavrent'evskomu spisku*) were published in 1872 by the Archaeographic Commission in St. Petersburg and the narratives of the two Franciscans Johannes de Plano Carpino and Rubruquis in the *Recueil de textes et de mémoires, publié par la Société de géographie* (Vol. iv.). The Mongol epic of the year 1241 has as yet only been published in a Russian translation (from the Chinese; *Trudi rossijskoi duchownoi missii w Pekině*, t. iv). Cf. also K. Patkanow, *Istorija mongolov inoka Magakii*, xiii v'eka, St. Petersburg, 1871.

al-**BATŪL** (a.) "the Virgin"; cf. the articles fāṭima and maryam.

BĀWAND, an Iranian dynasty which reigned in Ṭabaristān from 45 (665) to 750 (1349); it traced its origin from Bāw son of Shāpūr, son of Kayūs, a contemporary of Khusraw Parwīz (Chosroes II) and called by him *Ispahbed*. It comprised three branches, the first of which had thirty princes (45—397 = 665—1006), the second, eight (466—606 = 1073—1210) and the third, eight also (635—750 = 1237—1349).

BAWĀRDĪ, "musket bearers", the name "of the bodyguard composed of freemen and bondmen, armed with flintlocks, of the Great Sharīf" of Mecca; cf. C. Snouck Hurgronje, *Mekka*, i. 197, note 3.

BAWĀZĪDJ, or Bawāzīdj al-Malik, a former town in the province of Mawṣil on the west i. e. the right bank of the little Zāb, not far from its mouth.

The name is the Syriac Bēth Wāzīk, "the house of the toll-collector". As the Sāsānian name there appears occasionally Khunyā-Sābūr "Shāpūr's song" after the usual style of the poetical names of towns common in the Sāsānian period. In the older geographers and historians the place is only briefly mentioned along with Takrīt, Ṭīrhān and Sinn. Some one with an accurate knowledge of the town has, however interpolated a detailed description in the text of Ibn Ḥawḳal (ed. de Goeje, p. 169, note 9). The place was notorious in the middle ages as the abode of the Khāridjites — the inhabitants say they are descended from the troops of 'Alī b. Abī Ṭālib — and as a nest of robbers. The town lived by receiving goods stolen by the Banū Shaibān Beduins from caravans. Yāḳūt however also mentions some scholars who were born in Bawāzīdj. A portion of its inhabitants must have been Christian; the miracle-working bones of a Syrian martyr Bābōje were there. There was occasionally a Jacobite bishop of Bēth Remmān (i. e. the village of Bārimmā) and Bēth Wāzīk, or a Nestorian of Shennā (i. e. Sinn) and Bēth Wāzīk.

The ruins of the town have not yet been discovered. On my journey past its neighbourhood on the Tigris, in the winter of 1907—1908, a place called Mbāzīye was mentioned to me, in which the name Bawāzīdj is possibly preserved. Another Bawāzīdj was at Anbār-Fairūzsābūr on the Euphrates, and a Mawāzīdj in Diyār Hudhail in South Arabia.

(E. Herzfeld.)

BAWIĀN, a Kurd village of five or six huts, with the larger village of Hinnis, half a mile distant, in the district of the Mizūriya Kurds, between the district of Nawkūr in the Djebel Maḳlūb near Mawṣil and the district of 'Amādiya, famous for the Assyrian sculptures which are found in the adjoining ravine of the Khūsir. The

rock reliefs were first visited by M. Rouet, the French consul, Botta's predecessor, then by Mr. Ross, an English merchant in Mawṣil, a friend of Sir Henry Layard's (not the well known M. D. Ross) whose account is given by Layard in his *Nineveh and its Remains*, ii. 142. They were afterwards drawn by V. Place, the excavator of Khorsābād and by Layard himself. Layard's companion, Mr. Bell was drowned while bathing there in 1851. Photographs and squeezes are still wanting; the inscription of the relief made by Sanherib (705—681) contains the so-called Bāwiān date viz. the statement that Sanherib brought back the images of the gods of the town of Ekallāte, which had been carried off by Mardukuādinaḫē of Akkad (Babylon) in the time of Tiglath-pileser (I), from Babylon to their ancient restingplace after 418 years. This statement contains an important problem of Assyrian chronology.

BAYĀN (A.), Lucidity, explanation. *'Ilm al-Bayān* is often used synonymously with *'Ilm al-Balāgha* [see BALĀGHA] although strictly it only denotes a subsection of it. (A. SCHAADE.)

BAYĀN b. SAM'ĀN AL-TAMĪMĪ, Shī'a sectarian, who was burned along with al-Mughīra b. Sa'īd [q. v.] and a few adherents by command of Khālid b. 'Abd Allāh al-Ḳasrī, governor of Kūfa in 119 (737). He believed that the words of the Ḳor'ān (Sūra 3, 132): "this is an explanation (*bayān*) for mankind etc." — referred to him and was therefore regarded by his followers as a prophet and incarnation of the divine. He taught by a false explanation of Sūra 55, 26—27 and 28, so that the King of Light (God) is subject to dissolution with the exception of his face and revealed himself in the Prophet and afterwards in the 'Alid Imāms (down to Abū Hāshim b. Muḥammad Ibn al-Ḥanafiya) and again in him himself. His doctrine was apparently based on older conceptions such as we already find among the Mandaeans.

BAYĀS, usually written BAIYĀS, also BĀYĀS, the modern PAYĀS, the ancient BAIAE, a coast village on the Gulf of Issus at the foot of the Djebel al-Lukkām, a station on the road from al-Maṣṣīṣa to al-Iskandarūna. In the 'Abbāsid period, Bayās belonged to the Syrian Thughūr [see 'AWĀṢIM]; it shared the vicissitudes of that land, so often fought for, without itself playing any important part. After the revival of the town in the beginning of the xixth century, it was still described by recent travellers as a miserable village inhabited by Turks; nevertheless Sāmī-Bey gives the number of its inhabitants at about 5000 and Cuinet at 6325. It is the centre of a Ḳaẓā in the Wilāyet of Adana.

(R. HARTMANN.)

BĀYAZĪD, a town in Turkey in Asia, capital of a Sandjaḳ of the province of Erzerūm, 168 miles from this town and 17 from the Persian frontier, at the foot of Mount Ararat; it has about 2000 inhabitants mostly Armenians. Founded by Sulṭān Bāyazīd I Yildirim to serve as a post of observation against Timūr's designs, it has an old fortress dating from this period, enclosing a beautiful mosque built by Behlūl Pasha in the xviiith century. In 1805 Amédée Jaubert, entrusted by Napoleon with a secret mission, spent six months here in confinement (*Voyage en Arménie*, p. 29 *et seq.*). The town which commands the road to Ādharbaidjān, was taken by the Russians in 1828 (the inhabitants were taken to Eriwan and Alexandropie which ruined it), 1854 and 1877. The Ḳaẓā of which it is the largest place comprises 110 villages of which 78 belong to the town, regarded as centre of a nāḥiye; the total population is 7,785 inhabitants. It manufactures Kurdistān carpets and cattle are reared on the prairies.

BĀYAZĪD (Turkish pronunciation of the Arabic Abū Yazīd) I, surnamed YILDIRIM, "the lighting", Ottoman Sulṭān, son and successor of Murād I Khudāwendigār, married the daughter of the prince of Germiyān who brought him as her dowry the town of Kutāhia and three other smaller towns and succeeded his father, who was assassinated on the battlefield of Kosovo (791 = 1387); his first act was to order the execution of his only brother Ya'ḳūb whose popularity he feared, a crime which was regularly enacted by the Ottoman Sulṭāns down to the period of reform. He completed the conquest of Servia and concluded a treaty with Etienne, son of Lazar which placed this prince under the suzerainty of Turkey. He placed John VII, one of the sons of Andronicus IV, on the throne of Constantinople in place of the Emperor John V Palaeologus, and then dethroned him to replace him by Manuel II, son of John V, as co-regent (1390). The Greek auxiliaries furnished by Manuel conquered for him Ālā Shehir (Philadelphia) which its commander had refused to surrender; the prince of Aidin submitted; the principalities of Ṣārūkhān and Menteshe were incorporated in the empire; 'Alā al-Dīn, of the dynasty of Ḳaramān, conceded Aḳ-Shehir, Nigde and Aḳ-Serāi (793 = 1391) to him. He sent razzias to ravage the island of Chios, Euboea and Attica, and blockaded Constantinople which John Palaeologus had hurriedly fortified and Manuel had again entered secretly for seven years. The prince of Ḳaramān having rebelled, was defeated and the towns of Ḳonia and Larenda, again incorporated

in the empire; Toḳāt, Sīwās and Ḳaiṣariya preferred to offer themselves to him rather than be given back to the son of the Ḳāḍī Burhān al-Dīn (795 = 1392). Kötürüm Bāyazīd, of the dynasty of the Banū-Isfendiyār at Sinope, having taken to flight, all the province of Ḳasṭamūnī fell into his hands.

Sigismund, king of Hungary, disturbed by the progress of Bāyazīd on his frontiers declared war against him, after interesting the sovereigns of Europe in his cause, including Charles VI, king of France, who sent him a body of troops commanded by the Comte de Nevers, son of the Duc de Bourgogne, who afterwards was called Jean-sans-Peur. The Grand Prior of the Teutonic Order, Frederick, Count of Hohenzollern and Philibert de Naillac, Grand Master of the Chevaliers of Rhodes all joined in the Crusade. The allies besieged Nicopolis but were completely defeated before its walls (798 = 1396). Following up this victory the Ottomans invaded Styria, Syrmia and Bosnia; in Asia, their territories were increased by the addition of Karghrī, Divrigi, Behesnī, Malaṭya and Kemākh; in Europe by Yeni-Shehr (Larissa) and Tirḥāla; their incursions brought them as far as Athens and into the Peloponnese.

Bāyazīd was rejoicing in his successes at Brusa when the capture of Erzingān and Sīwās by Tīmūr turned his attention from Constantinople, the conquest of which he was planning, and forced him to march against the invaders, around whom gathered the princes dispossessed of their territories by the Ottomans. The siege of Angora by Tīmūr brought him up to the walls of this town; the battle took place to the northeast in the plain of Čibuḳ Ābād. The auxiliary troops, formed of contingents levied from the ancient principalities of Ṣārūkhān, Menteshe and Germiyān, went over to the enemy with whom were their former masters; the Serbs remained faithful and Bāyazīd fought till nightfall surrounded by his Janissaries almost all of whom were slain. The Sulṭān attempted to escape but his horse fell and he was taken prisoner (19th Dhu 'l-Ḥidjdja 804 = 20th July 1402). Bāyazīd was treated with consideration by the victor; nevertheless as he attempted to escape, they took the precaution of putting him in chains during the night and making him travel in a litter surrounded by a grille (*Ḳafas*) carried by two horses. It is this word *Ḳafas* which has given rise to the belief, supported by a misunderstood passage in Ibn ʿArabshāh that Bāyazīd was shut up in an iron cage, as well as the word *Κλουβόκλιον* used by Phrantzes (I. 26). While accompanying Tīmūr who returned to Samarḳand after the capture of Smyrna from the Chevaliers of Rhodes, Bāyazīd died at Aḳ-Shehr from an attack of gout (14th Shaʿbān 805 = 8th March 1403); he was buried at Brusa by his son Mūsā. The Ottoman Empire was no longer in existence; it was not reconstituted till ten years later by the energy of Sulṭān Muḥammad I.

(Cl. Huart.)

BĀYAZĪD II, Ottoman Sulṭān, son of Muḥammad II, was governor of Amasia at the time of his father's death; a revolt of the Janissaries assured him the throne by foiling the intrigues of the Grand Vizier Nishānī Muḥammad who favoured Djem, his younger brother; he rewarded their services by making them a gift on his accession which became a regular custom after him (21st Rabīʿ I 886 = 20th May 1481). Djem seized Brusa but being beaten on the field of Yeni-Shehr (26th Rabīʿ II = 20th June) he fled to Ḳōnia and then to Syria and Egypt; after a pilgrimage to the holy towns he tried his fortune again and advanced from Aleppo on Ḳōnia and Angora where, abandoned by his troops he had to flee for refuge to the Knights of Rhodes. Bāyazīd induced Pope Alexander VI Borgia to put out of the way his unfortunate brother, whom he caused to be buried after his death (29th Djumādā II 900 = 24th February 1495) in the tomb of Murād II at Brusa. In Italy Khair al-Dīn the defender of Otranto had to capitulate (10th September 1481); the raids into Bosnia, Dalmatia and Hungary were continued; Herzegovina was entirely subdued. Bāyazīd directed the Moldavian campaign in person and took Kilia and Aḳ-Kermān with the help of the Tatars of the Crimea (Djumādā II 889 = July 1484). In Asia Hersek Aḥmad Pasha was entrusted by him with the direction of the campaign against the Egyptian Mamlūks but on this general's defeat Bāyazīd lost Adana and Tarsūs (891 = 1486), which were regained two years later only to be lost again after the battle with the Egyptians in the field of Agha Čāiri (8th Ramaḍān 893 = 17th August 1488); peace was not brought about till 1491. Having given up the siege of Belgrade in consequence of the Hungarian victories, Bāyazīd turned his attention to Albania, ravaged Styria, Carinthia and Carniola; the Turks were defeated near Villach and their leader Mikhal Oghlu ʿAlī Pasha shot; the Hungarians in their turn were defeated at Abdera (9th September 1493). Ainā-Bakhti (Naupactus, Lepanto) abandoned by the Venetian fleet had to capitulate (26th August 1499) and became the Ottoman arsenal for that neighbourhood. In the following year the Sulṭān conquered Modon, Navarino and Coron but failed before Nauplia. A coalition of the Venetian, Papal and Hungarian forces, with the addition of the French and Spanish fleets swept the Archipelago and threatened the islands; Santa Maura (Leucadia) surrendered to the allies but was restored on the conclusion of peace (14th December 1502).

To all these troubles abroad civil war was added. Bāyazīd had nominated his son Aḥmad as his successor. Selīm, supported by the Janissaries, left his governorship in Asia and fought against his father at Čorlu, where he was totally defeated (8th Djumādā I 917 = 3rd August 1511) and had to take refuge with his father-in-law, the Khān of the Crimea, but he was restored to favour the following year, went to Constantinople and with the support of the army constrained his father to abdicate in his favour (8th Ṣafar 918 = 25th April 1512). The latter wished to retire to Demotika, his native town, but died three days later on the way, at Aya near Hafṣa (10th Rabīʿ I = 26th Mai).

Bāyazīd was a mystic, devoted to Ṣūfī doctrine, which earned him the title of Walī (saint). He built a mosque in Constantinople in which he is buried, with an ʿimāret (hospice, kitchen for the poor), another in Adrianople, and various dervish monasteries, in the capital and in the provinces as

wall as bridges over the Ḳizil-Irmāḳ and the Ṣakaria.

(Cl. Huart.)

BĀYAZĪD Anṣārī Pīr Rōshān, son of Shaikh ʿAbdullāh and his wife Banīn, born at Djālandhar in the Pandjāb about 1525. His parents were Afghāns, and when Bābur defeated Ibrāhīm Lōdī and destroyed the Afghān dynasty, they removed to Kānigūram in the hill-country near Ḳandahār. Bāyazīd was descended from the saint Sirādj al-Dīn Anṣārī and early showed a tendency to religion and mysticism. He is said in his youth to have rigidly conformed to the ordinances of orthodox Islām, but later on his theology became more and more pantheistic until he asserted that nothing existed except God, and set little value on the observance of the precepts of the Muslim law. He announced that he was a perfect Pīr and promised salvation to all who followed him. He instituted an active propaganda, which met with considerable success among the Afghāns.

It appears from a passage in the Dabistān, (p. 387), incorrectly translated by Leyden, that early in 994 = 1585, a report of the death of Bāyazīd was sent to Akbar. But if Niẓām al-Dīn Aḥmad is correct (see Elliot-Dowson, v. 450), Bāyazīd was dead in or before 1581; for he says under the account of Akbar's 31st year, that Bāyazīd "had gone to hell" when his son Djalāl al-Dīn at the age of 14, appeared before Akbar in 989 A. H. Djalāl al-Dīn was the fifth son of Bāyazīd and succeeded to his influence. He was kindly received by Akbar, but soon afterwards deserted his camp, and was for many years a religious leader and a disturber of the public peace. He was killed in 1600-1601. He was succeeded by his nephew Aḥdād, who was slain in 1625-1626.

According to Ākhūnd Darwīza, Bāyazīd was a highway robber, and an infidel, and was twice defeated by one Muḥsin Khān Ghāzī, who was perhaps a servant of Akbar's half-brother Mīrzā Muḥammad Ḥakīm. But Ākhūnd's account must be received with caution for he was a fanatical opponent of Bāyazīd's teaching, and he is a rather late authority, for he wrote his book in 1021 A. H. (1612). If, as he says, Bāyazīd was born some years after 900 A. H., he cannot have known him personally. According to the Dabistān, Bāyazīd became prominent in 949 (1542).

Bāyazīd composed an account of his doctrines, entitled *Ḥāl-nāma*, and a work called *Khair al-Bayān*, besides numerous others; but none of them is known to be extant. According to his great opponent Ākhūnd Darwīza (whose* real name was ʿAbd al-Karīm), the principal doctrines of Bāyazīd were that all existing objects are manifestations of God, the highest of which are Pīrs or religious teachers; the sole test of right and wrong is obedience to the Pīr, and all who disobey the Pīr may lawfully be put to death; the Ḳorʾān and Ḥadīth are not to be interpreted literally but in a mystical sense, which can only be learned from a Pīr, who is thus the source of all highest knowledge.

Bibliography: *Makhzan al-Islām* by Ākhūnd Darwīza (Ethé's *Cat. of Persian MSS. in the Library of the Indian Office*, Nos. 2632—8); *Dabistān*, ii. 380 (ed. Calcutta); *Maʾāthir al-Umarā*, ii. 242 (*Bibl. Ind.*); Leyden, *On the Roshenian Sect and its founder, Bayezid Ansari* (*Asiatic Researches*, xi. 363 sqq.); Graf Noer, *Kaiser Akbar*, ii. 180 sqq. There is in the British Museum a MS. (Or. 222, Rieu's Catalogue i, 28), which appears to be the Persian edition of the Pashtū work of Ākhūnd Darwīza described by Leyden. It is called *Tadhkirat al-Abrār*. The account of Bāyazīd will be found at folio 114 *et seq*. (H. Beveridge).

BĀYAZĪD al-Bisṭāmī, his real name was Abū Yazīd Ṭaifūr b. ʿĪsā b. Ādam b. Surūshān, a famous Ṣūfī, who died in 261 (875) or 264 (877-878). His grandfather was a Magi; of the circumstances of his own life, little is known except that he led an ascetic life. Legend has therefore adorned his biography all the more richly, and deduced from certain misunderstood Ṣūfī utterances that he ascended to heaven (*Miʿrādj*). His doctrine is only known to us from occasional utterances handed down by ʿAṭṭār amongst others. From these it is clear that he was a convinced pantheist and very probably the first to introduce the doctrine of *Fanāʾ* (Nirvana). His followers are called Ṭaifūriya or Bisṭāmiya. His tomb in Bisṭām is still held in great reverence by pious Ṣūfīs; the Ḳubba on it was erected in 700 (1300-1301) by Uldjaitū.

BĀZ BAHĀDUR, or Bāyazīd, ruler of Mālwa, Central India, in the 16th cent. He was the son of Shudjāʿ Khān, who had been appointed governor of Mālwa by the Afghān emperor, Shēr Shāh. On his father's death in 1554, he assumed independence, with his capital at Sārangpur, and coined money in his own name. In 1560 Mālwa was conquered by the Mughal emperor, Akbar, and Bāz Bahādur after struggling ineffectually for some years, surrendered in 1570 to the emperor by whom he was taken into favour. He died at Udjdjain in 1588. Bāz Bahādur is known in legend for his romantic attachment to his Hindu wife, Rūpmatī, herself the composer of songs that are sung to this day throughout Mālwa.

BĀZĀR, market (Pahlavi *vāzār*, Persian *bāzār*, J. Darmesteter, *Études Iraniennes*, ii. 129; P. Horn in the *Grundriss der Iranischen Philologie*, Vol. i., Part 2, p. 11), strictly a row of shops in a street covered in by a wooden or stone roof and closed by doors at each end; when this street crosses another like it, forming a crossroad, this is called in Arabic *murabbaʿ*, a translation of the Pahlavi *čahār-sūg*, Persian, *čār-sū*, Turkish, *čārshy* (four-sided, cf. Latin *quadrivium*). Caravanserais usually have their doors opening into the middle of the bazaar. At Teheran there

is for example the *bāzār Emīr* built by the minister Mīrzā Taḳī-Khān in the xix[th] century. There are also smaller markets in the various quarters of the town called *bāzārča*. Idlers spend hours talking in the bazaars, they are called *bāzārī* and *bāzār-gard*.

(Cl. Huart.)

BEDEL-I ʿASKERĪ (the erroneous form Bedel-i ʿAskeriye is also often used) means in Turkey the taxes which are paid by non-Muslims for exemption from military service and have taken the place of the ancient *Kharādj*. The latter appellation survived into the middle of last century. Under pressure from foreign powers, particularly England, after the abolition of the *Kharādj* and the enrolment of non-Muslims as soldiers in the Turkish army, a decree was promulgated on the 10[th] May 1855, after long resistance by the government, which promised non-Muslims conscription and the abolition of the Kharādj. In the Khaṭṭ-i humāyūn of the year 1856, the decree was confirmed but at the same time exemption was allowed by providing a substitute or buying oneself off. As the resentment at this innovation was equally great among Muslims and non-Muslims and the latter were not inclined to serve, the practical result was that the only difference was the change of the name from Kharādj to *Bedel-i ʿaskerī*. The amount paid also was the same as the Kharādj (cf. Morawitz, *Les finances de la Turquie*, p. 76 note 1). The taxes were paid *en bloc* by the communities and shared by them among the individual members according to their means and income. At first the payment was 5000 piastres (about £ 45) for 180 persons and later for 135. The total revenue to the state from this source is given by Morawitz (p. 76) at £ 800,000 Turkish in round numbers. Clergymen, women, children under 15, old men over 75, the poor and the inhabitants of the privileged districts and of Constantinople were exempted from the tax. The collection was first made by officers of the state, after the reforms of 1257 (1841) by the spiritual heads of the communities, and again since 1902 by the government tax-collectors. (The Turkish text of the law is given in *Lāyiḥa-i Ḳawānīn*, ii. 347, and the French in Young, *Corps de droit ottoman*, v. 276).

After the revolution of 1908 the *bedel-i ʿaskerī* was abolished by a provisional law of the 20[th] Radjab 1327 (25[th] Tammūz 1325, published in the *Djerīde-i ʿaskerīye* of the 2[nd] Shaʿbān 1327 = 16[th] Aug. 1325 and also in the *Medjmūʿa-i Ḳawānīn-i djedīde-i ʿothmānīye*, Const. 1327 Vol. i.) and in its place universal military service for non-Muslims also, introduced.

(F. Giese.)

BEDEL-I NAḲDĪ, a tax paid by Muḥammadans liable to bear arms, who wish to buy exemption for the rest of their period of service after serving three months. It amounts to £ 50 Turkish and is allowed on condition the man liable can pay it without having to sell his agricultural implements. For further information see the article bedel-i ʿaskerī.

(F. Giese.)

BEDJA. The name Bedja or Bodja — more correctly pronounced Beja or Boga — is applied to a group of Hamitic tribes, who live between the Nile and the Red Sea, and whose influence was formerly felt from as far north as Cairo to the Abyssinian frontier. The name Bega is met with in pre-Muḥammadan times in the Aksum inscription (E. Littmann and D. Krencker, *Vorbericht der Deutschen Aksum-expedition*, Berlin, 1906, p. 6 *et seq.*) between 300 and 500 A.D.; in the Greek text King of the Βουγαειτῶν corresponds to the "King of the Bega" (D. H. Müller, *Epigraphische Denkmäler* in *Denkschr. Ak. Wiss., phil. hist. Kl.*, Vol. 43, Wien, 1894, p. 16), both of which are here titles of the prince of Axum. To the Bedja of the Arab geographers corresponds the name, still in use at the present day, applied collectively to these tribes "Bedaûye, Bejaûye", from which their language is called "to-Bedaûye" (Leo Reinisch, *Wörterbuch der Bedauye-Sprache*, Vienna, 1895).

The Bedja have often been identified with the Blemmyes. The latter however certainly did not belong to this group of tribes; the ancient name has survived not in the Bedja but in the Baliyūn whom de Goeje (Edrīsī, p. 26, note 3) has already identified with the Blemmyes. In the beginnings of Islām the Bedja were considered by the Muslims as rude heathen unworthy of a treaty. It was not till the beginning of the second century that negotiations were entered into when ʿUbaidallāh b. al-Ḥabḥāb made an agreement with them, which was renewed under the Caliph Maʾmūn. Their land offered great attractions to the Arabs by its rich stones of gold (al-ʿAllāḳī) and jewels (emeralds). The Rabīʿa and the Djuhaina, more particularly the former, settled in Bedjaland but gradually blended with its natives. From ancient times the names of two subdivisions of the Bedja have been known. According to Maḳrīzī the Ḥadārib are the ruling part of the nation and the Zanāfidj or Ranāfidj a sort of helots. Ibn Baṭṭūṭa says (i. 110) that the king of ʿAidhāb was called "al-Ḥadrabī". The relationship is said to have formerly been the opposite. The Ḥadārib early became converts to Islām, most probably direct from paganism and not from Christianity as some authorities state. As to their Islām, we can only add to the full account given by Vollers [see the article ʿabābde] that daughters among them did not inherit (Ibn Baṭṭūṭa, i. 110) and that therefore contrary to ancient popular law the prescription of the Sharīʿa on this point could not be put into force. In spite of the strong influx of Arab blood the Bedja have preserved their individuality to the present day. Their chief divisions are the ʿAbābde [q. v.] and the Bishārīn [q. v.].

BEDJKEM, an Amīr al-Umarā'. Bedjkem was a manumitted slave of Turkish origin. He first attached himself to the prince of Gīlān, Mardāwīdj b. Ziyār, and then deserted him because his countrymen had been slighted by Mardāwīdj. In 323 (935) the latter was slain and, as Bedjkem had been the leader of the assassins, he had to flee from fear of vengeance. He then betook himself to the Caliph, was appointed commander of the troops accompanying him by the Amīr al-Umarā' Muḥammad b. Rā'iḳ and received the name al-Rā'iḳī. In 325 (936-937) he twice defeated an army of the rebel governor of al-Ahwāz, Abū 'Abd Allāh al-Barīdī; when the latter sought the help of the Būyids, his luck turned. Bedjkem was put to flight and had to retire to Wāsiṭ. Here he began to cherish the plan of making himself Amīr al-Umarā'. The vizier Abū 'Alī b. Muḳla wished to bring about the fall of Ibn Rā'iḳ and to this end entered into negotiations with Bedjkem. When the chief Emir heard of this he had Ibn Muḳla thrown into prison where the unfortunate vizier soon died. Ibn Rā'iḳ then sought to win over his erstwhile enemy al-Barīdī but the latter was defeated by Bedjkem and forced to take his side. All Ibn Rā'iḳ's efforts were of no avail. In Dhu 'l-Ḳa'da 326 (September 938) Bedjkem entered the capital and was appointed Amīr al-Umarā' in place of Ibn Rā'iḳ by the Caliph. His first task now was to bring the recalcitrant Ḥamdānids to a fulfilment of their pledges. These were refusing to pay the tribute due, but when Bedjkem had gone to Mosul against the Ḥamdānid Ḥasan, Ibn Rā'iḳ suddenly appeared in Baghdād at the head of two thousand men. Bedjkem had to make peace with Ḥasan in 327 (938) and to return to the capital. A peaceful settlement was soon reached with Ibn Rā'iḳ by the terms of which the latter received the governorship of Ḥarrān, Edessa and Kinnesrīn with the districts on the Upper Euphrates and the frontier fortresses. Only the Būyids now remained to be dealt with. Al-Barīdī therefore sent an army corps against Sūs. Mu'izz al-Dawla, the Būyid lieutenant, was not able to defeat it but his brother Rukn al-Dawla came to his assistance, advanced against Wāsiṭ and occupied a part of the town. Bedjkem arrived with reinforcements however, and Rukn al-Dawla had to retire. While Bedjkem and al-Barīdī were drawing up common plans for the prosecution of the campaign, the latter began to intrigue with a view to securing power for himself and was therefore deprived of his office. The Caliph al-Rāḍī died soon afterwards. His successor al-Muttaḳī confirmed Bedjkem as Amīr al-Umarā' and the latter now sent an army against al-Barīdī. His lieutenant was defeated however and Bedjkem had to take the field himself. Before he reached the scene of operations however, al-Barīdī was completely defeated and soon afterwards in Radjab 329 (April 941), Bedjkem was surprised and slain on an expedition by some Kurds. The highest praise is bestowed on him by Oriental historians not only for his military ability but also for his talents in other directions.

BEDR. [See BADR, p. 559.]

BEDUINS [See ARABIA, p. 372 *et seq.*]

BEG, a Turkish title, Ottoman *bey*, Kirghiz *bi* or *biy*. The various meanings, which are given in the dictionaries (cf. in particular *Sravnitelnij slovar' turetskikh narěčij*, i. 263 *et seq.* and W. Radloff, *Versuch eines Wörterbuches der Türk-Dialecte*, iv. 1568 and 1580), may be traced back to three fundamental notions: 1) a *beg* is any noble, in opposition to the common people, and usually also to the princes of the ruling house (the term is however also occasionally applied to the latter); 2) the "prince" of a small tribe or community is called *beg* in opposition to the *kaghan* or *khān*, the ruler of a larger domain; 3) finally the word *beg* is applied to any "position of authority" in the widest sense whether it has been obtained from a ruler, by election or by usurpation: the commanders of divisions of armies from the largest to the smallest (cf. in particular the expressions *ulus-begi*, *tümen-begi*, *min-begi*, *yüz-begi* and *on-begi* in the sources for the history of the "Golden Horde"), the holders of administrative offices from the headman of a village to the governor of a province, civil officers and judges. The word appears to be found in all three meanings in the very earliest monuments of the Turkish language, the inscriptions of the viii[th] century A. D. *Begler* is there the noble in opposition to the people (*budun*); the prince of the Kirghiz, Bars-*beg* is given the title of *Kaghan* by the ruler of the Turki kingdom; the "wise and valiant" *buyuruk* who rule the kingdom with the Kaghan are in some places distinguished from the main body of the people as well as from the nobles; the expression *buyuruk-begler* also appears however. Cf. the glossary to the inscriptions in W. Radloff, *Die alttürkischen Inschriften der Mongolei*, St. Petersburg, 1895, p. 138 and 143. In the mediaeval glossary published by Meliorandskij (*Arab filolog o turetskom yazykě*, St. Petersburg, 1900, see Index) the word *Beg* is translated by the Arabic Amīr.

(W. Barthold.)

Among the Ottoman Turks every son of a Pasha is entitled to bear the title *bey*; in addition the title is granted to military officers of the 5[th] and 6[th] rank (*Mīr Alāi*, *Ḳāim maḳām*) as well as by courtesy to the *personnel* of the foreign diplomatic missions (whence *Bey oghlu*, the Turkish name of Pera where the Ambassadors reside). In former times the chief governors of Roumelia, Anatolia and Syria bore the title *begler beg* (*begler begi*) = Arabic *Amīr al-Umarā'*, Persian *Mīr Mīrān*, but now these are merely titles of honour. — *Begzāde* (v.) hence means in general a distinguished man of noble rank. — Further derivatives: *Beylik* the rank of a *Beg*, any office the tenant of which holds the rank of *Beg*. — *Beylikdji*, prime minister, president of the Sulṭān's chancellory (*Dīwān-i Humāyūn*). Cf. S. Kekule, *Über Titel, Ämter, Rangstufen und Anreden in der offiziellen osmanischen Sprache*.

BEGA. [See BEDJA.]

BEGTEGINIDS, the name of a dynasty in Arbela (Irbil), founded by Zain al-Dīn 'Alī Kūčik b. Begtegin. The latter was one of Zangī's [q. v.] Emirs and was sent by him (539 = 1144) as governor to al-Mawṣil. On Zangī's death, he retained not only this office but also became lord of Shehrazūr, Hekkāriye, Tekrīt, Sindjār, Ḥarrān etc. The real seat of the family however was Irbil; 'Alī had his ḥarem and his treasures there

and he retained this town for himself when in 563 (1167) on account of advancing years he abandoned his other lands and towns in favour of Ḳuṭb al-Dīn Mawdūd [q. v.]. After his death in the same year, Irbil fell to his son Zain al-Dīn Yūsuf, who was still very young, while an elder son, Muẓaffar al-Dīn Kökbüri [q. v.], afterwards received the town of Ḥarrān from the then lord of al-Mawṣil, ʿIzz al-Dīn Masʿūd, son of Mawdūd. In the struggle which took place some years later between Ṣalāḥ al-Dīn and the Zangids, both took the side of Ṣalāḥ al-Dīn. On the death of Yūsuf in 586 (1167) his brother Kökbüri became lord of Irbil also and bequeathed his lands to the ʿAbbāsid Caliph when he died childless in 630 (1242).

Bibliography: Ibn al-Athīr (ed. Tornberg), xi. and xii.

BEGTIMUR, Lord of Khilāṭ from 581—589 (118—1193). Begtimur Saif al-Dīn was originally a slave of Shāh-i Arman Ẓahīr al-Dīn and played a prominent part in the reign of his son Sukmān II. As the latter, as Ibn al-Athīr states, was childless, the neighbouring princes hoped to be able to seize Khilāṭ on his death. Sukmān therefore in his lifetime ordered the chief men of his domain to pay homage to Ḳuṭb al-Dīn Ilghāzī, Urtuḳid of Māridīn, who was his sister's son, but as the latter died before him in 580 (1184) and his successor was still a child, there was no one on Sukmān's death, which took place soon after, who had a legitimate claim to the throne. Begtimur took advantage of the situation to make himself lord of Khilāṭ, after putting Shāhi Arman's vizier Madjd al-Dīn Ibn Rashīḳ out of the way. He did not succeed without opposition however, for at this time the renowned Ṣalāḥ al-Dīn was preparing to subdue Khilāṭ and other towns in that district. Taḳī al-Dīn ʿOmar, a nephew of Ṣalāḥ al-Dīn, put Begtimur's troops to flight, released Ibn Rashīḳ from his imprisonment and was on the point of taking Khilāṭ when death carried him off and left Begtimur master of the field. When his dangerous enemy Ṣalāḥ al-Dīn died in the beginning of 589 (1193) Begtimur showed an almost insane joy. He took the title from this period of al-Sulṭān al-Muʿaẓẓam Ṣalāḥ al-Dīn ʿAbd al-ʿAzīz, and was planning the siege of Maiyafāriḳīn when his son-in-law Hazār Dīnārī had him murdered. The latter thereupon seized the throne of Khilāṭ, but some years later we again find a son of Begtimur mentioned as lord of the town.

BEHĀR. [See BIHĀR.]

BEHAR-I DĀNESH. [See BAHĀR-I DĀNESH, p. 575.]

BEHĀRISTĀN. [See BAHĀRISTĀN, p. 575.]

BEHESNI, derived from the Syriac BĒT ḤESNĀ, the BAHESNĀ of the Arabs, a Ḳaẓā and town in the Sandjaḳ Malaṭya of the Wilāyet of Maʿmūret al-ʿAzīz. The population of the whole Ḳaẓā amounts according to Cuinet to 45,120, including 23,600 Muḥammadans, 5500 Kurds, 13,191 Ḳizilbashis, 2829 Gregorian Armenians and the town itself — again following Cuinet — has 1500 inhabitants. This figure is probably an error. Balhassanoghlu (see below), apparently following Sāmī's *Ḳāmūs* gives the number at 12,000 of whom 1500 are Armenians. This would rather agree with the statements of Ritter and Ainsworth, who estimate the number of houses at 2500 of which 250 were Armenian. The town has a few relics of the past, among them a fortress which was once famed for its strength. Under the Mamlūks of Egypt, it was one of the chief frontier-fortresses against the *Bilād al-durūb*, "the land of the great passes" through the Taurus. It was taken as early as 1396 by Timurtāsh for the Ottomans (Hammer, i. 204) but it was not till the reign of Selīm I in 1576 that it finally became a permanent Ottoman possession, when by the occupation of Ḥalab all the other Syrian border fortresses of the Mamlūks fell into the hands of the Turks. After the battle of Nizib (1839) in which Ḥāfiẓ Pasha was defeated by Ibrāhīm, son of Meḥmed ʿAlī, the Ottoman army after its flight reassembled here before its retreat over the Taurus.

Balhassanoghlu gives some specimens of the Turkish dialect spoken there in *Keleti Szemle*, 1903, p. 125 (he is wrongly called Balkanoghlu here; Nedjīb ʿĀṣim is meant).

BEILĀN (BAILĀN, BĒLĀN, BELES), a village in the Amanus Mountains (Alma-Dagh, see above, p. 312) in North Syria situated in 36° 16' East Long. (Greenw.) and 36° 30' N. Lat. It is the capital of a Ḳaẓā (and therefore the residence of a Ḳāʾimmaḳām) belonging to the Wilāyet of Ḥalab (Aleppo) with an area of 600 square miles and 10,800 inhabitants; cf. Supan in *Petermann's Geogr. Mitt.*, Erg. Heft 135 (1901), p. 15. Beilān possesses a picturesque situation and an excellent climate. It fills a deep valley, stretching from east to west between the Ḳara-Dagh and Djebel Mūsā ranges, so that its houses of wood stand partly on the banks of the Nahr Beilān (also called Dere-baghdsche) and partly rise in terraces up the northern face of the hill. The fact that Beilān is situated on a slope accounts to a certain extent for the differences in the estimates of the height above sea-level: Schaffer and Baedeker 1400 feet; M. Hartmann and Janke: 1580 feet; Cuinet: 1650 feet; Ainsworth: 1760 feet; Oberhummer-Zimmerer: 2325 feet. The vegetation (including many fruit-trees and vines) is exuberant here as the land is well watered by numerous mountain streams; the air is very healthy on account of the high situation, and the high cliffs running along the sides of the valley protect it from the oppressive heat; Beilān is therefore a favourite country resort of the fever-stricken merchants of Alexandretta (Iskanderūn) and is also much visited by the inhabitants of the

more distant Ḥalab. The figures given for the number of inhabitants (which is higher in summer) have varied since the middle of the xix[th] century from 2000 to 4000; Neale (1850): 3500 inhabitants, Kotschy (1862) and Czernik (1875): 2000 inhabitants, Oberhummer-Zimmerer (1896): 2100 inhabitants, Schaffer (1902): 4000 inhabitants, Janke (1902): 2000—3000 inhabitants, Sepan, *op. cit.*, p. 26: 4200 inhabitants. The latest estimate, in Baedeker (1910), 7500 inhabitants, if correct, implies a considerable increase in the town in the last decade. Its present inhabitants are according to Baedeker mostly Muslims; earlier travellers e. g. Eli Smith (1848), H. Petermann (1853), and Oberhummer-Zimmerer say that two thirds of the population are Turks and one third Armenian.

Oriental authors of the middle ages never, as far as I am aware, mention Beilān. The statement of the *Sālnāme* of the Wilāyet of Ḥalab (year 1300 = 1882, p. 88) and of Adhana (year 1308 = 1890, p. 188) that Beilān was first founded by the Ottoman Sulṭān Sulaimān II (1520—1566) is therefore quite credible. This new foundation is said to have filled a previously unoccupied area called *ʿAin Nīl*. The emendation of Nil (نيل) to Bail (بَيْل) and the derivation of the word Beilān from the earlier name of the *Bail*-spring (*ʿAin*) seems quite obvious. In this case the explanation, quite satisfactory in itself, of the word Beilān from the Turkish "pass" (Turk. *bel*, *beil*), which is proposed e. g. by Sachau (*Sitz. Ber. der Berl. Akad.*, 1892, p. 322) would be quite unnecessary. The conjecture put forth by Leake and H. Petermann that Beilān (or the above *Bail*) represents a corruption of the Greek πύλαι (cf. Σύριαι πύλαι below) is not to be entirely despised.

Beilān owes its importance entirely to its favourable situation on the most important route over the Amanus, which attains its highest ridge a short distance from the town (1¼ miles to the south, ¾ hour). It was naturally fitted to be the halting station for all caravans from the Syrian-Mesopotamian hinterland (in particular from Ḥalab, Anṭākiya and ʿAintāb) journeying to the sea, usually to Alexandretta (Iskanderūn); there is therefore a large Khān here. The various estimates of the height of the pass differ in a rather remarkable degree; the figures given vary from 1980 feet (Murray) and 1996 feet (Baedeker) as minimum to 2900 feet (Oberhummer-Zimmerer) as maximum; most authorities give it as between 2220 and 2290 feet; cf. Janke, *op. cit.*, p. 158, note 96.

The pass of Beilān is by no means the only pass over the Amanus; there are, for example two other routes over the mountain from the ʿAmk [q. v., p. 331], the plain of Antioch to Iskanderūn; cf. M. Hartmann, *op. cit.*, p. 10. But these and all the other passes (cf. Janke, *op. cit.*, p. 34 *et seq.*) are in the main mere footpaths and cannot in any way be compared in comfort with the Beilān pass, which is suitable for vehicular traffic. Trade and commerce between Syria and Cilicia have therefore from the earliest times been carried on over the Beilān pass and even armies have crossed it. Σύριαι πύλαι (Ptolemy, Strabo) or Portae Syriae (Pliny) also Ἀμανίδες πύλαι (Portae Amani cf. Pauly, *Realencykl. der klass. Altertumswiss.*, vi. 1547; Pauly-Wissowa, *op. cit.*, i. 1723). Alexander the Great marched through these "Syrian Gates" to his victory at Issus 333) B. C.) and Roman armies in later times frequently used them.

In antiquity and the middle ages the principal place nearest the ridge of the Beilān pass was Pagrae (Πάγραι), Arabic Baghrās [q. v., p. 570]. The pass seems usually to have been called after Baghrās in mediaeval times; cf. Balādhorī (ed. de Goeje, p. 164, 167), and the passages mentioned by M. Hartmann, *op. cit.*, p. 88, note 1. The name *ʿaḳabat al-nisāʾ* = "Pass of the Women" is also given (Balādhorī, p. 167 = Yāḳūt's *Muʿdjam*, ed. Wüstenfeld, iii. 692, p. 12), the origin of which is ascribed to a tragic incident. When Maslama, son of the Caliph ʿAbd al-Malik, was traversing the Beilān road on his expedition against ʿAmmūriya (Amorium), one of his wives is said to have fallen into a ravine there. The Beilān pass was included in the area of the Syrian military frontier instituted against Byzantium, cf. G. le Strange, *Palestine under the Moslems* (1890), p. 37; the Caliph al-Muʿtaṣim (218—227 = 833—842) further strengthened the road over the pass, as Balādhorī tells us (p. 167), by a specially built stone wall.

The name *Baghrās beli* (for *bel* see above) appears occasionally at the present day (cf. Ritter, *op. cit.*, p. 1829) but the usual name now is, since the rise of Beilān, *Beilān bel(i)* or *gedik(i)* (a synonym of *bel*).

In military history this mountain pass last figured in the struggle between Turkey and Muḥammad ʿAlī as the scene of a decisive battle (30[th] July 1832) in which the Egyptian Crown Prince Ibrāhīm Pāshā utterly defeated the Turkish forces who were posted in positions easily defended on the height which dominate the valley, and by this victory became the undisputed lord of all Syria. Since that time the Beilān pass has also been called *Top-Yol* = "Cannon road" or *Top-Boghāz* = "Cannon-pass".

That part of the Amanus range which is traversed by the Beilān pass bears the name of Beilān-Dagh; the names Nawlū-Dagh and Giawr (Djawūr-Dagh) are also applied to it, however; cf. thereon M. Hartmann, *op. cit.*, p. 36-37 and above p. 312.

BEIRAMĪYA. [See BAIRAMĪYA, p. 595.]

BEISHEHR, pronounced Bīshehri by the Turks, a Ḳaḍā and small country-town in the Sandjaḳ of

Ḳoniya of the Wilāyet of the same name. The place at the present day has 2000 inhabitants, who are all Muslims, and is situated on the lake of the same name. According to Ramsay, *Historical Geography of Asia Minor*, p. 390 the town is built on the site of the ancient Karallia. The lake is the Karalis of the ancients and not the Trogitis as Hammer (*Gesch. des osmanischen Reiches*, i. 160) supposes. The Turkish town was founded by the Seldjūḳs, apparently by ʿAlā al-Dīn I and was one of the six chief towns of Ḥamīd in the xivth century. It was acquired in 1381 by purchase by Murād I when his son Bāyazīd was married to the daughter of the prince of Kermiyān, and it became definitely an Ottoman possession in 1443 under Meḥmed I. Even at the present day the town enjoys a certain importance for the surrounding country on account of its fertile soil and the richness of the lake in fishes, which are sent to Ḳoniya and Nigde, as well as for its weekly market on the Saturday. The population suffers much from fever.

BEIYŪMĪYA. [See BAIYŪMIYA, p. 599.]

BEKR. [See BAKR, p. 604.]

BEKRĪ MUṢṬAFĀ AGHA, the name of a drunkard, who lived in the reign of the Sulṭān Murād IV (1623-1640) and is said to have led him into habits of drunkenness; the name *bekrī* therefore in Turkish still commonly means a drunkard. In the popular literature the drunkard Bekrī Muṣṭafā Agha is a favourite character. Ewliya even gives the title of a Taḳlīd: *Bekrī Muṣṭafā and the Blind Arab Beggar*. Jacob who has collected the material referring to him, recently published a Karagöz play from Brusa in the *Zeitschr. der Deutschen Morgenl. Ges.*, liii. (1899), p. 621.

Bibliography: Jacob, *Traditionen über Bekri Mustafa Aga* in *Keleti Szemle*, v. (1904), 271; Menzel, *Bekri Mustafa bei Mehmed Tewfik*, *ibid.*, iii. (1906), 83. (F. Giese.)

BEKTĀSH, an Islāmic saint who has given his name to the Derwīsh order of the Bektāshīya. The accounts of Ḥādjdjī Bektāsh Walī are quite legendary. He is said to have belonged to Nīshāpūr and to have been a pupil of Aḥmad Yesewī. The date 738 A.H. (1337 A.D.) given as the year of his death is merely the numerical value of the word Bektāshīya. On the *Maḳālāt* (sayings) ascribed to Ḥādjdjī Bektāsh and the *Wilāyat-nāma*'s which relate his miracles cf. Jacob, *Bektaschijje*, p. 4, 7 *et seq.* The tradition that Bektāsh blessed the Janissaries under Orkhān appears to be a story based on the later connection of the Bektāshīs with the Janissaries.

The story that Bektāsh himself founded the Derwīsh order which bears his name is equally unworthy of credence. Jacob (*Bektaschijje*, p. 24) has advanced the supposition that the real founder was the Bālim Bābā (died 922 A.H. = 1516 A.D.) mentioned in the list of Grand Masters as "second Pīr", and that he has been connected with a mythical Bektāsh Walī. At any rate we can certainly prove the existence of the Bektāshī order under this name only from the beginning of the xvith century. The religious movement which has been organised by the order in the west of Turkey, is however older and even after the foundation of the order has spread far and wide beyond its limits. The Ḳizil-bāsh ("Red-heads") in the east of Asia Minor and in Kurdistān and the ʿAlī-Ilāhīs (those who deify ʿAlī) in Persia agree in their main doctrines with the Bektāshīs; they lack only the rigid organisation of the order. In some districts, particularly in Albania and in the Sandjaḳ Tekke in Lycia (Jacob, *Türkische Bibl.*, ix. 13 *et seq.* has shown that the Takhtadjis discussed by Luschan in the *Archiv f. Anthropologie*, viz. are Bektāshīs) the Bektāshīs are a sect rather than an order, for almost the whole population belongs to them.

In the doctrines of the Bektāshīs the Ṣūfī ideas of the original equality of all religions and of the worthlessness of external ceremonies play an important part. Many Christian, Gnostic and pagan elements have remained incorporated in Derwīsh doctrines.

Although they for the most part profess to be Sunnīs and some few indeed possess Sunnī characteristics (on their illogical attitude to Abū Bakr, cf. Jacob, *Bektaschijje*, p. 42), the Bektāshīs are, as far as one may reckon them adherents to Islām, extreme Shīʿites and revere ʿAlī, while the names of the first three Caliphs are tabooed. They recognise the twelve Imāms and among them particularly revere Djaʿfar al-Ṣādiḳ. The fourteen *Maʿṣūm-i-pāk* ("the pure, innocent children") mostly ʿAlid martyrs also enjoy the highest esteem. Graves of saints are held in such honour that prayers offered at them may take the place of ritual worship. The Bektāshīs have often settled at old and famous places of pilgrimage and thereby made them their own.

The important Christian elements which are found among the Bektāshīs, give rise to the hypothesis that they were originally Christians who have only adopted the external ceremonies of Islām. They have the doctrine of the Trinity, in which ʿAlī has taken the place of Jesus (Allāh-Muḥammad-ʿAlī). At their meetings in the *Maidān odasy*, the hall of assembly in the monastery (*Tekkiye*; these correspond to the *Zikr* of other Derwīsh orders, although the Bektāshīs themselves deny that they have *Zikr*), they celebrate a sort of communion with the sharing of wine, bread and cheese. This particularly recalls the Artotyrites who are connected with the Montanists (cf. Jacob, *Fortleben von antiken Mysterien und Alt-Christlichem im Islam*: *Der Islam*, ii. p. 232 *et seq.*). They also confess their sins to their *Bābās* (chiefs) and receive absolution. The drinking of wine is not forbidden on account of the importance of the vine in the cult. Their women also do not wear veils. One section of the Bektāshīs lives in a state of celibacy. This was probably originally the rule; a particularly strong testimony to the non-Islāmic origin of the sect. The ascetic tendencies were chiefly manifested in the Ḳizil-Delī Sulṭān Monastery, at Dimetoḳa which was very powerful in the most flourishing period of the order and was broken up in 1826.

The Bektāshīs have adopted the mystic doctrine of numbers (for the most part Pythagorean) from Faḍl Ḥurūfī, whose *Djāwidān* in the Persian text and in the Turkish edition by Ferishteoghlu, called *ʿAshḳ-nāma* is held in high esteem by them, particularly the cult of the number four

and they have further developed the system independently. They also believe in the transmigration of souls.

The whole order is governed by the Grand Master (*Čelebī*) who resides in the mother-monastery (*Pīr ewi*) at Ḥādjdjī Bektāsh (between Ḳirshehr and Ḳaiṣarīye; cf. the picture in Jacob's *Bektaschijje* and the description in Edmund Naumann's *Vom Goldenen Horn zu den Quellen des Euphrat*, p. 193 *et seq.*). This office is not necessarily hereditary but it has been transmitted from father to son for the last 150 years. The narrower circle of celibate Derwishes has since the middle of the xvi[th] century had a head of its own, the *Mudjerred babasy*, who also resides in the mother-monastery. The head of a single monastery (*Tekkīye*) is called *Bābā*, the ordinary Derwish *Mürīd*, a layman attached to the *Tekkīye*, *Müntesib*.

The dress of the order of Bektāshī's consists of a white cloak and a white cap (*sikke*), composed of several, usually twelve triangular pieces (corresponding to the number of the Imāms), around which the Bābās wear the green turban (cf. the pictures in Jacob, *Bektaschijje* and *Türk. Bibl.*, ix.). The amulet of stone called *Teslīm Tash* is usually worn round the neck. The double axe and long staff complete the full dress. Those Bektāshīs who practice celibacy wear earrings as a distinguishing mark.

The political importance of the Bektāshīs depended on their close connection with the Janissaries, whose chaplains they were. The Janissaries are often actually called Bektāshīs or sons of Ḥ. B. (*Hādjdjī Bektāsh oghullary*). An official representative (*wekīl*) of Ḥādjdjī Bektāsh lived in the barracks of the 94[th] Orta. The Bektāshīs were accessory to many of the Janissary revolts. Therefore when Maḥmūd II annihilated the Janissaries in 1826, the blow also fell on the order allied to them. Many monasteries, especially those in the neighbourhood of Constantinople, were destroyed and their occupants for the most part banished, although some of their heads, e. g. of the monastery of Merdivenkjöj, were executed (cf. Esʿad Effendi, *Üss-i Ẓafer*, Constantinople 1243).

Although the order has never regained its former powerful position, it has again become more and more flourishing and at the present day is much stronger and more widely diffused than is generally supposed. On the monasteries in the neighbourhood of Constantinople see the appendix to Jacob's *Bektaschijje*. In Asia Minor besides the "mother monastery", ʿOsmandjyk in the north and in the west the Tekkīye at the grave of Baṭṭāl at Eskishehir are important centres. There are a few isolated monasteries outside of Turkey e.g. on the Muḳaṭṭam in Cairo.

Bibliography: The chief work is Georg Jacob, *Die Bektaschijje in ihrem Verhältnis zu verwandten Erscheinungen: Abhandl. der K. Bayer. Akad. der Wissensch.*, i. Kl., xxiv. Part iii. (München, 1900) — cf. the authorities given there p. 4—12; do. *Beiträge zur Kenntnis des Derwischordens der Bektaschis: Türkische Bibliothek*, ix. (Berlin, 1908). To the Oriental literature given by Jacob, *loc. cit.*, should be added the recent apologetic work *Bektāshī Sirri* by Rifḳī (Constantinople, 1326 *et seq.*). (Tschudi.)

BEL (T.), the "saddle of a mountain", "pass", occasionally appears in place-names.

AL-**BELĀDHORĪ**. [See AL-BALĀDHORĪ, p. 611.]

BELBĪS. [See BILBĪS.]

BELFORT. [See ḲALʿAT AL-SHAḲĪF.]

BELGRADE (Slav: "white town"), the capital of Servia. The possession of Belgrade was often fought for by the Ottomans and the Holy Roman Empire. It was first besieged in 845 (1441) in the reign of Sulṭān Murād II by ʿAlī Beg, son of Ewrenos, and hemmed in by land and water but supported by the Hungarians and defended by Prior Zowan of Ragusa, it was able to hold out for six months, till it was relieved by the intervention of Wladislaus, king of Poland. Muḥammad II (860 = 1456) made great preparations for the capture of the town; he had collected over 300 cannon. Nevertheless the attempt to storm the town, led by the Sulṭān himself, was brought to naught by the bravery of Hunyadi and Capistrano (21[st] July). — The fortress was not won for the Turks till the reign of Sulṭān Sulaimān on the 25[th] Ramaḍān 927 (29[th] August 1521). Belgrade had to surrender, for its supplies were exhausted. The Bulgarians who belonged to the garrison were allowed to found a village in the forest to the north of Constantinople; they called it Belgrade and it bears this name to the present day. The older Belgrade was besieged in 1099 (1688) by the Imperial troops and given up by the Ottoman governor Yegen ʿOthmān without a fight. Two years later the Grand Vizier Köprülü Muṣṭafā Pasha regained it. Laṭīfī who was present on this occasion jocosely calls the town *Bi'r al-Aghrāḍ*: "spring of bad intentions" (Seybold, *Tübinger Arab. Handschriften*, p. 70 *et seq.*). The imperial forces attempted in vain to recover it in 1105 (1693). Five years later, Belgrade was destroyed by a great conflagration (5[th] Djumādā I, 1110 = 9[th] November 1698). After Prince Eugene had won the battle of Peterwardein (5[th] August 1716), the Imperial troops appeared before the town. An attempt by the Turks to dislodge them led to a great battle under the walls of the town in which they were utterly routed (16[th] August, 1717). On the second day after this battle the fortress surrendered on being granted honourable terms. On the Peace of Passarowicz (21[st] July 1718) it passed to Austria. In 1152 (1739) the Ottomans again undertook a siege of the town and by the Treaty which bears its name, it was ceded to them (27[th] Djumādā I, = 1[st] September). In the beginning of the reign of Selīm III, the Austrians recaptured Belgrade after the battle of Fakshānī (1203 = 1789) and held it till the Treaty of Sistow (4[th] August 1391). The mutiny of the Janissaries of the garrison (1803) facilitated the revolt of the Servians (1806). They made Belgrade, which had been captured by Ḳara-Georg, their capital, till they were defeated in 1813, by Redjeb, Pasha of Widdin. Belgrade received a Turkish garrison, which only vacated the citadel in 1867, after bombarding the town (which had again been the capital since 1832) in 1862.

Bibliography: Hammer-Purgstall, *Gesch. des Osman. Reiches*, see Index; Jouannin, *Turquie*, p. 362, 366, 390. (Cl. Huart.)

BELĪG, the name of two Turkish poets, who are often — even by Turks — confused or mistaken for one another, viz:

1. Ismāʿīl Belīg of Brusa. Little is known of his life. Like his father he was an Imām in Brusa, where he was born and died. Accounts differ as

to the year of his death. Sâmi gives 1140, Ḥādjdjī Khalfa, 1143, and once by a slip 1133, and the biography at the end of his printed works (see below), 1142 or 1143 A. H. The latter = 1730 or 1731 A. D. is the most likely. Of his poetical works which are said to be in Brusa, are there mentioned: 1. *Gül-i ṣadberk*, a commentary on a hundred Ḥadīths; 2. *Sergusht-nāme*; 3. *Seb'a-i seyâre*, according to Ḥādjdjī Khalfa composed about 1125. A *Shehrengiz* is attributed to him by Ḥādjdjī Khalfa, but this is probably a confusion with the other Belig. He is said in addition to have written a biography of poets. His chief work however is the *güldeste-i riyāḍ-i 'irfān we waṣfiyāt-i dānishmeran-i nādiredān*, printed in Brusa in 1302. It consists of five parts (*gülbun*) in which the most prominent people of Brusa (Sulṭāns, princes, scholars, poets, musicians etc.), are dealt with. At the end of the printed work is a biography of the poet.

Bibliography: Ḥādjdjī Khalfa; Sâmi, *Ḳāmūs* and the above mentioned biography.

2. MEHMED EMIN BELIG of Larissa (Turkish Yenishehr). Little is known of his life either. He belonged to the 'Ulemā and on his death in 1172 = 1758-1759 held the office of Ḳāḍī in Eski Zaghra. He was not a great celebrity, and the verdict of Turkish critics on him varies. Hammer does not mention him, but Gibb rightly emphasises his importance. His Ḳaṣīdas, Ghazels and his *Sāḳināme* are of mediocre quality. His most original work is his four poems: *Ḥammamnāme*, *Kefshgernāma*, *Khaiyāṭnāme* and *Berbernāme*. In these, influenced by Mesīḥī's *Shehrengīz*, he describes the beautiful youths engaged in the trades mentioned in the bazaar and at the same time gives us very interesting glimpses of the life of the time. In these he writes relatively pure Turkish. Unfortunately his fondness for archaic expressions renders his style cumbrous.

Bibliography: Gibb, *A History of Ottoman Poetry*, iv. 117 *et seq*. In the Index he is confused with the preceding. (F. GIESE.)

BELVOIR, a fortress of the Crusaders in South East Galilee, high above the valley of the Jordan, called KAWKAB by the Arabs, the modern KAWKAB AL-HAWĀ. The castle, built by King Fulko about 1140, passed in 1168 into the possession of the order of Knights-Hospitaller. In 584 (1188) it fell into the hands of Ṣalāḥ al-Dīn after a long resistance. Al-Mu'aẓẓam 'Īsā of Damascus demolished the fortress in 615 = 1219, as he did not feel strong enough to hold it against the Franks. It thus ceased to play an active part in history although it is still occasionally mentioned in later documents. In its considerable ruins there is a village at the present day.

Rey, *Les colonies Franques de Syrie*, p. 436 *et seq*.; Guérin, *Galilée*, i. 129—132; *Survey of Western Palestine*, *Memoirs*, ii. 85, 117—119. (R. HARTMANN.)

BENARES, or BANĀRAS (also called KĀSĪ), a holy city of the Hindus, United Provinces, on the r. bank of the Ganges: pop. (1901) 209, 331, including 53,566 Muḥammadans, of whom many belong to the Djulāhā or weaving class. Some descendants of the Mughal Emperors of Dihlī reside here. Benares is not prominent in Muḥammadan history, except for Awrangzīb, who razed to the ground the most sacred Hindu temple and built on its site a mosque, whose white domes and minarets are still the most conspicuous object from the river. He also changed the name of the city to Muḥammadābād, in which style it appears on his coins. There are other mosques and *dargahs*, constructed from Hindu or Buddhist materials, which date back to the 14th cent.

Bibliography: M. A. Sherring, *The Sacred City of the Hindus* (1868); E. B. Havell, *Benares* (Calcutta, 1906); *Benares Gazetteer* (Allahabad, 1909). (J. S. COTTON.)

BENDE, the Persian word for slave. The number of slaves still in existence in Persia is gradually decreasing. The black slaves come from Africa and are introduced while still young, usually via Masḳaṭ and Būshire, more rarely via Arabia and Baghdād. A distinction is made between Abyssinians (*Ḥabashī*) and negroes (*Zangī*); the former are preferred for their beauty and intelligence. The few white slaves are Turkomans or Balōčis. Some Kurdish tribes sell their daughters to Persian families, but these girls are usually afterwards married to a member of the family and therefore cease to be slaves. This formerly was also the case with Circassians. The Russian occupation of the Caucasus and the English cruisers in the Indian Ocean have now put an end to this trade. Besides, the climate of Persia is not fitted for negroes, who cannot rear their children there and certain illnesses carry off half-breeds in the second or third generation. — The eunuchs also are slaves or freedmen. They are all black, the last white eunuch, who had been taken in the Caucasus wars, having died in 1856. — The word *bende* has having taken the meaning of "servant" and is used as a polite way of referring to oneself: *bende* = "your servant", i. e. "I", similarly in Turkish *bende-ñiz*.

Bende is also the *Takhalluṣ* or penname adopted by Mīrzā Muḥammad Rāḍī of Tabrīz, a Persian poet who was employed as calligrapher and secretary in the government offices in the reign of Fatḥ 'Alī Shāh. He died in 1222 (1807) and was buried at Nedjef. He has left poems in Arabic, Persian and Turkish, as well as some writings in prose (*Zīnat al-tawārīkh*) dedicated to the Shāh.

Bibliography: J. E. Polak, *Persien*, Vol. i. p. 247. — Riḍā-Ḳulī-Khān, *Madjma' al-Fuṣaḥā'*, Vol. ii. p. 80. (CL. HUART.)

BENDER, the chief town in Bessarabia, on the right bank of the Dniester. This town was built on the site of a Genoese fortress dating back to the viith century. It belonged to the princes of Moldavia, then to the Turks, who changed its old name of Tigin to its present one. The Swedish king Charles XII (called *Demir-bash*, "Iron Head" by the Turks) fell back here after the battle of Pultawa (8th July 1709). He had a house built outside the walls and it was in it that he was besieged and taken prisoner (12th February 1713) when he declined to leave Bender. It was taken by assault after a two months' siege by the Russians on the 27th September 1770; occupied again in 1789 and in 1806, it was definitely ceded to Russia by the treaty of Bucharest (28th May 1812).

BENDER, in Persian, a harbour on the sea or on a large river; it has passed into the Arabic of Syria and Egypt with the sense of place of trade or exchange of moneys (Bocthor, Vollers) and even workshop (Cuche); *Shāh-bender* is the Syndic of the merchants; the Ottomans use the word to designate their consuls abroad. *Bender-i Gez* is the name of the harbour of Astarābād on the Caspian Sea. (CL. HUART.)

BENDER-ʿABBĀS, a Persian seaport situated in 56° 20′ East L. (Greenw.) and about 27° North Lat. in the south-east of the province of Fārs, near the Kermān frontier. From its geographical position it is the most advantageous point on the whole Persian coast; for, built on the northern bend of the strait of Hurmūz (Ormūz) the town with the islands in front of it, commands the entrance to the Persian Gulf as well as to the Gulf of ʿOmān. Just opposite is the long island of Kishm (Arabic Ṭawīla = the "long") which is only separated from the continent by a narrow channel, called Clarence Strait on the maps. To the east of Kishm are two small islands, the southern of which is called Lārek and the northern Hurmūz [q. v.].

In antiquity and during the greater part of the middle ages, the capital of this district was the town of Hurmūz (in the classics: Ἁρμόζεια, Armysia etc.; Arabic Hurmūs) half a day's journey distant from the shore. On account of the constant raids of robber nomadic tribes, the then prince of the town transported the inhabitants in the beginning of the viii[th] (xiv[th]) century to the adjacent island of Djarūn, which has since then generally been known by the name of Hurmūz (Ormus). The abandoned settlement on the mainland (Old-Hurmūz) soon fell into decay (its ruins still exist at the modern Mīnāb), while the newly founded town on the island (New-Hurmūz) quickly attained considerable importance and became the chief emporium on the Persian Gulf and an international harbour for the wares of the Orient. When at the time of the decline of the rule of the Ak-Koyūnlū [see above, p. 225, 441] and the rise of the Ṣafawīs, there was no strong authority in South Persia, the Portuguese under Albuquerque seized the island of Hurmūz in 920 (1514) and were left in undisturbed possession of this valuable island for over a century. When the English appeared in the Indian Ocean, they, being jealous of the influence of Portugal, supported the efforts of Shāh ʿAbbās I, to whom this flourishing European colony at the gates of his kingdom was a thorn in the flesh. With the help of a fleet of the East India Company he took the island from the Portuguese and utterly destroyed the town in 1301 = 1622; cf. above p. 8ᵃ. The successor of New Hurmūz was the already very old settlement of Gumrun (Gomron), directly opposite the island which had been used by the Portuguese as an occasional landing-place on the mainland, where English, French and Dutch factories had recently been built.

The older Arab geographers mention a fishing village on this site, called Sūrū (Shūrū) whose inhabitants, as Muḳaddasī tells us, carried on commerce with the opposite coast of ʿOmān. Mustawfī in 740 (1340) calls this place Tūsar (?). As to the name Gumrun or Gombron, which with many variants (Gambron, Kamron, Komorun, Combarao etc.) was the usual one among Portuguese and European travellers of the xvi[th] and xvii[th] centuries, it can hardly be explained, as has often been done, as derived from the Turkish as meaning Custom House (corruption of the Turkish *gümrük* = toll) but is rather connected with the earlier name of the island of Hurmūz, Djarūn or perhaps better Djarrūn; according to the latter reading of the name, Gamrūn (Gumrūn) would have to be regarded as a form of the name in which nasalisation has taken place in compensation for the loss of the double consonant (a phonetic change for which other examples could be quoted). Just as the name of the Hurmūz on the mainland had been transferred to the island of Djarūn, the latter older name seems to have been transferred to the town on the neighbouring coast.

Shāh ʿAbbās gave to the village of Gumrūn which soon became prosperous on the fall of New Hurmūz, the name of Bender-ʿAbbās = "Harbour of ʿAbbās", which it still bears. But the plan of the Persian king to make his foundation the centre of a foreign trade which was to be gradually developed, could not be fulfilled on account of the disinclination of his subjects for nautical affairs. As the successor of Hurmūz, Bender-ʿAbbās inherited and filled for over a century its role of a maritime commercial centre, though in a much more modest degree. A dangerous rival arose to it in the harbour of Bushir (Bushehr, q. v.) called into being by Nādir Shāh, which soon obtained the commercial supremacy of the Persian Gulf.

In 1795 Saiyid Sulṭān, the ruler (Imām) of Maskat (in ʿOmān) received Bender-ʿAbbās with the adjoining lands along the coast (from Lingah to Yashk) on lease, and it was retained till 1854 when the Persians again occupied the town. Saiyid Saʿīd, the then prince of Maskat was able in 1856 to obtain an extension of the terms of the lease for a further 20 years but under much less favourable conditions. The town and district is now ruled by a Persian governor of its own. The importance of Bender-ʿAbbās has increased again considerably in the last decades so that it now ranks as the second commercial town on the Persian Gulf immediately next to Bushir. The revival of Yazd and Kirmān and the cultivation of opium, which is being constantly extended, has contributed much to the continual increase in the volume of trade there. The commerce is almost entirely in the hands of native and Indian merchants. On the amount and development of exports and imports cf. the statistical tables given in Stolze-Andreas, *op. cit.*, p. 76, 77 and M. v. Oppenheim, *op. cit.*, p. 321, note 2, which are based on material from English official sources. Almost all the eastern provinces of Persia as well as eastern Fārs send their products to Bender-ʿAbbās; traffic by land is rendered possible by three roads of which two run in a north-westerly direction from Shīrāz (the one viâ Lār and the other viâ Ṭārum) while the other runs north in a fairly straight line to Kirmān.

The harbour of Bender-ʿAbbās is the next best to that of Bushir; it is on the whole well sheltered, being only open to the winds from the south-east; but the flatness of the coast makes the landing of large ships difficult. The passage through the above mentioned Clarence Strait is rendered difficult by shoals and by the mangrove islands which are submerged at flood-tide. The anchorage at 3 fathoms deep is one mile from land and at 4 or 5 fathoms, two miles.

As to the modern town, its appearance, with its low mud houses, many of them in ruins, suggests a village rather than a town. Only fragments remain of the earlier fort and the European factories. The custom house (*gümrük*) dates from the Portuguese period. The Serāi, the residence of the governor is a modern building of one story. Gardens surround the town on both sides; the coast is in part overgrown with mangrove bushes which afford a welcome fuelsupply. In the background rises a high mountain wall with peaks rising to about 10,000 feet.

The climate of Bender-'Abbās is usually described as very unfavourable. The heat of the sun in summer is terrific; to escape the burning heat, the population for the most part migrate in the hot season to Mīnāb lying just at the foot of the mountains (near the ruins of Old Hurmūz) or to other high lying places in the neighbourhood. For purposes of ventilation the houses are usually furnished with towers. The supply of drinking water is also bad; the large cisterns built by Shāh 'Abbās I are still pointed out.

The inhabitants are for the most part Arabs. They have a reputation for being unruly, and in conjunction with the Arab tribes of the hinterland, give much trouble to the Persian government by their unrest. Under 'Abbās I the population is said to have risen to 20,000 souls; even in 1674 Chardin numbered the houses at 1400—1500, which would give 15,000—20,000 inhabitants. Since the middle of the xviii[th] century the number has declined, a fact which is partly to be explained by the dangerous competition of Bushir, which began at that time. Dupré's estimate of 20,000 (in 1808) is certainly much too high, Fraser (1820) estimated the number at 3000—4000, Pelly (1864) 500 houses (about 4000—5000 inhabitants), Stolze-Andreas: 8000 inhabitants; the latest figures of Lovini (7000 inhabitants) and Curzon (5000 inhabitants) seem to show a recent increase in the population there; on the last two estimates see Supan in *Petermann's Geogr. Mittеil.*, Erg. Heft, n°. 35 (1901), p. 26. The already mentioned unhealthy condition of the town forms a serious obstacle to its ever attaining any great prosperity.

BENG (Sanskr. *bhangā*, Avest. *banha*, Pahl. *mang*, *bang*, hemp), strictly the name of various kinds of hemp (*Hyoscyamus niger*), is in Persia however the popular name for the *Hashīsh* (*Cannabis Indica*). It is sold in the form of leaves or pills (*ḥabb*). Such pills are also pounded up and placed in fresh milk from which "Beng-butter" (*raughan-i beng*) is prepared. A tea-like infusion (*beng-āb*) is also prepared from the Beng (1—3 grammes a dose), which is regarded as an excellent remedy for acute urethritis. — The Arabs have borrowed the word in the form *bendj*.

BENGAL, the largest and most populous province of British India, comprising the lower courses of the Ganges and Brahmaputra rivers, together with their joint delta. The name does not appear in any Muḥammadan writer before the end of the 13[th] cent. As a Muḥammadan province, its area and limits were practically the same (though there were frequent changes on the frontier, especially on the W. and the N. E.), from that period until the end of the 16[th] cent., when it was regularly assessed by the orders of the Emperor Akbar. "On the south the province was bounded by the swamps of the Sundarbans and by the dense forests which then made Orissa practically inaccessible: the eastern frontier followed the river Megna northward, and then turned eastward to include Silhat; thence it passed along the lower slopes of the hill country of southern Assam to a point on the Brahmaputra near Dhubri. The northern boundary extended from this point westward along the south of the Kuč Bihār state, and thence along the Terai to the river Kosi. To the west and north-west the frontier extended little beyond that river, but under some of the earlier Sultans the kingdom of Bengal included North Bihār as far as the river Gandak. South Bihār belonged to Bengal only for a short time, and the more permanent boundary line of Bengal to the south of the Ganges started from Colgong, including Rādjmahāl, passed to the confluence of the Barākar and Dāmūdar rivers, and then followed the western boundaries of the modern districts of Hūghlī and Howrah down to the point where the Rupnarāyan river runs into the Hūghlī. Speaking generally, therefore, the dominions of the Sultans of Bengal included most of the present districts of the Bardwān, Presidency, Dhākā, Rādjshāhī, Bhāgalpūr and Patna (north) Divisions, and embraced an area of about 75,000 square miles." (H. N. Wright, *Catalogue of Coins in the Indian Museum*, Calcutta, ii., 140).

In English official usage the word Bengal has borne many significations. At first it was applied to the area ceded in 1765 by the *dīwānī* grant of Bengal, Bihār, and Orissa, forming the original Bengal Presidency. Then it was extended to the acquisitions gradually made in Northern India, until it came to be coextensive with all British territory that was not included in one of the other two Presidencies of Madras and Bombay. This signification lasted until quite recent times for the Bengal army and the Bengal civil service. In 1854 a lieutenant-governor was appointed to the province of Bengal in its original sense, which

had hitherto been administered by the Governor-General in person, or in his absence by a deputy governor. Finally, in 1895, the eastern portion with Assam was constituted a new lieutenant-governorship, leaving the old name for the portion round Calcutta, together with the sub-provinces of Bihār, Orissa, and Čhoṭā Nāgpur. In this official sense, the area of Bengal is 148,592 sq. m.; pop. (1901), 54,662,529. But, for the purposes of the present article, Eastern Bengal may be included, adding 50,000 sq. m. to the area and 25 millions to the population.

At the time of the Muḥammadan conquest, the greater part of Bengal was ruled by a Hindu dynasty of the Sen family, with its capital at Nadiya, while Bihār was under a Buddhist dynasty of the Pāl family, who had been driven from Bengal by the Sens. The Muḥammadan conquest of Bengal was almost contemporary with their conquest of Hindustan, being accomplished during the lifetime of Mu'izz al-Dīn Muḥammad Ghōrī. About 1197, one of his generals, Muḥammad Bakhtiyār Khildjī, conquered Bihār, and two years later advanced into Bengal with a small body of horse. The last Sen king, named Lakshman, fled ignominiously from his capital, and thenceforth all Hindu resistance seems to have ceased. For more than a century (1202—1339) Bengal was ruled by a succession of 25 Muḥammadan governors, more or less subordinate to the Dihlī emperors, with their local capital at Gaur (or Lakhnauti), while for the later portion of this period Eastern Bengal revolted against Dihlī; and for a second period of two centuries (1338—1537) there are reckoned 24 independent Muḥammadan kings, who mostly also had their capital at Gaur, or at the neighbouring cities of Pandua and Tāndā, now all alike in ruins. In 1537 Humāyūn conquered Bengal, only to be driven out shortly afterwards by his rival, Shēr Shāh. In 1576 Bengal was finally annexed to the Mughal empire by Akbar; and then follows a third period of nearly two centuries (1576—1757) during which about 30 governors each acknowledged his appointment from Dihlī, though latterly such recognition was only nominal and the office tended to become hereditary. Akbar's Rādjpūt governor, Mān Singh, fixed the capital at Rādjmahāl on the Ganges, not far from Gaur, whence it was soon removed to Dacca (then on the Brahmaputra), for convenience in dealing with Portuguese and Arakanese pirates. In 1704, Murshid Kuli Khān transferred it again to Murshidābād, on a branch of the Ganges then frequented by European traders. After the battle of Plassey (1757), the Nawwābs of Bengal became dependent on the British, without any express surrender of sovereignty other than contained in the *dīwānī* grant from Shāh 'Ālam. Their descendant now ranks as the first nobleman in Bengal, with the title of Nawwāb Bahādur of Murshidābād.

In 1901, before the division of the province, the number of Muḥammadans in Bengal was 25½ millions, being two-fifths of the number in all India. The proportion to the total population was 33%, though in some districts of eastern and northern Bengal the proportion rises above 75%, and in the new province of Eastern Bengal and Assam the proportion is 56%, compared with 10% in Western Bengal and only 1% in South Bihār. This irregular distribution can best be explained by assuming that the inhabitants of the delta belong to aboriginal races, who were never admitted into the higher castes of Hinduism and therefore received Islām readily from their conquerors. It has been proved by anthropometric evidence that the vast majority of the Muḥammadans in Eastern Bengal cannot be distinguished physically from their Hindu fellows; and it is also true that they preserve to this day many Hindu observances and superstitions. It may be added that, apart from some slight amount of conversion, they certainly increase at a quicker rate than the Hindus, which is attributed to their occupation of a more fertile region, their use of a more nourishing diet, and their permission of widow marriage. Almost without exception they belong to the Sunnī sect, and describe themselves as Shaikhs, which is the usual name throughout India for the descendants of converts. The number of Saiyids in 1901 was 236,468, of Paṭhāns or Afghāns 423,740, and of Mughals only 18,678. The doctrines of the Wahhābī sect were introduced into Bengal early in the 19th cent. by two separate movements. One of them, derived from Saiyid Aḥmad Shāh of Rāē Barēlī and subsequently headed by Mawlānā Karāmat 'Alī [q. v.] of Djaunpūr, had its headquarters at Patna. The other, which was mainly local in Eastern Bengal and confined to the lower classes, is associated with the name of Dudhu Miyān, a weaver of Farīdpur district. Their followers are generally known as Farāʾiḍī [q. v.] or followers of the *farāʾiḍ* or obligatory ordinances of the religious law. Apart from Hindu superstitions, certain forms of worship not based on the Ḳorʾān are common among the Muḥammadans of Bengal. Such are the adoration paid to departed *pīrs*, often of local origin, and the homage of certain mythical personages, among whom Khwādja Khiḍr stands preeminent as the saviour of seamen from shipwreck.

(J. S. Cotton.)

BENGHĀZĪ (so called after a Marabout whose grave is farther to the north on the sea shore) is the economic capital of Cyrenaica and the seat of the government of the Turkish province of Benghāzī. It lies at the north end of a bay open to the west, not more than 10 feet deep and badly protected by a dilapidated breakwater (the

larger vessels have to anchor at a considerable distance out and in winter cannot unload in rough seas) and is enclosed on the east by a salt bed dry in summer, on the southeast by a sand-flat which is often inundated, so that it is only on the north that there is good ground communicating with the continent through a palm-grove. The surrounding country is very fertile, but is not yet cultivated very intensively and so appears desert and dreary. There are no ancient ruins, with the possible exception of some foundations of a quay but the soil is rich in sculptures, vases, inscriptions and coins. The simply built mosques, synagogues, churches and one or two-storied dwelling houses call for no remark. In the west of the town is a large Kaṣr, in which the Mutaṣarrif lives and the military also are quartered. There are Turkish and Italian Post Offices, an Italian school, and branches of the Banco di Roma. From its situation — although the harbour which year by year becomes more silted up and the lack of drinking water which has to be brought in from the country, are grave disadvantages — Benghāzī commands on the one side the trade of the eastern part of the Golf of Sidra and the northern coast, on the other the commerce of the western two thirds of Cyrenaica and the caravan routes by the Awdjila where the roads branch, *a.* to Kafra, the oasis south east to Tibesti and Wadāi, *b.* to Murzūḳ. Through political changes in the central Sūdān it temporarily attained (to the detriment of Tripolis) a larger sphere of commerce but soon gradually sank again to its former insignificant position so that at the present day its inhabitants may be estimated at from 12,000—15,000, of whom the greater part are Muhammadan Libu Berbers, strongly mixed with negro blood, 1200 Maltese, Greeks and Italians as well as a few other Europeans and 2500 Jews. The imports comprise cotton stuffs, linen, olive oil, soap, candles, petroleum, sugar, coffee, rice, tea, wood, and charcoal; the exports consist mainly of cattle and corn to Malta and Crete, wool to Marseilles, and sponges. Large quantities of salt have been obtained by the government from the *Sebkhas*. The exports averaged for the years 1902—1906: £ 455,700 in value annually and the imports only £ 214,000. There is a regular fortnightly service of steamboats from Malta via Tripoli to Alexandria and from Alexandria to Malta four times a month. The settlement of Euhesperides founded about 500 B. C. by the king's (Arkesilaos IV) party, probably on an older native site, was called Berenice after the occupation of Cyrenaica by the Ptolemies of Egypt in honour of the wife of Ptolemy III. Its temporary prosperity, largely due to the large number of Jews there, gradually declined as the land became desert, and did not revive till the middle ages during the period of Genoa's supremacy in the Mediterranean, when it was known by the name of Berniḳ (Yāḳūt, *Mu'djam*, i. 595; Idrīsī, ed. Dozy and de Goeje, 132 *et seq.*). With the decline of the Italian republics, Benghāzī also began to sink from its prosperity; the stirring times of the Corsairs did not help it either and in 1820 the town now called Benghāzī had only 2000 inhabitants.

(EWALD BANSE.)

BENĪḲA, the government offices of the Makhzen in Marocco. The Benīḳa are large rooms in one of the courts of the Dār al-Makhzen in Fās (Fez) or wherever the Sulṭān is for the time. The viziers reside there with their secretaries and see that business is dispatched. The following nine officials are each entitled to a "benīḳa": the *Wazīr* (Minister for the Interior), the *Wazīr al-Baḥr* (Foreign Minister), the *Amīn al-Umanā'* (Minister of Finance), the *Amīn al-Dakhl* (in charge of the revenues), the *Amīn al-Shkāra* (entrusted with the expenditure), the *Amīn al-Ḥisāb* (Accountant-General), the *Wazīr al-Shikāyat* (Minister of Justice) and the *Ḥādjib* (Chamberlain, who has control of the Sharīf's household). Each benīḳa therefore has a minister in the European sense of the word at its head (Aubin, *Le Maroc d'aujourd'hui*, Chap. xi.).

(G. YVER.)

BENJAMIN. [See BINYĀMĪN.]

BERĀR, a province in India, lying between 19° 35' and 21° 47' N. and 75° 59' and 79° 11' E., bounded on the north by the Sātpurā hills, on the east by the river Wardhā and on the south by the river Pengangā. The population (in 1901) was 2,754,016, of whom 212,040 were Musalmans. Berār was first invaded by the Muhammadans in 1294 but was not permanently occupied until 1318, when it became part of the Dihlī empire. It formed one of the provinces of the kingdom of the Bahmanī Shāhs [q. v.], and constituted the dominions of the 'Imād Shāhs [q. v.] when 'Imād al-Mulk, governor of Berār, proclaimed his independence in 1490, in the reign of the Bahmanī king Maḥmūd Shāh II. When the 'Imād Shāhī dynasty came to an end in 1575, Berār passed under the sway of the Niẓām Shāhī kings of Aḥmadnagar, and in 1596 was annexed to the Mughal empire. When in 1724 Āṣaf Djāh, who had been appointed viceroy of the Dakhin with the title of Niẓām al-Mulk, made himself independent, Berār ceased to be a province of the Mughal empire and from that time has been nominally subject to the Niẓāms of Ḥaidarābād. By the treaty of 1853 Berār, together with some other districts, was assigned to the East India Company, its revenues being employed partly in the payment of debts contracted by the Ḥaidarābād State and partly in maintaining the Ḥaidarābād contingent. In 1902 the British Government entered into a fresh agreement with the Niẓām, whereby the rights of the Niẓām over Berār were reaffirmed and the province was leased to the Government of India at an annual rental of 25 lakhs of rupees (£ 166,666).

BERĀT. [See BARĀ'A, p. 651.]

BERBER, a town in the Anglo-Egyptian Sūdān, lying on the Nile in 18° 1′ North Lat. and 33° 59′ East Long. (Greenw.). The town which as "the key of the Sūdān" formed the starting point for the roads to Assuan and Sawākin, was the seat of a *Mek* nominally dependent on the Fundj kingdom of Sennār, till it was forced to recognise the suzerainty of Egypt in 1821. In 1884 it fell into the hands of the Mahdī Muḥammad Aḥmad and Gordon became completely invested. In 1897 it was abandoned by the Mahdists and occupied by Kitchener. It became the centre of the *Mudīriya* of the same name. In 1905 however the seat of government was transferred to al-Dāmer. The railway from 'Atbara to Port Sūdān and Sawākin (Suakim), opened in 1906 seriously affected the caravan traffic from Berber and destroyed the importance of the town.

BERBERĀ, the chief town and harbour of British Somaliland, lying in 10° 26′ North Lat. and 45° 4′ East Long. (Greenw.). The *Periplus maris Erythraei*, as well as Ptolemy and Cosmas give the name Βαρβαρικὴ ἤπειρος or Βαρβαρία to the coast of the Land of Frankincense; the town itself is probably identical with Μαλάω ἐμπόριον. The older Arab geographers know only a land of the name of Berberā, after which the Gulf of 'Aden is called *Baḥr Berberā* or *al-Khalīdj al-Berberī*. The land owes its name to the natives who are called Βάρβαροι, *Berbera* or *Barābir*. The people whom Yāḳūt (iv. 602), describes as being between the Zandj and the Ḥabash are apparently the ancestors of the modern Somalis. Whether the Berberā ever were Christians is doubtful, although the Christian Abyssinians extended their power for a period over a part of the Berberā coast. In Yāḳūt's time Islām had already penetrated among them, although he describes the Berberā as negroes with barbarous customs (poisoned arrows, castration of prisoners). Ibn Sa'īd (died 1286) says that they had adopted Islām for the most part and Ibn Baṭṭūṭa describes them as Shāfi'is which they are to-day.

Ibn Sa'īd seems to be the first to mention the town of Berberā. Little is known of its history. Native tradition tells of numerous arrivals of missionaries of Islām. The stories are to be connected with the great advance of Islām which had been going on since the xiiith century and the striving for independence in the outer Abyssinian provinces. Berberā must have been a part of the kingdom of Adal-Zaila' [q. v.] in the xivth century. Varthema who travelled in the beginning of the xvith century speaks of a Muhammadan prince of the "Island" of Barbarā. Presumably the reference is to the kingdom of Harar under Aḥmad Grañ, who fought against the Abyssinians, who were supported by the Portuguese with the help of the Turks, who had been ruling in Yaman since the time of Selim I. The claims of the Turks as lords of South Arabia to suzerainty scarcely appear to have affected the independence of the Somali coast in later times. The town of Berberā, which on account of internal disturbance gradually declined, acquired an evil reputation through the massacre of the crew of the Mary Ann in 1825 and the attack on Burton in 1855. In 1855 the Egyptians occupied Berberā but they had to retire in 1884 on account of the Mahdist rising whereupon England occupied Zaila' and Berberā. In recent times, particularly in 1902, the hinterland of Berberā has been disturbed by the "Mad Mulla".

Travellers in the middle of the xixth century describe Berberā as a poverty-stricken settlement of miserable huts, the population of which was considerably multiplied however during the period of the great markets from November to April. Ships from the Arabian coasts, the Persian Gulf, and from India trafficked in slaves and cattle. In the Egyptian period a new town was founded at a little distance from the native one; it was burnt down however in 1888 and rebuilt by the English in European fashion. The market, which had sunk into insignificance, is beginning to regain its importance and the town the ordinary population of which is from 10,000—20,000, numbers 30,000 inhabitants during the market. The not inconsiderable foreign trade (the chief exports are hides) is chiefly carried on by English steamers.

BERBERS.

HISTORY.

The Berbers have been settled in North Africa since remote antiquity. The ancient historians and geographers mention them under various names; the Nasamones and Psylli in Cyrenaica and Tripolitania; the Garamantes leading a nomadic life in the Sahara; the Makyles and Maxices in the Tunisian Ṣāḥel, the Musulani and the Numidians in the eastern Maghrib, the Gaetuli on the borders of the desert and the high tablelands and lastly the Mauri occupying central and western Maghrib. The establishment of foreign colonies, Phoenician, Carthaginian, and Greek exercised but a slight influence on all these peoples except perhaps in the immediate neighbourhood of Carthage. Divided into numerous rival tribes, although sometimes capable of uniting at once against a foreign foe, they were never able to form powerful or permanent states. At the period of the Punic wars, although the east remained in a state of anarchy, in the centre and the west the beginnings of political organisation may be traced in the formation of the Massyli, Massaesilli, and of Mauretania. The genius of Masinissa, aided by the support of Rome, enabled this prince to reunite under his sway all Numidia, and in the space of a few years to create a kingdom comprising all the Berber tribes from the Mulūya to the Gulfs of Syrtis. This kingdom had but an ephemeral duration however. It disappeared in 46 B. C. and Eastern Numidia became a Roman province. When reconstituted some years later, the kingdom of Numidia was merely a Roman protectorate. The duration of the Mauretanian kingdom created by Augustus in 17 B. C. for Juba II was still briefer, for it became a Roman province again in 42 A. D.

The domination of Rome in Africa lasted till the v[th] century of our era. During this period the Berbers were assimilated in the province of Africa and in Numidia but they were hardly affected in the great mountains and high tablelands on the borders of the Sahara and in Mauretania. The Romans were at most satisfied with compelling the Berbers to pay tribute and furnish auxiliaries and left the government of the tribes to the local chiefs (*reguli*). The spirit of independence among the Berbers was not stifled however. It manifested itself sometimes in rebellions, led by natives more or less Romanised such as Tacfarinas (17—29 A.D.) and sometimes in inroads by the peoples of the desert or the hardly civilised tribes of the interior. Such were the raids led by the Nasamones and Garamantes in the reigns of Augustus and Domitian; the insurrections of the Mauri in the reigns of Hadrian, Antoninus and Commodus; of the Gaetuli during the period of military anarchy; the rising of the Quinquegentiae (Kabili of the Djurdjura at the end of the third century A.D.). The gradual weakening of Roman authority is marked by a more and more energetic reaction on the part of the Berbers. The natives asserted their individuality by the adoption of heterodox doctrines such as Donatism, so that the religious disputes which desolated Africa in the iv[th] century are in many respects a war of races. The rising of the "Circumcelliones" appears to have been a kind of Berber "Jacquerie". Revolts like those of Firmus (372—375) and of Gildon (398) give another example of the hot-bloodedness of the Berbers. But the Berbers were no more able now than they had been in ancient times to unite against the common enemy and displace him. Their hostility to the Romans only facilitated the Vandal conquest. The Germanic conquerors, like the Romans, had to reckon with the Berbers. Although Geiserich succeeded in restraining them by enrolling them in his armies, his successor had to carry on a perpetual warfare with them. Mauretania, Kabylia, the Awrās, and Tripolitania remained independent. The Byzantines who held Africa for over a century (531—542) after their conquest of the Vandals, were not more fortunate. Native chiefs, Antalas in Byzacene, Yabdas in the Awrās, Masiinas in Mauretania, resisted Solomon, the governor sent by Justinian and he had great difficulty in overcoming them. After the death of this general, who was slain in an expedition against the Levates (Lawāta in Tripolitania), the situation in Byzantine Africa became very critical. It was only with the assistance of the Berbers of the Awrās that John Troglita was able to repel the invasion of the Lawāta. But Byzantine authority was not recognised by all the native peoples. With the exception of Byzacene, the former province of Africa (Tunisia), and the northern part of the modern province of Constantine, the towns on the coast and some strongholds in the interior, the Berbers were everywhere independent. At this time they formed three main groups: 1. in the east, the Lawāta (Howāra, Awrigha, Nefzāwa, Awraba) occupying Tripolitania, Cyrenaica, the Djerīd and the Awrās; 2. in the west the Ṣanhādja scattered through central and western Maghrib (Ketāma in Little Kabylia, Zwāwa in great Kabylia), Zenāta on the Algerian coast between Kabylia and Shelif, Benū Ifrēn from Shelif to Malūya, Ghumara in the Rīf, Berghawāta, Maṣmūda on the Atlantic coast of Morocco, Gezūla on the Great Atlas, Lemṭa in the south of Morocco, Ṣanhādja "wearers of the *lithām*", nomads in the Eastern Sahara; 3. the Zenāta in parallel divisions on the borders of the plateaux from Tripolitania to the Djebel ʿAmūr, and gradually advancing towards central and western Maghrib.

The arrival of the Arabs scarcely affected this state of affairs. Their first expeditions were merely raids and left no trace other than the devastation caused by marauding bands of Muḥammadans. The foundation of Ḳairawān (670) gave the Muhammadans a permanent base for operations but ʿOḳba's expeditions through the Maghrib were merely raids rather than a real conquest. The towns still occupied by the Byzantines did not fall to the Moslem leader, nor did the mountain fastnesses, the natives of which he could not overcome. The latter were so far from being subdued that one of their chiefs, Kusaila, was able to surprise and kill ʿOḳba at Tehūdha, to drive the Arabs out of Ifrīḳiya and found a Berber kingdom comprising the Awrās, the south of the department of Constantine, and the greater part of Tunisia (687—690). Kusaila could not hold out for long, however, and in spite of the resistance offered by the Berbers in the Awrās, which has been embodied in the legendary figure of *Kāhina*, the Moslems were finally victorious by the end of the first century A. H. The conversion of the Berbers to Islām, begun with no great success by ʿOḳba, was carried out in the century following. It was effected less by conviction than by self-interest, as the Arab generals hit on the plan of enlisting the Berbers in their armies and thus winning them to their religion by the hope of booty. The Berbers formed the nucleus of the armies which, under the leadership of Arab generals or even Berbers like Ṭāriḳ, completed the conquest of the Maghrib in a few years and in less than half a century effected the conquest of Spain.

These friendly relations did not long subsist however between the Arabs and the Berbers. The latter complained that their services were poorly recompensed and that, although Muslims, they were treated more like inferiors than equals. They also left the paths of orthodoxy and adopted Khāridjī (Abāḍī, and Ṣufrī) doctrines, which indeed appealed more to their democratic sentiments; then they rose in revolt against the Arabs. The movement began in the west, led by Maisara a water-carrier in Tangier, in 122 (740). In spite of a victory by the Emir Khālid over the rebels and the death of their leader they swept through the whole of the Maghrib and even crossed into Spain. The Arabs suffered momentuous defeats such as that of Kulthūm at Bagdūra in 123 (741). They were driven out of Ḳairawān which was plundered by the Warfadjūma, who were followers of Ṣufrī doctrines, in 139 (756). The Abāḍī Howāra under Abu ʾl-Khaṭṭāb [q. v.] were victorious over the Warfadjūma and became masters of Tunisia and Tripolitania. The authority of the ʿAbbāsid Caliph was for the moment of no avail in Africa.

But the Berbers, divided against themselves, were not capable of taking advantage of the situation and following up their success. The destruction of Abu ʾl-Khaṭṭāb's army by Syrian troops, gave Ifrīḳiya back to the Arabs in 144 (761). Forty years of bloody fighting and numberless battles (300 according to Ibn Khaldūn) were required before they could again assert their sway in the

eastern Maghrib. The remaining lands were quite lost to them; states with a Berber population under leaders of Arab descent were set up in various places, quite independent of the ʿAbbāsid Caliph; for example, the kingdom of Tāhart (Tagdemt) founded by the Imām Ibn Rustam with the survivors of the Abāḍīs, who had fled from the eastern to the central Maghrib; that of Sidjilmāsa under the Banū Midrār, that of Tlemcen, founded by Abū Ḳarra, the leader of the Banū Ifren, that of Nukūr in the Rīf; that of the Berghawāta on the shores of the Atlantic Ocean and lastly the kingdom of Fās founded at the beginning of the ixth century by the ʿAlid Idrīs II with the help of Berber tribes, the Miknāsa, Sodrāta and Zwāgha. Only the semi-independent dynasty of the Aghlabids (802—908) recognised the suzerainty of the ʿAbbāsids. They raised from the Berbers their troops for the conquest of Sicily, but they had, on the other hand, to put down frequent rebellions by the natives in Tripolitania, Southern Tunisia and in the Zāb and Hodna territory.

The resistance of the Berbers to the Arabs really was quite as keen as before. It was strong enough to assure the supremacy of Shīʿite doctrines in the Maghrib, although these were radically opposed to the Khāridjī doctrines adopted by the Berbers only the century previous. The Ketāma furnished the *Dāʿī* Abū ʿAbd Allāh with the troops who fought the Aghlabids and laid the basis of the Fāṭimid power for the *Mahdī* ʿUbaid Allāh. The Fāṭimids were never able however to subdue all the Berbers. Although they succeeded in suppressing the Imāmate of Tāhart, they could not prevent the Idrīsids from retaining their power in the western Maghrib; they were unable to make vassals of the Maghrāwa and Zenāta, who out of hatred for the Fāṭimids placed themselves under the Omaiyads of Spain; and lastly they had to put down the revolt of the Khāridjīs led by Abū Yazīd "the man with the ass", (942—944), a revolt which endangered their power and from which they only emerged victorious with the help of the Ṣanhādja of the Central Maghrib. Besides, the Fāṭimids soon turned their attention to the east and as soon as the Caliph al-Muʿizz was firmly established in Egypt they lost interest in the Maghrib. North Africa again fell a prey to various Berber tribes, no one of which was able to overcome the others. In the east the Ṣanhādja displaced the Ketāma and supported the Zīrids, who were governors of Ifriḳiya and Tripolitania. In the west, since the Idrīsids had fallen, the power passed into the hands of the Zenāta, who were at first only governors for the Spanish Omaiyads but became independent princes. In the beginning of the xith century the Zīrid kingdom broke up; the Ḥammādid kingdom was formed in the centre of the Maghrib the rulers of which recognised the authority of the Caliph of Baghdād and first made their capital at Ḳalʿa, then at Bidjāya (Bougie). The state of anarchy, resulting from the quarrels of the Berbers among themselves, was complicated in the middle of the xith century by the invasion of the Hilālī tribes, the immediate results of which were the devastation of Ifriḳiya and a part of the Maghrib and the ultimate consequences a radical modification of the ethnography of Northern Africa.

Just when the confusion had reached its height, two Berber dynasties, the Almoravids and the Almohads, each proclaiming different reformed religious doctrines, succeeded in establishing their preponderance for a time in Northern Africa. The triumph of the Almoravids was that of the Lemtūna, who had up till then led a nomadic life between Southern Morocco and the banks of the Senegal and Niger. Though converted to Islām in the third century of the Hidjra, they had for long been Muhammadans only in name. They were taught the true doctrine and orthodox practices by the Marabout Ibn Yāsīn and resolved to carry the true faith to the negroes of the Sūdān and the untutored peoples of Southern Morocco. Their conquests soon stretched beyond those limits. Their chief Yūsuf b. Tāshfīn founded Marrākush in 1062, subdued all Morocco and central Maghrib up to the Ḥammādid frontier in a few years, drove back the advancing Christians in the Iberian peninsula by the victory of Zallāḳa in 1086, deposed the Andalusian Emīrs and became sole master of Muḥammadan Spain. The decline of the Almoravids was as rapid as their rise. Exhausted by their own victories and vitiated by contact with a superior civilisation, these Berbers from the Saḥara rapidly disappeared. In their place the Caliphs had to employ Christian mercenaries, while they themselves, heedless of orthodoxy, scandalised good Muhammadans by their conduct. The Maṣmūda of Deren, converted to Unitarianism (*Tawḥīd*, whence the name Almohads) by the preaching of Ibn Tūmart, rose against them. Led by a Kūmiya Berber, of great ability, named ʿAbd al-Muʾmin they soon put an end to the Almoravid rule, without much difficulty. The empire founded by the Almohads was even larger than that of their predecessors. Although ʿAbd al-Muʾmin was not actually able to conquer all Spain, he destroyed the Ḥammādid kingdom of Bidjāya, the Zīrid kingdom of Ifriḳiya, drove the Christians out of the ports they had seized and made himself lord of all the country between the Gulf of Sidra and the Atlantic. A great Berber empire thus extended over the whole of northern Africa, though it was likewise soon to crumble away. The Almohad Caliphs were no more able than the Almoravids to keep to the paths of orthodoxy; one of them, Ibn Maʾmūn, went so far as openly to curse the memory of Ibn Tūmart and raged against true believers. The rivalry of the diverse Berber factions also hastened the break up of the empire founded by al-Maʾmūn. The quarrels of the Maṣmūda and the Kūmiya bathed the Moroccan court in blood; the tribes of the Maghrib favoured the efforts of the Banū Ghāniya or attempted to make themselves independent. A century after the death of ʿAbd al-Muʾmin, the last of his descendants, Abū Dabbūs came to an inglorious end as leader, of a robber band in 1279. By this time the Maghrib was partitioned among new powers, the Marinids in Fās, the ʿAbd al-Wādīs at Tlemcen, and the Ḥafṣids in Tunis. None of these dynasties was able to impose its authority on the others, nor even to make itself respected by its own subjects. In Morocco the tribes of the mountain regions were in a constant state of revolt against the Marinids; in central Maghrib, the Banū Wemannū of Warsenīs (Wānsherīsh), the Zwāwa of the Djurdjura, the Ḳabyls of the province of Constantine, the peoples of the Zāb and the Djarīd threw off the yoke of the princes of Constantine, Bidjāya and Tunis. The same thing happened at

the oases of the Djebel Nefūsa and the Awrās. The inability of the Berbers to unite to form a great empire was once more clearly demonstrated. The only way to trace their history from this period is to write the history of the various tribes. The task is still farther complicated by the changes brought about by the Hilālī invasion. In the plains and plateaus the Berber population has been mingled with the Arabs; they have gradually abandoned their language and customs; they have even lost their ancient name which has been replaced by that of some individual from whom they trace their descent; they have become quite arabicised. Other groups have escaped this transformation, owing to the difficulty of access to their abodes such as those of the Awrās, of Kabylia and the Rīf; they have been augmented by fugitives of all sorts, who have taken refuge with them; some have even gone down to the Sahara so that since the xivth century "the Berbers form a cordon on the frontier of the land of the negroes parallel to that formed by the Arabs on the borders of the two Maghribs and Ifrīḳiya" (Ibn Khaldūn, *Histoire des Berbères*, transl. de Slane, ii. p. 104). This disintegration was accompanied by the retreat of Muḥammadan civilisation. It is no exaggeration to say that many Berber groups returned to a semi-savage state and only retained the most rudimentary notions of Islām. Their reconversion to Islām was the work of Marabouts in the xvth and xvith century, who very often claimed to come from the south of Morocco, from the legendary Sāḳiyat al-Ḥamrā, which popular imagination believed to be a regular nursery of missionaries and saints. The influence of these pious individuals was so great that whole tribes at the present day regard them as their ancestors. Some few groups escaped their attention; such perhaps are the Zekkāra whose religious customs and beliefs, so different from those of the Islām of the Maghrib, have given rise to the strangest and most far-fetched hypotheses.

Geographical Divisions.

At the present day the Berbers are no more a homogeneous mass than they were in the first centuries of the Hidjra. Their descendants still form the basis of the population of North Africa but they have been so greatly modified by the Arab element that it is often impossible to recognise them. They have lost all memory of their real origin, as well as their language and customs. Some considerable groups have however persisted in the mountains and in the desert, that is to say, in those regions into which the Arabs could not penetrate or which they did not succeed in retaining. They are linked up by smaller groups more or less related which are rapidly disappearing and survive as evidence of the ancient ethnographic conditions. It is besides, very difficult to give an exact list of these tribes. The retention of the Berber dialect appears to be the most reliable criterion, although some tribes which claim to be of Berber origin have ceased to speak the language of their ancestors.

Speaking generally, it may be said that the density of the Berber communities increases from east to west and from north to south. They are scattered over an immense area, bounded on the east by the oases of Sīwah, the desert of Libya, and the mountains of Tibesti, on the west by the Atlantic, on the south by the Hausa countries, the middle course of the Niger and the Senegal.

Tripolitania and Cyrenaica. There are some Berber tribes in the mountains of the land of Barḳa, in the Ghuryān and the Djebel Ifren and in the Djebel Nefūsa, the religious stronghold of the Abāḍīs. They are also met with in the oases of Sīwah, Awdjila, Saḳna, Timissā and in the Fezzān. We may also mention the Modjabra of Awdjila and the Urfella of the environs of Tripoli who, although they speak Arabic, say they are of Berber stock.

Tunisia. Berber dialects are spoken among the Djerbī (island of Djerba), who, like the Nefūsī, belong to the Abāḍī sect, among the Troglodytes of the Maṭmāṭa and amongst some of the inhabitants of the Djebel (Sened). The other Berber tribes of the protectorate, such as the Khūmīr have been arabicised.

Algeria. Kabylia in the north, the Awrās in the south-east have been the great centres of resistance of the Berbers. Although Little Kabylia was more affected by the Arabs than Great Kabylia, Berber dialects are still spoken in the neighbourhood of Burdj bū ʿArarīdj, in the Babars and among the Telāghma, ʿAbd al-Nūr and the Zwāgha of the district of Seṭīf. In the Djurdjura Kabylia the Zwāwa have preserved a dialect which is regarded as the purest of all those in the north; they are connected with the tribes of the Wādī Sāḥil (Wed Sahel) in the east, the Banū Khalfūn in the west. In the south and east of the department of Constantine, the Ūlād Khiar (Sūḳ Ahrās), the Harakta (ʿAin Baiḍā), the Nemengha (Tebessa) are allied to the Shāwiya of the Awrās. In the Tell of Algiers and Oran, some insignificant groups, which are rapidly disappearing, found in parallel lines from east to west, such as the Usara, the Zaʿatīt, the Banū bū Yaʿḳūb, and the Merāghda of the Blida Atlas. The Benī Menāṣer between Miliana, Cherchell and Tenes; the Harāwa of Teniet al-Ḥād (Thanīyat al-Aḥad), the Banū bū Khannūs of the Warsenis, the Aʿshāsha of the Dahra, the Bei Halima of Frenda, the Banū Snūs and the Banū bū Saʿīd of the Algero-Moroccan frontier. In the Algerian Sahara, the oases of Wād Rīgh and Wārglā, the oases of the Mzāb peopled by Abāḍī Berbers, the Ḳṣūrs of Moghar, of Bū Semghūn of ʿAin Ṣfisifa mark the road between South Constantine and South-east Morocco.

Morocco. Of all the parts of North Africa Morocco is the one in the which the Berber element is the most important. It predominates in the Rīf, in the various ranges of the Atlas, in the Sūs, in the valleys of the Wād Nūn and of the Draʿa and in the oases. All the Berber tribes are not yet known however. A certain number of principal groups may nevertheless be distinguished. 1. The peoples of the lower Mulūya territory (the Banū bū Zeggū and Banū Iznāsen, who form a connecting link between the Berbers of Algeria and those of Morocco). 2. The tribes of the Rīf (Gueleʿia [Ḳalaʿa], Temsaman, Boṭṭwa, Banū Uriaghen, B. Saʿīd). 3. The Berāber, occupying, in the centre of Morocco, the lands round the sources of the Mulūya, the Sebū, the Wād Draʿa (Darʿa) and scattered between Fās and Miknāsa to the north and the Tafilelt to the south-east, with a few outposts as far away as the Atlantic coast area near Rbāṭ and Slaʿ (Sale). The Zayan, Banū

Mtir, Banū Mguild, Aït Sherroshen, Aït Atta and Aït Yafälman (a confederacy of the Berāber) also belong to this group. 4. The Shilḥa, occupying the land to the south of Mogador and Marrākush, the valleys of the Great Atlas Range and of the Anti-Atlas, the Atlantic coast, the valleys of the Sūs, and Wād Nūn and the upper course of the Wād Tansift and the Wād Drā'a (Dar'a). (To this group otherwise but little known, belong the Ihalen of the Ḥāḥa country, the Gundafa, the Guezūle, Glawa of the Great Atlas, the Huwāra, Aït Yaḥyā of the Sūs, the Shtūka, Aït Iklef, Aït Isimūr of the Sāḥil etc.). 5. The inhabitants of the oases (Tafilelt, Figuig and Twāt). In these oases, alongside of a Berber population in the strict sense of the world, there lives a dark skinned people, the Harafīn, whose origin has given rise to controversies, some writers regarding them as black Berbers, and others as a cross between Berbers and negroes, analagous to the Melanogaetuli of the ancients, while others again say they are the last representatives of a negroid race called the "Garamantic". 6. The Berbers of the Sahara. The ancient tribes of the Zenāta and Zenāga who ruled in the western Sahara in the early centuries of the Hidjra, were overcome by and made tributary to the Arab element so that the word Zenāga has become almost a synonym for "slave". Some tribes have nevertheless retained their independence; the Ulād Dalim, descendants of the Almoravids, the Duiḥ (Idā ū 'Aïsh) and the Meshdūf of Tagant. Lastly a certain number of sections of the large tribe of Trārza in the north of Senegal, notably the Ulād Daimān and the Tendagha still speak Berber. In the Central Sahara, the Tuāreg preserve one of the most characteristic of Berber types. They class themselves into two great groups; the Northern Tuāregs (the Azdjer of Tassili and Ahaggar, occupying the massive mountains of the same name), and the Southern Tuāregs (Awellimids, Kël Wï (Kel Wi) of the Aïr); the latter are already mixed with negro elements.

Manners and Customs.

Their manners and customs are with their language the distinguishing mark of the Berber tribes. Although we possess but scanty notices of certain Berber groups which have as yet been little studied, such as those of Morocco, the information available is sufficient to prove the identity of their customs with those of groups which are well known such as the Ḳabīls, the Shāwiya of the Awrās and the Tuāregs. The most striking characteristic is the part played by custom in legislation. Among the Berbers the source of their laws is not, as with the Arabs, the Ḳor'ān. Although they have adopted Islām, they have sharply separated dogma from law. The Ḳor'ān is the undisputed authority on all that pertains to faith or religious hygiene but only affects civil and criminal law in so far as it does not come into contact with the law of custom. The proportion in which the two elements combine varies according as the tribes have been more or less deeply affected by Arab influence. This statement of Hanoteau's with reference to Kabylian law, is apparently true for other Berber groups also. One result of the profane origin of Berber law is that it may be modified, while Muḥammadan law, taken from the Ḳor'an, a divine and immutable book, is essentially unalterable. As to the customs themselves, they fall into two classes; *a*) *'āda* or general usages transmitted from generation to generation by oral tradition; it is applied in Ḳabylia to all that concerns individual rights and the transference of property; and *b*) the *'urf* or local usage. The modification of principles consecrated by the *'āda* requires the consent of the tribes; the alteration of prescriptions sanctioned by the *'urf* requires only the approval of the village assembly. The Morocco Berbers likewise have a particular code (*izerf*) for each tribe or each locality, whose prescriptions, almost always in accord with ancient tradition, are settled by the *anfālis* or assembly of the elders. Infractions of civil and criminal law have given rise to a regular system of fines called *ḳānūn*, which varies in the different villages; it is sometimes written down but as a rule is committed to memory by the elders. Tariffs of the same kind appear to exist among some of the Berāber tribes of Morocco, the Aït Atta and the Aït bū Zīd, for example. Many ordinances consecrated by custom, go back to a very ancient period, anterior even to Islām, for example the application of the *talio* in criminal law; the right of *reḳba* or private vengeance allowed to the family of a murdered man; the institution of the *'anāya*, which is the safeguard granted to an individual or body of strangers; and that of the *debiḥa*, the immunity, sometimes hereditary, of an individual or body of people. There is however one Berber group whose laws present striking differences to those we have just mentioned, that is the Abāḍi group of the Mzāb, whose laws are of religious origin and are distinguished from the orthodox laws by their exceeding severity.

The social life of the Berbers likewise differs in many respects from that of the Arabs. One of the most striking features is the place of woman amongst them. She enjoys greater consideration and influence than among the Arabs; for example, she is not forced to wear the veil; monogamy is the rule among Berber families; and lastly among the tribes which have best preserved the original such as the Tuāregs traces are found of an organisation of the family based on matriarchy.

The political organisation of the Berbers varies in the various districts. Two principal types may be distinguished however: 1. The aristocratic type: a noble and warlike class under whom is a class of vassals and serfs, sometimes with a marabout class intermediary. 2. The democratic type: a municipal republic making its own laws and governing itself, for example the villages in Kabylia, the Awrās and the Moroccan Atlas. In these latter public business is carried on and magistrates elected by the general assembly of the people (*djamā'a*, *anfālis*). This form of government however looks more democratic than it really is for the influence in the assembly is in the hands of the old men and powerful individuals. In the Mzāb country power was in the hands of a clerical aristocracy (*'azzaben*). Each of these little republics, divided by the rivalries of its "sofs" (*ṣuff*), or parties grouped round an important individual is very jealous of its independence. In former times in Kabylia there was a practically permanent state of war between the various villages and tribes; in Morocco this is still the case. The individualistic spirit of the Berbers prevent them at the present day as in the past

from forming political groups of any importance; although they are capable of forming temporary or permanent confederacies they never rise to the conception of any more complete organisations.

(G. YVER.)

RELIGION.

In ancient times the religion of the Berbers appears to have consisted of a number of local cults corresponding to the division into tribes. The objects of their worship, about which we have only sparse and incomplete details were undoubtedly natural objects: caves, rocks, springs, rivers and mountains (e. g. the Atlas) to which should be added the celestial bodies, at least the sun, the moon and certain stars. The veneration in which these objects were held may still be traced in certain superstitions. It is certain that since the Punic epoch, there has not only been a borrowing of foreign divinities but also an assimilation of the latter to the native deities. Judaism also made numerous converts and if it did not play the role which some have tried to credit it with, it was certainly disseminated throughout the whole of North Africa; indeed with the exception of the descendants of the Jews, who were banished from Spain in the xv[th] century, the greater part of the indigenous followers of Judaism, are descended from converts made before the introduction of Islām. Judaism paved the way for Christianity which soon, as elsewhere broke off from it, and flourished in spite of the strenuous struggle it had to wage with paganism, and the internal dissensions which rent it within. This is not the place to write its history (cf. Dom Leclercq, *L'Afrique chrétienne*, Paris, 1904, 2 Vols.; Monceaux, *Histoire littéraire de l'Afrique chrétienne*, Paris, 1901—1909, 3 Vols., in course of publication); it will be sufficient to note that it gave the Berbers an opportunity to unite against Roman rule and that they eagerly adopted the heresies opposed to the doctrine of the Church of Rome. The same thing happened after the Muḥammadan conquest, only the name of their adversaries was changed. We do not exactly know the details of the conversion of the Berbers to Islām; we only know that they renounced it twelve times and that had they found stronger support than the Byzantine or the ephemeral Visigothic kingdom, their resistance would have had quite another result. Islām did not finally triumph till the xii[th] century of our era; it was at this date that the last of the native Christians disappeared.

At the beginning of the conquest, the Berbers professed the orthodox doctrine, the only one they knew; but their spirit of independence soon showed itself in the adoption of Khāridjī doctrines, which laid the most emphasis on the conception of universal equality. That at heart they were really little concerned with religious dogma, is clearly shown by the fact that one section of them took the side of the Shīʿites, not only on behalf of the Idrīsids of Fās but of those who, steeped in Persian doctrines, saw in the *Imām* an incarnation of the Deity. This also explains why we have the Fāṭimids beside the Khāridjis, Ṣufris and Abāḍīs and the Ketāma the principal supporters of the Mahdī ʿUbaid Allah. A reaction brought the triumph of Sunnī doctrines with the Lamtūna (Almoravids) of the Sahara who had only been converted in the x[th] century; it was further emphasised by the Maṣmūda of the Atlas who founded the Almohad empire and exterminated those who still professed other faiths, Christians and Shīʿites except a few Khāridjī communities who were protected by the mountains, desert or sea. [See the articles KHĀRADJĪS, ṢUFRĪS, ABĀḌĪS, NOKKĀRĪS, NEFŪSA, RUSTAMIDS.]

From the point of view of religion, the Berbers, without distinction of sects, have only produced theologians with a fondness for disputation; they have produced no great original thinkers, whether orthodox or heterodox. It was the narrowest and least liberal of the four Musulman sects (next to that of Ibn Ḥanbal), that of Mālik b. Anas that became the most wide spread amongst them: this has remained the case to the present day. Sunna doctrines now reign supreme, more or less mixed with local superstitions, in particular the cult of marabouts, many of whom have replaced obscure indigenous divinities, except in a few Abāḍī communities which have survived in the Mzāb, in Djerba, and in the Djebel Nefūsa and who keep up a connection with their co-religionists in Zanzibar. In addition to official Islām, two attempts to found in Morocco a religion which was to bear the same relation to Islām as the latter professes to bear to Christianity, must be mentioned; in the Rīf the attempt of Hā-Mīm al-Moftarī (the "forger", q. v.) in the iv[th] century A. H. and in Tāmesnā, the modern Shawiyā, the religion founded by a former Khāridjī, Ṣāliḥ ibn Ṭarīf, among the Berghawāṭa [q. v.] which lasted from the second to the fifth centuries A. H.

LANGUAGE AND LITERATURE.

In spite of the impossibility of proving their common origin, there is a linguistic unity among the Berber languages and although we know but little of the ancient language it may be presumed that its dialects did not differ from one another more than the modern dialects. Inscriptions alone could give us the key; but unfortunately they have not yet yielded up their secrets and the attempts that have been made to decipher them have not given satisfactory results. They were collected by Faidherbe in 1870 (*Collection complète des Inscriptions numidiques*, Lille, 1870; cf. also J. Halévy, *Essai d'épigraphie libyque*, Paris, 1879); since then however not a year has passed without new ones being discovered (see the collections in the *Recueil de la société archéologique de Constantine*, in the *Revue africaine*, in the *Comptes de l'Académie des Inscriptions* etc.). The Lybian alphabet has hitherto been thought to be of Phoenician origin (cf. Halévy, *op. cit.*, p. 13—16); an attempt to connect it with one of the South Semitic alphabets, more particularly the Thamūdenian has not been successful (E. Littmann, *L'origine de l'alphabet libyque*: *Journ. As.*, x. Series, iv. p. 422—440); but the proposal to connect it with the Aegean alphabet still requires to be examined (cf. also Ph. Berger, *Histoire de l'écriture dans l'antiquité*, Paris, 1891, p. 324—332). It ceased to be used in the north after the Arab conquest and it is represented at the present day only by the Tuāreg alphabet. Besides the inscriptions the only materials we have for the study of ancient Berber language are a certain number of words preserved in a more or less corrupt form by the writers of antiquity, they are only of importance from the lexicographic point of view.

The same remark applies to those which have been handed down to us by Arab writers. One point may be confidently asserted however namely that the great invasion of the Banū Hilāl, which definitely established Arab power in the xith century in the north-west of Africa, had a considerable influence on the Berber language: some dialects disappeared; others were invaded by numerous words which may be easily distinguished from those which had been borrowed in previous centuries (cf. R. Basset, *Les mots arabes passés en berbère: Oriental. Studien, Th. Nöldeke gewidmet*, i. 429—443). A knowledge of the Guanche dialect, which was not exposed to the Arab invasion, would have to a certain extent made up for our ignorance of ancient Berber: unfortunately, all that we now possess of this dialect, spoken in the Canary Islands down to the xviith century, exists only in the corrupt form in which it has been transmitted by Spanish writers: all that remains has been collected by S. Berthelot (Parker Webb and Sabin Berthelot, *Histoire naturelle des Îles Canaries*, Vol. i. Part 1, Paris, 1832).

The Berber language, which belongs to the Kūshite or Ḥamitic family of language which is related to the Semitic group, is still spoken from the oases of Sīwa to the Atlantic Ocean and from the northern Niger to the Mediterranean but it is far from being the predominant language in this vast area. Only a provisional classification of its dialects has as yet been made: when each of them has been completely studied it will be possible to settle their inter-relations, and connect them with the Libyan inscriptions when these have been deciphered. The principal dialects, going from east to west are the Zenāga, spoken in the north of Senegal, the Tuāreg of the Awelimmida, the Ahaggars (Taitoḳ) and the Azgers; the Shilḥa of Sūs and the Tamazight of the Atlas, the Rīf language in the north of Morocco, the Berāber in the south-east, the Zenātia of the east of Morocco and the west of Algeria, the dialect of the Ḳṣūr, that of the oases (Tidikelt, Twāt and Gūrāra) the Zenātia of central Algeria (Wārsenis, Aʿshāsha, and Harāwa) which is closely connected with the dialect of the B. Menāser and through the mountains of the Atlas links up with the Zwāwa of Great Kabylia (one of the best preserved) and the dialects of Bidjāya and the Wādī Sāḥel (Wed Sahel); in the south the dialects of the Mzāb, Wārglā and the Wādī Rīgh; the Shāwiya of the Awrās and that of the tribes from Saṭīf to Sūḳ-Ahras. In Tunisia, Berber only survives in the extreme south; at Sened, among the Maṭmāṭa, at Djerba and up to the frontiers of Tripolitania where it passes into the dialect of the Djebel Nefūsa. The only other areas in which it is found are the oases such as Ghadāmes, Ghāt, Awdjila and lastly in Sīwa. The study of these dialects has been begun but has not been advanced in the same degree for each.

Religious literature must have been well developed among the Berbers, particularly among the Khāridjis as we may gather from the scattered notices in chroniclers and biographers. Although we have lost the Kurʾāns of Hā-Mīm and Ṣāliḥ (except a few scarce fragments) there still remains, out of all the Abāḍī literature Ibn Ghānim's treatise entitled *Mudawwana* (cf. de Motylinski, *Le manuscrit arabo-berbère de Zouagha: Actes du XIVe Congrès des Orientalistes*, Algiers, 1909, ii. 64—78). As to Sunnī literature, we have lost the translation of the Kurʾān and the Berber text of three treatises in the Shilḥa dialect composed in the XIth century of our era by the Mahdī Ibn Tūmart, founder of the Almohad empire, but we have two works dating from the XVIIIth century and composed in the same dialect by Muḥammad b. ʿAlī b. Brahīm: the *Ḥawḍ* (a treatise on religious duties) after the *Mukhtaṣar* of Sīdī Khalīl (published and translated by M. Luciani, Algiers 1897) and the *Baḥr al-dumūʿ* a complement to the preceding (manuscripts in Algiers and Paris); the two first chapters were published with a translation by de Slane, *Appendices à l'Histoire des Berbères*, Vol. iv. pp. 552—562. With this class of literature are connected certain religious poems, all in Shilḥa, like that of Ṣabi which tells of the descent into hell of a young man in search of his parents (R. Basset, *Le Poème de Çabi*, Paris, 1879; 8vo.); the poems of Sīdī Ḥammū (Stumme, *Dichtkunst und Gedichte der Schluḥ*, Leipzig, 1895; Johnston, *Fadma Tagurramt: Actes du XIVe Congrès des Orientalistes*, Vol. ii, p. 100-101), an account of the Ascension of the Prophet and a version of the *Burda*.

Works of profane literature are rare and have only been published by Europeans e. g. Sīdī Brahīm's account (in Shilḥa) of West Africa (published by Newman in the *Journ. of the Roy. As. Soc.* 1848 p. 215—260, transl. by R. Basset, Paris, 1882) and the account of the Djebel Nefūsa in the Nefūsī dialect by Brahīm b. Slīmān al-Shammākhī (edit. and transl. by de Motylinski, text Algiers, 1885); transcription and translation, Paris, 1898). We may also mention here a collection of tales entitled *Kitāb al-Shilḥ* (Ms. in the Bibl. Nat. Paris), which is largely borrowed from the *Bakhtiyār-nāma* and the *Hundred Nights*; extracts have been edited and translated by de Slane, Basset and Rochemonteix.

The popular literature (stories, poems and riddles) is more important than all these texts which are so strongly mixed with Arabic. These are to be found in almost all the above mentioned dialects and will be found detailed in the particular articles concerning them. General collections (translations only) have been published by R. Basset (*Contes berbères*, Paris, 1887; *Nouveaux contes berbères*, Paris, 1897; *Contes populaires de l'Afrique*, Paris, 1903). Of collections in particular dialects one may mention: for the Shilḥa of Tazerwalt: Stumme, *Elf Stücke im Šilḥa-Dialekt*, extract from the *Zeitschr. der Deutsch. Morgenl. Ges.*, 1894; do., *Märchen der Schluḥ von Tazerwalt*, Leipzig, 1895 (Texts and translation); de Rochemonteix, *Contes du Sous et des Oasis de la Tafilalt*: *Journ. As.*, xi (1889), p. 198—225; for the dialect of the Ḳṣūr: R. Basset, *Recueil de textes et de documents pour la philologie berbère*, Algiers, 1887; for the dialect of the Banī Menāṣer: R. Basset, *Textes berbères dans le dialecte des B. Menacer*, Rome, 1892; for the Zwāwa: Hanoteau, *Poésies populaires de la Kabylie du Jurjura*, Paris, 1882 (translation only); Moulièras, *Légendes et contes merveilleux de la Grande Kabylie*, Paris, 1882 (translation only); Ben Sedira, *Cours de langue Kabyle*, Algiers, 1887 (text only); Moulièras, *Légendes et contes merveilleux de la Grande Kabylie*, Paris, 1893—1897 (8 parts, text only, unfinished); Le Blanc de Prébois, *Essai de Contes Kabyles*, Batna, 1897

(2 parts, unfinished); Luciani, *Chansons Kabyles de Smail Azikkiou*, Algiers, 1899; Boulifa, *Recueil de poésies Kabyles*, Algiers, 1904; for the dialect of Wādī Sāḥil: R. Basset, *L'insurrection algérienne de 1871 dans les chansons populaires Kabyles*, Louvain, 1892; for the Shāwiya: G. Mercier, *Cinq textes berbères en dialecte chaouia*, extract from the *Journ. As.* 1900; for the Djerid: Stumme, *Märchen der Berbern von Tamazratt*, Leipzig, 1900; for the Taitok: Masqueray, *Observations grammaticales et textes de la temahaq des Taitoq*, Paris, 1897.

We may also mention the *Ḳānūns* or collections on customary law, which are still used among certain Berber tribes. These only exist in oral tradition but some of those of Great Kabylia have been taken down and published; by Hanoteau (*Essai de grammaire Kabyle*, Alger, n. d., p. 313—324; *La Kabylie et les coutumes Kabyles*, Paris, 1873, Vol. III, Appendix, p. 327—443, translation only, reprinted partly in Masqueray, *Formation des cités chez les populations sédentaires de l'Algérie*, Paris, 1886, p. 263—324, translation only); by Ben Sedira (*Cours de langue kabyle*, p. 205—355 text only); Boulifa (*Le Kanoun d'Adni*: *Recueil de mémoires et de textes publiés en l'honneur du XIVe Congrès des Orientalistes, par les professeurs de l'École Supérieure des lettres*, Algiers, 1905, p. 152—178). It is not necessary to enumerate the various translations of the Old and New Testaments which have been made by Catholic and Protestant missionaries.

Bibliography: The most important materials have been collected by Fournel, *Les Berbers* (Paris, 1877—1881, 2 vols.) but he stops with the departure of Mu'izz lidīn Allāh for Egypt. As to the Arab historians: Ibn Khaldūn, *Kitāb al-'Ibar* (Būlāḳ, 1284 7 vol.), vols. vi. and vii., the French translation by de Slane, *Histoire des Berbères* (Algiers, 1852—1856, 4 vol.); S. Lane-Poole, *The Mohammadan Dynasties*, p. 33—63 (Lond., 1894); Ibn Abī Zer', *Rauḍ al-Ḳirṭās*, ed. Tornberg (Upsala, 1843—1846; 2 v. in 4°.); Ibn 'Adhārī, *al-Bayān al-Moghrib*, ed. Dozy (2 v., Leyden, 1848—1851); al-Marrākoshī, *History of the Almohads*, ed. Dozy (Leyden, 1847); al-Bakrī, *Description de l'Afrique septentrionale*, ed. de Slane (Algiers, 1857); transl. by de Slane (Paris, 1859); de Goeje, *Descript. al-Maghribi* (Leyden, 1860: extract from al-Ya'ḳūbī); Masqueray, *Chronique d'Abou Zakaria* (Algiers, 1878); al-Barrādī, *Kitāb al-Djawāhir* (Constantine, 1302); R. Basset, *Les Sanctuaires du Djebel Nefousa* (Paris, 1899); Quedenfeldt, *Eintheilung und Verbreitung der Berberbevölkerung in Marokko*, (*Zeitschr. für Ethnologie*, 1888, 1889); Daumas, *La Grande Kabylie* (Paris, 1847); Carette, *Études sur la Kabylie proprement dite* (Paris, 1848, 2 v.); Barth, *Travels and Discoveries in North and Central-Africa* (London, 1847); Duveyrier, *Les Touaregs du Nord* (Paris, 1864); Bissuel, *Les Touaregs de l'Ouest* (Algiers, 1888); Jean, *Les Touareg du Sud-Est de l'Aïr* (Paris, 1908); Hanoteau et Letourneux, *La Kabylie et les coutumes Kabyles* (Paris, 3 v., 1872-1873); Renan, *La Société berbère* in the *Mélanges d'histoire et de Voyages* (Paris, 1878) p. 319—352; le P. Dugas, *La Kabylie* (Lyon, 1877); Masqueray, *Formation des cités chez les populations sédentaires de l'Algérie* (Paris, 1886); Morand, *Les Kanouns du Mzab* in the *Études de droit musulman algérien* (Algiers 1910), p. 419—457; T. W. Arnold, *Preaching of Islam* (Lond. 1896), p. 258—262; R. Basset, *Recherches sur la religion des Berbères* (Paris, 1910) authors quoted; de Slane, *Appendice à l'histoire des Berbères*, Vol. iv. p. 488—584; R. Basset, *Étude sur les dialectes berbères*, (Paris, 1894); id. *Loqmân berbère*, (Paris, 1890), and the papers presented to various Oriental congresses (London, 1891; Paris, 1897; Hamburg, 1902; Copenhagen 1908). (René Basset.)

BEREIDA or Buraida (the diminutive of Burda), a large village in the Ḳaṣīm province of Nedjd, situated 26° 17′ N., 43° 55′ E. It lies on the left bank of the Wādī Rumma, about ten miles from 'Onaiza on the opposite bank. 'The names of Boreyda and 'Aneyza are from bergs in them' (Doughty). Buraida probably occupies the site of the ancient Fayda (Sprenger, *Die alte Geographie Arabiens*). The present town is said to have been founded three or four hundred years ago, by people of the Banū Tamīm. After the fall of the Wahhābī state it became independent under chiefs of the family of 'Alaiyān (Palgrave). When Faiṣal, the representative of the Ibn Sa'ūd or Wahhābī dynasty, had recovered most of the lost ground, he crushed Buraida by treachery, and placed it under a native of al-Riyāḍ named Moḥanna, who was governor at the time of Palgrave's visit (1862). His son Ḥasan was governor when Doughty stayed there (1878). The former estimated the population at 25,000, the latter at 5,000 or, counting the surrounding hamlets, 6,000. The people are merchants and caravaners. The town is built of clay and surrounded by a wall only two feet thick. The gardens form a ring round the town outside the wall. The palms and tilled land stretch for three miles on the side next the Wādī. They are irrigated from wells, made by digging in the sand. The water is raised by means of a wheel set on a frame of *'ithl* wood, which grows plentifully here. At the time of Palgrave's visit there was a busy market, rock-salt from western Ḳaṣīm being a common article of sale. The streets were fairly broad and regular. The height of the minaret proves the mosque to have been built before the rise of the Wahhābīs [q. v.]. It is probably about 200 years old. The castle Palgrave considered to be in part older, some of it being of stone. It had no architectural features, and there appear to be no ancient inscriptions in the town.

Bibliography: Palgrave, *Central and Eastern Arabia*; Doughty, *Arabia Deserta*; Ritter, *Erdkunde*, xiii. 454 *et seq.* (T. H. Weir.)

BERGAMA, the name of a district (*ḳaḍā*) and its capital in the Sandjak of Izmir in the Wilāyet of Aidīn (Smyrna). The town, which is situated in 24° 35′ east Long. and 39° 5′ north Lat., is the ancient Pergamon, as has now been ascertained from the excavations of Humann, Conze etc. This is not the place to discuss the history of Pergamon and the excavations; the reader may be referred to the brief but excellent account in Baedeker's *Constantinople and Western Asia Minor*, p. 246—254.

In the beginning of the xiv^th century the town fell into the hands of the Turkish dynasty of the Ḳarāsī and with Bālikesrī was the most important

town of this Emirate. Ibn Baṭṭūṭa visited it in 733 (1333) and found it as at the present day. He describes it as being in ruins but with a strong fortress on the hill. He calls the Sulṭān Yakhshī. Orkhān took the town soon afterwards (according to the Turkish historians in 735 (1334) or 737 (1336) but Mordtmann, *Über d. Türkische Fürstengeschlecht der Karasi*, relying on Byzantine historians places the date later. Since then it has belonged to the Ottomans. At the present day it is an imposing, picturesquely situated little town with about 20,000 inhabitants (Cuinet 14,502, Sāmī 12,000, ʿAlī Djewād 21,197) and the seat of the Ḳāʾimmaḳām. The neighbourhood is fertile and tobacco and cotton are particularly cultivated. In addition the art of working in leather, for which the ancient Pergamon was famous (parchment) is still flourishing. According to ʿAlī Djewād the town has 10 tanneries.

Bibliography: Cuinet, *La Turquie d'Asie* (Paris, 1894), Vol. iii. p. 471 *et seq.*; Mordtmann, *Über das türkische Fürstengeschlecht der Karasi in Mysien. Sitzungsber. der Kgl. Preuss. Akad. der Wissensch.* (Berlin, 1911); ʿAlī Djewād, *Memālik-i ʿothmāniyenin taʾrīkh we djoghrāfia lughāti*, 164; Ibn Baṭṭūṭa (ed. Defrémery, Paris, 1853). (F. GIESE.)

BERGHAWĀṬA, is the name formerly applied to a group of Maṣmūda tribes of which the more important were the Berānis, the Zwāgha, the Maṭmaṭa, the Maighāra, the Banū Būrgh and the Banū Wāghmer. They were settled in the west of Morocco in the district of Tāmesnā which now bears the name of Shāwiya from Salé (Salā') and Azemmūr to Asfī and Anfā. They adopted the teachings of the Khāridjīs and took part in their wars against the Arabs under the leadership of Maisara, the water-carrier of Tangier. Their chief at that time was Ṭarīf Abū Ṣāliḥ. He left his power to his son Ṣāliḥ who had fought with him in the ranks of the Khāridjīs. Ṣāliḥ had obtained a reputation for learning and virtue among his people and conceived the idea of founding a new religion which would be to Islām what the latter was to Judaism and Christianity. This project has also been ascribed by some authorities to his father Ṭarīf. In any case Ṣāliḥ claimed to be the *Ṣāliḥ al-Muʾminīn* mentioned in the Ḳorʾān (lxvi. 4) and it was said that he first appeared at the beginning of Islām. In reality he lived in the reign of the Omaiyad Caliph Hishām b. ʿAbd al-Malik though if the date 127 be adopted for his appearance, it must have taken place in the reign of Marwān II as Hishām had died in 125. Some enemies of Ṣāliḥ assert that he was of Jewish origin, that the real name of his father was Shemaʿūn (Simeon) b. Yaʿḳūb b. Isḥāḳ and that he was born in Barbāṭ, in the vicinity of Xeres in Spain whence the name Barbāṭī, corrupted to Berghawāṭī, borne by his disciples. These views of the author of the *Naẓm al-Djawhar* have rightly been combatted by Ibn Khaldūn. Ṣāliḥ composed a regular code of religious laws, if we may believe al-Bakrī in his notice of the "leader of prayer" Zemmūr Abū Ṣāliḥ b. Mūsā b. Hishām (or Hāshim) b. Wārdīzen who was sent on a mission to the court of al-Ḥakam al-Mustanṣir, Caliph of Cordova, in Shawwāl 352 (October—November 963) by Abū Manṣūr ʿĪsā b. Abī 'l-Anṣār, king of the Berghawāṭa. This code, composed in the Berber language, was translated into Arabic by Abū Mūsā ʿĪsā b. Dāwūd, a Muḥammadan of Shella. The month prescribed for fasting was that of Radjab and not Ramaḍān, a certain day each week was also to be observed as a fast; prayers were to be offered five times a day and five times a night; the "feast of sacrifice" was celebrated on the 11th of Muḥarram and not on the 12th Dhu 'l-Ḥidjdja. Ablutions had to be made by beginning with the navel and the hips, then the privy parts, the mouth, neck, the forearms beginning at the elbows, the ears and lastly the knees. Some of their prayers consisted only of gestures; others resembled those of the Muslims. Their prostrations (*sudjūd*) were made three times in succession; they raised the forehead and their hands half a palm's breadth from the ground. The *takbīr* was replaced by the following formula, *A bism en Yaḳūsh* (Berber: in the name of God) followed by *Mokkor Yaḳūsh* (God is great). This name *Yaḳūsh*, which means God, in which some scholars have wrongly thought to recognise that of Bacchus — or rather the Bacax of the inscriptions of Numidia — on account of a variant, Baḳūsh, appears to be the translation of the Muḥammadan *Wahhāb* "he who gives", an epithet of God, and the fact that it is also found among the Abāḍīs recalls the Khāridjī antecedents of Ṣāliḥ (cf. A. de Motylinski, *Le nom berbère de Dieu chez les Abadhites*, Algiers, 1905, and R. Basset, in the *Bulletin de la Société archéologique de Sousse*, 1906). In repeating the profession of faith they hold their hands open with the palms downwards. At public prayer, which was celebrated on the Thursday and not the Friday, they repeated half of their Ḳorʾān, standing and the remaining part, while making their prostrations. The ceremony was completed by repeating in Berber the following formulas: God is above us, nothing which is on the earth nor in the heavens is hidden from him. Then they repeated twenty times the formula: *Mokkor Yaḳūsh* = God is great; *Ihan (Iwan?) Yaḳūsh* = God is one; *ur dam Yaḳūsh* = there is none like God. It is evident therefore that with the exception of the use of Berber their religion did not differ essentially from Islām. — Following the example of Muḥammad, Ṣāliḥ composed a *Ḳorʾān* in Berber. It contained eighty Sūras each of which as a rule was called after some prophet. The first was that of Aiyūb (Job), from which al-Bakrī gives an extract (p. 140); the others were those of Firʿawn (Pharaoh), Ḳārūn (Korah), Hāmān, Yādjūdj and Mādjūdj, al-Dadjdjāl (the Antichrist), al-ʿIdjl (the Golden Calf), Hārūt and Mārūt, Ṭālūt (Saul), Nimrūd and Yūnus (Jonas) the last. There were also the Sūras of the Cock, the Partridge, the Camel, the Eightfooted Snake and the Wonders of the World. Its imitation of the Moslim Ḳorʾān is manifest. A tenth part of all cereal produce was levied as legal alms, except from Muḥammadans; it was also forbidden to intermarry with the latter. Any one could marry as many wives as he could afford, but marriage was forbidden between collaterals to the third degree. Thieves were put to death, adulterers stoned, and liars banished, while murder could be atoned for by the payment of a hundred oxen. Certain prohibitions appear to be a survival of native customs; for example, it was forbidden to eat the head of any animal, or eggs (this prohibition still exists among certain tribes of Algeria and the Sahara). Cocks were held in reverence

as calling to prayer (cf. the name *mu'adhdhin* still given to them in vulgar Arabic). As is still the case with certain Marabouts, the saliva of their prophet was a remedy for sick people.

Another fact that shows the close connection of the religion of the Berghawāṭa with Islām, is that Ṣāliḥ attributed some of his sermons to Moses, to the seer Ṣāliḥ (who had prophesied the coming of the Prophet) and to Ibn ʿAbbās, the cousin of Muḥammad and ancestor of the ʿAbbāsids.

If the tradition may be relied on, Ṣāliḥ, after reigning forty-seven years, set out for the east, after promising to return in the reign of his seventh successor. He advised his son Elīsaʿ (Elyas) to keep his doctrine secret till the favourable moment which was not to be till the reign of his grandson Yūnus. It is difficult to take this literally; either, in the reign of this last prince, the teachings of Ṣāliḥ, after having been neglected were vigorously enforced or Yūnus was their real author but ascribed them to his grandfather. In addition there are some gaps in the chronology: Elīsaʿ reigned fifty years; his son Yūnus, who propagated the new doctrines with fire and sword, forty-four years; his nephew Abū Ghufair Aḥmad, who died in 300, twenty-nine; Ṣāliḥ must therefore have reigned fifty years to fill the gap between 127 when he first appeared and 300. ʿAbd Allāh Abu 'l-Anṣār, who is buried at Tāmesṅikht, died in 341 after a reign of 42 years. As a rule the Berghawāṭa sought the support of the Omaiyad Caliphs of Spain to help them in their struggle against the other powers who shared the Maghrib. They held out for long in their own territory and in addition to the troops raised from tribes which professed their religion, they had contingents furnished by Muḥammadan Berber tribes, such as the Izmāir, Banū Ifren, Banū Ifellūsa etc. Arab historians mention the wars which the Berghawāṭa had to wage against the Arabs of Spain, the Ṣanhādja vassals of the Fāṭimids and the Banū Ifren, and say they suffered severe defeats. This may well be doubted, as they remained independent and a constant danger to the Almoravid empire, which is said to have exterminated them, but they defeated the army of the celebrated ʿAbd Allāh b. Yāsīn, who perished in the battle in 450. A century later (543) we find the founder of the Almohad dynasty ʿAbd al-Muʾmin marching against them and being defeated by them; he afterwards gained the upper hand and the Berghawāṭa disappear from history.

(René Basset.)

BERKE b. Djūčī (in most Egyptian authorities wrongly called Berke b. Bātū), a Mongol prince, chief of the Golden Horde, grandson of Cingiz-Khān and third son of Djūčī. From the accounts of the Egyptian ambassadors, who were received by him during the last years of his life, he cannot have been more than a few years younger than Bātū. Little is known of his career before he ascended the throne. He took no part in the wars in Russia and Western Europe in the years 1234—1242; he was more frequently in Mongolia than Bātū and took part in the great parliaments of 1246 (coronation of Güyük) and 1251 (coronation of Möngke). The latter assembly was presided over by Berke as the eldest member of the ruling house present, as perhaps also was the assembly which decided the punishment of the descendants of Čaghatai and Ügedei [cf. the article bātū khān]. As the Armenian Kirakos tells us, Alghū, grandson of Čaghatai afterwards held Berke chiefly responsible for the misfortunes of his house.

Soon afterwards he returned to his ancestral territory and did not again visit eastern Asia. Rubruquis (1253) mentions the camp of Berke in his journal; he was a Muḥammadan even at this time so that no swine's flesh was allowed to be eaten in his camp. The story, given by Abu 'l-Ghāzī (ed. Desmaisons, p. 172 *et seq.*), that Berke became a convert to Islām after he ascended the throne, is apparently a later invention. Djūzdjānī (*Ṭabaḳāt-i Nāṣirī*, transl. Raverty, p. 1284) says that Berke was instructed in the Ḳorʾān while still a youth in Khodjand by a theologian of this town. Djūzdjānī (p. 129) also gives a story of the hatred in which Sartāḳ, son of Bātū, and a Christian, held his Muḥammadan uncle; with this story may be compared the statement of the Armenian Kirakos who accuses Berke of having poisoned his nephew. If these two princes were really so hostilely inclined to one another, their enmity can hardly be explained solely by detestation of one another's religions. That Sartāḳ was baptised is denied by Rubruquis but on the other hand expressly affirmed not only by Syrian and Armenian but also by the Muḥammadan sources (including the two contemporary but independent authorities Djuwainī and Djūzdjānī). In any case Sartāḳ, who had six wives according to Rubruquis, and according to Kirakos exempted the Muḥammadan as well as the Christian clergy from all taxes, can no more have been a fanatical Christian than Berke, whose capital Sarāi was in 1261 the seat of a Christian bishop, a fanatical Muḥammadan.

According to Djuwainī, Sartāḳ received the news of the death of his father Bātū while on his way to Mongolia in the year 653 (February 1255—January 1256) to the Great Khān Möngke but continued his journey. He was appointed successor of Bātū by Möngke and lord of the ancestral territory of Djūčī and second in rank to the great Khān in the whole empire but died soon after, according to some authorities while on his return journey and to others soon after his return. The young prince Ulāḳčī (called the son of Sartāḳ by Djuwainī and of Bātū by Rashīd al-Dīn) was installed as chief of the Golden Horde by the Great Khān's commissioners and the regency entrusted to Bātū's widow Boraḳčin-Khātūn. According to Russian annals the camp of "Ulawčij" was visited by Russian princes as late as 1257. It was not till the death of the young Khān, probably in the same year 1257, that the succession passed to Berke.

Like Bātū, Berke during the earlier years of his reign ruled not only over the ancestral territory of his father but also over Mā Warāʾ al-Nahr. According to Djūzdjānī he visited Bukhārā and showed great honour to the learned men of that town;

he is also said to have ordered the Christians of Samarḳand to be severely punished and their church destroyed, as they had taken some liberties with their Muḥammadan fellow-citizens. When the news of the death of the Great Khān arrived (1259) it is said that the Friday prayer (Khuṭba) was read for Berke, not only in Mā Warā' al-Nahr but also in Khorāsān and the other provinces of Persia (*Ṭabaḳāt-i Nāṣirī*, transl. Raverty, p. 1292).

During the next four years (1260—1264), two brothers of the dead Great Khān, Khubilai and Arigh-Buga, engaged in a struggle for the throne in Eastern Asia. As the coins struck in Balghār show, the younger claimant Arigh-Buga (who was ultimately overcome by his opponent), was recognised as the rightful heir to the throne by Berke. Prince Alghū, a grandson of Čaghatai, appeared in Central Asia about the same time, at first in the name of Arigha-Buga and afterwards in open revolt against him; he succeeded in bringing under his sway not only the whole ancestral territory of his grandfather but also Khwārizm, which had always belonged to the kingdom of Djūčī and his successors; the governors and the officials appointed by Berke were driven out of all their towns. The massacre mentioned by Waṣṣāf (Indian edition, p. 51), of a division of Berke's army, 5,000 strong, in Bukhārā must have been carried out, not, as Waṣṣāf himself says by Khubilai, nor as d'Ohsson supposes (*Histoire des Mongols*, iii. 381 *et seq.*) by Hūlāgū, but by Alghū. The war between Berke and Alghū lasted till the death of the latter; even in the last years of his life, after the final victory over Arigha-Buga, Alghū's troops occupied and destroyed the commercial town of Otrār. Berke, whose forces were required in the South and West, could do nothing against his enemies in the East but did not however yield his claims; Prince Ḳaidū, grandson of Ügedei, who was in Arigh-Buga's army, continued the war against Alghū on the overthrow of Arigh-Buga and was supported by Berke.

The campaigns in the West against the Poles and against King Daniel of Galicia, who, not content with declaring himself independent in 1257, was bold enough to attack the Tatars, were of no great importance and were successfully carried by the troops, whose duty it was to guard the frontier districts, without it being necessary for Berke to take the field in person. King Daniel had to destroy at the bidding of the Tatar General most of the fortresses which he had built in his kingdom. The war between Berke and his cousin Hūlāgū, the conqueror of Persia, was more important and prosecuted with less success. The causes of the war are variously given; as was previously the case in the story of the enmity between Berke and Sartāḳ, Berke is here pictured by some authorities as the defender of Islām. He is said to have bitterly reproached Hūlāgū for his devastation of so many Muḥammadan countries and particularly for the execution of the Caliph Musta'ṣim. Those authorities who say that the princes of the house of Djūčī felt their rights endangered by the foundation of a new Mongol kingdom in Persia are probably more trustworthy; some of the territories such as Arrān and Adharbaidjān which were incorporated in the new kingdom, had already been trod by the "Hoof of the Mongol horse" in the reign of Čingiz-Khān and therefore according to the conqueror's directions ought to have belonged to the ancestral territory of Djūčī [cf. above in the article Bātū Khān]; the right to these lands was also constantly claimed but without success by the chiefs of the Golden Horde.

Berke twice made war on his Persian relatives. In the first war, Hūlāgū was at first victorious, advanced as far as over the Terek (in November and December 1292), but was there defeated by Berke's troops (the Khān himself was not present with his army) and lost a great part of his army on his retreat; many perished in the Terek, the ice on which was broken by the hoofs of the horses. After this war Hūlāgū massacred all merchants from Berke's kingdom who could be found in his domain; Berke retaliated by a massacre of those from Hūlāgū's lands; no further attempts were made on either side to continue the war, however, during the next few years. Even before war broke out between these two princes, the Egyptian Sulṭān Baibars [q. v.] had decided to get into communication with Berke and to make an alliance against their common enemy Hūlāgū. A message in this strain had been sent from Cairo as early as the year 660 (26th November 1261—14th November 1262) to Berke; in Muḥarram 661 (15th November—14th December 1262) an embassy was equipped for the same object. Before the ambassadors had returned, there appeared in Cairo in the spring of 1263, an embassy from the kingdom of Berke; when these envoys set out on their return journey the Sulṭān sent a second embassy to accompany them to the country of the Mongol prince. It is scarcely possible to reconcile the various statements given by the authorities on these transactions; apparently the accounts of the two embassies have been confused by the Egyptian historians. The accounts brought back by the envoys of the country of the Khān and his appearance (thin beard, yellow complexion, the hair bound behind both ears, apparently in plaits, a gold ring set with a jewel in one ear, a high turban on the head, a girdle of green Bulgarian leather, set with gold and jewels, around his waist, and shoes of red leather) are worthy of note; he is said to have then been 56 years of age; like Bātū he was afflicted with gout. In connection with these embassies, mention is made of a Mongol campaign against the Byzantine emperor, who had detained one of the two Egyptian embassies, probably the second, in his territory. In the year 1260 the Balkan Peninsula to the Aegean Sea was ravaged by a Mongol army (Berke took no part in this campaign either) and the Seldjūḳ Sulṭān 'Izz al-Dīn Kai-Kāwus, who had been driven out of Asia Minor and placed in custody in the fortress of Enos (on the Aegean Sea) was set free and brought to the Crimea.

In the year 1266 war was renewed by Berke against Persia where Hūlāgū's successor Abāḳā now ruled, but it led to nothing. The two armies lay for a considerable time inactive on the banks of the Kura opposite one another; Berke, who was on this occasion at the head of his army (at least so the Persian authorities tell us), wished to ascend the Kura to Tiflis and there cross the river, but died on his way thither whereupon his army returned home. In the Egyptian sources the date of Berke's death is given as 665 (2nd October 1266—21st September 1267). In Ṣafar (22nd

Oct.—19 Nov. 1267) a message of sympathy was sent from Egypt to his successor Möngke-Timür. The Russian annalists say that Berke died in the years 6774 of the Creation of the World (1st Sept. 1265—1st September 1266).

Berke left no family, so that the throne passed to Bātū's grandson Möngke-Timür. During the last years of his reign he was no longer, as Bātū had been, second to the Great Khān in the Mongol Empire, but the ruler of an independent state, although this evolution was not completed till the reign of his successor who was the first to strike coins in his own name. It is difficult to estimate how much he did as a Muḥammadan to further the culture of Islām among his Mongols. The Egyptian accounts speak of schools, in which the youth was instructed in the Ḳor'ān; not only the Khān himself but each of his wives and Emirs also had an Imām and a Mu'adhdhin attached to their establishments; yet we learn from the same sources that all sorts of heathen customs were observed at the court of the Khān with the same strictness as in Mongolia. How little education the Khān himself had, may be gathered from the question which he asked the ambassadors, whether it was true that an enormous human bone was used as a bridge across the Nile. Not only the Khān himself but several of his brothers are said to have adopted Islām; nevertheless half a century was still to elapse after his death before Islām definitely became predominant in his kingdom. Most of the later authorities ascribe the foundation of the capital Sarāi on the Achtuba to Berke (Ibn Baṭūṭa in his journal, ed. Defrémery, ii. 447, therefore calls this town Sarāi-Berke) but the town as we know from the narrative of Rubruquis was already founded by Bātū; perhaps it was only under Berke that it rose to be a town in the strict sense of the word.

Bibliography: For the Persian and Russian authorities and the editions of them see the Bibliography to the article Bātū Khān. W. Tiesenhausen collected the Arab materials for the history of the Golden Horde (*Sbornik materialow otnosjaschtschichsja k istorii Zolotoi Ordi*, Vol. i. St. Petersburg, 1884, Arabic text and Russian Translation); of special importance are the notices in the *al-Nahdj al-sadīd* of al-Mufaḍḍal (*ibid.*, p. 181 *et seq.* 193 *et seq.*; on the work itself see Brockelmann, i. 348); Quatremère quotes the same authorities: in Maḳrīzī, *Histoire des Sultans Mamlouks*, i. Part i. p. 213 *et seq.*; Patkanow has published Kirakos's work (*Istorija mongolow po armjanskim istotschnikam*, vol. ii. St. Petersburg, 1874); Howorth, *History of the Mongols*, Vol. ii. (London, 1880), p. 103—125; Gulielmus de Rubruquis, *Journey to the Eastern Parts of the World*, transl. by W. W. Rockhill (London, Hakluyt Society, 1900). (W. Barthold.)

BESHIKTĀSH, a suburb of Constantinople, 2½ miles from the bridge of Galata on the European shore of the Bosporus. It was called Diplokionion by the Byzantines after a double column erected here by the elder Romanus. It was from here that Sulṭān Meḥmed II, the conqueror of Constantinople had his fleet dragged over the hills of Pera into the Golden Horn, the entrance to which from the Bosporus was barred by a chain drawn across it. In the xviith and xviiith centuries the summer palaces of the court were situated here, which were more than once burned down. The place is now surrounded by the picturesque castles of Dolmabaghče, Čirāghān (at present also burned down) and by the Yildiz palace. Among the buildings of historical interest dating from the Turkish period may be mentioned the tomb of Khair al-Dīn Barbarossa, the great Turkish corsair (died 953 = 1546). The place now forms the viith *dā'ire-i belediye* of Constantinople. (F. Giese.)

BESHLIK, a Turkish coin, which was introduced with the currency reforms of Sulṭān Sulaimān II (1099—1102 = 1687—1691). It was based on the *ghurūsh*, the *grossus* (*gros*, groat) of European countries; the foreign *ghurūsh* had previously been current in Turkey but it was not till now that they were actually struck by the government. The smaller coins were called paras. Five paras were a beshlik. How many paras originally made a *ghurūsh*, we do not know; Lane Poole supposes twenty. With the gradual debasement of the coin the relationship was continually changing. As a rule a *ghurūsh* was to be equal to 40 paras. The oldest beshliks, that we have, are of the reign of Aḥmad III (1115—1143 = 1403—1450). The beshlik, also called *ičrek* — from *ichār yek* = ¼ — was retained in the new currency instituted in Muḥarram 1260 = February 1844 during the reign of 'Abd al-Medjīd. It is a quarter of the Medjīdiye or 5 piastres, which are now called ghurūsh. It is about the equivalent of the franc at the present day.

Asiat.*, vith Ser., Vol. iii. t. iv. (F. Giese.)

BESHPARMAḲ (= five fingers) denotes the cinque foil. In combination with *Dāgh* it frequently appears as the name of a mountain. The best known Beshparmaḳdagh is the mountain range in the ancient Caria on the left bank of the Maeander, the ancient Latmos. Its highest eminence of five steep peaks about 5000 feet high has given its name to the whole range. (F. Giese.)

BESIKABAY, called Beshike körfezi by the Turks is a bay on the western coast of Asia Minor opposite Tenedos. Although it is open, it affords a good anchorage sheltered from the north and north east winds, which gives secure protection in summer when the south and west winds do not blow. In 1853 the English and French fleets assembled here before proceeding to the Crimea. The ships of foreign powers have also cast anchor here when they wished to bring pressure to bear on the Porte. (F. Giese.)

BESSARABIA. [See Bučak.]

BEST (P.), band, place of refuge; hence *bestī*, one who claims the right of asylum.

BETEIGEUZE. This is the name given by the mediaeval astronomers of the west to the star of the first magnitude a Orion. The *i* has arisen from the careless writing of an *l* and the better form is therefore *Betelgeuze*. This star has three names among Arab astronomers. The first is *Mankib al-Djauzā'* (= Shoulder of Orion), the second

Yad al-Djawzā' (= Hand of Orion) and the third *Dhirā' al-Djawzā'* (= Forearm of Orion). The general opinion is that Betelgeuse is a corruption of *Yad al-Djawzā'*; a *y* might easily be read for a *b* in Arabic though less readily a *t* for *d*; this explanation is due to Th. Hyde. L. Ideler considers it more probable that Betelgeuse comes from *Ibṭ al-Djawzā'* (= shoulder of Orion). As a matter of fact in the vulgar dialect of Egypt for *ibṭ* there is a form *bāṭ* which perhaps also occurred in the Maghrib and was there pronounced *bīt*; with regard to this alluring hypothesis, it must be pointed out however that *ibṭ* in place of *mankib* or *yad* has not yet been found in any Arab astronomical works. A third attempt to explain the derivation suggests that *bet* comes from *bait*. The heavens were of course divided by the astrologers into twelve sections which were called *Buyūt* (houses). These houses however were denoted by the first twelve numerals but it is just possible that some astrologist called the house in which the star α Orion is, *Bait al-Djawzā'*, and the name may have afterwards been applied to this star itself, the brightest in Orion and the Twins. — Why Orion and the Twins were usually included by the Arabs under the common name of *al-Djawzā'* (properly meaning a black sheep, with a white patch on it) while the more important astronomers elsewhere give them the separate names of *al-Djabbār* (the Giant) and *al-Taw'amān* (the Twins), is a question which is not to be discussed here but the reader may be referred to Ideler's work (see below).

BEY. [See BEG, p. 688.]

BEZOAR — Arab. *fādizahr*, from the Persian *Pā(d)zahr*, i. e. removing poison — a highly esteemed remedy against all kinds of poison for which high prices were paid throughout the middle ages down to the xviii[th] century and to the present day in the East. The real (Oriental) bezoarstone is obtained from the Persian bezoar-goat (*Capra aegagrus Gm.*) and according to Wöhler's researches is a gallstone. A description of its properties and supposed effects is to be found as early as in the *Kitāb al-Aḥdjār*, which is ascribed to Aristotle. The effect of poisons is to make the blood coagulate; the bezoarstone stops this process and drives the poisons out of the body in strong perspiration. The fullest and most adequate account of the origin of the stone is to be found in Tīfāshī. According to him the bezoarstone is a light, soft, yellow, rather speckled stone which is composed of concentric layers; it may be pounded into a white powder which is readily dissolved in water. The largest pieces, weighing as much as 5 mithḳāls come from Persia and the lands on the borders of China. The animal, from which it is obtained is a goat indigenous to these regions which lives chiefly on poisonous snakes. The stone is said to form when the animal has eaten too much snake's flesh; to find a cooling remedy for the heat of its internal sores, the animal plunges itself up to the head in water, a fine vapour rises to its head and is exuded at the corners of its eyes, where it consolidates and remains hanging on the hairs; from a repetition of this process the concentric layers are formed. According to others the stone is formed in the heart; Tīfāshī himself considers the formation in the gall-bladder the correct one, for the genuine bezoarstone has a disagreeable bitter taste.

Wüstenfeld), i. 231; do. (transl. by J. Ruska), p. 29; H. Fühner, *Bezoarsteine*, in *Janus*, 1901. (J. RUSKA.)

BEZZISTĀN, usually written BEDESTĀN (from the Arabic *bazz*, "silk, linen" and more particularly "cotton") the central part of a bazaar, a stone building which can be closed by iron doors, where the more valuable wares are sold. In Ḳoniya it used to be called *bazzāzīya* "place of the clothmercers" (Huart, *Epigraphie*, n[o]. 38); in Constantinople the corrupt form *bedestān* was used. The latter was built by Sulṭān Meḥmed II. The corresponding Arabic word is *ḳaisārīya* (or *ḳaiṣārīya*).

BHARATPUR, a native state of India, in Rādjpūtāna: area 1,982 sq. m.; pop. (1901) 626,665, of whom 18%/₀ are Muḥammadans. The ruling chief is a Hindu of the Djāṭ caste, descended from a family that actively contributed to the downfall of the Mughal empire in the 18[th] century. Under their famous leader, Suradj Mal, the Djāṭs sacked Dihlī in 1753, and permanently occupied Agra from 1761 till 1774, where they mutilated the Tādj and are said to have desecrated the tomb of Akbar.

BHARŪČ, or BROAČ, a town and district of India, in Gudjarāt, Bombay Presidency. Area of district: 1,467 sq. m.; pop. (1901): 291,763, of whom 22%/₀ are Muḥammadans, mostly Bohrās [q. v.]. The town, on the right bank of the Narbada, about 30 m. from the sea, was from early days the chief port of Gudjarāt, being known to the Greeks as Barugaza; pop. (1901): 42,896. It contains a Djāmi' Masdjid, almost entirely built of pillars from Hindu temples; and the ruined tomb of a saint called Bāwa Rahan, said to date from the 11[th] cent. In 1736, the governor was raised to the rank of Nawwāb by Niẓām al-Mulk, the founder of the Ḥaidarābād state, and his descen-

dants still receive a small pension from the British government.

Bibliography: *Broach Gazetteer* (Bombay, 1877). [J. S. COTTON.]

BHAṬṬI, or **BHĀṬI**, a Rādjpūt tribe settled on the borders of the Pandjāb and Rādjpūtāna, who have given their name to the towns of Bhatner and Bhatinda and a former British district of Bhattiāna. The majority of them have long been converts to Islām. The mother of the Dihli emperor Fīrūz Shāh is said to have been a Bhatti, while the Phūlkiān Sikh chiefs of the Pandjāb claim a similar ancestry.

BHOPĀL, a feudatory Native State in Central India, lying between 22° 29′ and 23° 54′ N. lat. and 76° 28′ and 78° 51′ E. long. — next to Haidarābād the most important Muhammadan State in India. Population (1901) 665,961, of whom 83,988 are Musalmans.

History. This state was founded by Dōst Muḥammad Khān, an Afghān soldier of fortune, who at an early age had entered the service of the Emperor Awrangzēb. He took advantage of the anarchy that prevailed after the death of Awrangzēb in 1707, to set himself up as an independent ruler with the title of Nawwāb, over the territory he had acquired, partly as a reward for services rendered, and partly by stratagem. He died about 1740, at the age of sixty-six. His two sons and three grandsons who succeeded him, were either children or incompetent rulers, and the conduct of affairs was left in the hands of their Hindu ministers, men distinguished alike for honesty and ability. In 1778, in the reign of Hayāt Muḥammad Khān (the third grandson of Dōst Muḥammad), the state of Bhopāl first entered into relations with the British, and the foundations were laid of a friendship that has remained unbroken ever since. Towards the close of the 18th cent. the territories of Bhopāl were overrun by hordes of Pindārās (the marauders who spread desolation throughout Central India during this period) and was invaded by the Marāṭhas, who were called in to expel the Pindārās. In this crisis, Bhopāl was saved from destruction by a young cousin of the Nawwāb, Wazīr Muḥammad Khān, who assumed the sole direction of affairs and succeeded in reconquering most of the territories that had been lost to his country. But his endeavours on behalf of the state were constantly thwarted by the jealousy of the heir apparent, Ghawth Muḥammad Khān, who called in, first the Pindārās, and afterwards the Marāṭhas, in order to compel Wazīr Muḥammad to retire from Bhopāl. Despite the want of confidence shewn in him, Wazīr Muḥammad seems to have scrupulously avoided any act of open hostility to the recognised ruler of his country, but when Ghawth Muḥammad had reduced himself to the condition of a mere puppet in the hands of the Marāṭhas, he took advantage of a favourable opportunity to return to Bhopāl and drive the Marāṭhas out of the city (1807). (Nawwāb Hayāt Muḥammad, who had long withdrawn from all active participation in public life, died in the same year). From this time Wazīr Muḥammad was the real ruler of the state, though Ghawth Muḥammad still enjoyed the titular dignity of Nawwāb. In 1812 a combination was made between the Marāṭha chiefs of Gwalior and Nāgpūr to crush him, and Bhopāl was besieged by their united armies towards the close of the following year. Wazīr Muḥammad made a gallant defence during a siege of eight months and the Marāṭhas were obliged to retire unsuccessful. They made active efforts to renew the siege in the following year, and would probably have effected the destruction of Bhopāl as an independent principality but for the intervention of the British Government. Wazīr Muḥammad died in 1816, at the age of fifty-one, after having ruled Bhopāl for nine years. He was succeeded by his son Naẓar Muḥammad Khān, who had married Ḳudsiyah Begam, the daughter of Ghawth Muḥammad, who though still called Nawwāb had sunk into obscurity and made no objection to the elevation of his son-in-law. The first efforts of Naẓar Muḥammad were directed to forming a treaty of alliance with the British Government, whereby Bhopāl was guaranteed to him and his descendants, on condition of his assisting the British with a contingent of troops and co-operating in suppressing the Pindārā freebooters. He died after a reign of 3½ years, during which the state had entered upon a new era of prosperity and the revenues had increased tenfold. As he left but one child, an infant daughter, Sikandar Begam, it was arranged that the regency should be in the hands of his widow, Ḳudsiyah Begam. The regent, wishing to retain the power in her own hands, delayed the marriage of her daughter until 1835, but as she was even then unwilling to resign, a civil war broke out, in the course of which her son-in-law, Djahāngīr Muḥammad, a nephew of Naẓar Muḥammad, was defeated and besieged in a fort by the troops of his wife and mother-in-law. Through the mediation of the British Government, the administration of the state was in 1837 entrusted to Djahāngīr Muḥammad, and Ḳudsiyah Begam retired on a pension. On his death in 1844 he was succeeded by his widow, Sikandar Begam, who ruled Bhopāl until her death in 1868. This remarkable woman displayed in all departments of the state an energy, an assiduity, and an administrative ability such as would have done credit to a trained statesman. In six years she paid off the entire public debt; she abolished the system of farming the revenue, and made her own arrangements directly with the heads of villages; she put a stop to monopolies of trades and handicrafts; she re-organised the police, and made many other improvements. Throwing aside the restrictions of the pardah, she appeared in public unveiled and in masculine attire. During the Sepoy Mutiny of 1857, she distinguished herself by her unflinching fidelity to the British Government; when her nobles were urging her to proclaim a Djihād, and the contingent raised in Bhopal and commanded by British officers had mutinied and was clamouring to be led to join the rebels in Dihli, she never faltered; she caused the British officers to be conducted in safety into British territory, allayed the excitement in her capital, put down the mutinous contingent with a strong hand, and finally restored order in every part of the Bhopāl territory; further, she liberally assisted the British troops in every way that lay in her power. In return for these services, the Begam received various honours

from the British Government, besides a substantial enhancement of the territories of her state. In 1863-1864 she performed the pilgrimage to Mecca, leaving her daughter under the protection of the British Government; on her return she published an account of her travels. (For an account of Sikandar Begam and her court, see L. Rousselet, *L'Inde des Rajahs* (Paris, 1877); Eng. trans. *India and its Native Rulers* (London, 1881). She was succeeded by her daughter Shāh Djahān, who like her mother was a woman of great administrative ability. After the death of her first husband in 1867 she threw aside the restrictions of the pardah and made herself accessible to all, but retired again on her second marriage in 1871 with a mawlawi named Saiyid Muḥammad Ṣadīḳ Ḥasan Khān [q. v.] who received the honorary title of Nawwāb; he died in 1890. Shāh Djahān died in 1901 and was succeeded by her daughter and only child, Sulṭān Djahān Begam, the present ruler, who personally directs the administration of her State, assisted by her eldest son Nawwāb Muḥammad Naṣr-allāh Khān, (born 1876).

W. Arnold.)

BHOPĀL CITY. Population (1901): 77,023, of whom 41,888 are Musulmans. Capital of the State of the same name, surrounded by two lines of fortifications. The chief buildings are the palaces, the Djāmiʿ Masdjid, built of a purple-red sandstone by Ḳudsiyah Begam, and the unfinished mosque, Tādj al-Masādjid, which Shāh Djahān Begam intended should become the dominating feature of the city; she at first proposed to pave this mosque with sheets of looking-glass in imitation of the floor that Solomon had made to deceive Bilḳīs, the queen of Sheba, but abandoned the project in deference to the protest of the ʿulamāʾ.

BĪ (cf. Beg), in Bukhārā, a title of viziers and officials of high rank. With it is connected *bīke*, a title of Muhammadan women of Turkish birth, which at the present day, is still occasionally found in Asia Minor.

BĪʿA (A.) "Church", loanword from the Aramaic, cf. S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, p. 274. [See kanīsa.]

BĪBĀN, famous passes in Algiers, called *Demir Ḳapū*, "Iron Gates" by the Turks, and still called "Portes de Fer" by the French. They are breaches made by erosion in the mountains of the same name, which form the northern border of the plateau of Seṭīf and connect Dire d'Aumale with the Babors of Little Kabylia [cf. the articles algeria, atlas and kabylia]. There are two of these narrow passes, the "Great Gate" (*Bāb al-Kebīr*), in the depths of which flows the Wād Shebba and through which the road and railway from Algiers to Constantine pass; and the "little gate" (*Bāb al-Seghīr*), the valley of which is occupied by the Wād Būktūn. The "Little Gate" is the narrower; it is a valley four miles long, hemmed in on either side, by precipitous cliffs 300 to 500 feet high, which in any places are scarcely 60 yards from one another.

These dangerous passes were not used by the Romans, who made a deviation from Caesarea to Auria southward around the Bībān range. The Turks allowed troops, which had to go from Algiers to Constantine, to march through them but not without previously purchasing the neutrality of the surrounding tribes. On the 28th October 1839, a French column of 8000 men, under the command of Marshal Valée, the governor-general of Algeria, with whom was the Duke of Orleans traversed the "Little Gate" without mishap. The neighbouring tribes, who might easily have prevented their advance, had received the usual toll through the intermediary of al-Makrānī, the Bash-Agha of Medjāna, who was friendly to the French. This so called "expédition des Portes de Fer" aroused great enthusiasm in France where it was celebrated as a brilliant feat of arms but it ultimately led to a breach between the French and ʿAbd al-Ḳādir, who regarded it as a breach of the treaty of Tafna. [Cf. the article ʿabd al-ḳādir]. (G. Yver.)

BĪBĀN al-MULŪK, a village in Egypt. Bībān al-Mulūk i. e. "Gates of the Kings" is the modern Arabic name for the graves of the kings of Ancient Egypt of the xviiith—xixth dynasty on the west bank of the Nile near Luxor.

Bibliography: Baedeker: *Egypt*, 6th ed. (C. H. Becker.)

BĪBĪ, a word of Eastern Turki origin meaning "lady" in Persian is found quite early in a verse by Enwerī (xiith century) quoted in the *Farhang-i Nāṣirī*. The mausoleum of the daughter of Yezdigerd III, the last Sāsānian king, the wife of Husain, son of ʿAlī, is known by the name of Bībī Shahrbānū and lies near Teherān on the ruined site of Ray. *Bībī Maryam* is the Virgin Mary. — The queen in cards is also called *Bībī*.

Bibliography: Edw. G. Browne, *A Year amongst the Persians*, p. 88; do. *A Literary History of Persia*, i. 130; Gobineau, *Religions et philosophies*, p. 275; Yāḳūt (ed. Houtsma), ii. p. 293 (= Harār with the epithet Ghazāla); Bogdanow, *Persiya* (in Russian), p. 82. (Cl. Huart.)

BIDʿA is the exact opposite of *sunna*, and means some view, thing or mode of action the like of which has not formerly existed or been practised, an innovation or novelty. The word became important theologically in the revolt against the precise following of the Sunna of the Prophet, and came thus to indicate all the unrest of new ideas and usages which grew up naturally in the Muslim church, covering dogmatic innovations not in accordance with the traditional sources (*uṣūl*) of the Faith, and ways of life different from those of the Prophet. The word, therefore, came to suggest

individual dissent and independence, going to the point of heresy although not of actual unbelief (*kufr*). In modern Arabic it can mean "paradox" (Dozy and Badger).

In this development two broad parties showed themselves. One, conservative but gradually vanishing, in the past mostly Ḥanbalite and now practically Wahhābite only, taught that the duty of the believer was "following" (*ittibāʿ*) — the Sunna understood — and not "innovating" (*ibtidāʿ*). The other accepted the facts of change of environment and condition, and taught, in varying degrees and ways, that there were good and even necessary innovations. According to al-Shāfiʿī, anything that is new and contradicts Ḳurʾān, Sunna, Agreement or Traditions (*āthār*) is a *bidʿa* which leads astray. But a good novelty which does not so contradict is a praiseworthy *bidʿa*. A more elaborate classification divides innovations under the five rules (*aḥkām*) of canon law. Innovations which are also duties incumbent on the Muslim community (*farḍ kifāya*) are study of Arabic philology in order to understand the Ḳurʾān etc.; accepting and rejecting legal witnesses (*ʿadl*), distinguishing sound from corrupt traditions; codifying canon law (*fiḳh*); confuting heretics. Forbidden are all heretical systems (*madhāhib*) opposed to orthodox Islām. Recommended (*mandūb*) are such things as the founding of religious houses for devotees (*ribāṭāt*) and schools. Disliked (*makrūh*) is such as the decorating of mosques and Ḳurʾāns. Permitted (*mubāḥ*) is such as expenditure in eating, drinking etc.

Finally, the distinction between *bidʿa*, heresy, and *kufr*, unbelief, is said to lie in the origin of *bidʿa* being only a confusion (*shubha*) as to a sound proof, while that of *kufr* is obstinate opposition (*muʿānada*).

Bibliography: The classical history of the development is by Goldziher, in his *Moh. Studien*, ii. pp. 22 ff. See, too, Macdonald, *Development of Muslim Theology*, *bidʿa* and *mubtadiʿ* in index. (D. B. MACDONALD.)

BĪDAR, an ancient Hindu city, situated in 17° 55′ N. and 77° 32′ E., first occupied by the Muḥammadans in 1322; it became the capital of the Bahmanī Kings [*q. v.*] in 1429, and of the Barīd Shāhī dynasty [*q. v.*] that followed them. It contains many monuments of the grandeur of these dynasties; among them are the massive tombs of the last ten Kings of the Bahmanī dynasty; the tombs of the Barīd Shāhī kings are of a more graceful type, the most beautiful being that of ʿAlī Barīd Shāh, adorned with fine coloured tiles. The Barīd Shāhī Kings are said to have deliberately destroyed the palace of their predecessors, the Bahmanīs, which is now entirely in ruins; but fine remains of their own palaces remain, among which may be mentioned the Rangīn Maḥall, with its beautiful inlaid work of mother-of-pearl. Of the great madrasa, built in 1478—1479 by Maḥmūd Gawān [*q. v.*], part only survives, richly decorated with enamelled tiles.

Bibliography: *Report on the Antiquities in the Bidar and Aurangabad Districts*, by James Burgess, p. 42 et seq. (*Archaeological Survey of Western India*, Vol. iii. 1878); T. W. Haig, *Historic Landmarks of the Deccan* (Allahabad, 1907), pp. 95—104.

BĪDIL (P., "unfortunate, disheartened") the name of several Persian poets:

1. MĪRZĀ ʿABD AL-ḲĀDIR BĪDIL, a Persian poet of India, born 1054 (1644) at Akbarābād, died 4th Ṣafar 1133 (5th Dec. 1720) at Dihlī, wrote amongst other works a poetical handbook of mysticism called *ʿIrfān* (knowledge), an allegorical Mathnawī *Ṭilism-i ḥairat* (Talisman of Amazement) and in prose a collection of letters (mostly to his patron Shukr Allāh and his two sons) entitled *ruḳaʿāt* or *inshā*. His collected works (*Kulliyāt-i B.*) were lithographed at Lucknow in 1287.

2. ḤĀDJDJĪ MĪRZĀ RAḤĪM BĪDIL, a poet of Shīrāz, a descendant of a family of scholars, which had given the Ṣafawīds a number of physicians. His father Mīrzā Muḥammad Ṭabīb had gone from Iṣpahān to settle in Shīrāz at the request of the Wakīl Karīm-Khān Zand (died 1779), he himself was physician to Fatḥ ʿAlī Shāh and died at Ḳumm while returning from a pilgrimage to Mecca, in the beginning of the reign of Muḥammad Shāh (about 1786).

3. MUḤAMMAD AMĪN BEG BĪDIL, a poet of Nīshāpūr.

Bibliography: Ethé in the *Grundriss der Iran. Phil.*, Vol. ii. p. 300, 310, 337; Riḍā-Ḳulī-Khān, *Madjmaʿ al-Fuṣaḥā*, Vol. ii. p. 82. (CL. HUART.)

BĪDJĀN, AḤMAD, the son of a certain Ṣāliḥ al-Dīn al-Kātib, wherefore he is sometimes like his brother Muḥammad, called Yāzidjī Oghlu (son of the clerk), a Turkish author, who lived in the first half of the ixth (xvth) century. Both the brothers were pupils of the famous Ḥādjdjī Bairam, the founder of the darvish order of the Bairamīya [see above, p. 595] and led an ascetic life whereby Aḥmad is said to have become so emaciated that he appeared to be lifeless (whence the epithet Bīdjān). His literary activity was therefore mainly devoted to Ṣūfism. He translated into Turkish the *Maghārib al-Zamān* composed by his brother in Arabic and gave the translation the title *Anwār al-ʿĀshiḳīn* (Constantinople, 1261, 1291; Kazan, 1861; Būlāḳ, 1300 etc.). Another Turkish treatise, a kind of history of the prophets bears the title *Rawḥ al-Arwāḥ*. He also busied himself with cosmography, especially in the sense of a description of the wonders of creation after the pattern of the Arab author al-Ḳazwīnī. His *ʿAdjāʾib al-Makhlūḳāt* is an extract from the latter's work (cf. Rieu, *Cat. Turk. Mss. of the Brit. Mus.*, 106 *et seq.*); a similar work entitled *Durr Maknūn* is more original. The first mentioned work was written in the year of the conquest of Constantinople 857 (1453) so that the author must have been still alive at that date, cf. the article YĀZIDJĪ OGHLU.

Bibliography: v. Hammer, *Geschichte der Osm. Dichtkunst*, i. 127; Gibb, *Ottoman Poems*, 169; do., *a History of Ottoman Poetry*, i. 396 *et seq.*; cf. also the Catalogues of Rieu (London), Pertsch (Berlin), Flügel (Vienna) etc.

BIDJANAGAR. [See VIDJAYANAGAR.]

BIDJĀPUR, or VIJAYAPURA, (= "city of victory"), a town and district of India, in the Bombay presidency. Area of district: 5,669 sq. m.; pop. (1901): 735, 435, of whom only 11% are Muḥammadans. It consists for the most part of a barren upland tract, very liable to drought. The language of the great majority is Kanarese, and many belong to the Lingāyat sect. The town has been the head quarters of the district (formerly called Kalādgī) since 1885; pop. (1901): 23, 811. It was the capital of the ʿĀdil

Shāhī dynasty [q. v.] which established its independence of the Bahmanis in 1490, and was finally conquered by Awrangzīb in 1686. Magnificent palaces, mosques, tombs, and other buildings still remain in a fair state of preservation, together with the city walls enclosing an immense area. Conspicuous among them are the Rawḍa of Ibrāhīm ʿĀdil Shāh (ob. 1626); the Gōl Gumbaz of Muḥammad ʿĀdil Shāh (ob. 1656), said to be the second largest dome in the world; and the Djāmiʿ Masdjid of ʿAlī ʿĀdil Shāh (ob. 1673). All of these have recently been the subject of careful restoration by the British government.

(J. S. COTTON.)

BIDJĀYA. [See BOUGIE.]

BIDJNAWR or BIDJNOR, a town and district of India, in Rohilkhand, United Provinces. Area of district: 1,791 sq. m.; pop. (1901): 779,951, of whom as many as 35% are Muḥammadans. The town — pop. (1901): 17,583 — is of little importance, but the district is prominent in Rohilla history. It contains the town of Nadjībābād, founded about 1750 by Nadjīb al-Dawla, who rose to be Wazīr of Dihlī, and whose son was Zābita Khān. In the Mutiny of 1857, a grandson of Zābita Khān, with the title of Nawwāb of Nadjībābād, was one of the most formidable opponents of the British. He finally died in prison, his property was confiscated, and his palace razed to the ground.

Bibliography: *Bijnor Gazetteer* (Allahabad, 1908).

(J. S. COTTON.)

BIDLĪS or BITLIS, a town in Turkish Armenia, capital of the district of Kurdistān, situated in 42° 4' East Long. (Greenw.) and 38° 23' North Lat., 14 miles from the western shore of the Sea of Van, and 35 miles north east of Siʿird (Seʿort); according to Ḳudāma (*Bibl. geogr. arab.*, vi. 229), it was four post-stations (*sikkes*) from Akhlāṭ [q. v., p. 235 *et seq.*]. Bitlis (or Bidlis) is the Turkish pronunciation of the name; arabic Badlīs and Armenian Baghēš.

The appearance of the town is described as very striking and most picturesque. It is built at the bottom of a deep valley and in two narrower ravines which run into it. The Bidlis-čai flows from north to south through the town. This stream, which takes its name from Bidlis rises about 16 miles to the north and flows into the Bohtān-ṣu, the socalled Eastern Tigris, near Bensia, about 10 miles southwest of Siʿird. In the centre of the town the Bidlis-čai receives a tributary from the west; another from the north east joins it at the south end of Bidlis. The town is divided by this system of rivers or ravines into four separate quarters, the inhabitants of which often took separate sides during hostilities and blockaded one another. The houses, usually surrounded by beautiful gardens rise up the steep cliffs all around; many dangerously steep and twining little streets, which however are always paved, contrary to the usual custom of the east, communicate with one another, numerous bridges span the river. The remarkably solid style of architecture of most of the dwelling houses makes a very pleasant impression on the visitor. Excellent building material is furnished by the red-brown volcanic rocks of the district.

The whole town is commanded by a strong citadel, now partly in ruins, perched on the top of a steep cliff. The date of its foundation is not known; the walls bear a series of Arabic inscriptions. It may be assumed that the fortification of this dominant height was contemporaneous to the foundation of the town. Oriental legend ascribes the latter to Alexander the Great. The citadel of Bidlis played an important role from the military point of view throughout the vicissitudes of Armenian history. Since about the end of the middle ages Kurdish Chiefs (begs) had resided here, who, as elsewhere, exercised unlimited power, quite independent of the Porte; only on one occasion had Bidlis to submit to its nominal suzerain, viz. in 1638 when Sulṭān Murād IV. set out for the reconquest of Baghdād with a vast host. It was not till 1847 that after severe fighting the Turks succeeded in breaking the power of the Kurdish princes ruling in Bidlis and Vān and ruling the town and district directly. The ancient Kurdish castle is now used as the residence of the principal Turkish officials.

The climate of Bidlis is on account of the high altitude (5180 feet; citadel 5310 feet) raw and damp. As everywhere on the Armenian plateau, a long winter is followed by a short relatively hot summer; snow often lies on the roads from November to May, conditions are very favourable for the cultivation of fruits however; vegetables and excellent fruit flourish in abundance.

The industries of Bidlis are on the whole not unimportant. The many channels of waters drive numerous mills. The textile industry may be particularly mentioned. The tastefully decorated carpets woven in the Bidlis district are famous throughout Turkey. Colouring with madder is a speciality here. The principal exports are: red dyed stuffs (cotton and linen), carpets, goat and and buffalo hides, and large flocks of sheep; of special importance is the exportation of gallapples collected in the mountains of Kurdistān and of white and red gums (tragacanth) which find their way to Europe.

Bidlis is a most important town commercially and indeed must be regarded as one of the chief towns in Armenia; for it is one of the chief places through which passes the caravan traffic between Armenia and Georgia on the one side and the basins of the Euphrates and Tigris and Syria on the other. According to Layard there are three routes from Bidlis to the Djazīra, two over the mountains to Siʿird, which are usually traversed by caravans but are steep and difficult; a third (which was taken by Layard) makes a detour through the valleys of the eastern arm of the Tigris. Of the two roads mentioned by Layard connecting Bidlis and Siʿird, the first Arab town in Mesopotamia proper, one, of which nothing further is known, must be a mere footpath. We know more about the road which is more frequented from Bidlis via Dukhān to Siʿird (2 days' journey), the Bidlis pass proper, which has several times been traversed and described by European travellers. This narrow pass is already mentioned in the Byzantine (George Cypr.: κλεισοῦρα Βαλαλείτου) and Arab sources (Balādhorī, *op. cit.*: *al-darb*) and more often in Armenian literature, cf. Gelzer, Georg. Cypr. (Lipsiae, 1890), p. 168; H. Hübschmann, *op. cit.*, p. 317, 318.

The main route from Bidlis into the interior

of Armenia turns immediately in a north-westerly direction towards Mūsh and before crossing the Nimrūd-dagh, 7000 feet high, sends off a side road which goes directly north-east towards the Sea of Wān (to Tadwan). All these passes are often quite snowed up during the long severe winters and then are exceedingly difficult to traverse.

Before the last Russo-Turkish war the district of Bidlis was under the Governor-General of Erzerūm; it was then raised to the rank of a separate district (wilāyet) by the Porte, chiefly in order to put a check on the individualistic tendencies and quarrels of its citizens. The modern Wilāyet of Bidlis comprises 4 Sandjaḳs (Bidlis, Mush, Si'ird and Gindj) with 19 Ḳazās and 13,500 sq. miles in area. The population numbers 254,000 Muḥammadans, 140,000 Christians, 3,900 Jews etc., in all 398,700 souls. The Sandjaḳ of Bidlis (with 4 Ḳazās) comprises 2800 sq. miles with 108,227 inhabitants including 70,000 Muḥammadans, 32000 Armenians, 963 Yazidis and 3740 Syrian Jacobites. As to the town of Bidlis itself the older estimate of Kinneir (1814) gives 12,000 inhabitants, while Southgate (1837) and Brant (1838) give 3000 families, which would give about 13,000—15,000 inhabitants. Müller-Simonis and Hyvernat estimated the population in (1888) at 30,000 inhabitants in 6000 houses, (of which 5000 were Kurds and 1000 Armenians); Nolde (in 1892) 36,000 inhabitants. The last, more accurate estimate by Cuinet, *op. cit.* whose statistics on the Wilāyet of Bidlis have also been used by Supan in *Petermann's Mitteilungen*, Erg.-Heft n° 135 (1901), p. 5, 14—15, 21 gives the present population as 20,000 Muḥammadans (almost all Kurds) 16,086 Gregorian Armenians, 200 Protestant Armenians, 1800 Jacobites, a total of 38,886 souls in 8300 houses; there are 15 mosques and 4 Takkiyas (Dervish monasteries). The Gregorian Armenians, who live exclusively in the south quarter are governed by a Bishop and have 4 Churches; there is another church for the Jacobites.

Bidlis is still the typical Kurdish metropolis, and was their political centre during the last great revolts of the Kurds in the xixth century. It is no wonder therefore that it has repeatedly been the scene of awful massacres of Christians, during the Armenian troubles of the last two decades, cf. above p. 443.

BIDLĪSĪ, Mawlānā Idrīs Ḥakīm, a Turkish general and historian, son of the mystic Ḥusām al-Dīn, who belonged to the school of Shaikh 'Omar Yazir, was first of all, an official in the chancellory of Ya'ḳūb, son of Uzun Hasan, Sulṭān of the Turcomans of the White Sheep (died 806 = 1400-1401). His reply to the Ottoman Sulṭān Bāyazīd II on the latter's message announcing his victory, induced the Sulṭān to invite Bidlisi to his court where he remained in the service of Selim I. He accompanied the latter on his campaign against Persia and took possession of Kurdistān for Selim. At the head of a Kurdish army he defeated the Persians, conquered Mārdīn, played an active part in the annexation of al-Ruhā (Edessa) and Mawṣil and consolidated the internal affairs of the land.

In the name of the Sulṭān he granted Ḥiṣn-Kaifā to the Aiyūbid Khalīl. He also took part in the conquest of Egypt and celebrated Selim in a panegyric, in which he took the opportunity to give him some advice on the government of Egypt. He died in 926 (1520) the year in which Selim also died and left a history in Persian verse (80,000 *bait*) of the first eight Ottoman Sulṭāns, called the *Hesht-behisht* "the eight Paradises".

Barb, *Geschichte der Kurdischen Fürstenherrschaft*, p. 12 (*Sitzungsber. der Wiener Akad.*, xxxii. 1859, p. 145); J. de Hammer, *Histoire de l'empire ottoman*, Vol. vi. p. 222, 253 *et seq.*, 259, 415; Sa'd al-dīn, *Tādj al-tawārīkh*, Vol. ii. p. 566; Gibb, *History of Ottoman Poetry*, Vol. ii. p. 267, n. [where a wrong date is given]. (Cl. Huart.)

BIDLĪSĪ, Sharaf Khān, a Persian historian, eldest son of the Emīr Shams al-Dīn, prince of Bidlis, born 20th Dhu 'l-Ka'da 949 (26th February 1543), at Kerahrūd near Ḳumm, was brought up with the family of Shāh Tahmāsp I (958 = 1551). At the age of 12, he was appointed an Emīr of the Kurds, an office which he held for three years. He carried out with zeal the task of subduing the province of Gīlān, with which he was entrusted. He was afterwards summoned to the court of Shāh Ismā'īl II (1576-1577) and was governor of Nakhcewān when Sulṭān Murād III placed him on the throne of his ancestors in Bidlis. In 1005 (1596-1597) he abdicated in favour of his son Shams al-Dīn in order to complete his Persian history of the Kurds, entitled the *Sharaf-nāma*; it was translated into Turkish by Muḥammad Bey b. Aḥmad Bey Mirzā in 1078 (1667-1668) and by Shamī shortly after 1095 (1684). There is an autograph Ms. in the Bodleian (Elliot 332); the text has been edited by Véliaminof-Zernof (St. Petersburg, 1860—1862); and a French translation by Charmoy (1868—1897).

BIDPAI, Bilpai or Pilpai is the form usual

in the west, of the name of the author of the *Kalīla wa-Dimna*; this form may be traced to the Arabic *Bidbā* or *Bidbāh*. The Syriac version of the book (compiled from the Pahlavi) has the name *Bidag* or *Bidwag*. This form is said by Benfey to be derived from the Sanskrit *vidyāpati* which means "lord of knowledge".

All that we know of this (legendary) personage is given in the preface by Bahnūd b. Sahwān, alias ʿAlī b. al-Shāh al-Fārisī, to the Arabic version of the *Kalīla wa-Dimna*. This can only be briefly given here and the reader may be referred for other points to the article KALĪLA WA-DIMNA.

After the prince who had been set over India by Alexander the Great had been driven out, king Dabshalīm, a scion of the native ruling house was placed on the throne by the people. He soon began to conduct himself in an arbitrary fashion and to neglect the interests of his subjects. This grieved a wise Brahman, Bidbā by name, who after a fruitless consultation with his pupils reproached the king at an audience with his misgovernment. The latter threw him into prison, where he lay for a time forgotten by everyone. One evening the king was absorbed in the study of the starry heavens and was reminded of Bidbā, whom he ordered to be brought to him. He pardoned him his bold speech, appointed him vizier, and showed him great honour. The king henceforth devoted himself entirely to the arts of peace and expressed a wish to have his name, like those of his ancestors, go down to posterity associated with some great book, which would give deep wisdom in a popular form. Bidbā then retired from the world with a supply of writing-materials and food, and attended by one pupil, to whom he dictated the *Kalīla wa-Dimna*.

When the work was completed, the king invited all the people of his kingdom to hear it read, which was done by Bidbā in the presence of the king.

(A. J. WENSINCK.)

BIDRĪ WARE, inlay metal work, so called from Bidar [q. v.] where it is said to have been first manufactured; it is made of a composite alloy of copper and zinc (the proportions of which vary in different localities), to which tin, lead or steel powder is sometimes added; the surface is inlaid in silver or gold, and finally polished and coloured to a dark green or black colour by means of a composition of sal ammoniac, saltpetre and other ingredients; the patterns are generally of a floral description, one of the oldest and most prevalent being the poppy pattern. The chief centres of manufacture are Bidar, Purniah, Lucknow, Dacca and Murshidābād; in the three last towns the trade is almost entirely in the hands of Muḥammadans.

BĪGHA a measure of land in India, 5/8 of an acre or 3025 square yards. This is the standard bigha as fixed by the Emperor Akbar, but at different times and in different parts of India it has varied considerably.

Bibliography: Abu 'l-Faḍl, *Āʾīn-i Akbarī*, transl. Jarrett, ii. 61—62; H. H. Wilson, *Glossary*, s. v.

BIGHA (Greek Πηγαί), a town in Asia Minor on the Granicus (Turkish Čanau or Čančai, a tributary of the Ḳodja čai) about 14 miles distant from the Sea of Marmora, capital of a Ḳaẓā with about 5000 inhabitants (Cuinet, see below, iii. 763, gives 10,000). The whole northwestern province of Asia Minor (Mutaṣarrifiḳ) is also called after Bigha although it is not the capital, which is Ḳalʿa-i Sulṭānīye or Čanaḳ Ḳalʿesi (Dardanelles). The harbour (Scala) of the town at the mouth of the Ḳodja čai is Ḳara Bigha or Bighaniñ Eskelesi.

BIH'ĀFRĪD B. MĀHFARWADĪN, a Parsi revivalist, who appeared at Khawāf in the district of Nīshāpūr in the last years of the Omaiyad Caliphate and was slain with many of his supporters by Abū Muslim at the instigation of the Mobeds. He is said to have spent seven years in China early in his career and to have suddenly appeared to the people on his return pretending he had been dead and in heaven during this period. According to one writer he actually simulated death and spent a year in a tomb, which he had built for himself. His teaching, which he claimed to have learned in heaven, was contained in a Persian work. In it he abolished certain ceremonies and customs of Magism e.g. the muttering (*zamzama*), the worship of fire, the marriage of near relatives, the drinking of wine and the eating of animals that had died etc., while he substituted in their place new rites, for example, the repetition of certain prescribed prayers seven times daily and turning towards the sun while repeating them.

BIHĀR, or BAHĀR, a town and historic tract of India, in the province of Bengal. The town — pop. (1901) 43,063 — derives its name from *vihāra* = a Buddhist monastery, and is surrounded by Buddhist remains. It is believed to have been the provincial capital under the Muḥammadans from early in the 13th cent. until the time of Akbar, when the seat of government was removed to Patna. The province was never an independent kingdom, being on the borderland between Bengal proper and Hindustan. Under the Mughals it formed a *ṣūbah*, divided into eight *sarkārs*, which was always subordinate to the *ṣūbah* of Bengal, and as such it passed to the British in 1765, with the grant of the *dīwānī* of Bengal, Bihār, and Orissa. Bihār, however, differs from Bengal proper in almost every respect — in climate and

agriculture, in population and language. Only 18% of the inhabitants are Muḥammadans, compared with 54% in Bengal. Their language, known as Bihārī, is directly derived from the ancient Māgadhī Prākrit, and may be described as intermediate between Eastern Hindī and Bengalī. It comprises three dialects, Maithilī, Magahī, and Bhojpurī. In 1901, it was found to be spoken by 34½ millions, showing that the language has spread beyond the administrative province, which contained only 24,241,305 persons.

AL-**BIHĀRĪ** (MUḤIBB ALLĀH B. ʿABD AL-SHUKŪR AL-ḲĀḌĪ AL-BIHĀRĪ), born in a village in Bihār, India, one of the most eminent ʿUlamāʾ of his time. ʿĀlamgīr appointed him Ḳāḍī of Lucknow, and afterwards of Ḥaidarābād, Dakhin. For a time he fell under the displeasure of the Emperor, but was restored to favour and appointed tutor to ʿĀlamgīr's grandson, Rafīʿ al-Ḳadr, son of Muḥammad Muʿaẓẓam. On the death of the Emperor ʿĀlamgīr, Muḥammad Muʿaẓẓam succeeded him under the title of Shāh ʿĀlam I and bestowed upon Muḥibb Allāh the title of "Fāḍil Khān" and made him Ḳāḍī al-Ḳuḍāt (chief justice) of the entire Mughal Empire; but he did not live long to enjoy this post, as he died a few months after in A. H. 1119 (A. D. 1707). He is the author of the following works: 1. *al-Djawhar al-Fard*, a treatise on the indivisible atom, (Loth, Ind. Off. N°. 581, ix.); 2. *Musallam al-Thubūt*, on the principles of Muslim jurisprudence, according to the Ḥanafī school, (printed Aligarh, 1297; Dihli, 1311); 3. *Sullam al-ʿulūm*, on logic; as this has long been a favourite textbook in India, it has frequently been printed, and numerous commentaries and super-commentaries have been written upon it.

BIHISHT. [See BAHISHT, p. 600.]

BIHḲUBĀDH, the mediaeval name of three districts (Pers. *ustān* = Arabic *kūra*) of Sawād or ʿIrāḳ (Babylonia). The division of this area in Sāsānian times, adopted by the Arabs, was as follows: 1. Upper Bihḳubādh with six divisions (*ṭassūdj*), including Bābil, Khuṭarniya, Upper- and Lower-Fallūdja and ʿAin al-Tamr; 2. Central-Bihḳubādh with four divisions including Sūrā and Nahr al-Malik; 3. Lower Bihḳubādh with five divisions, among them Furāt Bādaḳlā and Nistar. All three districts are occasionally comprised under the plural form Bihḳubādhāt. In general the term is applied to the lands along the banks of the Euphrates in its course south-west of Baghdād as far as the district of Kūfa. The name Bihḳubādh means: "Good (or "better", modern Persian *bih* = middle Persian *weh*)-Ḳubādh"; analogous appellations may be quoted elsewhere; cf. Marquart, *op. cit.*, p. 41. The Ḳubādh referred to is the first Sāsānian king of that name (reigned 488 or 496—531): a number of other district and town-names may be traced to him; cf. e. g. the articles ABARḲOBĀDH [above, p. 5] and ARRADJĀN [p. 460]. In the geography of Pseudo-Moses-Xorenaçi the name of the Bihḳubādh province appears in the form Kevat; cf. Marquart, *op. cit.*, p. 142.

BIHRŪZ, MUDJĀHID AL-DĪN, was prefect of Baghdād with short intervals for more than 30 years from 502—536 (1108—1141) and for a period, of all ʿIrāḳ for the Seldjūḳ Sulṭāns. After being finally deposed in 536 he retired to his private property, the town of Takrīt, and spent the remainder of his life there till his death in 540 (1145-1146). During his government he earned the gratitude of his contemporaries by the many useful public works which he had undertaken for the improvement of the general welfare.

Bibliography: Ibn al-Athīr (ed. Tornberg), x. 330 *et seq.*

BIHZĀD, KAMĀL AL-DĪN, the most famous of Persian miniature painters, born in Herāt, a pupil of Pīr Saiyid Aḥmad of Tabrīz and favourite of the Tīmūrid Ḥusain-i Bāiḳarā and the Ṣafawī Shāh Ismāʿīl. Bāber (*Memoirs*, i. 412) praises his delicate talent but criticises him for making the lines of the chin too thick on beardless faces. He was still alive when Khōndemīr completed his *Ḥabīb al-Siyar* (930 = 1524). Among the manuscripts illustrated by him may be mentioned a *Tīmūr-Nāmah* written by Sulṭān ʿAlī Mashhadī, which belonged to the library of the Great Moghal Humāyūn, when it was plundered and afterwards found a place in Akbar's library (perhaps the identical example, now in the Schultz collection, *Orientalisches Archiv*, i. Plate vi. n°. 5). He also illustrated a *Bustān* of Saʿdī (893 = 1488) in Cairo and the *Dīwān* of Ḥusain-i Bāiḳarā in Paris; there are seven sketches by him in Vienna. His pupils were Shaikh-zāde Khorāsānī, Mīr Muṣawwir of Sulṭāniya, Aghā Mīrek of Tabrīz, who decorated the public buildings of Herāt with inscriptions, and Muẓaffar ʿAlī, who ornamented the Cihil Sutūn palace at Ispahān. His nephew Rustam ʿAlī was an excellent calligrapher.

(CL. HUART.)

BIḲĀʿ. [See BUḲʿA.]

BIKR (A.), first born, virgin.

BILĀD (A.), plural of *balad* [q. v.], "district", "province", appears in the names of countries, e.g. *Bilād al-ʿArab*, Arabia; *Bilād al-Rūm*, land of the Romans, Asia Minor; *Bilād al-Durūb*, lands of the Taurus passes; *Bilād al-Djarīd*, see below.

BILĀD AL-**DJARĪD** (Land of Palms), or as it is popularly called al-Djerīd, a district in Central Tunisia. The name is now given to a group of four oases, viz. Tūzer, Nefṭa, al-Wadiān and al-Ḥamma [cf. the articles TŪZER and NEFṬA]. The Djarīd is a rocky stretch of land bounded on the north by the Shoṭṭ Gharsa and in the south by the Shoṭṭ al-Djarīd. The latter forms with its eastern continuation the Shoṭṭ Fedjedj an almost

unbroken depression from the shores of the Gulf of Gabes to the Algerian frontier. Shut in by mountains and sand hills against which measures have had to be taken to prevent the invasion of the oases by the sands of the desert, the Djarīd forms a kind of natural hot-house, where the average temperature throughout the year is 70°, with, however, a maximum of 120° and a minimum of 25° Fahr. The rainfall is small, — 5 inches annually — but the springs provide a plentiful supply of water. They are skilfully utilised by the inhabitants, by a system of irrigation which has been described by al-Bakrī, and nourish in the oases a luxurious crop of fruit-trees, mainly date-palms, which shade the cornfields at their feet. Date-palms constitute the principal wealth of Djarīd, which contains about a million of them, producing annually from 38.000—40.000 tons of dates. The inhabitants also derive a portion of their income from the manufacture of silk and cotton stuffs and carpets, which are much esteemed in Tunisia. The Djarīd was besides, in the middle ages as at the present day, the starting-place and the destination of caravans. Nefta was once known as the "port of the Sahara". But this traffic, now much diminished since the suppression of slavery under the governorship of Aḥmad Bey, has lost almost all its former importance. The population, which is scattered through the various oases, numbers 30,000 of which 10,000 are in Nefṭa, 9000 in Tūzer, 1400 in al-Ḥamma and 8000 in al-Udiyān.

The modern Djarīd does not quite correspond to the region mentioned by the Arab historians and geographers under the names of Bilād al-Djarīd or land of Ḳasṭīliya. Ibn Ḥawḳal (*Description de l'Afrique: Journ. Asiat.* 1842, p. 243) regards the name Ḳasṭīliya as being applicable only to the town of Tūzer. Al-Bakrī (*Description de l'Afrique*, trad. de Slane, p. 116 *et seq.*) extends it to the adjoining country. "The land of Ḳasṭīliya" he writes, "contains several towns such as Tūzer, al-Ḥamma and Nefṭa". Ibn Khaldūn (*Berbères*, trad. de Slane, i. p. 192) regards the two names as identical and in addition includes Gafsa on the north, and Nefzāwa on the south, in the Djarīd. "The towns with the date-palms are situated to the south of Tunis; they include Nefṭa, Tūzer, Gafsa and the towns of the Nefzāwa country. All this area is called the land of Ḳasṭīliya and supports a large population". Leo Africanus uses the name Djarīd in a much wider sense; the limits he gives, are, on the one side Pescara (Biskra) and on the other the Mediterranean shores near Djerba (*Description de l'Afrique*, ed. Schefer, iii. Chap. vi. p. 296).

Inhabited originally by Nefzāwa Berbers and colonised by the Romans, the Djarīd had to bear the first brunt of the Muḥammadan invasion. In 647 A. D. it was ravaged by the army of Ibn Zuhair, in 669 by that of Oḳba, who deprived the Christians of the towns they occupied in this region and forced them to adopt Islām. Their conversion to Islām was neither general nor permanent, however, for there were Christian communities in Ḳasṭīliya down to the time of the Almohads. Incorporated for administrative purposes with Ifrīḳiya, the Djarīd tolerated the authority of the Emirs of Ḳairawān with a very bad grace. The Berbers of the Djarīd repeatedly rose against the Aghlabids, notably in 137, 209 and 224 A. H. At the beginning of the Fāṭimī rising, the *Dāʿī* Abū ʿAbd Allāh had no difficulty in conquering the country of Ḳasṭīliya. The inhabitants had readily adopted the heterodox doctrines of the Abāḍites in the 4th century (Ibn Ḥawḳal, *op. cit.*, p. 248); they preserved, as al-Bakrī particularly mentions (*op. cit.*, p. 119) as a peculiarity of the Djarīd, the habit of eating dogs' flesh, which is, it is said, still practised by the heretics of Djerba and the Mzāb. At this period, the Djarīd was enjoying remarkable prosperity, for according to al-Bakrī, the taxes produced an annual sum of 200,000 dinārs (£ 80,000).

Protected by its isolation, the Djarīd succeeded in preserving a practical autonomy, while nominally recognising the suzerainty of the various dynasties that succeeded one another in Ifrīḳiya. The towns formed little republics, governed by councils of the more prominent men, or ruled by powerful families, such as the Beni Forḳān, and later the Beni Wāṭās at Tūzer. The Hammādids, to whom the tribes of the Djarīd paid their homage after casting off the authority of the Zīrids, treated these local councils with deference. The Almohads suppressed them. As soon, therefore, as the Almohad empire began to break up, the Djarīd, which had fallen to the Ḥafṣids, tried to regain its independence. The civil wars, which broke out between the rulers of Tunis and of Bougie (Bidjāya), gave these tribes of the oases the looked for opportunity. Taking advantage of the weakness of Tunis, the towns of the Djarīd again organised themselves into republics. Under the leadership of powerful families, the Beni Yamlūl at Tūzer, Beni Khalef at Nefṭa, the Beni Abū Manīʿ at al-Ḥamma, with the aid of Hilālī tribes and in alliance with the Beni Mozni of Biskra [see the article BISKRA] they fought throughout the xivth century against the Ḥafṣids. Conquered by Sulṭān Abū Bakr, who entrusted the government to his son, the Djarīd rose again on the latter's death in 1346. It recognised Marīnid authority, then after the destruction of Abu 'l-Ḥasan's army at Ḳairawān, and regained its independence. The successes gained by the Ḥafṣid Abu 'l-Abbās do not appear to have had any enduring results. During the xivth and xvth century the Djarīd was practically independent and affairs have not altered much under Turkish suzerainty. The Turks had to send an expedition every winter into the oases to collect the taxes.

(G. YVER.)

BILĀL B. RABĀḤ, the first Muʾadhdhin, a slave of Abyssinian origin, who belonged to a man of the tribe of Djumaḥ b. ʿAmr, was early attracted by Muḥammad's preaching and joined his little band of followers. For this he was persecuted by the Prophet's enemies, but remained steadfast in his belief in the one God, which induced Abū Bakr to purchase him and give him his freedom. He fled with Muḥammad to Medina where he immediately found a welcome from Saʿd b. Khaithama. He afterwards dwelled in the house of Abū Bakr, where he like the other members of the household was attacked by the fever then raging in Medina. According to Ibn Isḥāḳ, Muḥammad established a bond of brotherhood between him and the Khathʿamī Abū Ruwaiḥa; so that he — one of

the five non-Arabs to whom grants were assigned by ʿOmar — appears in the lists of names along with Abū Ruwaiha, according to others this bond was made with ʿUbaida b. al-Ḥāriṯh b. al-Muṭṭalib. When the Prophet after some hesitation introduced the call to prayer [see the article ADHĀN] he appointed Bilāl his Muʾadhdhin. He was also entrusted with the office of carrying the prayer-spear ʿ*Anaza* before the Prophet at public prayer on the great festivals. He accompanied Muhammad on all his campaigns and is said to have had Umaiya b. Khalaf put to death at Badr to revenge himself for his ill treatment of him in the past. After the occupation of Mecca he had the glory of calling to prayer from the roof of the Kaʿba. In several narratives he is mentioned as the man whose duty it was to look after the food supply on journeys and Abū Hadjar calls him the Prophet's steward (*Khāzin*).

After the death of Muḥammad he was filled with a longing to take part in the holy war, which was granted him, not however, as one version has it, by Abū Bakr but only in the time of ʿOmar. He accompanied Abū ʿUbaida on the campaign into Syria and when ʿOmar visited the conquered land, he is said to have been once more asked to call to prayer, which he did amidst the sobs of all present. He died in A. H. 20 = 641 A. D. (according to others in 21 or 28 A. H.) about the age of 60, in Damascus and was buried there or in the adjacent Dāraiyā (according to others in Aleppo). He is described as tall and thin with a stooping gait; his complexion was dark, his face thin and his thick hair strongly tinged with gray.

BILĀL, in the Dutch East Indies, the usual name for the Muʾadhdhin.

BILBĪS, a town in Lower Egypt, north-east of Cairo on the edge of the desert.

The name Bilbīs appears in many forms e. g. Balbīs, Belbīs, Bilbais and is derived from the Coptic Phelbes. As a halting-place on the road from Syria to Cairo, Bilbīs played a certain part during the period of the conquest. Tradition connects a daughter of Muḳauḳis with it. In the year 109 (727) the first regular settlements of Arab tribes took place in the neighbourhood of Bilbīs. It is again mentioned in 386 (996) as the place where the Fāṭimid Caliph ʿAzīz died. At the end of the Fāṭimid period it was a point of considerable strategic importance for King Amaury of Jerusalem and later during the Aiyūbid wars. Though for a long period a flourishing town with mosques, bazaars, baths and a hospital and the capital of the province of Sharḳiye, it must have suffered a serious reverse at the beginning of the modern period. At the present day it is a small town, the chief of a district (*markaz*) with 9875 (or with its 20 dependencies 11,267) inhabitants. The whole district of Bilbīs, which is still part of the province of Sharḳiye, has 122,736 inhabitants.

H. Becker, *Beiträge zur Geschichte Ägyptens*, ii. 126 *et seq.* (C. H. BECKER.)

BILDĀR (P.), "Shovel-bearer"; labourers who are employed from the villages for archaeological excavations and work with a long shafted, triangular shovel are so called. This shovel is a much used agricultural implement, and takes the place of the plough in irrigated or damp soil and is used in connection with the planting of vegetables and melons. The inhabitants of Iṣpahān and the Parsis of Yazd are famous for their skill in the use of this implement.

BILEAM. [See BALʿAM, p. 613].

BILEDJIK, the Byzantine BELOKOMA, a town in Asia Minor on the Anatolian railway (Haidar-pasha-Eskishehr), capital of the Sandjaḳ of Ertoghrul in the Wilāyet of Brusa (Khodāwendikiār) famous for its silk spinning and weaving. The present town has about 5000 inhabitants and contains several mosques which are said to have been built by the early Ottoman Sulṭāns ʿOthmān and Orkhān, a Madrasa, Tekke etc. Biledjik was one of the first towns conquered by the Ottomans (in 1299) and the scene of the legendary story of the princess Nilūfer and the wise Shaikh Edebali, whose grave is shown here, is placed here.

BILGRĀM, a town in the United Provinces, India, (27° 10′ 30″ N. lat., and 80° 4′ 30″ E. long.), chiefly famous as a seat of Muslim learning from the time of Akbar to the 19th cent. The *Āʾīn-i Akbarī* (ed. Blochmann, I, 434) describes the inhabitants as being for the most part intelligent and fond of singing; there was a well in the town, the water of which possessed such marvellous properties that any one who drank of it for forty days grew in understanding and personal beauty. The Saiyids of Bilgrām trace their descent to Saiyid Abu'l-Faraḥ of Wāsiṭ, who is said to have migrated to India after Hūlāgū's conquest of Baghdād; this family has produced a number of poets, scholars and administrators, among whom may be mentioned Saiyid ʿAbd al-Djalīl (died 1733), Mīr Ghulām ʿAlī, Āzād [*q. v.*] (died 1786), Amīr Ḥaidar Ḥusainī (grandson of the above), author of Sawāniḥ-i Akbarī (Elliot-Dowson, viii, 193) and Muftī of the Ṣadr Dīwānī ʿAdālat in Calcutta, and Nawwāb ʿImād al-Mulk Saiyid Ḥusain Bilgrāmī, the first Muḥammadan placed on the Council of the Secretary of State for India (1907). Among the Shaikhs of Bilgrām, (who settled there before the Saiyids), are also found several persons of distinction, such as Rūḥ al-Amīn Khān, deputy-governor of Gudjarāt, Shaikh Allāhyār (killed at Aḥmadābād, 1730), and his son, Murtaḍā Ḥusain, Shaikh Allāhyār Thānī, author of *Ḥadīḳat al-Aḳālīm*.

BILḲĪS is the name among Muḥammadans for the Queen of Sheba. The story, given in I Kings x, 1—10, 13, of how the Queen of Sheba (Saba) came to Solomon to prove him with hard questions, early gave rise to the formation of further legends.

Muḥammad in the Ḳorʾān xxvii. 20—45 relates how the heathen Queen of Sheba, who worshipped the sun, received a letter, borne by a hoopoe, from Solomon demanding that she should worship the true God. The Queen in terror sent presents to Solomon which were not well received. When she herself came to Solomon, the latter had her throne taken away by an ʿIfrīt to see if she would recognise it again. He afterwards led her to a room paved with glass. As Solomon expected — according to the commentators he wished to see if she really had goats' feet — she took the glittering floor for water and raised her garments. Finally she became converted.

The very fragmentary story in the Ḳorʾān presupposes a considerable development of the legend. In its main features the Targum II to Esther agrees with it but this may possibly have been influenced by the Muslim tradition. The story, which certainly reached Muḥammad through Jewish sources, appears even by that time to have been subjected to Iranian influence.

The name Bilḳīs is not found in the Ḳorʾān. It has been variously explained: as the Greek παλλακίς, which would point to the story of the marriage of Solomon and the Queen of Sheba, which was wide spread among the Jews at quite an early period, or as a corruption — quite comprehensible in the Arabic script — of Naukalis, as Josephus calls his Queen of Sheba, whom he regards as ruler of Egypt and Ethiopia. The later Muslim legend, the development of which is not yet quite clear, places Bilḳīs in the dynastic lists of Southern Arabia. It is possible that the Biblical figure may yet be identified with some South Arabian princess whose name has not hitherto been found in inscriptions. Cf. A. von Kremer, *Über die Südarabische Sage*, p. 65 *et seq.*, M. Hartmann, *Die Arabische Frage*, p. 478. The elaborate Muslim legend given by Hammer-Purgstall in *Rosenöl* and G. Weil, *Biblische Legenden der Muselmänner*, p. 247 *et seq.*, could only have attained its final form under Indian and Persian influences. The story appears elsewhere in different forms. The Persian extract from Ṭabarī (transl. by Zotenberg, i. 443 *et seq.*) for example, contains a pretty tale of the birth of Bilḳīs, according to which she was the daughter of a Chinese king Abū Sharḥ and a Peri. Zotenberg wished to recognise the Himyarite deity Ilmuḳah in the name of her mother Balḳamah — according to the Arabs she was called Yalmaḳa, Balḳama or Yalḳama — (on the connection of these names see also D. Nielsen, *Der Sabäische Gott Ilmuḳah*). Al-Bīrūnī, *Chronology*, p. 49, only says that, like Dhu 'l-Ḳarnain, she was the offspring of a demon, while according to Zamakhsharī she belonged to the family of the Himyarite Tubbaʿ, son of Shoraḥbīl and lived in the palace of Maʾrib. At any rate it appears that the Muslims were long aware of the fact that she did not properly belong to Islām; we therefore have occasional polemics against individual portions of the story such as her super-human origin.

In Christian Abyssinia the legend of the Queen of Sheba has become naturalised in a form which traces the descent of the ruling house from the marriage of Solomon and the Queen of Sheba who is here called Mākedā.

(B. Carra de Vaux.)

BILLAWR, Ballūr — whether from the Greek βήρυλλος is a disputed point, cf. Dozy, *Supplément*, i. 110 — the rock-crystal. According to the *Petrology* of Aristotle the stone is a kind of glass but harder and more compact. It is the finest, purest and most translucent of natural glasses, and is mentioned as one of the "colours" of the *Yāḳūt*; by the dust coloured rock-crystal is meant the smoky topaz. It may also be artificially coloured; it concentrates the sun's rays so that a black rag or piece of cotton or wool may be set on fire by it; valuable vessels for kings are made of rock-crystal. A commoner kind which is harder and looks like salt — i. e. quartz — gives out sparks when struck by steel and is used for striking fire by kings' servants. No account of its crystalline formation, which Pliny gives, is given nor is the general distribution of quartz known. Tīfāshī says that at 13 days' journey from Kāshghar are two mountains the interiors of which consist entirely of beautiful rock-crystal, it is worked in the night time as the reflection of the sun's rays render work by day impossible. Akfānī (publ. in *al-Machriq*, 1908) gives the fullest account of the places in which it is found; according to him it comes from Ethiopia (Zandj), Badakhshān, Armenia, Ceylon, the land of the Franks and Maghrib al-Aḳṣā.

BILLITON or Blitung on the south-east coast of Sumatra, with the 150 adjoining islets has an area of 88 square miles and with regard to its situation, formation, greatest height (1700 feet) flora and fauna, population (338 per square mile) products (tin), agriculture and trade, it is exactly similar to Banka. Tandjung Pandan is the capital of this independent assistant-residency. The original population (34,181 souls in 1905) consists of Muḥammadan Malays (agriculturists) and heathen Sekah's (about 1600) who are fishermen, living on their boats and workers in the bush of whom one tribe (*suku*) has however become Muḥammadan and is sedentary. In Tandjung Pandan (about 3300 inhabitants) live the foreign merchants (Chinese and Arab) and the European officials (46 of the 136 on the whole island).

Before 1850 Billiton was a worthless nest of pirates but since 1861 the exploitation of the valuable tin mines by the Billiton Maatschappij, which employs 1800 Chinese coolies, has altered the economic conditions.

Batav. Gen. v. Kunsten en Wetenschappen*, Parts 1, 9, 24, 26, 34.

(A. W. Nieuwenhuis.)

BILLŪR KÖSHK, "Crystal Palace" is the title of a collection of 14 Turkish fairy tales, so called from the first of them, printed in Constantinople, n. d. Cf. G. Jacob, *Türkische Volkslitteratur* (Berlin, 1901), p. 5—7, 9 *et seq.*

BILMA, an oasis of the Sahara on the caravan route from the Lake of Chad to Tripoli at a height of 1016 feet, belongs to the group of oases, called Kawār by the Arabs, and Henneri Tughe by the Tebbu (= Rocky Valley according to Nachtigal). Kawār occupies the centre of a sandstone basin of the cretaceous period beneath which impermeable schists collect, not far from the surface, the water which filters down from the mountains of Tibesti. It is a valley running from north to south, about 60 miles long and according to Barth and Nachtigal 5—7 miles, according to more recent travellers (Monteuil, Chudeau, Gadel), 3—4 miles in breadth. A wall of rock about 300 feet high protects it on the east from the winds from the desert. The population, which is called Tebba-Dirku appears to represent a mixture of the Tebbu proper with negroes from Bornu. These natives are of medium height, hardy but not so powerful or warlike as the Tebbu of Tibesti. They are ruled by a chief called *Mai* or *Dardai* who is elected by the more important men, and live in about twelve villages, in which they have adopted various ways of living according to their origin; the Tebbu build their houses on the rocks while the Bornuans build clay houses separated from one another by streets and surrounded by a wall. The most important of their villages are Anay, Dirkū founded by a Bornuan colony, perhaps in the v[th] century A. H., Ashenuma, Shimendru, the site of a Senūsī-Zāwiya, Kalala or Kolo and Garū.

Garū is the chief place of the district of Bilma, and the most important in all Kawār. The population of this little town, according to Nachtigal, is about 2000. In this district the Bornu element predominates, and the Kanūri language is more used than the Teda. The district of Bilma, like the other oases of Kawār possesses some unimportant palm groves (there are about 100,000 palm trees in the Kawār) and a small area devoted to cereals but its real importance lies in the fact that it is a halting place on the routes from Bornū to Fezzān and in the salt deposits in its neighbourhood. The salt, which is melted into pillar-like blocks or "*kantu*" of which ten form a camel-load is carried by the nomads into the oases of the Sahara and to the Sūdān. The Tebbu trade in it to Tibesti, and the Dāza to Kānem and Bornu. The Kelwi of Aïr [q. v.] retain the monopoly of the trade towards the north and north-east. They organise annually a caravan called the *airi* for this purpose, which has been described by Barth. These nomads have for long exercised a sort of suzerainty over Bilma, even going so far as to forbid the inhabitants of the oasis to grow cereals so as to have them more dependent on them. The value of this trade has been variously estimated. Barth estimates it at 3000 camel loads annually, Chudeau at 4000, Gadel at 15,000, and he says it may be as much as 40,000. As to the through trade, which has been much affected by the suppression of the slave trade which formed its staple and by the ruin of Bornu under the domination of Rabah [see BORNU], it is now almost insignificant. The diminution in the number of caravans has now forced the inhabitants of Kawār and Bilma to seek new sources of income and to devote more attention to agriculture. The occupation of Bilma by the French (1906) by assuring the inhabitants of an efficient protection against the nomads will no doubt contribute to accelerate this change in their manner of living.

Chap. vi.; Rohlfs, *Quer durch Afrika*, i.; Nachtigal, *Sahara und Sudan*, i.; Monteil, *De Saint Louis à Tripoli par le Tchad* (Paris, 1894), Chap. xiii.; Chudeau, *Le Sahara Soudanais* (Paris, 1909), p. 118 *et seq.*; Gadel, *Notes sur Bilma et les oasis environnantes* (*Revue Coloniale*, 1907), p. 361—386.

(G. Yver.)

BIMBASHI, properly *bin-bāshi*, "Chief of a thousand", has been the name of the commander of a battalion in Turkey since the introduction of the reforms.

(Cl. Huart.)

BINĀ' (A.), properly "building" or "structure", hence comes in grammar to mean "form" (e. g. Sībawaihi, ed. Derenbourg, i. 2, 2 *infra*) and particularly the indeclinability of the (vowel or consonantal) termination (the opposite is *I'rāb*). It must however be noted that words like *'aṣan* "stick" according to the Arab view have a virtually declinable ending and are therefore not regarded as *mabnī*. The *Binā'* moreover appears in all three classes of words (nouns, verbs and particles).

Bibliography: Sībawaihi (ed. Derenbourg), i. 2, 1—2, 16—3, 22; Ibn Ya'īsh, p. 400—405 and elsewhere; Ibn 'Aḳīl, Commentary on Ibn Mālik's *Alfiya*, verses 15—17.

(A. Schaade.)

BINGÖLDAGH, one of the most important elevations of the Armenian highlands on the borders of the Wilāyets of Erzerum and Bidlis [q. v.]; the geographical position of the highest peak is about 41° 20' East Long. (Greenw.) and 39° 20' N. Lat. Strecker and Radde describe the Bingöldagh as a gigantic, extinct volcano, the edges of the crater of which have for the most part fallen in. According to the more recent geological investigations of Oswald, it is not however really a volcano, but only a dome, the material of which has been poured forth through a system of fissures, and is faulted on the south with a downthrow from N.N.W. to S.S.W. (the so called Bingöl Cliffs on which there are precipices 3700 feet high). The greatest heights are found on a ridge 5 miles long running from east to west; two parallel ridges running north and south one at each end of this range form with it the letter H. The massif culminates in the eastern Demir or Timur-ḳal'a (= Iron Fort), 10,120 feet in height; this is the height given by Oswald in Stieler's *Handatlas*, n°. 59, 1910; Radde estimates the height at 12,087 feet which is much too high; H. and R. Kiepert's figure of 11,378 feet, given in the *Formae orbis antiqui*, Pl. v. 1910, Abos (followed by me above p. 435[b]), is also too high; Strecker's estimate of 10,285 feet is much nearer the truth. The western peak Bingöl-ḳal'a or Toprak-

Ḳal'a (East Fort) is only a little less. The northern part of the mountain is cut up by two large circular depressions, separated by a steep bridge, which the central peak Ḳara-Ḳal'a (= Black Fort) sends out to the north.

The Bingöldagh is unusually well watered; it has received its Turkish name "Thousand (*bin*)-lake (*göl*)-mountain" (*dagh*) from its innumerable little lakes (these are really merely pools in the impermeable soil). No fewer than six important water-courses rise in this centre of erosion, in which Armenian tradition for this reason places the site of the Biblical Paradise. The lava plateau in the N.W. of the range is the area of the sources of the Arax (al-Rass, q. v.); in the west rises the Tuzla-Ṣu, a tributary of the so called western (rather: northern) Euphrates and the Bingöl (Peri)-Ṣu; in the S.W. the Gönük (Ganak)-Ṣu; in the S. the Čabaghur-Ṣu in the E. and N.E.; the Khunus (Khinis)-Ṣu. The latter four are tributaries of the so called eastern (rather: southern) Euphrates. The great humidity of this mountain range produces a remarkably rich flora; Radde found it a paradise for the botanist.

In the classics the Bingöldagh probably appears under the name Abos (Ἄβος); cf. Pauly-Wissowa, *Realencykl. d. klass. Altertumswiss.*, i. 108; vi. 1197, 1198; H. Hübschmann in the *Indogerman. Forsch.*, xvi. (1904), p. 427. The ancient Armenian name was Srmanç, cf. Hübschmann, *op. cit.*, p. 370. On the other hand it is nowhere mentioned in the Arab geographers of the middle ages, as far as I have been able to discover. J. B. Tavernier (about the middle of the xvii[th] century) appears to be the first modern European traveller to use the name Bingöldagh.

At the present day the region of the Bingöldagh is inhabited by robber Kizilbashes, the descendants of manumitted slaves of the Turks, cf. thereon p. 426[a] above.

Bibliography: K. Ritter, *Erdkunde*, x. 79, 81, 385—386; M. Wagner, *Reise nach dem Ararat* (Stuttgart, 1848), p. 272. Minute descriptions of the range were first given by Strecker and Radde; cf. Strecker, *Zur Geogr. von Hocharmenien* in the *Zeitschr. der Ges. f. Erdk.*, Berlin, 1869, iv. (particularly Chap. 3 and 4); G. Radde (travelled in 1874) in *Petermann's Geogr. Mitteil.*, 1877, p. 411—422 (with original map, pl. 20); E. Naumann, *Vom goldenen Horn zu den Quellen des Euphrat* (München, 1893), p. 321—322; J. Oswald, *A treatise on the Geology of Armenia* and cf. thereon the comprehensive review by F. Schaffer in *Petermann's Geogr. Mitteil.*, 1907, p. 145 *et seq.* (particularly p. 149). See also the Bibliography to the article Armenia (see above p. 446 *et seq.*).

(M. Streck.)

BINT (A.) "Daughter", "Maiden".

BINTU, Plural *Bintiyāt*, form the Italian *venti*, in the popular Arabic of Egypt denotes the twenty franc piece.

BINYĀMĪN (the printed edition of Zamakhsharī's *Kashshāf* gives the form Bunyāmīn), one of the sons of Jacob. The Muḥammadan stories of Benjamin agree in their main points with the Biblical narrative; there are however some additions which are connected with Rabbinical legends. The non-Biblical elements take the following form: when Joseph's brothers visited him, he had a feast prepared for them and made them sit at it in pairs. Binyāmīn was thus left out and began to weep and said: "If only Joseph were alive, he would take me with him". Joseph heard this, placed him beside him and asked after his children. Binyāmīn said that he had ten all of whose names had some reference to his lost brother Joseph. Joseph then said: "Wilt thou agree to take me as thy brother in his stead?" and Binyāmīn replied: "Who could find a brother like thee? and yet thou art not the son of Jacob and Rachel". Joseph then wept and said: "I am thy brother Joseph".

It is also related that when the brothers entered, Joseph tapped his cup and said: "It tells me that you are twelve brothers and that you have sold one of your number". Binyāmīn then flung himself at his feet and said: "O King, ask the cup about our brother Joseph". Then follows the recognition and the concealment of the cup, or of the corn-measure in Binyāmīn's sack, concerted between Joseph and Binyāmīn.

According to another version, the tapping on the cup did not take place till after it had been concealed, that is on the return of the brothers to Joseph.

(A. J. Wensinck.)

BI'R (A.), Plural *Ābār* and *Bi'ār*, "Well", appears in compounds, and in the Plural by itself as a place-name.

BI'R MAIMŪN, a well not far from Mecca on the road to Minā, about an hour's journey from the town of Mecca, which had been already dug before Islām by a certain Maimūn, whose origin is variously given. According to Hamdānī (ed. D. H. Müller, 129) this well is referred to in the Ḳor'ān, Sūra lxvii, 30. The Caliph al-Manṣūr died here in 158 (775) while engaged in making the pilgrimage to Mecca. The well was repeatedly repaired e.g. in the year 604 (1207-1208) at the expense of the lord of Irbil.

Bibliography: besides Hamdānī: Yāḳūt, *Mu'djam*, i. 436; *Chroniken der Stadt Mekka*, ed. Wüstenfeld, ii. 124, iii. 96.

BI'R MA'ŪNA, a well in the mountains on the road from Medina to Mecca, not far from the mine (*ma'din*) and the Ḥarra of the Banū Sulaim, between the lands of this tribe and those of the Banū 'Āmir b. Ṣa'ṣa'a. We do not exactly know to which of these tribes the well belonged. Near it was the dam *Sadd Ma'ūna*, sometimes corrupted to *Sadd Mu'āwiya*. This district was the scene of the defeat at Bi'r Ma'ūna, a place only rarely mentioned by the geographers. The scanty topographical notes collected by them have apparently been obtained from oral tradition regarding that event.

'Āmir b. Mālik Abū Barā', called Mulā'ib al-asinna, a chief of the Banū 'Āmir asked the Prophet to send him missionaries to preach Islām to his people and guaranteed their safety. Muḥammad thereupon sent him a deputation of 70 Anṣār *Ḳurrā'* who were treacherously slaughtered with one exception by the Banū 'Āmir. The revelation in Ḳor'ān iii. 163 is said to refer to this. This is the traditional account supported by the *Sīra*.

As a matter of fact, we have here an actual campaign, as may be seen from the book of the *Maghāzī*, and may be rendered certain by a comparative study of the sources. 70 *Ḳurrā'* were not necessary to teach the Ḳor'ān and indeed at that time Medina did not possess that number. On such occasions Muḥammad used only to send one or two *Ḳārī'* (cf. *Aghānī*, vi. 19, 9 etc.). The story was invented by the Traditionists, to cover an unfortunate campaign and also to prove the large number and great antiquity of the *Ḳurrā'* and to give sanctity to the body. Muḥammad had been asked by the Banū Liḥyān, Ri'l, Dhakwān etc., divisions of the Banū Sulaim, for help against their relatives, possibly also by Abū Barā' for support against a rival, 'Āmir b. al-Ṭufail. The Prophet's policy required him to interfere in such secular quarrels. A division of 70 horsemen, all Anṣār sent by him, was surprised in the neighbourhood of Bi'r Ma'ūna by the Banū Sulaim and cut to pieces. 'Āmir b. al-Ṭufail was leader of the enemy and his name has ever after been held accursed by Tradition. This happened in Ṣafar of the year 4 or in the 36th month of the Hidjra, in the 14th month after the battle of Uḥud. To allay the great excitement in Medina another verse, besides Ḳor'ān iii. 163, is said to have been revealed but was afterwards forgotten or omitted from the Ḳor'ān: "Announce from us to our people that we have met our Lord and he is content with us, even as he has made us content". Abū Barā' himself appears to have played a double part in this affair. The Prophet continually cursed the authors of this calamity, which was the greatest blow he had suffered next to the disaster at Uḥud.

(H. LAMMENS.)

AL-BĪRA, the name of several places, generally in districts where Aramaic was once spoken, for al-Bīra is a translation of the Aramaic *birthā* = "fortress", "citadel". The best known is al-Bīra on the east bank of the Euphrates in North-west Mesopotamia, the modern Bīredjik [q.v.]; on other places, bearing the name Bīra, cf. Yāḳūt, *Mu'djam* (ed. Wüstenfeld), i. 787; Nöldeke in the *Nachr. der Götting. Ges. der Wiss.*, 1876, p. 11—12 and in de Goeje, *Bibl. geogr. arab.*, iv (gloss.), p. 441; Le Strange, *Palestine under the Moslems* (1890), p. 423. (M. STRECK.)

BIRĀDER, popularly *bilāder*, Turkish pronunciation of the Persian *birāder* "brother", is a form of address used only between Muslims who speak Turkish, and is never applied to one who is not a Muhammadan. (CL. HUART.)

BIRDJAND, a town in Persia, situated in 59° 10' East Long. (Greenw.) and just below 30° North Lat. on a plateau 4440 feet high. The older Arab geographers do not mention it. Yāḳūt (c. 623 = 1225) is the first to note it and describes it as one of the finest towns in the district of Kūhistān, which in the time of the Caliphate was a dependency of the province of Khorāsān. At the present day Birdjand is regarded as the chief town of Kūhistān, while in the middle ages this honour fell to Ḳā'in which is about 70 miles farther north. Mustawfī (740 = 1340) describes Birdjand as an important town, the surroundings of which were not very favourable for the cultivation of corn but produced large quantities of grapes and other fruits; the saffron, as at the present day, was then extensively cultivated; with the above mentioned Ḳā'in, Birdjand produces the greatest quantity of this plant and dye, of any town in Persia. The district of Birdjand has long been famed for its carpets which almost all come from the village of Derākhsh (50 miles north-east of Birdjand) and sometimes fetch very high prices. The *Barāks*, which are manufactured in Birdjand of camel's hair are also highly esteemed and are used as felt-carpets, *namads*, as well as cloth. Birdjand at the present day is one of the busiest commercial towns in Persia for there the caravan routes from Samnān, Meshhed, Herāt, Seistān, Kirmān and Yazd meet.

Birdjand is built on the slope of a hill and makes a pretty picture with its houses all of which are surmounted by domes and from the distance look like bee-hives. Four underground aqueducts (*kārīz*) provide the town with a plentiful supply of water. When the springs in the surrounding country dry up in summer, the country people therefore flock into the town and the number of inhabitants is for a period doubled. Goldsmid estimated the number in 1873 at 15,000, Stewart in 1886 at 14,000, Lorini quite recently at 18,000; on the latter estimate cf. Supan in *Petermann's Geogr. Mitteil.*, Erg.Heft nº. 135, p. 125.

Since the middle of the xixth century Birdjand has been better known; Ritter (see *Erdkunde*, viii. 263) had no very definite information about the town. The name of the town often appears on maps in the erroneous form Birdjan (Ritter, *op. cit.*: Bridschan).

BĪREDJIK, a town in Mesopotamia, on the left bank of the Euphrates, situated in 38° East Long. (Greenw.) and 37° 2' North Lat. The name Bīredjik, popularly *Beledjik*, in the Ḥalabī dialect (according to Sachau) *Bīrādjīk*, means "little Bīra", i. e. "small Fort" (Arabic *bīra*, with the Turkish diminutive suffix); the etymologies given by Ritter, x. 951, 965 and Moltke, *op. cit.*, p. 214, are wrong.

Bīredjik (1170 feet above sea-level), is the centre of a plain which is surrounded by a semi-circle of mountains sloping down to the Euphrates. The place itself is overshadowed by an isolated cone of rock rising sheer out of the river, which has been fortified from the remotest times, to guard the passage. Bīredjik therefore naturally possesses one of the most important positions in nearer Asia. The Euphrates here leaves the narrow confines of the steep mountain walls and enters the Syrian-Mesopotamian plain, through which it flows till it reaches the sea. It is here too that the

river first becomes navigable, after leaving behind it the dangerous cataracts formed where it breaks through the Taurus, and traffic may proceed up to this spot with the greatest ease.

There can hardly be any doubt that on the site of the modern Biredjik we must locate the ancient Til- (= hill) Barsip or Barsip of the Assyrian inscriptions. In the ix[th] century B.C. the position of this town as the capital of the small Aramaic state of Bit-Adini in North Syria and Mesopotamia was by no means an unimportant one. Salmanassar II (859—824 B.C.) always crossed the Euphrates here on his campaigns into North Syria; he repeatedly mentions the fortress taken by him there (apparently the modern castle), to which he gave the new name of *Kār-Sulmanu-ašarid* = "Salmanassar's citadel", which we find again in the *stele* inscription of his successor Shamshi-adad V. When Sanherib required ships to cross the Persian Gulf, he had them built at Til-barsip and taken down the Euphrates. On the references in cuneiform inscriptions cf. E. Schrader, *Keilinschr. u. Geschichtsforsch.* (Giessen, 1878), 143 *et seq.*, 219 *et seq.* and F. Delitzsch, *Wo lag das Paradies?* (Leipzig, 1881), 4, 141, 263. It is not improbable that the old name Barsip is preserved in Ptolemy (v. 18, 5) in the corrupt form Ὀρρίκα (for Βαρσίκα).

In the Assyrian period, the passage over the stream was usually made on inflated skins (the modern *kelleks*), as is expressly mentioned. After the beginning of the Seleucid period there were two bridges of boats over the Tigris, just at its exit from the Taurus, both called Zeugma and often mentioned; the northern one, apparently the less used, near Samosata (Arabic, Sumaisat) in Commagene and the southern at Biredjik. Each of the towns which arose at these bridges had a suburb on the Mesopotamian side; that of the southern Zeugma, was founded by Seleucus I and called after his first wife, Apamea. The Zeugmas are often confused with their eastern suburbs (for example by Ritter, Forbiger, Mommsen and Chapot). Cf. thereon, particularly H. & R. Kiepert, *Formae Orbis Antiqui*, Heft v. 1910, p. 1—2, 5; cf. also on this area where the Euphrates could be crossed, Mannert, *Geogr. d. Griech. u. Röm.*, vi. i. (Leipzig, 1831), p. 389 *et seq.*; Ritter, *Erdkunde*, x. 959—1003; Nöldeke in the *Nachr. der Götting. Ges. d. Wiss.*, 1876, p. 1 *et seq.*; Streck in Pauly-Wissowa, *Realencykl. d. klass. Altertumswiss.*, Suppl. i. 99 (Apamea 4), 274 (Capersana, Caphrena); V. Chapot, *La frontière de l'Euphrate* (Paris, 1907), p. 272 *et seq.* We have evidence of the existence of a bridge at the southern Zeugma down to the second half of the xv[th] century (cf. Khalīl al-Ẓāhirī). By the possession of the fortress on the dominating rock, the eastern town soon gained an advantage over the western; the latter quite disappeared in the middle ages, while the former gradually increased in importance. The official name Apamea, which possibly never became generally current, also disappeared and was succeeded by the indigenous name used by the Aramaic population of the district, Birthā = "fortress". Birthā often appears as a place-name in areas where Aramaic was spoken (cf. the article AL-BĪRA); the modern Dēr ez-Zōr on the right bank of the Euphrates, 40° 8' East Long. (Greenw.), also denotes the site of another Birthā, which is mentioned by Ptolemy, Isid. Charac., the Notit. Dignit., Hierocl., Georg. Cypr. (Birthon) and the Syrian Chronicle of Joshua Stylites. This Mesopotamian Birthā has often wrongly been identified with Biredjik; this identification has been combatted by C. Müller, *Geogr. Graeci Min.*, i. 245; Regling, *op. cit.*; and R. Kiepert, *op. cit.*, p. 5[b].

The Arabs adopted the name Birthā in the form al-Bīra, which appears in the later Syriac writers (cf. e. g. Barhebraeus, *Chronic. Syriac.*, ed. Paris, p. 405) in the form Bīreh. In historical literature Bīra appears to be first found in the Crusading period. In 1099 Baldwin, Count of Edessa, took possession of it, and it remained well nigh half a century in the hands of the Franks. In 539 (1144) they defended themselves valiantly in the citadel of Bīra, under the command of the then Lord of Edessa, against the assaults of the troops of Zangī, Emīr of Mosul; but the town surrendered soon after of its own accord to the Urtuḳid prince of Māridīn out of fear of Zangī, cf. Weil, *Geschichte der Chalifen*, iii. 288—289. Since then, it has always remained in Muhammadan hands except for a brief period when the Byzantines held it (cf. Ritter, x. 931, 950, 965). During the Tatar invasions of the xiii[th] century the impregnable citadel of Biredjik remained a stronghold of Islām (cf. Abu 'l-Fidā, *loc. cit.*).

The older geographical works of the Arabs never mention Bīra; nor does Yāḳūt. It is not till the middle of the xiii[th] century that it appears, for example in Dimishḳī, Abu 'l-Fidā, the *Marāṣid*, and Khalīl al-Ẓāhirī. After Syria and Mesopotamia had passed under the power of the Crescent and Turks had gradually attained a numerical preponderance in the population of Bīra, the Arab name was gradually supplanted by the Turkish Biredjik. This is first given among European travellers by Niebuhr (1766) while all travellers before him write the name Bir or Beer (C. Federigo, 1563; L. Rauwolff, 1574; Tavernier, 1638 and 1644; Maundrell, 1699; Otter and Pococke, both in 1737).

In the history of modern warfare, Biredjik is famous for the decisive battle which took place quite near it (at Nisib, 10 miles west of the Euphrates) in the war between Turkey and Egypt in 1839. The Turkish army under the command of Ser'asker Ḥāfiẓ Pasha had taken up a position on the heights on the right bank of the Euphrates, two hours journey from Biredjik. In the Turkish camp was v. Moltke, afterwards General Field-marshall, but his advice was, unfortunately for the Turks, not taken. The encounter between the two armies took place on the 24[th] June and ended in a brilliant victory for the Egyptian troops, who had an experienced leader in the Crown Prince Ibrāhīm Pāshā. The retreat of the Turks soon degenerated into a headlong flight and ended in the total dispersion of their army.

According to the accounts of all travellers Biredjik forms a pretty picture. The houses are built in terraces along the river bank for over a mile up the slopes of four connected hills and form a sort of amphitheatre around the highest mass of rock which is crowned by a fortress. The numerous cypress trees and orchards, which rise above the houses, enhance the beauty of its situation. A ruined wall with four gateways, built by Sulṭān Ḳā'it-bāi in 887 (1482) (cf. v. Berchem, *op. cit.*, p. 106[2]), and flanked by four towers,

likewise in a dilapidated condition, encloses the town, the streets of which are tortuous and dirty.

The most remarkable feature of Bîredjik is the very extensive fortress, now in ruins, on the oval summit of a chalk hill (about 172 feet high), the top of which has been levelled partly by nature and partly artificially; it rises sheer out of the river, just below where it flows out of the rocky valley and turns to the south into the open plain. As this steep cone (in parts, artificial, it has been supposed) was covered by a coating of hewn stones, traces of which still remain, the taking of the citadel built upon it was absolutely a thing of impossibility. v. Moltke to whom we are indebted for most of our knowledge on this point calls it the most extraordinary building that he had ever seen. It consists, as he tells us, of three or four stories of arches of enormous size, and in spite of the many great earthquakes it has suffered, most of it still remains unharmed. This fortress certainly goes back to a very great antiquity. It is possible, as Regling suggests, that some portions of it may date from the Seleucid period: in the main, however, the modern building may be said to date from the xii[th] century. There are six Arabic inscriptions on it, of which the oldest is of the reign of the Mamlūk Sulṭān Baraḳat-Khān (676—678 = 1277—1279), and the most recent are of the years 887—888 = 1482—1483 of Sulṭān Ḳā'it-bāi who, while on his Syrian journey in 882 (1477-1478), inspected all the fortresses as far as Rūmḳala' (above Bîredjik) and repaired them. The inscriptions are thoroughly discussed, with six others on the gates and other buildings in Bîredjik, by M. van Berchem in *Beiträge zur Assyriologie*, Vol. vii. Heft 1, 1909, p. 101—108.

In one of the lofty vaults of the citadel are two remarkable figures of men, larger than life-size in bas-relief painted in three colours; cf. T. J. Arne in Grothe's *Oriental. Archiv*, i. (1910), p. 82—85. The castle at the present day is called Ḳal'a-i bēḍa i. e. "white palace", probably after the dazzling white chalk, of which the hill is formed.

The district of Bîredjik is regarded by the later geographers as a part of the province of Ḥalab; the present administrative division of the Turkish Empire has also placed it in the Wilāyet of Ḥalab and it forms a separate Ḳaẓā (therefore it is the seat of a Ḳā'immaḳām) of the Sandjak of Urfa with an area of 1500 square miles and 26,500 inhabitants in 129 towns and villages (following Cuinet, *op. cit.* and Petermann, *Geogr. Mitteil.*, Erg. Heft, n⁰. 135, 1901, p. 15).

The town of Bîredjik had about 500 houses in Niebuhr's time; Buckingham estimated the number at 400 (with 3000—4000 inhabitants), Petermann (1853) 2000 houses, Czernik (1873) 2000—3000 inhabitants; Sachau's estimate (1879), 6000 houses with 30,000 inhabitants is certainly too high. The residential population of the town is estimated at the present day at 10,000; cf. Cuinet, *Petermann's Mitteil.*, *op. cit.*, p. 21; Baedeker's *Syr. und Palást.*[7] (1910), p. 386. According to Cuinet, who gave the exact figure as 10,162, the population in 1892 consisted of 8707 Muslims (mostly Turks and Kurds), 978 Gregorian and 437 Catholic Armenians and 45 Jews. There are 7 mosques, 4 churches and 3 Christian schools. The language spoken is Turkish; the area where the Arabic language is spoken does not begin till somewhat further down, near the mouth of the Sādjūr.

Bîredjik, as has already been mentioned, derives its chief importance from its position as a station for caravan traffic from North Syria to Mesopotamia and on to Kurdistān and Babylonia. Everything going from the Mediterranean to the Tigris *viâ* Anṭākiya, Ḥalab and 'Aintāb passes through this town. The three main routes, which enter it, come from 'Aintāb (35 miles distant), Urfa-Edessa (50 miles distant) and Ḥarrān (90 miles distant). It is here that the river, which in its normal state is 130 yards (in floods 1100—2200 yards) wide, is now crossed on primitive rafts (*felūka*) specially built for the transit of cattle, for the early boat-bridges have disappeared for centuries. The congestion is often very great; as many as 5000 camels have been counted here waiting to be loaded or unloaded (Czernik); there is a large Khān on the western bank. The inhabitants depend for their livelihood mainly on this traffic; the bazaars are in consequence well managed. The trade in wheat, oil and opium, is by no means inconsiderable. According to Petermann, coarse woollen cloths and mantles for the Fellāḥs are manufactured and sold here. If the route of the proposed Baghdād railway does not go *viâ* Bîredjik but as the plan now is, *viâ* Djerābis, which is more to the south, it appears inevitable that considerable injury will be done to the economic prosperity of Bîredjik.

The Euphrates is navigable for large boats and even for steamers of small draught from Bîredjik down, as the investigations of Captain Chesney's expedition to the Euphrates (in 1836—1837) have shown. Chesney's experiment has not been repeated and the proposal to make a connection by steamship with Bîredjik and the Persian Gulf has been allowed to drop. At the present day only a few rafts and barges use the river and go from Bîredjik to Dēr ez-Zōr with corn.

(M. STRECK.)

BIRGE (Perga) properly BIRKI (also pronounced BERGI), a town in Asia Minor, on the slopes of Tmolos in the valley of the Küčük Menderes (Kaystros) belonging to the Wilāyet of Smyrna, and the Ḳaẓā of Ödemish, 5 miles distant from the latter town, was a fairly important place in the middle ages and the summer residence of the princes of Aidin. The mosques and madrasas, with the graves of these princes, which still survive, testify to the past glory of the town. Here also is the grave of the Turkish scholar Birgewī, who taught for many years [see the next article] in the madrasa of this town.

Bibliography: ʿAlī Djawād, *Mamālik ʿOthmāniyanin ta'rīkh*, *djoghrāfiya lughāti*, 169; Cuinet, *La Turquie d'Asie*, iii. 516.

BIRGEWĪ or BIRGILI, Muḥammad b. PīR ʿALī, a Turkish theologian, born in Balikesri 928 (1522) received his earlier education in his native town and afterwards studied in Constantinople, where he attached himself to the Bairamiya order [q. v.]. After next spending some time in Edirne, he wished to retire from public life but was appointed Mudarris at the Madrasa in Birge by ʿAṭā Allāh Efendi. He worked here until his death in 981 (1573). Numerous works and schoolbooks mostly composed in Arabic, testify to his literary activity. The majority of those deal with theology in its widest sense, the art of reading the Ḳor'ān, dogmatics, homiletics, legal questions, e. g. on the conditions of Waḳf-foundations, on which he had a controversy with his contemporary, the Chief Muftī Abu 'l-Suʿūd [q. v., p. 108]; others of his works deal with Arabic grammar. A list of these writings is given by Brockelmann, *Geschichte der Arab. Litter.*, ii. 440 *et seq.* He is particularly known by his Turkish catechism, which is usually briefly known as *Risāla-i Birgewi*, also called the *Waṣīyet nāme*, and has been repeatedly printed and translated. Cf. thereon Zenker, *Bibliotheca orientalis*, i. N°. 1463 *et seq.*; ii. N°. 1192 *et seq.*; *Journal Asiatique*, 1843, ii. 32, 55; 1859, i. 524; Dieterici, *Chrestomathie Ottomane* 38 *et seq.*; of the translations, the French one by Garcin de Tassy in his *l'Islamisme d'après le Coran* etc. 3rd ed. (1874) may be particularly mentioned here.

Bibliography: in addition to the works above mentioned: ʿAlī b. Bālī, *al-ʿIḳd al-manẓūm fī Dhikr Afāḍil al-Rūm*, 430 *et seq.* (on the margin of edition of Ibn Khallikān of 1310, Cairo).

BIRKA (A.) "Pond".

BIRMA. [See BURMA.]

BIRS, also called BIRS NIMRŪD, in the older literature BURS, a ruined site 9 miles S. W. of the town of Ḥilla on the Euphrates, about 12 miles S.S.W. of Babylon on the eastern shore of the Lake of Hindiya.

The place is the ancient Borsippa, the sister town of Babylon. Its immense ruins, the largest that have survived from the Babylonian period, were thought by the Arabs to be the palace of Nimrūd ibn Kanʿān (*ṣarḥ Nimrūd*, Yāḳūt, i. 136) or of Bukhtnaṣṣar (Yāḳūt, i. 165). Even in modern times they were thought to be the ruins of the Tower of Babel and this erroneous view used to crop up even after H. Rawlinson had proved from inscriptions that they were the ruins of the tower of the Temple of Nebo of Borsippa. Whether there was still a town on the ancient site in the early Islāmic period is not quite clear. Balādhorī only speaks of the *adjamat Burs* (Ass. *agammē*) the land around the marshy lakes of Burs, which were taken possession of by ʿAlī. Upper and Lower Burs appear in Ḳudāma and are called al-Sibain and al-Waḳāf by Ibn Khurdādhbeh in the lists of taxes, as districts (*ṭassūdj*) in the circle (*ustān*) of Central Bihḳubādh.

Even in ancient times the district of Babylonia and in particular Borsippa was famous for its textile industry (e. g. Strabo, xvii. 1, 7). This industry survived into the Arab period. The garments made in the district of Burs were, according to Masʿūdī (*Murūdj*, vi. 59) called Bursiya or also Khutarniya, after the district between Burs, Bābil and Ḥilla (following G. Hoffmann's emendation). In Yāḳūt, iv. 773, Narsiya should therefore be emended to Bursiya.

AL-**BĪRŪNĪ** (BERŪNĪ), ABU 'L-RAIḤĀN MUḤAMMAD B. AḤMAD, Arab author of Persian origin born in Dhu 'l-Ḥidjdja 362 = (September 973) in a suburb of Khwārizm; studied mathematics, astronomy, and medicine, and chronology and history in addition, and entered into correspondence with Ibn Sīnā. As a result of these studies he composed his first great work his *Kitāb al-Āthār al-Bāḳiya ʿani 'l-Ḳurūn al-Khāliya* (*Chronologie orientalischer Völker*, edited by Eduard Sachau, Leipzig, 1878; *Chronology of Ancient Nations*; *an English Version of the Arabic Text of the Athār ul Bākiya of Albiruni or "Vestiges of the Past", collected and reduced to writing by the Author in A. H. 390-391, A. D. 1000, translated and ed. with Notes and Index by C. E. Sachau*. Or. Transl. Fund. London, 1879). In his maturer years he went to India, which had just then been opened to Islām by the victorious campaigns of Maḥmūd of Ghazna. He there taught the Greek sciences and in exchange made himself acquainted with the achievements of Hindu learning. The results of these studies he used for his second great work, the *Ta'rīkh al-Hind* (*Alberuni's India, an Account of the Religion Philosophy, Literature, Chronology, Astronomy, Customs, Laws and Astrology of India about 1030*, ed. by Edw. Sachau, London, 1887; — An English edition with notes and indices, by E. Sachau, London 1888, 2 voll., new edit., London 1910; cf. E. Sachau, *Indo-arabische Studien zur Aussprache und Geschichte der Indischen in der 1. Hälfte des XI. Jahrh.*, *Abh. d. Berl. Akademie* 1888). After his return from India he settled at the court of Ghazna and in the year 421 dedicated to Sulṭān Masʿūd b. Maḥmūd an account of the whole science of astronomy entitled *al-Ḳānūn al-Masʿūdī fī 'l-Haiʾa wa 'l-Nudjūm* (cf. Ahlwardt, *Verzeichnis der arab. Hdss. der Kgl. Bibliothek zu Berlin*, N°. 5667; Rieu, *Supp. to the Catalogue of the ar. Mss. in the Brit. Museum*, N°. 756; *Biblio-*

thecae Bodleianae Codd. Mss. orient. cat., ii. 370; *Mulla Firuz*, p. 35, N°. 65). In the same year he also composed a short catechism of geometry, arithmetic, astronomy and astrology, entitled *al-Tafhīm li Awā'il Ṣinā'at al-Tandjīm* (vgl. Ahlwardt, *op. cit.*, N°. 5665-5666; *Bibl. Bodl.*, i. 1020; ii. 282; de Slane, *Catalogue des mss. arabes de la Bibliothèque Nationale*, N°. 2497; a Persian version: *Catalogue of the Pers. Mss. in the Brit. Museum*, ii. 451ᵇ). Al-Bīrūnī died on the 3rd Radjab 448 = 13th December 1048. Besides the above-mentioned works and some smaller mathematical and astronomical treatises (cf. H. Suter, *Das Buch der Auffindung der Sehnen mit Kommentar von Abu 'l-Raiḥān Muḥammad al-Bīrūnī übers. mit Komm.* etc.: *Bibl. Math.*, Series iii, xi, 151, Leipzig, 1910), he also composed a Materia Medica entitled *Kitāb al-Ṣaidala* (*Ṣaidana*) which was translated into Persian by Abū Bakr b. 'Alī b. 'Othmān al-Asfara 'l-Kāsānī in India after the year 607 (1211), cf. H. Beveridge in the *Journ. of the Royal As. Society*, 1902, p. 333—335. For al-Malik al-Mu'aẓẓam Abu 'l-Fatḥ Mawdūd (died 440 = 1048) he wrote a book on gems called *K. al-Djamāhir fī (ma'rifat) al-Djawāhir* (Casiri, *Bibl. arabico-hispana Escurialensis*, i. 322; Steinschneider, *Zeitschr. d. Deutsch. Morgenl. Ges.*, 49, p. 252). Finally there has survived a treatise from his pen on the relations of the volumes of metals and jewels (MS. in the Library of the Three Moons of the Orthodox Greeks in Bairūt, cf. L. Cheikho, *Mashriq*, 1906, p. 19; E. Wiedemann in the *Sitzungsber. der physikalisch-medizinischen Sozietät in Erlangen*, Vol. 38 (1906), p. 163—166).

AL-BIRZĀLĪ, ABU 'L-ḲĀSIM B. MUḤAMMAD B. YŪSUF 'ALAM AL-DĪN AL-SHĀFI'Ī, Arab historian, was born at Seville in Djumādā I 665 = February 1267, of Berber parents, and travelled to the east on the conclusion of his studies, where he first took up his abode in Ḥalab in 685 (1286). After making the pilgrimage to Mecca in 688 (1289), he settled in Damascus. Here he received a professorship in the al-Ashrafīya-school of Tradition, and in 713 (1313), a teaching post in the Ẓāhiriya also. He ultimately became the first professor in the Nūrīya and in the Nafīsīya. He died on his fourth pilgrimage at the halting place at the well of Khulaiṣ between Mecca and al-Medina on the 4th Dhu 'l-Ḥidjdja 739 = 14th June 1339. His chief work is a continuation of the chronicle of Damascus by Abū Shāma down to the year 728 = 1338 entitled *Ta'rīkh Miṣr wa Dimashk* or *Kitāb al-Wafayāt* (MS. in Stambul, Köprülü N°. 1047); his pupil Muḥammad b. Rāfi' [q. v.] continued the work. He composed a short chronicle of the years 601—736 (1204—1335) which gives obituary notices, brief notes of political events and remarkable occurrences, entitled *Mukhtaṣar al-Mi'a al-Sābi'a* (s. Ahlwardt, *Verzeichnis der arab. Hss. der Kgl. Bibliothek zu Berlin*, N°. 9448).

Bibliography: Kutubī, *Fawāt al-Wafayāt*, ii. 130; Subkī, *Ṭabaḳāt al-Shāfi'īya*, VI, 246; Suyūṭī, *Ṭabaḳāt al-Ḥuffāẓ*, xxi. 14; Wüstenfeld, *Geschichtschreiber der Araber*, N°. 403; Brockelmann, *Gesch. d. ar. Lit.*, ii. 36. (C. BROCKELMANN.)

BISBARĀI B. HARICARHIDĀS KĀYATH, also called B. HARKARN, a Persian author who translated the collection of tales called the *Vikramacaritam* from Sanskrit into Persian in the reign of Shāh Djahān in 1061-1062 (1651-1652), making use of the work of his predecessors. The translation is known by the name of *Singhāsan Battīsī* and was translated into French by Lescallier (New York, 1817). On the various editions of the Sanskrit original as well as the Persian translations cf. the works cited below.

Bibliography: Ethé, *Grundriss der iranischen Philol.*, ii. 353; Rieu, *Cat. Brit. Mus.*, ii. 763 *et seq.*; Pertsch, *Cat. Berlin*, 1034 *et seq.*

BĪSHA (also written BĪ'SHA with *hamza*) an important village in a populous valley in the Yemen, twenty-four miles from Tabāla, and one of the districts subordinate to Mecca, from which it is distant five days' journey. The valley begins in the mountains of the Ḥidjāz and flows towards Nedjd until it comes to an end in the country of the Benī 'Uḳail. In Bīsha were many families belonging to the tribes of Khath'am, Hilāl, Suwā'a, Salūl, 'Uḳail, al-Ḍibāb and Ḳuraish. The last had a property in the Wādī Bīsha called the Ma'mal. It is famous for its palm trees and palm shoots, and also for a forest haunted by lions. Cf. Ḥarīrī, *Maḳāma* 48, fin.; the *Kāmil* (ed. Wright), 349, 16; 503, 14; *Kitāb al-Aghānī*, iv. 75; Idrīsī (ed. Jaubert) gives the distance between Bīsha and Tabāla as fifty miles. The present Ḳal'at Bīsha lies about 20° N., 43° 20' E. Ibn Ḥawḳal mentions also a Bīsha in al-Baḥrain. Cf. De Goeje, *Bibl. Geogr. Arab.*, Indices. Snouck Hurgronje, *Mekka*, i. 181, says that the policemen of the Sharīf of Mekka are also called Bīsha after the South-Arabian tribe of this name.

Bibliography: al-Hamdānī (ed. Müller), see Index; Yāḳūt, *Mu'djam* (ed. Wüstenfeld), i. 791; Sprenger, *Die alte Geographie Arabiens*, 47; Ritter, *Erdkunde*, xii. 202, 949 *et seq.* (T. H. WEIR.)

BĪSHAR' (P.), a name applied to those Ṣūfīs, who say that the laws of Islām are abrogated for the mystically enlightened (Antinomians).

BISHĀRĪN, a tribe of nomads between the Nubian Nile and the Red Sea. The Bishārīn form with the 'Abābde, Hadendoa, Benī 'Āmer and some smaller tribes a homogeneous body (from the physical point of view and originally from the linguistic also), which even at the present day is comprised under the name Bega or Bedja [q. v.], which was the usual one with mediaeval Arab writers. On the earlier history of the Bedja, cf. J. Marquart, *Benin*, p. CCCXL.

et seq. in addition to the bibliography given in that article. Very little is known of the history of the collateral tribe of the Bis̲h̲ārīn. They themselves say they are of Arab descent and trace their genealogy to a certain Bis̲h̲ar. If they are certainly not wholly of Arab blood, it must not be forgotten that the Rabī'a in the iiird (ixth) century began to mix with the Bedja and that in the beginning of the ivth (xth) century a certain Bis̲h̲r b. Marwān b. Isḥaḳ b. Rabī'a, the lord of the land of the mines, is said to have taken the field with 30,000 of the Bugs, in fact with the Ḥadārib, who still bear their name and are sometimes regarded as a branch of the Bis̲h̲ārīn. The application of the name Bis̲h̲ārīn appears to be very uncertain. Sometimes the Hadendoa are included among the Bis̲h̲ārīn and sometimes the Ḥadārib (south of Suakim [Sawākin]) are classed with them as an independent Bedja tribe. It follows that their territory cannot be sharply defined. In general they dwell to the south of the 'Abābde [q. v., p. 1]; Bis̲h̲ārīn are however mentioned in the neighbourhood of al-Ḳuṣair in the Red Sea and they are always to be found in Assuan (see Baedeker, *Aegypten*, p. 335). They stretch to the south beyond the 'Atbara. Hartmann in the *Zeitschrift für Ethnologie* xi. (1879), p. 197, estimated their number at 50,000—60,000; others give much higher figures.

In physique they are described as resembling the 'Abābde, dolichocephalic, with lofty brow, pleasant expression, almost European profile, the figure muscular and well built, the skin dark-brown to brownish-red, (Schweinfurth in *Petermann's Mitteilungen*, 1865, p. 338). Their character is unfavourably described; inhospitable, treacherous and taciturn, inquisitive, covetous to the extent of begging and stealing.

They are on an exceedingly primitive level of civilisation. They are purely nomads and possess great herds of camels, sheep and goats. Intractable and suspicious they keep away from wells and roads while the more peaceful and honourable 'Abābde guide caravans. The clothing of the Bis̲h̲ārīn consists of a loin-cloth for the men and a girdle for the women. Extraordinary care is devoted to the arrangement of the hair, which is worn in the form of a roll twisted together with tallow, on the top of the skull, while around it the hairs stand out like rays. Heuglin (*Petermann's Mitteilungen*, 1860, p. 333) says that their chief weapons are light javelins and clubs, but particularly two-edged daggers.

Islām, which a section of them (particularly the Ḥadārib) had adopted by about 300 A. H. has not had any civilising effect on them. Indeed from the accounts of Arab authors it would appear that they were on a higher level a thousand years ago than modern travellers tell us they are to day.

(R. Hartmann.)

BIS̲H̲BALIĶ, usually written Bis̲h̲balīḳ, or Bis̲h̲balīgh, (Turkī "Five Towns", Pentapolis); Chinese Pei T'ing (North Town), a town in the modern Chinese Turkestan, north of the Celestial Mountains (T'ien-s̲h̲ān). The site of this town, often mentioned from the viiith (in the Orkhon inscriptions) to the xvth century, has only recently been satisfactorily located. Since the days of Klaproth and Abel Remusat, Sinologists and geographers have sought for Pei-T'ing and Bis̲h̲balīḳ at the modern Urumči. Grum-Gržimailo (*Opisanie putešestviya v Zapadnii, Kitai*, i. 221 *et seq.*) was the first (in 1896) to put forth the view that the town must have been situated farther to the east, somewhere near the modern Guček. In the second volume of the same work (1899, p. 42 *et seq.*) this view is placed on a more explicit foundation, with reference to the *Meng-ku-yu-mu-ki*, translated by Popov in 1895. Independently of Popov and Grum Gržimailo, Ed. Chavannes had in 1903 (*Documents sur les turcs occidentaux*, p. 11) quoted the same references from another Chinese work (the *Si-yu-shui-tao-ki*); in the year 1908 it was proved by Dolbežew that in the area defined by the Chinese writers (at the village of Hu-pao-tse, 6 miles north of the town of Tsi-mu-sa) there actually were the ruins (now called Po-čöng-tse) of a relatively important town $2^1/_2$ miles in circumference (*Izviestiya Russkago Komiteta dlja izučeniya Srednej i Vostočnoe Azii*, nº. 9, p. 65 *et seq.*). The results of these researches were not known to M. Hartmann (*Chinesisch Turkestan*, Halle, 1908 p. 7) nor to G. Blochet (*Introduction à l'histoire de Rashid ed-din*, London-Leyden, 1910 p. 212, 316), and they still adhere to the old identification of Bis̲h̲balīḳ with Urumči.

According to the Chinese authorities, in ancient times (after the latter Han dynasty 25—220 A. D.) the town was the residence of a native prince and was called Kag̲h̲an Stüpa (cf. Chavannes, *Documents etc.*, p. 19 and 305). The Chinese names Kin-man and Pei-t'ing do not appear till the viith century. After 658, Pei-t'ing was the capital of a Chinese protectorate, the government of which was in the hands of Chinese governors and occasionally of Turkish princes. In 714 the Chinese governor was successful in repelling an invasion of Turkish tribes led by the son of K̲h̲ān Mo-čo: nevertheless by the end of the century the Chinese supremacy had been overthrown by Turks and Tibetans. Pei-t'ing passed into the possession of the Uighurs from whom it was taken by the Ḳarluḳ in the year 791.

The town is later mentioned as the seat of a Uighur prince, at whose court in Pei-t'ing, Wang-yen-té, the ambassador of the Sung dynasty of China, was received in 982. It is to the account of this embassy (transl. by St. Julien, *Journ. Asiat.*, ivth Series, ix. 50 *et seq.*) that we owe the most detailed description of Bis̲h̲balīḳ, that we possess. It is therefore quite conclusive evidence for the identification of Bis̲h̲balīḳ with the ruins of P'o-čöng-tse, that, as Dolbežew tries to show, all that Wang-yen-té tells us about the situation of the town, its surroundings etc., agrees perfectly with what has been ascertained by exploration of the remains, which have been preserved in P'o-čöng-tse. The lake on which Wang-yen-té made the voyage by boat, which he describes, was apparently to the east of the town; traces of a dam may still be found there, by which the stream which flows past could be used to form a lake. West of the ruins, a Buddhist monastery appears to have stood. According to Wang-yen-té there

were Buddhist temples at Pai-č'ing in his time, which had been built in 637. The inhabitants not only engaged in gardening but also manufactured articles of gold, silver, copper and iron.

There appears to be only one notice of Bishbalik in Muḥammadan literature before the Mongol period viz., in the anonymous *Ḥudūd al-ʿĀlam* (377 = 982-983), the town of Pandjikath (Five Towns, apparently a Persian translation of the name Bishbalik) is mentioned to the north of the Tafḳūs (T'ien-Shan) mountains as the summer-residence of the Princes of Tughuzghuz; in the summer it was said not to be so warm there, as in the towns to the south of these mountains. Even in the description of the road from the land of Tughuzghuz to the mountains of Kögmän (the Saian mountains) in Gardīzī (in Barthold, *Otčet o poězdkie v Srednjuju Aziju*, p. 86) Bishbalik (Pandjikath) is never mentioned, although the writers of the Mongol period show that Bishbalik, like the modern Gučen, was of great importance as the starting place of a caravan route through the desert to Mongolia; for this reason the district of Bishbalik was one of the first of the settled areas of Central Asia to be reached by the tribes fleeing out of Mongolia before Čingiz-Khān in the xiiith century and later by the hordes of the Conqueror himself.

At that time Bishbalik was with Ḳara-Khodja (near the modern Turfān) the chief town of a Uighur prince, who bore the title of Idiḳut and was a vassal of the Gurkhān of the Ḳara-Khiṭai. In the year 1209 the Idiḳut took advantage of the successes of Čingiz-Khān's arms to cast off his obedience to his suzerain and to place himself under Mongol protection. In the course of the following decade the ravages of the bands sent out by Muḥammad Khwārizmshāh are said to have extended as far as Bishbalik, to follow a not very trustworthy account of the historian Djuwainī (*Taʾrīkh-i Djahānkushāy* in Barthold, *Turkestan v epochu mongolskago našestviya* i. 115). It is also Djuwainī who gives us most of our information regarding the relations of the subjects of the Idiḳut with the representatives of Muḥammadanism during the earlier years of Mongol rule. The land of the Uighurs had been united into a political whole with the Muḥammadan countries of Central Asia by the victorious campaigns of Mongols to the West, in which the Idiḳut had taken part at the head of 10,000 men and could not in the long run resist the advance of Islām, particularly as Muḥammadans by their wealth and education had attained influential positions in all the lands of the Mongol Empire, even in China, and had gradually superseded the Uighurs, the first teachers of the Mongols. A bitter feud thus arose between the Uighurs and the Muḥammadans. Under Möngke-Khān (1251—1259) the governorship of all the lands of Khwārizm up to the Chinese frontier was entrusted to Masʿūd Beg, son of Maḥmūd Yalwādj, a native of Khwārizm. Masʿūd-Beg is also mentioned by the Chinese as governor of Bishbalik. About the same time, 650 (1252-1253) the Idiḳut was accused by Saif-al-Dīn, who was living in Bishbalik (probably as representative of Masʿūd-Beg) of having given secret orders for the massacre of all Muḥammadans in his land: the court, appointed by the Mongols to try him, found the prince guilty and he was executed in Bishbalik. Djuwainī himself made a journey to Mongolia (649—651) in the retinue of the Mongol governor of Persia, Arghūn-Agha and at least on his return journey visited Bishbalik but he only gives his readers fabulous stories from Uighur sources, including one about the foundation of Bishbalik (cf. especially W. Radloff, *Kudatku-bilik*, Introduction, p. xli *et seq.*). He tells us nothing about the town itself, its extent etc. The other travellers who visited Bishbalik in the xiiith century, such as the Chinese Čang-Č'un (1221 cf. Bretschneider, *Mediaeval Researches*, i. 65) and Hethūm, the King of Little Armenia (1255), tell us as little about the town. Bishbalik is never mentioned at all by travellers from western Europe in the Mongol period, although the road from Armalec (Almalik near Kuldja) to Cambalec (Khānbalik, i. e. Pekin), mentioned by Pegolotti (cf. Yule, *Cathay*, p. 288), Marignolli, (*ibid.*, p. 338) and others must apparently have passed Bishbalik; according to Waṣṣāf (ed. Hammer p. 29, Indian edition, p. 12) it took two weeks to go from Almalik to Bishbalik.

We know still less of the later history and final destruction of the town. After the break up of the empire founded by Čingiz-Khān, the Idiḳut succeeded for a period in holding an independent position between the kingdom of the Great Khān (China) and the Mongol Empire in Central Asia; about 1275 an invasion from Central Asia was successfully repelled (cf. d'Ohsson, *Histoire des Mongols*, ii. 451 *et seq.*).

According to the Chinese map of the year 1331 (Bretschneider, *Mediaeval Researches*, ii. frontispiece) both parts of what had earlier been the Uighur Kingdom, i. e. Bishbalik as well as Ḳara-Khodja, belonged to the dominions of the sons of Čaghatai [q. v.] During the wars between the latter country and the great Khān's, the dynasty of the Idiḳuts must have perished. These wars as well as the struggle between the sons of Čaghatai were also fatal to the existence of the town. According to Muḥammad Ḥaidar, the author of the *Taʾrīkh-i Rashīdī* (xth = xvith century) the land of Bishbalik belonged to Moghulistān, which stretched from the Lake of Balkhash [q. v.] to Bars-kul (the modern Barkul) on the Chinese frontier (*Taʾrīkh-i Rashīdī*, English trans., London, 1895, p. 365); like the other towns of this area, which are mentioned in the xiiith and xivth century (Balāsāghūn, Almalik etc.), Bishbalik had apparently by that time long disappeared. The Chinese also appear to have used the name Bishbalik in the xvth century only as the name of a district. In the same century Buddhism appears to have been finally superseded by Islām in these lands.

Even in the xvith century mention is made of the first inroads of the Kalmucks on the lands of the descendants of Čaghatai; all the lands of the eastern half of Central Asia were afterwards incorporated in the great nomad kingdom founded by the Kalmucks, which was not conquered by the Chinese till the years 1755—1758. This period was naturally not favourable to the development of cities and civic life; there was nevertheless, according to the map prepared by the Swedish lieutenant Renat during his residence among the Kalmucks (1716—1733, *Carte de la Dzungarie, dressée par le Suédois Renat*, St. Petersburg, 1881), in the district of the modern Gučen, a town „Börbensin", about which nothing else appears to be known. Gučen (Chin. Ku-č'ong, Turk. Kučhang)

was only founded after the establishment of Chinese rule. (W. BARTHOLD).

BISHR, a mountain in Syria, famous as the site of a "memorable battle" of the ancient Arabs, probably the modern Djebel Bishri, a long chain running in a northeasterly direction from Palmyra to the Euphrates. R. Kiepert's map shows a place-name Rebih in the centre of the Djebel Bishri. The battle of Bishr was also known by this name and this corroborates the identification of Bishr with the Djebel Bishri. An aqueduct brings the water from this range to Oriza. Akhtal describes Bishr as a place on the outermost western border of the area inhabited by the Taghlibites. Khālid b. al-Walīd is said to have surprised them there on his march from the 'Irāk into Syria. If, as can hardly be doubted, Akhtal was a native of Syria, we may locate his home in the district of Bishr. It was here that he was suddenly overwhelmed by the last outburst of the long and bitter feud, between the Kais and Taghlib, the "day" of Bishr.

While with 'Abd al-Malik, Akhtal had been unbounded in his praises of his fellow tribesmen at the expense of the Kaisites, he had specially directed his shafts against Djahhāf b. Hukaim, a Sulaimite chief, celebrated for his hotheaded courage, an ill-advised provocation. Although Djahhāf had been early dragged into the feud between Kais and Taghlib, he appears to have remained neutral at first. He now swore to be revenged however. With 1000 Kaisites he fell under cover of night upon the Taghlibi camp at Bishr; the men were put to the sword; even pregnant women were ripped open.

A son of Akhtal, named Abū Ghiyāt, lost his life there. The poet himself owed his safety to his presence of mind alone; he pretended to be a slave and was allowed to go. Akhtal hurried from Bishr to Damascus to claim vengeance. Djahhāf had to take refuge on Greek territory, but returned some years later on promising to pay the price of blood.

Kunde des Morgenl.*, 1901, p. 8; *Aghānī*, xi. 59 *et seq.*; Balādhorī (ed. Ahlwardt), p. 238; Yākūt, i. 631; Tabarī, i. 2068, 2072 *et seq.*; Djarīr, *Nakā'id* (ed. Bevan), 401 *et seq.*, 507 *et seq.* (H. LAMMENS.)

BISHR B. ABĪ KHĀZIM (or HĀZIM), a poet of the Ignorance (*Djāhiliya*) belonging to the tribe of Asad b. Khuzaima (*Kāmil*, ed. Wright, 42,9; 133,7; Ibn Kutaiba, *Tabakāt*, ed. de Goeje, 145 *et seq.*) He it was who carried to Harb b. Umaiya and the other Kuraishite chiefs assembled at the fair of 'Ukāz warning that al-Barrād, the ally of Harb, had killed 'Urwa al-Rahhāl of Hawāzin. This enabled them to receive back their arms from 'Abd Allāh b. Djudh'ān and leave 'Ukāz before they were attacked by Hawāzin in the war of the second Fidjār, which lasted during the years 585—589 A. D. Bishr was on friendly terms with Hātim al-Tā'ī. On one occasion al-Nābigha al-Dhubyānī, 'Ubaid b. al-Abras al-Asadī and Bishr, journeying to visit al-Nu'mān of al-Hīra, fell in with an Arab tending some camels and asked for hospitality. The Arab, who was Hātim, killed for each a she-camel, because, he explained, he saw them to belong to different tribes, and he wished his generosity to be known to each. According to this explanation Bishr could not have been of Asad, but was of Kuraish. When Aws b. Hāritha was adjudged by al-Nu'mān to be more excellent than his fellow tribesman Hātim, Bishr satirized the former. Afterwards he was captured by some of the Tai', but was rescued from their hands by Aws, in consequence of which Bishr wrote for every satire a panegyric. Bishr's poetry was not free from defects. He and al-Nābigha are bracketed as being two poets of the first rank who admitted the fault called *ikwā'* (or a mischyme in the final vowel of the line) into their verses. When the fault was pointed out to them they did not return to it. Bishr is also said to have been not always accurate in his descriptive pieces, as when he gives a horse two aortae (Ibn Kutaiba, p. 146). His verses are frequently cited in illustration of uncommon uses of words (*Hamāsa*, p. 247). Some of his poems are in praise of al-Hārith b. Hudjr (*Kitāb al-Aghānī*, xv. 87). He took part in the war between Asad and Tai' and was present with his son Nawfal at the conclusion of the peace; and he mentions in his verses the day of al-Nisār, on which Asad and Dhubyān defeated Djusham b. Mu'āwiya. His verses are included among the *Mufaddaliyāt*, and in the *Djamharat al-'Arab*. His poetry contains many original ideas and curious figures, for example in his ode ending in *mīm*. Bishr was killed as he was raiding the Benī Wā'il, one of whom shot him with an arrow in the breast, which caused him to fall from his horse. As he lay on the ground he composed some verses, announcing to his daughter his death.

Bibliography: In addition to the books referred to above, see Freytag, *Arabum Proverbia* and Caussin de Perceval's *Essai*. (T. H. WEIR.)

BISHR B. AL-BARĀ', one of Muhammad's Companions. In the year 622, Bishr took part in the second 'Akaba where his father, al-Barā' b. Ma'rūr took part.

He was famous for his skill as a bowman and took part in the battles of Badr and Uhud, the "Battle of the Ditch", the campaign to Hudaibiya and the conquest of Khaibar. After the capitulation of the Jewish population of Khaibar in the year 7 (628), Bishr was poisoned by a Jewess named Zainab bint al-Hārith, because she had lost all her male relatives in the war and wished to avenge their deaths. For this purpose she brought to the Prophet a slaughtered sheep which she had steeped in poison. Muhammad accepted it and invited some guests, including Bishr to share it with him. At the meal the Prophet at once saw what had happened from the unpleasant taste and spat out the poison, but Bishr would not commit such a breach of good breeding and swallowed his portion. According to some authorities he died on the spot, while others say, not till a year later.

BISHR B. GHAIYĀTH B. ABĪ KARĪMA ABŪ 'ABD AL-RAHMĀN AL-MARĪSĪ, one of the chief Murdji'ite teachers of his time. He was the son of a Bagh-

dād Jew and was enfranchised by Zaid b. al-Khaṭṭāb. He studied jurisprudence with the Ḳāḍī Abū Yūsuf and soon excelled in several branches of knowledge. He then devoted himself to the science of *Kalām* and adopted the opinion that the Ḳor'ān was created, for which he was persecuted. He was a pious ascetic but found no adherents among good Moslems on account of his too public profession of the science of *Kalām*, which was then looked upon with suspicion. Abū Zor'a al-Rāzī says that he was a heretic, (*zindīḳ*). He died in 218 A. H. (833).

It was in the reign of al-Rashīd, that the Mu'tazilites first ventured to express openly their doctrine of the creation of the Ḳor'ān, which they had up till then only held in secret. The Caliph, hearing rumours of this, said "I have been told that Bishr al-Marīsī holds that the Ḳor'ān was created; by Allāh, if Providence causes him to fall into my hands, I shall put him to death as I have never put any one to death". Bishr therefore kept in concealment throughout the reign of al-Rashīd, that is to say, for about 20 years. After the death of this Caliph the situation remained the same during the reign of his son Amīn. It was only under the latter's successor al-Ma'mūn that the Mu'tazilite doctrine found favour with those in authority.

Shahrastānī says that the theological views of Bishr b. Ghaiyāth were closely connected with those of Ḥusain al-Nadjdjār. In opposition to other Mu'tazilites, they both held that God wills for eternity, good or evil, belief or unbelief, which then must become manifest.

Bishr did not believe in an eternity of punishment for believers, guilty of grave sins: the eternity of punishment is, according to him, absurd and contrary to justice. He teaches that faith presupposes affirmation both with the heart and with the tongue; to worship an idol is not in itself impiety; but it is a sign of impiety. — In jurisprudence, Bishr was a follower of Abū Ḥanīfa and adhered to the system of *ra'y*.

(CARRA DE VAUX.)

BISHR B. MARWĀN B. AL-ḤAKAM, third son of the Caliph Marwān and a Beduin woman of the Banū Kilāb, from whom her son inherited his partiality for the Ḳaisites. Marwān had placed him under the tutelage of his elder brother 'Abd al-'Azīz, but Bishr left him to live with 'Abd al-Malik, when the latter became Caliph. In his early youth he had borne a banner at the battle of Mardj Rāhiṭ. On the death of Muṣ'ab b. Zubair, 'Abd al-Malik appointed him governour of Kūfa. He was fond of wine, musicians, and poets and was an artistic prince, feared only by deserters, whom he nailed to the pillory; his generosity and affability earned him the warmest praises of the poets. The most famous of them, such as Oḳaishir, 'Abd Allāh b. Zabīr and Aiman b. Khoraim not to mention the triad Akhṭal, Farazdaḳ, and Djarīr, sang his praises at this epoch of the renaissance of literature. 'Abd al-Malik had given him, in addition to the famous Faḳīh Ḳabīṣa b. Ḏhu'aib, one of his best and most faithful ministers, Rawḥ b. Zinbā', but Bishr was not long in freeing himself from their tutelage. After the deposition of Khālid b. Asīd, Bishr, who was by this time in bad health, received the governorship of Baṣra in addition to that of Kūfa, which he already held. Meanwhile the Azraḳites had again taken the field. Bishr hated the able general Muhallab, who was ordered to suppress the revolt, and went so far as to order Muhallab's chief lieutenant to cause his plans to miscarry. Thus hampered in his movements, the commander-in-chief lay in camp for several weeks opposite the enemy till Bishr died unexpectedly in the prime of life (74-75 = 694). The news of his decease was the signal for the soldiers to desert en masse. To improve the grave situation 'Abd al-Malik had to entrust the supreme command in the whole of 'Irāḳ to the energetic Ḥadjdjādj.

(H. LAMMENS.)

BISHR B. MU'TAMIR, a Mu'tazilite teacher, and Shaikh of the Baghdād school, flourished in the caliphate of al-Rashīd (Mas'ūdī, *Les Prairies d'or*, vi. 373). Shahrastānī (text, p. 44) enumerates six points on which this theologian differed from other Mu'tazilites. It was he who first raised the question of *tawallud*, also called *tawlīd* (*Ta'rīfāt*); there is *tawlīd* when an action results from an agent acting through an intermediary, as in the case of a key which is held in the hand; the movement of the key results from the will of the agent through the intermediary of the hand. Some physicists, as Shahrastānī points out, had previously studied intermediate causes, but Bishr brought this point of view into the study of morals and showed how the intermediary agent could modify an action and diminish the responsibility of the agent. Numerous discussions took place on this point and are given in the *Mawāḳif* (pp. 116—125).

Bishr also discussed the will in God, which he considered as a quality of his being, and a quality of his action. He also studied important questions of theodicy; the justice of God as regards children; his providence regarding people who have had no knowledge of the revelation; the problem of optimism. Bishr did not agree that God could damn infants, for that would assume that they are capable of deserving rewards or punishment, which is absurd. He believed that people, who had never heard of the revelation, could guide their lives by the light of natural law. He also taught that this world of ours is not the best possible, that God was not bound to create the best but only to reveal himself to man at such time as he should think fit.

(CARRA DE VAUX.)

BISHR B. AL-WALĪD B. 'ABD AL-MALIK, son of the Caliph Walīd I, and an *Umm Walad*. His knowledge earned him the title of *'Ālim banī Marwān* "the scholar of the Marwānid dynasty", a title which a false reading sometimes gives to his brother Rawḥ b. al-Walīd. He was leader of the pilgrimage in 95 A. H. and took part in several invasions of Asia Minor. As admiral of the Egyptian fleet, he landed in Thrace and ad-

vanced as far as Adrianople. The date of his death is not known. He married Sa'dā, a divorced wife of Walīd II, took part in the rising against this Caliph and was still alive after his assassination.

Bibliography: A short notice of Bishr b. al-Walīd is given by Ibn 'Asākir (Vol. ii. of the MSS. in Damaskus); Ibn Ḳotaiba, *Ma'ārif* (Egypt. edit.) p. 123; Mas'ūdī, *Prairies*, v. 362; Ibn 'Abd Rabbihi, *'Iḳd*, ii. 333; de Goeje, *Fragm. hist. arab.*, p. 12—14; Ṭabarī, ii. 1270, 1787; *Aghānī*, vi. 137. (H. LAMMENS.)

BISHR AL-ḤĀFĪ (the "barefooted") a famous Ṣūfī, born 150 (767) in Matersām, a village in the district of Marw. He bore the *kunya* Abū Naṣr and the name of his father was al-Ḥārith. His own home was in Baghdād, where he gathered round him a number of pious ascetics to whom he taught his doctrines. He died there in 226-227 (841) and his tomb at the Bāb Ḥarb was for long a popular place of pilgrimage.

BISKRA, a town and oasis in Southern Algeria in the department of Constantine; 5° 42' East Long. (Greenwich) and 39° 27' North Lat. The oasis of Biskra, lying at the foot of the Awrās, at a height of 428 feet above sea-level is the principal oasis of the Zībān (cf. the article Zāb). It extends for 3 miles along the Wād Biskra, has an area of 3200 acres and encloses 150,000 palm trees. The native population is distributed over the villages of Mṣid and Dār al-Ḥarb on the east, Rās al-Guerria, Sīdī Barkāt, Medjeniah and Gaddesha on the west, which together make up "Old Biskra". The smaller palm-groves of Benī Mora in the west, Kora in the south, al-Aliya and Filiyash in the south-east are merely outlying portions of the main oasis. The modern town of Biskra lies above the oasis around the fort, which has been built by the French since their occupation. Biskra has attained a certain importance as a winter resort since it has been connected by railway with Constantine (180 miles distant). It is the capital of an autonomous commune with 7357 inhabitants, including 661 Europeans, (census of 1906) attached to which is the military territory of Tuggurt with 63,436 inhabitants, of whom only 60 are Europeans, and an area of 540 square miles.

Biskra appears to occupy the site of the Roman town of Vescera, one of the military stations for the defence of the Zāb. The name Biskra itself, first appears in Arab authors, where it is mentioned in connection with the suppression of a revolt of the population of the Zībān against the Aghlabid Emīr Abū 'Abdallāh Muḥammad, called Abu 'l-Gharānīḳ, in 865 A.D. Biskra surrendered without resistance to the general Abū Khafādja, sent to put down the insurrection. In the time of the Ḥammādids, Biskra was ruled by a council of prominent men, among whom the Benī Rommān, a family belonging to the town and deriving its influence from the number of its members and the possession of almost all the neighbouring lands (Ibn Khaldūn, *Berbères*, transl. by de Slane iii. 125), were the most powerful. One of them, Dja'far tried to make himself independent. At his instigation, Biskra rose against Buluggīn bin Muḥammad. This revolt was harshly suppressed, Biskra was taken by assault, Dja'far taken prisoner and put to death in the Ḳal'a of the Benī Ḥammād, whither he had been taken with his accomplices. The government of the town then passed into the hands of the Benī Sindī, who succeeded in keeping the Hilālī Arabs in check and at the same time remaining faithful to the Ḥammādids till the overthrow of this dynasty by the Almohads.

Biskra was then at the height of its prosperity; al-Bakrī (*Description de l'Afrique*, transl. by de Slane, pp. 129 *et seq.*) describes it as "a large and beautiful town". It possessed a chief ("Djāmi'") mosque, and several smaller mosques and baths, and was surrounded by a wall and a ditch beyond which were extensive suburbs. The inhabitants, who were for the most part Mālikites, were of a mixed race (*Muwalladūn*) resulting from the fusion of Berbers with descendants of the Romans, while around the town lived people of Berber stock of the tribes of Sedrāta, Maghrāwa etc. The pursuit of knowledge was held in great esteem there. Al-Bakrī concludes by praising the fertility of the soil, the beauty of the palm-groves and the quality of the dates of which certain kinds in the Fāṭimī period were reserved for the exclusive use of the sovereign.

On the fall of the Ḥammādid dynasty, Biskra passed under the sway of the Almohads. Yaḥyā b. Ghāniya, however, succeeded in taking it in 1201 (598). We again find him in possession of it 23 years later (621—1224) but he evacuated it on the approach of an Almohad army, which occupied and plundered the town. On the break-up of the Almohad Empire, Biskra fell to the Ḥafṣids of Tunis. The real masters of the town in the xiiith and xivth centuries were the Mozni, the chiefs of an Arab family of the tribe of Laṭīf, who had come to the Zāb at the Hilālī invasion. Settling at first around Biskra, the Mozni soon entered the town, forced their way on to the council and entered into competition with the Benī Rommān. The quarrels which broke out among the princes of the Ḥafṣid house gave the Mozni an opportunity to overthrow their rivals. Faḍl b. Mozni took the side of the Emīr Abū Isḥāḳ, who had rebelled against his brother, the Caliph al-Mustanṣir, and opened the gates of Biskra to him. Forced to flee, he followed Abū Isḥāḳ to Spain, where this prince had taken refuge on being defeated. Becoming sovereign of Tunis on the death of al-Mustanṣir, Abū Isḥāḳ recompensed the fidelity of Faḍl by giving him the governorship of the Zāb. Enraged at the triumph of their enemy, the Benī Rommān caused him to be assassinated (1284 = 683). His son Manṣūr, who was then in Tunis, was thrown into prison where he remained for seven years. The revolt of Abū Zakarīya, who proclaimed himself lord of Constantine and Bougie (Bidjāya), turned the fortunes of the Mozni. Manṣūr, who had managed to make his escape, received the governorship of the Zāb, brought this region again under the rule of the king of Bougie (Bidjāya) and drove the Benī Rommān out of Biskra. He overcame the "Marabuts", who rose in the Sūdān at the instigation of the Sharīf Sa'āda and was the real master not only of the Zāb, but also of Hodnā, the Awrās and Wārglā. He quarrelled with Abu 'l-Baḳā, king of Bougie, and taking up arms against him besieged Constantine, but came

to terms with him again: he soon quarrelled with the Ḥafṣids again and fought with them till his death in 725 (1325). His son and successor ʿAbd al-Wāḥid, was assassinated by his brother Yūsuf. The latter stirred up a new rising of the Marabuts and succeeded in turning towards the Wed Rīgh, a Ḥafṣid army sent to enforce the authority of the Sulṭān of Tunis in the Zāb.

Hostile to the Ḥafṣids, he showed a lively sympathy with the Marīnids and cordially welcomed Abu 'l-Ḥasan when the latter undertook his campaign against the Ḥafṣids in 1347 (748). He supplied assistance to Abu ʿInān at the siege of Constantine but on the final defeat of the Marīnids he again went over to the Ḥafṣids. His successor Aḥmad was likewise very powerful, although he had to reckon with the enmity of the Arab chiefs settled in the Zibān.

From this period to the xiith century we have no information regarding the history of Biskra, but it is probable that the bonds which bound the Zāb to the kingdom of Tunis were gradually loosened. At the beginning of the xvith century Biskra appears to have been completely freed from Ḥafṣid authority and to have remained independent for thirty years. In 1541 the Turks made their appearance in the south. Ḥasan-Agha took Biskra, placed a garrison and built a fortress there. The real representative of Turkish authority however was the Shaikh al-ʿArab chosen from the Bū-ʿAokkāz, one of the more important families of the district. The influence of this family ultimately aroused the suspicions of the Turks and in the xviiith century Ṣalāḥ, the Bey of Constantine, set up a rival family, the Ben Ganah. Exposed to the rapacity of the Turks and the raids of the Arab tribes, Biskra rapidly declined. Early in the xvith century, Leo Africanus (ed. Schefer Vol. iii., vi. 351) notes the poverty of its inhabitants. Biskra, according to the accounts of the Arab travellers al-ʿAiyāshī (1662) and Mūlāy Aḥmad (1740), continued to retain some of its importance owing to the richness of the oasis and its position as a commercial emporium. In the second half of the xviiith century the town was abandoned; the inhabitants dispersed over the oasis and built the villages which we now find. Down to the time of the French occupation there still survived a minaret of the ancient town but at the present day there are only some shapeless ruins left.

From 1830—1840 the possession of Biskra was disputed between Farḥat b. Saʿīd representing the Bū-ʿAokkāz, and the Ben Ganah, supported by Aḥmad, the Bey of Constantine. After having tried from 1831—1837 to get the French to interfere on his behalf, Farḥat decided to call in ʿAbd al-Ḳādir. The Emir took advantage of the occasion to set up a Caliph, al-Ḥusain b. ʿAzzuz, at Biskra. But in 1138, the Ben Ganah, seeing that Aḥmad Bey's cause was definitely lost, submitted to the French. On the 2nd March 1840 they put the caliph appointed by ʿAbd al-Ḳādir to flight at Saâda and in the following year rid themselves of Farḥat. Anarchy however only ceased with French rule. On the 21st March 1844, the Duc d'Aumale occupied the town: on the 12th May of the same year, in consequence of the massacre of the little body of soldiers which he had left there, he installed a permanent garrison and built a fort. Biskra then became the chief place in a circle under the command of a superior officer, entrusted with the task of administrating the country with the aid of native chiefs and thus became the base of military operations in the south of Constantine. (G. YVER.)

BISMI'LLAH. [See BASMALA, p. 692].

BISṬĀM (also BASṬĀM, now usually pronounced BOSṬĀM) a town in the Persian province of Khorāsān (on the slopes of the Alburs), at the northern extremity of the great desert; Long. 55° East (Greenw.) and Lat. 36° 30′ north. During the caliphate, Bisṭām was the most important place in the district of Ḳūmis, next to Damaghān (the capital). Bisṭām was apparently founded by Bisṭām, a maternal uncle of the Sāsānian king, Khusraw II. Parwīz who was appointed governor of Khorāsān, Ḳūmis, Djurdjān and Ṭabaristān, after the overthrow of the rebel Bahram Čōbīn, assumed the regal title and ruled for about six years (590—595) till he was overthrown. The newly founded town received its name from Bisṭām (Middle Persian *Wistakhm*, modern Persian *Bistahm*). On this Bisṭām cf. in particular Nöldeke, *Gesch. der Araber und Perser zur Zeit der Sasaniden* (Leiden, 1879), p. 96³, 478—487; A. v. Gutschmid in *Zeitschr. d. Deutsch. Morgenl. Ges.*, xxxiv, 748; Marquart, *Ērānšahr* = *Abhandl. d. Götting. Ges. d. Wiss.*, N. F. iii. Nº. 2 (1901), p. 71.

Bisṭām lies in a valley surrounded by hills through which flows a river from the Alburs mountains and brings a plentiful supply of water to irrigate the surrounding land with its numerous gardens. In the middle ages, the fine apples which grew here were particularly famous and these, known as the Bisṭāmī variety, as Yāḳūt tells us, were exported in large quantities to the ʿIrāḳ. Yāḳūt further describes Bisṭām as a large town with numerous market-places; he specially mentions the very extensive palace crowning a hill, said to have been built by the Persian king Shāpūr (Sapor) II. as well as the famous tomb of the great Ṣūfī Abū Yazīd al-Bisṭāmī [See BĀYAZĪD, p. 686]. The present mosque with the shrine of the saint dates from the beginning of the xviiith century; on this sanctuary cf. Houtum-Schindler in the *Journ. of Roy. Asiat. Soc.*, 1909, p. 161-192; Sarre gives an illustration in the *Zeitschr. der Ges. für Erdk.*, 1902, p. 110.

Bisṭām also possesses some other graves of saints as well as several mosques; a wall fortified with many round towers surrounds the town. The number of inhabitants at the present day is estimated at 7000. In the middle ages, Bisṭām held an important position as junction for the North Persian caravan traffic. It has for several centuries yielded pride of place in this respect to Shāhrūd, situated two hours' journey to the south-west (which is never mentioned by the mediaeval Arab geographers), where the important routes to Ṭeherān, Meshhed and Astarābādh now cross one another. The decline of Bisṭām through the change in trade routes has been accompanied by a corresponding revival of Shāhrūd (which now has about 8000 inhabitants).

(M. STRECK.)

AL-**BISṬĀMĪ**, ʿABD AL-RAḤMĀN B. MUḤAMMED B. ʿALĪ B. AḤMAD AL-ḤANAFĪ AL-ḤURŪFĪ of Antioch, a mystic, who, in addition to numerous mystical works, also wrote on history and biography. The most important is the great encyclopaedia *al-Fawāʾiḥ al-Miskiya fī Fawātiḥ al-Mekkiya*. He lived in Cairo and Brusa where he died in 858 = 1454. Cf. Brockelmann, *Gesch. der Arab. Litt.*, ii. 231 *et seq.*

AL-**BISṬĀMĪ**, ʿALĀʾ AL-DĪN ʿALĪ B. MUḤAMMAD, called MUṢANNIFEK, "the little author", on account of his early *début* in the field of literature, born in 803 (1400-1401) in Bisṭām, settled in Turkey in 848 (1444-1445) where he died in 875 (1470-1471). At the request of Sulṭān Muḥammad II, he issued a *Fatwā*, which annulled the capitulation granted to the king of Bosnia by the Grand Vizier Maḥmūd and, either out of servility or religious fanaticism, offered to execute the sentence of death on the king with his own hands and actually cut his head off. — al-Bisṭāmī composed numerous works in Arabic and Persian, including a commentary on Zamakhsharī's *Kashshāf*. He was a descendant of Fakhr al-Dīn al-Rāzī.

(CL. HUART.)

AL-**BISṬĀMĪ**, BAYAZĪD. [See BĀYAZĪD, p. 686.]

AL-**BISTĀNĪ**. [See AL-BUSTĀNĪ.]

BĪSTĪ (P.) "Twenty-piece", a small Persian coin (according to Vullers' *Lexicon Persico-Latinum* = viginti denarioli) of the value of $^1/_5$ Maḥmūdī. In the modern coinage 10 Dīnārs make a Bīstī and 1000 Bīstī a Tomān, the Bīstī is therefore about equal in value to the tenth of a penny.

BĪSUTŪN, a mountain about 20 miles east of Kirmānshāh, on the road from Baghdād to Hamadān.

The name appears in Greek sources (Ktesias quoted by Diodorus Siculus and Isidoros Charax) as τὸ Βαγίστανον ὄρος and in the earlier Arab authors, such as Ḥamza al-Iṣfahānī and al-Khwārizmī, as Baghistān (or Baghastān). This form goes back to an old Persian Bagastāna, i. e. "Place of the Gods" and as Bāga was particularly Mithras, it may be presumed that this mountain, one of the most beautiful in North Western Īrān, was in ancient times the site of a cult of Mithras. The early mediaeval form (Bahistān, Bihistūn) and the modern Bīsutūn (Bīsitūn) have regularly developed from the ancient name. Even the mediaeval Arabs and Persians no longer understood its etymology. As the place lay on the great military road to Khorāsān it is repeatedly mentioned in itineraries. High up the mountain in a ravine, is the great monument of the victory of Darius the Great, and at the foot a relief commemorating a victory of the Arsakid Gotarzes, one of the very few Arsakid rock-reliefs, which has however been almost destroyed by a modern niche with a Persian inscription. These sculptures caused the Muḥammadans to regard the mountain as one of the wonders of the world. Those writers, who follow Abū Zaid al-Balkhī, give a short description of the sculptures, which is however not very clear and is confused with a description of the neighbouring Sāsānian sculptures of Tāḳ-i Bustān (Khusraw II Parwēz with his horse Shibdīz, the work of Ḳaṭṭūs b. Sinimmar). In Ibn Ḥawḳal we find a curious explanation of the Darius relief and the nine "kings of falsehood" as a teacher and his pupils, the bow of Darius being taken for a whip in the hand of the teacher. The great trilingual inscription of Bīsutūn, in Babylonian, Elamite and Old Persian, gave the key to the decipherment of the Babylonian cuneiform to Sir Henry Rawlinson and laid the foundations for the study of Assyriology.

(ERNST HERZFELD.)

BITIKČI, an Eastern Turkī word for "writer" from the verb *bitimek* "to write". The root is derived by Shiratori (*Sinologische Beiträge zur Geschichte der Türkvölker*, ii. St. Petersburg, 1902 p. 16) and more recently by Radloff (*Alttürkische Studien* in the *Bulletin de l'Acad.*, 1911) from the Chinese *pit* "a paint-brush". Like the Japanese and Coreans many peoples of Central Asia also first learned the art of writing under Chinese influence; among the linguistic evidence in confirmation of this fact, Shiratori adduces the Hungarian *betü*. The Chinese notices quoted by this scholar show that in Eastern Asia even in the time of the dynasty of Topa Wei (386—558 A. D.) the words *Pi-teh* (apparently for *bitik*, script) and *Pi-tchien*, the name of an office (probably for *bitikči*) were known. The words *bitimek* "to write" and *bitig* (sic) "writing" are already found in the Orkhon inscriptions, while the title *bitikči* (according to Radloff, *Wörterbuch*, iv. 1346 *pidikči*) first appears in the *Kudatku-bilik*. The Mongols, in later times (xiiith century) took over this title from their teachers the Uighurs; in the historical sources and docu-

ments of the Mongol period the form *Mitkili* appears alongside of *bitikli*. (W. BARTHOLD.)

BITLIS. [See BIDLIS, p. 714].

AL-**BIṬRŪDJI**, NŪR AL-DĪN ABŪ ISḤĀḲ, called ALPETRAGIUS by European authors, a Hispano-Arab astronomer, pupil of Ibn Ṭufail, flourished about 600 = 1200 A. D.; Suter, *Die Mathematiker und Astronomen der Araber*: *Abhandl. zur Gesch. der math. Wissens.*, x. p. 131; *Nachträge* in Heft xiv. p. 174.

BIZERTA, in the Arab authors: BENZERT, a town on the northern coast of Tunisia, about 40 miles to the N. E. of Tunis; 9° 53′ East Long. (Greenwich) and 37° 17′ N. Lat., Population 35,000. Bizerta lies between the sea and a lake which runs 11 miles inland and covers an area of 35 square miles. The location of Bizerta, commanding the strait between Sicily and the African coast, renders its position of the highest strategic importance.

Bizerta occupies the site of the Phoenician town of Hippo-Diarrhytus (It. Hippone Zarito, Ar. Benzert). It became a Carthaginian possession, was next taken by the Romans, and made a colony under Augustus. It was laid waste by the Vandals and again in the year 41 A. H. (661-662 A. D.) sacked by Mu'āwiya b. Hodaidj. After being temporarily regained by the Byzantines, it was finally taken from them at the same time as Carthage by Ḥasan b. al-No'mān. In the third century A. H. it is mentioned by Ibn Ḥawḳal as the capital of the maritime province of Seṭfūra (سطفورة), although it was by that time almost entirely abandoned and in ruins (Ibn Ḥawḳal, *Description de l'Afrique*, transl. by De Slane in the *Journ. Asiat.*, 1842, p. 179). It recovered however from its decadence, for in the time of al-Bakrī it was surrounded by a stone wall, had a Djāmi' (mosque) and several bazaars and was the centre of a considerable trade in fish. Above the town rose a castle which served as a refuge to the inhabitants against the incursions of the Byzantines (*Rūm*) and also as a monastery (*ribāṭ*) for those who wished to lead a devotional life. The roadstead then bore the name of "Roadstead of the Dome", *Marsa 'l-Ḳubba* (al-Bakrī, *Description de l'Afrique*, ed. de Slane, p. 47 *et seq.*; transl. do., p. 129). Idrīsī also tells us that Bizerta was a busy commercial town. The town however suffered much from civil wars and the invasions which devastated Tunisia. As a result of the Hilālī invasion it fell into the hands of an Arab adventurer named al-Ward al-Lakhmī, who made himself independent in it. It submitted to 'Abd al-Mu'min in 1160, and later in 1202-1203 was occupied by the Almoravid Yaḥyā ibn Ghāniya. Bizerta remained in a stagnant condition till the xvith century in spite of the arrival of the Moors from Andalusia who there built the "suburb of the Andalusians". Leo Africanus describes it as "a small town the inhabitants of which are poor and wretched" (Leo Africanus, *Description de l'Afrique*, iii. Bk. V. ed. Schefer, p. 129).

As in all the other harbours of the Barbary states, the corsairs increased in numbers in the xvi[th] century and later to such an extent that the Christian Powers had to take steps to put a stop to their raids. A Franco-Genoese expedition led by the Archbishop of Salerno appeared before the town in 1516 without being able to take it. In revenge as soon as Khair al-Dīn had made himself master of Tunis 1534, (cf. the article KHAIR AL-DĪN) the Bizertines hastened to throw off the Ḥafṣid suzerainty and to submit to him. But in the following year Charles V, after the capture of Tunis, took Bizerta also and placed a garrison there. He at once dismantled the fortifications which were soon afterwards rebuilt by the Spaniards, who added another, the "Fort of Spain", which still exists. Spanish rule only ended here in 1572, when Bizerta was finally occupied by the Turks. Throughout the xvii[th] century, Bizerta was one of the most notorious strongholds of the Barbary pirates. The corsairs, who sailed from this harbour, in spite of the ships of the Knights of Malta, were not afraid to ravage the coasts of Sicily and Italy and to attack vessels of the chief powers in Christendom. The bagnios of Bizerte held as many as 20,000 Christian captives. It was not till the end of the xvii[th] century that France, after fruitless negotiations, decided to resort to force and Bizerta was bombarded by Duquesne in 1681 and 1684. The same causes in the xviii[th] century brought about renewed bombardments by a French squadron under the command of Admiral De Boves (4[th] and 5[th] July, 1770) and by the Venetian Admiral Emo who almost completely destroyed the town in 1785. The suppression of piracy and the silting up of the harbour brought about the decline of Bizerta in the xix[th] century. It was only a wretched little town straggling along narrow channels almost filled up with sand, when the French troops occupied it on the 1[st] May 1881, at the beginning of the Tunisian campaign.

Since the establishment of the French protectorate, Bizerta has been quite transformed by numerous improvements. The old canal was partly filled up and a new canal, navigable by ships of greater tonnage, dug between the sea and the lake, a commodious outer harbour built, large buildings laid on the shores of the lake and an arsenal built at Sīdī 'Abd Allāh, 10 miles from the sea. Strong forts were erected on the surrounding heights to defend the town. Finally a new town was laid out between the old town and the canal, which developed very rapidly although the increase in population and trade has not yet quite fulfilled the expectations of its founders.

(G. YVER.)

BLIDA (BULAIDA), a town in Algeria (department of Algiers) with 29,000 inhabitants of whom 6,000 are Europeans. It is built on the southern edge of the plain of Mitīdja at a height of 770 feet. The Wēd el-Kebīr (Wādī 'l-Kabīr) runs through the town, bearing to the Shifa the waters of the Djebel 'Abd al-Ḳādir, the highest peak of the Atlas in this part of Algeria. It is surrounded by gardens and orange-groves.

Blida is a town of modern origin, the foundation of which is not earlier than the x[th] century of the Hidjra. According to the legend it was founded by a celebrated Marabut of that period, Sīdī Aḥmad al-Kabīr. After numberless wanderings, this sacred personage is said to have settled in the valley of a Wādī, called Wēd al-Rummān (Wēd Sīdī Aḥmad

al-Kabīr or briefly the Wād al-Kabīr, as it is now called). A group of disciples settled around him; next came Andalusian refugees who had been driven out of their original settlements in Tipaza by the attacks of the Kabyls of Shanua and forced to seek refuge at the foot of the Atlas. At the request of the Marabut, the tribe of Ūlād Sulṭān granted the new-comers the land required to build their dwellings on. The Beglerbeg of Algiers, Khair al-Dīn, who had come to see Sīdī Aḥmad al-Kabīr while these things were going on, decided to build a mosque, a bath, and a public bake-house, around which the Andalusians grouped their dwellings. This agglomeration of buildings received the name of Blida or "little town" (942 A. H.). The town flourished rapidly and the surrounding land was soon covered with gardens, mainly owing to the efforts of the Andalusians who introduced the cultivation of the orange into this country and taught the natives the methods of irrigation practised in Spain.

Under Turkish rule, Blida became part of the *Dār al-Sulṭān*, that is to say, of the territory administered directly by the Dey of Algiers, who was represented in it by a governor or *ḥākim* of Turkish origin. A detachment of Janissaries formed a garrison there. The population, composed of Andalusians, Moors, Jews and Mazābites was famous for its easy-going and pleasure-loving disposition. Sīdī Aḥmad bin Yūsuf, in one of the epigrams which are attributed to him, said that Blida ought not to be called *Blida* ("little town") but *Wrida* ("little rose"). Severer censors branded it with the name *Kaḥba*, ("prostituted") on account of the license which prevailed there. The caravan-leaders of the south for whom Blida was the centre for the exchange of merchandise between the Tell and the Sahara, found great facilities for enjoyment there; the Ra'īs, enriched by the proceeds of their piratical expeditions and the great Algerian officials had country-houses here and brought large retinues to the town. Officials who had fallen into disfavour were interned here and led quite an endurable exile. The prosperity of Blida was affected only by visitations of nature; the plague swept through it on several occasions in the xvii[th] and xviii[th] centuries and earthquakes wrought great havoc in it. The most disastrous was that of 1827, which almost entirely destroyed the town. The inhabitants at first thought they would rebuild it some distance away but they gave up this project and rebuilt it on the original site.

After the occupation of Algiers by the French (1830) Blida remained for some years independent, administrated by its *Ḥākims*. Bourmont appeared before the town in July 1830 but went no farther. Clauzel entered it, after a fiercely contested battle on the 19[th] November of the same year but evacuated it a few days later; the Duc de Rovigo sacked it in 1832 but did not stay any time there. As a result of the treaty of the Tāfna, which recognised France's occupation of the Mitīdja, Maréchal Valée, to put a stop to the intrigues of 'Abd al-Ḳādir, placed his troops around the town and then, in 1839, decided on its effective occupation. Since then Blida has remained peaceably under French rule. It was severely affected by another earthquake in 1865, and only a few fragments of its Muhammadan buildings have survived. There has however been but little change in the life of the natives and many traditions and ways of living have been preserved, which are now being studied and collected.

(G. Yver.)

BOABDIL = Aboabdilĺlāh = Abū 'Abdallāh Muḥammad XI, the last king of Granada (887—897 = 1482—1492), son of 'Alī Abu 'l-Ḥasan (= Mulai Hasen = Mulahacen: 866—887 = 1461—1482), was called El Rey Chico ("The Little King") by the Spaniards and by the people of Granada el-Zogoybi ("the Poor Devil" cf. Dozy, *Supplément s.v.: Zoghbi*) while his uncle the Pretender Muḥammad XII b. Sa'd (890—892 = 1485—1487) was called al-Zagal = *al-Zaghall* ("the Valiant"; cf. Dozy, *ibid.*). Boabdil dethroned his father in 887 (1482) but the latter regained it from 888—890 (1483—1485). M. J. Müller (*Die letzten Zeiten von Granada*) was the first to write the true history of the last days of Granada, which has been so much interwoven with legend, from contemporary Arabic and Spanish documents (even August Müller, *Der Islam*, ii, 678, follows too closely the legend "*el último suspiro del Moro*"). More recently M. Gaspar Remiro has carefully sifted fact from fiction, cf. his *Documentos árabes de la corte Nazarí de Granada* (*Revista de Archivos, Bibliotecas y Museos*, 1910); *últimos pactos y correspondencia íntima entre los Reyes Católicos y Boabdil sobre la entrega de Granada* (Granada, 1910); *Entrada de los Reyes Católicos en Granada al tiempo de su rendición* in his recent *Revista del Centro de estudios históricos de Granada y de su reino* (Granada, 1911, 7—24). Bargès erroneously believed he had found Boabdil's grave in Tlemcen, while he really died in exile in Morocco. (C. F. Seybold).

BOBASTRO, a ruined mountain fortress in Andalusia. After Casiri and Conde Bobastro had been confused with the Babastro in Aragon and also with Huéscar in the extreme north east of the province of Granada Dozy thought (*Recherches* I, 323—327 and *Histoire des Musulmans* II, 195), that it ought to be identified with the ruins of the ancient Municipium Singiliense Barbastrense (Singilis Barba), the modern el Castillon near Teba, west of Antequera in the upper Guadalhorce valley. Simonet more correctly seeks to connect it with Estébanez Calderon between Antequera, Ardales and Casarabonela in Las Mesas de Villaverde, 1½ leagues north east of the modern Carratraca, at an almost inaccessible height, sheer above the Middle Guadalhorce. After 267 (880-881) this rocky retreat was the impregnable refuge of the rebel 'Omar Ibn Ḥafṣūn [q. v.].

Bibliography: Cf. in particular Simonet, *Historia de los Mozárabes de España*, p. 173 *et seq.* (where however we should read N.E. [= N.O.] instead of N.O. [= N.W.]).

(C. F. Seybold.)

BOGHA al-Kabīr, Bogha, the elder, a Turkish general under al-Mu'taṣim and his successors, won a name for himself in various campaigns, in which he held the supreme command, against the Beduins around al-Medina in 230 (844-845), against the Armenians in 237 (851-852), against the Byzantines in 244 (858) etc. At the time of the assassination of the Caliph al-Muta-

wakkil in 247 (861) he was away from court, but returned immediately to the palace and after the death, which took place very soon after, of the Caliph al-Muntaṣir raised al-Musta'īn to the throne in 248 (862). He died in the same year.

Bibliography: Ṭabarī (ed. de Goeje), iii. 1174 *et seq.*; Ibn al-Athīr (ed. Tornberg), vi. 317 *et seq.*; Weil, *Geschichte der Chalifen*, ii. 299 *et seq.*; Thopdschian in *Mittheil. des Seminars für orient. Sprachen* 8, 2, p. 121 *et seq.*

BOGHA AL-SHARĀBĪ, also called Bogha al-Saghīr (Bogha the younger), likewise a skilful general, defeated the rebels in Ādharbaidjān in the reign of al-Mutawakkil. It was he who led the conspiracy against this Caliph and brought about his assassination. During the brief reigns of al-Muntaṣir and al-Musta'īn, all authority really was in the hands of Bogha and his confederate Waṣīf. When Musta'īn was forced to abdicate in 252 (866), Bogha was to receive the governorship of al-Ḥidjāz, but the new Caliph al-Mu'tazz tried to deprive him of it and finally succeeded. In 254 (868) Bogha was taken prisoner and beheaded.

Bibliography: Ṭabarī (ed. de Goeje), iii. 1348 *et seq.*; Ibn al-Athīr (ed. Tornberg), vii. 28 *et seq.*; Weil, *Geschichte der Chalifen*, ii. 356 *et seq.*

BOGHAR (BOGHĀR = ABŪ GHĀRĪ), a small town in Algeria (department of Algiers) about 50 miles from Medea (Lamdiya) on the left bank of the Shalif, at a height of 2800 feet above sea-level; the population is 2386 of whom 2041 are natives. The situation of Boghar, the "Balcony of the South" on the borders of the plateaus, on the natural road, formed by the Shalif where it enters the Tell, which is followed by the nomads on their migrations, has always been of the highest strategic importance. The Romans had a military station here. 'Abd al-Ḳādir built a fortress which was destroyed by General Baraguay d'Hilliers on the 23rd May 1841. The French have built a fort and other extensive buildings for military purposes.

Boghar is a place of modern origin. Five miles to the east on the right bank of the Shalif at a height of 3700 feet is the ancient village of Bokhārī (incorrectly called Boghari), a market for the natives of the plateaus, the native quarter of which begins to resemble the Sahara Ḳṣūr (cf. the descriptions of Fromentin, *Un été dans le Sahara* [1872] p. 25—35, and Maupassant, *Au soleil* [1884] p. 31—33). According to the legend, Bokhārī was founded by a saint of the same name. About 1830 a Marabut of the Madaniya order, named Sī Mūsā b. Ḥasan, won a great following in this district and even attempted some years later to use his influence to supplant 'Abd al-Ḳādir. He was defeated by the Emir however and after the defeat of his subordinate Si Ḳuīder by the French, the power of the Madaniya was at an end. The Shādhiliya-Derḳāwa took its place, owing mainly to the influence of Sīdī 'Adda b. Ghulām Allāh and the activity of Shaikh al-Mīsūm (1825—1883). The latter founded an important *zāwiya* in Bokhārī which is now however in a state of decay (cf. A. Joly, *Etude sur les Chadouliyas*: *Revue Africaine*, 1906 and 1907).

Bokhārī is the chief place of an autonomous commune with 4299 inhabitants (of whom 3387 are natives) and of a "mixed commune" of 1079 square miles with 33,587 inhabitants of whom 32,295 are natives. (G. YVER.)

BOGHĀZ (T.) "Ravine", "gully" (literally "strangling" from the root *boghā*) hence in geographical names "pass" or „strait". It is particularly applied to the Thracian Bosporus (*Khalīdj-i Ḳusṭanṭīnīye*), a strait 18 miles long and from 600 to 3,500 yards broad with 7 bays and 7 promontories. The various parts into which it is broken up, together form the *boghāz-ichi*, "the interior of the Bosporus". This runs from the heights of the Serai cape and Scutari up to the Black Sea. It separates the European coast from the Asiatic and is traversed by two lines of steamers which start from the bridge of boats at Ḳara-Kiöi between Stambul and Galata. A third service crosses and recrosses the Bosporus in zigzag and links up the two shores (*dilendji vapor* "steamboat for picking up", sometimes translated wrongly as "Beggars' boat"). Passengers land from the steamers by wooden piers at the various stations of which the following is a list (from south to north). On the European coast: Ḳaba-Tāsh, Beshik-Tāsh, Orta-Kiöi, Ḳuru-Česhme, Arnaut-Kiöi, Bebek, Rūmili-Ḥiṣār, Emirghān (Mir-Gūn), Stenia, Yeñi-Kiöi, Therapia, Böyük-Dere, Mazār-burnu, Yeñi-Maḥalle; on the Asiatic coast: Scutari (special service) Ḳūzghundjuḳ, Beylerbey, Čengel-Kiöi, Wānī-Kiöi, Kandilli, Anadolū-Ḥiṣār, Ḳanlydja, Pasha-baghče, Rif'atpasha maḥallesi, Beiḳōz, Anadolū-Ḳawaḳ (served from the European coast). The villages above these limits are not served by steamboats (Rūmili-Ḳawaḳ, and the two Fanaraki). The ruins of the fortresses on the European and Asiatic sides (Rūmili-Anadolū-Ḥiṣār) recall the siege of Constantinople; the former, built by Sulṭān Muḥammad II (1452), who wished the plan of the building to represent his name, the same as that of the Prophet, in Arabic letters; it was built in less than three months by six thousand workmen and received the name of Boghāz-Kesen, "cut-throat"; the second was built earlier by Bāyazīd I Yildirim on the ruins of a temple of Jupiter Urius (Güzeldje-Ḥiṣār). It is at this point that the current which carries the waters of the Black Sea into the Sea of Marmora is at its strongest, whence its name of *Shaiṭān Āḳyntisi* "The Devil's Stream". The Bosporus is a favourite resort during the heat of summer for the people of Constantinople; its shores therefore present a continuous succession of houses and palaces built on the very edge of the sea (*Yālī*, *Sāḥil-Khānē*) as far as Mazār-Burnū and Beiḳoz; there are numerous beautiful walks here, Gök-Ṣū (Sweet waters of Asia) Khunkiār-Iskelesi, Kestāne-Ṣuyu (Valley of Roses Ṣārī-yār).

Bibliography: Ḥādjdjī-Khalfa, *Djihān-numā*, p. 664 (map, p. 672); Sa'd al-Dīn, *Tādj al-Tawārīkh*, Vol. i. p. 148; Baedeker, *Constantinople*, pp. 130—137. (CL. HUART.)

BOGHĀZ-KIÖI, a village in Asia Minor near Sunghurlu, formerly the capital of a Kazā (in the Wilāyet of Angora, Sandjaḳ of Čorum). The ruins of Pterium "the City of the Medes" were found here by Texier on the 28th July 1834. It has Hittite monuments. Since the summer of 1906, important excavations have been carried on there by H. Winckler.

BOGHDĀN, the Turkish name for Mol-

davia, borrowed from that of its founder Boghdān I. Dragosh (1352). Stephen the Great had gained a victory over the Turks at Racova (1475) but in the following year he was in turn defeated in the White Valley (*Valea Albă*). In alliance with the Turks he laid waste a part of Poland in 1498; but a year later he threw off the suzerainty of the Ottomans. In alliance with the Poles and Hungarians, he repelled another invasion in 1499. On his death-bed (2nd July 1504) he advised his son Boghdān to submit to Turkey (Treaty of 1511). During the siege of Vienna in 1529, Peter Raresh offered the suzerainty of Moldavia to Sulṭān Sulaimān and went to Sofia to take the oath of allegiance; as he was accused of intriguing with Ferdinand, king of Hungary, and of having taken part in the assassination of Aloisio Gritti, Sulamān decided to make war on him. He left his capital on the 11th Ṣafar 945 (Tuesday 9th July 1538), was joined at Jassy by Ṣāḥib-Girāi, Khān of the Crimea, burnt the town and set out in pursuit of Raresh who had taken refuge in Transylvania. After the surrender of Sucsawa the Sulṭān summoned an assembly of boyards who elected Stephen, brother of Raresh to take his place. Stephen embraced Islām and surrendered Budjak at the mouth of the Dniester to the Turks. Peter Raresh, who had been living in Pera, obtained a firmān for himself, which reestablished him in power. His son Elias II, accused of having brought about the defeat of the Ottomans by Martinuzzi in 1548, was deposed and his place was taken by his brother Stephen, who was soon afterwards assassinated (1552). He was the last of the Boghdānids. The Turkish garrison of Jassy was massacred in a popular rising on the 13th November 1594. Muḥammad III made the province a Pashalik and gave it to Dja'far, but by the treaty of Carlsberg (1595), it became a dependency of Hungary; it was conquered in 1600 by Michael the Wallachian. Moldavia which had hitherto been governed by native princes, now fell a prey to the cupidity of intriguers who purchased the governorship which was sold to the highest bidder: the Saxon Jankul (1580), the Croatian Gratiani (1619), the Pole Barnowski (1626), the Greek Alexander Elias (1630). This state of affairs lasted till 1115 (1703) when Sultan Aḥmad III allowed the boyards to choose one of their number as Hospodar; they unanimously elected Michael Rakovitza, son-in-law of Constantine Cantemir (governor from 1685 to 1693 and father of the historian) who was invested by the Porte on the 22nd Djumādā I = 3rd October. From 1716 on, it was the Greek families of Phanar who supplied princes to Moldavia as well as to Wallachia: Ghyka, Maurogordato, Callimaki, Murusi, Ypsilanti. Alexander Ypsilanti obtained a firmān from the Porte in 1774, which abolished a portion of the charges of the *ra'is* and regulated the taxes. In 1781 Russia installed a Consul-General at Jassy as "Censor of the conduct of the Princes" and fixed the tribute to be paid at 115,000 piastres. The fruitless insurrection led by another Alexander Ypsilanti, son of Constantine, in 1821, led the Ottomans to occupy Moldavia with a military force and to establish there a native Hospodar, Sturdza (19th October 1822). The treaty of Adrianople (14th September 1829) between Russia and Turkey established the independence of Moldavia and Wallachia under Hospodars elected for life, who had only to pay tribute (Michael Sturdza 1834—1843, Gregory Ghyka 1849—1856). The two provinces (*eyaletleri*) were reunited to form the principality, (Cuza 1861; Charles of Hohenzollern elected by plebiscite 8th April 1866), then the kingdom of Roumania and were definitely recognised as independent by the Treaty of Berlin (Article 43).

(Cl. Huart.)

BOGRA, a district of India, in Eastern Bengal: area 1,359 sq. m.; pop. (1901) 854,533, of whom no less than 82% are Muḥammadans, being the highest proportion in the province.

Bibliography: *Imperial Gazetteer of India*.

(J. S. Cotton.)

BOHORĀS (Bohras, Buhrah), a Muḥammadan sect in Western India, (mainly of Hindu descent), for the most part Shī'as of the Ismā'īlī sect, and belonging to that branch of it which upholds the claims of al-Musta'lī (487—495 = 1094—1101) to succeed his father al-Mustanṣir, in the Fāṭimid Caliphate of Egypt, in opposition to his brother Nizār, whose adherents (the ancient Assassins) are represented in India by the modern Khodjahs [q. v.]. The name Bohorās denotes "traders", (from the Gudjarātī *vohoru* 'to trade') and records the occupation of the earliest converts to Islām; the appellation, however, is not confined to Musulmans, and in the census of 1901, 6652 Hindus and 25 Djains returned themselves as Bohorās. The number of Musulman Bohorās was 146,255, of whom 118,307 resided in the Bombay Presidency. They fall into two main groups the larger of which, belonging to the mercantile class, is Shī'a (with the exception of the Dja'farī Bohorās, who are Sunnī); the other, composed of peasants and cultivators of the soil, is Sunnī.

Some of the Shī'a Bohorās claim to be descended from refugees from Arabia and Egypt, but the majority are of Hindu origin, their ancestors having been converted by Ismā'īlī missionaries. The first of these is commonly stated to have been called 'Abd Allāh and to have been sent from Yaman by the Imām of the Musta'lī Ismā'īlī sect, to have landed in Cambay in 460 (1067), and there to have initiated an active propaganda. But other accounts give Muḥammad 'Alī, whose tomb is still reverenced in Cambay, as the name of the first missionary in India, (ob. 532 = 1137). The Čālukya Dynasty of Anhilvāḍa was then ruling over Gudjarāt and the Ismā'īlī missionaries seem to have been allowed by the Hindu government to carry on their propaganda without interruption and with considerable success. In 1297 the Hindu kingdom came to an end and for a century Gudjarāt remained more or less in subjection to Dihlī. Under the independent kings of Gudjarāt (1396—1572) who favoured the spread of Sunnī doctrines, the Bohorās were on several occasions exposed to severe persecution.

Up to 946 (1539) the head of the sect resided in Yaman and the Bohorās made pilgrimages to him there, paid tithes, and referred their disputes for settlement; but in 946 Yūsuf b. Sulaimān migrated from Yaman to India and settled in Sidhpur (a town now in the Baroda State). About fifty years later, a schism occurred after the death, in 1588, of Dā'ūd b. 'Adjab Shāh, the then head of the sect. The Bohorās of Gudjarāt

chose as his successor, Dā'ūd b. Ḳuṭb Shāh, and sent news of the appointment to their co-religionists in Yaman; but the latter supported the candidature of a certain Sulaimān, who claimed to be the rightful successor in virtue of a formal mandate from Dā'ūd b. 'Adjab Shāh. (This document the Sulaimānīs assert to be still in their possession). Sulaimān came over to Gudjarāt, but found his claim rejected by all but a small number of Bohorās; he died in Aḥmadābād, where his tomb and that of his rival, Dā'ūd b. Ḳuṭb Shāh, are still reverenced by their respective followers. Those who recognise his claim are called Sulaimānīs and their Dā'ī resides in Yaman, but he has a representative in India in the city of Baroda. The number of the Sulaimānīs is now very small; the majority of the Bohorās (about 130,000 in number) are Dā'ūdīs, and their head Mullā or Dā'ī has been residing in Surat since the latter part of the 18th cent.; his decisions on both religious and civil questions are held to be final; discipline is enforced by fines and grievous offences are punished by excommunication. The Dā'ūdīs are said to subscribe a fifth part of their income to the head Mullā, as well as pay other dues on the occasions of birth, marriages etc. The head Mullā has a deputy Mullā attached to every Dā'ūdī settlement of any importance.

Two insignificant secessions from the Dā'ūdīs may be mentioned, — (i.) the 'Aliya Bohorās, who in 1624 supported the claims of 'Alī, the grandson of Shaikh Ādam, the head Mullā, in opposition to Shaikh Ṭaiyib, whom Shaikh Ādam had nominated as his successor; — and (ii.) the Nāgoshīs, who broke away from the 'Aliya sect about the year 1789; their name is derived from their doctrine that the eating of flesh is sinful.

The Bohorās keep their religious books secret, and only a few unimportant books of prayer have been published e. g. *Ṣaḥīfat al-ṣalāt* (partly in Arabic, partly in Gudjarātī). Among still unprinted books of this sect may be mentioned *Da'ā'im al-islām* and *al-Ḥaḳā'iḳ*, which contain an exposition of the doctrines and rites of Islām according to Shī'a theology, and accounts of the Bohorā Dā'īs and their sayings.

The Dja'farī Bohorās are mainly descended from the Dā'ūdī Bohorās who became Sunnī in the reigns of Muẓaffar Shāh (1407—1411) and succeeding kings of Gudjarāt, but they have received accessions to their numbers from Hindu converts. They derive their name from a saint named Saiyid Aḥmad Dja'far Shīrāzī (15th cent.), whose descendants they reverence as their spiritual guides.

BOHTĀN (Buhtān), the name of a Kurdish district south of the Lake of Vān. The name is applied to the whole district between the Tigris and the Bohtān-ṣu and the (little) Khābūr, which flows into the Tigris at Meghāra (about 42° 20' East Long Greenw.). This area which is separated from the surrounding country by large rivers has the form of a triangle with unequal sides, the base of which is the Bohtān-ṣu and the sides the Tigris and the Khābūr, continued by a line to Ṣānā. In the north, Bohtān is bounded by Shīrwān, in the south by the district of Zākhō, in the west by Ṭūr 'Abdīn and in the east by Hakk(i)ārī.

The Bohtān-ṣu or -ćai (the so-called Eastern Tigris) which takes its name from this district, in which it rises, falls into the western or main Tigris (al-Shaṭṭ) a few miles below Til (31° 50' East. Long. Greenw.) after receiving the waters of the Bidlis-ćai [cf. the article BIDLIS] from the north, about 10 miles southwest of Si'ird; on the confluence see Lehmann-Haupt, op. cit., i. 337 *et seq.*; the source of the Bohtān-ṣu (in the Ḳaẓā Nörduz) was first definitely located by the explorations of R. Wünsch in 1883. The Arab geographers call the river the Wādī 'l-Zarm; cf. M. Hartmann, op. cit., p. 65 *et seq.*

Bohtān is a geographical, not a political division. Like Shīrwān and Ṭūr 'Abdīn it finds no place in the Turkish administrative division of the country. There has never been a Wilāyet or Ḳaẓā of Bohtān; even when one is, as sometimes happens, mentioned in Oriental works, it is merely due to a carelessness of expression. All the places which go to make up Bohtān belong to one of three modern administrative districts, Arwāh, Djazīra and Shirnāḳ. The inhabitants however know only the name Bohtān for the area as above defined.

The modern pronunciation of the name is usually Bohtān; European travellers and American missionaries in particular also write Bootān and Bottān; Modern Syriac: Boṭān and Boṭān. The original form of the word however was Bokhtān; for the best authorities (Balādhurī, p. 176; Yāḳūt, passim, e. g. s. v. *Āḏil*, *Bāz* and *Djurdhaḳīl*; Sharaf al-Dīn's *Chronicle of the Kurds*), always write the name of the people as *Bukhtaiya*. This is also true of the Syriac authors (*Bukhtāiyē*); for the latter see Tuch in the *Zeitschr. d. Deutsch. Morgenl. Ges.* i, p. 59. The name is derived from the Bokhtī-Kurds, who have been settled here for centuries and were at an earlier period the ruling race. Nöldeke, (op. cit.,) and H. Kiepert (*Lehrb. der alt. Geogr.*, 1878, p. 81) agrees with him, suggested that this widely branched tribe might be identified with the Πάκτυες whom Herodotus III, 93 mentions along with the Armenians. M. Hartmann (op. cit., p. 103) regards this identification as doubtful on account of the difference in the labials.

The name of the district Bohtān or Bokhtān never appears in the mediaeval Arab geographers (only as above mentioned the name of the inhabitants); in its place we find Zawazān which has a somewhat wider denotation; Yāḳūt says of it: "It is a fair province (*kūra*) among the mountains of Armenia, Khilāṭ (Akhlāṭ, q. v.), Ādharbaidjān, Diyārbakr and Mawṣil (Mosul); the inhabitants are Armenians but there are also some Kurdish tribes". Among the latter he mentions the Bashnawī- and the Bokhtī-Kurds, to whom belonged all the strongholds in this extensive area; Djurdhaḳīl was the most important town of the Bokhtī-Kurds and the residence of their 'king'.

The area of the whole of Bohtān is about 2300 square miles. Hyvernat and Müller-Simonis, who travelled through it in 1887, before the last Armenian troubles (in which many settlements were

destroyed) estimated the number of towns and villages at 300, which would give a population of about 40,000. M. Hartmann gives a list of 269 place-names of which about 230 may be claimed for Bohtān with certainty. The most important towns have naturally always been on the banks of the main rivers, e. g. Bāzabdā (the modern Djazīrat ibn ʿOmar), Finik and Siʿird (Seʿört), which is now the largest town in Bohtān (cf. Lehmann, op. cit., i. p. 334), although strictly speaking it lies outside of it. The Arab geographers mention also amongst others: Ardumusht, Alkī, the famous mountain fastness of Dergulī, etc. The inhabitants at the present day are mainly Kurds, who, according to Lehmann, belong to 10 different tribes, of whom the chief of Shāwā-Kurds bears the title of Bohtān-Agha, i. e. Lord of Bohtān. There are also Armenians and Nestorians.

Bohtān is as yet comparatively unexplored; the accounts of most of the travellers of the xixth century (among whom may be mentioned: J. Rich, Layard, Sandreczki, Socin, Černik, Sachau, Müller-Simonis, Lehmann-Haupt and Belck) are as a rule very scanty; their accounts also deal almost exclusively with the banks of the Tigris and the Bohtān-ṣu, the area visited by them. Wünsch (1883), Maunsell and H. Burchardt (1894) alone have penetrated into the interior of the country. Except for a not very extensive plain between the Tigris and the Khābūr, the whole of Bohtān is covered by wild and lofty mountains; this enormous mountain system was, however, till lately a terra incognita and was usually represented on maps by Djebel Djūdī [q. v.] (12,000? feet high), the mountain on which the ark rested according to primitive Mesopotamian and later Muḥammadan tradition.

Regarded from the purely geographical standpoint, Bohtān belongs to Armenia. In history, however, this district, inhabited from the earliest times by nomads, has always been a sort of connecting link between the Semitic south and the Indo-Germanic north, and has been loosely attached sometimes to the one and sometimes to the other, as a sort of frontier province, while it has often been completely independent. Turkish authority in Bohtān was not at first rigidly enforced. Even after the battle of Čaldirān (1514) the Kurdish chiefs enjoyed almost unlimited authority in their inaccessible mountain castles; it was not till the middle of last century that the Porte began gradually to put a check on the independence of the Kurdish princes and to bring their lands directly under the sway of the Sulṭān.

M. Hartmann has given a valuable topographical and historical study of Bohtān (see *Bibliography*). What he gives is not exactly a systematic account, but rather the materials for the preparation of one, consisting mainly of lists of places compiled from 1. the Kurdish-Arabic dictionary of al-Khālidī (Stambul, 1310); 2. the Arab geographers, chiefly Yāḳūt; 3. the Kurdish chronicle (*Sharaf-nāma*) of Sharaf al-Dīn (died 532 = 1137), edited by Véliaminof-Zernof (St. Petersburg, 1860—1862); 4. the official Turkish year books; 5. the accounts of European travellers. In a supplement he also gives a fairly important itinerary (written in modern Syriac) published in 1852, by two Syriac priests of Urmi(a). There is still much valuable and little explored material for the history of Bohtān in Armenian and Syriac literature.

BOLOR DAGH, see the article pamir.

BÖLÜK, A Turkish word, properly meaning "division" (*böl* to separate), group or troop. Since the reforms, it has been the name applied to a company of infantry (about a hundred men) commanded by a captain (*yüz-bāshī*), and to a squadron of cavalry. The *bölük-emīni* is the farrier-sergeant. It was also the name of one of the three divisions of the corps of Janissaries, composed of sixty-one *orta* ("regiments"), of which thirty were distributed throughout the provinces, while the others were quartered, as a garrison, in Constantinople. Those who composed it were called *bölük-lü* or *bölük-khalḳi*. The register for the year 1033 (1624) gives 12,768 men as the effective strength of this division. *Bölükāt-i-erbaʿa* "the four squadrons" was the name given to four companies attached to the corps of *sipāhs* and *silāḥdārs* which were themselves subdivided into *bölük*, the leaders of which were called *bölük-bāshī*. These *bölükāt-i-erbaʿa* were the oldest body of cavalry in the Empire; they were originally raised by Orkhān and at first numbered 2,400 men but the number gradually rose to 16,000. This corps having become notorious for its unruly conduct, was reduced to

its original number by Muḥammad IV and incorporated in the *sipāh* and *silihdār*. From its institution this body had always been entrusted with the duty of guarding the Standard of the Prophet (*sandjak-i sharīf*).

(Cl. Huart.)

BOMBAY PRESIDENCY, a province in western India, with its capital at Bombay city [q. v.]. It stretches from Sind, through Gudjarāt, to the Konkan, with a landward extension across the Ghāts into the Dakhan and the Carnatic. Comprised within its limits are the Portuguese possessions of Goa, Damān, and Diu, and also the state of Baroda. The settlement of 'Aden at the mouth of the Red Sea is politically a part of Bombay. It differs from other provinces in that more than one third consists of native states. Including these, the total area is 188,745 sq. m.; total pop. (1901), 25,424,235. For its history under Muḥammadan rule, see the separate articles GUDJARĀT, DAKHAN and SIND. The more important Muḥammadan states at the present time are Khairpur [q. v.] in Sind, Djunagarh [q. v.] in Kāthiāwār, Cambay [q. v.], Pālanpur [q. v.] and Rādhanpur [q. v.] in Gudjarāt, and Djandjira [q. v.] in the Konkan. Though the whole of the province was at one time under Muḥammadan rule, it was from the Marāṭhās that the British acquired it, with the exception of Sind [q. v.]. Of the total population in 1901, Muḥammadans numbered 4,567,295, or 18%; but if Sind be excluded, the number falls to less than 2 millions, and the proportion to 7%. While in Sind the proportion of Muḥammadans is as high as 76%, elsewhere it exceeds 10% only in Bombay city, in two districts of Gudjarāt and two districts of the Carnatic. This uneven distribution shows that Islām never made much way among the Marāṭhās of the Dakhan, though they were for nearly four centuries under Muḥammadan rule. As throughout India, the vast majority are Sunnis, estimated at 97%. The Shī'a sect is represented by the Khodjas [q. v.] (50,837) and the Bohorās [q. v.] (118,307). The latter belong to two distinct classes: a wealthy commercial community in Bombay city and other trading centres, and a group of agriculturists in Gudjarāt, who are Sunnis and not Shī'as. The sect of Aḥmadiyas, [q. v.] founded in the Pandjāb by the late Ghulām Aḥmad of Ḳādiān, is said to have made 10,000 converts in Bombay. Of other communities or races, Memons numbered 97,000, Balōčī 543,000 (mostly in Sind), Arabs 262,000, Paṭhāns or Afghāns 170,000, and Mughals only 28,000. Apart from the prosperity of Sind, there is no reason for thinking that the Muḥammadans increase faster than the rest of the population.

Bibliography. *Census Reports* for 1872, 1881, 1891, and 1901; Sir J. M. Campbell, *Bombay District Gazetteers* (Bombay, 1877—1901); *Imperial Gazetteer of India. Provincial Series. Bombay Presidency*. (Calcutta, 1909).

(J. S. Cotton.)

BOMBAY CITY, an island on the W. coast of India, now connected by causeways with the mainland, capital of the presidency of the same name, chief sea port of India, and centre of cotton trade and manufacture. Area, 22 sq. m.; pop. (1901), 776,006. The census was taken in time of plague, and a special enumeration in 1906 gave a total of 977,822. The name is undoubtedly derived from Mambādevi, a Hindu goddess whose shrine is still worshipped. The island, though commanding the only safe harbour for large ships in all India, hardly figures in history until 1661, when it was ceded to Charles I by the Portuguese as part of the dowry of Catharine of Braganza. In 1668 it was granted by the king to the East India Company, and in 1687 the headquarters of the company, were transferred to Bombay from Surat.

Of the total population in 1901, Muḥammadans numbered 155,747, or 20%. They include representatives of all the races that have embraced Islām: Arabs, Persians, Turks, Afghāns, Malays, and Africans. Three classes of traders are specially numerous and influential — Memons, Bohorās, and Khodjas. Their dealings are chiefly with the Persian Gulf and Zanzibar, but they do not shrink from visiting Europe and the British colonies for trade purposes. They are scarcely less prominent in finance, in industrial enterprise, in charitable works, and in the municipal administration. Other special classes are Nawaits from the Konkan, descendants of Hindu women by Arab fathers, originally sailors but now a wealthy community; Arab horsedealers, conspicuous by their national dress; Sidis or Africans, some of whom have been long settled on the west coast; and Djulāhās, who come to the cotton mills from as far as northern India. The Djāmi' Masdjid dates only from 1802; but the oldest Muḥammadan monument is the tomb of Shaikh 'Alī Paru, built about 1431 and repaired in 1674, which is the scene of an important annual fair. The celebration of the Muḥarram festival in Bombay not seldom results in riots between Sunnis and Shī'as.

Bibliography: *Census Reports* for 1872, 1881, and 1901; Sir J. M. Campbell, *Materials towards a Statistical Account of the Town and Island of Bombay* (Bombay, 1894); S. M. Edwardes, *The Rise of Bombay* (Bombay, 1902); J. M. Maclean, *Guide to Bombay*.

(J. S. Cotton.)

BŌNA (French Bône), a town on the Algerian coast in the department of Constantine, situated at the mouth of the Sebus on the western shore of the gulf of the same name, which lies between Cape Garde in the west and Cape Rosa on the east. The town is built between the sea and the wooded heights, which form the outer buttresses of the *massif* of the Edough (ايدوغ). It is called BŪNA by the Arab geographers and 'ANNĀBA by the natives.

The population (census of 1906) is 42,934 of whom 16,457 are French, 11,880 foreigners, 1662 Jews and 12,935 natives.

The modern town of Bōna is about $1^1/_2$ miles from the site of Hippōne (*Hippo regius*). Founded by the Phoenicians, conquered by the Carthaginians, and then held by the kings of Numidia, Hippo was annexed to the Roman province of Africa on the defeat of Jugurtha. Under the Empire it attained a high degree of prosperity and after the spread of Christianity became one of the religious centres of the country. Councils assembled here in 393, 395 and 426 A. D.: Saint Augustine was Bishop of it. Taken by the Vandals in 430, it was occupied in the century following by the Byzantines, in whose power it remained till the Arab conquest. It passed into the hands of the Muḥammadans probably at the same time as Carthage, that is to say, in the last years of the vii[th] or early in the viii[th] century A. D., during the governorship of Ḥassān b. al-Nu'mān.

During the centuries following, the district of Bōna, inhabited by a Berber population of the tribes of Awraba and Maṣmūda (al-Bakrī, *Description de l'Afrique*, transl. de Slane, p. 134) was successively ruled by Arab governors of Ḳairawān, Aghlabids, Fāṭimids, Zīrids and lastly by the Ḥammādids. During this period, a new town was built close to the sea, at some distance from the ancient Hippōne, perhaps to protect the coast from the attacks of the Christians. "The governor of the town", we read in Ibn Ḥawḳal (*Description de l'Afrique*, transl. de Slane: *Journ. Asiat.* 1842, p. 182) "is independent and keeps a body of Berbers always ready for service, as are the troops quartered in the *ribāṭs*". Al-Bakrī (*op. cit.*, p. 133) clearly distinguishes between an ancient and a modern town. The former, the birthplace of "Oḳoshtīn" (St. Augustine) built on a hill and difficult of access, was called Madīnat Zāwī, probably, as de Slane suggests, because it had been granted by al-Mu'izz b. Bādīs, fourth ruler of the Zīrid dynasty, to his relative Zāwī b. Zīrī. The second, built three miles away, was called New Bōna, and had been surrounded by walls some time after 450 A. H. (1058 A. D.). The date of the disappearance of Madīnat Zāwī is not known. At the present day there is nothing on the site of Hippōne but a few traces of Roman buildings. Both geographers agree in extolling the prosperity of the town, and the richness of the neighbourhood in fruits, cereals, and cattle. There was a great trade here in hides and wool, and merchants visited the town in large numbers, particularly from Andalusia. In the time of Ibn Ḥawḳal, besides the sums levied for public purposes, Bōna supplied 2000 dīnārs annually to the privy purse of the Ḥammādid Sulṭān. At this period and in the century following, it still numbered among its inhabitants some native Christians and was the see of a Bishop, as a letter from Pope Gregory VII to the Sulṭan al-Nāṣir in 1076 shows (Mas Latrie, *Traités entre Chrétiens et Arabes au Moyen Âge*; *Introd. Hist.*, p. 22).

The piratical expeditions to which the people of Bōna devoted themselves, brought down upon them the wrath of the Christians. In 1034, a naval expedition of Pisans and Genoese sacked the town. A century later, Roger II of Sicily, taking advantage of the destruction of the kingdom of Bougie by the Almohads sent his Admiral, Philippe de Mahdiya, to occupy Bōna and set up a prince of the Ḥammādid house as his representative there in 1153. Bōna remained but a brief time in Christian hands and by 1160 it was regained by the Almohads. In the xiii[th] century, they lost it temporarily and for two years (599-601 A. H. = 1203—1205 A. D.) it recognised the authority of Yaḥyā b. Ghāniya. On the break-up of the Almohad empire, Bōna fell to the lot of the Ḥafṣids of Tunis and later became a bone of contention between the princes reigning at Tunis, Bougie, and Constantine. It was (1358—1360) the capital of a little kingdom founded by the Ḥafṣid prince al-Faḍl. In 1366, it was given by Abu 'l-'Abbās, king of Bougie, to his nephew Abū 'Abd Allāh Muḥammad. It still continued to be an important seaport, visited not only by Muḥammadan but also by Christian merchants. The Pisans, Genoese, Marseillais, and Catalans all had countinghouses here. As the increase in piracy gradually interfered with maritime trade, Bōna began to decline. At the beginning of the xvi[th] century, it was only a small town with 300 houses (*Leo Africanus*, ed. Schefer, Vol. iii. p. 107).

The settlement of the Turks in Algeria induced the people of Bōna to throw off Ḥafṣid authority. In 1533, they rose against Sulṭān Mūlāy Ḥasan and appealed to Khair al-Dīn. The latter went to Bōna and there completed his preparations for the expedition by which he became master of Tunis in 1535. But as a result of the occupation of this town by the Spaniards, Charles V obtained the cession of Bōna from Mūlāy Ḥasan, now re-established on his throne. The Marquis of Mondejar came to take possession of it and placed a garrison of 600 men in the Ḳaṣba, which they evacuated after five years (1535—1540) during which they were closely blockaded by the Turks and the natives. After the departure of the Spaniards, the Turks again became definitely the owners of the town, where they established a garrison and held it till 1830. During these three centuries, in spite of the annoyance caused to commerce by the corsairs, Bōna was regularly visited by French merchants. The Compagnie du Corail, founded in the middle of the xvi[th] century by some merchants of Marseilles, obtained permission to have a countinghouse here. This building was destroyed in 1609 but rebuilt in 1626 as the outcome of negotiations by Sanson Napollon and remained till 1799. The various companies, which under the name of "Compagnie d'Afrique" were engaged in commerce with Barbary, made it the centre of their operations, particularly for the purchase of hides, wool and cereals. The importance of Bōna was such that Louis XIV thought of taking it and making it a fortified station. Restored to France in 1801, the countinghouse at Bōna was again taken from them and granted to the English who held it from 1807 to 1815. It was then given back to France but evacuated in 1827 as a result of the rupture between France and the Dey Husain.

After the capture of Algiers, an expeditionary force was sent against Bōna. General Damrémont, who commanded it, entered the town on the 2[nd] August 1830 and took possession of the Ḳaṣba; on being recalled by De Bourmont, the general in chief command, he re-entered Algiers by the 15[th] August. The inhabitants, who had thrown off the authority of Aḥmad, the Bey of Constantine, retained their independence in spite of the attacks on them by Aḥmad's lieutenants. Another attempt

by the French to establish themselves in the town in 1831 failed and ended in the murder of the two officers who led it, Commandant Huder and Captain Bigot. Ibrāhīm, a former Bey of Constantine, who sought to become lord of Bōna on his own account, had been the instigator of this assassination. However, a year later, the inhabitants of Bōna finding themselves unable to resist any longer the attacks of Ben Aissa (Ibn ʿĪsā), the Khalīfa of the Bey of Constantine, had to appeal to the French as a last resource. Captains d'Armandy and Yūsuf managed by a bold stroke to get a number of soldiers and sailors into the Ḳaṣba and in spite of the resistance of the Turks, unfurled the French flag there on the 27th March 1832. Ibrāhīm fled and Ben Aissa disappeared after setting fire to the town. Soon afterwards a French garrison was placed in Bōna, which became the base of operations in the eastern province and from it the expeditions against Constantine were sent in 1836 and 1837.

Since that date the prosperity of Bōna has been continually on the increase. The utilisation of the plain of the Sebus, now devoted to agriculture, the exportation of the products of the forests of the Edough, and of the beds of iron ore at Maḳṭaʿ al-Ḥadīd and more recently of the phosphates from the Tebessa district, now connected by rail with Bōna, have assured its rapid development. The harbour of Bōna is now the third port in Algeria and seems destined to a still more brilliant future. A modern town, the population of which is daily increasing, has been built beside the native one of which there remain only a few insignificant traces and the Ḳaṣba, built in the xivth century by the Ḥafṣids but since completely transformed.

AL-BONDĀRĪ, AL-FATḤ B. ʿALĪ B. MUḤAMMAD AL-IṢFAHĀNĪ, with the honorific (*Laḳab*) ḲAWĀM AL-DĪN, an Arab historian, compiled an epitome of ʿImād al-Dīn's history of the Saldjūḳs entitled *Zubdat al-Nuṣra wa Nukhbat al-ʿUṣra* (published by M. Th. Houtsma in the second volume of his *Recueil de Textes relatifs à l'Histoire des Seldjoucides*). He is said to have previously dealt with another work by ʿImād al-Dīn (*al-Barḳ al-Shāmī*) in a similar fashion. He also translated the *Shāhnāme* of Firdawsī into Arabic and dedicated his translation to the Aiyūbid al-Malik al-Muʿaẓẓam, who died in 624 (1227). Nothing more definite is known regarding the date of his death or the events of his life.

Bibliography: Houtsma in the preface to the second volume of the work quoted above, p. 37 ff.; Brockelmann, *Geschichte der Arab. Litteratur*, i. 321.

BONDŪ, a country in Senegal, bounded on the north by the circle of Bakel, on the west by the Sandugu, a tributary of the Gambia, which separates it from Ferlo, on the south by the Fuladūgū, on the east by the Faleme, a tributary of the Senegal which separates it from Bambūk. The Bondū measures about 120 miles from east to west and 110 from north to south; it lies between 13° 12′ and 14° 49′ north Lat. and 16° 40′ and 18° 10′ west Long. (Greenw.) and covers an area of about 15,000 square miles.

Bondū presents the appearance of a level plain over which are scattered isolated mounds from 250 to 500 feet high. It rises towards the south where ranges of hills, which rarely exceed 300 feet in height, separate the basin of the Faleme from that of the Gambia. The waters of this area are thus carried off in two directions, either to the north by the Faleme, which forms the boundary of Bondū for 100 miles of its course; or towards the south by the tributaries of the Gambia, of which the largest, the Niaule, is nearly 200 miles long. Besides these rivers, a number of small lakes, most of which never dry up and a subterranean sheet of water from 6 to 60 feet below the surface, assure a plentiful supply of water to nourish the soil. Rain falls in abundance from June to November but is usually rare in the dry season from November to June.

The soil, usually composed of ferruginous laterite, is not of the same fertility everywhere. The western district, near Ferlo, is covered with steppes which are almost bare in the dry season but are clothed with a green mantle of vegetation after the first rains. In the centre, steppes and cultivated lands are found adjacent to one another. In the south appear tropical growths, tamarisks, cotton-trees, bamboos, figs etc., but too far apart to constitute regular forests. The cultivated plants are earth-nuts, millet in the districts with clay soils, rice near the perennial marshes, but agriculture has been much retarded by the wars of which Bondū has been the theatre and by the ignorance of the inhabitants in such matters. In spite of the large numbers of domestic animals, horses, cattle and asses, but little attention is devoted to breeding them. The mineral resources of the country are small. The gold, obtained by washing the sands of the Faleme is not abundant enough to justify the introduction of a more remunerative method of obtaining it; the deposits of iron are inconsiderable. Industry is confined to the manufacture of the most necessary articles of domestic life, with the exception of weaving; strips of cloth are made which are used as money in commercial transactions.

The population consists of very different elements. To the peoples of the Mande race, Malinkes, Soninkhes, and Bambāras who constitute the main stock, have been added Wolfs, Tucolors and lastly Fūls, who came from Fūta Djallon, few in number, but forming a kind of aristocracy.

Bondū is governed by an *almamy* residing at Būlebanīa, in the south of Bakel. He is not only the military but also the religious head of the state and exercises absolute authority, although according to Raffenel, he is bound to consult the principal chiefs before he can declare war. His power is hereditary but is transmitted not to the son of the late *almamy* but to the son of his eldest brother. The villages are ruled by hereditary chiefs; alongside of them the Marabuts hold an important position. These are divided into three classes: *Imāms*, whose duty it is to divide inheritance and arrange successions, *tamsirs*, judges intermediary in rank between the village chiefs and the *almamy*, and Talibes who attend to education and public worship.

According to tradition, Bondū was founded by the Sissibes of Fūta. Driven out of their country by political troubles, these fugitives came to seek refuge with the chief or *tunka* of Galam. The latter received them kindly and allowed their chief

to choose a residence for himself. The frontier of the two states was then fixed at the point where the two chiefs setting out at the same time from their respective capitals should meet. In the time of Raffenel, certain symbolic ceremonies still recalled the indebtedness of Bondū to Galam. At first very limited, the territory of Bondū increased as a result of victorious wars against neighbouring tribes and the population was increased by refugees from Fūta, Fūta Djallon, and by numerous colonies of Sarrakoles.

The inhabitants, in spite of the Muḥammadan propaganda carried on by Soninkhe merchants, remained pagans for a long time. They were converted to Islām in the second half of the xviii[th] century by the Pūls of Fūta Djallon, who, under the leadership of the *almamy* ʿAbd al-Ḳādir, invaded Bondū and imposed on them the religion which they had only recently adopted themselves. As a result, incessant wars broke out between the Pūls and the people of Bondū, in the course of which the *almamy* ʿAbd al-Ḳādir was slain by Sego, the *almamy* of Bondū, whose brother he had caused to be assassinated. In the xix[th] century the rulers of Bondū broke off their alliance with the French. The *almamy* Bū Bakar Saʿāda remained faithful to the French cause till his death. He especially refused to join the Marabut al-Ḥādjdj ʿOmar [q. v.], whose hordes were ravaging Bondū. After his death, a party, hostile to his successor ʿOmar Penda, embraced the cause of the agitator Maḥmadu Lamin. From 1885 to 1887, Bondū was again laid waste. Maḥmadu drove out the *almamy* and remained master of the country up till the time when he was driven out by Colonel Frey's troops. In our own times a notable change has taken place in the attitude of the people of Bondū, who for long resisted the doctrines of the Tidjānīya and were rather lukewarm Muḥammadans; they now appear disposed to adopt the doctrines of this brotherhood, which is hostile to European influence.

AL-BŌNĪ. [See AL-BŪNĪ.]

BONNEVAL, Claude Alexandre Comte de, a French adventurer, who served first in the French army, afterwards in the Austrian, and finally entered the Turkish service after becoming a convert to Islām and adopting the name of Aḥmad Pasha. Bonneval was born in 1675, took part in Prince Eugen's campaign against the Turks in 1716 and became a Muḥammadan in 1730. He was appointed governor of Karamān and endeavoured to bring about an alliance between France and Turkey, at the same time trying to reform the Turkish army, particularly the artillery. In 1738 he lost the favour of the Grand Vizier Yegen Muḥammad Pasha and was banished to Kastamuni, but recalled when the vizier was deposed in 1739. He died on the 23[rd] May 1747 and his adopted son Sulaimān, likewise a renegade, succeeded him as commander of the bombardiers.

BŌRAḲ, Bawraḳ, Būraḳ, borax. The description in Ḳazwīnī shows that the most different salts were confused under the general name of borax; he mentions natron as a kind of borax; i. e. the Armenian borax, the borax of the metal-founders, tinkār, which is brought from India, bakers' borax, the borax of Zerāwand and of Kirmān. Even in the *Petrology* of Aristotle the peculiar property of borax is said to be that it melts all bodies, hastens smelting and facilitates casting. Natron is particularly mentioned in this connection as a kind of borax; tinkār is said to be specially useful in connection with the smelting of gold. It has also numerous applications in medicine.

Bibliography: Ḳazwīnī (ed. Wüstenfeld), p. 212; do. (transl. Ruska), p. 9.

(J. Ruska.)

BORNEO, the largest island in the Malay Archipelago and next to New Guinea in the whole world (332,000 square miles), lies under the equator and is covered with luxuriant tropical forests up to its highest mountain tops. The mountain ranges running from west to east give the island its massive form, which is most pronounced in the mountains of the Upper Kapuas which run right through Borneo from west (Cape Dato) to East (Cape Mangkalihat). It consists of crystalline schists and varies greatly in height (from 500—6000 feet.) To the south separated by parallel depressions are plateaus of tertiary sandstone, viz. the Mahdi Plateau to the north and the Schwaner Mountains to the south of the River Mĕlawi. These ranges continue westwards to the China Sea and eastwards through a region the geology of which has as yet been little studied. South of the area in which the Kapuas rises they are crossed by a tuff formation, the Müller Range, more than 3000 feet thick and much excavated by water. To the north of the Upper Kapuas range also the west-easterly direction of the mountains is very marked. These sedimentary formations have been broken through by masses of granite and andesite, which now rise as isolated mountains above the surrounding country as a result of great erosion. In the north Kinabalu (12,900 feet) in the centre of the Gunung Balu (6,800 feet) is the highest eminence among the mountains which have been thus formed.

The great rainfalls (on the west coast about 160 inches and in Bandjarmasin 90 inches annually) supply numerous large rivers which rise in the centre of the island. The Sambas and the Kapuas, which is in places as much as 1500 yards broad, flow to the west coast; the Kahajan, the Kapuas-Murung and the Barito (about 600 miles long) to the south; the Mahakam of the same length and the Kajan to the east; the River Baram, the Batant Redjang and the Batang Lupar to the north. These and numerous smaller rivers have all filled their valleys which are of older formation with masses of debris, sand and mud. The alluvial plains which have thus arisen are still mainly on the north, west and south coasts, gradually advancing and regaining ground from the surrounding shallow seas. The coasts are thus

low and marshy and covered with rhizophors. Only along the east coast is there a low range of hills which has apparently arisen and separated the interior of the modern Kutei from the basin of the sea. This was gradually filled up by the deposits from the rivers running into it and is now a very flat country in which a few lakes have been left. Borneo has from ancient times been famous as producing precious metals and diamonds. These however have not been found in sufficient quantities to repay working by Europeans either in the alluvial deposits which are of general distribution, or in rock-veins. The natives however, as were in former times the Chinese on the west coast, are still able to obtain a sufficient recompense for their labour. It has been mainly through its deposits of antimony and quicksilver that Sĕrawak has been able to develop into a principality. The Tertiary deposits of coal, which are found in many places, only exceptionally pay Europeans for working them (on Pulu Laut on the south-east coast) and the natives at surface-workings in various places (the middle course of the Kapuas and Barito). The petroleum industry has become of great importance in late years (the main centres are at the mouth of the Mahakam and at Balik Papanbai).

To its tropical forests, the island of Borneo owes its exports of guttapercha (*Gĕtah pertja*), caoutchouc, rotan, camphor etc. Agriculture and cattle rearing have been but little developed by the natives so that copra, pepper and sago are exported in relatively small quantities. In the north-east and south tobacco of good quality is grown by Europeans for export to Europe and America.

The basins of the rivers on the west, south and east coasts (250,000 square miles) belong to the Netherlands, the watershed of the northern rivers (88,000 square miles) belongs indirectly to England by the contract of the 20th July 1891; the latter consists of the kingdom of Sĕrawak in the west and the territory of the British North Borneo Company in the east with the smaller English possessions, the Island of Labuan, the town of Brunei and a small stretch in the centre.

The Dutch territory is divided into two residencies, that of the Western Division of Borneo with the capital Pontianak, from the centre to the west coast and the Southern and Eastern division of Borneo with its capital Bandjarmasin.

In the first residency are the Malay kingdoms of Sambas, Mampawa, Pontianak, Kubu, Simpang and Matan; along the Kapuas, Landak, Tajan-Mĕliau, Sanggau, Sĕkadau, Sintang, Silat, Suhaid, Salimbau, Piasa, Djongkong and Bunut. Their chiefs bear titles like Sultan, Panembahan, Pangéran etc. and are quite subject to the Dutch government. Although frequently possessing only a small territory and little power, they are all despots; each has a vice-regent and a council consisting of members of the ruling family and the most important feudal chiefs. The great mass of the population which consists of Muḥammadan Malays and almost always of subjected heathen Dyaks also, appears only to exist to assure a lazy life for the chiefs and nobles by paying taxes, which are regularly and arbitrarily levied.

Borneo became known later than the other islands of the Archipelago. Although Ptolemy (Chap. iii. 2, 3) describes the land of the Orang Utan and the Kinabalu (?) and the many Viṣṇuite Hindu antiquities in Kutei argue intimate relations with further India, and on the Kapuas and Barito with Hindu Java, the earliest definite accounts are found in the Chinese annals. These refer to the west coast, from which according to the *History of the Sung Dynasty* (Book 489) camphor was brought as tribute in the year 977 A. D.; in the *History of the Ming Dynasty* there is a similar entry for the years 1370 and 1405. In this period the Chinese had commercial relations with the important state of Brunei on the north coast, with Bandjarmasin and the Karimata Islands. In these notices we find descriptions of the natives which agree in many points with present conditions; important kingdoms on the coasts are also mentioned. These were founded either by Malays from Djohor (e. g. Brunei and Sambas on the west coast) or by Javanese (Sukadana on the west coast, Kotawaringin and Bandjarmasin on the south coast and Kutei on the east coast). The rulers of many smaller kingdoms on the Kapuas are descended from the Hindu chiefs of Sukadana, who settled there in the xivth century.

In the middle of the xvith century Islām was preached in Sukadana and Matan from Palembang; in the year 1590 Giri Kusuma ascended the throne there as the first Muḥammadan prince. During his reign Europeans first began to visit the west coast (van Waerwijck in 1602), while the Portuguese and Spaniards had been visiting Brunei on the north since 1518 (de Gomez) or 1528 (de Menezes) or 1521 (Pigafetta in Magelhaen's ship).

The kingdoms on the coast of Borneo were able to retain their independence longer than those on many other islands of the archipelago. For nearly 300 years, the Portuguese, Spaniards, Dutch, English, and other Europeans successively visited their capitals to trade and build counting-houses there but made no permanent settlements. Bandjarmasin [q. v.] was the first to surrender a part of its independence to the Netherlands in the middle of the xviiith century. Sukadana on the west coast was for a short time conquered by Bantam [q. v.] on West Java in 1699, but regained its independence about 1725 with the help of Buginese from Celebes. From that time many Buginese began to settle on the west coast and became themselves rulers of separate kingdoms (Mampawa). The kingdom of Sukadana was first overthrown by the Dutch and the Sulṭān of Pontianak in 1786; its kings henceforth ruled only over Matan. The Sultanate of Pontianak owed its foundation to an Arab adventurer, Sharīf 'Abd al-Raḥmān, son of Sharīf Ḥusain Ibn Aḥmad al-Kadri, whose tomb in Mampawa is still visited by pilgrims, and a Dyak woman. In his youth he endeavoured to satisfy his thirst for adventure and lust for gold by trading voyages and piracy but was therefore cursed by his pious father and, leaving Mampawa, settled with his following of robbers in 1772 at the confluence of the river Landak and the Kapuas. By his ability and energy he succeeded in making himself master of this favourably situated position and founding an important trading centre, the modern Pontianak. By the year 1779 he was able to get himself recognised as Sultan of Pontianak by the Dutch East India Company and to make a treaty with them. His descendants still reign in Pontianak although they are very much under the control of the Dutch government.

The Sultanate of Sambas (capital Sambas) was founded by Malays from Djohor, the suzerainty of which was recognised at first; as early as 1609, it entered into a trading agreement with the Dutch East India Company. In the first half of the xviith century the ruling house was driven out by Radin Sulaimān, a son of Radja Tengah, prince of Brunei and a princess of Sukadana, who lived in Sambas; the latter reigned under the name of Muḥammad Safī al-Dīn. He was the first Sultan of the present dynasty. In the xviiith century Sambas was notorious as a nest of pirates; in the year 1811, an English expedition had to be sent to destroy it. The practice of piracy, by introducing foreign elements, exercised a great influence on the kingdoms on the north and west coast of Borneo, as did the goldwashing industry in the hands of the Chinese, which has been developing since the middle of the xviiith century. The first relations of the Chinese with Borneo certainly date from as early as the middle of the viith century as we know from their annals; in later centuries they traded chiefly with Brunei and settled in the commercial centres. It was not till later, when the Malay chiefs began to plunder them more and more, that these trading voyages ceased. Numerous descendants of their marriages with native women are however still to be found in the coast towns of Borneo and some Dyak tribes of the north coast are thought to show an admixture of Chinese blood.

The Malay chiefs of Mampawa and Sambas brought the first Chinese goldwashers from Brunei to their territories about the year 1760. They obtained such good results that soon hundreds of their countrymen began to pour in; according to their custom they formed numerous, secretly organised, mining companies (*kongsi*) which however changed very much in the course of time. They were soon able to make themselves independent of their Malay and Dyak neighbours. In the year 1774, fierce feuds broke out among these companies, which have been constantly renewed. The consequence was that the Chinese spread themselves more and more over the land and occupied not only the districts of Larah and Lumar but also Montrado and Mandor. It was not till the second half of the xixth century that the Dutch succeeded in quite subduing them. The goldwashing industry has now almost ceased and the Chinese still settled there live by agriculture.

The origin and development of the kingdom of Sĕrawak (capital Kuching) affords us a unique and highly interesting opportunity of seeing the beneficent effect which a firm but not harsh application of European ideas may have on the political and economic conditions of a native population. When its founder James Brooke, an English naval officer, landed in 1838 in the west of the kingdom of Brunei with a ship which he had equipped himself, he found the country in a dreadful condition, brought about by the plundering of the people, piracy, slavery, bloodshed and the licentiousness of the Malay chiefs. With his help the well-meaning but weak prince Radja Muda Hassim was able to restore order to some extent and in 1842 Brooke was recognised as Radja of the country of Sĕrawak by the Sultan of Brunei. Relying mainly on the oppressed heathen Dyaks and the proceeds of the antimony mines he was able to restore order and suppress the rebellion of the Chinese and Malays who formed the hostile elements in the population. It was only for the suppression of the Arab chiefs, who with the Malays and Dyaks in the east, lived by piracy, that he required English help (1845). With the help of only a few Europeans besides the princes of the native populace who all enjoyed equal rights, Sir James Brooke ruled his domain with great success so that it prospered economically and extended its boundaries. In 1863 he left to his nephew Charles Brooke an orderly kingdom which now stretches to the lands on the Limbang river. Sĕrawak has placed itself under the suzerainty of England. The Sultanate of Kutei on the east coast with its capital Tengaron and the fort of Samarinda occupies the lower course of the Mahakam river. Extensive Hindu remains, which are found along this river, point to a lengthy period of colonisation in the Hindu period of the Archipelago (till about 1500). Kutei was one of the lands dependent on the kingdom of Modjopahit in Java; afterwards it belonged to the kingdom of Bandjarmasin. During the xixth century the Sultans made several treaties with the Dutch government whereby this kingdom also yielded its independence.

In the year 1905 the census of the Dutch territory gave the following figures: 1,382 Europeans, 55,522 Chinese, 3,141 Arabs, 746 foreigners from the Archipelago, and 1,172,864 natives. The last figure is partly based on a rough estimate. The population of the island of Borneo consists of pagan Dyaks in the interior and a Muhammadan population on the coast which is Malay. It is small in number, estimated at from 1—3 every two square miles, i. e. about 2,000,000 in all. The Dyaks are agriculturists and grow rice, tuberous plants, maize etc.; they also hunt and fish. In the forests around the sources of the large rivers wander various separate tribes of hunters, known by the names of Ot, Punan, Bĕkĕtan etc. The agricultural Dyaks are divided into numerous small tribes which are organised on a patriarchal basis, speak many different dialects, are hostile to one another and are thus able to offer little resistance to the more closely united Malays. The Dyak tribes belong to the older stratum of the Malay peoples of the Archipelago but differ markedly from another, probably through admixture with other stocks. The independent Dyaks, who live in the centre, are well advanced, some of their achievements in the field of art and industry, for example, being really wonderful. As they are little developed they are helpless against the injurious influences of their environment and make but poor use of the materials at hand for food, clothing and dwelling. Neither do their numbers increase nor does their culture make much advance. They have had an evil reputation for their head-hunting from the earliest times. They are driven to this practice rather by their animistic ideas than by their character, for they are described as mild in temperament. Where the Dyaks are more or less subject to the Malay chiefs, a greater or less degeneration may be observed amongst them. This is a result of the harsh way the Muḥammadan chiefs have exploited the heathen tribes; the less the latter were able to retaliate the more cruelly were they treated.

The Malay tribes on the coast differ very much in physique, intellect and customs according to

their composition. They have remained purest on the west coast, being strongly mixed with Buginese only in the delta of the Kapuas. In the commercial towns like Pontianak and Sambas the richest merchants, next to the Chinese, are the Bandjarese and Buginese. The Malays have extended farthest inland along the Kapuas; here however they often marry Dyak women; besides, when a Dyak becomes a convert to Islām, he is reckoned a Malay. Nevertheless we find many among them with little or no Malay blood in their veins.

As a rule these Malays are little developed; they devote much less attention to industries than the indigenous Dyak, do not care for agriculture and only take it up when driven by necessity. They prefer to live by trading, fishing (formerly by piracy), hunting and like a free, roaming life. As they are more closely united by their political system, have a greater unity of religion and language and import better weapons and wares from abroad, they have been able to rise to be the dominating race. As they always settled at the mouths of rivers, the only trade routes in these pathless lands, they were soon able to control the imports and exports to the whole basin of the river. Here as throughout the island the great demand from European merchants for products of the interior such as guttapercha, caoutchouc, rotan and camphor has caused the Malays to seek them farther and farther inland. They are therefore now found at the present day, either individually or in groups, among the most remote Dyak tribes, and thus involuntarily help to spread Malay civilisation and Muḥammadanism. The expansion of European dominion, which has increased the security of the lands under its sway, allows traders to proceed farther up the rivers and to visit the Dyaks in greater numbers with the same results.

On the south coast, the Bandjarese with a strong admixture of Javanese, form a centre of progress and commercial enterprise in the ancient kingdom of Bandjarmasin [q. v.]. On the east coast, the presence of numerous Buginese, who are distinguished for their commercial ability and enterprise, is of great political and economic importance. The great mass of the Malay inhabitants of the former and present kingdoms of Pasir, Kutei, Gunung Tabur, Sambaliung and Bulungan, are no higher on the scale of civilisation than those of the west coast.

Bibliography: To detail all the works referring to the island of Borneo, its peoples and their kingdoms would require too much space. They may be found up to the year 1854 in P. J. Veth, *Borneo's Wester-Afdeeling* (Zaltbommel, 1854); to the year 1889 in Th. Posewitz, *Borneo, Entdeckungsreisen und Untersuchungen* (Berlin, 1889, English translation by Hatch, London, 1892) and in H. Ling Roth, *The Natives of Sarawak and British North Borneo* (London, 1896); a very full bibliography is given with the article DAJAK in the *Encyclopaedie van Nederlandsch-Indië*. The most important books that have since appeared are: S. B. Saint John, *Rajah Brooke* (London, 1899); A. W. Nieuwenhuis, *In Centraal-Borneo* (Leiden, 1900); A. C. Haddon, *Headhunters* (London, 1901); W. H. Furness, *The Homelife of Borneo Headhunters* (Philadelphia, 1902); A. Combanaire, *Au Pays des Coupeurs de Têtes* (Paris, 1902); O. Beccari, *Nelle Foreste di Borneo* (Firenze, 1902), English translation by E. N. Giglioli, *Wanderings in the Great Forests of Borneo* (London, 1904); G. A. F. Molengraaff, *Geological Explorations in Central Borneo* (Leiden, 1902); A. W. Nieuwenhuis, *Quer durch Borneo* (Leiden, 1904 and 1907); D. Cator, *Among the Headhunters* (London, 1905); E. H. Gomes, *The Sea-Dyaks of Borneo* (London, 1907); H. H. Juynboll, *Catalogus des Ethnographischen Rijksmuseums, Borneo* (Leiden, 1909 and 1910); J. P. J. Barth, *Boesangsch-Nederlandsch Woordenboek* (Batavia, 1910); M. W. H. Beech, *The Tidong Dialects of Borneo* (Oxford, 1908); S. B. Gould and C. A. Bampfylde, *History of Sarawak under its two White Rajahs* (London, 1909); J. E. Tehupeiorij, *Onder de Dajaks in Centraal Borneo* (Batavia, 1906).

(A. W. NIEUWENHUIS.)

BORNŪ, a state in Central Sūdān. Bornū is bounded on the north by the Sahara, on the west by the Hausa country, on the south by the Adamawa, in the south-east by the Bagirmi, on the east by Lake Chad. These boundaries are, as Nachtigal points out, rather indefinite in the neighbourhood of the desert, and on the other sides they have continually varied with political circumstances. During the last quarter of the xix[th] century Bornū might have been regarded as lying between 11° 19′ and 14° 30′ North Lat. and 9° 50′ and 16° 29′ East Long. (Greenw.). Its area may be estimated at about 80,000 square miles.

The origin of the word Bornū is still uncertain. The etymology which derives the name from *Barr Nūḥ* "the land of Noah" ought certainly to be rejected. Barth says the word is of Berber origin, relying on the analogy of the words Beraunī (Bornūans), Berdoa or Berdāwa (a Libyan family from which, according to tradition, the first kings were descended) and Berber. He quotes also the name "Ba-berbertchē" (the "Berber" nation) used by the Hausas to designate their neighbours of Bornū (Barth, *Reisen*, Vol. ii. Ch. vii. p. 293). As to the name Bornū, it is found for the first time under the form البرنو in Ibn Faḍl Allāh al-ʿOmarī, *Taʿrīf bi 'l-Muṣṭalaḥ al-sharīf* (Cairo, 1312), p. 27. The country itself was for long only known from a few notes in Arab historians and geographers, Ibn Saʿīd, Ibn Khaldūn, Maḳrīzī, and a chapter in Leo Africanus (*Description de l'Afrique*, Part iii. Bk. vii. Ch. 14, ed. Schefer) who made a brief stay there at the beginning of the xvi[th] century A. D. Bornū was practically only made known to Europeans by the narrative of Denham, Oudney and Clapperton, who visited Kūka in 1823. From 1851 to 1854, Barth, the sole survivor of the expedition organised by Richardson, explored several provinces, made three prolonged stays at Kūka and collected documents and traditions among the natives, which enabled him to give a brief account of the history of Bornū. His researches have been supplemented by those of Vogel (1854—1856), Beurmann (1860), Rohlfs (1866), Nachtigal, who was entrusted with the task of bearing to Shaikh ʿOmar, the presents of King William of Prussia (1870—1872), Matheucci and Massari (1880-1881), Monteil (1892) and quite recently by the works of officers and administrators in Nigeria, the Cameroons, West Africa and French Congo.

Bornū, strictly speaking, is an almost level plain. The ground only rises on its outskirts, in the Munio and Zinder country on the N. W., where some eminences reach a height of 3000 feet and towards the S. E. in the Marghi and Mandara country. The nature of the soil varies in different districts. Around Lake Chad, it is very permeable, while towards the south stretch great expanses of impermeable clay which becomes baked and cracked during the dry season and after the rainy season, forms basins in which marshy pools form and stagnate. The streams are carried to the Chad by the Yō and the Ye-u, wrongly called Komadugu Waube by Barth, the word Komadugu meaning an expanse of water and being applied to the marches and the Lake itself as well as to actual rivers. The Ye-u flows from S. W. to N. E. It receives numerous tributaries of which the most considerable are the Chaba on the left, and the Koshe on the right, and flows into the Chad 12 miles north of Kūka after a course of about 450 miles. The Lake itself forms the frontier of Bornū, from the village of Ngigmi at its N. W. corner to the delta of the Shāri. Its banks are very undefined elsewhere. Sometimes immense stretches of the lake dry up; this is particularly the case with the N. E. part which at the present day is nothing but a pestilential marsh; sometimes on the other hand it suddenly inundates the surrounding country. It would even appear, from the most recent explorations that the N. W. shore is being carried away by the waters while on the south considerable deposits of soil are constantly being laid down. Thus Kaua, the harbour of Kūka in the time of Barth is now 14 miles from the lake.

Intermediate between the tropical zone and the equatorial, Bornū presents all the characteristics of a transitional region in flora, fauna and climate. The seasons, instead of being reduced to one as on the Congo, or to two as in the western Sūdān, are three in number. The cold and dry season, from November to March, during which the temperature never rises above 77° Fahr. and falls as low as 59°, the hot and dry season, from March to June, during which the thermometer remains at about 104°; the rainy season from June to October, characterised by abundant downpours and storms of great violence; it is also the season of illnesses, malarial fevers, dysentery etc. which attack the natives as well as Europeans. The flora becomes gradually richer as one goes from north to south. Near the Sahara is a region of prairies covered by scanty green vegetation over which are scattered a few shrubs; this zone, desolate and arid during the dry season, is transformed after the rains into verdant plains "pleasant to the eye". Then in Bornū, in the stricter limitation of the word, the number and variety of the trees increase, acacias give place to the *dūm*-palm, the tamarisk, the baobab, the butter-tree, the cotton-tree, growing in clumps but not dense enough to constitute forests. It is only in the southern part of Bornū, particularly in the regions bordering on the tropics, that we find forests. Besides the natural flora, plants that have been cultivated by man are also much grown here. The Bornūans are excellent agriculturists and grow millet, sesame, and corn, which is reserved exclusively for the Sulṭāns, tobacco and lastly rice in those areas which are periodically flooded or in the stretches of water which stand for a while after the rains. Little attention is paid to trees, though around the towns may be found gardens in which are planted citron and pomegranate trees. Dates, which form part of the sustenance of the people, are imported from Kānem and the oases of the Sahara. The fauna is very rich, particularly in the steppes adjoining the deserts where antelopes, gazelles, giraffes, lions, hyenas as well as numerous varieties of birds (herons, storks, pigeons etc.) literally swarm. The banks of the rivers and marshes are frequented by herds of elephants and hippopotamuses. Crocodiles and reptiles abound, as well as insects, of which some kinds such as termites and ants, are perhaps more noxious to man than the larger animals. The domestic animals are the horse, ass, cow, sheep and pig. The camel alone is not fitted for the soil or climate of Bornū.

Population. The population of Bornū, to which the general name of Bornuni is applied, is composed of very diverse elements: Kanūri, Negroes, Arabs, Berbers and Fulbe.

1. The Kanūri are the preponderating element both in point of view of number (1,500,000 out of a total of 5,000,000, according to Barth and Nachtigal, as well as in political influence. Their name has not yet been explained. According to Nachtigal, the natives derive it from the Arabic word *nūr* and the prefix *k*; it would thus mean "the bearers of light", in allusion to Islām, which the Kanūri have long professed and have propagated among the idolatrous tribes. According to another hypothesis, the word Kanūri of which the primitive form would have been Kānemri, is to be connected with Kānem, the home of the invaders who came in the xivth century A. D. and settled in Bornū proper. In any case, the word Kanūri is not applied to any particular race nor even to a definite tribe; it is applied to a mixture of peoples of diverse origins in opposition to the original elements themselves, which combined to form this group and some portions of which still preserve an independent existence. The ancestors of the present Kanūri came from Kānem in the xivth century. These invaders numbered in their ranks representatives of tribes who had long been settled in Kānem and claimed Arab origin, as well as of the Kānembu, Tubū and other elements, traces of whom may still be found in the population of Bornū. To the first category for example belong the Māgomi who are scattered in small groups in the provinces of Munio and Zinder and the Ngalma-Dukko. The Tubū are represented by the Kai-Dāza, who form the greater part of the population of Koyām, the Ngalma scattered throughout the whole length of Bornū, the Tūrā etc. On the other hand the invaders have themselves intermarried with black peoples and groups of half-breeds have thus arisen such as the Ngoma, who inhabit the country between Dikoa and Ngornu.

In physique, the Kanūri present a type intermediate between the Tubū and the negro; they have not the slight build of the former and their limbs are better proportioned than those of the latter. The profile approaches the European rather than the negro type but like the latter they have curly hair, prominent maxillaries and thick lips. The colour of the skin varies from reddish-brown to dark grey. In their social relations and manner of living the Kanūri are likewise readily

distinguishable from their neighbours. They are not inclined to drunkenness and their industry contrasts with the indifference and laziness with which the negro is usually reproached. Men and women work together at agriculture and weaving. The men prepare the strips of cloth for the manufacture of "tobes", a garment peculiar to the country; the women practise the art of embroidery. The Kanūri engage in numerous trades, e. g. the making of pottery, basketwork, and working in iron. They are incontestably the most industrious of black peoples. Their nobles alone look down upon manual labour and physical fatigue and even think themselves disgraced if by chance they are compelled to walk.

The position of woman among the Kanūri is relatively better than among the majority of African peoples. In girlhood she enjoys great liberty and is allowed to associate with young men; when married she is not forced to work. Polygamy is only practised by princes, and great nobles who keep large harems in imitation of them. Family life, according to travellers, is well developed. The influence of the wife is considerable in all classes of society; the Sulṭān's mother or *Magera* enjoys very great privileges, notably the right to dispose of the government of various districts as she pleases; the first wife of the Sulṭān possesses similar privileges. The genealogy of the princes and high officials is given by their bearing the names of their mothers and not of their fathers.

It is possible that in these peculiarities we may trace the Berber origin of some of the elements which have gone to form the Kanūri? As among the Berbers also, hospitality is largely cultivated among the Kanūri although Barth and Nachtigal have perhaps exaggerated their disposition to welcome strangers. It may easily be that the cordiality of the Bornūan is really inspired by cupidity and the desire to receive presents and gratuities from the guest.

2. Native tribes, distinct from the Kanūri in language and customs. Amongst these may be mentioned:

The Makkari or Kotoko, who live in the south of Bornū in the province of Kotoko and the vassal kingdom of Logon. They appear to have come from Central Shāri and to have subdued the Sō, the original inhabitants before being themselves overcome by the Kanūri. Of a darker skin and stouter build than the former, they devote themselves to agriculture and fishery.

The Keribina live in the same region. They appear to be the last representatives of the Sō.

The Mobber live on the left bank of the Ye-u, three days' journey from Kūka.

The Manga are found over an area of 130 miles from the north of the Ye-u. Barth regards them as a cross between the Kanūri and Nachtigal, as the survivors of an aboriginal conquered race.

The Bedde and the Kerrikerri, to the south of the Manga.

The Fika and the Bābir, neighbours of the Adamawa.

The Marghi, to the S. E. of the Bābirs.

The Gamergu.

The Mandara or Wandala, to the S. and E. of the Gamergu.

The Musgo between the country of the Mandara and the Logone.

According to Nachtigal the total number of these various tribes amounts to about 1,500,000 people.

3. Arabs. — The Arabs settled in Bornū are known by the name of Shoa or Shwā, in opposition to the Arab merchants, who make brief stays, called "Wassili". They have preserved a more or less fair complexion, according to their degree of admixture with the natives. Some of their tribes, such as the Asela, the Djō'ama, the Selāmāt, came, according to Barth, from the east about the beginning of the xvi[th] century A. D.; others like the Khozzām and the Ūlād Hamet only left Kānem to settle in Bornū, early in the xix[th] century. They are found scattered throughout the provinces of Kotoko, Mandara and Logon. They have settlements there in which they live during the rainy season, while they lead a nomadic life with their flocks during the dry season. Some of their subdivisions, whose flocks have been decimated by epidemics have given up their nomadic life and become quite sedentary. Their numbers estimated by Barth at 290,000, have much diminished since that time, according to Nachtigal the figure does not exceed 150,000.

4. Various tribes. To the tribes mentioned above should be added a few Tuāregs, known by the name of Kindin, who have been settled for centuries on the northern frontier in the district of Dūtshi and around Zinder; Fellāta (Fulbe, Pūl) who have formed colonies in various places since the xvi[th] century A. D.; lastly Hausas, who, mixed with Kanūri, Fellāta and Tuāregs, inhabit the provinces of Zinder and Gummel.

The population of Bornū is, on the whole, sedentary. The inhabitants live in villages and towns of which some are of considerable size. The most important at the end of the xix[th] century was the capital Kūka. Founded in 1814 by Muḥammad al-Kānemī in a plain 10 miles from Lake Chad, it grew rapidly. Barth estimated the number of inhabitants at 120,000, Nachtigal at 60,000, Monteil, the last European to visit it before Rabah's conquest of Bornū, at 50,000. It was divided into two parts, separated from one another by a surrounding wall and by a wide open space, used as a market. The western town was inhabited by the lower classes and the merchants, particularly by the Turawa who came originally from Tripolitania and were often related to the chief families of the land. A large street called *Dendal* ran through it from side to side and opened out on the market-place. The eastern town enclosed the palaces of the sovereign and the dwellings of the great dignitaries. Barth, Rohlfs and Nachtigal dilate at some length on the picturesque appearance of this agglomeration of huts or cottages of clay, built in the centre of the green country and on the commercial activity of this great city, the real metropolis for commerce between Central and Northern Africa. The products of Europe, brought from Tripoli in caravans, are here exchanged for hides, ostrich plumes, ivory and slaves. As many as 15,000 or 20,000 people sometimes assembled here. Only the memory of this period of prosperity now remains. Kūka was utterly destroyed by Rabah and has not recovered from this disaster.

Among the other places in Bornū, may be mentioned: Ngornū (20,000 inhabitants according to Rohlfs) 20 miles S. E. of Kūka; Barrawa (1500

inhabitants) on the banks of Lake Chad. Ngigmi (1500) at the N. W. corner of the lake, on the borders of the prairies; — in the basin of the Ye-u, Ngurutwa (the "village of the hippopotamuses") which has about 10,000 inhabitants, situated not far from the ancient capital Ḳaṣr-Eggomo; Bornūri (7500); Maghena (12,000); — in Damerghu the vassal town of Zinder (10,000 inhabitants); — in the country of the Kerrikerri, Magommeri; Gudjba (12,000 inh.); — to the South of Chad Yedi; Ngāla (7000 inh.); — in the basin of the Shari, Gulfei; Karnak (15,000 inh.) on the Logone; Dikoa (15,000 inh.); Doloo, Capital of the Mandara country (30,000 inh.).

Various languages are spoken in Bornū. The most widespread is the "*Kanūri*". This language presents analogies to the language of the Tubū and also to certain Sūdānese languages like the *Bagrimma*. It offers a great wealth of forms, which according to Koelle renders it capable of expressing with precision the most delicate shades of thought. There is no written literature, but stories, traditions and historical narratives have been col- on the lips of the natives. The Kanūri language is still spreading. It has been imposed on a number of native tribes, like the Manga, and it is now tending more and more to take the place of Arabic as the official language. — Arabic, outside the entourage of the Sulṭān, is spoken by the Shoa. The dialects spoken by them, differ appreciably from those of northern Africa and approach the dialects of the Ḥidjāz, from which they claim to have come. These tribes cling to their own language and, even in the neighbourhood of Kūka, have not allowed it to be ousted by Kanūri.

Islām is the dominant religion. Introduced in the middle ages by invaders from Kānem, who had already practised it for several centuries, it is professed by the sovereign, the nobles and the inhabitants of the principal towns; it is daily gaining ground among the fetish-worshipping tribes of the west and south. The Marghi and the Mandara are at the present day Muḥammadans and the chiefs of the Musgo have adopted Islām, although their subjects are still pagans. Islām has not however yet penetrated deeply among the mass of the people. The Kanūri language for example, does not have a word to express the monotheistic idea. *Kema* which is used as the equivalent of *Allāh* merely signifies "lord" or "master". Of Muḥammadan belief, only the external ceremonies and a few more or less fantastic notions about Paradise and Hell are known to the main body of the people. They have forgotten their ancient divinities, *Kelyram*, the spirit of the forests and *Ngamaram*, the spirit of the waters, but they have preserved numerous superstitions. The Muḥammadan festivals are regarded as corresponding to the periodical manifestations of natural phenomena, phases of the moon, the return of the rainy season etc. The Islām of the Bornūans is thus much degraded; it is likewise rather lukewarm. Travellers are agreed in noting the tolerance of the inhabitants and their little enthusiasm for proselytising. Religious brotherhoods play an insignificant part. The most extensive is that of the Tidjāniya, to which the sovereign belongs. The Ḳādiriya numbers a few adherents while the Sanūsiya has only a few scattered members. These remarks do not apply to the Shoa who along with their language, have preserved their religious fanaticism. For example, they left Bornū in great numbers, to follow to Mecca the Fulbe pilgrim, Sharaf al-Dīn, who caused a regular emigration of Sūdānese Muḥammadans about 1850. Nevertheless Islām has been a civilising influence in Bornū as in all the negro countries and has raised it well above the level of the adjoining countries. Bornū is however far from justifying the reputation which some travellers have given it. Intellectual life has always been at a low stage of development there. At the beginning of the xix[th] century Muḥammad al-Kānemi was regarded as a learned man because he was able to write Arabic correctly. At the present day, schools, which are for boys only, are few in number and are only found in the large towns. There was, it is true, in Kūka a kind of university attended by 2,000 or 3,000 students who lived on alms or on the liberality of the nobles whose children they taught, but instruction there was limited to the teaching of the Arabic script and to the learning of a few Sūras of the Ḳor'ān by heart. "The professors" says Rohlfs (*op. cit.* I, 342) „are hardly more learned than the students, intellectual development is non-existent".

The existence of a political organisation singularly more complex than that of the other negro countries and recalling in many ways that of Europe in the middle ages made a deep impression on the early travellers who visited Bornū. Only a few traces remain at the present day of this constitution as the Bornūan empire disappeared at the end of the xix[th] century. To study it, one must go back to the years 1850—1872 when Barth, Rohlfs, and Nachtigal were able to study its inner workings.

The empire of Bornū then comprised two distinct groups of countries: Bornū proper or *bild* (*bilād*) *Kūka*, administered directly by the sovereign; and vassal sulṭanates governed by native chiefs. To this second category belong Inglewa (capital Būne) Munio, Zinder, the land of the Bedde, that of the Kerrikerri, Maghena, Gummel, Mandara, Kotoko, Logone, Udjda. The chiefs of these various countries had to pay a tribute in kind and in slaves, whom they procured by raiding neighbouring tribes. Some of them like the Sulṭāns of Kotoko and Logon were practically almost independent.

The Sulṭān of Bornū until the middle of the xix[th] century bore the title of *Mai* or Sulṭān. After the death, in 1846, of the last representative of the Saifiya dynasty, the sovereigns were content with the title of Shaikh, borne by Muḥammad al-Kānemi, the founder of the new dynasty. The ruler exercises despotic authority and combines in his person both spiritual and temporal power; he disposes at will of the lives or goods of his subjects. He is however surrounded by a council or *nōkena* whose members are called *kōkenāwa* and which Nachtigal regards as a survival of the ancient aristocratic constitution of Bornū, but it has no real power. This council includes the heir presumptive (*yerima*), the sons and brothers of the Sulṭān, his relatives or *maina*, the great nobles and captains commanding the troops. The sovereign lives surrounded by a splendid court. He has in his service several officers, of whom in the xvi[th] century there were twelve, according to Barth, but the number has varied since that time.

The chief are the *Sāntal-ma* or Lord High Cupbearer, the *Mainta* or Lord High Steward and the *Marmakallo-bē*, who has charge of the slaves. Eunuchs, as at all Muḥammadan courts are numerous and sometimes play a very important part in politics. One of them, Seliwa 'Abd al-Karīm, has been the real master of Bornū for half-a-century, during the reigns of Shaikh 'Omar and his successors.

Next to the dignitaries attached to the personal service of the Sulṭān are the officials entrusted with administration (*Kegnana*, *Kökenāwa*), some of whom are free-born and others of servile origin. They receive no salary but are given lands or governorships, out of which they make as much as possible, though they have to give presents to the Sulṭān every year. Such, for example are the *Digma* or *Dugma*, a kind of minister for Foreign Affairs; the *Fugoma*, executioner and at the same time governor of the town of Ngurnu; the *Kaselma*, governor of the district of Yō, the *Galadima*, an important feudatory, entrusted with the administration of the western districts of Bornū. As a rule the aboriginal tribes have retained their own chiefs under the supervision of Bornūan officials. This is the case with the Makkari, whose townships are governed by chiefs who are controlled by a Bornūan official called *Ali-fa*, and with the Shoa, who are allowed to retain their *Shaikhs* and *Bagh-shaikhs*, on condition that they remit to a representative of the Sulṭān a quarter of their regular incomes.

The Sulṭān has at his disposal an army comprising about 1000 footsoldiers, 1000 horsemen armed with flintlocks, and 3000 men armed with lances and bows. He also possesses an artillery battery of a score of cannon, a body guard of a thousand archers and lancers wearing coats-of-mail and helmets, mounted on horses, protected by thick padded covers. The officers, recruited from among the slaves are the *Katchella Blall* or *Kaigama*, chief of the archers and lancers, the *Katchella s'burza*, commanding the mounted riflemen, and lastly the *Katchella* each of whom commands a company of one hundred men. In addition to these regular troops there are the contingents furnished by the Shoa whose tribes have to do military service in time of war, and the bands raised by the *Katchella* or *Kagna*. The regular soldiers are not paid but receive lands on the cultivation of which they subsist. Bornū can put in the field a total of from 25 to 30 thousand men. Its cavalry and fire-arms give it an advantage over the negro tribes who are not so well equipped.

History. The history of Bornū has been sketched by Barth who, in addition to the traditions collected by him in the country, has made use of several written documents: 1. an anonymous chronicle, giving a list of the Sulṭāns from the earliest times to Ibrāhīm, in whose reign Denham and Clapperton visited Kūka; 2. two other lists of sovereigns; 3. the chronicle of the first twelve years of the reign of Idrīs Alaōma, compiled by the Imām Aḥmad. Besides these chronicles, the Bornūans told Barth of another, called the Chronicle of Masfarmā which neither he nor Nachtigal was able to procure. Nachtigal, however, modified in a few points the statements of Barth; for example he reduces the number of sovereigns, who had reigned in Bornū during the period stated above, from 67 to 64; he has also altered the dates of several reigns; on the whole, however, he has added nothing to the work of his predecessor. The information derived from these chronicles may be supplemented by that given by Leo Africanus, and by the accounts collected by Koelle, of which the most interesting refer to the coming of the Kānemkī family.

Bornū was ruled till the middle of the xixth century by the Saifua (Saifiya) dynasty, which, after reigning for several centuries in Kānem, transferred its seat to the western shores of Lake Chad. The name of the dynasty is derived from Saif, son of Dhū-Yazan. This legendary hero of Islām, son of the last king of Yaman, according to tradition, founded a kingdom in Kānem, by subjecting to his authority various tribes (Tubū, Berbers and Kānembu) living in that country. As a matter of fact, it appears that the Muḥammadan kingdom of Kānem was founded by invaders who came, about 1100, from the country of the Bardoa, a tribe who led a nomadic life in the eastern Sahara. According to the Imām Aḥmad, the capital of this kingdom was Njīmi. The accounts handed down to us of the early Saifites are quite legendary; two of them, Dūgu and Katori, are, for example, credited with reigns of 250 years. The direct line from Saif became extinct at the end of the Vth century A. H. in the person of Selma'a. According to legend, the power then passed to another branch of the same family that of the Banū Ḥami (or Ḥumē). The founder of this dynasty, Ḥami, (479—490 A. H. = 1086—1097 A. D.) perhaps the Muḥammad b. Djabal (read 'Abd al-Djalīl) b. 'Abd Allāh of Maḥrīzī, is probably the first historical personage in the history of Kānem (see Becker, *Der Islām*, Vol. I. p. 171). He adopted Islām and died in Egypt while on a pilgrimage to Mecca. The adoption of the new religion was followed by a rapid growth in the power of the rulers. Dūnama (491—545 A. H. = 1098—1150 A. D.) extended his kingdom by successful wars. He organised an army in which the cavalry was the principal force. He thrice made the pilgrimage to Mecca but was drowned in the Gulf of Suez by the Egyptians, who were disturbed by his ambition and the success of his arms. His son Bīri acquired a great reputation as a jurist and scholar.

All these princes were of white race; they had, the chronicle tells us, a complexion as fair as that of the Arabs. After the vith century A. H. they were supplanted by negro sovereigns. Salmama, the first of these (590—617 A. H. = 1194—1220 A. D.) was held in great esteem and was victorious over the neighbouring tribes. He entered into friendly relations with the Hafsids of Tunis, which continued under his successors. He was succeeded by Dūnama (618—657 A. H. = 1221—1257 A. D.) who triumphed over the Tubū after a seven years' war, forced the people of Fezzān to recognise his authority and extended his empire from the southern shores of Lake Chad to the Nile and the Niger. After his death the kingdom passed through a critical period. The Sulṭāns had to wage long wars against the Sō, a people living between the Yo-u and Lake Chad, who, after being conquered by the princes of Kānem, had taken up arms against them. Within four years, the Sō fought and killed four Sulṭāns. It was not till the middle of the xivth century A. D. that king Idrīs

(754—778 A. D. = 1353—1376 A. D.) finally overcame them. Then the kingdom was attacked by a new enemy, the Bulāla, whose chiefs, descended from a branch of the royal family of Kānem, ruled in the country around Lake Fittri. Sulṭān Dā'ūd, driven from his capital Ndjimi, perished in an encounter with the invaders (788 A. H. = 1386 A. D.). Several of his successors met a similar fate in trying to keep back the Bulāla. 'Omar, son of Idris (796—800 A. H. = 1394—1398 A. D.) was finally forced to abandon Kānem and move his capital to Kaghā, between Udj and Gudjba. The Bulāla did not cease to harass the Saifiya and the latter had finally to seek refuge in the marshy districts of the Sō country, constantly changing their place of residence to escape the enemy. This state of affairs, aggravated still further by civil wars, epidemics, and famines, continued for several years.

Order was only restored in the reign of 'Alī Dūnamami (877—909 A. H. = 1472—1505 A. D.). This prince, called 'Alī Ghadjidāni by the Bornūans, put an end to the civil wars, forced the great officials, who were in rebellion to obey his authority, particularly the *Kaigama* who had tried to make himself independent. He built a capital, Ḳaṣr Eggomo or Birni on the Yo-u, three days' journey to the east of the modern town of Kūka. He waged several successful campaigns and thus earned the title al-Ghāzī. Thus restored, the power of Bornū still further increased in the reign of Idris Katakarmābi (910—932 A. H. = 1504—1526 A. D.) who brought about the ruin of the Bulāla and recaptured the town of Ndjimi, out of which his ancestors had been driven 122 years before, and during the rule of his sons Muḥammad and 'Alī; Dūnama Ghamarāmi, son of Muḥammad, suppressed a revolt of the Bulāla, fortified Ḳaṣr Eggomo and concluded a treaty of alliance with Dragut (Durghūth, Pasha of Tripoli). Idris Amsāmi, also surnamed Alaoma, from the place of his burial, Alao (آلو), appears to have been still more powerful (979-1011 A.H. = 1571-1603 A.D.).

He ascended the throne after the brief regency of his mother and undertook to subdue the heterogeneous elements in his kingdom. He was successful owing to the superiority of his army which included a body of musketeers and well mounted cavalry. The Sō, although a tributary state, harassed Bornū very much by frequent risings. Idris conquered them, deprived them of the strongholds they still possessed, and dispersed them or reduced them to slavery. The Kanawa lost all their fortresses with the exception of the rock of Dala, at the foot of which the town of Kanō was afterwards built. The Tuāreg in the N. W. and the Berbers of the Aïr, who were ravaging the northern lands of the kingdom were defeated, as well as the pagan tribes of the east and south (Marghi, Mandara, etc.)

Five expeditions were sent against Kānem, where a usurper had dethroned the legitimate Sulṭān Muḥammad, whose father had declared himself a vassal of Bornū. At the same time, important buildings were being erected in the various towns, notably a mosque at Ḳaṣr-Eggomo. All these details refer to the first twelve years of the reign of Idris. We know nothing, however, of the events which took place in the second part of his reign; he perhaps died in the course of an expedition against the neighbouring pagan tribes of Bagirmi.

The xvi[th] century was the most brilliant period in the history of Bornū. In the xvii[th] century, however, the decline began, perhaps in consequence of the weakness of the sovereigns who no longer took an interest in public affairs. 'Alī, son of Ḥādjdj 'Omar and fourth in succession from Idris (1055—1096 A. H. = 1645—1685 A. D.) alone took any active part in politics. He had to wage a momentuous war against the Sulṭān of Agades. Besieged in his own capital by the Tuāreg and the Kōana, he succeeded in setting his adversaries against one another and ultimately drove the Tuāreg into the desert. But his successors lived in luxury and indolence, allowing their neighbours to attack the country while its unfortunate inhabitants, exposed to the constant depradations of robber bands, gave up cultivating the soil and were decimated by disease and famine. At the beginning of the xix[th] century, Bornū was quite unfit to resist the redoubtable enemies who began to attack it: the Pul or Fulbe.

The invasion of the Fulbe took place in the reign of Aḥmad b. 'Alī (1208—1225 A. H. = 1793—1810 A. D.), an educated and generous prince but utterly devoid of energy. The Fulbe, after subduing the Hausa provinces tributary to Bornū, made an alliance with their compatriots, who had been settled since the xvi[th] century at various points in Bornū and invaded the country. Aḥmad attempted to resist them but saw his army cut to pieces near Ḳaṣr-Eggomo. He himself only escaped with difficulty through one of the gates of the town, while his enemies were entering by the other, and transported his head quarters to Kurnawa (1224 A. H. = 1808 A. D.). On becoming masters of Ḳaṣr-Eggomo, the Fulbe destroyed it.

At this critical juncture, Bornū was saved by the intervention of an outsider, Muḥammad al-Amīn al-Kānemi (Shaikh Laminū). Born in Fezzān, but married to a daughter of the prince of Nghāla in Kānem and already renowned for his wisdom and piety, Muḥammad had refused to leave the country on the approach of the Fulbe. He organised a small body of Kānembu, opposed the progress of the invaders at the east of Lake Chad and was in the end successful in freeing the whole of the eastern part of Bornū from the invaders after a decisive victory at Ngornū. Aḥmad called him to his assistance, placed him in command of the army and was restored to his capital by him. Aḥmad died soon after in 1810.

Dūnama, son of Aḥmad, at first tried to continue the combat, single-handed, against the Fulbe. He was defeated however and forced to wander from town to town, had in his turn to appeal to Muḥammad al-Kānemi. As a reward for his services, the latter received half the provinces retaken from the enemy. From this time there were two rulers in Bornū: Muḥammad, who exercised the real power, contented himself with the title of Shaikh, and lived in Ngornū, while Aḥmad reduced to the rôle of nominal sovereign, resided with his court at Berberuā. To escape from his humiliating situation and to free himself from the tutelage of the Shaikh, the Sulṭān, abandoning Berberuā, installed his court at Wūdi, to the N. W. of Lake Chad. But he could not regain his independence.

Muḥammad brought him by force back to Berberuā, then deposed him and put one of his uncles on the throne. This new Sulṭān also declined to comply with the wishes of the Shaikh and when he began to build a new residence at Birni al-Djadīd, two miles to the N. E. of Ngornū, Muḥammad deprived him of his power and restored it to Dūnama, who retained the title of Sulṭān till his death in 1818.

At the same time, no doubt in order to emphasise his independence of the older dynasty, Muḥammad resolved to build himself a capital. In 1814 he began the building of Kūka, socalled after a *baobab* (in Kanūri: *kuka*) which grew in the plain at the place chosen by the Shaikh as the site of his palace. At the same time he tried to restore the fallen fortunes of Bornū; he regained from the Fulbe a part of the provinces conquered by them and sent expeditions against the tribes of the East. In alliance with ʿAbd al-Karīm Sabūn, Sulṭān of the Wadāi, he declared war on ʿOthmān Burgumanda, Sulṭān of Baghirmi (see BAGIRMI and WADĀI). But Sabūn after ravaging Baghirmi, concluded a treaty which placed that country under his sway. To make up for this loss, Muḥammad made an alliance with the Shaikh of Fazzān, ravaged the northern part of Baghirmi, and advanced to Masenya, but could not gain a decisive victory over the enemy who were strongly entrenched behind the Shāri. The war continued till 1824 and was ended by a decisive victory of the Bornūans at Nghāla. At peace in this direction, Muḥammad turned his attention to the west, and recovered the province of Bautchi but had to make peace with the Fulbe in 1826, after a defeat at the hands of Sulṭān Bello. He also made several attempts to conquer Kānem; he died in 1835, leaving the succession to his second son ʿOmar, the eldest of his sons having been killed in 1817 during the war with Baghirmi.

Shaikh ʿOmar (1835—1881) was at first content to govern in the name of the Sulṭān Ibrāhīm (1233—1263 A. H. = 1818—1846 A. D.), brother of Dūnama. He was of a peace-loving disposition and remained on good terms with the Fulbe and the Baghirmi, but he had much difficulty in keeping down the governors of the various provinces, who were constantly trying to make themselves independent. Taking advantage of these disorders, the partisans of the Saifids attempted, with the help of the Sulṭān of Wadāi, to restore the ancient dynasty to its former power and overthrow the Kānemiid influence. Muḥammad Ṣāliḥ, Sulṭān of Wadāi, acting in arrangement with the malcontents, took advantage of the absence of the Shaikh's troops on an expedition into the Zinder country to invade Bornū. On hearing of this, ʿOmar threw Ibrāhīm into prison, and, collecting all the soldiers at his disposal, marched against the Wadāian army. He was totally defeated at Kusseri in an encounter in which his vizier Tirāb was slain and his brother ʿAlī taken prisoner and had to take refuge in the western provinces after executing Sulṭān Ibrāhīm. The Wadāians ravaged Bornū, and burned Kūka, but retired on the approach of a Bornūan army from Zinder. Before departing, Muḥammad Ṣāliḥ had installed ʿAlī, the son of Ibrāhīm as Sulṭān in Birni al-Djadīd. Left to his own resources, this prince was unable to resist Shaikh ʿOmar successfully and was defeated at Mināresa, perishing in the battle. With him disappeared the last representative of the ancient Saifid dynasty. The rebels were crushed at all points, the partisans of the Saifids cruelly punished and Birni al-Djadīd destroyed. Another revolt broke out in 1853, stirred up by ʿAbd al-Raḥmān, brother of ʿOmar, jealous of the influence of the vizier Ḥādjdj Bashīr over the Shaikh. The rebels were victorious, Bashīr was put to death and ʿOmar forced to abdicate; but on being threatened with exile in Dikoa, the Shaikh gathered some supporters, defeated ʿAbd al-Raḥmān and had him executed in 1854.

Henceforth ʿOmar was allowed to rule undisturbed till his death in 1881. He could have claimed the title of *Sulṭān* but like his father, was content with that of *Shaikh*. He was a just and peace-loving ruler. Well disposed to Europeans, he gave a hearty welcome to Barth and Nachtigal. He unfortunately lacked energy and allowed himself to be dominated by those around him. After the death of his vizier Bashīr, he fell under the influence of the eunuch Settima who in the name of the Shaikh was the real master of Bornū. He carried out the wishes of ʿOmar, who wished the throne to pass to his sons and decided the order in which they were to succeed him.

The eldest, Bū-Bakr, renowned for his generosity and military skill, reigned only three years (1881—1884). He died while preparing an expedition against Wadāi. He was succeeded by his brother Shaikh Brāhīm (1884-1885), who was followed by Shaikh Hāshim (1885—1894) another of ʿOmar's sons. Monteil who visited this prince describes him as a gentleman and an ardent and educated Muḥammadan. He took little interest in the affairs of state and lived in his palace surrounded by his 450 wives and 350 children. Ruled by his favourite, Maladam, he was not at all popular. The decline of Bornū, already apparent during the last years of Shaikh ʿOmar became more manifest every day. The population had devoted themselves to agriculture and gradually lost all military qualities and in consequence of the tendency of the sovereigns to entrust the most important offices to individuals of servile origin, no one any longer took an interest in public affairs. Symptoms of disorganisation multiplied rapidly. The tributary princes and the great officials acted as they pleased. The Sulṭān of Zinder refused to pay tribute, the *Galadima* declared himself independent; the tribes of Wadāi made continual incursions and plundered and murdered with impunity up to the very market-place of Kūka. The Sultanate of Bornū was a tottering edifice, which the slightest blow might overthrow. It collapsed under the attacks of Rabah [q. v.].

In 1893, Rabah, after laying waste Baghirmi, entered Bornū. He seized Karnak Logon where he was rejoined by his ally Hayatu, the claimant to the throne of Sokoto. The Bornūan army, sent to meet them, was defeated at Gilbe near Karnak and at Hamdje between Dikoa and Nghala. Shaikh Hāshim, having himself taken command of his troops, was likewise defeated at Ham Habiu on the shores of Lake Chad. This victory opened the gates of Kūka to Rabah and he was able to enter it without striking a blow. Hāshim then tried to come to terms with him; he was assassinated in 1894 by his nephew Abū Kiari who attempted to continue the struggle but was defeated and slain near Kūka. Rabah then destroyed Kūka and chose

Dikoa as his capital. Some of the sons of Hāshim stayed with the conqueror but others retired to Zinder where they were afterwards rejoined by the heir presumptive ʿOmar Sanda, who had first of all sought refuge with the Sulṭān of Mandara.

The rule of Rabah in Bornū was brief. On the 22nd February 1900, the conquering African was slain near Kossuri by the French troops under Commandant Lamy. ʿOmar Sanda, whom Foureau, the explorer, had discovered in Zinder, was restored as Sulṭān of Bornū but soon afterwards deposed in favour of his brother Djerbai, who appeared more capable of facing the difficulties of the situation. Faḍl Allāh, son of Rabah, prepared to regain the throne by force. Djerbai attempted to check him but was defeated and driven into Kānem. French troops had again to intervene to rid Bornū of Faḍl Allāh, who took refuge in Nigeria on being routed on the 2nd February 1901. From there he attempted another invasion of Bornū but came in contact with the French troops on the 13th August 1901 at Gudjba and perished in the battle.

The death of Faḍl Allāh has assured the reestablishment of the Kānemid family in Bornū. The Sulṭānate itself however has now lost much of its importance. The lands which compose it, are practically divided among the three European Powers whose spheres of influence extend up to Lake Chad: England, France and Germany. Kānem and Damergu are now part of the French possessions; Bornū proper with Kūka which is being rebuilt has fallen to England. The southern districts, with Dikoa, the most populous town at the present day are among the possessions of Germany.

BOROLLOS. [See BURULLUS.]

BOSNA-SARĀI (Slav Sarajevo), the capital of Bosnia, built at a height of 1500 feet at the confluence of the Migliazza (Miljačka) and Bosna. In the xivth century there was a town called Vrhbosna on the site of the modern Sarajevo. The town did not become important till it became the residence of the Turkish governors. It is to the greatest Wālī of Bosnia, Ghāzī Khosraw-Beg that Bosna-Sarāi owes most of its buildings and foundations. On the 19th August 1878 it was taken by General Baron Philippovich; occupied by Austria in terms of the treaty of Berlin, Sarajevo was finally annexed in 1908. The town, in which twelve towers of the ancient fortress still stand as witnesses of its history, has over 40,000 inhabitants and 106 mosques. See BOSNIA.

(Cl. Huart.)

BOSNIA AND HERZEGOVINA.

I. Statistics.

The area of Bosnia and Herzegovina is 19,702 square miles; Bosnia alone being 16,173 sq. m. and Herzegovina 3529 sq. m. According to the census taken by the Turkish authorities in 1875, when these lands were still under their rule, the population was approximately 1,051,000 souls.

According to the census of 1910 the total population of B. H. was 1,898,044 of whom

612,000	were	Muḥammadans
825,338	„	Servian Orthodox
434,190	„	Roman Catholics
8,136	„	Greek Catholics
5,849	„	Augsburg Confession
488	„	Swiss Confession
8,202	„	Sephardic (Spanish) Jews
3,658	„	other Jews
96	„	various other creeds

The greater part of the population is engaged in agriculture. There are (reckoning by heads of families): 14,742 landowners; 136,854 free peasants; 79,701 kmets; free peasants who are also kmets 31,416; other individuals connected with agriculture 20,450; 1,668,587 persons in all with their families. The remainder of the population is chiefly engaged in trade and manufactures.

II. History.

The north-western corner of the Balkan Peninsula may be compared to the entrance to a bridge over which various peoples have passed from the earliest times on their migrations from the South-East to the West and from North to South. Before Roman times, Bosnia and Herzegovina were occupied by various Illyrian tribes. The only sources for our knowledge of pre-Roman conditions are the prehistoric remains. The oldest and richest deposit in Bosnia is the site of Butmir at Sarajevo; it dates from the Stone Age. The Illyrians were divided into numerous smaller tribes. Those who lived on the sea coast are described as pirates by the writers of antiquity and those who lived in the mountains are branded as robbers. The bravest Illyrian tribes lived in the modern Bosnia and Herzegovina. It was only after much fighting that the Romans succeeded in subduing them (6 B. C. — 9 A. D.). For four centuries Bosnia and Herzegovina were Roman provinces. At first they formed a part of the province of Illyricum but were later united with the territory along the Adriatic coast to form the province of Dalmatia. In the first and second centuries A. D. the mines of Bosnia were worked with great energy. To transport more easily the products of the mines and to be able to defend more readily the area between the Save and the Danube and the lands to the north of the Danube (Pannonia), roads were made which ran from Salona (the modern Spalato) to the modern Sisek and Mitro-

vina and were thence further extended. In Ilidže near Sarajevo, there was a beautiful bath, and very fine mosaic pavements have been found in Stolac (Herzegovina). The second and third centuries A. D. furnish numerous examples of Pannonian and Illyrian soldiers who rose to be Emperors. The greatest Illyrian Emperor was Diocletian who did a great deal for his favourite province and native land of Dalmatia. In his division of the Empire, Bosnia and Herzegovina remained with Italy and the west. It was from there that the Christian religion first spread among the towns of the coast and thence into the highlands of Bosnia. After the division of the Empire in 395, the influence of the new Imperial city of Constantinople began to make itself felt in this area.

The Turano-Slav migration of Avars and Slavs in the vii[th] century destroyed the remains of Roman civilisation and brought about the modern ethnographic conditions in the region along the Bosna and the coast of Herzegovina, which was then called Hum (Chlm). The Slav tribes, among whom the bond of union was a loose one, were led by chiefs, called Voivods and until the defeat of the Avars at the attack of Constantinople (626) were under their rule. Between 626 and 640 some of the larger tribes, known collectively as Croats and Serbs threw off the Avar yoke and penetrated into the north-western part of the Balkan Peninsula where they conquered Dalmatia, Bosnia and Herzegovina, Montenegro, North Albania and the territory of Novi-Bazar. The Slav tribes, who occupied the modern Dalmatia as far as Cetina and part of modern Bosnia approximately up to the River Urbas, were known as Croats. At the head of these tribes was the Great Župan whose vassals were called Župans. The original stock of the Serbs settled in Montenegro and the surrounding country, in Zeta and the land of Raška called after the river of the same name. The Croats later adopted Roman Catholicism, while the Serbs from the beginning were adherents of the Orthodox Greek Church. In the midst of these Croats and Serb tribes, thus divided into two nations, arose Bosnia, inhabited by tribes speaking the same language. Bosnia and Herzegovina was divided into Banates. The rank of Ban is probably of Avar origin and the name certainly is.

From the vii[th] to the xii[th] century the people of Bosnia and Herzegovina shared the lot of the Croats and Servs. They recognised the Byzantine Emperor as suzerain, although not directly, till Hungarian power incorporated in its Empire or at least its sphere of influence, first Croatia, then advancing southward in the beginning of the xii[th] century, the territory around the confluence of the Rama and the Narenta. Under the Hungarian king Koloman (1096—1116) whose rule extended not only over the interior of the ancient Croat kingdom but also down to the Dalmatian coast, the partial occupation of Bosnia took place. In the year 1137, Bosnia submitted to King Bela II, who appointed his 5 year-old son Ladislaus, "Duke of Bosnia". The Hungarian supremacy did not, however, destroy the power of the native chieftains. The ancient laws and customs remained intact and the country continued to develop on its own lines. In Bosnia, neither the Roman Catholic nor the Orthodox faith was able to become supreme. The New Slav inhabitants of the Dinaric Alps retained for long their pagan beliefs and were thus inclined to be neutral in religious matters. The position of this people between two different religions prepared the way for a new faith, Bogumilism, which in spite of the persecutions of the Popes, the Hungarian and Servian Kings, gradually became more powerful and has left its mark on the history of Bosnia. Thousands of more or less rudely executed monuments attest to the present day the once general dissemination of this faith. The splendid tombs at Stolac and Kakanj-Doboj may be specially mentioned. The nobles of Bosnia and Herzegovina, the Voivods and Knezes early became converts to this faith and even the Lord of the land, the Banus, for a period professed the new religion.

The history of Bosnia from 1137 to 1878 may be divided into six periods. I. Bosnia under Bans who ruled the whole land (1137—1251), II. Bosnia under Bans who ruled various parts contemporaneously (1251—1314). III. the period of the two Kotromans (1314—1377). IV. the Bosnian kingdom and the Duchy of St. Sava (1377—1463). V. the division of the land between Hungary and the Ottoman Empire (1463—1528) and VI. Bosnia as a province of the Turkish Empire (1528—1878).

The first period of the rule of the Bans in Bosnia covers the reigns of four Bans of whom the most important was the Ban Kulin. At the end of the twelfth century the Bogumil sect began to spread and the Papal court took energetic steps to suppress them. In the year 1180 Ban Kulin appears as ruler of the land. It is related of him that he did much for the material prosperity of the country. The Kulenovićbegs (a prominent Muḥammadan family in Bosnia) believe they are descended from him though there is no documentary evidence on this point. The period after the death of Kulin-Ban, is a gloomy one in the history of Bosnia. The Catholic party regarded Prijezda of the Banal family of Kulin as ruler, while the Bogumil national party, who were in the majority, flocked round Mate Ninoslav. During his long reign, Ninoslav sometimes made peace with the king of Hungary and sometimes called in the help of the Pope against him and was always able to extricate himself cleverly from the most difficult complications and embarrassments. Fortunately for Ninoslav, the Dalmatian towns, struggling with one another fully occupied the forces of the Hungarian king.

After the death of Ninoslav, however, in the fifth decade of the xiii[th] century the power of Bosnia began to totter. The Hungarian king Bela IV had given the western part of the modern Servia with the fortress of Mačva to the Russian Duke Rostislav, who had married his daughter Anna. At this period the leading Croat-Dalmatian vassal-families, who had come to the king's help against the Tatars, particularly the Šubić the ancestors of the Zrinyis, began to come to the front. For these families Bela created Banates in some districts such as the Banate of Soli (Tuzla) and of Usora (Ozora). Bosnia thus became a land divided up into numerous little divisions, while in Herzegovina the feudal tenure was in the hands of a few of the chief families. The confusion, which arose on the extinction of the Arpad dynasty of Hungary, further favoured this partitioning of the country.

In 1314 arose a dynasty in Bosnia: the family of Kotroman which was descended from Prijezda.

Stefan Kotromanović (died 1353) reigned 30 years. He also was a Bogumil although surrounded by Catholic clergy; his wife was certainly a Catholic. Outwardly he appeared strongly attached to the alliance with Hungary and claimed its protection but in secret when it suited his interests he intrigued against this power. His daughter Elizabeth came to the Hungarian court at Ofen where the young and widowed king Louis the Great fell in love with and married her.

After the death of Kotromanović his nephew Twrtko succeeded him as Ban. At the beginning of his reign during his minority he was under the guardianship of his mother. He had to defend himself against many risings of his vassals, and not only acknowledge the suzerainty of his uncle (as the rock-inscription at Drežnica shows) but also feel it. But all this adversity only served to steel the character of this prince whose keen eye quickly saw the weaknesses of his enemies and who is easily the most prominent figure in the history of his country. In the year 1377 he took the title of king, had himself crowned by the Church and founded the kingdom of Bosnia which was destined however to but a brief existence. King Louis of Hungary made no objection to his elevation to the regal title. The exact details of this procedure are unknown. The most important part of the reign of Twrtko falls into the epoch (1382—1391) of the confusion which arose on the death of Louis the Great. He took advantage of the rebellions in South Hungary and Croatia against the queen Elizabeth and extended his territory at the expense of the Hungarian power which had been broken in these areas. One after the other the Dalmatian towns with the exception of Zara submitted to him. He fought on the side of the Servians in the sanguinary battle of Kosovo (15th June 1389) and entered into possession of the Servian lands on the coast. Whether by his adoption of the Servian regal title he is to be regarded as the champion of the downtrodden Servian national spirit, is uncertain. It is certain that he made himself independent on all sides and he is to be regarded as the founder of the kingdom. Twrtko I was succeeded by his younger brother Stephen Dabiša (died 1395) who was followed by Twrtko's natural son Stephen Ostoja I (died 1418); on the latter's death, the rule was shared by his legitimate son Stephen Ostojić (1418—1421) and Stephen Twrtko II (1404—1443) son of Stephen Twrtko I. From 1444–1461 reigned Stephen Tomaš, natural son of Ostoja, whose son Stephen Tomašević was the last male heir of the Kotromanović.

The great results of Twrtko's reign disappeared under Stephen Dabiša. He became the vassal, in the mediaeval sense of the word, of King Sigismund of Hungary, on which account the Dalmatian towns lost their confidence and interest in the king of Bosnia. The reign of Sigismund of Hungary was unpopular; the disastrous battle of Kosovo was followed by the victory of the Turks at Nikopolis in 1396. The opponents of the King of Hungary made alliances with the Turks; so did the Christian princes of the Balkan Peninsula. The kings of Bosnia in this period were mere tools in hands of their "Magnates". Affairs were managed by two real statesmen; in Bosnia, Hervoja, Duke of Spalato (died 1416) a scion of the family of Hrvatin and in the south Sandalj Hranić (died 1435) son of the Voivod Hranja Vuković from whose family sprung the later independent princes of Herzegovina. In the year 1408 the fortress of Dobor was taken after much fighting by Sigismund's generals, Nicolas Garay and John Maróthy and King Twrtko II taken prisoner.

The Ottomans profited by this struggle. Hervoja became the governor for the Hungarian king but in the year 1415 with the help of the Turks he annihilated a Hungarian army. He made his headquarters in the fortress of Jajce which he had built, but the Turks remained, although in a small part of the country (in the south-east of the modern district of Serajevo), nevertheless permanently within Bosnian territory. Bosnia henceforth was in the sphere of influence of the Turks, Hungarians and Venetians. A further blow to the unity of Bosnia was that Sandalj's nephew, Stephen Vukčić, "The chief Voivod of Bosnia by the grace of God" in 1448 adopted the title of Duke of Saint-Sava and forced Bosnia to recognise it. From this time on, his land was called "Herzegovina". Till the year 1463 the devoted country offers a melancholy picture. Even the victories of John Hunyadi could not inspire the kings of Bosnia to throw off the Turkish influence under which they had so completely fallen. After the fall of Constantinople in 1453, it was only a question of time when the advancing tide of Ottoman power would attain like successes in the north and west. Turkey ultimately took possession of Bosnia. The last king Stephen Tomašević fell a victim to his double dealing. His contemporaries accused him of the murder of his own father; he was suspected of having sold the fortress of Semendria to the Turks and the powers that might have protected him finally paid no heed to his promises and left him to his fate. He took refuge in the strong fortress of Jajce and made it his residence as he no longer felt secure in the southern parts of his country. The Turkish hordes occupied Bobovac, Jajce and Ključ in rapid succession and the king himself was taken prisoner. The end of this unfortunate monarch is variously given; it is certain that the Sultān had him beheaded to make sure of keeping his lands. (A head joined to a skeleton is still shown as that of Stephen Tomašević).

Bosnia did not yet pass totally under Turkish rule however. King Mathias of Hungary captured the north from the Ottomans and in 1463 went to war for the possession of Jajce which he also took and retained in spite of the valiant defence of the Janissaries. Nominally he preserved the independence of the conquered district intact and gave it a titular king in the person of Nicolas Ujlaky, a rich magnate, in 1471. This district comprised the ancient Banate of Bosnia (the lands on the Save as far as Srebenica, the modern district of Tuzla) with the addition of Teočak (near Zvornik). The Banate of Jajce remained under military occupation and was in close relations with the Lower-Slavonic counties. Nicolas Ujlaky's rule soon came to an end. His son John became Regent of Bosnia in 1491 and Hungarian arms withstood the Turks even after the disastrous battle at Mohács in Bosnia. Till 1528 only part of Herzegovina and the southern part of Bosnia were in the hands of the Turks.

It was only after the break-up of the Hungarian kingdom in 1526 that the lands which still retained their independence, succumbed, and the continuous exertions of the great conqueror Su-

laimān I finally made all Bosnia a Turkish province. The richer and more intelligent classes of the population, the greater part of the landowners, adopted Islām; they proved zealous professors of the faith of Muḥammad, since their ancient privileges were confirmed. The history of Bosnia and Herzegovina after the Turkish conquest is that of the Ottoman Empire. The annals of the xvi[th] and xvii[th] century are full of fights with Hungary under the Hapsburgs. "The lords, formerly Bogumil, brought up amid the turmoil of constant warfare, born to command natives of the country, well acquainted with the affairs of Hungary and the Hungarians, filled with a fanatical hatred of the Papal Court, were qualified to play a prominent part in the war against Hungary". As long as the power of Turkey was still at its zenith, and the army of the German Emperor was unable even for a period to free Hungary from the Ottoman yoke, the Christian population of Bosnia took no active part in the struggle. The ruling element was the native Muḥammadans who made their influence felt in the Turkish part of Hungary also. From their ranks came the heads of the civil and military services. Between 1544—1611 nine statesmen born in Bosnia held the office of Grand Vizier, the highest in Turkey; among them were three of the family of Sokolović (of Goražda). The Muḥammadans of Bosnia undertook the defence of the northwestern frontier of the kingdom alone. The number of Wālīs of Bosnia is variously given, according to the date which is taken as authoritative for the first appointment of a governor, and whether an individual who held the office of Wālī on several occasions is counted once or several times. The Muḥammadan historians of Bosnia and Herzegovina call Isḥāḳbeg, appointed in 1418, the first Wālī. From 1418—1878, 264 Wālīs were appointed. The most famous Wālī of Bosnia and particularly celebrated by the Muslims of the country was Ghāzī Khusrawbeg (1506—1512 and 1520—1542). The value of the *Waḳfs* which he devoted to scientific and humanitarian purposes was several millions of crowns in the modern reckoning. A part of his endowments and of the library still exists. The Mosque, Medrese and Khānḳāh which he founded in Sarajevo are still the objects of pious reverence. Till 1583 Bosnia was a Beglik and after that date a Pashalik. The first Pasha was Ferhād Pasha Sokolović. The Sulṭān's governor resided first in Sarajevo, later, when all Bosnia passed under Turkish sway, in Banjaluka and after 1686 (according to some even earlier) in Travnik. Turkish Bosnia comprised: the interior of Bosnia Krajina (Turkish Croatia with Bihać, which was conquered at the close of the xvi[th] century), the Sandjaḳ of Novi-Bazar, and Herzegovina with Trebinje and Zeta. The feudal troops, under their hereditary captains, remained faithful to the provincial government as long as the Turkish power was unshaken, and Bosnia was a bulwark of the Ottoman Empire. In the xvii[th] century the fortune of war changed. Ofen fell; in 1697 Count Eugen of Saxony burnt the suburbs of Sarajevo and Bosnia's reputation as impregnable was lost. After the peace of Požarevac (1718) the Sulṭān surrendered a part of Bosnia on the lower course of the Save to the Emperor and King Charles III. This district had, however, to be given back to Turkey after the unfortunate campaign of 1739.

As the policy of the Hapsburgs was mainly concerned with the west, Bosnia remained unmolested under Turkish rule in the xviii[th] century, the Eastern policy of the statesmen of Vienna now being to preserve the integrity of the Turkish kingdom, in agreement with Western Powers. This principle was adhered to in spite of the beginning of the decline of Turkey and the loss of Servia (1804-1815), Egypt and Greece. In Bosnia, nevertheless, affairs began to be more and more unsatisfactory early in the xix[th] century. The "European" reforms of government in Constantinople met with little favour in Bosnia and the Slav Muḥammadans took up arms to resist them under the leadership of Ḥusain, captain of Gradačac (1830). The Vizier Meḥmed Wedjīhī Pasha wished to introduce in 1840 the modern administration which had been announced in 1839 through the Khaṭṭ-i Sherīf of Gül-Khāne and began to replace the native captains of each district by Muḥammadans, who had been appointed in Constantinople. The Bosnian aristocracy felt this to be a heavy blow to them and therefore the Muḥammadans of Sarajevo rose against the Vizier. They were put to flight by the Sulṭān's troops at Vitez (in the district of Travnik). In the years 1843 and 1846, revolts broke out in Krajina (Turkish Croatia) because the Turkish government demanded the payment of the legal dues by the Muḥammadans there who would not pay their taxes. The rebels were scattered on both occasions. A fertile source of unrest was the undefined relationship of the Muḥammadan landlord (*spāhī, beg agha*) and the peasant (*kmet*).

The kmets complained that they were at the mercy of the will of the landlords. The Wālī Ṭāhir Pasha decreed in 1848 that the forced labour of the kmets on the private estates (*beglik*) of the landowners should cease, while the kmets were to give the landlord one third (the so called Tretina) of the corn, fruit and vegetables produced on their own holdings and the half of the hay. Neither the kmets nor the landowners were satisfied with this enactment. Therefore, when Ṭāhir demanded that every Muḥammadan and Christian household should pay 44 piastres half yearly and each Christian 7 piastres *Kharādj* in addition and that the legal tithe was to be paid on all holdings, the Muḥammadans in Krajina rose in revolt and besieged the fortress of Bihać. The rising was secretly favoured by ʿAlī Pasha Rizvanbegović, the then Vizier of Herzegovina, and soon spread over almost the whole of Bosnia till the Serdār ʿOmar Pasha defeated the rebels in the winter of 1850-1851. In the spring of 1851 he had ʿAlī Pasha Rizvanbegović arrested in Buna (near Mostar) and led away, a prisoner. It was given out that ʿAlī Pasha had been accidentally shot while being taken away. Some of the remaining prisoners were executed, some banished and the ancient political institutions reorganised. The residence of the Wālī was moved from Travnik to Sarajevo again and the power of the Bosnian aristocracy broken. Parallel with the unrest among the Muḥammadans of Bosnia, discontent developed among the Christians who complained that the reforms promised in 1839 and 1856 by the Khaṭṭ-i Humāyūn had not been carried out. In some districts the Christian peasants rose against the Muḥammadan landlords and as the Turks took harsh measures in reprisal, numerous Bosnian Christians fled to Austria and besought the government at

Vienna to intervene (1888). They also presented to the Turkish Ambassador, a petition to the Sultān, in which they asked to be protected against their landlords. The Porte sent a commission to Bosnia to settle the point in dispute. In 1859, the ordinance of the 14th Ṣafar 1276 A. H. (17th September 1859) regarding the Bosnia-Herzegovinian Čiftliks came into force, which regulated the payments of the kmets to their landlords and other rights and obligations, on both sides. The enforcement of the decree of Ṣafar was defective however and gave cause for new disputes. In spring 1875 a rising of Christians took place in Herzegovina, which proved fateful to Turkey and spread into Bosnia also among the Servian Orthodox Christians and really only came to an end on the occupation of the two provinces by Austria-Hungary as a result of the Berlin Congress of 1878. The last Wālī of Bosnia was Aḥmad Maẓhar Pasha (1878).

On the 5th October 1908, the annexation of Bosnia and Herzegovina was proposed and the European powers and finally Turkey also agreed. On this day the Emperor Franz Josef I published through his Foreign Minister, Count von Aehrenthal, an autograph letter in which he extended the rights of his suzerainty to Bosnia and Herzegovina and decreed that the order of succession in the ruling house was to apply to these lands also.

III. Legislation.

In the proclamations issued on the advance of the Austro-Hungarian troops into Bosnia and Herzegovina it was announced that the old laws were to remain in force in so far as they were not abrogated by new ones. The first thing necessary therefore on the occupation was to collect the Turkish laws then in operation and translate them. These were published in the Collection of Laws and Ordinances of Bosnia and Herzegovina in 1878—1880 and deal with various branches of law particularly the land laws, the various kinds of landed property and its conveyance, commercial law and the commercial and Sharī'at courts etc.

Till the proclamation of the new constitution in 1910, legislative power in Bosnia and Herzegovina belonged to the Crown and the right of bringing in bills proposing legislation to the Provincial Government of B. H. By the new constitution a Parliament (*sabor*) has been summoned to co-operate in the legislation of the country. The Parliament consists of nominated *ex officio* members and elected deputies. The *ex officio* members are: the Ra'is al-'ulamā, the director of the Wakf-Ma'ārif; the Muftis of Sarajevo and Mostar and in addition the Mufti who has held his office longest, the four Orthodox Servian Metropolitans and the Vice-President of the Grand Administrative and Educational Council of the Orthodox Servian Church, the Roman Catholic Archbishop and two Roman Catholic Diocesan Bishops and the two Provincials of the Franciscan Order. The Sephardic Chief Rabbi, the President of the Chamber of Advocates, the Mayor of the capital, Sarajevo, and the President of the Chamber of Commerce and Industry in Sarajevo. The number of elected Deputies is 72. The period of office of the members of Parliament is fixed at five years. A resolution is only valid if more than half the members are present and those present must be absolutely unanimous. For a resolution which concerns legislation in religious matters, the presence of at least four fifths of all members and a majority of at least two thirds of those present is required. All bills within the province of the Parliament require the approval of the government of Austria and Hungary before being brought into the House. Bills approved by the Parliament have to be approved by both states of the monarchy and require the sanction of the Crown. The sphere of legislation of the Parliament of Bosnia and Hungary is confined exclusively to domestic affairs. A provincial council of nine of its members is chosen by the Parliament to represent its interests and give utterance to its wishes in such public matters as Bosnia and Herzegovina is interested in. Each denomination in Parliament elects representatives to the provincial council in proportion to its numbers in the country.

The most important matters, that fall to be dealt with by the Parliament are: the settlement of the annual Budgets, the borrowing of new loans and the conversion of those already existing; the sale or mortgage of the property of the state; criminal law; civil law with the proviso that the application of Sharī'at law in dealings of Muhammadans with one another as regards marriages, inheritances or family affairs, shall be guaranteed; sanitation; industrial conditions; matters affecting the general prosperity of the people, educational matters relative to all educational institutions; religious questions, concerning the relations of the denominations to one another or to the government in so far as the enjoyment of equal rights, the internal organisation and the public exercise of worship of the several denominations recognised by law is not interfered with; agrarian laws; the introduction of new taxes and the increasing of those existing or the making of special additions to a tax already being levied; the building of railways, for which proposals are made by the government, the making of roads, ways and other means of communication; the organisation of the communities; the examination and approval of accounts etc. The estimates of the provincial income and expenditure have to be placed before Parliament annually and regularly by the provincial government, and Parliament must proceed without delay to discuss them so that they may be passed before the beginning of the next year. If the estimates are not dealt with punctually by Parliament the Budget of the coming year remains in force until the new one is passed in the statutory fashion to replace it.

The members of Parliament are elected by the people on a denominational basis. All male citizens of Bosnia and Herzegovina, over 24 years of age, who have had a fixed abode in the country for at least a year, are entitled to vote, as also are similarly qualified citizens of Austria-Hungary who are engaged in the Civil Service of Bosnia and Herzegovina as civil servants or teachers. All males over 30 years of age, who are qualified to vote, and are in full enjoyment of civil rights are eligible for election to parliament, with the exception of officials in the Civil Service of Bosnia and Herzegovina, officials and employees on active service on the national railways and also teachers and other officials in the public schools. The electorate is divided into Curias. Of the 72 deputies to be elected, 18 are allotted to the first Curia, 20 to

the second and 34 to the third. Within the first Curia and in the second and third Curias taken together, the seats are divided in proportion to the numbers of the three chief denominations of the population, so that in the first Curia the Catholics have four seats, the Muslims 6, the Servian Orthodox Church 8, and in the second and third Curias, the Catholics have 12, the Muslims 18, the Servian Orthodox Church 23. In addition the Jews in the second Curia have one seat. In the first Curia the following are eligible to vote: *a*) in the first class of voters: all Muḥammadan landowners who pay a land tax of at least 140 Kr. (£ 5—16—8). Landowners of other denominations, who pay a tax of not less than 140 Kr. are allowed to vote either in this class or in the division of the second class into which they would fall by their religion; *b*) in the second class of voters: all persons who pay not less than 500 Kr. (£ 21—6—8) in direct taxes excluding licenses; persons who have completed their studies in all High Schools and other similar educational institutes within the Austro-Hungarian monarchy; the clergy of all denominations recognised by the law; all officials and teachers whether active or pensioned in the Civil Service of Bosnia and Herzegovina as well as officials on the railway or officers in the army; and lastly officers on the retired list. The Second Curia consists of all inhabitants of towns who are not already in the First Curia. Eligible voters living in the country and not in the first Curia form the Third Curia. In the election of representatives of the first class of voters in the First Curia, the whole country forms one Muḥammadan electoral district, while for the election of representatives of the second class of voters in the First Curia, the whole country forms an electoral district for each of the two religions. Each voter in the First Curia has to vote for as many candidates as there are seats allotted to the electoral district he is voting in. For the election of representatives of the Second and Third Curias, the whole land is divided into denominational electoral districts each of which elects a deputy. Each voter is also entitled to vote for candidates in another Curia than that to which he himself belongs. The members of those denominations which are too small to have a separate seat allotted to them, e. g. the Protestants, are entitled to vote at the elections in one of the denominational electoral bodies of the Curia according to the particular Curia to which they belong.

The first ceremonial opening of the Parliament took place on the 15th June 1910 in Sarajevo. The new provincial constitution has in the first session of Parliament answered the expectations placed on it in a most satisfactory manner and proved a most useful instrument for the harmonious co-operation of the people and the government in the administration of the country. The new Parliament has already instituted, within the brief period for which it has existed, numerous reforms in all branches of public life.

IV. Administration.

Bosnia and Herzegovina form a single province, which, in accordance with the Austrian statute of the 22nd February 1880 and article VI of the Hungarian statute of 1880, is under the responsible government and supervision of the common ministry of the Empire and Kingdom. The Common Minister of Finance attends to the above mentioned classes of business on behalf of the common ministry. The administration of the county and the carrying out and enforcing of the laws is the duty of the provincial government of s. u. in Sarajevo, which is under the common ministry and is responsible to it for its administration. The head of the provincial government is as a rule, a military officer of high rank (the Commandant of an Army Corps or an Army-Inspector) who is assisted in the civil administration of the county by the civil Adlatus. The provincial government consists of four divisions, viz. the administrative departments and the departments of Justice, Finance and Commerce. At the head of each department is a Chief Secretary. The division of the country as it was under Turkish rule has been taken over by the new government with a few unimportant alterations. The country is divided into six districts, viz. Banjaluka, Bihać, Mostar, Sarajevo, Travnik and Tuzla. The number of counties is 54. The counties in the district of Banjaluka are: Banjaluka (the town and the county round it forming two separate counties), Dervent, Bosnian Dubica, Bosnian Gradiška, Bosnian Novi, Kotor-Varoš, Prjedor, Prnjavor and Tešanj; in the district of Bihać: Bihać, Cazin, Ključ, Krupa, Bosnian Petrovac, Sanskimost; in the district of Mostar: Bilek, Gacko, Konjica, Ljubinje, Ljubuški, Mostar (the town and the country round it forming two separate counties), Nevesinje, Stolac and Trebinje; in the district of Sarajevo: Čajnica, Foča, Fojnica, Rogatica, Sarajevo (the capital Sarajevo has its own organisation) Višegrad and Visoko; in the district of Travnik: Bugojno, Glamoč, Jajce, Livno, Prozor, Travnik, Varcar-Vakuf, Zenica, Žepče and Županjac; in the district of Tuzla: Bjelina, Brčka, Gračanica, Gradačac, Kladanj, Maglaj, Srebrenica, Tuzla (the town with the industrial area forming one county and the country district another), Vlasenica and Zvornik. The number of civil servants and other officials in the service of Bosnia and Herzegovina was in 1909, 10,944. Of these 3,846 were Austrian, 3037 Hungarian citizens, 4024 citizens of Bosnia and Herzegovina and 17 citizens of foreign states. The estimates approved by the government for 1910 were:

Expenditure . . .	5,182,886 Kr. (£ 215,954)
Income	5,338,570 Kr. (£ 222,438)

In regard to Public Health it may be noted that in 1909 there were a provincial public hospital in Sarajevo, 9 county and 14 local hospitals, 1 private hospital and 55 dispensaries. Steps have been taken in 34 counties to eradicate the syphilis which is very prevalent among the people. To counteract the dangers to which pilgrims are liable on their journey to Mecca, suitable steps have been taken. In the year 1909-1910 56 individuals made the pilgrimage.

V. Religion.

Before the Austrian occupation Islām as a denomination did not have a particular organisation in Bosnia and Herzegovina any more than in the other districts of Turkey. The Orthodox Servs, who were officially considered to belong to the Greek Church, the Catholics and Jews (Spanish) were regarded as *Millets*. The Greek Catholic and the Evangelical Church only appeared after the

occupation through the immigration of adherents. The organisation of the Evangelical Church in the country is at present being carried out. The Serv. Orth. Church was reorganised in 1905 and was granted permission to regulate and govern its ecclesiastical and educational affairs independently and free from state supervision provided the laws of the country were not infringed. There is a special statute of the same year defining the work and sphere of influence of the autonomous Serv. Orthod. Church in ecclesiastical and educational matters.

The Muslims had, as early as 1881, expressed the wish to have a head of their own (*Ra'is al-'ulamā*), who, supported by a committee of men learned in the law, could govern their religious affairs. In 1882 this wish was granted and the committee mentioned, consisting of the Ra'is as President and four other members, was constituted. In 1883 a provisional Waḳf Commission was appointed, whose duty it was to ascertain details of all Waḳfs in the land, to control their expenditure and to carry out any new regulations regarding the administration of the Waḳfs. In 1884, provisional Waḳf commissions were instituted in all the districts; these were presided over by the Ḳāḍī of the district and had to enquire what Waḳf property existed, to look after mosques and Waḳf buildings and particularly to supervise the trustees (*Mutawallī*) and officials, to lay their accounts before the Provincial Waḳf Commission and to carry out the directions of the latter. In 1894 the Waḳf administration was reorganised. In place of the provisional Waḳf Commission, a Provincial Waḳf Commission, a deliberative and administrative body, and a Provincial Waḳf Board as an executive body were introduced. The Provincial Waḳf Commission is composed of the President, Inspector (*Mufattish*), Secretary (*Kātib*), four members of the *Madjlis-i 'Ulamā*, two judges of the Chief Sharī'at Court and two prominent Muḥammadans from each of the six districts of B. H. who hold office for 3 years and are nominated by the ministry. The Provincial Waḳf Board consists of the President of the Provincial Waḳf Commission, the Inspector, Secretary and the necessary clerical staff and accountants.

This was the state of affairs till 1909, when the Muḥammadans received the right which had already been granted to the Servian Orthodox Church in 1905, of managing their religious affairs themselves. The main provisions of the Statute are as follows: The duties of the Waḳf-Ma'ārif committee of management are: the foundation and maintenance of mosques and other Muḥammadan buildings, religious, educational or charitable; the education and payment of the required number of clergy and teachers; the education of the Muḥammadan youth in the belief and spirit of Islām; and as far as possible the propagation and consolidation of a knowledge of their religion among Muḥammadans. The administrative machinery of the Waḳf-Ma'ārif consists of: the Djamat (*djamā'at*)-assemblies; the Djamatmadjlises; the district commission; the Provincial Assembly and the Committee of the Provincial Assembly. There are also certain specially elected bodies; the district assemblies and the county committees. All the above mentioned bodies are elected by the Muḥammadan populace in accordance with the provisions of the Statute. The autonomous Waḳf-Ma'ārif and religious authorities discharge all business falling within their province according to the provisions of the statute absolutely, so that there is no appeal to the civil courts against the decisions of these boards so long as they are not contrary to the common law of the land. In case the law should be broken by a legal decision of one of these autonomous boards, the government has only the right to annul the decision and to refer the matter to the autonomous board concerned for reconsideration with a view to coming to a new decision.

The provincial government may demand that the 'Ulamā-Madjlis, the provincial assembly and its committee shall give it particulars of its own proceedings and of the managing body of the Waḳf-Ma'ārif and these committees are bound to supply the desired information.

All the Muḥammadans in a community with at least 100 Muḥammadan members form a Waḳf-Ma'ārif Djamat. The Djamatmadjlis is elected for 3 years. The representatives of all the djamats in a district form the district assembly. The work of the district commission consists mainly in acquiring information on all the movable and immovable property of the Waḳf-Ma'ārif, the supervision of the religious and Waḳf-Ma'ārif buildings; supervising the work of the Mutawallīs as well as of all individuals in the district, who are paid out of the funds of the Waḳf-Ma'ārif; seeing that the curriculum of the Medreses, Mektebs and other Waḳf-Ma'ārif institutions is properly carried out and making a report to the Muftī, the 'Ulamā-Madjlis or to the political officials in cases where it comes to the knowledge of the commission that the curriculum for instruction in the Muslim religion is not being adhered to in public schools or institutions.

The Waḳf-Ma'ārif Provincial Assembly is the chief autonomous governing and supervising body for all the Waḳf-Ma'ārif property in Bosnia and Herzegovina. Its meeting place is in the capital Sarajevo. Its members are the Ra'is al-'Ulamā, the Muftīs of Banjaluka, Bihać, Mostar, Travnik, Tuzla and Sarajevo, the Waḳf-Ma'ārif Director and lastly 24 members elected by the district commissions. The statutory President of the national assembly is the Ra'is al-'Ulamā, while the Vice-President is elected by the members themselves from their number. The special duties of the Provincial Assembly are the supervision of all that is done by the various branches of the Waḳf-Ma'ārif and of all the officials of the Waḳf-Ma'ārif and their subordinates; deciding on the erection of mosques, medreses, mektebs and the refectories connected with them; deciding on the erection of schools, educational and charitable institutions of all sorts and on the purchase, exchange or burdening of all the movable or immovable property of the Waḳf-Ma'ārif, as far as it is in accordance with Sharī'at law; the settlement of the annual estimates for the individual Waḳfs and the funds of the Central Waḳf-Ma'ārif; the alteration of existing and the passing of new regulations regarding the management and supervision of the property of the Waḳf-Ma'ārif.

The committee of the Provincial Assembly is its governing and executive body. It consists of the Waḳf-Ma'ārif Director who is president, the Muftī of Sarajevo and six other members elected from its midst by the Assembly. The committee of the National Assembly is particularly concerned

with the routine business of the Waḳf-Maʿārif property, the supervision and direction of the activities of the district commissions; the supervision of individual Waḳfs as regards the management of their property and the fulfilment of the object for which they were founded; the collecting of the revenues of the Waḳf-Maʿārif and the application of them in accordance with the decisions of the Provincial Assembly; the approval of the foundation of Waḳfs for pious or useful purposes and the acceptance of presents and legacies; the appointment of Mutawallis and other administrative officials of the Waḳf-Maʿārif; the appointment of secular teachers at the Waḳf-Maʿārif schools, of officials and servants at the district commissions, the exercise of disciplinary authority over these individuals; the making of proposals to the ʿUlamā-Madjlis, regarding the appointment of ecclesiastical or educational officials paid out of Waḳf-Maʿārif funds.

Each independent Waḳf is managed by a Mutawalli, appointed by the committee, according to their regulations. The Mutawalli represents the Waḳf managed by him before a court or other authority.

The resources of the Central Waḳf-Maʿārif consist of the movable and immovable property which has been collected in the past in the National Waḳf Fund or may be accumulated in the future. The object of the Central Waḳf Fund is: the defrayal of all the expenses of administration of the machinery of the Waḳf-Maʿārif; the settlement of the expenses of maintenance and of the public contributions to the Waḳf Funds; the granting of subsidies for the repair and building of mosques, the maintenance of the staff of mosques, religious institutions and schools for which there are no or only insufficient Waḳfs etc.

The ʿUlamā-Madjlis, which has its seat in Sarajevo, is entrusted with the supreme direction of Muḥammadan ecclesiastical affairs in Bosnia and Herzegovina. The ʿUlamā-Madjlis consists of: the Raʾīs al-ʿUlamā as president and four members. The Raʾīs al-ʿUlamā and the members of the ʿUlamā-Madjlis are appointed by a separate Curia at a secret sitting. This Curia is composed of 30 persons of the rank of Khōdja viz: the Muftis of Sarajevo, Banjaluka, Bihać, Mostar, Travnik and Tuzla as *ex officio* members and 24 elected members. The King-Emperor appoints as Raʾīs al-ʿUlamā one of three candidates who are selected by the Curia. When there is a vacancy in the membership of the ʿUlamā-Madjlis the Imperial and Royal Common Ministry appoints one of two candidates selected by the Curia. The Curia applies to the Shaikh al-Islām in Constantinople to grant powers to take up the religious duties of his office to the individual appointed Raʾīs al-ʿUlamā by the King-Emperor. This request is transmitted to the Shaikh al-Islām through the Royal and Imperial Embassy in Constantinople. The ʿUlamā-Madjlis is empowered to govern, supervise and direct all the affairs of Islām; to note any necessity for building mosques or other religious buildings such as Mektebs, Medreses and other denominational educational and charitable institutions and to lay proposals with regard to them before the administrative of the Waḳf-Maʿārif; to see that the laws of Islām are not broken in the Muslim denominational schools, nor in the public schools and institutions as well as generally; to co-operate with the Waḳf-Maʿārif Provincial Commission to prepare a curriculum for all the education in the Medreses and Mektebs as well as for the religious instruction in the other institutions of the Waḳf-Maʿārif; to define the course of Muḥammadan religious instruction in the state schools and institutions in co-operation with the provincial government; to appoint the Mudarrises and other religious and educational officials of the Waḳf-Maʿārif on the proposal of the committee of the Assembly; to choose instructors in the Muslim religion in the state schools and other public institutions and to lay their appointments before the Provincial Government for confirmation; to examine candidates for the office of Sharīʿat judge and positions in the Waḳf educational institutions and issue certificates to them; to propose candidates for vacancies in the office of Mufti to the Provincial Government. The Raʾīs al-ʿUlamā has the following special privileges: the appointment of *Murāsals* to the Sharīʿat judges; the appointment of Imāms and Khaṭībs; the supervision of the Sharīʿat Law College in Sarajevo. The ʿUlamā-Madjlis is bound to apply to the Shaikh al-Islām in Constantinople for a decision or *fetwā* in doubtful or contested points of dogmatics or Sharīʿat Law. The documents containing the question to be settled have to be conveyed through diplomatic channels on behalf of the Provincial Government and the reply comes by the same route.

In the chief town of each district of s. u. there is a Mufti. The Muftis are appointed by the Provincial Government on the nomination of the ʿUlamā-Madjlis. For this purpose the ʿUlamā-Madjlis proposes the names of two candidates for the vacancy, who possess the requisite qualifications. The Government appoints one of them Mufti. The main duties of the Mufti are as follows: to issue *fetwās* when necessary, to visit the mosques and other places of worship to see that the curriculum, proposed by the ʿUlamā-Madjlis for Muslim religious instruction in the state and denominational schools and other institutions, is adhered to; to preside at the examination of the pupils in the Medreses etc.

The Provincial Government is empowered to erect and maintain institutions in Bosnia and Herzegovina for the advancement of education in the religion of Islām in co-operation with the ʿUlamā-Madjlis. The most important Waḳf-Maʿārif schools are the Mektebs and the Medreses. The Provincial Assembly may also found other institutions for the education of the Muḥammadan youth but the approval of the Provincial Government is necessary. Secular education in all Waḳf-Maʿārif schools can only be imparted by teachers qualified for the purpose. The Mektebs are elementary schools for instruction in the Muslim religion. Education is free. The curriculum, the apportionment of the subjects and the time-table for the Mektebs are all planned by the ʿUlamā-Madjlis. Every Muslim is bound to send his children to a Mekteb, the boys before they are eight and the girls before they are seven years old. The Medreses are more advanced schools for religious instruction and their aim is to educate a sufficient number of Khōdjas for the religious requirements of the country. These institutes are under the supreme direction and supervision of the ʿUlamā-Madjlis. The subjects of instruction in the Medreses are taught by Mudarrises who are appointed by the ʿUlamā-

Madjlis on the proposal of the committee of the Provincial Assembly.

The Provincial Assembly has the permanent right to collect a tax for religious purposes to defray all the expenses of public worship and the administration of the Waḳf-Maʿārif and to cover the requirements of education and religion generally. This tax is levied and collected as a percentage in addition on all direct taxes. For the first ten years during which the statute was in force, the amount of this tax was fixed at 10 % of all direct taxes. The total Waḳf budget of 1909 showed on expenditure of 761,114 Kr. (£ 31,713) and on income 768,277 Kr. (£ 32,011), giving a credit balance of 7,163 Kr. (£ 2,98). The movable and immovable Waḳf property was estimated in the same year at 9,931,061 Kr. (£ 413,793). The number of individual Waḳfs was 1050.

VI. Education.

The Turkish act of the year 1285 A. H. (1869) which however was never put into force did not suit the altered conditions in Bosnia and Herzegovina after the occupation and sweeping reforms were introduced in the educational system by the new government.

In the year 1909 there were 434 elementary schools in Bosnia and Herzegovina of which 389 were undenominational, 134 denominational and 11 private with a total attendance of 38,950 pupils. To make allowance for the peculiar social and religious requirements of the Muḥammadans, special elementary schools (*Rushdīyas*) were instituted in the capitals of the six districts of the country and also in Brčka, which is the chief town of a county. These schools have the same educational objects and curriculum as the ordinary elementary schools except that Arabic and Turkish are additional subjects taught in them. Attention was also devoted as far as possible to the education of Muḥammadan girls. The largest institution of this kind is the Muḥammadan Girls' School in Sarajevo, which is supported by the state, which has four elementary classes and a three years' course of secondary instruction, the object of which is to prepare Muḥammadan women as teachers of the preparatory classes in elementary schools. In 1909 there were also in Bosnia and Herzegovina, 9 commercial schools, 1 military boarding-school for boys, the object of which is to prepare native boys for entrance to the military academies; 5 undenominational and 7 denominational girls' schools; 2 industrial schools, 12 industrial continuation courses, 1 technical school, 1 school of forestry, 1 training college for male teachers and denominational training college for women teachers, 3 public *gymnasia*, 2 denominational *gymnasia*, 1 Franciscan seminary and 2 State *realschulen*.

In all these institutions provision has been made for religious instruction by appointing teachers of all denominations. Muḥammadan pupils at the *gymnasia* can learn Arabic instead of Greek. The educational institutes supported by the Muḥammadan community are the Mektebs, the Medreses and the Dār al-Muʿallimīn in Sarajevo. Before Muḥammadan children go to the undenominational elementary schools, they have as a rule to attend the Mektebs where they receive their first religious instruction. Other subjects are rarely taught in the Mektebs. As the methods of the Khōdjās in these Mektebs produced but poor results, a movement was set on foot in the nineties by the Waḳf Commission with the support of the government to reform the Mektebs. In 1909 there were nearly 1000 of the old-fashioned Mektebs (*Ṣibyān mekteb*) and 92 reformed Mektebs (*mekteb ibtidāī*) of which 83 were for boys and 9 for girls.

The Medreses in Bosnia and Herzegovina are organised on the same lines as those in Turkey and need to be reformed. In 1909 there were 42 with 1613 pupils (*sōkhta*). The best known are the Ḳurshūnli and Khānḳāh Medreses in Sarajevo which are supported by the Ghāzī Khosrawbeg Waḳf. The Dār al-Muʿallimīn, founded in 1893 in Sarajevo, provides a kind of supplementary course to the Medreses and gives the scholars in addition to the subjects of the Medreses, which are mainly Turkish and Arabic, instruction in the mother tongue as well as in such useful subjects as history, geography, arithmetic and pedagogy, and qualifies them for posts as teachers (*muʿallim*) in the Mektebs, or as religious instructors etc. The course lasts three years. In the session 1900—1909, 60 sōkhtas attended the Dār al-Muʿallimīn.

In the Sharīʿat Law College in Sarajevo founded in 1887 which is supported by the state and the main object of which is to educate suitable candidates for posts in the Sharīʿat courts, the Muḥammadans have an institute which supplies one of the requirements of Islām. Admission to this college is obtained by nomination from the Raʾīs al-ʿUlamā through the government. In the session 1908-1909 the college was attended by 28 students of whom 25 lived in the college and received full board and clothing. The course of instruction lasts for five years. The curriculum includes the following subjects: Arabic, Logic (*manṭiḳ*), *maʿānī wa bayān*, *ʿaḳāʾid*, Sharīʿat Law (*fiḳh*), *uṣūl al-fiḳh*; *ṣakk*, *farāʾiḍ*, *uṣūl al-muḥākama*, European Jurisprudence, the vernacular, mathematics, geography, history, and Arabic calligraphy. In the year 1908-1909 there were 9 teachers on the staff of the College.

The National Museum in Sarajevo which was founded in 1885 and taken over by the government in 1888, may also be classed with the educational institutions of the country. Its literary organ is the: *Glasnik zemaljskog muzeja u Bosni i Hercegovini*, which has appeared quarterly since 1889. A selection of the articles published in it are issued annually in a German version under the title: „*Wissenschaftliche Mitteilungen aus B. und H.*"

55 newspapers appeared in 1909, which may be classed according to their political or religious tendencies as 6 Croat, 6 Servian, 13 non-party, 4 Muḥammadan, 4 Roman Catholic and 2 Servian Orthodox.

The Muḥammadans of Bosnia and Herzegovina, who before the occupation shared the intellectual life of Turkey and wrote in Arabic and Turkish are now using their Servian vernacular more and more for literary as well as scientific purposes. They usually write in the Latin alphabet. Of late years, particularly among the Khōdjās, a movement has arisen to write at least literary works of a religious nature with a Slav text in Arabic characters. The Arabic alphabet has therefore been adapted to the requirements of the Slav language. The organ of the National Society of Muʿallims and Imāms in Sarajevo, the *Muʿallim*, appears in this form.

VII. Administration of Justice.

The right of having their subjects tried by their respective consuls, which had been obtained from the Turkish government by various countries, was abolished in 1878—1881, with the approval of the governments concerned, not only as regards Austria Hungary but also for the other countries. After the occupation, the organisation of the courts was adjusted to the organisation of the government authorities. In Sarajevo there is a High Court which is the chief court of the country; there are district courts at the headquarters of each district and county courts in the chief towns of each county. In addition there are county courts in some of the more important towns.

The Sharī'at courts, which have been incorporated in the above mentioned courts are organised on special lines. The county Sharī'at court consists of the Sharī'at judge (*kāḍī*), a Muḥammadan who has been educated for this profession and has graduated in the Sharī'at Law College in Sarajevo (see above) and the assistants and clerical staff assigned to him. The Sharī'at High Court consists of the President of the High Court, two judges of the High Court and two Sharī'at Chief Magistrates. The sphere of judicature of the Sharī'at Courts was defined by the Government of Bosnia and Herzegovina in 1883. They are to deal specially with: *a*) questions arising out of the Muḥammadan law of marriage, when both husband and wife are Muḥammadan, whether the question is one of the law of the property or any other point; *b*) disputes, concerning the Muḥammadan law of parent and child; they have also to deal with the Muḥammadan law of inheritance and the division of estates in so far as they consist of the class of property known as *Milk*.

The Sharī'at court deals with the first class of cases by itself but with the second in a joint court. Before coming to a decision, the High Court may ask the opinion of the 'Ulamā-Madjlis on any point, which requires further elucidation. As regards the decisions of the Sharī'at courts, a clause is attached to them by the Sharī'at court stating that the sentence is to be carried out, but the actual enforcement is done through the medium of the ordinary courts.

In 1909, 2629 lawsuits were dealt with by the Sharī'at courts and 17,467 transactions regarding inheritances, 7312 marriages were registered and 819 divorces granted. The payment of the judges of the Sharī'at court is on the same scale as those of other officials of the same rank.

Regarding the criminal statistics it may be noted that the number of individuals sentenced for crimes or misdemeanours was 3072, of whom 1032 were Muḥammadans, 1504 Orthodox Greeks, 517 Catholics, 10 Jews and 9 belonging to other faiths.

VIII. Finance.

According to the Austrian and Hungarian acts of 1880 the administration of Bosnia and Herzegovina is to be so arranged that the expenses of government can be met out of the revenues of the country itself. The Budget of Bosnia and Herzegovina shows a great increase since the occupation, proportionate to the development of the means of communication and the improvement in economic conditions generally. The first Budget of the civil government in 1879 showed an income of 9,321,000 K. (£ 388,696) and an expenditure of 8,942,224 K. (£ 372,592) giving a surplus of 378,976 Kr. (£ 15,749). In the year 1890 the expenditure was 19,373,282 K. (£ 807,220) in 1900 it was 41,526,368 K. (£ 1,730,262) according to the estimates for the year 1910, the total expenditure was estimated at 74,251,960 K. (£ 3,093,832) and the income at 74,376,409 K. (£ 3,099,017) yielding a surplus of 124,099 K. (£ 5185).

The revenue department is based on the laws and methods which were in operation under Turkish rule. The Turkish laws have practically been retained almost unaltered. The most important direct tax is the tithe (*'ushr* pl. *a'shār*) which in its essence, is the taking by the state of one tenth of each agricultural product from the owners. This tax, which was originally paid in kind, was in most places farmed out under Turkish rule. As the payment in kind and the farming out of the tax had its disadvantages both for the government and the populace, the government ordained in 1879 that henceforth payment should be made in cash according to the prevailing market prices. The inconvenience caused by the annual variation in the amount of the tithe induced the government to fix it in 1906 at a regular figure, based on an average. By this provision it was not the nature of the tax which was altered but only the way of collecting it; in place of a tithe which varied annually an average one was introduced. The amount raised in 1909 by tax was 9,308,000 K. (£ 387,833).

IX. Economic Statistics.

As soon after the occupation as orderly economic conditions were restored in the country the government took various measures to improve the condition of the country particularly with regard to agriculture.

The yields of various products for the years 1905-1909:

	1907	1908	1909
		Metric Cwts.	
Wheat . .	566,318	752,515	723,373
Barley . .	518,312	320,150	765,580
Maize . .	1,678,189	2,240,250	2,787,066
Oats . . .	376,187	318,500	766,808
Potatoes . .	802,647	633,667	1,439,703
Hay	4,780,351	3,241,850	7,016,190
Plums . .	433,623	1,302,433	222,358

Of tobacco which is a government monopoly 52,267,37 metric cwt. were taken out of bond of the value of 5,152,790 K. (£ 214,700).

The ground available for agriculture is either the freehold property of the landowner or certain rights of the peasant (*kmet*) are attached to it. The kmet's holding (*Čiftlik*), so long as he is able to cultivate it properly, must remain in his tenure. In other matters the landlord can deal with the holding as he pleases. The kmet has to pay the landlord a certain portion of the produce annually in kind. There are government provisions for the eviction of the kmet when he neglects to cultivate his holding. The relation between the landlord and tenant was defined by the Ottoman decree of the 14th Safar 1276 (12th September 1859) which has been retained in force by the Austro-Hungarian government. The kmet may buy his Čiftlik by agreement with the ground

landlord and thus become himself owner of it. From 1879 to the end of 1909, 26,221 kmets' holdings had been purchased by their occupiers at a cost of 20,259,574 K. (£ 843,318).

The richness of Bosnia in minerals was famous even in ancient times. At the present day the mining of salt, coal and iron has attained great importance. The value of these products in 1909 was 12,952,502 K. (£ 539,692).

The total area under forests in Bosnia and Herzegovina is 6,374,287 acres of which 48,945 acres are Waḳf forests. The latter belong for the most part to the Ghāzī Khosrawbeg Waḳf in Sarajevo.

The total length of railway line in Bosnia and Herzegovina is 1088 miles, of which 743 are broad gauge and 345 narrow gauge. The length of the high roads was in 1909, 1372 miles and of the district roads 1556 miles.

The imports of fat stock and draught animals were 31,051 head in 1909 and the exports 266,940. The remaining trade amounts to 13,970,000 metric hundredweights of which 22,72 % were imports and 77,28 % exports.

(J. KRCSMÁRIK.)

BOSPORUS. [See BOGHAZ, p. 737].

BOṢRĀ (BOSTRA), at the present day also called ESKI-SHĀM (Old Damascus), the centre of a Nāḥiya, is a wretched village in Ḥawrān, with imposing ruins recalling its past splendour. The existence of the town can first be definitely proved in the Maccabee period (1 Macc. v. 26) but in the period following, it is much more frequently mentioned and in Roman times under the name of Nova Trajana Bostra it was expanded and fortified; after Diocletian it was the capital of the province of Arabia. It does not seem to have belonged to the Ghassānids but to have been ruled directly by the Byzantines. In the year 613 or 614 it was destroyed, like Adhri'āt [q. v., p. 135] by the Persians and never afterwards regained its former greatness. According to the legend, Muḥammad visited Boṣrā as a boy with his uncle Abū Ṭālib and was recognised as a future prophet by Baḥīrā [q. v., p. 576 *et seq.*] a monk, who lived there. At a later period in his career, he sent a messenger, who was killed on the way, to the *Ṣāḥib* or "King" of Boṣrā, probably the Governor. Boṣrā was the first town in Syria to be captured by the Arabs, for it surrendered to Khālid in 634 and promised to pay *Djizya*. Under Arab rule it retained its importance as the chief town in the district of Ḥawrān. In the year 906 it suffered much at the hands of the Ḳarmaṭians and Kalbites led by Abū Ghānim, as did the whole of the northern part of the country east of Jordan. During the period of the Crusades, the treacherous commander handed over the town to Balduin III, but Nūr al-Dīn prevented the Christians from taking possession of it. Ṣalāḥ al-Dīn and his successors fortified it strongly, so that the Christians were unable to take it at a later period. After the Mongols had laid it waste, like other Syrian fortresses, it was rebuilt by Baibars after his victory in 1261. It remained the capital of an administrative district under Damascus during the Mamlūk period. Most of the ruins date from Roman times but some, as the inscriptions show, belong to the Aiyūbid period. The once splendid Djāmi' al-'Arūs is rapidly falling into ruins.

Abu 'l-Fidā' describes Boṣrā as a very old town inhabited by the Banū Fazāra and Murra, the houses in which (as at other places in Ḥawrān) were built of black stone which was also used for the roofs: he also mentions the mosque, the fortress, which reminded him of Damascus, and the market held there. Muḳaddasī mentions the viniculture of Boṣrā which is also referred to by Nābigha (27,9) and speaks with admiration of the monastery there, traditionally connected with Baḥīrā, for which special taxes were annually collected by order of the Sulṭān.

(FR. BUHL.)

BOSTĀN (P. *bō-stān*, "place of perfumes"), properly a "garden of sweet-smelling flowers", also means "orchard". As a loanword it appears in Turkish with the meaning of "vegetable-garden", in which melons, water-melons and vegetables are grown; in Arabic (plur. *basātīn*) its meaning varies in different districts; in Bairūt, for example, *bostān* means a piece of ground (Cache) planted with mulberry trees and surrounded by a hedge, in Algeria it means also "cypress" (Beaussier). — Bostān is also the title of a Persian didactic poem by Sa'dī, English translation by Forbes Falconer (*Selections*, London, 1838), German, (metrical) by Graf (*Sadis Lustgarten*, Jena 1850) and by Schlechta-Wssehrd (Vienna, 1852) and French by Barbier de Meynard (Paris, 1880).

(CL. HUART.)

BOSTĀNDJI (T.), the gardeners of the Imperial palaces of Constantinople, who form a regular body of troops. This organisation dates from Sulṭān Muṣṭafā II, who, on taking command of the army in 1107 (1695), formed three regiments each of 1000 men with a particular uniform, out of 3000 bostāndji, half of whom were drawn from

the palaces of Adrianople and Constantinople: their dress consisted of a long red head dress (*kečes*) peculiar to the corps, red jacket and blue trousers for the first regiment, blue jacket and red trousers for the second, green dolman and blue trousers for the third. In their capacity as guards of the garden they were divided into nine sections, distinguished by the colour of their girdles. Like the Janissaries, they were recruited from the *ʿadjami oghlān* [q. v., p. 140]. They were also privileged to row the barges of the Sulṭān and all the palace officials when they walked abroad. Muṣṭafā III built a place of worship for them in the Sarāi and founded near it a library for the use of the officers of the corps.

Bibliography: M. d'Ohsson, *Tableau de l'empire ottoman*, vii. 27; J. B. Tavernier, *Voyages*, vi. 32, 236. (Cl. Huart.)

BOSTĀNDJI-BĀSHI, chief of the gardeners, a high official in the Sulṭān's palace in Constantinople under the old *régime*, who commanded the *bostāndjis*. Under him were the *khāṣṣeki-agha*, his representative and chief of the *khāṣṣeki* (subordinate officers chosen from the *bostāndji* and serving as a bodyguard), the *odjak-ketkhudāsi*, the lieutenant-colonel, the *tuchāju-bāshi*, inspector of the forests under the care of the *bostāndji-bāshi*, the *terchedji-bāshi*, who collected the duties earmarked for this office and the revenues of the Imperial estates, the *bostāndjilar-oda-bāshi*, his agent with the government, who lived in the palace of the Grand Vizier, the *wezir-ḳara-kulāghi*, the intermediary between the Sulṭān and his Vizier, and the *agha-ḳara-kulāghi*, who watched for fires from the tower of the palace of the Agha of the Janissaries and had to report immediately to the Sulṭān any dangerous outbreaks of fire. The *bostāndji-bāshi* had to inspect the shores of the Bosporus and the Sea of Marmora from the Black Sea to the Dardanelles. His permission was necessary to build or repair a house or building, of any kind, and for this he charged arbitrary and extortionate dues. When the Sulṭān went for a trip by water, it was he who held the rudder of the imperial barge. He also exercised the functions of a provost-marshall and supervised the executions of people of high rank when these took place in the palace; he also had charge of the *Furūn* prison (so called because it was near the bakery), where torture was inflicted on officials to make them confess their crimes or give up property which had been confiscated. As Inspector-General of the waters and forests around the town, he had charge of the hunting and fishing, and through his agents controlled the trade in wine and lime. The Governor of Adrianople, who commanded a body of 1500 *bostāndjis* bore the same title.

BOUGIE (Arabic: Bidjāya, Kabylian: Bogaith), a town on the coast of Algeria (department Constantine), Long 5° 9′ (Greenwich), Lat. 36° 49′ N., Population in 1906: 5528.

The town is built in an amphitheatre formed by the outermost spurs of the Djebel Gūrāya (2000 feet) around a bay, well sheltered from the winds from the open sea by high cliffs. The temperature is remarkably mild in winter and as the rainfall is very abundant, the vegetation is luxurious (olives, holm-oaks, cork-trees etc.).

Of the history of Bougie for the first three centuries after the Muḥammadan invasion we know very little. We do not even know at what period the Roman town of Saldae disappeared, which once occupied the site of the present town. It appears probable that the anchorage never ceased to be frequented by ships and that there was always a town of some importance at the foot of the Djebel Gūrāya. Al-Bakri (*Description de l'Afrique*, transl. de Slane, p. 192) actually describes Bougie as a very ancient town inhabited by Andalusians and having a good harbour suitable for wintering in. According to Ibn Khaldūn (*Hist. des Berbères*, transl. de Slane, II, p. 51) the site of the town was formerly inhabited by a Berber tribe called Bidjāya or according to the native pronunciation, Bikāya, in Kabylian *Begaith*. Bougie did not however begin to play any important part in the history of Barbary till the time of the Ḥammādid dynasty [see ḤAMMĀDIDS] when the Sulṭāns of Ḳalʿa, threatened by the invasions of the Hilālī Arabs, decided to move towards the coast. In 455 A. H. (1062-1063 A. D.) al-Nāṣir b. ʿAlennās, the fourth in succession from Ḥammād took possession of the hill of Bougie and built a town to which he gave the name of al-Nāṣiriya, but which the natives continued to call Bidjāya. He soon attracted a large population thither, by exempting all the new inhabitants from taxes and also, the story goes, by forcing all his subjects to build a house there and making every one who entered it bring a stone or pay a piece of gold. In 461 (1068-1069) he himself settled there, built a palace, the Ḳaṣr al-Luʾluʾa ("Castle of Pearls"), a mole, an arsenal, aqueducts and a wall flanked with bastions around the town. His son and successor, al-Manṣūr, transferred the capital of his kingdom from Ḳalʿa to Bougie in 483 (1090-1091). He built the Ḳaṣr Amīmūn, erected a mosque adorned with a minaret sixty cubits high, and a façade with 17 porticoes and finally constructed an aqueduct to bring to the town the waters of the Djebel Tūdja. Bougie thus became one of the most prosperous towns of the Maghrib. It was divided into 21 quarters and contained 72 mosques. Travellers praised its wealth, magnificence and commercial activity. "Bidjāya" wrote Idrīsī "is the capital of the Banū Ḥammād. Ships unload there, caravans come to it by land and it is a depot for merchandise. Its inhabitants are rich and have more skill in various arts and trades than those of other towns so that commerce is in a flourishing condition. The merchants of this town trade with those of western Africa as well as with those of the Sahara and the east; merchandise of all sorts may be found warehoused here. Around the town are cultivated plains on which grow wheat, oats and fruit in abundance. The surrounding mountains and valleys are well wooded and produce resin and tar of excellent quality so that large ships for war and commerce are built here" (Idrīsī, transl. by de Goeje and Dozy, p. 104). The inhabitants work the iron mines which yield very good ore. To sum up, the town is a busy centre of industry. Learning was held in honour as well as the pursuit of industry and commerce. The historian al-Ghubrīnī, himself a native of Bougie, gives the biographies of 140 personages illustrious for their knowledge or piety who lived in this town in the vii[th] century A. H. Among them may be

mentioned the Faḳīhs 'Omāra b. Yaḥya 'l-Ḥusainī, 'Abd al-Ḥaḳḳ b. Rabī' and 'Abd al-'Azīz b. 'Omar al-Ḳaisī; the historians 'Abd Allāh b. Muḥammad b. 'Ibāda, Muḥammad b. al-Ḥasan b. Maimūn, Aḥmad b. 'Isa 'l-'Omarī, Abu 'l-Ḥasan b. Abī Nūr, Nāṣir Fataḥ b. 'Abd Allāh; the physicians Aḥmad b. Khālid, Muḥammad b. Aḥmad al-Umawī, Abu 'l-'Abbās Aḥmad, a Persian by birth who settled in Bougie after travelling in China, India and Armenia, Taḳī al-Dīn of Mosul, 'Abd al-Ḥaḳḳ b. Ibrāhīm b. Sebaīm etc.; the poet Ibn Faḳūn, who has left an account in verse of a journey to Morocco and his rival, the poetess 'A'isha, the daughter of the Faḳīh al-Ḥusainī. Ibn Tūmart appeared in Bougie as a preacher in the reign of 'Abd al-'Azīz and Sīdī Abū Madyan taught there for many years [see IBN TŪMART, and ABŪ MADYAN, p. 98].

The prosperity of Bougie survived the fall of the Ḥammādids and continued under the Almohads. 'Abd al-Mu'min [q. v.] took possession of the town in 546 (1152), dethroned the Sulṭān Yaḥyā and replaced him by one of his sons. Bougie then became the capital of a province, the administration of which was in the hands of a prince of the ruling house. Occupied in 1183 by Ibn Ghāniya [see ALMORAVIDS], Bougie was soon reconquered by the Almohads but when Abū Zakarīyā I had made himself independent in the east in 629 (1298) it passed into the power of the Ḥafṣids [q. v.]. Following the example of the Almohads, Abū Zakarīyā' gave the governorship of the town to his eldest son. During the latter half of the xiii[th] century and the two following centuries the history of Bougie was an exciting one. On several occasions (1284—1309; 1310—1318; 1364—1368) the Ḥafṣid governors threw off the suzerainty of the Sulṭān of Tunis and made Bougie the capital of an independent state, which covered the greater part of the present province of Constantine. They also had to repel the attacks of the 'Abdalwādids of Tlemcen and the Marīnids of Fās [see 'ABD AL-WĀDIDS, ZIYĀNIDS and MARĪNIDS]. The former besieged Bougie without success in 1310, 1316 and 1388-1319. To gain their end and to blockade the town narrowly, they established themselves permanently at Temzezdekt, in the valley of the Summam. — The Marīnids were more fortunate and succeeded in taking the town. Abu 'l-Ḥasan entered it without striking a blow in 1347 and the Marīnid rule lasted till 1301. In this year the Ḥafṣids again succeeded in forcing the town to recognise their authority, Bougie again became the capital of a principality administered by a son of the Sulṭān of Tunis and like Constantine formed a sort of appanage for the prince of the royal house. Harmony did not long reign between the governors of Constantine and Bougie; their constant wars bathed Algeria in blood throughout the xv[th] and during the early years of the xvi[th] century.

In spite of these vicissitudes, Bougie continued to play an important part in the economic life of Northern Africa. The Ḥammādids had always been on friendly terms with the Christian states, particularly with Rome and the Italian republics. Al-Nāṣir had even signed a treaty with the Pisans authorising them to come to trade in his dominions. The Almohads followed the same policy, renewed al-Nāṣir's treaty with Pisa and granted similar concessions to Genoa and Marseilles. Under the Ḥafṣids the harbour of Bougie (mentioned in western texts in the forms Bugia, Buria, Bugea and Buzana) was regularly visited by Catalans, Provençals and Venetians. "Christian merchants had *funduḳs* there and came to buy wool, oil, hides and wax". This state of affairs was however changed at the end of the xiv[th] and beginning of the xv[th] century, in consequence of the revival of piracy, which had never really disappeared. The inhabitants of Bougie soon took their place among the corsairs most dreaded by Christian sailors.

When the Spaniards had decided to occupy the principal places on the Barbary coast, they meant to take Bougie also from the Muḥammadans. Pedro Navarro seized the place in January 1509. The fortifications were strengthened but the town was sacked and the Ḥammādid palaces, which were still standing, destroyed. Attacked in 1513 by the corsair 'Arūdj [q. v.] the Spaniards were able to hold out and retained the town till 1555. Their rule nevertheless was always precarious. Continually blockaded by the Ḳabyls, the garrison never could receive sufficient reinforcements of men, munitions or provisions from Spain. The walls were falling into ruins when the Beylerbey Ṣalāḥ Ra'īs laid siege to the town. In six days he was able to take all the defences of the town and forced the governor, Don Alonso de Peralta to capitulate (28[th] September 1555). On his return to Spain, Peralta was tried by court-martial, condemned to death and beheaded.

After thus gaining Bougie, the Turks held it for 188 years. They placed a garrison there but were never able to appease the hostility of the Ḳabyls of the neighbourhood, nor to restore the town to its past prosperity. In the xvii[th] century Bougie never had more than 500 or 600 inhabitants, exclusive of its garrison of 168 Janissaries.

On hearing of the capture of Algiers by the French in 1830, the Ḳabyls drove the Turkish garrison out of Bougie and seized the town. The French government, after first trying to set up a chief chosen by it here, decided to take possession of the town, perhaps to prevent it being occupied by another Power. An expedition, fitted out in Toulon, disembarked a body of troops commanded by General Trézel in September 1833. After much fighting and bloodshed (30[th] September—12[th] October), he remained master of the town. The situation of the French, constantly harassed by the Ḳabyls was for a long time very critical, and on several occasions it was thought they would have to evacuate the town, the occupation of which did not appear to be worth the trouble. It was not till the conquest of Ḳabylia (1847—1857) that the safety of the town was assured. Since that date, the exploitation of the valley of the Summan and of the abundant mineral deposits in this region, as well as the construction of roads and railways connecting Bougie with Great Ḳabylia on the one side and with the plateaus of Saṭīf and Madjāna on the other have restored a fair share of prosperity to the town and given its port the beginnings of a great trade.

BOZANTI, the BADHANDŪN (or BADANDŪN, BUDANDŪN) of the Arab geographers and the Greek PODANDOS, the name of a river and a town of great strategic importance situated on it, at the *darb al-salāma*, the Pylae Ciliciae, south of Lu'lu'a (Lulon). The place is famous in history, because the 'Abbāsid Caliph, al-Ma'mūn (218 = 833) died suddenly there on a campaign against the Greeks after incautiously drinking cold water. He was buried in Ṭarsūs at the Gate of Badhandūn. The modern Bozanti is a wretched village with 500 inhabitants.

BROACH. [See BHARŪČ, p. 710.]

BRUSA, Turkish BURSA, the ancient PRUSA, is situated in 26° 40′ East Long. and 40° 31′ N. Lat. at the foot of Olympus (Kashīshdagh). The number of inhabitants in 1907 was 66,151; a railway connects the town with the harbour of Mudania. The principal occupation of the population is the rearing of silk-worms, but wine, olive-oil, opium and fruit are also exported. Near the town and the village of Čekirge, some distance off, are the well known and much frequented warm sulphur and chalybeate baths. Among the sights of the town are the mosques built by the early Ottoman Sulṭāns, i. e. the Yeshil Djāmi' built by Muḥammad I, the Ulu Djāmi', the mosque of Murād II with the tombs of the Sulṭāns and the Yilderim Mosque. Brusa first attained importance for the history of Islām, after its conquest by Orkhān, son of 'Othmān in 726 (1326). — He made it his residence and after his time it remained the capital and imperial residence till the conquest of Constantinople. Brusa is now the capital of the Wilāyet of Khodawendik'ar.

BSHARRĀ or, according to the modern pronunciation, BSHERRE, one of the most ancient villages in northern Lebanon. In the Arab geographers the district of Bsherre usually bears the name Djobbat Bsharrīya or Bsharrā, which it has preserved to the present day; under the Mamlūks, the district belonged to the *Niyāba* of Tripolis and appears always to have been governed by Christian Moḳaddams. Near Bsherre grow the famous cedars of Lebanon, which are nowhere mentioned by Muḥammadan writers. The great market town of Bsherre (3000 inhabitants) belongs to the Ḳā'immaḳāmat of Batrūn. The whole district is Maronite.

BTEDDĪN (abbreviated from BAIT AL-DĪN), a small town in Lebanon (with about 400 inhabitants) not far from Dēr al-Ḳamar, from which it is separated by a deep ravine. About 1812 the Emir Bashīr Shihāb [q. v.] began to build a palace here with courts and gardens planned on a splendid scale. It is now used as the summer residence of the governor of Lebanon. Besides the Sarāi there are several other palaces in Bteddīn, in one of which the Ḳā'immaḳām of the Ḳaḍā al-Shūf resides for a time. The place consists mainly of government buildings and the houses of officials with a few shops and hotels. For administrative purposes, it belongs to the district of Dēr al-Ḳamar, which, although situated in the centre of Ḳaḍā al-Shūf, does not form part of it, but is administrated directly by the governor.

BŪ. [See ABŪ, p. 73.]

BU'ĀTH, a place near Medina famous for the battle fought there between the related tribes of the Aws and Khazradj, some years before the Migration of Muḥammad and his adherents to that town. It belonged to the Jewish tribe of Ḳuraiẓa, and according to Samhūdī, was two miles east (to be more accurate south-east) of Medina, above a cornfield called Ḳawrā. A few incidental mentions of the place in the traditions help to locate it more accurately. Muḥammad's men, who slew Ka'b b. Ashraf, went past the Banū Ḳuraiẓa, thence past Bu'āth, and thus reached Ḥarrat al-'Uraiḍ and from there went to Baḳī' al-Gharḳad to the east of the town. At the attack on the Ḳuraiẓa, Khawwāt b. Djubair slipped past the 'Abd al-Ashhal, and Zuhra and thence past Bu'āth and thus came up to the Ḳuraiẓa. The battle, which was the climax of a series of petty feuds, at first went against the Awsites but ended in the total defeat of the Khazradjites. It gave rise to a number of songs which became very popular.

BUČAK is the Turkish name of the steppe, which forms the southern part of the Russian province of Bessarabia, roughly equivalent to the circle of Akkerman and is sometimes used as a name for the whole of Bessarabia. This district passed under Turkish rule during the reign of Bāyazīd II, in 889 (1484) and was not finally ceded to Russia till the treaty of Bucharest in 1812, although it had been several times previously occupied by the Russians during the wars with Turkey. On the Turco-Tatar elements in the population see the article GAGAUS.

BUCHAREST, Turkish BÜKÜRESHT, the capital of Roumania, [see IFLĀḲ]. The Peace between Russia and Turkey was signed here on the 28th May 1812, by which the Pruth to its confluence with the Danube and thence along the left bank of the latter till its entrance to the Black Sea became the frontier.

BUDAIL B. WARḲĀʾ, chief of the Banū Khuzāʿa, a tribe living near Mecca, who served Muḥammad as spies, kept him informed of the enterprises of the Ḳoraish and after the agreement at Ḥudaibiya (6 = 628) were his allies. Budail appears for the first time in the camp at Ḥudaibiya to tell Muḥammad that the Meccans were armed to resist him. On his return he carried the Prophet's offers to Mecca, where he had a *dār*. The Banū Khuzāʿa fled thither during their war with the Banū Bakr, when the Ḳoraish took the side of the latter, their clients, against the former. This was a breach of the treaty of Ḥudaibiya, by which the Banū Khuzāʿa had been recognised as allies of Muḥammad and thus gave him an opportunity to attack his native town. Budail hurried to Medina to make an arrangement with Muḥammad and on the way met Abū Sufyān [q. v., p. 107] who was on the way to Medina on a similar errand. Apparently they both came to an arrangement with Muḥammad in Medina regarding the terms of a peaceful surrender of Mecca for which they offered their services. Muḥammad advanced against Mecca at the head of 10,000 men under the pretence of avenging the Banū Khuzāʿa. On the day before his arrival in Marr al-Ẓahrān (the middle of Ramaḍān 8 = beginning of June 630) Budail went out with Abū Sufyān to reconnoitre. If the two had not been secretly in agreement the Umaiyad could not have been able to persuade the chief of the Khuzāʿa, who was the cause of the campaign, to go with him at such a critical moment. After they entered the Prophet's tent, they are both said to have paid him homage and adopted Islām. The conversion of Budail cannot have taken place earlier, because he is mentioned among the "Muslims of the conquest (*fatḥ*)" of Mecca. It was granted him that his house in Mecca, should be recognised as a place of asylum for the belligerents. After the capitulation of Mecca, Budail accompanied Muḥammad with his adherents to Ḥunain. He was not present at the siege of Ṭāʾif because he had to guard the booty taken at Ḥunain, in the camp of Djiʿrāna. He is not again mentioned and must have died before the Prophet, i. e. between the years 9 and 11 (630 and 632).

BUDALĀʾ (A.), Plur. of *Badīl*, s. above under ABDĀL.

BUDAN, BĀBĀ, the eponymous saint of the Bābā Budan mountains, the loftiest range on the Mysore table-land, India, situated between 13° 23' and 13° 35' N. lat. and 75° 37' and 75° 52' E. long. Bābā Budan is said to have introduced the cultivation of coffee into India in the 17th century, on his return from a pilgrimage to Mecca. His tomb is located by the Muḥammadans in a cave, which the Hindus, on the other hand, venerate as the place into which the sage Dattātreya vanished and out of which he is expected to re-appear as a prophetic sign of the last avatār of Vishṇu; the spot is thus a place of pilgrimage for the adherents of both creeds.

Bibliography: *Gazetteer of Mysore and Coorg*, by L. Rice, (Bangalore, 1876), ii. 429.

BUDAPEST, the capital and chief town of Hungary, which arose in 1872 through the union of the towns of Buda (Budin) and Pest, is only of importance in the history of Islām at an earlier period, when the town of Buda (Budin, Budun) was under Turkish rule (1541—1686). Sulaimān entered Buda on the 10th Sept. 1526, after his victory at the battle of Mohács and three years later the fortress was occupied by him. The Emperor Ferdinand's attempts to regain the town (1530 and 1540) failed and provoked a third campaign into Hungary, Sulaimān thereupon appointed a Pasha governor of Buda and by various other means endeavoured to make the town quite Muḥammadan. In the years 1598 and 1602, the town was unsuccessfully besieged by the Archduke Matthias and again in 1684 by the Duke of Lothringen who was finally able to take the town in 1686. The only relic of the Muḥammadan occupation is the tomb of the saint Gülbābā [q. v.] which is still sometimes visited by Turkish pilgrims.

BUDD. The word *Budd* or *budda* is used with various meanings. It is applied either to a pagoda, to Buddha himself, or to idols, not necessarily figures of Buddha. The word means pagodas, for example in a passage in the *ʿAdjāʾib al-Hind* (*Les Merveilles de l'Inde*, ed. and translated by Marcel Devic p. 5), where it is said that a town in the island of Ceylon possesses six hundred large *budd*. This meaning is the rarest.

Budd or *Budda* sometimes means Buddha in authors like Masʿūdī, al-Bīrūnī and Shahrastānī. For example, Masʿūdī, speaking of the temple in Multān known as the "House of Gold", says that in it the Indians preserve their archives from the date of the coming of the first Buddha amongst them, i. e. 12,000 times 36,000 years ago (*Kitāb al-Tanbīh*, *Livre de l'avertissement*, transl. by Carra de Vaux, p. 201; cf. al-Bīrūnī, *India*, transl. Sachau, i. 368; ii. 18). — Al-Bīrūnī, though possessing such a good knowledge of Brahmanism, knows very little of Buddhism. The reverse holds true of Shahrastānī whose article on Buddhism is of some interest. This writer defines a *budd* as a person in this world, who is not born, does not marry, neither eats nor drinks and never grows old or dies; this definition evidently refers to incarnate

or living Buddhas. Shahrastānī (ed. Cureton, p. 416) refers indirectly to the doctrine of successive Buddhas for he says that "the first Buddha" appeared five thousand years before the Hidjra; he was called *Shākmin*, — the Arabic form of Sakyamuni. This historian knows also of the Bodhisattvas: the next rank to that of the Buddha, he tells us, is that of the Būdis'iya, i. e. of the men who seek the path of truth. He explains that this is attained by patience, renunciation of the world, abstention from desire, sympathy with others, practising ten virtues, which are all virtues of gentleness and avoiding ten sins of which the chief are: the slaughter of any thing that has life, fornication, lying, slander and calumny. The Buddhas appear in various forms; the Buddhists assume the eternity of the world and believe in the retribution of acts in another life. This is almost all that Muḥammadan scholars know of Buddhism; Shahrastānī thinks that this religion flourished in India because of the climate of the country and the large number of ascetics in it.

The Arabs give the name of Būdasp to the mythical founder of the religion of the Sabaeans. In the reign of Tahmuret or Tahomers, Būdasp is said to have proclaimed this religion to the Persians who were previously *Ḥunafā*, i. e. pagans. The name of Būdasp, a corruption of Būdāsf is found in Iranian (*Bundahish*, xxviii); it is not formed directly from Buddha but rather from Bodhisattva (cf. *Avesta*, transl. J. Darmesteter, ii. 259 and iii. p. XLVII: Mas'ūdī, *Kitāb al-Tanbīh*, transl. de Vaux, p. 130).

The name *budd* is often also used in the sense of idol; thus the author of the *Compendium of Wonders* says that "the most prominent feature of the religion of the people of India is the worship of *budd*". The *Silsilat al-Tawārīkh* (p. 134-135) gives the name *budd* or *budda* to an idol worshipped in a country in India to which courtesans are dedicated; the word *budd* is here explained by *ṣanam*, idol. The idol of Somnath, the capital of Lāristān was well known to Muḥammadans. It is of it that Sa'dī tells in his Bustān (transl. by Barbier de Meynard, p. 354), that he surprised the priest in the act of pulling the string, with which he worked the arms of the statue. The story is, however, evidently fictitious. Dimishkī (*Cosmography*, ed. Mehren, p. 170-171) describes in detail the idol of Somnath; it evidently belonged to a Sivaite cult; he gives the name of *budd* to the principal object of worship which consisted of two stones representing the male and female organs of generation; this object was adorned with precious stones and placed on a pedestal, large enough for ten men to stand on. The pedestal itself was placed on the top of a pyramid with nine steps, covered with idols in human forms, very hot dishes were offered to these divinities and the vapours rising from them were thought to nourish the spirits of the fetish and those of the idols that surrounded it as well as the souls of the dead (cf. also what Reinaud says of the idol of Multān in the *Journal Asiatique*, 1844 and 1845). (B. CARRA DE VAUX.)

BUDJNURD, a town in Khorāsān, formerly called Būzandjird, to the north of Elburz in the valley of the Atrek at the foot of Nakhčīr-kūh on the north and of the Alā-Dagh and Schāh on the south; it has about 4000 houses. A citadel, in which the governor resides rises above the town. A boulevard planted with trees (*Khiyābān*) leads in a straight line from the gate of the citadel to the farthest end of the town, which before the Russian occupation, was exposed to the inroads of the Tekke Turkomans.

Bibliography: Nāṣir al-Dīn Shāh, *Siyāḥat-nāma-i Khurāsān*, p. 348. (CL. HUART.)

BUDŪḤ is an artificial talismanic word formed from the elements of the simple three-fold magic square

4	9	2
3	5	7
8	1	6

expressed in *Abdjad* by

د	ط	ب
ج	ه	ز
ح	ا	و

Other groups of letters from that square are similarly, but not so generally, used, e.g. بطد, زهج, واح and together بطد زهج واح. From some, also, larger squares are built up, as a four-fold on بدوح and a six-fold on ب ط د و ا ح. In the older Arabic books on magic (e.g. al-Būnī, d. A. H. 622, *Shams al-ma'ārif*) this formula plays a comparatively minor part; but after it was taken up by al-Ghazālī and cited in his *Munḳidh* (pp. 46 and 50 of ed. of Cairo, 1303) as an inexplicable, but certain, assistance in cases of difficult labour, it came to be universally known as "the three-fold talisman, or seal, or table of al-Ghazālī" (*al-wafḳ*, *al-khātam*, *al-djadwal*, *al-muthallath lil-Ghazālī*) and finally has become the foundation and starting point for the whole "Science of Letters" (*'ilm al-ḥurūf*). Al-Ghazālī is said to have developed the formula, under divine inspiration (*ilhām*), from the combinations of letters كهيعص and حمعسق which begin Sūras xix. and xlii. of the Ḳur'ān, and which by themselves are also used as talismans (Reinaud, *Monuments musulmans*, ii. p. 236). For the process see pp. 170 *et seq.* of *Mafātīḥ al-ghaib* (Cairo, 1327) by Aḥmad Mūsā al-Zarḳāwī, a contemporary Egyptian magician, and on the subject in general, the sixth and seventh *Risālas* in that volume. Others trace the formula back to Adam, from whom it passed down to al-Ghazālī (*Al-'ināya al-rabbāniya* p. 44, and *Al-asrār al-rabbāniya* p. 16, both by Yūsuf Muḥammad al-Hindī, a contemporary Egyptian writer on magic, who also has a special treatise on this *wafḳ* which I have not seen). In all this al-Ghazālī's established reputation as a custodian of mystical knowledge and especially of the book *Al-Djafr*, evidently played a part (*Journ. Am. Or. Soc.*, xx. p. 113; Goldziher, *Ibn Toumert*, pp. 15 *et seq.*). Another suggested origin is the Aramaeo-Persian name of the planet and goddess Venus, *Bīdukht* ܒܝܕܘܟܬ, بيدخت G. Hoffmann, *Auszüge aus syrischen Akten persischer Märtyrer*, pp. 128 *et seq.*). But though this name appears in the *Fihrist* (i. 311, 7) with magical and diabolic associations and is quoted very occasionally in connection with Zuhara (e.g. Maḳrīzī in his *Khiṭaṭ*, i. p. 8 of edit. of 1324; Tha'labī in his *Ḳiṣaṣ*, p. 29 of edit. of 1314 — both with misprints) it appears to be totally unknown in magical or Djinn literature. Yet the name evidently passed early into South Arabic, became used there as a feminine proper name and as a feminine epithet, *fat*,

and was confused with the root بذخ (*Lisān*, iii. p. 484 sub بدخ). Other standing in Arabic it does not have. Further, when Budūḥ is associated with a particular planet, it is with Saturn (*Zuḥal*) and its metal is lead (*Mafātīḥ*, above, p. 170), not copper as Venus would require. Hardly worthy of mention is Von Hammer's fancy that Budūḥ is one of the names of Allāh (*Journ. As.*, 1830, p. 72) though it may have a Turkish basis (and see, too, de Sacy below), and the derivation he suggests or the story told by Michel Sabbagh to de Sacy (*Chrest. ar.*, iii. 364 *et seq.*) that it was the name of a pious merchant whose packages and letters never went astray, though that may well be a popular Syrian explanation. In magical books there are few cases even of personifying the word (e.g. *Yā Budūḥ* in *Al-fatḥ al-raḥmānī* by Ḥādjdj Sa'dūn, p. 21) but for the popular mind Budūḥ has become a Djinnī whose services can be secured by writing his name either in letters or numbers (*Journ. As.*, Ser. 4. xii. 521 *et seq.*; Spiro, *Vocabulary of Colloq. Egyptian*, p. 36; Doutté, *Magie et Religion*, p. 296, with *Ḳaiyūm* as though a name of Allāh; Klunzinger, *Upper Egypt*, p. 387). The uses of this word are most various, to invoke both good and bad fortune. Thus, in Doutté (*op. cit.*), against menorrhagia (p. 234), against pains in the stomach (p. 229), to render one's self invisible (p. 275), against temporary impotence (p. 295). Lane's Cairo magician also used it with his ink mirror (*Modern Egyptians*, chap. xii), and so in several magical treatises. It is also engraved upon jewels and metal plates or rings which are carried as permanent talismans, and it is inscribed at the beginning of books (like *Kabīkadj*) as a preservative, e.g. in *Fatḥ al-Djalīl*, Tunis, 1290. But by far the most common use is to ensure the arrival of letters and packages. Besides the references above, see also Reinaud, *Monuments musulmans*, ii. pp. 243 *et seq.*, 251 *et seq.* and 256.

(D. B. MACDONALD.)

BUGHRĀ, in Eastern Turkī means a dromedary (cf. *bughur*), generally a male one; it was also the name of several rulers in Central Asia (cf. BUGHRĀ KHĀN), after whom a certain dish is named, a kind of pastry called in Ottoman Turkish *'adjem yakhnisi* "Persian ragout" and *tawa böreki* "pasty".

Bibliography: Sulaimān-Efendi, *Lughāt-i djaghatāi*, p. 82; Vámbéry, *Čagataische Sprachstudien*, p. 248; Pavet de Courteille, *Dictionnaire turc-oriental*, p. 172; [Mīrzā Ḥabīb], Glossary to the *Dīwān-i aṭ'ime* of Abū Isḥāḳ Ḥalladj, p. 175.

(CL. HUART.)

BUGHRĀ-KHĀN, the name of several rulers of the Turkoman dynasty of Ilak Khāns or Ḳarākhanids (in Central Asia). The most famous are:

1. Satūḳ-Bughrā-Khān 'Abd al-Karīm, said to be the first member of this dynasty to adopt Islām and propagate it in his kingdom. He is called Satuḳ (so Shabaḳ is to be emended) Ḳara-Khāḳān by Ibn al-Athīr (ed. Tornberg, xi. 54). We have no reliable information either regarding his reign in general or his conversion unless the account given by Ibn al-Athīr (viii. 396) of the adoption of Islām by a numerous Turkī people in 349 (960) refers to the subjects of this prince. According to Djamāl al-Ḳarashī (in Barthold, *Turkestān v epochu mongolskago nashestviya*, i. 130) he was dead by 344 = 955-956; his tomb at Artūdj (the modern Artish) near Kāshghar is still a place of pilgrimage. The account of his life known as the *Tadhkira-i Bughrā-Khān*, which has been edited by F. Grenard (*Journ. Asiat.*, ix[th] Series, xv. *et seq.*) is certainly legendary. Some portions of the saga are to be found in the oldest document that has survived to us, in Djamāl al-Ḳarashī, and others have been added at later periods; it cannot be proved that there is any real historic basis for these traditions.

2. Bughrā-Khān Hārūn b. Mūsā (in Ibn al-Athīr, ix. 68: Hārūn b. Sulaimān), grandson of the preceding, the first of this dynasty to conquer Mā warā' al-Nahr. The power of the Sāmānids had been shaken by internal dissensions during the reign of Nūḥ b. Manṣūr (365—387 = 977—999); when the conqueror set out from his capital of Balāsāghūn [q. v., p. 614] and appeared before Isfīdjāb (the modern Sairām near Čimkent), the frontier town of the Sāmānid kingdom on the northwest, he met with no great opposition anywhere. The nobles, who were hostilely disposed to the Sāmānids, are even said to have called in the Turks themselves; Bughrā-Khān was able to enter Bukhārā, the capital of the Sāmānids in Rabī' I, 382 = 7[th] May—5[th] June 992, but soon afterwards he became very ill through overindulgence in fruit and had to vacate the conquered land again. By the middle of Djumādā II. of the same year, on a Wednesday (the 17[th] August) Nūḥ returned to his capital; Bughrā-Khān died on the way to Kāshghar in Ḳočkar-bashi, perhaps not far from the source of the Ču, which is still called Ḳočkar. Ibn al-Athīr (ix. 68 *et seq.*) who could not find any exact details in his chief authority, the *Ta'rīkh-i Yamīnī* of 'Utbī, makes Bughrā-Khān first conquer Bukhārā in 383 (993-994) but this statement is definitely disproved by the accounts of Gardīzī (in Barthold, *Turkestān* etc. i. 12) and Baihaḳī (ed. Morley, p. 234) which are quite in agreement.

3. Bughrā-Khān Muḥammad b. Yūsuf, grandson of the preceding. In the lifetime of his father Kadr-Khān Yūsuf, who ruled in Kāshghar, he bore the title Yighān-Tegin; in 423 = 1032, after the death of his elder brother Arslān-Khān Sulaimān, he received the title of Bughrā-Khān and was granted Tarāz, (the modern Awliyā-Ata) and Isfīdjāb. Both as prince and ruler, he entertained relations with the Ghaznawids and hoped with their help to drive his opponent 'Alī Tegin [q. v., p. 297], out of Mā warā' al-Nahr; this plan was never carried out; nor was his marriage with Zainab, daughter of Sulṭān Maḥmūd and sister of Sulṭān Mas'ūd, ever celebrated, although the prince himself came to Balkh in 416 (1025) in the reign of Maḥmūd to fetch his bride (cf. Baihaḳī, ed. Morley, p. 655 *et seq.*). When the consummation of this alliance was again postponed in the reign of Mas'ūd, Bughrā-Khān made an alliance with the Saldjūḳs and became the enemy not only of the Ghaznawids but also of his own brother Arslān-Khān; Abū Ṣādiḳ Tabānī, the Imām sent by Mas'ūd, who left Ghazna on the 7[th] Dhu 'l-Ḳa'da 428 = 23[rd] August 1037 and spent 18 months in the land of the Turks, succeeded in appeasing Bughrā-Khān, however, and in reconciling him to his brother. During these years coins were struck in the name of Bughrā-

Khān even in Mā warā' al-Nahr from which it may be concluded that his rule was recognised there also. According to Ibn al-Athīr (ix. 358), he put down a Shī'a movement in Mā warā' al-Nahr, with great severity. Shī'ite emissaries had at that time been successfully winning adherents for the Fāṭimid Mustanṣir (427—487 = 1036—1094); Bughrā-Khān himself made a pretence of being in sympathy with the heretics but it was only to deceive them; when they believed they were safe from all danger through the protection of the Khān, the order was suddenly issued to destroy all heretics in the provinces as well as in the capital. Ibn al-Athīr (ix. 211) makes Bughrā-Khān reign only till 439 = 1047-1048, Baihaḳī (p. 230) who as a contemporary, is naturally the more reliable, till 449 = 1057-1058. According to both sources (the text of the MSS. of the *Ta'rīkh-i Baihaḳī* is here, as the Persian lithographed edition of 1307 = 1889-1890, p. 193 rightly remarks, hopelessly corrupt) he had driven his brother out of his kingdom and occupied it shortly before his death. According to Ibn al-Athīr, Bughrā-Khān was poisoned by his wife, who also had his imprisoned elder brother strangled.

4. Bughrā-Khān, prince of Kāshghar, to whom Yūsuf Khāṣṣ Ḥādjib of Balāsāghūn dedicated his didactic poem, the *Ḳudatḳu-Bilik* in 462 = 1069-1070. He was probably Bughrā-Khān Hārūn, according to Ibn al-Athīr (ix. 212 *et seq.*) a brother of the preceding. This Bughrā-Khān is said to have reigned for 16 years as joint-ruler with his brother Ṭoghrul Ḳara-Khān, and afterwards for 29 years alone over Kāshghar, Khotan and Balāsāghūn; the date 496 = 1102-1103 is given as the year of his death. The notices in Ibn al-Athīr (x. 112 *et seq.*) of the "Khān of Kāshghar" who submitted to Sulṭān Malik-Shāh in 482 (1089) must refer to him; the same author tells us of the wars between this Khān his brother Ya'ḳūb-Tegin (prince of Atbāsh) and a third prince Ṭoghrul but gives no information, regarding the ultimate result of these wars.

BUGI. [See CELEBES.]

BUḤAIRA (A.) "lake", diminutive of *Baḥr* "sea", p. 578.

BUḤAIRA (BEHERA) is the name of the north-western province of Egypt. It comprises the whole territory west of the Rosetta arm of the Nile. It is bounded on the north by the sea and on the south by the hills at the south-east end of the Wādī Naṭrūn which separate it from the province of Djīza 30° 25' n. B. In 1896 the population was 631,225 persons and the province is divided into the following seven districts (*Marākez*): Abū Ḥummuṣ, Shubrā Khīt, Damanhūr, Kafr al-Dawār, al-Nadjīla, Rashīd, and Etyā'i (pronounced Teh) al-Bārūd. These districts comprise 365 towns and villages and 2582 smaller settlements. Alexandria has its own government and is not included in the province.

The province of Buḥaira has existed since the division of Egypt into provinces by the Fāṭimid Caliph al-Mustanṣir. It corresponds roughly to the ancient Ḥawf Gharbī which was divided into eleven circles (*kūra*) down to the rearrangement of the provinces by Mustanṣir. One of these circles, mentioned by Ḳuḍā'ī, was called al-Buḥaira. Ḳalḳashandī supposes that this name refers to the "Sea of Būḳīr". This suggestion is correct in so far as the name Buḥaira might have been applied to the whole province from one of the large lakes in the north which periodically dry up. Buḥaira, however, may also be regarded as the diminutive of *baḥra*, according to Lane, "a wide tract of land, low or depressed land". For a while in the middle ages, Buḥaira was of much greater extent, for the district of Fuwwa which now belongs to Gharbiya then belonged to it. Since the division into provinces, Damanhūr has been the capital of Buḥaira. Ibn Dji'ān gives the amount of taxes at which it was rated at 741,294 $^{7}/_{3}$ dinārs and the number of the districts (*nāḥiya*) in it at 222.

(C. H. BECKER.)

AL-BUḤAIRA AL-MUNTINA, "the Stinking Sea", is the Dead Sea, s. BAḤR LŪṬ, p. 582.

BUHLŪL AL-MADJNŪN, ABŪ WUHAIB, B. 'AMR B. AL-MUGHĪRA AL-ṢAIRAFĪ AL-KŪFĪ was one of the *'uḳalā' al-madjānīn*, "intelligent madmen", a contemporary of Hārūn al-Rashīd (d. 193) and the source of many edifying and pious anecdotes and paraenetic verses. His name, Buhlūl, had in his time no association with idiocy. The lexicons (*Ṣiḥāḥ*, *Ḳāmūs*, *Lisān*, xii. 77, Lane p. 2670) give it the meanings "great laugher", "one who is generous or noble", "a chief combining all good qualities", "a generous tribe" and in Ibn Taghrībirdī's *Annales* (i. 513, 697; ii. 185), for example, we find it borne by eminently sane and respectable men who d. in 183, 233 and 298. That one of these who died in 183, the year which Ibn Taghrībirdī gives for Buhlūl al-Madjnūn's death, was Buhlūl al-Rashīd, may explain the persistent tradition (Ibn Tagh., i. 518, Vollers in *Zeitschr. der Deutsch. Morgenl. Ges.*, xliii. 115, for present day Cairene popular legend) connecting our Buhlūl with al-Sabtī, the semi-legendary son of Hārūn al-Rashīd (Chauvin, *Bibliogr. ar.*, vi. 193 and references there). An early reference to Buhlūl is in the *Kitāb 'uḳalā al-madjānīn* (Berlin Cat. ix. p. 316, No. 8328) by al-Ḥasan b. Muḥammad al-Naisābūrī (d. 406) although he may be mentioned also in the similar work (Derenbourg, *Escur.* No. 482, Brockelmann, i. 154) by Muḥ. b. Mazyad (d. 325). According to Kern, quoted in Meissner's *Neuarab. Geschichten*, p. v, he is mentioned by Ibn Zūlāḳ (d. 387) in his *Akhbār Sībawaihi al-Miṣrī* (Cairo Cat. v, 7) as "eine altbekannte Persönlichkeit". Ibn al-Djawzī (d. 597) tells that in 188 Hārūn al-Rashīd was met at Kūfa by Buhlūl who imparted to him a tradition from the Prophet, and refused a reward (Amedroz in *Journ. of the R. As. Soc.*, 1907, p. 35), there are also anecdotes of Buhlūl in his *Adhkiyā*, pp. 180 *et seq.* of ed. of 1277. Ibn Taghrībirdī (d. 870 or 874) gives a longer account, based in part on Dhahabī (d. 748). Buhlūl's insanity was intermittent (evidently resembling that of Sa'dūn al-Madjnūn, Sha'rānī's *Ṭabaḳāt*, p. 54 of ed. of 1316), his language was good, and quick-witted stories came down from him. Dhahabī said that he narrated traditions from 'Amr b. Dīnār, 'Āṣim b. Bahdala and Aiman b. Nā'il; but as a traditionalist he was neither accepted nor rejected, and students did not write down anything which he gave. He lived through

the whole reign of al-Rashīd, whom he used to exhort and whose gifts he rejected. Sha'rānī (d. 973) gives, in his *Ṭabaḳāt* (p. 54), an account of such an interview and exhortation. In Yāfi'ī's (d. 768) *Rawḍ al-rayāḥīn* there are two anecdotes (pp. 33 and 45 of ed. of 1315) of a Buhlūl, but one of them describes a conversation with Shiblī who died in 334. Shiblī meets him riding on a cane with a stick in his hand, and going to present himself before Allāh. The conversation is similar to those above. The second is an interview at Baṣra reported by Buhlūl himself, with a pious boy, a descendant of Ḥusain b. 'Alī. It is different in that the exhorting is done by the boy.

His grave was shown to Niebuhr at Baghdād where he is described in an inscription dated 501, as the sulṭān of the *madjdhūbs* (saints attracted to Allāh) and the dulled soul (*al-nafs al-mutammana*). To Niebuhr he was called Bahlūl-dāna, "wise fool", and was described as a relative of al-Rashīd and as his court fool. Stories of his wit and sagacity were told in the coffee-houses, and he had evidently been transformed entirely from the pious idiot of the earlier legend (*Reisebeschr.*, ii. 301 *et seq.*; Le Strange, *Baghdad*, p. 350). The extreme of this last development of the legend is reached when Buhlūl became the hero of erotic stories, as in the *Rawḍ al-'āṭir* of Nafzāwī (fl. at Tunis early xvi[th] cent.: p. 14 of Cairo ed. and p. 9 of ed. of 1315), who makes Buhlūl a contemporary of Ma'mūn. See, too, the stories in Meissner's *Neuarab. Geschichten*, pp. v. and 73—83. From the above it is plain that Ibn Khaldūn's (d. 808) distinction of *buhlūls* (*bahālīl*), idiots whose reason (*'aḳl*) alone failed, but whose logical soul (*nafs nāṭiḳa*) was still intact and who were, therefore, capable of sainthood, and the insane (*madjānīn*) in whom the logical soul was corrupted, arose quite late, after *buhlūl* had become a common noun (*Proleg.*, ed. Quatremère, i. 201 *et seq.*; de Slane's transl. i. 229 *et seq.* and Macdonald, *Relig. Attit. in Islam*, p. 103). So Ibn Baṭṭūṭa (d. 779) had one of his very minor *karāmāt* with a *Buhlūl* (ii. 89). The later and modern development of this, especially in the Maghrib, can be read at length in E. Doutté's *Les Marabouts*, pp. 75 *et seq.* where it should be noticed that the *bahālīl* are characterised by great bursts of laughter. There are also *buhlūlāt*. This curious persistence of the original meaning of *buhlūl* suggests that the word itself, equally with the existence of the historical Buhlūl may have led to this application. To judge by Redhouse's *Turkish and English Lexicon* (p. 416[a]) *buhlūl* still means "great laugher" in Turkish. Dozy (*Suppl.*, s. v.) quotes a similar Arabic usage from Bocthor. For references to stories about Buhlūl, mostly of the court-fool type, see Chauvin, *Bibliogr. ar.*, vii. p. 126 *et seq.* Asserted poems by him and stories about him are catalogued in Berlin, Cat. vol. iii. p. 251, N°. 3437; vol. vii. p. 170, N°. 8061; p. 233, N°. 8103; p. 670, N°. 8784; vol. viii. p. 51, N°. 9065; in Cat. of Biblio. Nat., p. 623, N°. 3653. (D. B. MACDONALD.)

AL-**BUḤTURĪ**, ABŪ 'UBĀDA AL-WALĪD B. 'UBAID, Arabic poet and anthologist of the third century (204—284 approximately). His *nisba* signifies member of the Buḥtur clan of the tribe Ṭai', whose glories he frequently celebrates. His birthplace was Manbidj (or, according to one account a village near Manbidj called Zardafna), and of Manbidj he often speaks as his home; here he ultimately acquired property, which seems to have been inherited by his son Thābit, who was living there in Iṣṭakhrī's time. The woman who forms the subject of his erotic prologues in the greater number of cases was one 'Alwa of Buṭyās near Ḥalab, daughter of Zuraiḳa; in a poem addressed to al-Fatḥ b. Khāḳān (i. 44) he speaks of her (outside the prologue) as "his friend and the joy of his heart" whom he had left behind in Syria; and in another (ii. 109) she is obscenely satirized; there is no doubt then that she is historical, which is probably not the case with the other women mentioned in the prologues. What appear to be authentic traditions bring him into connexion with the other great Ṭā'ī poet Abū Tammām, though the accounts of their meeting are inconsistent; Abū Tammām is said to have recommended him as encomiast to the people of Ma'arrat al-Nu'mān, who engaged him at a salary of 4,000 dirhems. If this be true, the poems belonging to that period appear not to be included in the dīwān, where "the village of Nu'mān" is mentioned in connexion with Ibn Thawāba (i. 117), who must have come into the poet's life much later. The earliest poems included in the dīwān appear to be addressed to eminent families belonging to the poet's tribe, the Banū Ḥumaid, three brothers Abū Nahshal (mentioned in *Aghānī*, ix. 102), Abū Muslim, and Abū Dja'far (this last can scarcely be identical with the victim of Bābak, ob. 214), and the family of Abū Sa'īd Muḥammad b. Yūsuf (ob. 236), at whose house he is said to have met Abū Tammām; a poem in which this personage is consoled for the death of Mu'taṣim (i. 169, probably of the year 227) is perhaps the earliest in the collection. An early patron of the poet was the vizier Muḥammad b. 'Abd al-Malik b. al-Zaiyāt, whom he eulogized in the reign of Wāthiḳ (ii. 104). Another family to which he addressed encomia was that of 'Abdallāh b. Ṭāhir, whose son Muḥammad was made viceroy of Baghdād in the year 237; a poem which is perhaps not much later congratulates him on his appointment (ii. 125); two other sons, Sulaimān and 'Ubaid Allāh, also form subjects of encomia, as well as more distant connexions. He appears to have become court-poet first in the reign of Mutawakkil, when he enjoyed the patronage of al-Fatḥ b. Khāḳān, to whom his *Ḥamāsa* is dedicated; to both he addressed a large number of encomia, though his relations with al-Fatḥ appear at times to have been strained. From the year 235, when Mutawakkil proclaimed his three sons heirs to the throne, these encomia follow the events of the reign, such as the Armenian revolt (237), the Caliph's temporary residence in Damascus (243), his restoration of the Nairūz (245), his building of Mutawakkiliya (245-246). Mas'ūdī has preserved a narrative in which Buḥturī records as an eye-witness the murder of his two patrons; and indeed he confesses in his dirge on Mutawakkil (i. 28), that he was present, and excuses himself for failing to defend his patrons effectively on the ground that he was unarmed: he did however what he could with his hands. These two he continued to regard as his chief patrons (ii. 163, i. 112). After the catastrophe he retired to Manbidj, but speedily came forward with a eulogy on Muntaṣir, and he continued to officiate as court poet under the succeeding Caliphs, Musta'īn,

Mu'tazz, Muhtadī and Mu'tamid. He appears to have been in especial favour with Mu'tazz, to whom he addressed numerous odes, and whom he even employed as mediator between himself and 'Abd Allāh b. Mu'tazz. It would seem that his powers failed before the end of Mu'tamid's reign.

His success as court-poet naturally brought him into connexion with all the leading men of the empire, and of the large number of persons mentioned in his odes the greater number are otherwise known. These include statesmen, such as the viziers 'Ubaid Allāh b. Yaḥyā b. Khāḳān, Ḥasan b. Makhlad, Sulaimān b. Wahb, and Ismā'īl b. Bulbul; generals and governors, etc. such as Ibrāhīm and Aḥmad sons of al-Mudabbir; Aḥmad b. Ṭūlūn, Mālik b. Ṭawḳ, and his brother Muḥammad; secretaries of state such as Ibn Thawāba, Abū Nūḥ 'Īsā b. Ibrāhīm, etc.; the courtiers 'Alī b. al-Munadjdjim and Ibn Ḥamdūn; the grammarian al-Mubarrad; the geographer Ibn Khurdādhbeh; the litterateur Abu 'l-'Ainā. His dīwān thus forms a welcome supplement to the chronicles of the time, to which it not unfrequently adds details, sometimes by giving us the full names of the personages, at others by recording events which the historians appear to have overlooked.

The poems addressed to the Caliphs contain numerous references to the controversy between the 'Abbāsids and the 'Alids on the one hand, the Umaiyads on the other; only on one occasion, when a Moslem official had been delivered over to a Christian to torture, does the poet wish Umaiyad days back. Ordinarily he insists, on the claim of the uncle to the succession, on the merits of 'Abbās himself and his privilege of *siḳāya*, which the poet seems to interpret quite correctly as the right of obtaining rain (i. 21, 23), the services to Islām of the Persians, whom he calls *Mawālī*, and their equality with the Arabs, and the services of the 'Abbāsids to the 'Alids, which he extols somewhat in the same style as did Manṣūr (i. 63). He delights in describing palaces, e.g. the ship-palace called *Zaww*, those built by Mutawakkil, the Dausaḳ of Mu'tazz, those of Mu'tamid called Ma'shūḳ and Mashūḳ, and the ruined Īwān of the old Persian kings, which he visited in the company of his son Abu 'l-Ghawth, and on which he has an interesting ode (i. 108); somewhat similar is his description of a warship (i. 257), and the aqueduct constructed for the benefit of the pilgrims by the mother of Mu'tazz (ii. 146). As might be expected, the battles of Muwaffaḳ and his captains with the rebel Zandjs are frequent subjects of allusions.

Like most of his class Buḥturī was constantly begging, either for assistance towards his *kharādj* (i. 106, 127, 189), or for help in the matter of his estates (i. 150, ii. 152), or against officials who were attempting to defraud him (ii. 153), and complaining that his remuneration was insufficient (i. 257) or that promises made him had not been fulfilled (i. 222). In the *Aghānī* a singularly ingenious device is explained whereby he raised money, which was to induce friends to purchase his slave-boy Nasīm, and then complain so bitterly of the parting that the purchaser gave him back; a series of poems addressed to Ibrāhīm b. al-Mudabbir illustrate this process (i. 179—181).

Buḥturī is said to have given dying injunctions to the effect that his satires should be destroyed, and the author of the *Aghānī* thinks that the best may have perished; nevertheless a considerable number remain, and it is clear that he employed the common plan of extorting remuneration for his eulogies by threatening to satirize those who refused it; in consequence there are numerous cases in which the dīwān contains eulogies and satires on the same personage; at other times (e.g. in the case of Ibn Ṭūlūn) his attitude veered with political and not only personal considerations. Of his fellow-poets 'Alī b. al-Djahm (ii. 88, 99, 107) and al-Ḥasan b. Radjā (ii. 107) form the subject of satires; on the other hand he seems to have been on friendly terms with Di'bil (ii. 177). He attacks the grammarians in one of his odes (ii. 132), and Christians more than once (ii. 96, 112).

Native criticism classifies him with Abū Tammām and Mutanabbī as one of the three chief poets of the 'Abbāsid period; and comparison between him and Abū Tammām is a favourite subject of essays. In his own opinion his best was below Abū Tammām's best, and his worst above Abū Tammām's worst; Mas'ūdī devotes some pages to the consideration of this subject, and it is treated at length in the *Kitāb al-Muwāzana baina Abī Tammām wal-Buḥturī* of al-Ḥasan b. Bishr al-Āmidī, who however is charged with gross favouritism towards Buḥturī. Probably most European critics would find Buḥturī less brilliant than Mutanabbī, yet far more poetical than Abū Tammām.

The *Fihrist* attributes to Buḥturī besides the dīwān a work on "Poetic ideas" and a *Ḥamāsa*, which is preserved in a Leyden MS., and was both facsimiled and edited in 1909 [see ḤAMĀSA]. The dīwān was published in Constantinople, 1300, ostensibly from a MS. of the year 424; the odes are roughly grouped by the persons and families to whom they are addressed, but this arrangement is not consistently observed. A similar copy is that in the Vienna Library (Catal. i. 436). The poems were arranged in alphabetical order by Ṣūlī, and part of such a copy exists in the Munich Library (no. 508). 'Alī b. Ḥamza al-Iṣfahānī (Yāḳūt, *Dictionary of Learned Men*, v. 200) is said to have arranged them excellently in order of subjects (*Fihrist*, 165). The dīwān sometimes bears the title *salāsil al-dhahab*. Of Abu 'l-'Alā's commentary upon it called *'Abath al-Walīd* some extracts have been printed in the *Muḳtabas*. This author (Abu 'l-'Alā) in his *Rasā'il* (ed. Oxon., p. 90) records the curious detail that Buḥturī had "peacocks' feet".

(D. S. MARGOLIOUTH.)

BŪḲĀ (also written BŪḲA), a Turkish chief of the tribe of Ghuzz (Turkomans) is mentioned in Ibn al-Athīr (ix. 267 *et seq.* and 343) and Baihaḳī (ed. Morley p. 71). Būḳā belonged to that section of this people which had separated from the rest of the tribe in Mā warā' al-Nahr in 420 = 1029 and crossed the border into Khorāsān [see BALKHĀN above, p. 623]. By command of Sulṭān Mas'ūd who had taken them into his service, these Ghuzz were attached to the army of Tāsh-Farrash who was sent against 'Alā al-Dawla b. Kākūya (422 = 1031, cf. DUSHMANZIYĀR); Tāsh had more than 50 of their leaders seized and executed, on account of the robberies which they committed in Khorāsān; on this occasion as in the reign of Maḥmūd, Mas'ūd's predecessor, one section of them was massacred; the

others moved to the west and passed through various provinces of Khorāsān in the next few years to Diyār-Bakr, owing allegiance to no one, till they suffered an annihilating defeat from the Arabs of Diyār-Bakr under Ḳirwāsh b. Muḳallad (a prince of the Banū ʿOḳail) on the 20th Ramaḍān 435 = 21st April 1044. During these years they wrought terrible havoc on many towns from Damghān to Mawṣil; the harm done by these nomads however was not permanent; the Ghuzz came and went "like a summer cloud", says Ibn al-Athīr (ix. 277). Būḳā is several times mentioned in the accounts of these marauding excursions, once as chief of a division which returned to Raiy from Ādharbaidjān and plundered it for a second time, and afterwards took part in the siege and plunder of Hamadhān. His name is also found in the list of the chiefs who rejected in the abruptest fashion the offer of Sulṭān Tughril-Beg, who belonged to the same stock as they did, when he wished to take them into his service. Būḳā was also present at the last battle against Ḳirwāsh; whether he was slain in this battle or was one of few who survived, is not related.

(W. Barthold.)

BŪḲĀ or Būḳa (both forms are found), a place first mentioned in connection with the inroads of the Djarādjima-Mardaites into Syria. The name is again found in the history of the conquests under the Umaiyad Caliph Hishām. After its first destruction it was rebuilt and Būḳā is mentioned in the 4th century, after the Kūras of Antioch and Tīzīn; it must have been still in existence in the time of the geographer Yāḳūt; we know that it lay not far from Antioch and from the Djabal al-Lukkām (southern Amanus); its site therefore is to be sought in ʿAmḳ or in that part of the plain of Antioch, to which the name of Djūwa is applied. Its neighbourhood must have been swampy, for in the reign of Walīd I. the Zuṭṭ with their buffaloes were sent from Syria by Ḥadjdjādj and settled here. This description suits the district in which we noticed the little village of Djordjām, the name of which reminds us of Djarādjima. It also agrees with the very probable Syriac etymology *bōḳā* "mosquito", which is further testimony to the marshy nature of the district. The population of Būḳā was possibly Mardaite.

(H. Lammens.)

BUḲʿA also Baḳʿa (A.), according to the lexicographers means a strip of land which is in some way distinguished from its surroundings and is particularly applied to a place where water lies and stagnates. The word, with its diminutive al-Buḳaiʿa often appears in the names of plains. — The plural al-Biḳāʿ is the name of the long plateau, with an average height of 3000 feet, which forms the central part of the great Syrian depression between the mountain masses of Lebanon on the one side and Hermon and Antilebanon on the other which, according to a theory now rejected, put forth by Th. Nöldeke in *Hermes*, x. 167, had given its name to the Κοίλη Συρία "Hollow Syria". The word *al-Biḳāʿ* has often been connected with the Hebrew *Biḳʿā*, "Chasm, valley" and even with the name Baalbek [q. v.] the largest town in the district. For the explanation of the name — in accordance with the meaning of the Arabic — one ought rather to point to the marshy district situated between Karak Nūḥ and ʿAin al-Djarr (the modern ʿAndjar), which was drained and settled by Tengiz, governor of Damascus about 1330. — Al-Biḳāʿ belonged to the *djund* of Damascus from quite early times. In the Mamlūk period, the district was divided into two administrative districts, al-Biḳāʿ al-Baʿlabakkī in the north and al-Biḳāʿ al-ʿAzīzī, with its administrative centre in Karak Nūḥ, in the south which belonged to the northern frontier province (*ṣafaḳa*) of the *niyāba* of Damascus. Arab authors derive the name al-Biḳāʿ al-ʿAzīzī from al-ʿAzīz [q. v., p. 540] son of Ṣalāḥ al-Dīn but modern scholars from the name of the God Ἄζιζος (see Pauly-Wissowa, s. v.). The numerous sanctuaries, such as the Grave of Noah, Ḳabr Elyās, and Nebī Shīth may perhaps justify the conclusion that the place once had a peculiarly sacred character. According to the modern Turkish administrative division, Baʿalbek and Biḳāʿ al-ʿAzīz (with its seat of administrations in Djubb Djenīn) are two Ḳaḍās of the Sandjak of Damascus.

BUKAIR b. Māhān Abū Hāshim, one of the most zealous propagandists of the ʿAbbāsids. Bukair was originally employed as secretary or interpreter with Djunaid ʿAbd al-Raḥmān, governor of India when the latter was dismissed. Bukair went to Kūfa in 105 (723-724) where he was won over to the ʿAbbāsid faction and placed his great wealth at their disposal. After the death of the ʿAbbāsid emissary Maisara, he was entrusted by Muḥammad b. ʿAlī, the leader of the ʿAbbāsids, with charge of the propaganda in ʿIrāḳ. He displayed particular ability and energy in his efforts to win over the people of Khorāsān to the ʿAbbāsid party. In 107 (725-726) he sent several agents to this province; they were seized and executed however, by the governor Asad b. ʿAbd Allāh, only one, ʿAmmār al-ʿAbbādī, being able to escape by flight and return to Bukair. In the following year he is said to have made another attempt which ended in the execution of ʿAmmār and the flight of those accompanying him; but this appears to be merely another version of the preceding story. In 118 (736) Bukair appointed ʿAmmār b. Yazīd to take charge of the ʿAbbāsid propaganda in Khorāsān; the latter settled in Marw, took the name of Khidāsh and eagerly threw himself into the task of winning adherents for Muḥammad b. ʿAlī. At first he met with great success, but when he adopted the doctrines of the Khurramīs and preached the coarsest immorality and irreligion, he was seized by Asad and executed with the cruellest tortures. Another consequence of his agitation was that Muḥammad b. ʿAlī was incited against the followers of Khidāsh and broke off relations with them. To appease him the latter sent Sulaimān b. Kathīr to him in 120 (738) when he returned, Muḥammad gave

him a letter to take with him which only contained the words *bi'smi 'llāhi 'l-raḥmāni 'l-raḥīm.* He also sent Bukair to Khorāsān openly to deny the doctrines of Khidāsh. Bukair however was received with suspicion and had to return with his object unaccomplished. Muḥammad then sent him again to Khorāsān, and gave him with him a number of sticks, some of which were shod with iron and others with copper. When Bukair divided the sticks among the leaders of the factions, they saw their mistake and were converted. In 124 (741-742) Bukair was seized and imprisoned; meetings were being held in a house in Kūfa and as the chief agent of the 'Abbāsid propaganda, Bukair was held mainly responsible. Even while in prison he worked for the 'Abbāsids and succeeded in winning 'Īsā b. Ma'ḳil to their cause. The latter had a slave named Abū Muslim, the future general and governor of Khorāsān. According to some accounts Bukair bought him from 'Īsā and gave him to Ibrāhīm, son of Muḥammad b. 'Alī; but the exact details of the manumission of Abū Muslim are not certainly known. In 126 (743-744) Bukair was commissioned by Ibrāhīm to go to Khorāsān to announce the death of Muḥammad to the adherents of the 'Abbāsids and proclaim Ibrāhīm as his successor. After receiving the homage of the people of Khorāsān on behalf of Ibrāhīm, Bukair returned, bringing with him the money that had been collected in Khorāsān for the 'Abbāsid cause. Bukair died in 127 (744-745). On his deathbed he recommended Abū Salama Ḥafṣ b. Sulaimān as his successor. This choice was confirmed by Ibrāhīm and Abū Salama was recognised as his plenipotentiary.

(K. V. Zettersteen.)

BUKAIR B. Wassādj, Governor of Khorāsān. In the war between 'Abd Allāh b. Khāzim governor of Khorāsān and the Tamīmites, Bukair is often mentioned. Ibn Khāzim was a supporter of the rival Caliph 'Abd Allāh b. al-Zubair and rose against the Umaiyads. As soon as he had made his position secure, he began to oppress the Tamīmites, who were scattered throughout Khorāsān. When the latter appealed to his son Muḥammad in Herāt, whose mother was a Tamīmite, Ibn Khāzim wrote to Shammās b. Dithār and Bukair b. Wassādj, his lieutenants in Herāt and ordered them to drive back the Tamīmites. Shammās, however, went over to their side, while Bukair sought to carry out the order but in the end could not prevent the Tamīmites from entering the town and slaying Muḥammad b. 'Abd Allāh b. Khāzim. In 72 (691-692) when Ibn Khāzim refused to take the oath of fealty to 'Abd al-Malik, Bukair was appointed governor of Khorāsān by the Caliph. Ibn Khāzim then advanced against Marw, but was challenged by Baḥīr b. Warḳā' and a battle ensued in which the former was slain. Bukair now wished to take the credit for the death of Ibn Khāzim and threw Baḥīr into prison. As the population of Khorāsān was afraid of renewed unrest, they wished to have a Ḳoraishite governor and Bukair was therefore deposed in 74 (693-694) and Umaiya b. 'Abd Allāh b. Khālid, appointed his successor. Baḥīr was then set free and became reconciled with Bukair. In 77 (696-697) Umaiya equipped an expedition against Bukhārā and placed Bukair in command of it. As he had, however, been warned against Bukair by Baḥīr, he took the field himself, taking Bukair with him and leaving his son behind in Marw. As soon as Umaiya had crossed the Oxus, Bukair set the boats on fire to make his return impossible and hurrying back to Marw, declared himself independent and threw Umaiya's son into prison. Umaiya was thus forced to make peace with the people of Bukhārā and advance against Bukair. According to another account, the latter never went with Umaiya, but remained in Marw during the campaign. In any case, his rebellion ended in Umaiya's having to grant him honourable terms of surrender. Among other points he promised no longer to pay attention to the defamatory statements of Baḥīr. Nevertheless Bukair was accused of treason at the instigation of Baḥīr and executed in the same year.

BŪḲALAMŪN. [See ABŪ ḲALAMŪN, p. 94.]

BUKHĀRĀ, a city in Turkestān, on the lower course of the Zarafshān. We have only the scantiest notices of the history of the city in pre-Muḥammadan times. There can be little doubt, however, that the Iranians had settlements and even towns on the Zarafshān at a very early period; even in the time of Alexander the Great of Macedon there was another town in Sogdiana besides Maracanda (Samarḳand) on the lower course of the river; but whether this town corresponded to the modern Bukhārā may be questioned. Local tradition in the early centuries of the Hidjra described some other settlements in the same neighbourhood as "older than Bukhārā"; one of these, the village of Rāmīthan, Riyāmīthan, or Aryāmīthan (the modern Čarshamba-i Ramitan) is regarded by Muḳaddasī (ed. de Goeje, p. 282) as the "ancient Bukhārā (*Bukhāra 'l-ḳadīma*)".

In any case a city was founded on the site of the modern Bukhārā several centuries before Islām. From the vth century A. D. onwards, this town is known to Chinese writers as Nu-mi, which corresponds to the ancient name Numidjkath which survived into Muḥammadan times. The name Bukhārā (Chinese Pu-ho) seems to be first given by the Chinese pilgrim Hüan-Čuang (about 630). That the name, as has been suggested, is identical with *bukhar*, the Turki-Mongol form of the Sanskrit *vihāra*, "monastery" is not improbable; the same explanation is given in the viith (xiiith) century by Djuwainī (cf. the text in Schefer, *Chrestomathie Persane*, ii. 122). In any case there was a Buddhist monastery at Bukhārā as at Balkh and Samarḳand; indeed the notices on the topography of the town in the ivth (xth) century which are quoted below enable us to fix its site approximately.

Of the native (or possibly Turkī) dynasty of the Bukhār-Khudāt (or Bukhārā-Khudhāh, princes of Bukhārā) which ruled here before the Arabs, we only know from Chinese sources that one of these princes boasted about 627 A. D. that his ancestors

had been ruling the land for 22 generations. The remainder of our information about the Bukhār-Khudāts is obtained from historians of the Muhammadan period. Besides the information contained in works on universal history or in the literature of the conquests, we also possess, although only in later recensions, a separate history of the town, composed in the year 332 = 943-944 by Muhammad Narshakhī; this work contains much valuable information and is specially valuable for the historical topography of the town; nevertheless what Narshakhī tells us about the pre-Muhammadan history of Bukhārā obviously rests on no very reliable tradition. It is, for example, more than doubtful whether Narshakhī had any evidence for his statement that the Bukhār-Khudāt who first struck coins in Bukhārā was a contemporary of the Caliph Abū Bakr (11—13 = 632—634 A. D.).

The accounts of the first Arab conquests across the Oxus are also partly legendary and still require critical examination. The first Arab army is said to have appeared before Bukhārā in 54 = 674 under ʿUbaid Allāh b. Ziyād. The ruler of Bukhārā at that time was a woman, the widow of the late prince, who is usually called Khātūn (Turk. = "Woman"; in Ṭabarī, ii. 169 in place of her, Ḳabadj-Khātūn is mentioned, not as a widowed princess of Bukhārā but as the wife of the reigning king of the Turks). According to Narshakhī (ed. Schefer, p. 7) she ruled 15 years as regent for her infant son Tughshāda (in Ṭabarī, ii. 1693 Ṭūḳ Siyāda); but this Bukhār-Khudāt appears again in Ṭabarī as still a youth in 91 = 710, when Ḳutaiba b. Muslim after overthrowing his enemies, installed him as prince of Bukhārā. The rule of Islām in Bukhārā was first placed on a firm footing by Ḳutaiba. Even Tughshāda, adopted Islām or at least pretended to and ruled for 30 years afterwards in Bukhārā. In Ramaḍān 121 (11th Aug.—9th Sept. 739) he was murdered by two nobles in the camp of the governor Naṣr b. Saiyār at Samarḳand. During his long reign several rebellions against the Arab suzerainty took place and the Turks invaded the country several times; in 110 = 728-729 the town of Bukhārā itself was lost to the Arabs and they had to besiege it but regained it next year (Ṭabarī, ii. 1514 and 1529). What attitude Tughshāda took up during these wars, is unknown.

His son and successor, called "Ḳutaiba" in honour of the conqueror, behaved at first like a good Muslim and earned the gratitude of the House of the Prophet; when in the year 133 = 750-751 the Arab Sharīk b. Shaikh raised a revolt in Bukhārā against the new dynasty of Caliphs, the rebellion was put down by Ziyād b. Ṣāliḥ who had been sent thither by Abū Muslim, with the help of the Bukhār-Khudāt. Nevertheless the Bukhār-Khudāt was at a later period accused of apostasy from Islām and put to death by order of Abū Muslim. His brother and successor Buniyāt (the reading is not certain) met the same fate during the reign of the Caliph al-Mahdī (159—169 = 775—785) for the Caliph had him put to death as a follower of the heretic al-Muḳannaʿ. After this period the Bukhār-Khudāts appear to have been of litte importance in the government of the country but they held an influential position on account of the great estates in their possession. In the early years of the reign of the Sāmānid Ismāʿīl, while his brother Naṣr was still alive, mention is made of the Bukhār-Khudāt. Abū Isḥāḳ Ibrāhīm deprived the latter of his lands but he was to be allowed the same income (20,000 dirhems) from the state treasury, as he had previously derived from his estates. How long the government fulfilled this obligation to the Bukhār-Khudāt or his successors is not related.

Besides the native prince, the Bukhār-Khudāt, there was of course, in Bukhārā from the first years of the conquest (at least from the time of Ḳutaiba b. Muslim) an Arab Emīr or ʿĀmil who was subordinate to the Emīr of Khorāsān, whose headquarters were in Marw. On account of its geographical situation, Bukhārā was much more closely connected with Marw than with Samarḳand and the other towns of Mā warāʾ al-Nahr; the Bukhār-Khudāt had even a palace of his own in Marw (Ṭabarī, ii. 1888, 14; 1987 7; 1992 16). In the iiird (century ixth) also when the Emīrs of Khorāsān transferred their seat to Nīshāpūr, the administration of Bukhārā remained separate from that of the other parts of Mā warāʾ al-Nahr; till 260 = 874, Bukhārā did not belong to the Sāmānid territory but was under a separate governor, immediately responsible to the Ṭāhirids; the successors of these governors at a later period also had their palaces in Marw (Iṣṭakhrī, ed. de Goeje, p. 260). After the fall of the Ṭāhirids (259 = 873) the usurper Yaʿḳūb b. Laith was recognised only for a brief period in Bukhārā as Emīr of Khorāsān; the clergy and the populace applied to the Sāmānid Naṣr b. Aḥmad, who was ruling in Samarḳand and he appointed his younger brother Ismāʿīl governor of Bukhārā. Bukhārā henceforth was ruled by Ismāʿīl and his successors till the fall of the Sāmānids. Ismāʿīl continued to live in Bukhārā, after the death of his brother, Naṣr in 279 (892) when the whole of Mā warāʾ al-Nahr passed under his sway and also after his victory over ʿAmr b. Laith in 287 (900) when he was confirmed by the Caliph in the rank of Emīr of Khorāsān. The city thus became the seat of a mighty ruling house and the capital of a great kingdom (the officials also had their residences in Bukhārā) although it never equalled Samarḳand, the ancient capital of Mā warāʾ al-Nahr in size or wealth during this period.

The Bukhārā of the Sāmānid period is described in detail by the Arab geographers of the ivth (xith) century; we also owe much information to Narshakhī and later editors of his works. A comparison of these accounts with the descriptions of the modern town (particularly thorough in Khanikow, *Opisanie Bukharskago Khanstva*, St. Petersburg, 1843, p. 79 *et seq.*), shows clearly that in Bukhārā, unlike Marw, Samarḳand etc., only an expansion of the area of the town and not a shifting of the town from one place to another, may be traced. Although Bukhārā has been as little spared by fire and sword as the other cities of Central Asia, it has always been rebuilt on the same site and on the same plan as in the iiird (ixth) century. It is thus much easier to understand the original authorities on the subject. We can rarely trace the development and the topography of a mediaeval town so distinctly as here.

As in most Iranian towns, the Arab geographers distinguish three main divisions of Bukhārā: the citadel (Pers. *kuhandiz* = "ancient fortress", usually written *ḳuhandiz* in Arabic and afterwards contracted to *ḳundiz* or *ḳunduz*); the original town proper (Arab. *madīna*, Pers. *shahristān*)

and the suburb (in Persian works also only the Arabic name *rabaḍ* is applied to it) lying between the original town and the new wall which has been built in Muḥammadan times. The citadel from the earliest times has been on the same site as at the present day, east of the square still known, as in the Sāmānid period, as "Rīgistān"; two gates then led into the fortress (at the present day there is only one, from the Rīgistān side), the "Rīgistān Gate" on the west and the "Ghūriyān Gate" or "Gate of the Friday-Mosque" on the east; a street led from the one gate to the other. As the area of the citadel was naturally limited by the site on which it was built, probably no alterations have been made in it from the earliest times; it is now about 1 mile in circumference and has an area of 23 acres. Within the fortress, probably on the site that is now occupied by the palace of the Emir of Bukhārā, was the palace of the Bukhār-Khudāt. This building is said to have been erected in the vii[th] century A. D. before the conquest; it was supported by seven stone columns, which represented the constellation of the Great Bear (*banāt al-na'sh*). Above the gate of the palace was fastened an iron plate with the builder's inscription. According to an old popular belief no prince has ever fled out of this palace before an enemy nor has one died within its walls; death overtook them all while without it. The translator of the *Ta'rīkh-i Bukhārā*, Aḥmad al-Ḳubawī (wrote in Djumādā I 522 = May 1128) says that the palace was first destroyed in his lifetime and the plate with the founder's inscription perished also. As Iṣṭakhrī shows (p. 306 above) it was however still being used by the Sāmānids; the later Sāmānids did not inhabit it; according to Muḳaddasī (p. 280, ?) they had only their treasuries and their prisons there. Besides the palace there was in the citadel the oldest Friday Mosque, erected by Ḳutaiba; a temple of idols (*but-khāna*) is said to have occupied the site previously. When the ancient mosque was replaced by a larger one, the old building was used as a revenue office (*dīwān al-kharādj*). The citadel was several times destroyed in the vi[th] (xii[th]) and vii[th] (xiii[th]) centuries and rebuilt; the last remains of the ancient buildings were destroyed in 560 = 1164-1165 and used as building material to repair the town-walls.

Unlike most other towns, the citadel of Bukhārā was not within the Shahristān but outside it; between them, to the east of the citadel, was an open space where the Friday Mosque stood from the second half of the second (viii[th]) century to the vi[th] (xii[th]) century. What part of the modern town corresponds to the Shahristān may be exactly determined, for, according to Iṣṭakhrī (p. 307), there was no running water on the surface either in the citadel or in the Shahristān on account of their high situation. According to the plan given by Khanikow in his book, this high-lying portion of the town is about twice as large as the citadel; it is of course long since it was surrounded by the separate wall which encompassed it in ancient times. This wall had seven gates, the names of which are given by Narshakhī and the Arab geographers. As was the rule in Central Asia the market place in pre-Muḥammadan times was without the city walls, before the gate which in later times was called the "Bazar Gate", but which Narshakhī still calls "The Gate of the Spice-Merchants" (*dar-i 'aṭṭārān*); while the Arabs called it the "Iron Gate" (*bāb al-ḥadīd*); it is probably to be sought for on the east side of the town.

We have the express testimony of Narshakhī (p. 29) that at the time of the conquest the whole town (*shahr*) consisted of the Shahristān alone; there were a few separate palaces and small settlements outside but these had not yet been linked up, as they were later. Narshakhī gives us a fairly exact account of the topographical details of the Shahristān and it would probably be possible to determine which of the streets of the modern town correspond to the streets mentioned by him; no one has as yet, however, investigated this point. Unlike most other towns, the Shahristān of Bukhārā partly retained its earlier importance at a later period after the extension of the boundaries of the town. A new Friday Mosque was built by Arslān Khān Muḥammad b. Sulaimān in the year 515 (1121-1122) in the Shahristān, probably in the southern part of it where the chief mosque with the Madrasa Mīr-'Arab built in the x[th] (xvi[th]) century and the great Minaret still stands.

It was not till the Muḥammadan period that the Shahristān was linked up with the suburbs to form one town and surrounded by a wall, according to Narshakhī in 235 (849—850). By the iv[th] (x[th]) century another wall had been built close to the old one, enclosing a greater area. Each of these walls had, like the wall of the present town, 11 gates; the distance between the gates of the inner and outer walls is, unfortunately, not given, otherwise we might be able to determine how far the development of the town had been furthered by its elevation to be capital. The question how far the names given by the Arabs to the city-gates correspond to the modern names, can be readily answered with certainty. One gate, the "Samarḳand Gate", the gate on the north, bears the same name at the present day as did the corresponding gates in the Sāmānid period; the other names may be easily identified. The gates of both walls are given by Iṣṭakhrī in their proper order: on the outer wall he begins with the "Gate of the Square" (*bāb al-Maidān*) in the south-west, through which one came on to the road leading to Khorāsān (the modern Ḳarakul Gate), thence passes on to the Darb Ibrāhīm, immediately to the east (the modern Gate of Shaikh Djalāl) and round by the south-east, north, and west sides. In detailing the inner gates he begins with the Samarḳand Gate on the north but does not state in which direction the next mentioned gate lies from this one so that the order of succession cannot be determined with the same accuracy from the Arabic text. Narshakhī (p. 93 *et seq.*), however, in his account of the conflagration of the year 325 (937) gives us the clue, as to which of the gates mentioned by Iṣṭakhrī were north of the main canal and which to the south. Since the canal, as is clear from Muḳaddasī (p. 331) corresponds to the canal which flows through the town at the present day (the Kallābād Gate corresponds to the modern Ḳarshī Gate on the east side of the town), the task of locating the sites of these gates is considerably lightened by this statement of Narshakhī's; it is clear that Iṣṭakhrī, in the case of the inner wall also, went to the east from the Samarḳand Gate and gives the names of the remaining gates of the inner wall in the order of

succession of the east, south and west sides.

The identification of some of these names is also of importance for the understanding of the accounts of the early history of the town. The "Nawbahār" from which a gate on the outer wall (the modern "Mazār Gate") had taken its name was apparently a Buddhist monastery; it is a remarkable coincidence that at the present day, the way to the most important Muḥammadan Sanctuary in the neighbourhood of Bukhārā, the tomb of Bahā' al-Dīn Naḳshband, who died in the viiith (xivth) century, lies through the same gate (whence its name also). It cannot quite be determined what connection the places called Nawbahār, which, according to Iṣṭakhrī, were in the Shahristān as well as in the suburbs, had with this monastery.

The gates on the inner walls, in the south-east part of the town, were called after the "Mosque of Māk͟h" so that we can approximately determine the site of this sanctuary also. As Narshakhī (p. 19) tells us, the mosque was built on a site which had first been dedicated to the worship of idols (probably some Buddhist cult is meant) and later the worship of fire; whether, as Christensen (*Orient. Litt. Zeit.*, vii. 49 *et seq.*) supposes, the word *Mākh* is to be taken as a dialectic form for *Māh* "moon" and the cult was originally connected with the worship of the moon is doubtful. Narshakhī (born 286 = 899) says that even in his lifetime "idols" were offered for sale here on two fixed days of the year. Probably these were little clay figures of the kind that are frequently dug up in Samarḳand; in the ivth (xth) century they must have been merely regarded as toys.

Of the other gates of the inner wall, the "Gate on the Road of the Magi" (*bāb sikka mughān*) in the north-west of the town, ought to be mentioned. This was probably the quarter of the town which as late as the Sāmānid period still bore the name of "Palace of the Magi" (*kūshk-i mughān*). According to Narshakhī (p. 28 *et seq.*) after the conquest the rich merchants, the Kash-Kushān, retired to this part of the town. According to the agreement with Ḳutaiba the inhabitants had to give up half of their houses and estates (*ḍiyā'*) to the Arabs; this treaty appears, however, only to have referred to the town proper, the Shahristān. The Kash-Kushān preferred to evacuate their houses in the Shahristān entirely, leave them to the Arabs, and to build 700 palaces in the neighbourhood for themselves. Before every palace there was a garden, and the servants' houses; in the time of Abū Muslim, this settlement had a population more numerous than the town itself (Narshakhī, p. 62). These palaces are said to have been destroyed in a popular rising; their gates on which the owners had depicted their "idols" were used in the buildings erected to extend the Friday Mosque. The above mentioned Aḥmad al-Ḳubāwī says that one of these gates was still to be seen in his time (viith = xiith century, Narshakhī p. 47 *et seq.*).

Besides the palace in the citadel the princes of Bukhārā in pre-Muḥammadan times had their palaces in the Rīgistān also. In later times the Sāmānid Naṣr II (301—331 = 914—943) built a palace there; accommodation for the ten state chancelleries (*dīwānhā*) the names of which are given by Narshakhī (p. 24) was provided for in the buildings before the palace gate. During the early years of the reign of Manṣūr b. Nūḥ (350—365 = 961—976) this palace is said to have been entirely destroyed by fire and never afterwards rebuilt; Muḳaddasī, however, tells us that the Dār al-Mulk was still standing on the Rīgistān opposite the citadel; he had never seen such a fine building in any other part of the Muḥammadan world; till the year 360 (971) the Rīgistān was also used as a *muṣallā* (Pers. *namāzgāh*).

During the Sāmānid period, there appears to have been another royal palace on the Djū-i Mūliyān Canal lying not far from the Citadel and the Rigistan on the north side. This palace was built by Ismā'īl b. Aḥmad and fell into ruins after the fall of the dynasty.

In the reign of Manṣūr b. Nūḥ a new *muṣallā* had to be prepared as the Rīgistān could not contain the multitude of believers on these occasions. The new place of prayer was built in 360 (971) at a distance of $^1/_2$ Farsakh ($1^1/_2$—2 miles) from the citadel on the road to the village of Samtīn; unfortunately we know nothing further about the situation of this village. According to ancient custom, the people attended such assemblies armed, as the custom of carrying arms was still general in Mā warā' al-Nahr in the Sāmānid period (Hilāl al-Ṣābi', ed. Amedroz, p. 402.)

Between the citadel and the Shahristān close to the Friday Mosque was a large weaving establishment (*kārgāh* also called *bait al-ṭirāz*) the products of which (carpets etc.) were exported as far as Syria, Egypt and Rūm according to Narshakhī, p. 18. What Muḳaddasī, (p. 324) tells us about the wares exported from Bukhārā, testifies to a great development in trade and industry; even the reins (*ḥuzm al-khail*) manufactured in the prisons (*fi 'l-maḥābis*) were exported.

Even in the ivth (xth) century the town was thought to be overcrowded and insanitary, with bad water, foul air etc. The streets were broad yet there was not sufficient room. Considering the large number of inhabitants in the town, Muḳaddasī and some of the poets (*Yatīmat al-Dahr*, iv. 8 *et seq.*) describe the defects of the town in the most scathing fashion; to Muḳaddasī Bukhārā is the "cesspool of the district". Among the defects of the town enumerated by Muḳaddasī, the danger from fire is emphasised. Apparently in his time much more of the town was built of wood than is now the case; even the upper part of the minaret on the chief mosque was built of wood so that in 460 (1068), when two pretenders to the throne were fighting for the possession of the citadel, the tower was set on fire and the flames spread to the chief mosque which also perished. When the tower was rebuilt after this calamity, it was built entirely of brick for the first time in its history (Narshakhī p. 49).

Narshakhī and the Arab geographers give us full particulars of the country (*rustāḳ*, plur. *rasātīḳ*) round Bukhārā. In Iṣṭakhrī, (p. 30) the names of the canals which led from the Zarafshān to water the fields are given; according to Narshakhī, some of these canals were first formed in the Muḥammadan period. Many of these names have survived to the present day as Sitnjakowski has shown (in the *Izwestiya Turkest. Otdel'a Imp. Russkago Geograf. Obshč.*, Vol. ii. part. i. p. 136 *et seq.*). It would be of importance for the investigation of the surface conditions of Central Asia and the

changes which have taken place in historic times, if we could prove that the canals, which date from pre-Muḥammadan times, flow in markedly deeper beds than those of a later date; this point has however, not yet been investigated.

It is to Sitnjakowski also that we owe the establishment of the fact that traces still survive of the long walls which were built to protect the town and its suburbs from the incursions of the Turks in the ʿAbbāsid period. According to Narshakhī (p. 39 *et seq.*) these walls were begun in the year 166 (782-783) and only completed in 215 (830); whether, as Masʿūdī (*Tanbīh*, p. 65) tells us, it was rather the renovation of an old wall that was carried out at this period, is doubtful, although similar edifices had been erected in quite early times in Central Asia, as the description of Margiane (in the district of the modern Marw) in Strabo (Chap. 516) shows. The town itself was not in the centre but in the western half of the area enclosed within the walls; the village Tawāwis, for example, 7 farsakh from Bukhārā on the road to Samarḳand was within the walls (Iṣṭakhrī, p. 313); while on the road to Khorāsān the gate of the wall was only 3 farsakh from Bukhārā (Ibn Khordādhbih, ed. de Goeje, p. 25 and *Tanbīh*, loc. cit.). Of the villages lying north of Bukhārā, Zandana (4 farsakh from the city) and Maghkān (5 farsakh, cf. Iṣṭakhrī, p. 313 and 315) were within the walls. We are nowhere told how far the walls extended to the south of the town; it is not even certain whether the district on this side had to be protected by such defences. After the time of Ismāʿīl b. Aḥmad, who is said to have declared: "As long as there is life in me, I shall myself be a rampart for the defence of Bukhārā"; the walls were no longer kept in proper repair; at a later period the ruined walls were given the name Kanpurak (probably to be read *Kampirak* "old woman"); remains of these ancient fortification, still bearing the name *Kampir-Duwāl* (Wall of the Old Woman) have survived to the present day in the north-east, on the borders of the steppes between the cultivated areas of Bukhārā and Karmina (*Protokoll. Turk. kružka ljub. archeologii*, iii. 89 *et seq.*).

The entrance of the Ilak Naṣr b. ʿAlī into Bukhārā (10th Dhu 'l-Ḳaʿda 389 = 23rd Oct. 999) put an end to the Sāmānid kingdom, although the conquerors had still to struggle for the mastery with Ismāʿīl al-Muntaṣir, the last representative of the dynasty, for the next few years (till 395 = 1004-1005) and were even driven out again for a brief period from the former capital of the kingdom. On the fall of the Sāmānids, the town lost much of its earlier political importance; it was henceforth usually governed by princes or governors and did not again become capital of a kingdom till the xth (xvith) century. Only a few of the Ilak-Khāns or Ḳarakhānids lived in Bukhārā and erected buildings there. In the second half of the vth (xith) century, the Khān Shams al-Mulk Naṣr b. Ibrāhīm built a palace for himself to the south of the city and prepared a hunting-ground; this "Shamsābād" was allowed to fall into ruins after the death of his successor Khiḍr-Khān; in the reign of Arslān-Khān Muḥammad b. Sulaimān a *muṣallā* was made of the hunting-ground in 513 (1119-1120); it is still used for this purpose at the present day. Many other buildings in Bukhārā are ascribed to the same prince (cf. Narshakhī, p. 23 and 28) and also what is stated above about the chief Mosque. We are also told that Ḳilidj-Tamghāč Khān Masʿūd repaired the walls in the year 560 = 1165.

Even during the period of its political decline, the town retained its reputation as a bulwark of Islām and fosterer of religious sciences. As early as the iiird (ixth) century famous scholars like the author of the *Djāmiʿ al-Ṣaḥīḥ* had arisen in Bukhārā and the neighbourhood; in the vith (xiith) century, a prominent family of scholars afterwards known as the *Āl-i-Burhān* [see BURHĀN], succeeded in founding a kind of hierarchy in Bukhārā and making the town and the lands adjoining it, for a time at least, quite independent of its suzerains. When, after the battle of Ḳaṭwān (5th Ṣafar 536 = 9th Sept. 1141) the whole land had for the first time since the Muḥammadan Conquest, to submit to the rule of a non-Muslim power, the Ḳarā-Khitai, the *Ṣadr* (plur. *Ṣudūr*) of Bukhārā succeeded in maintaining his influence in spite of this enemy also. Ṣadr Ḥusām al-Dīn ʿOmar b. ʿAbd al-ʿAzīz had been slain at the taking of the town; nevertheless Ṣadr Aḥmad b. al-ʿAzīz, apparently a brother of the preceding, was made adviser to the governor appointed by the conquerors (*Recueil de textes relatifs à l'histoire des Seldjoucides*, ii. 278, and *Čahār Maḳāla*, ed. Mīrzā Muḥammad, p. 22). Ibn al-Athīr (xi. 205) makes the son of the slaughtered Muḥammad b. ʿOmar in 559 (1163-1164) praise in no mean fashion the moderation of the victors. The Ṣadr had to seek refuge with their conquerors when they were driven out of Bukhārā in the early years of the viith (xiiith) century by a popular rising and their goods were confiscated (ʿAwfī, *Lubāb al-Albāb*, ed. Browne, i. 385).

At the head of the revolt was, Djuwainī tells us, a man of the artisan class, son of a vendor of shields, (*mudjānn-furūsh*) who caused to be shamefully handled the prominent men of the town (*aṣḥāb-i ḥurmat*). The leader of the movement ruled the town as an independent prince for a time under the title of "Sindjar-Malik"; Bukhārā however soon (604 = 1207) passed under the rule of Muḥammad b. Takash, Shāh of Khwārizm. The town which had been once already held for a brief period by Muḥammad's predecessors, remained during the following years, probably with some interruptions (during the last efforts and successes of the leader of the Ḳarā-Khitāi) under the rule of the Shāh of Khwārizm, who renovated the citadel and carried out other building operations.

When the kingdom founded by Muḥammad was overthrown by the Mongols, Bukhārā was one of the first towns to have to submit to Čingiz-Khān, according to Ibn al-Athīr (xii. 239) on the 4th Dhu 'l-Ḥidjdja 616 = 10th Febr. 1220; the citadel was not taken till 12 days later. While the town was being sacked by orders of the victor, a conflagration broke out and the whole town with the exception of the Friday Mosque and a few palaces, built of brick, perished in the flames. Bukhārā soon recovered from this calamity and is mentioned in the reign of Ugedei, Čingiz-Khān's successor, as a large and populous town and seat of learning. In the year 636 (1238-1239) the town was exposed to a new danger by a popular rising, which was directed as much against the well-to-do classes

as against the Mongols: Maḥmūd Yalwādj, the governor who lived in Khodjand, managed to avert the wrath of the victors from the town on the suppression of the revolt. According to the account of Djuwainī (cf. the text in Defrémery, *Journ. Asiat.*, ivth Ser., xv. 392, and in Schefer, *Chrestomathie Persane*, ii. 127 *et seq.*) our only authority for these happenings, this rebellion arose not as had happened 30 years previously, among the artisans but among the country people.

We have no reliable particulars as to how the town and its lands were governed during the early years of Mongol rule. In Djuwainī's account of the life of the Uighur Kürküz (cf. thereon d'Ohsson, *Histoire des Mongols*, iii. 107 *et seq.*) Sāyin-Malikshāh is mentioned as prince of Bukhārā, but nothing further is known about him. According to Waṣṣāf (ed. Hammer, p. 25, Indian edition, p. 12), in addition to the Mongol Būkā-Būshā, a certain Čonkšan-Tafū, apparently a Chinaman, is mentioned as commander in Samarḳand and Bukhārā since the time of Ögedei; this probably explains the fact that during this period, copper coins were struck in Bukhārā with Chinese inscriptions. At the same time, Maḥmūd Yalwādj and later his son Mas'ūd-Beg [see BISHBALIK, p. 729] both Muḥammadans of Khwārizm, had also a share in the government of Mā warā' al-Nahr. Although the Muḥammadan clergy had taken a prominent part in the defence of the land against the Mongols, and even at a later period remained hostile to their conquerors, Mullas and Saiyids, like the priests of other religions were exempted from all taxation in the Mongol kingdom. Even more remarkable is Djuwainī's statement (cf. also d'Ohsson, *Histoire des Mongols*, ii. 267) that Siyurkukteni, a Christian, and mother of the great Khāns, Mongke and Khubilai, built a Madrasa called the *Khāniya* in Bukhārā at her own expense; the famous scholar Saif al-Dīn Bakharzī (died Dhu 'l-Ḳa'da 659 = 27th Sept.—26th Oct. 1261) was appointed its mudarris and mutawallī. Mas'ūd Beg also built a Madrasa, which was called after him, Mas'ūdiya, on the "Square" of Bukhārā, probably the Rīgistān; in these two institutions nearly 1000 students were maintained.

On the 7th Radjab 671 (28th January 1273) Bukhārā was taken by the Mongols of Persia under Nikpai-Bahādur, Ilkhān Abāḳā's general [q. v., p. 4] and plundered for seven days in which almost the whole town was destroyed by fire and sword and the population almost exterminated; three years later, the remaining inhabitants had the little that was still left them taken by the Čaghatai chiefs Čūbā and Ḳayān. Such a calamity had never before visited the town; as Waṣṣāf (ed. Hammer, p. 148, Indian edition, p. 78) says, there was not a living soul in Bukhārā for the next seven years; it was not till about 1283 that measures were taken by Mas'ūd-Beg by command of the Kaidū to rebuild the town and bring back its inhabitants. The Mas'ūdiya, which had been destroyed in 671 (1273) was rebuilt and its founder was buried in it in Shawwāl 688 = 18th Oct.—15th Nov. 1289 (Djamāl al-Ḳurashī in Barthold, *Turkestan v. epochu mongolskago nashestviya*, i. 139). The land was again ravaged in Radjab 716 (19th Sept.—18th Oct. 1316) by the Mongols of Persia and their ally the Čaghatai prince Yasāwūr; many of the inhabitants of Bukhārā and other towns were carried off by force and settled in the lands to the south of the Oxus (d'Ohsson, *Histoire des Mongols*, iv. 567 *et seq.*).

Bukhārā seems otherwise to have been of no importance in the political life of Mā warā' al-Nahr under the rule of the house of Čaghatai [q. v.] or later under Tīmūr and the Tīmūrids. There is much information on the busy political and religious life of the town, before and after this period, in the *Kitāb-i Mullāzāda*, which is practically unknown in Western Europe while numerous manuscripts of it exist in Russia; it is the work of Aḥmad b. Muḥammad, called Mu'īn al-Fuḳarā' (wrote probably in the ixth = xvth century; cf. the extracts in Barthold, *Turkestan* etc., i. 166 *et seq.*); on Bahā' al-Dīn Naḳshband (died 791 = 1389), his teachers and pupils and the Naḳshbandī order of Dervishes founded by him cf. especially the *Rashaḥāt 'ain al-ḥayāt* of Ḥusain al-Kāshifī (cf. Ethé in the *Grundriss der iranischen Philologie*, ii. 365). Ulugh-Beg (died 853 = 1449) famed as a patron of learning also built a Madrasa in Bukhārā on the Čarsū (centre of the town).

Towards the end of the year 905 (in the summer of 1500) Bukhārā was taken by the Uzbegs under Shaibānī Khān and has since remained in their power except for a brief period after the disastrous defeat of the Uzbegs at Marw (916 = 1510). As in all nomad kingdoms the dominions of the Uzbegs were regarded as the property of the whole ruling family and divided into a number of small principalities; Samarḳand still remained the capital and residence of the Khān (usually the oldest member of the ruling house); but the prince who was elected Khān always retained his hereditary principality, usually lived in his former capital and naturally paid more attention to the town he resided in than the official capital of the kingdom. The most important princes of the house of the Shaibānid 'Ubaid Allāh b. Maḥmūd (in Bukhārā from 918 = 1512, died 946 = 1539 (and 'Abd Allāh b. Iskandar (in Bukhārā from 964 = 1557, died 1006 = 1598) had their capital in Bukhārā.

Both princes for long allowed older members of the ruling house to bear the title of Khān but they alone practically held all the rights of sovereignty; through their prominence their capital Bukhārā became a real centre of political and intellectual life. The princes of the next dynasty of Djānids or Ashtarkhānids also ruled their kingdom from Bukhārā, while the old capital Samarḳand lost almost all its importance, mainly in the first half of the xiith (xviiith) century.

The materials for the history of Bukhārā during this period are still only accessible in manuscript, as the history of Central Asia during the last two centuries has been but little investigated. Much information about the buildings of the xth (xvith) and xith (xviith) century are given in the chronological compendium known as the *Ta'rīkh-i Mīr Saiyid Sharīf Rāḳim* (compiled in 1113 = 1701-1702; cf. Baron v. Rosen in *Collections Scientifiques de l'Institut des langues orientales du ministère des affaires étrangères*, iii. 115 *et seq.*); the chief authority on the intellectual life of the town under 'Ubaid Allāh is his contemporary Wāṣifī, author of the *Badā'i' al-Waḳā'i'* (cf. C. Salemann in the *Mélanges Asiatiques*, vii. 400); on the sources of the history of 'Abd Allāh b. Iskandar, see the article on him, p. 25 (there is, *inter alia*, a description of Bukhārā in the *'Abd Allāh Nāma*, which

shows that the author was acquainted with a fuller version of the *Ta'rīkh-i Narshakhī* than the one which has survived to us). On the Bukhārā of the xith (xviith) century cf. particularly Maḥmūd b. Amīr Walī, *Baḥr al-asrār fī manāḳib al-akhyār*, Cod. India Office, nº. 575.

From the xth (xvith) century there was constant intercourse between the Uzbeg kingdom and the Czars of Moscow, so that the capital Bukhārā became better known in Russia and Western Europe than previously. In the xviith and xviiith century all merchants and emigrants from Central Asia whose settlements were to be found as far Tobolsk, were known to the Russians as "Bukharans" (Bukhartsi); the same name was also extended to the inhabitants of the modern Chinese Turkestān which began to be called "Little Bukharia".

The reign of Khān 'Abd al-Azīz (1055—1091 = 1645—1680) was regarded by later native historians as the last great period in their history; the later rulers could no longer hold the kingdom together; princes (Begs) of the Uzbeg tribes made themselves independent in many parts, the Khān who lived in Bukhārā ruled only a small portion of the former kingdom and even there, the authority was not in the hands of the Khān himself, but of a Beg or Atālīḳ ruling in his name.

In 1153 (1740) Bukhārā had to submit to Nādir Shāh and did not regain its independence till his death. About the same time a new dynasty was founded in Bukhārā. The Atālīḳ Muḥammad Raḥīm of the tribe of Mankit had himself proclaimed Khān; his career has been written by his contemporary Muḥammad Wafā Karmīnagī under the title *Tuḥfat al-Khānī*; his immediate successor Dāniyār-Beg was content with the title of Atālīḳ and allowed a scion of the house of Čingiz-Khān to bear the sovereign title; his son Murād or Mīr Ma'ṣūm, however, again claimed the kingly title for himself after the year 1199 (1785); he and his successor did not take the title of Khān but of Emīr.

The observation of religious ordinances was much more harshly inforced by Murād and particularly by his successor Ḥaidar (1215—1242 = 1800—1826) than had been the case for example, in the xvith century by 'Ubaid Allāh. "Noble Bukhārā" (*Bukhārā-i Sharīf*) was more and more to attain the glory of a city of Islām and of the Sharī'at κατ' ἐξοχήν; even the daily life of the ruler had to conform to all the demands of the strictest orthodoxy. Ḥaidar himself lectured on the sciences connected with religion and had as many as 500 of an audience; he was however reproached with being too fond of the pleasures of the harem, of continually changing his legal wives and making a new acquisition to his harem every month. He was the last prince of Bukhārā to strike coins in his own name; since his death the coins have been struck in the name of the deceased (*marḥūm*) Emīr Ḥaidar, even to the present day.

His successor Naṣr Allāh (1242—1277 = 1827—1860) succeeded in strengthening the power of the throne against the Uzbeg nobles and extending the boundaries of his kingdom. As was at the same time the case in Khīwa and Khoḳand, the power of the nobles, which had been increasing since the break-up of the kingdom, was broken in the cruellest fashion; the native chroniclers agree with European travellers in describing Naṣr Allāh as a bloodthirsty tyrant. Instead of the levy on the Uzbeg tribes, a standing army was created and officials of humble origin promoted to the government of the kingdom; the Kush-Begi, usually a Persian by birth, was at the head of the government.

The dominions of the Mankit at first comprised only the valley of the Zarafshān and the territority to the south as far as the Oxus, the south-east almost to the Surkhān, and for a while, a few stretches of land south of the Oxus like Marw and Balkh. The remaining portions of the ancient Mā warā' al-Nahr were ruled by the chiefs of Khoḳand. Many wars were waged between these two kingdoms, usually for the possession of Djizak and Ura-tübe, in which the Emīr of Bukhārā was usually successful; in 1258 (1842) Khoḳand itself was taken and the whole of Mā warā' al-Nahr united under the sway of the Emīr, but these conquests could not be permanently retained.

When Naṣr Allāh's successor Muẓaffar al-Dīn (1860—1885) ascended the throne, the Russians had already secured a firm footing on the lower course of the Sir-Daryā from which they gradually advanced on the remaining portions of the ancient Mā warā' al-Nahr. After being repeatedly defeated, the Emīr had to submit to Russia, give up all claims to the valley of the Sir-Daryā which had been conquered by the Russians and cede a great part of his own kingdom, with the towns of Djizak, Ura-tübe, Samarḳand and Katta-Kurghān (1886), though his capital, unlike Khīwa and Khoḳand, to the present has been spared the shame of being besieged or taken by the enemy. The territory lost in the war with Russia was more than made good by the conquests of the next decade, made to a certain extent with Russian help. Lands, which, like Shahr-i Sabz and Ḥiṣār, had been politically separated from Bukhārā for more than a century, or, like Ḳaratagin and Darwāz had never really been permanently in the hands of the rulers of Bukhārā, had now to submit to the Emīr; in 1873, the Emīrate was increased in the west at the expense of Khīwa which had been taken by the Russians. It was therefore only under Russian suzerainty that that Emīrate attained its present dimensions. In the reign of the following Emīr 'Abd al-Aḥad (1885—1910) the boundary between Bukhārā and Afghānistān was defined; by the agreement come to between England and Russia in 1885 the Pandj was to be the boundary between the two kingdoms, so that the Emīr had to give up a part of the province of Darwāz to the Afghāns while he received in return the provinces of Rūshan and Shughnān.

The relationship of Bukhārā to Russia was also defined during the same reign. Since 1887 a Russian railway has run through the Emīr's dominions; the more important towns including the capital itself, are not touched by the railway, a Russian settlement called "New Bukhārā" arose 10 miles from "Old Bukhārā" on the railway, now known as the railway station of Kaghān; it was not till later that this settlement, the residence of a Russian "political agent" was connected with the ancient capital by a branch line, built at the expense of the Emīr. The whole kingdom is within the Russian customs area; Russian custom-houses have been built on the Afghān frontier and Russian military stations also like Karkī and Termez on the Āmū-Daryā and Khorog in Shughnān. Commerce between Termez and the Russian town of

Petro-Alexandrowsk on the Āmū-Daryā is carried on by Russian steamers; Termez is also connected with Samarḳand by a post-road; there is also telegraphic communication between Bukhārā and Samarkand.

Nevertheless the kingdom of the Emir has as yet been but little influenced by Russian civilisation. The system of administration and taxation which has been extended to the recently acquired provinces is still the same as that in vogue a century ago; the population is still, as before, exploited in the most ruthless fashion by the Emir, his officers and governors. Since the Emir has borne the title "Highness" and thus ranked nearer the Russian Imperial House, he has gained enormously in prestige and can now treat with the Governor-General resident in Tāshkent or with the political agent with much more independence than before. The policy pursued towards the Emir has recently been subjected to sharp criticism by some Russian authors (cf. particularly the writings of D. N. Logofet, which have appeared under various titles: 1. *Na granicach Srednej Asii*; 2. *Strana bezpravnja*; 3. *Bukharskoe khanstvo pod russkim protektoratom*). It cannot be denied that the results of this policy can only be disadvantageous not only to the subjects of the Emir but also to Russian prestige in Central Asia.

Since 1910, the Emir of Bukhārā has been Mīr ʿĀlim, son of his predecessor ʿAbd al-Aḥad; he was educated in Russia (in the Cadet Corps at St. Petersburg).

By the Russian successes in Central Asia the geographical exploration of the land has been considerably advanced, as has to a certain extent, the investigation of its ethnography. Since 1870, a large number of articles and larger treatises on the kingdom of the Emir and its separate provinces have appeared in Russian; cf. for example P. Malew, *Očerki Bukharskago khanstva*, Tashkent, 1876; the itineraries in L. Kostenko, *Turkestanskij kray*, ii. 102 *et seq.*; Kuznecov, *Darwaz*, Novij Margelan, 1893; A. A. Semenow, *Etnografičeskie očerki Zarafshanskich gor, Karategina i Darwaza*, Moskwa, 1903; Gr. A. A. Bobrinskoy, *Gorci verchovjew Pjandja*, Moskwa, 1908; A. Serebrennikow, *Pamir* (*Ežegodnik Ferghanskoy oblasti*, i. 90 *et seq.*). On the other hand, very little has been done towards the study of the past history and present conditions of the country from the point of view of the Orientalist. The writings of the native historians, even of the xix[th] century, are still with a few exceptions (on these see Teufel, *Quellen zur Geschichte der Chānate*, reprint from the *Zeitschr. der Deutsch. Morgenl. Ges.*, Vol. 38) only accessible in manuscript. No archaeological, or historico-topographical studies of any importance have as yet been carried out either in Bukhārā itself, or in other towns like Shahr-i Sabz (with the palace of Aḳ-Sarāi), built by Tīmūr, Termez (with the ruins of ancient fortifications and the beautiful tomb of Muḥammad b. ʿAlī Tirmidhī who died in 255 (869), cf. thereon, K. Kotevic in the *Izvěstiya Imp. Russkago Geograf. Obshčestva*, xliv. 644 *et seq.* with illustration). No description of the present conditions of the country has appeared from the pen of an Orientalist, so that Khanikow's book published in 1845, cannot yet be regarded as superseded. The material on the land and its history in works in the languages of western Europe is still more insufficient. Cf. Vámbéry, *Travels in Central Asia*, London, 1864 (also in a German translation); do., *Geschichte Bochara's oder Transoxaniens*, Stuttgart, 1872; Howorth, *History of the Mongols*, ii. 686, *et seq.*; Skrine and Ross, *The Heart of Asia*, London, 1899 (Ch. ix. "Bokhara, a Protected Native State"); cf. also the very unreliable comparison of the Arab notices in G. Le Strange, *The Lands of the Eastern Caliphate*, (Cambridge, 1905), p. 460 *et seq.* (W. BARTHOLD.)

AL-**BUKHĀRĪ**, MUḤAMMAD B. ʿABD AL-BĀḲĪ ABU 'L-MAʿĀLĪ ʿALĀʾ AL-DĪN AL-MAKKĪ, Arab author, wrote in the year 991 = 1583 a treatise on the excellencies of the Abyssinians in continuation of Suyūṭī etc. entitled *al-Ṭirāz al-Manḳūsh fī maḥāsin al-Ḥubūsh*; cf. Ahlwardt, *Verzeichnis der ar. Hdss. der kgl. Bibliothek zu Berlin*, N°. 6118; Pertsch, *Die arab. Hdss. der herzogl. Bibliothek zu Gotha*, N°. 1694; Vollers, *Katalog der islam. u. s. w. Hdss. der Universitätsbibliothek zu Leipzig*, N°. 738; *Catalogus codd. mss. or. qui in Museo Brit. asserv.*, ii. codd. arab, N°. 323, 1268; Rieu, *Supplement to the Catalogue of the Arabic Mss. in the Brit. Mus.*, N°. 1268; *Bibliothecae Bodleianae codd. mss. or. cat.*, i. 659 (extract, ii. 1363); *Fihrist al-Kutubkhāne al-Khidīwīye*, vi. 81.

AL-**BUKHĀRĪ**, MUḤAMMAD B. ISMĀʿĪL ABŪ ʿABDALLĀH AL-DJUʿFĪ, Arab author, born 13[th] Shawwāl 194 = 21[st] July 810 at Bukhārā, the grandson of a Persian, named Bardizbah. He began the study of the Traditions at the early age of eleven and in his sixteenth year made the pilgrimage and attended the lectures of the most famous teachers of Tradition in Mecca and Medina. He then went to Egypt as a Ṭālib al-ʿIlm and spent the next sixteen years, of which five were spent in Baṣra, in wandering through all Asia. He then returned to his native town where he died on the 30[th] Ramaḍān 256 (31[st] August 870); he is buried in Khartank, two parasangs from Samarḳand. His collection on Tradition *al-Djāmiʿ al-Ṣaḥīḥ* established his reputation. This work is divided according to the chapters of the Fiḳh, for which he had planned a complete scheme, although he did not succeed in preparing the necessary material of Tradition for all chapters. In his selection of Hadīths he showed the greatest critical ability and in editing the texts sought to obtain the most scrupulous accuracy. Yet he does not hesitate to explain the material by brief notes, quite distinct from the text. The transmission of the Ṣaḥīḥ texts was from the beginning most carefully done but it was impossible quite to prevent the appearance of variants, which are given us by the commentaries. The Vulgate at present in use was edited by Muḥammad al-Yūnīnī (died 658 = 1260) with the help of the famous philologist Ibn Mālik (died 672 = 1273). Cf. *Le Recueil de traditions musulmanes* par Abū ʿAbdallāh Muhammed Ibn Ismāʿīl al-Bukhārī, publ. par L. Krehl, (Leyde, 1862—1868), continué par Th. W. Juynboll, iv. (ibid., 1908); printed Būlāḳ 1210, 1282, 1284, 1289, Cairo, 1279 (lith.), 1305, 1307, 1312, 1314 (9 voll. with), Dehli 1270, 1889, Bombay 1269, 1869, 1873, Mirtah 1873 (on the MSS. cf. R. Basset, in *Giornale della società asiat. ital.*, x. 76—91); El Bokhari, *Les traditions islamiques*, transl. of the Arabic text with notes and index by O. Houdas and

W. Marçais (*Publ. de l'école des langues or. viv.*, Series iv., Vol. vi. sqq.), i.—iii., Paris 1903, 1906, 1908; *Le livre des testaments du Çahîh d'el-Bokhari*, translation with notes and commentary by L. Peltier, Paris 1909. Of the numerous commentaries on the Ṣaḥīḥ there have been printed: 1. *Fatḥ al-Bārī fī sharḥ al-Bukhārī* by Ibn Ḥadjar al-ʿAsḳalānī (died 852 = 1428), Būlāḳ 1300-1301; 2. *ʿUmdat al-Ḳārī fī sharḥ al-Bukhārī* by Maḥmūd Ibn Aḥmad al-ʿAinī (died 855 = 1451), Cairo, 1308, Stambul 1309-1310; 3. *Irshād al-Sārī fī sharḥ al-Bukhārī* by Aḥmad Ibn Muḥammad Ibn Abī Bakr al-Ḳasṭallānī (died 923 = 1517), Būlāḳ 1275-1276, 1288, 1304-1305, Cairo 1307, 1325-1326, together with the *Tuḥfat al-Bārī* of Zakariyā al-Anṣārī, (died 926 = 1520), Lucknow 1869, 1867, Dehli 1891; 4. von Abū Zaid ʿAbd al-Ḳādir Ibn ʿAlī al-Fāsī, Fās, 1307. Cf. Walī Allāh al-Dihlawī (died 1176 = 1762), *Sharḥ Tarādjim Abwāb Ṣaḥīḥ al-Bukhārī*, Ḥaidarābād 1323. As a preliminary to his Ṣaḥīḥ, Bukhārī had prepared, on his first pilgrimage to Medina, a work on the lives of the transmitters entitled *al-Taʾrīkh al-Kabīr* (s. Aya Sofia, 3069—3071, and thereon Horovitz in the *Mitteilungen des Seminars für orient. Sprachen zu Berlin*, x. ii. p. 40); extract *al-Taʾrīkh al-Ṣaghīr* (s. Ahlwardt, *Verzeichnis der ar. Hdss. der kgl. Bibliothek zu Berlin*, Nº. 9914). In addition to a collection of Traditions (*al-Thulāthiyāt*, s. Ahlwardt, *op. cit.*, Nº. 1620-1621) and the *Tafsīr al-Ḳorʾān* which still requires to be more accurately examined (see Casiri, *Bibliotheca arabico-hispanica*, Nº. 1255, cf. also Fagnan, Mss. Alger 1688, 3) there is also ascribed to him a *Taswīr al-ʿAinain bidafʿ al-Yadain fi 'l-Ṣalāt*, Calcutta, 1256 (with Urdu translation), identical with *Ḳurrat al-ʿAinain* on the edge of the *Khair al-Kalām fi 'l-Ḳirāʾa khalf al-Imām*, Cairo, 1320, also ascribed to him.

Bibliography: Subkī, *Ṭabaḳāt al-Shāfiʿīya*, ii. p. 2—19; Wüstenfeld, *Geschichtschreiber der Araber*, Nº. 62; do., *Schafiiten*, Nº. 44; Krehl in the *Zeitschr. d. Deutsch. Morgenl. Ges.*, iv. 1 *et seq.*; Goldziher, *Muhammedanische Studien*, p. 234—245; Brockelmann, *Gesch. d. arab. Lit.*, i. p. 158. (C. BROCKELMANN.)

BUKHT-NAṢAR. Under the name of Bukht-Naṣar, the Arabs have confused Nabonassar and Nebuchadnezzar. Ptolemy, following Hipparchus, makes use in his *Almagesta* of the era, known as that of Nabonassar, beginning in the year 742 B. C. al-Bīrūnī and Masʿūdī (*Tanbīh*, French transl., p. 265) knew of this era; the latter, comparing it with the Persian era, says: "Between the era of Bukht-Naṣar and that of Yazdegird, there is a difference of 1379 Persian years and 3 months". Al-Bīrūnī estimates that about 143 years intervened between the first Nebuchadnezzar, who is Nabonassar, and the second, or Nebuchadnezzar (*Chronology*, p. 31; on the era of Nabonassar, cf. Paul Tannery, *Recherches sur l'histoire de l'astronomie ancienne*, 1893, p. 158 and 162).

According to al-Bīrūnī, the Persian form of the name is Bukht-Narsī, which, some say, means "he who much bewails his lot"; Bukhtunaṣṣar is the arabicised form (*op. cit.*, p. 30).

The Muḥammadan historians have very much corrupted the Biblical story of Nebuchadnezzar. They usually make him a satrap or *marzubān* of the ʿIrāḳ, who governed on behalf of the king of Persia, whose residence was in Balkh (Masʿūdī, *Prairies d'Or*, i. p. 117). After the capture of Jerusalem, he made king Manasseh prisoner; the latter is Zedekiah in the Bible (Ṭabarī's *Chronicle*, transl. Zotenberg, i, p. 491). According to Masʿūdī he carried 18,000 Israelites away into captivity; he took the Tōrā and threw it into a well. The Israelites recovered it on their return from exile (*Prairies d'Or*, *loc. cit.*). The king of Persia, or Bukht-naṣṣar himself, married a young Jewish virgin called Dīnāzād and she afterwards succeeded in obtaining the return of the members of her faith to their native land. This is how Masʿūdī (Vol. ii. p. 122) corrupts the story of Esther, although he does say that there are many versions of these happenings.

Bukht-naṣar twice appeared before Jerusalem again and twice destroyed it; at the end of the first siege, he invaded Egypt. The Persian synopsis of Ṭabarī relates the episodes of Daniel in the den of lions and of Nebuchadnezzar changed into a beast. (B. CARRA DE VAUX.)

BUḲĪR [See ABŪḲĪR, p. 118.]

BUḲRĀṬ, is the Arabic form of the name Hippocrates. — Hippocrates enjoyed a great reputation among Eastern scholars and many of his works were known to them. Sergius of Rasʿain translated him into Syriac; Ḥunain b. Isḥāḳ, Ḳusṭā b. Lūḳā, ʿĪsā b. Yaḥyā and ʿAbd al-Raḥmān b. ʿAlī were his principal translators into Arabic. Ḥunain translated the *Book of Epidemics*; under this title the Arabs knew seven books of which only the first and third are authentically by Hippocrates. The same translator produced versions of the treatises, entitled *Prognostica* and *De Natura Hominis*. ʿĪsā b. Yaḥyā translated his work on *Diet in Fevers and Acute Diseases*, περὶ διαίτης ὀξέων, the Arabic title of which is *Kitāb al-Amrāḍ al-ḥādda*. The book of Precepts, *al-Fuṣūl*, has been translated by the four authors above-mentioned.

Besides these well known works, Ḥādjdjī Khalīfa gives a number of other books attributed to Hippocrates. Wenrich has classified more than fifty (*De Auctorum Graecorum Versionibus et Commentariis*, p. 95—114).

The scholars of the East were not content with translating the works of the great Greek physician; they also wrote commentaries and expositions of them. In particular, commentaries have been written on the *Prognostica* and the *Precepts*. Thābit b. Ḳurra wrote a synopsis of the treatise *De Aere, Aqua et Locis*; and the philosopher al-Kindī wrote his *Kitāb al-Ṭibb al-Buḳrāṭī* on "*The Medical System of Hippocrates*".

The Arabs knew of a noteworthy incident in the life of Hippocrates, which does honour to his character. During a plague which was devastating the Persian Empire, the king of Persia, Artaxerxes Longimanus, ordered Hippocrates, who was living in Cos, to be asked to come to help him, and offered great honours and large sums of money; but the physician refused, saying that he would not serve the enemies of his country and that his first duty was to his countrymen.

Masʿūdī (*Tanbīh*, transl., p. 184) tells us that he knew of this incident from Galen's commentary on Hippocrates's book "*On Oaths*", translated by Ḥunain b. Isḥāḳ; he adds that Cos was then under the sway of Artaxerxes, whom he calls Artakhshast and identifies with Bahman b. Isfandiyād. For the author of the *Taʾrīkh al-Ḥukamāʾ*, this king was Ardashīr.

The Arab authors place the date of Hippocrates about 100 years before Alexander. According to the *Ta'rīkh al-Ḥukamā'* he lived at Emesa and afterwards at Damascus and lectured in one of the gardens of the latter town in a place still called *Ṣoffa Buḳrāṭ*, the "bench of Hippocrates".

As this great physician had descendants who bore the same name and practised the same art, a certain confusion has arisen in the minds of the Arab writers, who number as many as four Hippocrates. They have even formed a plural, *al-Buḳrāṭūn* from the name Hippocrates. Thābit b. Ḳurra was the first to settle the question of the number of the Hippocrates (*Ta'rīkh al-Ḥukamā'*). He says: "the first is the one who was of the family of Aesculapius and the second was the son of Heraclides; there were nine generations between the first and the second, as many as between Aesculapius and the first. The second Hippocrates left three children: Thāilūs, Dārḳun and a daughter named Mānārisā who became more famous than her brothers; the two latter each had a son called Hippocrates". — According to the same authority, there were eight masters of medicine in ancient times, who succeeded one another at almost regular intervals from Aesculapius to Galen. We can trace in this arrangement the tendency of Eastern scholars and particularly of the Sabaeans to regard the sages of antiquity as a species of prophets; the idea of this line of great physicians, originating in a demi-god, Aesculapius, is analogous to that of the prophetic succession. (See also the *Fihrist* and Ibn Abī Uṣaibi'a, i. 24 *et seq.*).

(B. CARRA DE VAUX.)

BŪLĀḲ [See CAIRO].

BULANDSHAHR (= "high town"), a town and district of India, in the Doāb, United Provinces. Area of district, 1,899 sq.m.; pop. (1901), 1,138,101, of whom 19% are Muḥammadans. The town, built on a bank above the Kālī Nadī, was originally called Baran, whence the name of the historian, Ḍiyā al-Dīn Baranī [q. v.], who was born here: pop. (1901), 18,959, of whom just half are Muḥammadans. Most of them are converted Rādjpūts and Paṭhāns, both of which classes own considerable estates in the district.

Bibliography: F. S. Growse, *Bulandshahr* (Benares, 1884); *Bulandshahr Gazetteer* (Allahabad, 1903). (J. S. Cotton.)

BÜLBÜL (P. and T.), the nightingale. In Persian and Turkish poetry, the nightingale plays a great part usually in conjunction with the rose. Oriental fancy has conceived that the nightingale is consumed with love for the rose and therefore sings in numberless ways (whence its epithet, *Hazār dāstān*) of its love but her love is unrequited. It is mystically conceived as the image of the human soul which is consumed with love for God. Cf. Ethé in the *Grundriss der Iranischen Philologie*, ii. 250, 1; Gibb, *History of Ottoman Poetry*, iii. 110 *et seq.*

BULDUR or BURDUR, the ancient POLYDORION, capital of a Sandjaḳ in the Wilāyet of Konia, lies in a pleasant, fertile district on the Buldur-göl (the *Ascania limne* of the Byzantine writers). The population lives by cattle-rearing and agriculture; Buldur is also famous for its weaving establishments and tanneries.

Bibliography: 'Alī Djawād, *Djoghrāfiya lughāti*, 206 *et seq.*; Cuinet, *La Turquie d'Asie*, i. 845; Ritter, *Erdkunde*, xix. 797.

BULGARIA, a country lying between the Balkans and the lower course of the Danube; it owes its name to a branch of the Bulghār people: it was borne, after the fall of the great Hun empire, by the remnant of the invaders who were driven back from the lower Danube into the steppes of South Russia [see the article BULGHĀR] and in particular by the horde which crossed the Danube in 779 under Isperich, son of Kubrat and founded a powerful kingdom by conquering the provinces inhabited by the Slavs. Although small in numbers, this horde was able to impose its name on the country and its inhabitants; in the ix[th] century it adopted the Slav language and became finally merged in the population. Even by the second half of this century, Muslim influences had begun to make themselves felt among the Bulgarians. They must have been even older and already very deep if we adopt the view put forth by Bury (*Byzantin. Zeitschr.*, xix. 131 and 141) that the Bulgarians had borrowed the lunar year from the Arabs by the vii[th] century; Marquart has, however, raised objections (*T'ung Pao*, xi. 678). In any case Islām did not become the state religion but Christianity, which was introduced by Boris in 864. The Bulgarian Church recognised the supremacy of the patriarchate in Constantinople but had adopted the Slavonic liturgy.

When the Ottoman Turks first set foot in Europe, Bulgaria formed an independent state under the national dynasty of Asēnids, on the right bank of the Danube; it was bounded on the north by the Danube, on the south by the Balkans, on the east by the Black Sea and on the west by Servia. Eight passes (*derbend*) through the mountain chain led into the interior of the country: Ṣūlū, Ḳapūlū (Succi, Trajan's Gate), Isladi, Ḳazanlyḳ, Demir-Ḳapū, two passes leading to Rūsčuḳ and Silistria, and Nadir. Its inhabitants were divided into factions by the dissensions of the boyards. On the death of the Czar Alexander in 1364, the country was divided between Shishmān III, his son by a Jewish woman, who reigned at Ṣofia, and Sracimir who occupied Widin. Uneasy at the progress of the Ottomans under Murād I Khudāwendgār, Shishmān, although he was the brother-in-law of the Sulṭān entered the coalition of Serbs and Bosnians; an army of 20,000 men under the command of Lālāshāhīn was totally defeated and almost entirely massacred. 'Alī Pasha, son of Ḳara-Khalīl Čenderli, at the head of 30,000 men, crossed the pass of Nadir and advanced on Shumla (Shumna) and Tirnowo; the first surrendered as soon as it heard of the fall of the second; the Kral, shut up in Nicopolis on the Danube, obtained peace on abandoning Silistria and paying the tribute due; but instead of handing over this place he strengthened its fortifications; the war was therefore renewed. After the capture of the fortress of Dridjasa and the town of Hirshowa, the Kral again besieged in Nicopolis was forced to surrender at discretion. The Sulṭān granted him his life and gave him an income suitable to his rank, but incorporated Bulgaria in his empire after the capture of Tirnowo in 795 (1393).

Under its former organisation, Bulgaria formed the Eyālet of Silistria, divided into eight Sandjaḳs: Silistria, Semendra, Wize, Ibrail, Kirk-Kilisa, Nigebolī, Widdin and Cermen; it therefore included the cantons to the south of the Balkans and took the place of the former Eyālet of Ozi (Oczakow)

when this town was ceded to Russia. After the division into Wilāyets, Bulgaria formed the Wilāyet of the Danube (Ṭūna). The Treaty of Berlin had constituted Bulgaria as an autonomous and tributary principality, under the suzerainty of the Sulṭān and with practically the same boundaries as at the Turkish conquest; after annexing Eastern Roumelia, it has quite recently been formed into an independent kingdom (22nd Sept. = 5th October 1908).

Under Turkish rule, large numbers of Bulgarians became converts to Islām; nevertheless the majority of the population remained Christian. The political union with Constantinople allowed the Greek Patriarch to work at bringing the people over to the Greek Church and to reject the Slavonic liturgy. It was not till 1870 and 1872 that a national movement obtained the creation of an Exarchate and in consequence the establishment of an independent Bulgarian Church.

According to the census of 1901, the total population amounted to 3¾ millions of whom 2,889,219 were Bulgarians and 531,240 Turks (principally in the north-east of the kingdom); as to religion, 3,000,000 are Greek Orthodox and 643,300 Muḥammadans. Some groups of the inhabitants present remarkable features; such are the Gagauses, Christians whose language is Turkish, on the borders of the Black Sea, and the Pomaks, Muḥammadan Bulgarians, in the mountains of Rhodopus and near Lovet and Plevna.

BULGHĀR, a people of uncertain origin, by whom two states, one on the Volga the other on the Danube, were founded in the early middle ages. The name is first found in the vith century A. D. In the so-called *Ecclesiastical Chronicle* of Zachariah the Rhetor (about 555) the Bulghār are mentioned among the nomadic peoples of the Caucasus who "dwelled in tents and lived on the flesh of cattle and fish" (*Anecdota Syriaca*, ed. Land, iii. p. 337; *The Syriac Chronicle, known as that of Zachariah of Mytilene*, transl. by F. J. Hamilton and E. W. Brooks (London, 1899), p. 328). John of Ephesus (about 585) gives a story, in which Bulgharios and Khazarig, the ancestors of the Bulghār and the Khazar respectively, appear as brothers, which points either to a blood-relationship or a close alliance between these peoples. Centuries later, when this bond had long been broken and the lands of these peoples nowhere bordered on one another, Iṣṭakhrī (ed. de Goeje, p. 225) tells us that the language of the Bulghārs of the Volga resembled the speech of the Khazars, a statement, which is all the more important as the same geographer expressly emphasises the close linguistic unity of all the Turkish tribes from the Khirkhīz and Tughuzghuz in the East to the Ghūzz in the West (ibid., p. 9: *wa yafhamu ba'ḍuhum 'an ba'ḍin*), as well as the Turkish origin of the Badjanak or Petenegs (p. 10). The language of the Khazar and Bulghār, cannot have been identical with Turkish or Russian; even the people known as Burṭās, who were certainly Finnish, and then occupied the lands between the Khazar and the Bulghār must have spoken a different language.

In the vith century A. D. the steppes of Eastern Europe with the basin of the Volga belonged to the same great Turkī nomadic kingdom as the Central Asian steppes up to the Chinese frontier (on this point, cf. the reports of the Byzantine Ambassadors, which have been most recently collected by E. Chavannes in his *Documents sur les Turcs Occidentaux*, St. Petersburg, 1903, p. 133 *et seq.*). How and when the dominion of these Turks in Eastern Europe was destroyed is not now known. According to the Arab as well as the Russian sources the leader of the Khazar bore the Turkī title Ḳaghan (in Arabic Khāḳān). The account given by the Arabs of the ceremonies observed at the accession of each new Khāḳān (Iṣṭakhrī, p. 224, obviously corrupted in Ibn Hawḳal, p. 284), agrees perfectly with the Chinese notices of the Turkī rulers of the vith century (cf. e.g. De Guignes, *Histoire des Huns* etc., Vol. i. pt. ii. p. 460). It may be concluded therefrom that the kingdom of the Khazar arose immediately out of the Turkī principality mentioned by the Byzantine writers, which formed a portion of the great nomadic kingdom in the vith century, just as in the xiiith century the kingdom of the Golden Horde arose out of the great Mongol Empire. In this case also, the conquerors must soon have adopted the language of their more numerous allies or of subjected peoples.

The Khazar kingdom is first mentioned in the year 627 as a powerful ally of the Byzantine Empire in the war against Persia. There was not then a capital on the Volga nor had there been in the Turkī kingdom of the preceding century; it was only after their luckless struggles with the Arabs in the beginning of the second century A. H. (after 720 A. D.) that the Khazar princes moved their residence from the northern slopes of the Caucasus to the lower course of the Volga.

Still less do we know when and why the Bulghār separated from their Khazar brethren. If the explanation of the puzzling *bndjr*, proposed by J. Marquart, be the correct one, then the Bulghār are mentioned by Ṭabarī (i. 895 *et seq.*) as the enemies of the Sāsānid Khusrau Anūshirwān. The Burdjan also, mentioned by Ya'ḳūbī (*Historiae*, ed. Houtsma, p. 203; the Bulghārs of the Danube are also sometimes called by this name, cf. e.g. *Fragmenta Histor. Arab.*, ed. de Goeje, p. 26 *et seq.*) would, according to Marquart, be identical with the "North Caucasian Bulghārs", although the reading Burdjan is in this case assured by the verse quoted in Yāḳūt (i. 548). After the viith century A. D. we have many notices of those branches of the Bulghārs, who settled on the Black Sea and the Danube and came into contact with the Byzantine Empire [cf. the article BULGARIA]. Another branch of the same people had retreated to the central course of the Volga, apparently under pressure from its enemies, where they afterwards adopted Islām and for long formed the farthest outposts of Muḥammadanism in the north till the foundation of the Siberian kingdom on the Irtish and the Tobol.

We have only one first-hand account in the ivth (xth) century of these Bulghārs, namely, the *risāla* of the embassy of Ibn Faḍlān, preserved by Yāḳūt; this embassy, sent by the Caliph Muḳtadir, left Baghdād on the 11th Ṣafar 309 (21st June

921) and reached the capital of the Bulghārs on the Volga on Sunday the 12th Muḥarram 310 (12th May 922). It is very difficult to determine the problem of the relationship of the report of this embassy to the accounts of the Arab (Ibn Rusta, al-Bakrī, Iṣṭakhrī, Mas'ūdī etc.) and Persian (Gardīzī) writers on the Bulghārs. Marquart tries to show that the common source of the accounts of Ibn Rusta, al-Bakrī, and Gardīzī, which practically agree word for word, may be the lost geographical work of Djaihānī, and that this latter was not written till after the return of Ibn Faḍlān, i. e. after 310 A. H. (922 A. D.). Even Westberg, although he sees no connection between the accounts of Ibn Faḍlān and Ibn Rusta agrees with the view that the account of the Bulghārs in Ibn Rusta cannot have been written before 310. Neither Marquart nor Westberg try to explain how Ibn Rusta, as de Goeje points out, nowhere else in his work mentions any event of a later date than 290 (903) and adds the formula *aṭāla 'llāhu baḳā'ahu* to the name of the Caliph Mu'taḍid who died in 289 (Monday, the 22nd Rabī' II 289 = 5th April 902) so that at the date of the composition of his book he did not know of the Caliph's death; it might therefore be concluded that the work was completed very soon after the pilgrimage of the year 290 (mentioned on p. 73 and 75). If the account of these northern peoples given by Ibn Rusta, al-Bakrī, and Gardīzī dates from a later period, it must be an interpolation in the unique manuscript of Ibn Rusta's work that has been preserved to us, which is not suggested by either Marquart or Westberg. On the contrary, Marquart himself shows that the author of the original account was only acquainted with the Pečenegs in their ancient settlements on the Ural and that the groundwork of the account must therefore belong to the first half of the ixth century.

If the account preserved in Ibn Rusta, al-Bakrī, and Gardīzī cannot then be traced to Djaihānī, there only remains Ibn Khurdādhbih's work, copied by Djaihānī himself, and quoted by Ibn Rusta and Gardīzī. Even Arab bibliographers have been misled by the verbal agreement between the two works (cf. the statement on the sources of Ibn al-Faḳīh in the *Fihrist*, p. 154, first confirmed by de Goeje). Muḳaddasī (ed. de Goeje, p. 3 note *f*) saw in Shīrāz a geographical work in seven volumes without author's name, which he himself ascribed to Djaihānī but others to Ibn Khurdādhbih. The account of the people in the north might thus equally be referred to Ibn Khurdādhbih. There are other difficulties to this solution of the question: 1. According to Ibn Faḍlān, the Bulghār had adopted Islām a short time before his embassy. The prince then ruling, in conversation with Ibn Faḍlān even described his father as an "unbeliever"; on the other hand so early a writer as Ibn Rusta describes the Bulghār as good Muḥammadans; even at that time there were mosques and schools, callers to prayer, and Imāms; their dress and their burial grounds were similar to those of Muḥammadans; 2. The prince of the Bulghār is called Almis by Ibn Faḍlān; the same name seems also to have been found in the source used by Ibn Rusta, al-Bakrī, and Gardīzī (in Ibn Rusta, Almaḥ, in al-Bakrī المس, in Gardīzī Amlūn); 3. in Ibn Khurdādhbih's work, as edited by de Goeje, only the Khazar are mentioned of all the peoples of the Volga area; the author does not appear to have heard of the Bulghār and to have regarded the Don and, not like later geographers, the Kama, as the source of the Volga.

This last objection may be neglected on the ground that we do not possess Ibn Khurdādhbih's work in its final and complete form. It is possible that a copy of the complete work may have survived in India, perhaps in a Persian translation. I have already pointed out in my edition of the text of Gardīzī (cf. Barthold, *Otčet poězdke v Srednjuju Aziju*, St. Petersburg 1897, p. 79) that the itinerary from Bārskhān on the Issik-kul to the land of the Tughuzghuz otherwise only known from Gardīzī (*ibid.*, p. 91 *et seq.*) is also given by Raverty (*Ṭabaḳāt-i Nāṣirī*, p. 961) likewise in Persian but with a reference to Ibn Khurdādhbih. The Persian translation of Ibn Khurdādhbih used by Raverty has, as far as I am aware, not yet been made known.

The two other difficulties, also, are perhaps not so insuperable as at first sight appears. Ibn Faḍlān here contradicts himself; in one place he says that the prince told him his father had been an unbeliever and in another he makes the prince explain some phenomenon noticed in the sky as a combat between believing and unbelieving Djinn and say he had received this explanation from his forefathers.

The Arab embassy which had been sent at the request of the king of the Bulghārs had not only a religious but also a political object, which for the prince himself was naturally the more important one. The Caliph was not only to provide for the instruction of the Bulghārs in their religion but also to build a fortress against their enemies. The political side of the mission was entrusted to the actual ambassador Sūsan al-Rassī who had apparently been appointed "by the government" (*min djihati 'l-sulṭān*) and to whom the honours due to the leader of the embassy were paid on the reception at the court; Ibn Faḍlān had charge of the organisation of education in the precepts of Islām as the trouble he takes about the Khuṭba and the concealment of women from men while bathing, show. He probably over-estimated the importance of his side of the mission and represents it to his readers in this light. Both prince and people had apparently been already converted to Islām, although the statement regarding the schools may be based on an over-estimate, probably on the accounts of Bulghār merchants, who had good grounds for doing so, for, as good Muḥammadans, they would have to pay less duties and be able to sell their wares at a better advantage.

There still remains the name Almis or Almsh. It is doubtful whether the name appeared in this form in the *risāla* or is due to later copyists (in Yāḳūt's time the *risāla* was widely disseminated in numerous copies). Ibn Faḍlān says that the Bulghār prince afterwards adopted the title "Emīr" in the Khuṭba; we actually possess coins which were struck in the town of Suwār (see below) by a contemporary of the Caliph Muḳtadir (the name of the Caliph is given on the coins): the Bulghār prince calls himself "al-Emīr Bārmān" on these coins. There is a specimen of this coinage in the Coin Cabinet of the University of St. Petersburg. Frähn's statement (*Opusculorum Postumorum pars secunda*, ed. B. Dorn, Petropoli, 1877, p. 212)

that al-Ḳādir should be read for al-Muḳtadir and that the coin was struck in Shash (Tashkent) by a "governor for Bughra Khān" is clearly contradicted by the form of the letters; to anyone acquainted with the Kufic alphabet on coins, it is clear that an *Alif* could not stand between the article and the two final letters *dr*. It is very probable that the copyists of the *risāla* confused this Bārmān with the Alms or Almsh known to them from Ibn Khurdādhbih, Djaihānī or other sources.

Ibn Rusta cannot be proved to be independent of Ibn Faḍlān. Even the story, so popular in Muḥammadan literature, of the short summer nights and brief winter days, which made the observation of the prescribed hours of prayer impossible, are found neither in Ibn Rusta, nor in al-Bakrī, nor in Gardīzī but we find it given in Iṣṭakhrī (p. 225) in almost the same words as in Ibn Faḍlān (Yāḳūt i. 726, 11 *et seq.*). It is at any rate certainly not improbable that the Khaṭīb on whom Iṣṭakhrī here relies, is identical with Ibn Faḍlān. What Yāḳūt (ii. 436, 20 *et seq.*) tells us about the Khazars, on the authority of Ibn Faḍlān, agrees almost word for word with the text in Iṣṭakhrī p. 220 *et seq.* (cf. also F. Wüstenfeld's note, Yāḳūt, v. 173). It is equally clear that Mas'ūdī, when he says the Bulghārs adopted Islām in the reign of the Caliph al-Muḳtadir after the year 310 was thinking of Ibn Faḍlān's embassy and his report although there is nothing about the "dream" mentioned by Mas'ūdī, in the extract from the *risāla* made by Yāḳūt.

The account preserved in Ibn Rusta, al-Bakrī, and Gardīzī appears only to give the most meagre and contradictory accounts of the Bulghārs that had penetrated to the Arabs before Ibn Faḍlān's embassy. Mosques and schools, but no towns are mentioned; the people dwelled in woods and lived by agriculture. The Burṭās (or Burdās) dwelled between the Bulghārs and the Khazars; they were subject to the Khazars and had been conquered by the Bulghārs. It was 15 days' journey from the land of the Khazars to the land of the Burṭās and thence three days' journey to the land of the Bulghārs (obviously the references here are to the capitals or most important places in these three lands). The Bulghārs were divided into three sections but the total was not very great; there were only 500 families of importance. Even then the land was of great importance for its trade in furs and was visited by the Khazars and Russians for this reason; Muḥammadan trading vessels also came there and had to pay tithes. Taxes were paid by the populace in horses and other kind; amongst other levies, at every marriage the bridegroom had to hand over a horse for the herds of the prince. Money of metal was not struck; the fox-pelt was the unit of currency, each being worth 2½ dirhems (about a shilling). There was also silver money current which had been imported from Muḥammadan countries, this money being used to buy the goods of the Russians and Slavs. The land was bounded on the one side by the land of the Burṭās and on the other by the country of the Slavs.

The picture drawn by Ibn Faḍlān of the Bulghārs and their land is much more complete. It is remarkable that in his account the Bulghārs of the Volga are called "Slavs". The embassy covered the road from Djurdjāniya (near the modern Kunya-Urgenč in Khīwa) to the capital of the Bulghār prince in 70 days. Yāḳūt has unfortunately not given a description of the route: the number of days' journeys suggests that the embassy came from Khwārizm to the lower course of the Volga and from there entered the land of the Bulghārs through the country of the Khazars and Burṭās. According to Iṣṭakhrī (p. 227) it took a month to go "through the desert" from Itil the capital of the Khazars to Bulghār; going by water it was two months' journey through the mountains and then 20 days in the valley. It was reckoned 20 days' journey from Itil the Khazar capital, to the frontier of the Burṭās and thence 15 days to the limits of this people probably to the north-west, towards the land of the Slavs, not in the direction of Bulghār.

The site of the capital Bulghār is defined by the ruins of the village of Bulgarsko'e or Uspensko'e in the circle of Spassk in the province of Kazan. The distance between the ruined site and the left bank of the Volga is almost 4 miles; as Berezin remarks, this agrees perfectly with Ibn Faḍlān's statement that it was less than a farsakh from the town to the river, so that we may conclude that neither the town nor the river-bed have changed their position since the x[th] century. No further description of the town is given in the *risāla* (nor in the extract made by Yāḳūt), nor is there any information given about other towns in this country. Iṣṭakhrī mentions two towns, Bulghār and Suwār, (the ruins now existing near the village of Kurnečikha) lying near one another; there was a Friday mosque in each of them; the male population of the two towns amounted to about 10,000 in all. The inhabitants spent the winter in wooden huts, and the summer in tents. According to 'Awfī (*Djawāmi' al-ḥikāyāt*, Book iv. Chap. 18) the distance between Bulghār and Suwār was two days' journey; we do not know his authority for this statement. The notices of Bulghār and Suwār in Muḳaddasī (ed. de Goeje, p. 361) are probably based on a later authority than Ibn Faḍlān. According to this source, Bulghār lay on both banks of the river; the Friday mosque was in the market-place, and the houses were built of wood and reeds; the inhabitants of Suwār lived in tents. It is probable that the suburbs of Bulghār are here included with the actual town. Vaga-Bazar (probably Aghā-Bāzār) is mentioned by the Russians as the harbour of the town of Bulghār on the Volga; traces of other suburbs have survived on the right bank of the river also.

At the reception of the Arab embassy, silver coins were scattered in their honour; whether these coins had actually been struck in the country itself is not stated. During the ceremonial reception the king sat on a chair, covered with Greek silk (*al-dībādj al-rūmī*); to the right of him sat the kings subject to him, to the left the ambassadors and before him his sons. Whether the word Bltwār which appears in the name of the reigning king as well as in that of his father, is to be regarded as a dynastic name or a title, is not quite certain; 'Awfī (cf. the text in Barthold, *Zapiski vost. otd. arch. obshč.*, ix. 264) is the earliest authority who says definitely that the word is a title of the king of the Bulghār (in the manuscripts both Bltū and Bltūn are found). The title is explained by Senkowski as the Slav *wladatow* (ruler), by Marquart as the Turkī *alp-*

iltawār (the initial *al* having been deleted by copyists who supposed it to be the Arabic article), by Ashmarin as the Čuwash *bigĭtmĭn* for the Turkī *beg-fūghān* "of princely birth".

The relation of the king of the Bulghārs to his people was still quite patriarchal in Ibn Faḍlān's time, more so than among the Khazars or Bulghārs of the Danube. The kingdom of the Bulghārs on the Volga did not, apparently, like the Khazar kingdom arise out of the great nomad kingdom of the vi[th] century A.D. The power of the latter cannot have extended so far north; the separation of these Bulghārs from the Khazars must have been completed before the foundation of Khazar rule in Eastern Europe. Among the Bulghārs of the Volga the king used to ride through his capital alone, unaccompanied by a bodyguard or any kind of escort; at the sight of their ruler his subjects rose from their seats and bared their heads (in Bulghār as in Khwārizm the high caps, called *Kalansuwa* by the Arabs, were worn). The people paid no sort of taxes to the king from the produce of their fields; an oxhide was however levied on each house and the king also received a share of the booty in war.

Bulghār at this time was visited not only by merchants but also by artisans from the adjoining parts of Asia. There was a tailor from Baghdād at the king's court, from whom Ibn Faḍlān received some information about the country and its people. The Bulghārs do not seem to have practised any industries on their own behalf; at a later period Bulghār leather (the modern Russia leather, Russ. *juft'*, a word probably borrowed from the Bulghār), and the Bulghār shoes (Pers. *mūza-i bulghārī*) made from it were particularly well-known.

What further information Ibn Faḍlān gives about the manners and ideas of the Bulghārs of the Volga points to their still being on a very low scale of culture and to a very superficial contact with Muḥammadan civilisation. Our knowledge of the town of Bulghār in the vii[th] (xiii[th]) and viii[th] (xiv[th]) century justifies the conclusion that the country had made great progress in the interval; the information at our disposal for this period is unfortunately too scanty for us to be able to follow the advance in detail. We do not even know if the Caliph Muḳtadir fulfilled the Bulghār prince's desire; for there is no mention of the building of any fortress in Ibn Faḍlān. Intercourse with Baghdād was at any rate continued. According to Masʿūdī (*Murūdj*, ii. 16) a son of the Bulghār king had made the pilgrimage to Mecca in the reign of Muḳtadir, i. e. before 320 (932); he is said to have come on this occasion to Baghdād and paid his respects to the Caliph. Intercourse with the Sāmānid kingdom must, for geographical reasons, have been much busier. We possess silver coins of the Bulghār prince Ṭālib b. Aḥmad, which were struck in Suwār in the years 338 (949-950) and 340 (951-952); as on the contemporary Sāmānid coins, the Caliph whose name appears on these coins is Mustakfī who had been deposed some time previously, in 334 (946) and not Muṭīʿ who had not yet been recognised by the Sāmānids. We also have coins of Muʾmin b. Aḥmad (probably the brother and successor of Ṭālib) of the time of the Caliph Muṭīʿ (till 363 = 974); according to Frähn's reading these coins were not struck till 366 (976-977), that is, also after the end of the reign of the Caliph whose name appears on them. In 366 (976-977), under the Caliph Ṭāʾiʿ, Muʾmin b. al-Ḥasan is the prince who exercised the prerogative of striking coins. Coins of a later period with the names of Bulghār princes have not yet been discovered. The disappearance of silver money, for which no satisfactory explanation has as yet been given, which is noticeable in Central Asia in the v[th] (xi[th]) century, and in the other lands of the Muḥammadan world also at a somewhat later period, must also have been felt in the lands of the Bulghār. It was not till shortly after the Mongol conquest, in the time of the Caliph Nāṣir (575—622 = 1180—1225) that silver coins were again struck in Bulghār; on the one side of these coins is the name of the Caliph and on the other in a very barbaric Arabic script the mint (*al-dīwān al-fārī bulghār*). The name of the king is not given.

The question has been much discussed (particularly by Westberg and Marquart), as to how far the account only given by Ibn Ḥawḳal of the devastation of the whole Volga area by the Russians in the year 358 = November 968-969 agrees with the actual facts. Ibn Ḥawḳal refers to this campaign in several places in his work (ed. de Goeje, p. 14, 281, 282 and 286); the Russians are said to have conquered all the lands of the Bulghār, Burṭās and Khazar and laid them waste; those who escaped the sword took refuge on the peninsulas of Siyāh-Kuh (Mangishlak) and Bāb al-Abwāb (Apsheron) in the Caspian Sea; these refugees were later forced to make a treaty with the victors by which they agreed to return to their homes and live under Russian rule. It has escaped the notice of both Marquart and Westberg that, as is clear from the main passage, p. 282, 10 *et seq.*, the date 358 really was the year in which Ibn Ḥawḳal, who was then in Djurdjān, received the account of the Russian invasion and through some carelessness on the part of the author it was transferred to the event itself. There is then no chronological disagreement between the account given to Ibn Ḥawḳal by the people of Djurdjān and repeated by him and the statements in the Russian annals on the campaign of the Archduke Swjatoslaw against the Khazars in the year 965 (according to Westberg the account in Ibn al-Athīr, viii. 418, of an invasion of the Khazar kingdom by 'Turkish' peoples in 354 (965) also refers to this campaign). There is no ground for supposing that in addition to the invasion known from Russian annals, there was another, otherwise quite unknown, raid by Norse Vikings. Ibn Ḥawḳal's statements about the return of these 'Russians' through the lands of Rūm and Andalus, are probably, as Marquart suggests, based on some confusion with the contemporary raids by Normans of Denmark on Spain. It is very doubtful if the Russians, as Ibn Ḥawḳal says, really conquered on this occasion not only the Khazar territory but the peoples on the lower course of the Volga also, as nothing is said about it in the Russian annals. There has probably been, as in many other Arab sources, some confusion here between the Bulghārs of the Volga and of the Danube, against whom Swjatoslaw had at this time just begun his campaigns.

It is on the whole very probable that the Bulghārs gained more benefit than hurt from the

Russian campaigns against the Khazars; not only the Arab, but the Russian accounts also, clearly show that the Khazar kingdom in the ivth (xth) century was incomparably more powerful than the Bulghār and that the power of the Khazar rule stretched very far to the north-west. Not only the Burṭās but also the Slav Wjatiči, dwelling beyond them on the Oka, had to pay tribute to the Khazars; on the other hand at a later period the Russians were fighting with the Bulghārs in this same district; in 1088 the Russian town of Murom on the Oka was captured by the Bulghārs. In the viith (xiiith) century, the glory of the Khazar kingdom had long since passed away: but there was still a powerful body of Bulghārs on the Volga and Kama, though they did not perhaps form a single united kingdom (there is no mention anywhere of a ruler of the whole area), which was able to continue the war with the Russians with determination and varying success. In 1218 the Bulghārs captured the town of Ustjug situated far to the north; how far their power stretched to the south is unknown but it is probable that the commercial town of Ukek on the Volga (9 miles from Saratow) frequently mentioned in the Mongol period (first by Marco Polo) was not founded after the Mongol conquest but had previously belonged to the Bulghār kingdom. In the east, the Bashdjirt [q. v., p. 669] or the Bashkirs were subject to the Bulghārs. In the Russian annals, the names of several Bulghār towns are mentioned but without any exact details of their location. After the vith (xiith) century the town of Bilār (the name is also found on coins of the Mongol period) is frequently mentioned in Muḥammadan records also (it is the present ruined site near Biljarsk on the Little Čeremshan in the circle of Čistopol, about 70 miles east of Bulghār).

In the vith (xiith) century we again have the account of an eye-witness, the Arab traveller Abū Ḥāmid al-Andalusī, who visited Bulghār in 530 (1135-1136), but unfortunately he only gives us a few worthless anecdotes (cf. the translation of his narrative in B. Dorn, *Mélanges Asiatiques*, vi. 714 *et seq.*). His account of his meeting with the Ḳāḍī Ya'ḳūb b. Nu'mān, who is said to have composed a legendary history of his people under the title of "*Ta'rīkh Bulghār*", is worthy of mention. Almost as meagre is the narrative of another visitor, the Hungarian Dominican Julian, who travelled from Hungaria to "Great Bulgaria" in 1234 and returned home towards the end of 1236. According to him the capital of the kingdom could provide 50,000 fighting men (cf. O. Wolff, *Geschichte der Mongolen oder Tataren*, Breslau, p. 265 *et seq.*).

When the Mongols were returning to the East after their victory over the Russians on the Kalka (1224), they were enticed by the Bulghārs into an ambush where they suffered heavy losses (Ibn al-Athīr, xii. 254). This surprise is said to have been revenged in a most sanguinary fashion. In 1229, according to the Russian annals, the Bulghār frontier guards on the Yāyik (Ural) were put to flight; the final overthrow of the kingdom and the destruction of its capital followed in the autumn of 1236 according to the Muḥammadan historians, and in the autumn of 1237, according to the Russians [cf. the article BĀTŪ-KHĀN, p. 681].

The land of the Bulghārs of the Volga now formed a part of the kingdom of the "Golden Horde" which had been founded by the Mongols. The capital Bulghār, appears to have risen to a flourishing condition in a relatively short time again; even under the Great Khān Mangū (1251—1259), coins were struck in Bulghār again. The traveller Rubruquis, who had not himself been in Bulghār, although he was within five days' journey of it in 1253, regards this country, which, like his predecessor Julian, he calls "Bulgaria Major", as the last country with towns (in this part of the world): (*ultima regio habens civitatem*; *The Journey of William of Rubruck*, transl. by W. W. Rockhill for the Hakluyt Society, London, 1900). It is not known when or why the town was abandoned by its inhabitants. Tīmūr's campaign of the year 1395 does not seem to have affected the countries so far north, but Bulghār was soon afterwards (1399) destroyed by the Russians. The town probably suffered more from the rise of Ḳāzān, which is said to have been founded just before this time by Bātū-Khān, than from these wars, particularly as Ḳāzān had been selected as the capital of an independent Tatar state, of which Ulu-Muḥammad (died 1446) may be regarded as the founder. It is to this Ulu-Muḥammad that the last dated coins bearing the name of the town Bulghār belong; they were struck in 831 = 1427-1428. The importance of Bulghār as the greatest market on the central course of the Volga passed first to Ḳāzān and then to the Russian town of Nižnij-Novgorod. The word Bulghār still remained in use in literature, though only as the name of a country, till a later period; towards the end of the xth (xvith) century (in the work itself the date 989 (1581) is mentioned), Sharaf al-Dīn Ḥusām al-Dīn al-Bulghārī composed a history in Turki of his native land entitled "*Risāla-i Tawārīkh-i Bulghāriya*"; it has survived to us but contains nothing but fabulous stories about the propagation of Islām and the lives of Muḥammadan saints.

The surviving ruins of the town of Bulghār belong as the inscriptions on tombs which have been found there show, to the viith (xiiith) and the viiith (xivth) centuries. This town bore little resemblance to the Bulghār of Ibn Faḍlān. Most of the buildings were of stone, procured from the heights on the right bank of the Volga. The town had a circumference of about 6 miles, was surrounded by an earthen wall and a ditch, possibly, as Berezin supposes by a wooden wall also, and was in the shape of a long quadrilateral, the breadth of which gradually decreased from north to south; adjoining the town proper on the south, was the citadel with the royal palace, likewise surrounded by a ditch and an earthen wall. The suburbs lay to the north and west of the town. The most important buildings were in the centre of the town (two Friday mosques, with a minaret beside each, not far from them a large bathing establishment, which, as Berezin tells us, would not have disgraced cities like Iṣpahān, Cairo, or Constantinople). From the size of the mosques, Berezin computed that the town must have had a population of about 50,000 souls. The care and preservation of the ruins had now been undertaken by the "Society for Archaeology, History and Ethnography" in Ḳāzān. Previously the stones of the ancient buildings were, as usual, used for building purposes by the modern inhabitants. The inscriptions also, which were copied in 1422 by order of Peter the Great, are now for the most part no longer visible.

Besides the Muḥammadan epitaphs, Armenian ones have also been found in the ruins, which probably points to the importance of the town as a commercial centre. The Muḥammadan inscriptions are usually in Arabic, but they also contain Turkī; as Ashmarin has shown, this Turkī element is related not to the Tatar but to the Čuwash. It is on this fact that the view, previously put forward by Kunik and put on a securer basis by Ashmarin, is based, that the Old Bulghār language was a Turkī dialect similar to the Čuwash and that the Čuwash must be regarded as descendants of the Bulghārs of the Volga. It has however been recently quite justly emphasised by F. Korsh (cf. *Živaya Starina*, xix. vip. 1—2, p. 186 and *Etnograf. Obozrěnie*, 1910, n°. 1—2, p. 117) that this question cannot be regarded as settled until the most important material on this point, the non-Slavonic numerals in the so-called "List of Princes" of the Bulghārs of the Danube have been satisfactorily explained from the Čuwash. In spite of Radloff's attempt to explain them, these numerals still remain one of the unsolved riddles of philology. Against Radloff's view, W. Tomaschek and J. Marquart urge that these are not numerals but "characters for the reigns and personalities of the individual Khāns" — a statement which can only be explained by the fact that its defenders must have used Jireček's Latin translation and not the original Slavonic documents. The Slavonic words "*a lět imm*" can only refer to the years of the kings' lives.

If the view put forward by Ashmarin cannot yet be proved correct, it cannot on the other hand be denied that the above quoted Arab accounts of the relationship of the Khazar and Bulghār language to the Turkī and Finnish (the language of the Burtās) would be best explained by it. The Čuwash is known to be a Turkī language, but unintelligible to other Turkī-speaking peoples.

The question has hitherto, even by Ashmarin, been only treated from the point of view of the philologist; but there are other difficulties in the eyes of the historian. The Čuwash, who are mentioned as early as the year 1551, were known to the Russians to be heathen. Ashmarin gives a few words which had obviously once been borrowed from Muḥammadan peoples, but have assumed quite a different meaning among the Čuwash. Pagan prayers begin with the word *pismelle* (Arab. *bismillāh*); the god who rules over the wolves is called *pikhamper* (Pers. *paighambar* "prophet"), the soul of the dead, *kiremet* (Arab. *karāmat*, "grace, miracle"). If the Čuwash are really descended from the Bulghārs of the Volga, who lived in towns, and inherited these expressions from their forefathers, we would have here such an incredible lapse to barbarism, as cannot be paralleled anywhere in the Muḥammadan world. This lapse would be all the more difficult to explain as the Bulghār towns arose again immediately after their destruction by the Mongols, and did not succumb till much later, not in wars against barbaric conquerors but in a peaceful struggle with other, newly founded towns. The modern Čuwash obviously cannot be descended from the inhabitants of the towns on the Volga but only from such divisions of the Bulghār people as always lived in forests and were little affected by the Muḥammadan culture of the cities.

BULGHAR DAGH. The Turks apply this name which should properly be BUGHA DAGH (*Bugha* is Turkish for bull; Taurus) to a part of the Cilician Taurus [q. v.]

BULGHAR MA'DEN, the famous silver mines on the northern slopes of the Bulghār Dagh, south of the great caravan route from Eregli (Konia) to Gülek Boghaz (the Cilician passes). The mines which have been worked in an perfunctory fashion since 1825, yield an ore containing silver and gold, from which much lead is obtained. Statistics are given in Cuinet, *La Turquie d'Asie*, i. 837. That as this author says they were only discovered in 1825 is not correct, for even in the middle ages Ibn Faḍl Allāh speaks of the silver mines of Lu'lu'a, which are identical with those of Bulghar Ma'den.

AL-**BULĶĪNĪ** (in the modern Egyptian pronunciation AL-BULĶAINĪ) 'OMAR B. RASLĀN SIRĀDJ AL-DĪN AL-KINĀNĪ AL-'ASĶALĀNĪ, a famous jurist, born in Sha'bān 724 = August 1324 at Bulķīna in Egypt, settled in Cairo in 738 (1338) and made the pilgrimage in the years 740 and 747. In the year 765 (1363), he received the office of Muftī in the Dār al-'Adl and when his brother-in-law Ibn 'Aḳīl became Ḳāḍī of Damascus in the year 760 (1367) he followed him thither as his deputy. After the death of al-Isnawī, he became Professor at the Mālikīya in Cairo, was afterwards transferred to the Mosque of Ibn Ṭūlūn and finally became Ḳāḍī 'l-'Askar. He died in Dhu

'l-Ka'da 805 = June 1403, having a short time previously resigned some of his offices in favour of his sons. Besides a few commentaries he wrote the *K. al-Tadrîb fi 'l-Fikh 'alā madhhab al-Imām al-Shāfi'ī* (s. Ahlwardt, *Verzeichnis der ar. Hdss. der Kgl. Bibliothek zu Berlin*, N°. 4606; Vollers, *Katalog der islam. u. s. w. Hdss. der Universitätsbibliothek zu Leipzig*, N°. 381; *Catalogus Codd. Orient. qui in Museo Brit. ass.*, ii. Codd. Ar., N°. 800; *Fihrist al-Kutubkhāne al-Khidīwīya*, iii. 206). His son Ṣāliḥ wrote an appendix to it, *Tatimmat al-Tadrîb* (Ahlwardt, *op. cit.*, N°. 4607). The latter, born in 791 (1389), was Professor of Ḳor'ān Exegesis at the Barḳūḳiya and of Ḥadīth at the Madrasa of Ḳāit-Bāi and from 826 (1423), was Ḳāḍī of Cairo. He died in 868 (1463). In addition to a biography of his father, the *Tardjamat Shaikh al-Islām al-Bulkînî* (Köprülü-Medrese in Stambul, N°. 1061) he wrote a treatise on the legal relationships of freemen and slaves, entitled *al-Djawhar al-Fard fīmā yukhālif fīhi 'l-Ḥurr al-'Abd* (Ahlwardt, *op. cit.*, N°. 4993). His older son, 'Abd al-Raḥmān ibn 'Omar Djamāl al-Dīn, born in Ramaḍān 763 = July 1362, became Ḳāḍī of Damascus in 804 (1401) and died in Shawwāl 824 = Oct. 1421, after being several times deposed and re-instated. He wrote a commentary on the Ḳor'ān entitled, *Nahr al-Ḥayāt* (see *Catalogus Codd. Mss. Orient. qui in Museo Brit. ass.*, ii. N°. 1553—1557) and a treatise on the requirements of a Ḳāḍī entitled *al-Naṣīḥa fi daf' al-Faḍīḥa* (Ahlwardt, *op. cit.*, N°. 5616).

(C. BROCKELMANN.)

BULŪGH (A.), "Maturity". According to the Shāfi'ī school, one's majority is attained on the completion of his fifteenth year unless he has already shown signs of puberty. Should this happen, however, before the completion of the ninth year, the minority is not terminated. According to the Ḥanafī school and some Mālikīs also, the completion of the fifteenth year is the allotted period for the completion of the period of minority; according to most Mālikīs, on the other hand, it is the completion of the eighteenth and in the personal opinion of Abū Ḥanīfa the completion of the eighteenth year for boys and of the seventeenth for girls.

A major is called *Bāligh* (i. e. "grown up") in opposition to the minor, who is called *Ṣaghīr* ("little one") or *Ṣabī* ("boy") in the law books. A minor who is almost grown up is called *Murāhiḳ*.

Sachau, *Muhamm. Recht nach schafiit. Lehre*, p. 26; A. von Kremer, *Culturgesch. des Orients*, i. 517, 532.

(TH. W. JUYNBOLL.)

BULUKKÎN (BOLOGGUIN) b. Zîrî belonged to the great Berber family of the Ṣanhādja who proved themselves devoted adherents to the cause of the Fāṭimids, in opposition to the Zenāta, who were partisans either of the Khāridjīs or of the Umaiyads of Spain. After the defeat of Abū Yazīd, when Zîrî received the governorship of the Maghrib from the Caliph al-Manṣūr, he placed his son Bulukkîn over three towns, Algiers, Medea, and Miliana, which had recently been founded or rather rebuilt. The war was continued against the Maghrāwa with great carnage and when, after being at first victorious over Muḥammad b. Khazir, Zîrî was in his turn defeated and killed in 360 (971) and his head taken to the Caliph of Cordova, al-Mu'izz, who had decided to make his capital in Egypt, handed over the government of the Maghrib and of Ifrîḳiya with Ḳairawān as its capital to Bulukkîn. The latter immediately took steps to avenge the death of his father, recaptured the whole of the Zāb and pursued the Zenāta into the desert as far as Sidjilmāsa. The Fāṭimid Caliph gave him the honorific title of Abu 'l-Futūḥ and allowed him to take the name of Yūsuf (22[nd] Dhu 'l-Ḥidjdja 361 = 4[th] October 972). Bulukkîn proved himself worthy of his office and honours. After the departure of his suzerain, he recommenced the campaign against the Zenāta, seized Tlemcen 362 (973) and transported its inhabitants to Ashîr. As a reward, he received from the Caliph al-Nizār, who had succeeded al-Mu'izz, the province of Tripoli, which he added to his lands and continuing the war against the Zenāta, who were in alliance with the Umaiyads of Spain, captured Fās and Sidjilmāsa 369 (980). He was not, however, able to attack the Umaiyad vizier, al-Manṣūr who had disembarked at Ceuta with a large army. He therefore turned his attention to the Berghawāṭa [q. v.] and slew their king, 'Īsā b. Abu 'l-Anṣār. On the return of this expedition, he died at Wareksen (var. Wārkenfū) between Sidjilmāsa and Tlemcen on the 21[st] Dhu 'l-Ḥidjdja 373 leaving his power to his son al-Manṣūr the governor of Ashîr.

(RENÉ BASSET.)

BULUKKÎN (BOLOGGUIN) the Ḥammādid, son of Muḥammad b. Ḥammād, and cousin of al-Muḥsin, belonged, like the preceding, to the great Ṣanhādja family, a branch of which ruled over Eastern Algeria with the Ḳal'a of the Banī Ḥammād as their capital. Yūsuf, brother of al-Ḳā'id and uncle of al-Muḥsin, having revolted in the Maghrib, Bulukkîn was sent against him by the Ḥammādid sovereign; the latter did not trust Bulukkîn however and had asked two Arab chiefs, his lieutenants, Khalīfa b. Maggan and Aṭyat al-Sharīf, to assassinate him. The latter informed Bulukkîn, who revolted in his turn and in concert with them, seized al-Muḥsin, who had taken refuge in the Ḳal'a and slew him in 477 (1055-1056). The latter was a brave and clever man but cruel. The town of Biskra, having revolted at the instigation of its governor, Dja'far b. Abū Rummān in 450, Khalaf b. Ḥaidara was sent

against it and put down the revolt. The principal authors of the rising were brought to the Ḳal'a and put to death. Four years later, in 454 (1062), Balukkīn advanced against the Almoravids, drove them back into the desert, took possession of Fās and led away its principal citizens as hostages. While returning the same year, he was assassinated at Tessala by his cousin al-Nāṣir, who wished to avenge the murder of his sister Tanmirt, slain by order of Bulukkīn. The latter suspected her of having caused the death of her husband, al-Muḳātil, his brother.

(René Basset.)

BULUWĀDĪN, the Polybotum of the Byzantine historians, a small town in Asia Minor, chief town of a Ḳaḍā in the Sandjaḳ of Afyūn Ḳara-Ḥiṣār (Wilāyet Khudāwendgiār), 25 miles distant from the latter town, lying in a plain at the foot of the Emīr-Dagh and Sulṭān-Dagh, is surrounded by numerous gardens mixed with ancient ruins, and has six mosques, at least ten madrasas, a *Rushdiya* (modern) school, a monastery of Ḳādirī dervishes and 8000 inhabitants, all Muḥammadans. In the neighbourhood are the hot springs of Ḳizil-Kilīsā and the Seldjūḳ ruins of Ishāḳlu and Čāi.

Bibliography: 'Alī Djawād, *Djoghrafiyā lughāti*, p. 216; V. Cuinet, *Turquie d'Asie*, iv. 240.

(Cl. Huart.)

BUNDUḲ, also Funduḳ, arabicised from the Latin (*nux*) *pontica*, the hazelnut, thence bullet or projectile not only of modern fire-arms but also of ancient siege artillery [cf. funduḳ].

BUNDUḲDĀR. [See baibars i, p. 588.]

BUNDUḲĪ, a Venetian sequin; from *Bunduḳiya*, the Arab name of Venice (Abu 'l-Fidā, *Geography*, Arabic text, p. 120) formed like the German Venedig, from *Veneticum*.

(Cl. Huart.)

BUNDUḲĪYA, musket (derived from *bunduḳ*, [q. v.] nut, ball, crossbow, hence *bunduḳčī* a musketeer); this word is in general use throughout the East (Wetzstein, *Sprachliches aus den Zeltlagern*, *Zeitschr. d. Deutsch. Morgenl. Gesellsch.*, xxii. 126, note 1; Burton, *Personal Narrative*, i. ii. p. 104), and is not unknown in certain dialects of Algeria also (Beaussier).

(Cl. Huart.)

al-**BŪNĪ**, Muḥyi 'l-Dīn Abu 'l-'Abbās Aḥmad b. 'Alī al-Būnī (i. e. of Bōna), is one of the most important Arab writers on occult sciences. He died in 622 (1225). He is the author of books like the *Sirr al-Ḥikam*, or "*Secret of Sciences*", on the Cabbala and divination, of minor works on the virtues of the *basmala*, on those of the divine names and of the letters of the alphabet. In these treatises, the construction of magic squares, cabbalistic letters, and other talismanic signs.

The works of al-Būnī are those which are the most used even to the present day by Muḥammadans, who deal in magic or amulets. In the west they have been of service to scholars like Reinaud in his work on the *Monuments Arabes, Persans et Turcs, du cabinet de M. le Duc de Blacas*, 2 vols. 1828, in the part where he discusses enchantment and M. Doutté in numerous passages in his book on *Magie et Religion dans l'Afrique du Nord*.

An interesting manuscript on magic, belonging to the Bibliothèque Nationale in Paris (nº. 2662), is in part based on the works of al-Būnī, who is there quoted — evidently by mistake — under the name of Sharaf al-Dīn. (See Carra de Vaux, *Notes sur les Talismans et conjurations arabes*: *Journ. As.* 1907, i. p. 529; do., article *Charms and Amulets (Muhammadan)* in the *Encyclopaedia of Religion and Ethics*. — Cf. also Brockelmann, *Geschichte der Arabischen Litteratur*, i. 497).

(B. Carra de Vaux.)

BUNN. [See ḳahwa.]

BURAIDA b. al-Ḥuṣaib, one of Muḥammad's Companions, chief of the tribe of Aslam b. Afṣā. When the Prophet migrated from Mecca and was passing the settlement of the Aslam in al-Ghamīm, Buraida became converted to Islām, with about eighty families, who were with him. He did not go to Medina till after the battle of Uḥud but thereafter then he took part in all Muḥammad's campaigns. In the year 9 (630) he was sent to collect taxes from the Aslam and Ghifār and is said to have accompanied 'Alī's expedition to Yaman in the following year. When the Prophet was preparing for the campaign against Tabūk, he again sent Buraida to the Aslam to call them to his aid against their enemies. After Muḥammad's death, he remained in Medina till the foundation of Baṣra where he built a house. In the year 51 (671), he went with al-Rabī' b. Ziyād to Khorāsān and died in Marw in the reign of Yazīd b. Mu'āwiya.

BŪRAḲ. [See būraḳ, p. 744.]

BURĀḲ, this name, which is connected with *barḳ*, "lightning" is applied by tradition to the fabulous animal which the Prophet mounted on the night of his ascension (*Mi'rādj*). Allusion is made in the Ḳor'ān (xvii. 1, 62; liii. 1—18) to a vision which the Prophet had in which he seemed to be borne from Mecca to Jerusalem and thence to heaven. The animal which carried him is neither described nor mentioned by name in the Ḳor'ān; but the commentators say that on this night Muḥammad was in the *ḥidjr* of the Holy House, that is, in the precincts of the Ka'ba, and that the Archangel Gabriel brought Burāḳ to him.

This legend has been considerably embellished and has become a favourite *motif* with poets and miniaturists. There are long descriptions of Burāḳ, who is represented as a mare with a woman's head and peacock's tail. On this subject see an excellent article in the *Magasin Pittoresque*, 1876, p. 364, where a reproduction of a curious Persian miniature is given; another is given in the same periodical for 1884, p. 4. This miniature is taken from the celebrated Uighur manuscript, containing the translation of the Persian poem on the *Night of the Ascension of the Prophet*, attributed to Farīd al-Dīn 'Aṭṭār (ed. Pavet de Courteille. See also Abu 'l-Fidā', Bukhārī etc.). Burāḳ was also used by Ibrāhīm on the visits he paid to his son Ismā'īl, banished to Mecca. (See Ṭabarī, *Persian Chronicle*, transl. Zotenberg, i. 165).

(B. Carra de Vaux.)

BURĀḲ-ḤĀDJIB (Bulāḳ in Ibn al-Athīr), prince of Kermān and founder of a new dynasty in that country. He was originally one of the Ḳarā-Khiṭāi, a pagan people; according to

Djuwainī he was brought to Muḥammad b. Takash Kh^wārizmshāh after the battle on the Talas, in which the Ķarā-Khiṭāi were defeated (Rabīʿ I 607 = August—September 1210) and taken into his service. According to Nasawī (ed. Houdas, p. 95), he had come to Muḥammad as an envoy from the Ķarā-Khiṭāi (Djuwainī tells us the same story of his brother) and was there forcibly detained; according to this authority also, it was only after Muḥammad's decisive victory over the Ķarā-Khiṭāi that he entered his service and was appointed Ḥādjib (Chamberlain); he is also said to have filled the same office in the kingdom of the Ķarā-Khiṭāi. When Muḥammad and his sons had to flee before the Mongols, Burāķ went with one of these princes, Ghiyāth al-Dīn Pīr-Shāh to Persia. Towards the end of the year 618 (the winter season of 1221-1222) when the father was dead and Djalāl al-Dīn, the eldest son, had fled to India and the Mongols had left the land they had laid waste, Ghiyāth al-Dīn was recognised as ruler in almost all Persia and appointed Burāķ governor of Iṣfahān. As a result of a quarrel with the vizier of that town, Burāķ obtained permission to go to India to Djalāl al-Dīn. On the way thither he was attacked by Shodjāʿ al-Dīn, prince of Kermān, who tried to seize his wives and goods; Burāķ and his retinue were not only able to defeat their opponents but in a short time to conquer the whole land of Kermān, whereupon they gave up their intention of proceeding to India (620 = 1222-1223). This is Djuwainī's version; Nasawī (*op. cit.*) however makes Burāķ appointed governor of Kermān from the beginning. When Sulṭān Djalāl al-Dīn appeared in Kermān in 621 (1224), Burāķ paid homage to him and was confirmed as governor of the province, although some of his dealings aroused the suspicions of the Sulṭān. While on his campaigns in Armenia, Djalāl al-Dīn received intelligence in Djumādā II 623 = June 1226 that Burāķ had risen against him and was in alliance with the Mongols. Ghiyāth al-Dīn was sent with 6000 men against the rebel; Djalāl al-Dīn soon followed him with other troops but could do nothing to Burāķ who was securely entrenched within the walls of his fortresses (Nasawī, p. 124). Djalāl al-Dīn himself does not appear to have come as far as Kermān; on the way thither he received repeated envoys from Burāķ assuring him of his devotion to his master. He was still in the neighbourhood of Iṣfahān when he decided to give up the campaign against Burāķ, confirm him in his office and even to send him a robe of honour (Ibn al-Athīr, ed. Tornb., xii. 236). Towards the end of 625 (1228), Ghiyāth al-Dīn, who had quarrelled with his brother, came a fugitive to Kermān; with him was his mother who, against her own will and the will of her son, had to become the wife of Burāķ. Soon afterwards she and her son were accused of having sought to poison Burāķ; Burāķ had his wife strangled and the 500 retainers of the Sulṭān massacred; Ghiyāth al-Dīn himself was thrown into prison and afterwards done away with likewise, although a rumour spread abroad that he had made a marvellous escape to Iṣfahān. As we learn from Djuwainī, Burāķ informed the Caliph that he had now adopted Islām and would be a faithful subject to the Imām, unlike the dynasty of Kh^wārizmshāhs, who had always been hostilely disposed to the ʿAbbāsids, and wished to be recognised as an independent Sulṭān. The Caliph granted his request and gave him the title of Ķutlugh Sulṭān (the fortunate Sulṭān). On the other hand Nasawī had seen with his own eyes a letter sent in the name of Burāķ to Sulṭān Djalāl al-Dīn's vizier in which Burāķ declared that he had rendered the Sulṭān a great service by ridding him of his worst enemy, and the Sulṭān might confidently confirm in the rank of Prince of Kermān one who like him had reached such an advanced age. He informed the Mongols, as Waṣṣāf (Indian lithographed edition, p. 287) tells us, that he had slain Sulṭān Ghiyāth al-Dīn as a rebel against the Great Khān and therefore according to Mongol law had a right to the estate of the dead man, including the right to seize his wives. He is said to have appealed to these laws when he advanced against ʿAlā al-Dawla Maḥmūd, Atābeg of Yazd, with whom Ghiyāth al-Dīn's widow then was. An arrangement was come to between the two princes; the Sulṭān's widow was handed over to the prince of Kermān, and is said to have afterwards borne a daughter to him; in return he gave the prince of Yazd his daughter to wife.

When the Mongols undertook the conquest of Sīstān in 632 (1235), their leader, Tāʾir Bahādur, demanded that Burāķ should join the Mongol army as a sign of his submission to the Great Khān. Burāķ excused himself on account of his being advanced in years and sent his son Rukn al-Dīn instead to Mongolia; while on his way thither, the prince received news of the death of his father, which took place on the 20th Dhu ʾl-Ḥidjdja 632 = 5th September 1235 (following the St. Petersburg manuscript of the *Taʾrīkh-i Waṣṣāf*; in the lithographed edition p. 288, the date is not given).

Bibliography: The portion of Djuwainī's *Taʾrīkh-i Djihānkushāi*, which has been used here is given in Houtsma, *Recueil de Textes relatifs à l'hist. des Seldjoucides*, i. Préface xxiii. *et seq.*; cf. d'Ohsson, *Histoire des Mongols*, iii. 5 *et seq.*, 19, 32 *et seq.*, 131 *et seq.*, and the brief notice in Hammer-Purgstall, *Geschichte der Ilchane*, i. 66. (W. BARTHOLD.)

BURĀĶ-KHĀN, a Mongol prince in Central Asia, great-grandson of Čaghatāi [q. v.] grandson of the Mütügen who had fallen at Bāmiyān in 1221 [see above, p. 644]. His father Yisün-Tuwa had taken part in the events of the year 1251 [cf. the article BĀTŪ KHĀN, p. 681] and shared the fate of the other rebellious princes. Like the rest of the children of Čaghatāi and Ügedei, Burāķ and his brothers were educated in Mongolia; some years after the accession of the Great Khān Khubilāi (1260—1294) they received permission to return to their home and to take possession of Čaghāniyan, their father's ancestral estate. Shortly before, Burāķ's cousin, Mubārak Shāh (the first prince of this house to adopt Islām) had been recognised in Central Asia as head of the house of Čaghatāi; Burāķ had therefore received a *Yārlīgh* (written order) from the Great Khān in which he was appointed co-regent with his cousin. Without producing his *Yārlīgh* and without doing anything in particular openly against his predecessor, Burāķ is said to have attained his purpose in a short time without leaving Čaghāniyān; all the princes of the house of Čaghatāi deserted Mubārak Shāh and rallied round

the new claimant; Mubārak Shāh himself was forced to recognise Burāḳ's suzerainty and to enter his service as head of the *karši* (court huntsmen). The dates given for these events are uncertain and contradictory. According to Djamāl Ḳurashi, the author of our only authoritative account of Central Asia (in Barthold, *Turkestan v epochu Mongol'skogo nashestviya*, i. 148), Mubārak Shāh was raised to the throne in Djumādā ii. 664 (10th March—7th April 1266) at Ahangarān (Angren) and taken prisoner in Dhu 'l-Ḥidjdja of the same year (13th September—1st October) at Khodjand by Burāḳ; according to Waṣṣāf, Burāḳ's accession took place as early as the beginning of 663 (which began on the 24th October 1264). It is certain that the brothers Nicolo and Matteo Polo whose sojourn of three years in Bukhārā must fall within the years 1262—1265, mention Burāḳ-Khān as prince of the country; it is just possible, however, that Marco Polo, who had heard of Burāḳ Khān and his campaign into Persia during his own journey through Persia and Afghānistān, introduced this name by mistake into his account of the first journey of his father and uncle.

During the years following, Burāḳ Khān had to defend himself against the Great Khān Khubilai as well as against the pretender to the throne of Central Asia, Ḳaidū, the grandson of the Great Khān Ugedei. Mughultai, the governor of Chinese Turkestān appointed by the Great Khān, was driven out by Burāḳ and replaced by another governor; the Great Khān sent an army of 6000 cavalry to restore the deposed governor but the army sent to meet them by Burāḳ was much more numerous (30,000 men), so that the Great Khān's cavalry had to retreat without risking a battle. The town of Khotān, which belonged to the Great Khān's empire, was plundered by Burāḳ's troops by his orders.

The war against Ḳaidū was less fortunate. Burāḳ was again successful at first; but his opponent received support from the kingdom of the Golden Horde. The prince Barkadjār, brother of the Khāns Bātū and Berke, appeared in Central Asia at the head of 50,000 men, so that the war took another turn. Burāḳ was defeated and retired to Mā warā' al-Nahr, to offer a desperate resistance to his enemies there; it was Ḳaidū himself, however, who offered to make peace. A Ḳurultāi (parliament) was summoned at which a kingdom quite independent of the Great Khān was organised under Ḳaidū's suzerainty. All the princes were to regard one another as kinsmen (*anda*); the property of the people of the towns and villages was to be respected, the princes were to be content with the pastures on the mountains and steppes and to keep the herds of the nomads back from the cultivated areas. The greater part (two-thirds) of Mā warā' al-Nahr was left to Burāḳ, but there also the government of the cultivated areas was placed in the hands of Mas'ūd Beg, a governor appointed by Ḳaidū. The place and date of this parliament are variously given; according to Rashīd al-Dīn it was held on the Talas in the spring of 667 (1269), according to Waṣṣāf in the steppe of Ḳatwān north of Samarḳand, a year or two earlier, for according to him Mas'ūd Beg went to Īrān in 666 (1268) as ambassador from Ḳaidū and Burāḳ and Burāḳ's campaign against Abāḳā took place in 663 (1268-1269).

Some such campaign had been already proposed at the Ḳurultāi and had received the support of Ḳaidū; probably Ḳaidū wished to get this still dangerous opponent of his out of the country by this means. Mas'ūd Beg was sent to Īrān ostensibly to collect the revenues, to which Ḳaidū and Burāḳ had a claim (the principle still prevailed that all the princes of the ruling house should have their share in the revenues of each country conquered); the real object of his mission was to spy out the land and its resources. Soon after the return of the envoy, Burāḳ opened hostilities and occupied parts of Khorāsān and Afghānistān but did not receive effective support from the troops sent to his help by Ḳaidū with the prince Ḳipčaḳ at their head and was soon left in the lurch; as Rashīd al-Dīn tells us, Ḳaidū afterwards said this had been done by his orders; Ḳaidū and Abāḳā ever afterwards regarded one another as friends. Abāḳā inflicted an annihilating defeat on his opponent on the 1st Dhu 'l-Ḥidjdja 668 = 22nd July 1270; Burāḳ had to retreat across the Oxus to Bukhārā with only 5000 men; during the battle he had fallen from his horse, been thereby lamed and had to be carried in a litter.

Various accounts are given of the last year of his life. According to Waṣṣāf he spent the winter in Bukhārā where he adopted Islām and took the name of Sulṭān Ghiyāth al-Dīn; in the following year he undertook a campaign into Sīstān, but his plans again came to naught through the defection of several princes; he had finally with his wife to throw himself on the mercy of Ḳaidū and was poisoned by the latter's orders. Rashīd al-Dīn's account is more detailed and apparently more reliable. According to him the defection of the princes took place immediately after Burāḳ's retreat over the Oxus; Burāḳ himself went to Tāshkent; from there he sent to Ḳaidū who set out with an army of 20,000 men but deliberately advanced very slowly to await the result of the struggle between Burāḳ and the rebellious princes and to use it to his own purposes. Burāḳ emerged victorious from the struggle and begged his "kinsman" to return home as his help was no longer required; nevertheless Ḳaidū continued his advance. His army was obviously much stronger than Burāḳ's; when Ḳaidū approached Burāḳ's camp, he surrounded it with his troops. Burāḳ died in the night, from fear it was said. When in the early morning, Ḳaidū's envoys appeared in the camp, they were received with cries of woe, learned that Burāḳ was dead and returned to their lord. By Ḳaidū's command, Burāḳ was buried on a high mountain, after the Mongol and not the Muhammadan fashion. The princes, with Mubārak Shāh at their head, complained of his high-handed deeds; Ḳaidū allowed them to appropriate the property left by Burāḳ; Mubārak Shāh's wife tore the rings from the ears of Burāḳ's widow with her own hands. Mubārak Shāh afterwards entered Abāḳā's service; the account given by Rashīd al-Dīn was probably obtained from one of his retainers.

According to Waṣṣāf, Burāḳ was dead by the end of 668 = summer of 1270, according to Djamāl al-Ḳarashī (*op. cit.*) he did not die till the beginning of 670 (began on 9th August 1271). This later date is obviously the preferable one as it alone agrees with the above quoted, apparently reliable account by Rashīd al-Dīn of the battle between Burāḳ and Abāḳā.

BŪRĀN or BŌRĀNDUKHT, daughter of Khusraw Parwīz, a Sāsānian Queen who reigned for a brief period in 630.

Bibliography: Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, p. 390 *et seq.*

BŪRĀN, wife of the Caliph al-Ma'mūn. According to some authorities, her real name was Khadīdja and Būrān was an added name. Born in Ṣafar 192 (December 807), while still a child ten years old she was betrothed to the Caliph at whose court her father Ḥasan b. Sahl was held in the highest esteem. The splendid wedding ceremony, which was celebrated on a scale hitherto unknown, did not take place till Ramaḍān 210 (825-826) at Fam al-Ṣilḥ, near Wāsiṭ. The Arab writers delight in fabulous descriptions of the gorgeous celebrations, all the expenses of which were borne by Ḥasan b. Sahl. On this occasion Būrān is said to have pleaded for the imprisoned pretender Ibrāhīm b. al-Mahdī and obtained his release; others, however, ascribe his pardon to the influence of the Wazīr Aḥmad b. Abī Khālid. Būrān died in Rabī' I 271 [September 884] nearly 80 years of age.

(K. V. ZETTERSTÉEN.)

BURDA. 1. A piece of woollen cloth used since pre-Muḥammadan times, which was worn as a cloak by day and used as a blanket by night. That of the Prophet has become famous. As a reward for Ka'b b. Zuhair's [q. v.] poem, he made him a present of the *burda* he was wearing. It was bought from the son of the poet by Mu'āwiya and was preserved in the treasury of the 'Abbāsid Caliphs till the occupation of Baghdād by the Mongols. Hulagū caused it to be burned but it was afterwards claimed that the real *burda* of the Prophet was saved and is still preserved in Constantinople.

Bibliography: Dozy, *Dictionnaire des noms de vêtements chez les Arabes* (Amsterdam, 1845), p. 59—64; R. Basset, *La Bânat So'âd* (Algiers, 1910), p. 90—91 and the authors quoted.

2. The name of a celebrated poem by al-Būṣīrī [q. v.]. According to the legend he composed it when he was cured of a paralytic stroke which had seized him by the Prophet's throwing his mantle over his shoulders as he had done on a previous occasion for Ka'b b. Zuhair. The fame of this miraculous cure spread and the poem which was entitled *al-kawākib al-durriya fī madḥ khair al-bariyya* came to bear the name *Burda*. Its verses are supposed to have supernatural powers. They are still employed at the present day as charms and recited at burials. No other Arabic poem has attained such renown. Over ninety commentaries have been written on it in Arabic, Persian, Turkish and Berber; the *takhmīs*, the *tasbī'* and the *tashṭīr* that have been made from it are innumerable. The poem begins with the usual *nasīb*, in the style of ancient Arabic poetry; the author then proceeds to regret his youth and confess his faults. His career is contrasted with that of the Prophet, whose miracles, related according to tradition, fill the following verses. The poem concludes with a supplication to Muḥammad and several verses in his honour. There is no trace of Ṣūfism in it and this is not the least of its merits. Among the chief commentaries may be mentioned the first in point of date, that of Abū Shāma 'Abd al-Raḥmān b. Ismā'īl al-Dimishḳī (596—665) copies of which are preserved in Paris (Bibl. Nat., n°. 1620) and Munich (n°. 547); that of Ibn Marzūḳ of Tlemcen (died 842) described by Dozy as "stupendus et horrendus"; that of Khālid al-Azhari (died in 905) which has been several times printed, occasionally with that of Ibrāhīm al-Bādjūrī (died 24th Dhu 'l-Ḳa'da 1276); that of Ibn Ashūr (Cairo, 1296). The text was published for the first time at Leiden by Uri in 1761 under the title, *Carmen Mysticum Borda Dictum*, with a Latin translation. Since then it has often been reprinted, particularly in the East and there is practically not a *Madjmū'* which does not contain it. In the West, von Rosenzweig's edition may be mentioned: *Funkelnde Wandelsterne zum Lobe des Besten der Geschöpfe* (Vienna, 1824), with a German translation and notes. The best edition is that of Rolfs, published after his death by Behrnauer, *Die Burda, ein Lobgedicht auf Muhammad* (Vienna, 1860), with translations into Persian, Turkish and German; it does not however contain the series of apocryphal verses given by von Rosenzweig. The *Burda* has been translated into various languages; without enumerating all the translations, we may mention, in addition to those mentioned above, that of de Sacy (at the end of the *Exposition de la Foi* by Pīr Alī Berkewī, translated by Garcin de Tassy, Paris, 1822) and that of R. Basset, with a commentary (Paris, 1894); that of Redhouse, *The Burda* (in W. A. Clouston, *Arabian Poetry for English Readers*, p. 322—341, Glasgow, 1881); Gabrieli's Italian translation, *al-Burdatan* (Florence, 1901), p. 30—85, with notes.

(RENÉ BASSET.)

BURDJ, arabicised from the Latin *burgus* through the Syriac (cf. Fraenkel, *Die Aramäischen Fremdwörter im Arab.*, p. 235), a "citadel". In astronomy *burdj* means 'sign of the zodiac'.

BURDJĪ was the name applied to the Mamlūk corps of Mongols and Circassians founded by Sulṭān Ḳalāūn and quartered in the towers of the citadel (*burdj*) of Cairo. From the time of Sulṭān Barḳūḳ (784—801 = 1382—1398) the Sulṭāns were chosen from their ranks; Baibars II [q. v.] was the first Burdjī Mamlūk to occupy the throne of Egypt. Their last ruler Tūmān Bey was executed in 1517 (922) by the Ottoman Sulṭān Selīm.

(M. SOBERNHEIM.)

AL-**BURGHŪTHĪYA** is the name applied to the followers of Muḥammad b. ʿĪsā Burghūth, a Muḥammadan theologian, who founded a sect; he is considered by some to have belonged to the Khāridjīs and by others to the Nadjdjāriya [q. v.] but on some points of minor importance he followed his own views. Nothing further is known of Muḥammad b. ʿĪsā, not even how he came to receive the nickname Burghūth, "flea".

Bibliography: Shahrastānī, ed. Cureton, p. 61, 103 (Haarbrücker, p. 94, 155); al-Baghdādī, ed. Muḥ. Badr, p. 197.

BURHĀN ("Proof"), *takhalluṣ* of Muḥammad-i Ḥusain b. Khalaf al-Tibrīzī, compiler of the Persian dictionary, *Burhān-i Ḳāṭiʿ*; see TIBRĪZĪ.

BURHĀN, a family (*āl*) in Bukhārā, in which, in the vith (xiith) century the office of *raʾīs* (superior, at this time the word had not yet acquired its present meaning of *muḥtasib*) of the Ḥanafīs of that city descended from father to son; the title *ṣadr djihān* (plur. *ṣudūr*) is applied not only to the head of the family but to all the other members also. Some poets compare these "Imāms" with the "Emirs" of the Sāmānid dynasty and rank the "wearers of the turban" (*ahl al-ʿamāʾim*) higher than the "wearers of the crown" (*arbāb al-tīdjān*). The title *ṣadr-djihān* was also borne, at a later period under the Mongols, in Samarḳand as well as in Bukhārā by the office-bearers of the highest rank among the clergy and in the civil service. In almost all stories of the Burhān family, in addition to their spiritual rank and learning, particular emphasis is laid on their great wealth, to which they apparently owed a great part of their influence. The *ṣudūr* maintained an almost princely attitude towards their fellow-citizens. It is not quite clear what was their relation to the Turkish Khāns residing in Samarḳand. Some of these Khāns exerted their authority in Bukhārā also and regarded the *ṣudūr* as their vassals; at other periods Bukhārā is described as a town under the rule of the *ṣadr-djihān* and politically quite independent of Samarḳand. This relationship was apparently not always settled in a peaceful fashion; it is significant that in the genealogical table compiled by Muʿīn al-Fuḳarāʾ (*Kitāb-i Mullāzāda*, in Barthold, *Turkestan v epochu mongol'skago nashestviya* i. 169) all the *ṣudūr* with the exception of the first are called "martyrs".

Independent of this genealogical table in which the *ṣudūr* appear as descendants of the Caliph ʿOmar I, are the notices of the *ṣudūr* recently collected by Mīrzā Muḥammad b. ʿAbd al-Wahhāb Ḳazwīnī (*Part I of the Lubābu 'l-albāb of Muḥammad ʿAwfi*, ed. Browne, London and Leiden 1906, p. 332 *et seq.*). The founder of the power of the house was the "second Nuʿmān" (Abū Ḥanīfa), Burhān al-Milla wa 'l-Dīn ʿAbd al-ʿAzīz b. ʿOmar Māza. The stories quoted by Mīrzā Muḥammad from ʿAwfī's *Djawāmiʿ al-ḥikāyāt* refer to this *ṣadr* and not, as Mīrzā Muḥammad supposes, to the latter ʿAbd al-ʿAzīz. The date of his rule is approximately fixed by the statement of Abu 'l-Ḥasan Baihaḳī (*Taʾrīkh-i Baihaḳ*, Cod. Mus. Brit. Or. 3587, 61a *et seq.*) who says that his father, who was born on the 1st Shawwāl 447 = 24th Dec. 1055 and died on Thursday the 27th Djumādā II 517 = 23rd August 1123 was at school with this *ṣadr*.

The second *ṣadr* Ḥusām al-Dīn ʿOmar, son of the preceding, was slain in 536 (1141) at the taking of Bukhārā by the Ḳarā-Khiṭāi (*Recueil de textes relatifs à l'histoire des Seldjoucides*, ed. Houtsma, ii. 278 and Niẓāmī ʿArūḍī, *Čahār Maḳāla*, ed. Mīrzā Muḥammad, p. 22). Nevertheless according to Niẓāmī ʿArūḍī, the governor appointed by the heathen Ḳarā-Khiṭāi received instructions to follow the advice of the Imām Aḥmad b. ʿAbd al-ʿAzīz (apparently a brother of the slain *ṣadr*) on all questions. Ibn al-Athīr (ed. Tornberg, xi. 205) makes the *raʾīs* Muḥammad, a son of the slain *ṣadr*, laud the moderation of the conquerors in the year 559 (1163-1164; this date cannot be correct, cf. Barthold, *Turkestan* etc. ii. 358).

This same Muḥammad is called *ṣadr* in the genealogical table. According to the same authority, his son Burhān al-Dīn Muḥammad and his great-grandson Saif al-Dīn Aḥmad also held the same rank after him. Contemporary accounts however show that the genealogical relationship of the later *ṣudūr* to the earlier must have been different. Unfortunately these accounts are very defective and much still remains uncertain on this point. ʿAbd al-ʿAzīz II is mentioned by ʿAwfī as son of ʿOmar (*Lubāb* i. 211): apparently this is the person to whom Muḥammad b. Zufar dedicated his edition of the *Taʾrīkh-i Narshakhī* (ed. Schefer, p. 2 *et seq.*) in the year 574 = 1178-1179: but this *ṣadr* is there called ʿAbd al-ʿAzīz b. ʿAbd al-ʿAzīz. The *ṣadr* Saif al-Dīn Muḥammad b. ʿAbd al-ʿAzīz who was still alive at the date of composition of the *Lubāb* (617 = 1220-1221; *Lubāb* i. 180) was probably a son of ʿAbd al-ʿAzīz II. The following must be regarded as sons of the Aḥmad b. ʿAbd al-ʿAzīz mentioned by Niẓāmī ʿArūḍī.

1. Masʿūd b. Aḥmad, whose son Burhān-i Islām Tādj al-Dīn ʿOmar and grandson Niẓām al-Dīn Muḥammad were personally known to ʿAwfī (*Lubāb*, i. 169 *et seq.*).

2. Burhān al-Dīn Maḥmūd b. Aḥmad, author of several works on the Fiḳh of the Ḥanafīs (Brockelmann, i. 375).

3. The Burhān al-Dīn Muḥammad b. Aḥmad, mentioned by Ibn al-Athīr (ed. Tornberg, xii. 170 *et seq.*) and Nasawī (ed. Houdas, p. 23 *et seq.* and 39). According to Ibn al-Athīr, he made a pilgrimage to Mecca in 603 = 1206-1207 and was at first received with great honour but later gave offence on all sides by his behaviour, which was such that a wit slyly remarked that his title should be changed to *ṣadr djahannam*. It is probably to this pilgrimage that a story given by ʿAwfī refers (Barthold, *Turkestan* etc. i. 88) of a *ṣadr* of Bukhārā, who is said to have lived in unheard-of luxury in Mecca.

About this time must have taken place the popular rising in Bukhārā mentioned by Djuwainī (thereon cf. Barthold, *Turkestan* etc. ii. 381); a man of the artisan class, son of a vendor of shields (*madjānn-furūsh*) seized the ruling power and took the title of "Malik-Sindjar"; the "well-to-do classes" (*aṣḥāb ḥurmat*) were persecuted on all sides; it was to be expected that the rich *ṣudūr* would be among those driven out of the town and as a matter of fact we learn from ʿAwfī (*Lubāb*, ii. 385) that the *ṣudūr* had to take refuge with the infidel Ḳarā-Khiṭāi, before whom they laid their charges against their enemy Malik-Sindjar and received the necessary decrees but could do nothing (the power of the Ḳarā-Khiṭāi had long

decayed): they fell into debt, their villages were without water, and their movable property was stolen; their journey to the Ḳarā-Khiṭāi was satirised by the poet Shamsī whose verses are quoted by ʿAwfī. It was probably immediately after his deposition that the *ṣadr* Burhān al-Dīn, like many Oriental princes, undertook the pilgrimage to Mecca.

ʿAwfī was able to add that affairs soon took another turn. Bukhārā was occupied by Muḥammad b. Takash, Shāh of Khwārizm probably as early as autumn 604 = 1207 (cf. Barthold, *Turkestan*, ii. 386); Malik-Sindjar was, as we learn from a verse quoted by ʿAwfī (*Lubāb*, ii. 393), brought first to Āmūi on the Oxus (the modern Čardjui), afterwards to Khwārizm where he lived for a considerable period and is also mentioned by Nasawī (ed. Houdas, p. 21). What Nasawī tells us about the *ṣadr* Burhān al-Dīn Muḥammad clearly shows that the *ṣadr* was able to return to Bukhārā, was for long *Raʾīs* and *Khaṭīb* of the Ḥanafīs again, and lived in the same princely luxury as before: 6000 jurists (*faḳīh*) are said to have been maintained there by him. He was afterwards deposed by the Shāh of Khwārizm and brought to Khwārizm. When Turkān-Khātūn, mother of the Shāh of Khwārizm, had to flee in 617 = 1220 before the Mongols, she had the *ṣadr*, his brother Iftikhār-Djihān and his two sons Malik al-Islām and ʿAzīz al-Islām, with the rest of the rulers and princes imprisoned in Khwārizm, thrown into the Oxus.

The influence of the family was not destroyed by these disasters but survived even the Mongol invasion. Whether, as Mīrzā Muḥammad supposes, the *ṣadr-djihān* mentioned as a contemporary of Sulṭān Ūldjāitū (703—716 = 1303—1316) belonged to the same family is uncertain; on the other hand Djuwainī in his account of the rising in the year 636 = 1238-1239 expressly describes the then *ṣadr-djihān* as a "scion of the family of Burhān" (*sulāla-i khāndān-i burhānī*, cf. the Persian text in Schefer, *Chrestomathie Persane*, ii. 129, and in Defrémery, *Journ. Asiat.*, ivth Series xx. 377). (W. Barthold.)

BURHĀN ʿIMĀD SHĀH, (1560—72), last king of the ʿImād Shāhī dynasty [q. v.] in Berār; he was a child when he began to reign, and his minister Tufāl Khān confined him in the fort of Narnāla [q. v.] and usurped the government. In 1572 Murtaḍā Niẓām Shāh, king of Aḥmadnagar, besieged the fort and captured both the king and his minister, who were subsequently put to death.

Bibliography: Firishta, *Gulshan-i Ibrāhīmī*, Maḳāla iii.

BURHĀN SHĀH I (1508—1553), second king of the Niẓām Shāhī dynasty [q. v.]

BURHĀN SHĀH II (1591—1595), seventh king of the Niẓām Shāhī dynasty [q. v.].

BURHĀN AL-DĪN (Ḳāḍī), Aḥmad, ruler of Siwās and one of the earliest Ottoman lyric poets. He was born at Ḳaiṣariya in 745 (1344) of a family of judges; on the completion of his studies in Aleppo, he settled in the town of Erzingān, became very friendly with the Emir who was then governing it and married his daughter; he afterwards quarrelled with him, put him to death and installed himself in his place. He took possession of Siwās and Ḳaiṣariya, and fought without success against an army sent against him by the Mamlūks of Egypt in 389 (1387); ten years later he had resource to Egyptian troops (799 = 1396) to rid himself of the Turkoman tribes who were troubling him; he perished in 799, 800 or 801 (1397—1399) in an encounter with Ḳara-ʿOthmān, surnamed Ḳarā-Yūluḳ of the Turkomans of the White Sheep. We may set aside Saʿd al-Dīn's story that Ḳara-ʿOthmān only came up with Ḳāḍī Burhān al-Dīn in the mountains of Kharpūt after the latter's flight, before the advance of the Ottoman Sulṭān Bāyazīd I. He wrote on the principles of jurisprudence and composed poetical pieces in Arabic, Persian and Turkish. His Dīwān was acquired in 1890 by the British Museum; this manuscript is a unique one copied in 798 (1395). The most interesting part of it is the series of quatrains called *tuyūgh*, which are scanned by the number of syllables in them, independent of their quantity (*parmaḳ ḥisābī*); they are entirely inspired by Persian influence, but the language is archaic and full of Eastern Turkī words.

His tomb still exists at Siwās (Grenard, *Journal Asiatique*, ixth Series, Vol. xvii. 1901, p. 555), with the probable date 799 (1397); there may also be seen that of his son Muḥammad Čelebi (died in 793 (1391) and of his daughter Ḥabība, surnamed Saldjūḳ Khātūn, because Burhān al-Dīn's paternal grand-mother was a grand-daughter of Kai-Kāūs II, Seldjūḳ Sulṭān of Rūm (van Berchem, *Corpus Inscriptionum Arabicarum*, Vol. iii. p. 50); she died in 850 (1446). Her biography, written in Persian by ʿAzīz b. Ardashīr al-Astarābādī, and still unpublished, is in the Library of St. Sophia (No. 3465).

Bibliography: Ibn Ḥadjar al-ʿAsḳalānī, quoted by Gibb, *History of Ottoman Poetry*, Vol. i. p. 204 *et seq.* (poems translated, p. 214 *et seq.*; text, Vol. vi. p. 16 *et seq.*); P. Melioranski, text and translation of 20 rubāʿī and 12 tuyūgh (*Vostotshniya Zamietki*, p. 131 *et seq.*); Saʿd al-Dīn, *Tādj al-tawārīkh*, i. 133; ii. 410. (Cl. Huart.)

BURHĀN AL-DĪN Ḳuṭb-i ʿĀlam, famous Indian Saint, grandson of another famous Saint, called Shaikh Djalāl Makhdūm-i Djahāniān 707—785 (1308—1384). He lived at the court of Sulṭān Aḥmad I of Gudjarāt at Batwa near Aḥmadābād, where he died in 857 (1453). Here a large mausoleum has been built for him. In the same place is the tomb of his son Shāh-i ʿĀlam (died in 1495) in a gorgeous mosque.

BURHĀN AL-DĪN AL-MARGHĪNĀNĪ. [See AL-MARGHĪNĀNĪ.]

BURHĀNPUR, a city in the Central Provinces, India, on the r. bank of the Tāptī river, situated in 21° 18′ N. and 76° 14′ E., founded in 1400 by Nāṣir Khān, the first independent prince of the Fārūḳī dynasty [q. v.]. After the kingdom of the Fārūḳīs became part of the Mughal empire in 1600, the city was much embellished by Akbar and his successors, and became one of the most important cities in the province of the Dakhan. The town is still surrounded by walls, with massive gates on the main roads. The remains of mosques and other buildings show that, at the height of its prosperity under the Mughals, Burhānpur extended over an area of about five square miles. The Djāmiʿ Masdjid, built by ʿAlī Khān in 1588 and decorated with fine stone carvings, is still well preserved, and the waterworks con-

structed by Djahāngīr in the seventeenth century have recently been repaired for modern use.

BŪRĪ (= "Wolf" in Eastern Turkī) b. AIYŪB TĀDJ AL-MULŪK MADJD AL-DĪN, the younger brother of Ṣalāḥ al-Dīn was sent by the latter in charge of the baggage-train to Damascus at the beginning of the campaign of 578 (1182). In the same year he had command of the troops before the al-ʿImādī gate at the unsuccessful siege of Mawṣil. He died after the surrender of Aleppo from a wound received in the knee from a lance during the siege (579 = 1183). Brave and magnanimous, he combined in his person the most admirable moral and physical qualities. Shortly before his death, his brother greeted him with the words: "I have taken Aleppo and will give it thee". "Yes, if I were to live, but you have paid dearly for it in losing such a man as I", was the reply.

Bibliography: Ibn al-Athīr (ed. Tornberg), xi. 315, 320, 328. (CL. HUART.)

BŪRĪ, TĀDJ AL-MULŪK, prince of Damascus, fought bravely and devotedly from his early youth at his father Ṭoghtegīn's side, against the Crusaders. He succeeded him in 522 = 1128. The Ismāʿīlī sect [q. v.] managed to make their influence strong in Damascus through the Vizier Ṭāhir al-Mazdaghānī; their representative Abu 'l-Wafā became almost more powerful than Būrī himself. The Ismāʿīlīs made an agreement with Ṭāhir to hand over Damascus to the Franks by a stratagem and receive Tyre in exchange. When Būrī heard of the plan, he slew his vizier and had all the Ismāʿīlīs, 20,000 in number, massacred. Damascus was put in a state of defence and the Franks had to retire. The Nemesis of the Ismāʿīlīs was not long in overtaking him, however; Būrī was treacherously attacked by one of their agents in 525 (1131) and died of his wounds in the following year.

Bibliography: *Recueil des Historiens des Croisades. Orient.*, i. 6, 17, 19, 20, 206, 207, 315, 372, 384, 392, 393, 395; iii. 534, 535, 538, 539, 567 *et seq.*, 661, 662, 664 *et seq.* (M. SOBERNHEIM.)

BŪRĪ-BARS B. ALP ARSLĀN, the Saldjūḳ, was sent by Barkiyāruḳ against Arslān Arghūn, another son of Alp Arslān, who was trying to make himself independent in Khorāsān. In the struggle between the two brothers, Būrī-Bars was at first successful but in the second encounter in 488 (1095) his troops were scattered and he himself was taken prisoner and strangled by his brother's orders.

BŪRĪ-TEGĪN, a prince of the house of Karakhānids or Ilak-Khāns in Mā warāʾ al-Nahr. In all manuscripts the name is written Būr-Tegīn or Pūr-Tegīn; apart from the meaning of the Turkī word (*būrī* = Wolf), the reading is confirmed by the metre in Minūčahrī (ed. Biberstein-Kazimirski, text p. 47, verse 62).

In the *Taʾrīkh-i Baihaḳī*, Būrī-Tegīn is first mentioned in the narrative of the events of the year 429 = 1037-1038 (ed. Morley, p. 682). The text is here certainly corrupt; the correct reading probably is *Bu-Isḥāḳ Ibrāhīm pūsar-i Ilak-i māḍī*, i. e. the prince Būrī-Tegīn Abū Isḥāḳ Ibrāhīm was a son of Ilak-Naṣr, the conqueror of Mā warāʾ al-Nahr and identical with Tamghādj Khān Ibrāhīm b. Naṣr who afterwards became famous as Khān of Samarḳand. Of his earlier life we only know that he was kept imprisoned by the sons of ʿAlī-Tegīn (cf. p. 297). Escaping from his warders he first went to his brother ʿAin al-Dawla in Ūzgand (in Farghāna), thence sent a letter to the Vizier of the Ghaznawids and was recognised as Emīr by Sulṭān Masʿūd; the letter in reply was so conceived that should it have fallen into their hands, even the sons of ʿAlī-Tegīn could have raised no protest against it. Soon afterwards Būrī-Tegīn betook himself to the semi-savage Kumīdjī (this is the correct reading, cf. the comparison of the variants in Barthold, *Turkestān v epochu mongol'skago nashestviya* i. p. 9, note 4), who lived in the mountains north of Čaghāniyān and the adjoining area; from there he set out at the head of 3000 men towards Khuttalān and Wakhsh. These lands at this time belonged to the Ghaznawid kingdom, although Būrī-Tegīn proclaimed himself a vassal of Sulṭān Masʿūd, his cavalry ravaged the country as if it were that of an enemy. Būrī-Tegīn sent an envoy to make his excuses; nevertheless an army of 10,000 men was sent against him at the end of Muḥarram 430 = October 1038; he was forced to vacate Khuttal and retire to the land of the Kumīdjī; against the advice of his counsellors Masʿūd resolved to undertake a winter campaign against him there. On Monday the 19th Rabīʿ I. 430 = 18th December 1038 he crossed the Oxus on the bridge of boats commemorated in Minūčahrī's verses (*loc. cit.*); on Sunday the last day of the same month (31st December) he reached the town of Čaghāniyān ([q. v.], the modern Dih-i Naw), without having encountered any opposition on his march, advanced still further north from there but received despatches from his kingdom which induced him to return. At this season of the year this hurried retreat could not be effected without heavy losses; his army was now constantly harassed by Būrī-Tegīn and his horsemen: the Sulṭān only succeeded in reaching the Oxus by leaving behind a portion of his baggage, camels, and horses.

Būrī-Tegīn's prestige was naturally raised by this success and new adherents flocked to him. In Muḥarram 431 (23rd September—22nd October 1039) Sulṭān Masʿūd was informed that Būrī-Tegīn had defeated the sons of ʿAlī-Tegīn and deprived them of almost all Mā warāʾ al-Nahr; these accounts must, however, have been exaggerated. When the war between the Ghaznawids and the Saldjūḳ princes was decided at the battle of Dandānaḳān in favour of the latter (Thursday the 8th Ramaḍān 431 = 23rd May 1040), the victors sent envoys to announce their success to the sons of ʿAlī-Tegīn as well as to Būrī-Tegīn (Baihaḳī, p. 788). This is the last mention we have of Būrī-Tegīn; in place of him we now find Ṭamghādj-Khān Ibrāhīm b. Naṣr who is first mentioned on coins in 438 = 1046-1047 with his full title (*ʿImād al-dawla wa tādj al-milla saif khalīfat Allāh Ṭamghādj Khān*). On the coins struck in Bukhārā in the year 433 (1041-1042) he is only called Ibrāhīm b. Naṣr, without any title. It is nowhere expressly stated that this Ibrāhīm b. Naṣr is identical with Būrī-Tegīn but there are no real grounds for doubting the identification.

Bibliography: Besides the main source (*Ta'rīkh-i Baihaķī*) Būrī-Tegīn is also mentioned in Gardīzī (cf. the text in Barthold, *Turkestan* etc., i. 9) and in Minūčihrī (*Dīwān*, ed. Biberstein-Kazimirski, text, p. 47). Cf. the discussion of the original sources in Biberstein-Kazimirski (*Menoutchehri*, Paris 1887, Introd. p. 112 *et seq.*) and in Barthold (*Turkestan* etc., ii. 318 *et seq.*, 323 *et seq.*). (W. BARTHOLD).

BŪRIDS is the name given to a dynasty which ruled independently in Damascus as Atābegs (governors of the Saldjūķ Sulṭāns) from 503—549 = 1109—1154. Ṭughtegīn, the founder of the dynasty, was Atābeg from 497—503 = 1103—1109 for Duķāķ the infant son of the Saldjūķ prince and afterwards for Duķāķ's brother Baktāsh; the dynasty is called after Ṭoghtegīn's son Būrī [q. v.]. Its last ruler was Būrī's grandson Mudjīr al-Dīn Abaķ (534—549 = 1139—1154), an incapable and suspicious tyrant; he had put to death his real followers and could only rely for support on the Crusaders. To prevent Damascus falling into the hands of the Franks, Nūr al-Dīn seized the town, forced Abaķ to be content with Ḥimṣ and later to exchange the latter town for the distant town of Bālis.

AL-**BŪRĪNĪ**, AL-ḤASAN B. MUḤAMMAD AL-DIMASHĶĪ AL-ṢAFFŪRĪ BADR AL-DĪN, an Arab historian and poet, born in the middle of Ramaḍān 963 = July 1556, at Ṣaffūriya in Galilee, came when 10 years old with his father to Damascus, where he received his education at the Madrasa al-Ṣāliḥiya. After the completion of his studies, which he had to interrupt in 974 = 1567 by a four years' stay in Jerusalem on account of famine, he lectured in various madrasas. In the year 1020 = 1611 he acted as Ķāḍī to the Syrian pilgrim caravan. He died on the 13th Djumādā I 1024 = 11th June 1615. His chief work is the collection of biographies entitled *Tarādjim al-A'yān min Abnā' al-Zamān*, containing accounts of 205 individuals which he had collected at long intervals and completed in 1023 = 1614; it was edited by Faḍl Allāh b. Muḥibb Allāh in 1078 = 1667 and published with a supplement (cf. Ahlwardt, *Verzeichnis der arab. Hdss der Kgl. Bibliothek zu Berlin*, N°. 9889; Flügel, *Die arab., pers. und türk. Hdss. der Kgl. Hofbibliothek zu Wien*, N°. 1190; *Fihrist al-Kutubkhāne al-Khidīwīye*, v. 33); his *Dīwān* is preserved in Stambul (Köprülü, N°. 1287). There are some of his poems in Berlin (*Marāthī* on the Ṣūfī Muḥammad b. Abī 'l-Barakāt al-Ķādirī, s. Ahlwardt, *op. cit.* N°. 7858, 3), Gotha (poetic epistle to As'ad b. Mu'īn al-Dīn al-Tibrīzī al-Dimashķī with the latter's reply, cf. Pertsch, *Die arab. Hdss. der herzogl. Bibl.*, N°. 44, 23) and London (*Catalogus Codd. Or. Mus. Brit.*, ii. N°. 630, 2). Lastly he also wrote a commentary on the *Dīwān* of 'Omar b. al-Fāriḍ, lith. Cairo, 1279; he completed the commentary on the *Tā'īya al-Ṣughrā* in 1002 = 1593, cf. Derenbourg, *Les Mss. ar. de l'Escurial* N°. 420, 4.

BURLUS. [See BURULLUS.]

BURMA. In 1901, the total number of Muḥammadans in Burma was 339,446, of whom more than half are found in Akyab, where they form 30% of the inhabitants. In Rangoon city there are many wealthy Muḥammadan merchants. The most interesting class is that called Zairbādīs, the offspring of Burmese women by Muḥammadan natives of India, who numbered altogether 20,423. In Upper Burma the male parents are said to be derived from three quarters: immigrants from northern India, prisoners from Arakan, and prisoners from Manipur. While adhering faithfully to Islām, the Zairbādīs have adopted the Burmese dress and commonly know no language but Burmese.

Bibliography: *Imperial Gazetteer of India.* (J. S. COTTON.)

BURSA. [See BRUSSA, p. 768.]

BURSŪĶ, (the name means "badger" in Eastern Turkī), companion and friend of the Saldjūķ Sulṭān Toghrul-Beg, was the first to hold the office of chief of police (*shiḥna*) in Baghdād after the burning of that town in 451 (1059); he commanded a section of the advance-guard of the army sent against Aleppo by Malik-Shāh in 479 (1089) and walked at the head of the procession on the occasion of the marriage of Malik-Shāh's daughter with the Caliph in 480 (1087). He took the side of Barkiyārūķ in his struggle with his uncle Tutush, went with him on his defeat and accompanied him to Iṣfahān in 487 (1094); he was murdered by an Ismā'īlī assassin in Ramaḍān 490 (August 1077). He had received in fief part of Khūzistān (Tustar, Sābūr-khwāst, between al-Ahwāz and Hamadhān), which passed to his descendants. The latter were powerful enough to capture the rebel Mangu-Bars (Ibn al-Athīr, x. 274) and send him to Sulṭān Muḥammad. As a reward for this service, the Sulṭān withdrew their fief from them to give them that of Dīnawar and the surrounding country in exchange in 499 (1106).

His son, likewise called Bursūķ, was sent by Barkiyārūķ against Īnāl, one of Sulṭān Muḥammad's generals, who had seized Raiy, and defeated him before the walls of that city in 497 (1103). Though he was so ill with gout that he had to be borne on a litter he succeeded in breaking up the Muḥammadan troops in Syria 505 (1111-1112). He was appointed commander of the army sent by Sulṭān Muḥammad, first against Il-ghāzī and Toghtegīn, who had revolted and next against the Crusaders (508 = 1115) and crossing the Euphrates to Raķķa with the rear-guard of this army he marched on Ḥamā and occupied it. He was about to attack the Crusaders who were plundering the Muslim camp before Antioch when he was persuaded to retreat. He died in 510 (1116-1117). He was a man of noble and devout character, who always regretted having consented to retreat and indeed was preparing to renew the fighting when death overtook him. His grandson Bursūķ took part in the revolt of the Turkish Emīrs who seceded from Sulṭān Mas'ūd to throw in their lot with the Caliph al-Mustarshid (529 = 1135) and sought an interview with the latter; he received the command of a section of the right wing at the battle of Dai-mardj on the 10th Ramaḍān =

24th June. He was also among the Emirs who revolted against Mas'ūd in 530 (1136) and made their peace with him in the following year.

Bibliography: Ibn al-Athīr (ed. Tornberg), x. 6, 97, 106, 151, 159, 185, 196, 243, 321, 342, 356—358; xi. 14, 23, 30.

(Cl. Huart.)

al-**BURSUĶĪ** [See Aķ sonķor, p. 226.]

BURṬĀS or Burdās (in al-Bakrī: Furdās), a pagan people in the Volga territory; on the relations of the Burdās to their neighbours on the north and south, the Khazar and Bulghār, see the article bulghār, p. 786 *et seq.* Mas'ūdī also gives the name Burṭās to a tributary of the Itil (Volga; *Murūdj*, ii. 14 and *Tanbīh*, p. 62); Marquart (*Osteuropäische und ostasiatische Streifzüge*, p. 336) considers this river to be the Samara. No adherents of Islām are mentioned among these people by any authority, unlike the Khazar and Bulghār. Yāķūt's statement (i. 567) on this point is based on a misunderstanding: Iṣṭakhrī's (ed. de Goeje, p. 225) statement regarding the Bulghār is erroneously transferred by him to the Burṭās. In the source of Ibn Rusta (ed. de Goeje, p. 140 *et seq.*), al-Bakrī (Kunik and Rosen, *Izvěstia al-Bekri* etc. i. p. 44) and Gardīzī (Barthold, *Otčet o poyezdkě v. srednyuyu Aziyu*, p. 96) all that is told us of the religion of the Burṭās is that their beliefs were the same as those of the (Turkish) Ghuzz and that one section of them burned their dead and the other buried them. The Burṭās were far behind their neighbours on the scale of civilization; there was no real ruling authority in their land, only the elders of the tribes. The commercial relations of the Burṭās with the Muḥammadan world were only of importance for the fur trade. The furs (*firā'*) of the Burṭās are mentioned by Yāķūt (l. c.)

The Burṭās are identified with the Finnish people known to the Russians as "Mordwa" (in Rubruquis Merdua). Their settlements immediately adjoined the Slav lands on the Oka and stretched a considerable distance to the north; the town of Nizhnij-Novgorod was founded in their lands by the Russians in 1221. Like the other peoples of the Volga territory, the Burṭās had to submit to the Russians in the xvith century; risings by them are however mentioned as late as the xviiith century; nevertheless they showed themselves much more ready to adopt Christianity and Russian culture than Muḥammadan peoples or those who had been affected by Muḥammadan culture. A large section of the Mordwa is now completely merged in the Russians. (W. Barthold.)

al-**BURŪDJ** (A.) Plural of al-Burdj [q. v., p. 796.]

BURULLUS (Borollos, Burlus), a district and lake in the Nile Delta. While the main branches of the Nile flow directly into the sea, many of its smaller streams flow into the lakes which lie to the north of the fertile land of the Delta and are only separated from the Mediterranean by a narrow chain of sand hills. The large salt lake lying between the Rosetta and Damietta arms of the Nile, is called Lake Burullus at the present day. Throughout the year it covers an area of 180,000 acres and about twice this area in season of floods. It has an exit to the sea through which when the Nile is high, the fresh water flows out into the sea, and when it is low, the salt water rushes into the lake. The lake is famous for its richness in fishes and the population of the northern coastlands live by fishing.

The name Burullus (Borollos, Borlos) or more correctly Barallos (Yāķūt, Ibn Baṭṭūṭa) is quite ancient. In Coptic we have Parallou, Tparalia, in Greek Παράλου as the name of an ancient see of a bishop, which is also called Nikedules, Nikeddamles; al-Kindī mentions Barallos among the fortresses of the Egyptian frontier. No town of this name now exists, but the little villages at the end of the tongue of land, which lies along the north of the lake to the east of its exit, probably represent the remains of the ancient Barallos; the name is applied at the present day to the whole area in the northeast of the lake, a district (*markaz*) of the province of Gharbīya with 18,163 inhabitants. The chief town of the district is Balṭīm which had supplanted the ancient Barallos even in Ibn Baṭṭūṭa's time.

In the middle ages the lake was not called after Barallos, but after Nastarū(h) or Nastarāwe. This place, which has not yet been identified, probably occupied the site of the now abandoned Kōm Mostorūh which lies on the little Haff, west of the exit. According to Ibn Duķmāķ, v. 113, the ancient Nastarāwe must have occupied this site; even in his time it was quite buried in sand.

(C. H. Becker.)

al-**BURZULĪ**, Abu 'l-Ķāsim b. Aḥmad b. Muḥammad b. al-Mu'tall al-Ķairawānī al-Mālikī, an Arab author, came as a pilgrim in 806 = 1403 to Cairo, became Imām at the Zaitūna, muftī, preacher and professor in Tūnis, and died on the 25th Dhu 'l-Ķa'da 841 = 20th Apr. 1438 (according to others 844 = 1440 or 842). He wrote the *Djāmi' Masā'il al-Aḥkām mimmā nazala min al-Ķaḍāyā lil-Muftīn wa 'l-Ḥukkām* (cf. *Catalogus Codd. Mss. Or. qui in Museo Brit. ass.*, ii. Cod. Ar., N°. 244—246; *Catalogue général des mss. des bibliothèques publiques de France*, Départements, xviii. Alger, par E. Fagnan, N°. 1833-1834). A synopsis of this author is perhaps contained in Brit. Mus., N°. 247. In the 2nd half of the ixth century Aḥmad Ḥulūlū made a selection of *Masā'il* from this work; an anonymous excerpt of the year 1149 = 1736 is Algiers n°. 1337.

Bibliography: Zarkashī, *Ta'rīkh al-Dawlatain al-Muwaḥḥidīya wa 'l-Ḥafṣīya* (Tūnis 1289), p. 122; Ibn Maryam, *al-Bustān* (Algiers, 1908), p. 150; Brockelmann, *Gesch. d. ar. Lit.*, ii. 247. (C. Brockelmann.)

BUSHĀĶ, Aḥmad Abū Isḥāķ (usually called briefly Bus-ḥāķ), was born at Shīrāz, lived chiefly at the court of Tīmūr's grandson Iskandar b. 'Omar Shaikh in Iṣfahān and died there in 1424 or 1427 A. D. He appears in the Persian *Farhangs* as the authority on culinary matters. From the original Bushāķ *al-af'ima*, "Bushāķ of the

Meats", Persian *Bushāk-i atʿima*, Atʿima became the name by which this author was afterwards known, although he himself used the pen-name Bushāk. Very little is told us of the events of his life though his works testify to his importance as an authority on culinary matters. The *Dīwān* (extant in manuscripts in London, Vienna and Constantinople and published in the last-named town in A. H. 1303) contains: the *Kanz al-Ishtihā* "The Treasury of the Appetite", Kasīdas and verses in other styles, the Masnawīs *Asrār-i Čangāl*, "The Secrets of the Forks" (dishes of pastry and dates), "The History of Saffron Pillaw and Macaroni" (a burlesque epic), "Rice and Macaroni" (prose and verse intermingled), "The Dream" (how the poet fancies his tomb in terms of cookery); the *Munāzara* of the rivalry between bread and sweet cake (Ethé, *Litteraturgesch.*, p. 304) is not in it. At the end is given a list of dishes, which the poet explains in prose, but unfortunately not in the form of recipes, so that one cannot now make them from his descriptions. The smaller poems are almost all parodies on poems by Saʿdī, Ḥāfiẓ, Salmān, etc., though there is one original, — on Kīmī-pillaw — among the Kasīdas.

Bushāk is the Persian gastronomist *par excellence*; in him the Persian gourmand is seen in perfection, of the higher, aesthetic art, he is quite ignorant, his technical term for gourmand being "worshipper of the belly" (*Shikam-parast*), not perhaps "worshipper of the palate" or simply "belly-wise", (Greek Gastrosophos). His motto is "I shall eternally vary the theme of eating whether, reader, it delight thee or weary".

(Paul Horn.)

BŪSHANDJ, Būshang or Fūshandj (probably pronounced Pūshang in pre-Muḥammadan times), a town south of the Harī-Rūd below Herāt, a day's journey or (according to Yāḳūt, i. 758) 10 *farsakh* from this city. In the local history of Herāt composed by Muʿīn al-Dīn Isfizārī in 897 = 1491-1492 (*Rawḍāt al-Djannāt*, Cod. Univ. Petrop., 33a) Būshandj is described as the oldest town in Khurāsān and as a foundation of the mythical Pashang b. Afrāsiyāb (in the Iranian epic, Pashang is the father and not the son of Afrāsiyāb); this statement is obviously based merely on the similarity of the two names. In the Iranian list of towns (on this work cf. the *Grundriss der Iran. Philol.*, ii. 118) the foundation of Būshandj is ascribed to the Sāsānian king Shāpūr I (iiird century A. D.) to whom also is ascribed the building of a bridge over the Harī-rūd there (Marquart, *Ērānšahr*, p. 49). The name is compared by Tomaschek (*Zur Historischen Topographie von Persien*, i. 78) with the Πουκύγαι of Theophrastus. The town was certainly in existence in the pre-Muḥammadan period and is mentioned in the account of the Synod of the year 588 A. D. as the see of a Nestorian bishop, cf. Marquart, *Ērānšahr*, p. 64.

Būshandj was like the rest of Khurāsān conquered by the Arabs in the first century of the Hidjra. Ṭāhir b. Ḥusain, the founder of the Ṭāhirid dynasty (IIIrd = IXth century) came from Būshandj. In the IVth = Xth century the town was about half the size of Herāt and had three gates on the roads to Herāt, Naisābūr and Kūhistān (Iṣṭakhrī, ed. de Goeje, p. 268). The highway from Naisābūr to Herāt, described in detail by Ibn Rusta (ed. de Goeje, p. 172), usually went past Būshandj; Yāḳūt (*loc. cit.*) however did not touch Būshandj when in this district, but only saw it in the distance. Ibn Rusta also emphasises the importance of Būshandj as a strong fortress. The country around the town had the reputation of being exceedingly fertile; the town itself was the centre of the timber trade and timber was exported from it to various districts.

Like other towns and villages on the Harī-rūd, Būshandj was able to recover from the Mongol invasion in a comparatively short time and to attain a new prosperity under the rule of the Kurt dynasty (643—791 = 1245—1389) whose capital was Herāt. According to Isfizārī (f. 11b) the poet Rabīʿī, who composed a poem (*Kurt-nāma*) glorifying the Kurts, was a native of Būshandj. In the middle of Dhu 'l-Ḥidjdja 782 = March 1381 Būshandj was besieged by Tīmūr, taken after a week and destroyed in the cruellest fashion but it was soon rebuilt; the town at this period also was strongly fortified. Būshandj is also often mentioned in the IXth = XVth century; Ḥāfiẓ-Abrū (Cod. Bodl. Elliot 422, f. 525a) also mentions the bridge-head (*sar-pul*) of Būshandj on the road between Herāt and Kūsūya (the modern Kuhsan). According to Isfizārī (f. 33a) there was then a mosque and a *ribāṭ* at Būshandj, the foundation of which was ascribed to the patriarch Abraham; depressions in the stones at the *ribāṭ* were regarded as the footprints of the patriarch. According to Tomaschek (*loc. cit.*) Būshandj corresponds to the modern Gūriān; the country round Gūriān is likewise still regarded as one of the most fertile districts on the Harī-rūd. Like many other towns below Herāt, Būshandj was probably only finally destroyed by the inroads of the Uzbegs and Turkomans.

(W. Barthold.)

BŪSHIR (Būshehr) the chief seaport of Persia, in the province of Fārs, Long. 50° 51′ E. (Greenw.) and Lat. 29° N. The town is built on the north end of a narrow island (the Mesambria and Χερσόνησος of the ancients) lying north and south, which is connected with the mainland by a tongue of swampy land which is regularly covered by the tides (it is called Mashīlā, cf. Stolze-Andreas, *op. cit.*, p. 46). On the south end of this island or rather peninsula are the ruins of Rīshehr. The neighbourhood of Būshir is a cheerless desert only relieved by a few palm-trees; high mountain ranges in the distance border the low narrow strip of coast. The sea is so shallow that ships have to lie far out in the roads; larger steamers anchor four miles southwest of the town.

Like Bender-ʿAbbās (q. v., p. 604) the other seaport of importance on the Persian Gulf, Būshir has only arisen in comparatively modern times, likewise at the expense of older towns. The former was the successor of Hormuz, the latter of the above mentioned Rīshehr. The latter may date back to the period of Babylon's prosperity; numerous burial-urns and in 1873 (excavations by Andreas) and again in 1877, bricks with cuneiform inscriptions were found in its immediate neighbourhood (now in the British and Berlin

Museums). The "City of the Greeks" ('Ιάνασα) of Isid. of Charax must be identical with Rishehr, (Tomaschek, *op. cit.*). The modern name Rishahr, (abbreviated from Rew Shahr) dates from the period of the Sāsānians, to whom a refoundation of the town is ascribed. To distinguish it from the town of the same name in the district of Arradjān [q. v., p. 460] this Rishahr is characterised by the Arab authors of the middle ages as that near Tawwādj; it is written by them Rāshahr and Rishahr (cf. e. g. Balādhorī, ed. de Goeje, p. 387). Until comparatively modern times it was a busy maritime town; even on Portuguese maps of the xvi[th] and xvii[th] centuries, Reixer or Reixel (a corruption of Rishehr) is marked with red letters as the chief emporium on the Persian coast.

According to a note in the Armenian geography of Pseudo-Moses of Chorene (see Marquart, *Ērānšahr*, 1901, p. 27, 146) the finest pearls procured in the Persian Gulf were brought to the market of Rishehr. The Portuguese de Barros in the xvi[th] century estimated the size of the town at 2000 houses. Rishehr gradually declined as Būshīr arose; it became the quarry out of which the material was obtained not only for several villages in the neighbourhood, but also for the greater part of Būshīr. Of the ancient town there now only remain the ruins of the former fortress (*ḳal'a*) forming a huge square, which in its present form probably only dates from the Portuguese period. Rishehr is used at the present day by the European colony in Būshīr as a country resort: the British Resident also has a summer residence there.

Būshīr seems to be first mentioned in Yāḳūt (i. 503, line 1) in the form Būshahr, which is nearer the original Abū Shahr — "father of the town"; perhaps however the reading should be Rishahr. The name was corrupted by English sailors to Busheer and Boshire. Būshīr was a wretched little fishing village down to the middle of the xviii[th] century. The foundations of its modern importance were laid by Nādir Shāh when he raised the village to the rank of a town and destined it to be the base for the whole Persian navy. Although the naval ambitions of the Persian Shāh came to naught through his early death, his interest in Būshīr nevertheless had the effect of concentrating the trade of the Persian Gulf there more and more, so that Bender-'Abbās was ultimately deprived of its commercial supremacy in these waters, which it had held since the days of Shāh 'Abbās I the Great. Būshīr is now the first seaport of Persia. Even in Nādir Shāh's time the English merchants had built an important factory there. Since then the trade has been mainly Anglo-Indian; England, India, and other English dependencies almost exclusively control the import trade and have about half of the export trade. The most important articles exported are: opium especially, woollen goods, wheat and tobacco. The main imports are: cotton goods, weapons, munitions, tea and indigo. Besides the fairly regular steamboat trade, the number of sailing vessels, mostly Persian, Turkish and Arab, i. e. of Mascat, which call at Būshīr, is by no means insignificant.

On imports, exports and shipping the best source of information is the *Administration Reports* of the British Resident at Būshīr which have appeared annually since 1876 and are printed at Calcutta as *Selections from the Records of the Government of India, Foreign Department*. The tables, covering the years 1893—1897, given by M. v. Oppenheim, *op. cit.*, ii. 311—314, are based on these official English returns; the statistics on exports and imports given in Stolze-Andreas (p. 69—73, for the years 1866—1869, 1878—1882) and de Morgan's notes (*op. cit.*) on trade and commercial relations on the Persian Gulf, may also be consulted.

Būshīr may be regarded as the harbour of Shīrāz. It is connected with this town, about 120 miles distant, the chief intermediary for trade between the coast and the interior of Persia, by an important caravan route, which passes through some towns of importance (the principal is Kāzerūn). The road is difficult to traverse, as several dangerous mountain passes and five high parallel ranges have to be crossed.

The town which rises but little above the sea-level is surrounded by a wall, half in ruins, with bastions; its best defence is the shallowness of the water which allows only small boats to land; the town consists of narrow crooked streets, the bazaars are fairly extensive. On account of the almost unbearable heat the dwelling houses as in Bender-'Abbās are provided with column-like erections (*bādgīr*, Persian "wind-catcher") which carry the cool air from the upper strata of the atmosphere to the lower rooms.

The climate of Būshīr is very hot but in the opinion of competent judges not actually unhealthy, although it can only be borne by European constitutions if great precautions are observed; on the climatic conditions cf. Stolze and Andreas, *op. cit.*, p. 7, 8 note 1. Locusts are a terrible plague to the district as indeed to the whole stretch of coast from Būshīr to Shīrāz; cf. Ritter, viii. p. 789.

The principal building of Būshīr is the Residency, lying outside of the town proper, the immense fortified palace of the British Consul General, who supervises all Britain's political interests in the Persian Gulf. On account of its great importance the post of British Resident is maintained in a splendid fashion; gunboats and soldiers are always at his disposal.

The number of inhabitants was estimated by Morier at the beginning of the xix[th] century at about 10,000, by H. Petermann in 1854 at only 4000—5000. Ross reckoned it at 10,000 in 1885, and Stolze and Andreas at 12,000 at the same period. More recent estimates are as follows: M. v. Oppenheim, 20,000—30,000, Cuinet, 15,000, Lorini (1900), 20,500; on the last two see Supan in *Petermann's Geogr. Mitteil.*, Erg. Heft n[o]. 135 (1901), p. 26. By far the greatest part of the population is of Arab descent; there are a few hundred Jews and Armenians; the Europeans (mainly English) number not much over a score.

Curzon, *Persia and the Persian Question* (London, 1892), Index s. v. Bushire. The above mentioned reports of the British Resident give also an annual chronicle and form the chief source for the recent history of Bū̲s̲h̲īr and of the Persian Gulf in general. (M. STRECK.)

BŪṢĪR (also written Abūṣīr and in the true form Abu 'l-Ṣīr) the name of several localities in Egypt. The name is connected with the God Osiris, who was originally worshipped in the Delta, so that the name occurs more frequently in northern Egypt. The ruins of the ancient Taposiris Magna have retained the name Abūṣīr; likewise a village with 336 inhabitants in the district of Sinbellawain in the province of Daḳahliya. Better known is a place of this name with 6271 inhabitants in the district of Maḥalla al-Kubrā in the province of G̲h̲arbiya. It was called Būṣīr Banā in the middle ages. There is a fourth Būṣīr southwest of Cairo between Saḳḳāra and Dj̲īze (Gize). At the present day it has 2456 inhabitants, and is called Būṣīr al-Sidr to distinguish it from other places of the same name. 'Abd al-Laṭīf gives a remarkable account of its pyramids and tombs (De Sacy, *Relation de l'Egypte*, p. 171, 220 *et seq.*). Excavations have been carried out quite recently here under German auspices. Another Būṣīr, frequently mentioned, is Būṣīr al-Malaḳ at the exit of the Faiyūm in the province of Banī Suēf (formerly Bahnasā). This place used also to be called Būṣīr Kuraidis (or Ḳuraidis, Kuridis, Ḳuridis and many other variants) and is said to be the place where Marwān II, the last Omaiyad Caliph, died in 132 (749-750). His tomb is still pointed out in Būṣīr al-Malaḳ. Local tradition thus agrees with the popular belief so that al-Kindī (ed. Guest, p. 96; Yāḳūt, i. 670) must be mistaken when he says that Marwān died at an otherwise unknown Būṣīr in the province of As̲h̲munain. Būṣīr al-Malaḳ at the present day has 3319 inhabitants. Before the division into provinces i. e. in the early Muhammadan period it was a separate *kūra*. The poet of the *Burda* takes his *Nisba* from this Būṣīr. There is also a Būṣīr Dafanū (from the mediaeval Dafadnū) in the Faiyūm, which now has 1411 inhabitants. The rock of the same name at the Second Cataract is probably an Arabicised form of a Nubian word and has nothing to do with Osiris.

Abuṣīr). (C. H. BECKER)

AL-**BUṢĪRĪ**, S̲h̲araf al-Dīn Muḥammad b. Sa'īd b. Ḥammād b. Muḥsin, an Arabic poet of Berber origin as his tribal name al-Ṣanhādj̲ī shows. He was born on the 1st S̲h̲awwāl 608 = 7th March 1213 in Abūṣīr (whence the name al-Būṣīrī), or according to Suyūṭī at Dilāṣ (he is also called al-Dilāṣī). Very little is known of his life. He lived at Bilbīs, was a clever calligraphist, attended the lectures of the Ṣūfī Abu 'l-'Abbās Aḥmad al-Marsī and acquired the reputation of being learned in Tradition. The date of his death is not certain: Maḳrīzī and Ibn S̲h̲ākir give the year 696 = 1296-1297, Suyūṭī, 695 = 1295-1296, Ḥādj̲dj̲ī K̲h̲alīfa 694 = 1294-1295. His grave was near that of the Imām al-S̲h̲āfi'ī. He composed a number of poems of which the *Burda* [q. v.] is the most famous. We may also mention the *Hamziya fi 'l-madā'iḥ al-nabawiya*, which has often been published and annotated; the *Dukr al-ma'ād 'alā wazn Bānat Su'ād*, in which he imitates Ka'b b. Zahair's celebrated poem; the *Ḳaṣīdat al-K̲h̲amrīya* and the *Ḳaṣīdat al-Muḍariya fi 'l-ṣalāt 'alā k̲h̲air al-barriya*; *al-Tawassul bi 'l-Ḳur'ān*.

Bibliography: Ibn S̲h̲ākir, *Fawāt al-wafayāt* (Bulaḳ, 1299) ii. p. 205; al-Suyūṭī, *Ḥusn al-Muḥāḍara* (Cairo, 1293) Vol. i. p. 260; Ibn As̲h̲ūr, *S̲h̲ifā' al-Ḳalb al-djariḥ* (Bulaḳ, 1292), p. 10; R. Basset, Introduction to his translation of the *Burda* (Paris, 1894), p. i.—xii.; Brockelmann, *Gesch. d. arab. Litteratur*, Vol. i., p. 264-265; Gabrieli, *al-Burdatain* (Florence, 1901), p. 24—29. (RENÉ BASSET.)

BUSR b. Abī Arṭāt or b. Arṭāt (there is less authority for the latter form), an Arab general of the Ḳorais̲h̲ clan of the Banū 'Āmir, was born in Mecca in the last decade before the Hidjra. Only traditions which have been influenced by S̲h̲ī'ite prejudices deny him the title of Ṣaḥābī. He went with the relief column into Syria under K̲h̲ālid b. al-Walīd, distinguished himself there by his bravery and afterwards took part in the conquest of Africa. His bravery earned him a *du'ā'* and rewards from 'Omar. During the civil war he vigorously declared himself on the side of Mu'āwiya for whom he won over the influential Kindī chief, S̲h̲oraḥbīl b. al-Simṭ. At Ṣiffīn we find him in the Syrian camp. He afterwards helped 'Amr b. al-'Āṣ to reconquer Egypt for Mu'āwiya. Busr is perhaps the most striking figure among the lieutenants of this Caliph. He was a typical Beduin of the old school, utterly impervious to pity, if S̲h̲ī'ite tradition has not exaggerated the details of the portrait of this fiery opponent of 'Alī. Sent into Arabia against the the latter's partisans, Busr waged a war of extermination against them. He destroyed the dwellings of the enemies of 'Othmān in the sacred towns of the Ḥidjāz and displayed a loyalty to the Omaiyads which was only surpassed later by Muslim b. 'Oḳba and Ḥadj̲dj̲ādj̲. In the Yaman he put to death the two young sons of 'Ubaid Allāh Ibn 'Abbās. During the brief campaign, which was terminated by the abdication of Ḥasan, son of

ʿAlī, he commanded the vanguard. As a reward, he received the governorship of Baṣra where he established a dictatorial regime. He spent little time in the ʿIrāḳ but returned thither to seize the children of Ziyād b. Abīhi and by this drastic measure subdued the last armed partisans of ʿAlī. We later find him leading several naval expeditions against the Byzantine Empire.

After the year 50 (670), this agent of Muʿāwiya's ambition, general and admiral by turns, disappears from the field of politics. He is said however to have lived at court till the death of the sovereign. According to the Shīʿites, he went mad because he brought down ʿAlī's curse upon himself. He reappears again in the reign of Walīd I, when he is said to have again taken part in an expedition to Africa. Other authorities make him die at Medina in the reign of ʿAbd al-Malik. He seems to have lived to a great age and fallen into his dotage.

BUST, a town which formerly stood in the modern Afghānistān, on the left bank of the Helmand just below its junction with the Arghandāb. The situation of this town in the angle between the two rivers where the roads from the west (Herāt and Zarandj) unite to cross the Helmand and continue eastwards to Balōčistān and India, at the place where the river begins to be navigable, seems to have been an exceedingly favourable one.

Vast earthworks in the neighbourhood of Bust, which was one of the centres of ancient Iranian civilisation, point to a great prosperity in ancient times. At the beginning of the vi^th^ century we find Bust in the possession of the Ephthalites from whom Khusraw I Anōshirwān won back the town.

It was won for Islām by ʿAbd al-Raḥmān b. Samura. In the period following, Bust appears to have been an outpost of Arab dominion against the independent native chiefs of the lands adjoining on the east who bore the name or title of *Zunbīl* [see the article ʿABD AL-RAḤMĀN B. MUḤAMMAD B. AL-ASHʿATH, p. 56 and cf. Marquart, *Ērānšahr*, p. 250]. The Arabs sometimes consider Bust as being in Sīstān, which in the narrower sense did not strictly stretch so far to the east. The founder of the Iranian dynasty of Ṣaffārids who came from Sīstān, Yaʿḳūb b. al-Laith (254—265 = 868—878), is said to have spent a year in Bust between his campaigns. In 366 = 976, Bust was taken by Subuktegin, the founder of the Ghaznawid dynasty. It is from the period shortly before and shortly after this event that the descriptions of the town by Iṣṭakhrī and Muḳaddasī date. The former speaks of the Indian trade of Bust, both mention the bridge of boats, which crossed the Helmand and praise the rich orchards in the neighbourhood. The Ghaznawid period appears to have been the most flourishing in the history of Muhammadan Bust. Muḳaddasī speaks of the military town of al-ʿAskar (the modern ruins of Lashkari Bāzār) lying ½ farsakh east of Bust, as the dwelling of the Sulṭān. Bust is repeatedly mentioned as the royal residence. In 447 = 1048 ʿAbd al-Rashīd's generals succeeded in defeating Dāʾūd's and Alp Arslān's Saldjūḳs, who had made a raid into Sīstān, not far from Bust. A hundred years later the Ghaznawid lands received the blow from which they never recovered. The Ghōrid ʿAlā al-Dīn Djahānsūz ravaged the kingdom of Bahrām Shāh and utterly destroyed the capital Bust; the glory of Bust seems to have been shattered by this blow. Its favourable situation alone enabled it to drag on a wretched existence during the following centuries. Any prospect of a more prosperous future was destroyed by the invasion of Tīmūr's hordes at the end of the viii^th^ = xiv^th^ century. The destruction of Rostam's dam transformed Sīstān into a desert as it depended for its prosperity on irrigation from the Helmand. The fortress of Bust alone, owing to its strategic position, survived many a storm till it was finally destroyed by Nādir Shāh in 1738. Its walls still rise high above the bank of the Helmand and a wide area covered with ruins testifies to the erstwhile splendour of the seat of the Ghaznawids.

AL-**BŪSṬA**, The "Post", Arabic pronunciation of the Turkish Posta [q. v.]

AL-**BUSTĀNĪ**, the name of a prominent Maronite family which has produced several literary men who have rendered considerable service to the Arabic language and literature. The most deserving of mention is Buṭrus al-Bustānī who was born at Dibbiya (between Ṣaida and Bairūt) in 1819 and died in May 1883. He received his early education in the training-college of ʿAin Warḳa but in 1840 he became connected with the American Mission in Bairūt and became a convert to Protestantism. He then received an appointment as teacher in the college in ʿAbeih and composed a textbook on Arithmetic entitled *Kashf al-Ḥidjāb*. After a stay of two years there, he went to Bairūt and worked on the translation of the Pentateuch into Arabic, undertaken by E. Smith. At the same time he was engaged in his Arabic dictionary *Muḥīṭ al-Muḥīṭ* (ed. 1867—1869) of which he prepared an abridgment, the *Ḳaṭr al-Muḥīṭ* (printed at Bairūt, 1869). In 1870 he founded the newspaper *al-Djanna* and afterwards another *al-Djunaina* and finally the magazine *al-Djinān*. His plan of publishing a list of proper names, after he had finished his dictionary, was enlarged in 1875 to his beginning to publish an Arabic encyclopaedia entitled *Dāʾirat al-Maʿārif* assisted by his son Selīm al-Bustānī and other collaborators (1876). When the vii^th^ volume was about to appear, Buṭrus died, but the work was continued by his son and on the death of the latter also in 1884 it was continued by his other sons and a relative Sulaimān al-Bustānī and others till its completion in 1898. — The Sulaimān, just mentioned, won no less re-

nown by his translation into Arabic verse of the Iliad (*Ilyādhat Hūmērūs mu'arrabe naẓman*, publ. by the Hilāl Press in 1904), according to M. Hartmann, *Die Arab. Frage*, "an achievement of the first rank worthy of the highest praise."

Bibliography: G. Zaidān, *Mashāhīr al-Sharḳ*, ii. 24 *et seq.*; Cheikho in *al-Mashriḳ*, xii. 929 *et seq.*; Brockelmann, *Geschichte der arab. Litter.*, ii. 495; *Zeitschr. der Deutsch. Morgenl. Ges.* xxxiv. 579 *et seq.*

AL-BUSTĪ, 'ALĪ B. MUḤAMMAD ABU 'L-FATḤ, an Arab poet, born in 360 = 971 at Bust in the Kābul district, was in his youth secretary to Bāytūr, lord of his native town. When the latter was overcome by Subuktegīn, al-Bustī attached himself to the new ruler. His son Maḥmūd wished to take him to the land of the Turks but he died on his way thither in 401 (1010) at Bukhārā. Of his Dīwān only an extract in Leiden (s. *Catalogus codd. or. Bibliothecae Academiae Lugduno-Batavae*, ed. sec., i. N°. 633) and two poems in Gotha (s. Pertsch, *Die Ar. Hdss. der Herz. Bibl.*, N°. 26. 1) have survived. His most famous is a didactic poem entitled *'Unwān al-Ḥikam* (s. Baillie, *Five Books on Arabic Grammar*, iii.; *Madjānī 'l-Adab*, iv. 95; Subḳī, iv. 5). This poem has been commented on by 'Abd Allāh b. Muḥammad b. Aḥmad al-Nuḳrakār (died 776 = 1374), s. Ahlwardt, *Verzeichnis der Arab. Hdss. der Kgl. Bibliothek zu Berlin*, N°. 7594-7595; *Catalogus codd. or Bibl. Ac. Lugd.-Bat.*, i. N°. 634; Vollers, *Katalog der Islam. usw. Hdss. der Universitätsbibliothek zu Leipzig*, N°. 519, 520; Pertsch, *op. cit.* N°. 2236-2237; *Codices or. Bibliothecae Regiae Havniensis*, N°. 242, 7, and by 'Abd al-Raḥmān al-'Omarī al-Mallānī (about 780 = 1378, s. Ahlwardt, *op. cit.* 7596); 'Abd al-Ḳādir b. 'Aidarūs (*ibid.* 7597) wrote a treatise in elucidation of the first two verses.

Bibliography: Tha'ālibī, *Yatīmat al-Dahr*, iv. 204—231; Ibn Khallikān (ed. Būlāḳ 1299), N°. 443; Yāḳūt, *Mu'djam*, i. 612, 19; Ibn Taghrībirdī, ii. (ed. Popper), p. 605, 11 ff.; al-Subkī, *Ṭabaḳāt al-Shāfi'īya*, iv. 4; Tallquist, *Geschichte der Ikhîdîden*, p. 109; Brockelmann, *Gesch. d. ar. Lit.*, i. 251. (BROCKELMANN.)

BŪT, Persian form of the Arabic BUDD [q. v., p. 769]; whence *Būtperast* "idolator".

BUTHAINA, the name of Djamīl's beloved [q. v.].

BUṬNĀN, a district in Syria, east of Ḥalab (Aleppo). In the middle ages, the Arabs understood by the Wādī Buṭnān the land watered by the Nahr al-Dhahab and its branches. Buṭnān is certainly a very ancient name for the district. The Aramaic form Baṭnān (in Syriac authors) might, as Sachau suggests (*op. cit.*), be a corruption of the Bīt-Adini (the Bibl. Benē 'Eden) of the cuneiform inscriptions, the name of a small state, frequently mentioned in Assyrian times, on both sides of the Euphrates (defined roughly by lines drawn from 'Aintāb to Edessa in the north and from Ḥalab to Ḥarrān in the south) with Til-Barsip, the modern Biredjik [q. v., p. 723] as capital. The classical writers also knew at least two places named Batnae (Bathnai, Batane) in the Syrian-Mesopotamian area, of which the one in Cyrrhestica (the lands lying between Ḥalab and the Euphrates) is certainly identical with Wādī Buṭnān which at that time was an important place. On the Batnae (Bathnai) of the ancient authors cf. Pauly-Wissowa, *Realencykl. d. klass. Altertumswiss.*, iii. 125, 140 and Suppl. i. 244-245, see also Nöldeke, *Nachr. der Götting. Ges. d. Wissensch.*, 1876, p. 9; Chapot, *La frontière de l'Euphrate* (Paris, 1907), p. 305 *et seq.*, 342 and H. and R. Kiepert, *Formae orbis antiqui*, Heft V (1910), p. 3, 5.

From the above remarks on the antiquity and probable origin of the name Buṭnān, it is clear that the meaning given to it in the Arab geographers (cf. e. g. Yāḳūt, s. v.) as the plural of *baṭn* = "the bottom of a valley" can only be an obviously popular etymology.

To distinguish it from places of the same name, the Buṭnān under discussion was also called Buṭnān Ḥabīb after Ḥabīb b. Maslama, who, being sent thither by Abu 'Ubaida or 'Iyāḍ b. Ghanim, the conquerors of Syria and Mesopotamia in the reign of 'Omar I, captured the fortress (*ḥiṣn*) here; see Balādhorī, ed. de Goeje, p. 149 = Yāḳūt, i. 664; this was probably the citadel (*ḳal'a*), frequently mentioned, of Buzā'a [q. v.] the chief place in Buṭnān. The name Buṭnān (now pronounced Baṭnān) is now rather attached only to a mound 2½ miles northeast of Bāb (near Buzā'a).

The geographers Bakrī and Yāḳūt give a further name of Wādī Buṭnān, viz. Ṭarṭar (s. v.; var. Ṭalṭal); cf. also the Abū Ṭalṭal (Ṭarṭar) in this district mentioned by the Ḥalabī historian Ibn Shiḥna (died 890 = 1485); cf. A. v. Kremer, *Denkschr. d. Wien. Akad. d. Wiss.* 1852, iii. 2, p. 38.

The notices by the Arab geographers of Wādī Buṭnān are in part contradictory; in later times they were evidently not quite clear as to the exact geographic connotation of the name. On the whole they define Buṭnān as a low-lying area between Ḥalab in the west and Manbidj in the east, watered by the Nahr-al-Dhahab (Dimishḳī erroneously: Nahr Sadjūr), particularly the land between Bāb and Buzā'a: these two places, the most important in Buṭnān, they wrongly locate much nearer Manbidj than Ḥalab. The above mentioned Nahr al-Dhahab ("the Golden River") flows generally from north to south about 20 miles from Ḥalab (37° 35′ E. Greenw.), passes Ḳwāris (Ḳuwairis) and flows into the salt lake of al-Sabkha or the lake of Djabbūl (roughly in 36° N. Lat.). The Nahr al-Dhahab is formed of small streams which flow from Bāb, Tādhif and Buzā'a. On its lower course its bed is, according to Herzfeld, about 30 yards wide. According to Yāḳūt and Ḳazwīnī the people of Ḥalab considered the "Golden River" one of the wonders of the world, for "its source was weighed with scales and its mouth measured by dry measure". The meaning of this metaphor is that on its upper course, corn, cotton and excellent fruit were grown, while near its mouth salt was obtained so that in the former area goods were sold by bulk and in the latter by weight. The salt-pits of the Nahr al-Dhahab supplied most parts of Syria in the middle ages. In consequence of its excellent water-supply and consequent fertility, the whole district of Buṭnān was once thickly populated. There were apparently also stretches of morass there, as the name "Marj"-Buṭnān shows; on this point cf. Wellhausen, *Das Arab. Reich und sein Sturz* (1902), p. 117, note 2. The most important places in it were Buzā'a, Bāb and Tādhif all of which still exist. For further details see the article BUZĀ'A.

In military history Wādī Buṭnān is particularly prominent in the reign of ʿAbd al-Malik. This Caliph used to spend the winters in Buṭnān during his campaign against Muṣʿab in the years 69—71 = 689—691. His camp was there, and it was the starting point for his military operations, cf. Wellhausen, *op. cit.*, p. 117—119; Weil, *Geschichte der Chalifen*, i. 397, note 2.; *Ḥamāsa* (ed. Freytag), p. 658, v. 6. In the war between the ʿAbbāsids and the Syrian Ḳarmaṭians Buṭnān is again mentioned. The army sent by al-Muktafī under Abu 'l-Agharr was surprised by the Karmaṭians here in 290 = 903 and utterly routed.

(M. STRECK.)

BUṬRUS AL-BUSTĀNĪ. [See AL-BUSTĀNĪ.]

BUWAIṬ, the name of several places in Egypt. According to Boinet Bey's *Dictionnaire Géographique* there are two places in modern Egypt of this name, which is however pronounced Bawīṭ.

1. A *nāḥiya* with 327 inhabitants in the district of Damanhūr, in the province of Buḥaira, and 2. a *nāḥiya* with 1449 inhabitants in the district of Badārī in the province of Asiūṭ.

ʿAlī Mubārak mentions a third place of this name in his *Khiṭaṭ Djadīda* in the province of Banī Suēf in the administrative district of al-Zāwiya. This appears in Boinet Bey as Abouīṭ and belongs to the district of Wasṭa. Bawīṭ with 1366 inhabitants in the district of Dairūṭ, in the province of Asiūṭ, must also be mentioned here. One of these places was the chief town of a district (*kūra*) in the middle ages (Ḳalḳashandī, transl. Wüstenfeld, p. 94). As the name of this district is written Abwaiṭ by Abu 'l-Fidā's time, it could perhaps be identified with N°. 3; but according to Ḳalḳashandī, *loc. cit.* the identification with N°. 2 is more probable. Yūsuf b. Yaḥyā, the famous scholar and contemporary of al-Shāfiʿī (d. 231 = 845-846) took his name al-Buwaiṭī from one of these places, presumably N°. 3.

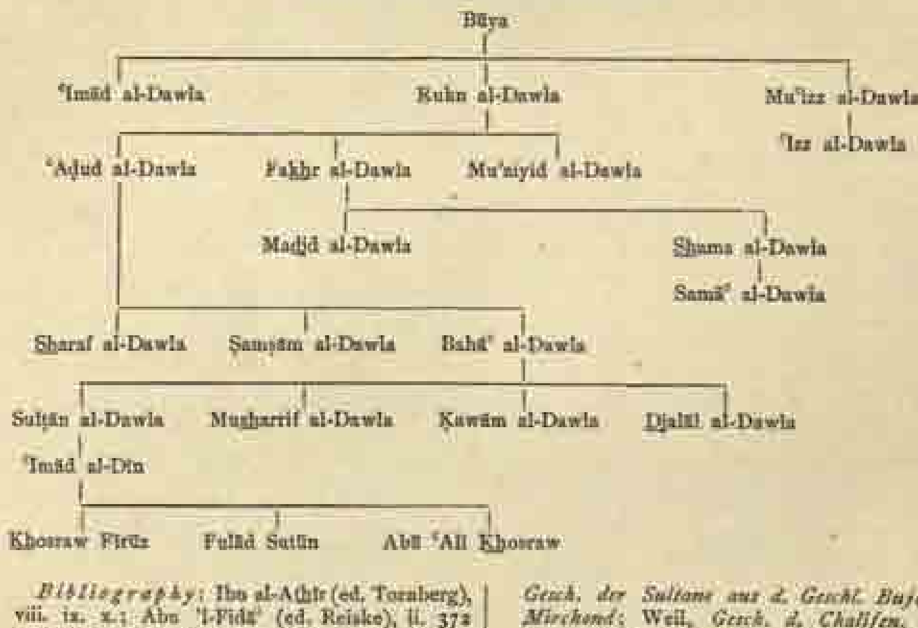
(C. H. BECKER.)

BUXAR, a place in British India, on the railway from Bombay to Calcutta, west of Bankipore. In 1764, the English under Munro defeated here the Nawwāb Wazīr of Oudh and the Great Mughal Shāh ʿĀlam.

BŪYIDS or BUWAIHIDS, a Persian dynasty whose founder Abū Shudjāʿ Būya (Buwaih) is represented by some to have been a descendant of the Sāsānian king Bahrām Gōr. The alleged genealogical table of the Būyids, who were originally freelances in Dailam, does not go back to the Sāsānian king himself but only to his first minister Mihr Narsī; little reliance is to be placed on this table however and the whole is apparently only an attempt to glorify the dynasty. As chief of a warlike horde, which consisted mainly of Dailamites, Abū Shudjāʿ had already played a prominent part in the struggle between the ʿAlids and the Sāmānids; the real founders of the dynasty however, which rose so rapidly, were his three sons ʿAlī, Ḥasan and Aḥmad. After the fashion of their countrymen they preferred to be regarded as Shīʿites; but for these wild warriors religious questions were of quite subordinate importance. After the Būyids had enlisted in the service of Mardāwidj b. Ziyār, who was at the height of his power about 320 (932), the eldest brother ʿAlī was appointed governor of Karadj (S. E. of Hamadhān). But when the latter defeated the Caliph Ḳāhir's troops and occupied Iṣfahān, Mardāwidj began to fear the rivalry and ambition of the Būyids and returned Iṣfahān to the Caliph whereby he provoked them to open hostility. Arrādjān had already been vacated by the Caliph's troops; the next place to fall was Nawbandadjān, which was occupied in 321 (933) by ʿAlī, while his brother Ḥasan drove the Arab garrison from Kāzarūn. In the following year the three brothers succeeded in taking Shīrāz and occupying the whole province; after the assassination of Mardāwidj in 323 (935), his brother and successor Washmgīr was unable to hold Media which province also fell into the hands of the Būyids. While ʿAlī remained in Fārs and Ḥasan ruled in Media, Aḥmad conquered Kirmān in 324 (935-936) and kept gradually advancing westwards. When in Djumādā I 334 (December 945) he entered Baghdād, the Caliph al-Mustakfī had to create him Amīr al-Umarāʾ and give him the honorific title of Muʿizz al-Dawla. At the same time ʿAlī and Ḥasan received the titles ʿImād al-Dawla and Rukn al-Dawla respectively, and similar pompous titles were henceforth the usual appellations of the Būyid rulers. A few weeks later in Djumādā II 334 (January 946) Muʿizz al-Dawla had the unfortunate Caliph blinded, and proclaimed Abu 'l-Ḳāsim al-Faḍl, a son of al-Muḳtadir, his successor under the name of al-Muṭīʿ. The Caliphate now passed through a period of the deepest humiliation and the "Commander of the Faithful" became a mere puppet in the hands of the Būyid Amīrs. According to one account, Muʿizz al-Dawla went as far as to adopt the title of Sulṭān; this is not confirmed by the coins however, on which the Būyids only bear the title Amīr or Malik. In the year 338 (949-950) ʿImād al-Dawla died and as he left no male heir, the next oldest brother Rukn al-Dawla was recognised as head of the family while the government of Fārs passed to his son ʿAḍud al-Dawla. Dissensions soon broke out within the family however. When Muʿizz al-Dawla died in 356 (967), his son ʿIzz al-Dawla Bakhtiyār succeeded him in Kirmān, Khūzistān and the ʿIrāḳ. The latter was unable to maintain proper discipline among his troops who consisted partly of Dailamites and partly of Turks, but had to seek the assistance of his cousin ʿAḍud al-Dawla who restored peace but took Bakhtiyār prisoner and seized his lands. Rukn al-Dawla managed to bring about a reconciliation between them and Bakhtiyār received his lands again. After the death of Rukn al-Dawla in 366 (976), hostilities



broke out again. He had divided the kingdom among his three sons and this plan, which has so often proved fatal, brought misfortune to the Būyids also. The suzerainty of the whole kingdom was to fall to ʿAḍud al-Dawla, while Muʾaiyid al-Dawla was appointed governor of Iṣfahān and the third brother Fakhr al-Dawla received the remaining province of Media. After ʿAḍud al-Dawla had defeated Bakhtiyār's troops and subjected all ʿIrāḳ to his rule, he next deprived his brother Fakhr al-Dawla of his kingdom. When the latter sought to make himself independent, he was attacked and had finally to flee to Khorāsān. ʿAḍud al-Dawla was now able to unite the whole kingdom under his sceptre and in his reign the dynasty reached its zenith. After his death in 372 (983) war broke out among his three sons. In the following year Muʾaiyid al-Dawla died childless and while ʿAḍud al-Dawla's sons, Sharaf al-Dawla, Ṣamṣām al-Dawla and Bahāʾ al-Dawla were fighting with one another, their uncle Fakhr al-Dawla was recalled from his exile by the nobles and recognised as ruler in Media, Ṭabaristān and Djurdjān. The war between the sons of ʿAḍud al-Dawla ended in 380 (990) with the triumph of Bahāʾ al-Dawla. The latter died in 403 (1012), and under his four sons, Sulṭān al-Dawla, Musharrif al-Dawla, Ḳawām al-Dawla, and Djalāl al-Dawla, and their successors, the family became more and more divided and the insubordination of the Turkish and Dailamite lieutenants increased more and more so that the kingdom gradually fell to pieces. With his power disappearing before his eyes, the irony of fate prompted Djalāl al-Dawla to become dissatisfied with the hereditary title of Amīr and to adopt the old Persian title of "King of Kings".

The authority of the line of Fakhr al-Dawla next collapsed. In 388 (988) Ḳābūs b. Washmgīr had conquered Djurdjān and Ṭabaristān, and ten years later the Kurd Kākōyids (Kākwayhids) seized Iṣfahān. Hamadhān also finally fell into their hands and in 420 (1029) the good-for-nothing Madjd al-Dawla, a son of Fakhr al-Dawla, was overthrown by Maḥmūd b. Subuktegin and taken to Khorāsān.

It was now the turn of the other Būyids. Under Sulṭān al-Dawla's son ʿImād al-Dīn the state of affairs was still endurable; but after his death in 440 (1048) the former confusion broke out again. In Baghdād the Sunnīs and Shīʿites were fighting with one another, and in the provinces there was war between ʿImād al-Dīn's two sons, Khosraw Fīrūz and Fulād Sutūn. The latter had to take to flight and allied himself with the Saldjūḳs, while Khosraw Fīrūz was recognised as Amīr of the ʿIrāḳ with the title al-Malik al-Raḥīm. In 447 (1055) however, the Saldjūḳ Sulṭān Ṭoghrul Beg entered Baghdād and put an end to Būyid rule. The last Amīr of the dynasty, al-Malik al-Raḥīm, ended his days in confinement.

The Būyids, with the exception of ʿAḍud al-Dawla, had little time for the arts of peace. It is to ʿAḍud al-Dawla's honour that he found time to attend to the domestic development of his kingdom as far as lay in his power, by encouraging poets and scholars, building mosques, hospitals and other public buildings, repairing canals and wells which had become filled up and granting funds from the state treasury for the relief of the poor. This period of peaceful prosperity was of but short duration and after his death the kingdom resumed its downward course.

GENEALOGICAL TABLE OF THE BŪYIDS.

BUZĀʿA (also Buzāʾā), a town in Syria, east of Ḥalab, Long. 37° 65′ E. (Greenw.) and Lat. 36° 13′ N., in the middle ages the most important place in the district of Buṭnān [q. v., p. 806]. The variant pronunciation of the name as Bizāʿa, which meets us as early as Yāḳūt, is the only one in use at the present day. According to the traveller Ibn Djubair (vith = xiith century) Buzāʿa was in his time midway between a town and a village in size. Its abundant water supply, flourishing gardens and fine bazaars are praised. A strong castle (*ḳalʿa*) rose above the town; outside of it stood, Abu ʾl-Fidāʾ tells us, the shrine (*mashhad*) of ʿAḳīl b. ʿAlī Ṭālib, brother of the Caliph ʿAlī (see above, p. 239). M. v. Oppenheim copied three inscriptions on the mosque at the west end of Buzāʿa, which refer to Malik Ṣāliḥ Ismāʿīl (reigned 569—577 = 1174—1181), son of Nūr al-Dīn, see van Berchem, *op. cit.*, nos. 70—72. The Crusaders conquered Buzāʿa after a seven days' siege of the citadel in 532 = 1138; in the same year however it was taken from them again by Zangī. In 571 = 1175, Ṣalāḥ al-Dīn (Saladin) gained possession of it.

At a short distance from Buzāʿa, 5 miles to the north, lies al-Bāb (= "the gate") 1050 feet above sea level (see Baedeker, *Palestine*, p. 396) an important station in the middle ages on the road from Ḥalab to Manbidj, about a day's journey from each but much nearer to Ḥalab in distance. It was once regarded as a sort of suburb of Buzāʿa, whence it is occasionally also called Bāb al-Buzāʿa. In Yāḳūt's time Bāb was an important market for cotton goods which were transported from it to Damascus and Egypt. The whole neighbourhood between Ḥalab and Manbidj has always been a famous cotton country. On five Arabic inscriptions from Bāb (of the xivth and xviith century) see van Berchem, *op. cit.*, nos. 63—67. The village of Tādhif, the modern Tēdif, lies nearer Buzāʿa than Bāb to the southwest: on two Arabic inscriptions from there, see van Berchem, nos. 68—69.

BUZĀBA, governor of Fārs under the Saldjūḳs. Buzāba was one of the Emirs of Mangubars, governor of Fārs, and ruled the province of Khūzistān on his behalf. He was therefore with the troops of his overlord, when the latter in alliance with the other Emirs advanced against the Saldjūḳ Sulṭān Masʿūd and was taken prisoner in the battle of Kurshanba (other authorities give the place of encounter as Pandj Angusht) and afterwards put to death (532 = 1137-1138.) While the Sulṭān's troops were beginning to plunder the hostile camp immediately after the battle, Buzāba fell upon them and put them to flight; he captured several distinguished Emirs of the Sulṭān and the latter himself only escaped with great difficulty along with the Atābeg Ḳara Sonḳor. Furious at the slaying of his overlord, Buzāba had them all put to death including Ḳara Sonḳor's son. To revenge the latter's death, his father undertook a campaign into Fārs in the following year and placed the Saldjūḳ prince Saldjūḳ Shāh in command of the operations. Hardly had Ḳara Sonḳor set off with his troops, when Buzāba, who in the interval had retired to the fortress of Safīd Dīz (Ḳalʿat al-baiḍāʾ), appeared again and took Saldjūḳ Shāh prisoner as he was left without troops (534 = 1139-1140). Sulṭān Masʿūd had therefore to hand over to him the province of Fārs, and Buzāba managed to make his position more secure by making an alliance with two other Emirs, ʿAbbās, Lord of al-Raiy and ʿAbd al-Raḥmān Taghanyarak. The Sulṭān bore the tutelage of these Emirs for a time, but was finally able to regain his independence by treacherously murdering both of them. When Buzāba then took the field against the Sulṭān, he was taken prisoner at the battle of Mardj Ḳarategin, a day's journey from Hamadhān, and put to death in 542 (1147).

AL-BUZDJĀNĪ. [See Abu ʾl-Wafāʾ, p. 112].

BUZURG b. Shahriyār, a sailor of Rāmhurmuz (ixth = xth century) and author of the *Kitāb ʿAdjāʾib al-Hind*, edited by P. A. van der Lith (Leiden, 1883—1886) with a translation by M. Devic, a collection of sailors' tales about the lands of the Indian Ocean, which are often full of fantastical exaggerations but usually have some foundation of truth.

BUZURGMIHR b. Bakhtagan of Marw, the famous Vizier of the Sāsānian king Anōsharwān to whom legend ascribes numerous pithy Sayings. Cf. Nöldeke, *Geschichte der Perser und Araber* & c. p. 251 note; Ethé in the *Grundriss der Iranischen Philologie*, ii. 346.

BUZURGUMMĪD, Kiyā, second Grand-Master of the Assassins or Ismāʿīlīs of Persia, born at Rūdbār, was after his admission to the sect entrusted by Ḥasan Ṣabbāḥ with the task of capturing the fortress of Lamasar. He took it by surprise in the night of 20th Dhu ʾl-Ḳaʿda 495 (= 5th Sept. 1102) and held out there for 20 years. In Ṣafar 511 (June 1117) he was besieged by the Atābeg Nūshtegin Shīrgīr,

general of the Saldjūḳ Sulṭān Muḥammad. When Ḥasan Ṣabbāḥ fell sick in Rabī' II 518 = May—June 1124, he summoned Buzurgummid to him and proclaimed him his successor, and after Ḥasan's death on the 26th of the same month = 12th June he was succeeded by Buzurgummid. After ruling for 14 years in Alamūt on the same principles as his predecessor he died on the 20th Djumādā I. 532 = 11th March 1138, leaving the post of Grand-Master to his son Muḥammad.

(See also K.)

CÁDIZ (rarely also in an older form CÁLIZ), written Cadix in French, Portugese and German, but pronounced Cadis, Cadice (whence Cadisaen, Spanish Gaditano, German Cadizer) is at the present day the capital of the province of the same name, the most southern of Spain, with 70,000 inhabitants, lying on the Bay and Gulf of Cádiz on the Atlantic Ocean northwest of the straits of Gibraltar. It was founded about 1100 B. C. by Phoenicians from Sidon as a depot for the tin which was brought from the Cassiterides (Britain) and the silver of Tarshīsh, Ταρτησσός, Ταρσήιον not far from the mouth of the Baetis (Guadalquivir) in the land of the Turdetani (Turduli), on the rocky northwestern promontory of the island of Erytheia or Cotinussa, which is now called Isla de León. In Phoenician the town was called Gad(d)ir, (H)Aggadir אגדר הגדר (cf. the Hebrew גָּדֵר and גְּדֵרָה = τεῖχος wall, s(a)eptum, septimentum, a walled place in a state of defence, a fortress (cf. the Haag) from which the Greeks made Γάδειρα, the Romans (Gadir) Gades, the Arabs Ḳādis, which latter is naturally the original of the Spanish Cádiz (as an appellative, the Punic *aghadir* passed also into Libyan Berber, as *agadir*, Plur. *igudar* = wall, steep rock = Arab. *djurf* and has given rise to modern placenames like Agadir.)

After 500 B. C. the Phoenician Cádiz was occupied by the Carthaginians and became the centre of operations for the Punic conquest of the south of the Peninsula, just as at a later period Hamilcar, Hasdrubal and Hannibal equipped their fleets and armies in this rich commercial centre, the Punic emporium of the west; a similar use was made of it by the Scipios in the second Punic war when Cádiz had seceded to Rome in 206 out of commercial jealousy of Carthage. Greek scholars like the sailor Pytheas in the time of Alexander the Great, Artemidoros in the second and Poseidonios in the first century B. C., who remarked the phenomenon of tides, which they had been practically unacquainted with in the Mediterranean (there is a difference of 6—10 feet between ebb and flow), frequently visited the town in which many Greeks resided. The flourishing trade and period of great prosperity of Cádiz lasted throughout the ancient period. On the other hand the Gothic period and the Arab middle ages mark a period of great decline in which the fortunes of the town reached a very low level (cf. Alexandria and Carthago); the town and its commerce continued in a state of stagnation; in 844 it was plundered by the Normans but in 859 the fleet of the Emir Muḥammad turned aside their attack. So far had the town fallen from its position as a world centre of commerce that Alfonso X the Wise after capturing it on the 14th September 1262 had to repopulate Cádiz again, till at a later period on the discovery of America a new era of prosperity dawned when it became the port of arrival for the silver fleets from the west; in this period it was able to defy the attacks of the Barbary Corsairs in 1530, 1553 and 1574, but it suffered severely when it was plundered in 1587 by Drake and again in 1596 by the Earl of Essex.

Cádiz is, it is true, occasionally mentioned by the Arab geographers but in comparison with Seville and Cordova its role is of no importance and in competition with Tarifa, Algeziras, Málaga, Almeria and Cartagena, it fell into the background. While the Arab authors give us but scanty details of the ancient fortified port of Cádiz, they are never weary of giving valuable accounts of the famous "Pillars of Hercules" near Cádiz, *aṣnām Hiraḳl* or briefly *al-Aṣnām* (also *al-tamāthīl al-Hiraḳliya* in Mas'ūdī, *Tanbīh*, p. 69), so often mentioned but never described in the classics; they mention seven of these pillars in the west, of which the most famous was the *Ṣanam Ḳādis*, also called *manārat Ḳādis* at Cape Trafalgar *Ṭaraf al-agharr* (Maḳḳarī, i. 83, 16; not to be confused, as Reinaud does — Abu 'l-Fidā, ii. 260₃ — with the once very famous temple of the Phoenician Herakles = Melqart, containing no idol, in the southeast of Cádiz). It is described as a brazen statue of a giant with a long club (according to others, a key) in his hand, on the top of a triangular pedestal resting on two square tapering blocks of marble; it was destroyed by 'Alī b. Mūsā b. Maimūn out of cupidity in 540 = 1145; for further details of these Pillars of Hercules, see Dozy, *Recherches*³, ii. 311—314, Append. Nº. xxxv, p. lxxxix—xcvii, and cvii. *et seq.* (p. xc. however الأندلس or الافرنج is to be read instead of الزنج as in Yāḳūt, iv. 6, 20). The district around Cádiz was therefore called *Iḳlīm al-aṣnām*. It would have been very useful, if Herm. Thiersch had included the Arab accounts and descriptions of the *Ṣanam* or *Manārat Ḳādis* in his great work on the Pharos of Alexandria. An indirect proof of the insignificance of Cádiz under Arab domination is that it is never mentioned in Simonet's monumen-

tal *Historia de los Mozárabes*. Following the Arab fashion, the Spaniards compare Cadiz to a 'silver shell' (una taza de plata).

ČAGHĀNIYĀN, written Ṣaghāniyān by the Arabs, a district on the upper course of the Oxus; the capital of the district bore the same name, whence the *nisbas* Čaghāniyānī and Čaghānī; the name of the river Čaghānrūd (the modern Surkhan), which flows through Čaghāniyān, and the title Čaghān-Khudhāt of the ruler of the land are of course derived from the same root. On the geography, cf. the article ĀMŪ-DARYĀ, p. 339. The capital Čaghāniyān was four days' journey or 24 *farsakh* from Tirmidh and three days' journey from Kuwādiyān (the modern Kabadian). The town has been identified by Barthold (*Turkestan w epokhu mongol'skago nashestviya*, ii. 74) with the modern capital of the same district, Denaw (properly *Dih-i naw* "New Village") and by Le Strange, (*The Lands of the Eastern Caliphate*, p. 440) with the town of Sar-i Asiyā somewhat farther to the north; in support of the former view we may now adduce the words of the historian Maḥmūd b. Walī (xith = xviith century): *ḥudūd-i Čaghāniyān ki imrūz Dih-i naw mashhūr ast* (Cod. Ind. Off., N°. 575, f. 77b).

As was the case in the other mountain lands on the left and right banks of the upper course of the Oxus, Čaghāniyān also was influenced in its cultural development by Balkh rather than Bukhārā and Samarḳand. Immediately before the Arab conquest, the religion was Buddhism as the Chinese pilgrim Hüan-tsang (c. 630 A. D.) tells us; there were then about 500 monasteries in Čaghāniyān although the number of monks was not large. Like most of the rulers of these lands, the "King" (*malik*) of Čaghāniyān also had to submit in 86 = 705 to the Governor, Ḳutaiba b. Muslim (Ṭabarī, ii. 1180, 3 *et seq.*); in the year 119 = 737 the "Čaghān-Khudhāt" is mentioned as the ally of the Arabs. The district on the lower course of the Surkhan with Tirmidh and Čarmangān a day's journey or 6 *farsakh* above it, did not belong to Čaghāniyān but was ruled by a separate prince, the Tirmidh-Shāh (Ibn Khurdādhbeh, ed. de Goeje, p. 39 at the foot). In later times also Tirmidh and the country attached to it was usually politically independent of Čaghāniyān; in the ivth (xth) century however, in the Sāmānid period, this one as well as the districts of Shūmān and Kharūn to the east of Čaghāniyān was subject to the Emirs of Čaghāniyān (Gardīzī in Barthold, *Turkestan* etc., i. 9 *et seq.*).

Whether this dynasty, called *Āl-Muḥtādj*, by Ibn Ḥawḳal (ed. de Goeje, p. 401, 11) was descended from the Čaghān-Khudhāt or some Arab Emir, is not known. The most famous prince of this house was Aḥmad (Abū 'Alī) b. Abī Bakr Muḥammed, cf. this article, p. 186.

The town of Čaghāniyān was then larger than Tirmidh but could not compare in numbers or wealth of its population with the commercial city on the Oxus (Iṣṭakhrī, ed. de Goeje, p. 298). On the market place stood the chief mosque with pillars of bricks but without arches (*bilā ṭīḳān*, Muḳaddasī, p. 283, 11). As late as the vith (xiith) century, in the period of Sam'ānī, the mosque of Čaghāniyān was a "beautiful and famous" building (*ḥasan mashhūr*). The number of villages in Čaghāniyān was estimated by Muḳaddasī at 16,000; of towns on the road to Tirmidh there are also mentioned Būrangī (5 *farsakh* from Čaghāniyān) and Dārzangī (7 *farsakh* farther on, only inhabited by weavers); Čarmangān, 6 *farsakh* from Dārzangī, already belonged to Tirmidh.

Little is known of the later history of Čaghāniyān. In the first half of the vth (xith) century, the princes of Čaghāniyān had to recognise the suzerainty of the Ghaznawids: on Sulṭān Mas'ūd's winter campaign, cf. the article BŪRI-TEGIN, p. 799. After Balkh had been finally ceded to the Saldjūḳs by the treaty of peace in 451 (1059), the lands on the other side of the Oxus also submitted to the new conquerors; a rebellion which broke out in Čaghāniyān and Khuttal was put down in 456 (1064) by Sulṭān Alp-Arslān. In the vith (xiith) century Čaghāniyān is sometimes called a possession of the Khāns of Samarḳand (Muḥammad al-Kātib al-Samarḳandī in Barthold, *Turkestan* etc. i. 72), and sometimes regarded as a part of the Ghorid kingdom of Bāmiyān [q. v., p. 643].

In the accounts of the Mongol campaigns of conquest, Čaghāniyān is never mentioned; the land later appears as a possession of one of Čaghatāi's grandsons and his descendants (see BURĀḲ-KHĀN, p. 794). The valley of the Surkhan was much valued not only by the Mongols but by other nomadic peoples also on account of its grazing-grounds; at the present day the original Iranian population has been completely dispossessed by the Uzbegs. The pre-Islāmic and mediaeval towns here have long since disappeared; even their ruins do not appear to have survived; in the accounts of modern travellers only an old brick bridge is mentioned over the Band-i Khān (which is now only filled with water in the spring time) not far from its confluence with the Surkhan; the site of the town of Dārzangī was probably here. The town of Čaghāniyān had probably disappeared by the viiith (xivth) century; the earliest mention of Dih-i Naw is in the *Ẓafar-Nāma* of Sharaf al-Dīn Yazdī (Indian edition, i. 124); Bābur however (*Bābur-Nāma*, ed. Beveridge, see Index) still gives the name Čaghāniyān to this district and its capital but this is probably only under the influence of literary tradition.

(W. Barthold.)

ČAGHĀN-RŪD, a tributary of the Oxus, now called Surkhan. The name (apparently of pre-Muhammadan origin, cf. ČAGHĀNIYĀN) is mentioned in the *Ḥudūd al-'Ālam* (Cod. Tumanski, 9a *et seq.*) written in the year 372 = 982—983, and was still in use in the viiith (xivth) century (*Ẓafar-Nāma*, Indian edition, i. 196).

(W. Barthold.)

ČAGHATĀI-KHĀN, a Mongol prince, second son of Čingiz-Khān and his queen Būrta-Fūdjin. Even in his father's lifetime he was regarded as having the best knowledge of the *Yāsā* (the tribal laws of the Mongols which had

been codified by Čingiz-Khān) and being the greatest authority on all questions of law and custom. Like his brothers, he took part in his father's campaigns against China (1211—1216) and against the kingdom of the Khwārizm-Shāh (1219—1224). The capital of the Khwārizm-Shāh, Gurgāndj (the modern Kunya-Urgenč) was besieged by the three princes, Djūčī, Čaghatāi and Ügedei and taken in Ṣafar 618 = 27th March—24th April 1221. In the same year Čaghatāi's eldest son Mütügen was slain before Bāmiyān (see above, p. 644). After the battle on the Indus (according to Nasāwī, ed. Houdas, p. 83 on Wednesday the 9th Shawwāl 618, probably the 24th November 1221), Čaghatāi was entrusted with the operations against the Khwārizm-Shāh, Djalāl al-Dīn, so that he spent the winter of 1221-1222 in India. When Čingiz-Khān undertook his last campaign (against Tangūt 1225—1227), Čaghatāi remained in Mongolia in command of the troops left behind there.

After his father's death Čaghatāi no longer took an active part in the campaigns. As eldest surviving son of the late ruler (his brother Djūčī also had died before his father) he enjoyed enormous prestige. In the year 1229 he presided with his uncle Öčügen at the meeting of princes which elected Ügedei Great Khān; owing to his position as the recognised authority on law in the whole kingdom, he exercised an influence to which even the Great Khān Ügedei had to bow. He seems to have spent this period partly in Mongolia at his brother's court, partly in the territory allotted to him by Čingiz-Khān where he held his own court-camp. Like all Mongol princes, Čaghatāi had separate camps (*ordu*) for winter and summer. Djuwainī mentions Marāwsik-Īla as his winter residence and Ḳuyāsh as his summer quarters. Both were in the Ili valley in the modern Chinese province of Ili, of which the modern capital Kuldja lies southeast of the mediaeval town of Almāligh. The camp mentioned by the Chinese traveller Čang-Čun lay to the south of the river Ili; as this traveller was here in May 1223 (cf. Bretschneider, *Mediaeval Researches from Eastern Asiatic Sources* i. 98), it is probably the summer residence he refers to. The residence of Čaghatāi's successors is called Ulugh-Īf (or Ulugh-Īḳ is perhaps the correct reading) by Djuwainī and others.

Čaghatāi had received from his father all the lands from the Uighūr territory in the east to Bukhārā and Samarḳand in the west: we must not however regard those lands as a single kingdom governed from the Ili valley and only indirectly subject to the Great Khān whose capital was in Mongolia. Everywhere, even in the Ili valley itself, the local dynasties who were there before the Mongols remained. On the relationship of these dynasties to the Mongol rulers we have no accurate information; we know equally little about what sovereign rights the court on the Ili could claim from the Great Khān and his deputies. The settled lands of Central Asia were certainly not governed in the name of Čaghatāi but in the name of the Great Khān. In the account of the suppression of the rebellion in 636 (1238-1239) in Bukhārā (see above, p. 780) Čaghatāi is not mentioned; the governor of Mā warā' al-Nahr at this period was Maḥmūd Yalawāč, a Khwārizmī by birth who lived in Khodjand and had been appointed by the Great Khān. Even the generals of the Mongol troops in Mā warā' al-Nahr were appointed by the Great Khān. When, soon afterwards, the governor Maḥmūd Yalawāč was arbitrarily deposed by Čaghatāi, the latter was called to account by his brother and had to confess the illegality of his action; Ügedei was satisfied with this apology, and granted the land to his brother as a fief (*inčü*); but the legal position of this territory was not thereby altered. During the last years of Ügedei's reign, as well as later under Möngke, all the settled areas from the Chinese frontier to Bukhārā were governed by Mas'ūd Beg, the son of Maḥmūd Yalawāč, in name of the Great Khān.

It cannot be ascertained how far Čaghatāi's Muḥammadan minister Ḳuṭb al-Dīn Ḥabash 'Amīd had a share in the administration of the country along with the representatives of the Great Khān. According to Rashīd al-Dīn this minister came from Otrār, according to Djamāl al-Ḳorashī from Karmīna, and had like many other Muḥammadan dignitaries at this time made his fortune among the Mongols as a rich merchant; he was on terms of such intimacy with the Khān that each of Čaghatāi's sons had one of Ḥabash 'Amīd's sons as a comrade. Čaghatāi was on the whole not favourably inclined to Islām. Among the infringements of Mongol law which were rigidly punished by him, was the observance of certain prescriptions of Islām. Among the Mongols it was forbidden to slaughter an animal by cutting its throat, which is the form prescribed by the Sharī'at; another law likewise frequently broken by the Muḥammadans at their ablutions was that which prohibited washing in running water. The cruel punishment with which Čaghatāi visited any such trespasses made his name hated among all Muḥammadans. At his death the poet Sadīd 'Awar sang: "That man from fear of whom no one dared enter water is himself now drowned in the wide ocean" (of death). His Muḥammadan minister did not have a great reputation for piety. It is said to have been at his instigation, that Čaghatāi executed Shaikh Abū Ya'ḳūb Yūsuf al-Sakkākī (thereon, cf. Khondemīr, *Ḥabīb al-Siyar*, Teheran edition iii, 28); we also have a poem (given in Barthold, *Turkestan w epokhu mongol'skago nashestviya*, i. 104) by Shaikh Saif al-Dīn Bākharzī (died 24th Dhu'l-Ḳa'da 659 = 20th October 1261) in which reproaches are heaped on Ḥabash 'Amīd. It was probably on account of his hostility to Islām that Čaghatāi was regarded as a friend of Christianity; according to a story given by Marco Polo, he is even said to have been baptised but this statement is nowhere corroborated.

Čaghatāi only survived by a few months his brother Ügedei who died on the 5th Djumādā II 639 = 11th December 1241: his death must therefore have taken place in 1242. According to the Mongol custom, his physicians (a minister of Chinese origin and Madjd al-Dīn, the physician-in-ordinary, a Muḥammadan), were put to death because they had not succeeded in saving the life of their sovereign. Ḥabash 'Amīd survived Čaghatāi many years and died in Sha'bān 658 (12th July—9th August 1260).

Of all the sons of Čingiz-khān, Čaghatāi is the only one whose name remained attached to his dynasty and the kingdom founded by this dynasty. In the kingdom of the Golden Horde, the names of heathen Khāns were quite driven out by the name of the Muḥammadan Uzbeg-Khān. The people became known as Uzbegs and their

country as Uzbegistān; on the other hand the Turkish or Turkicised nomads in Mā warā' al-Nahr were still known as Čaghatāi as late as the 15th = xvth century, although there had for long been no ruling family there descended from Čaghatāi. The same name is still borne at the present day by the Eastern Turkī literary language which was first developed under the Tīmūrids. (cf. the articles TURKS, TURKĪ DIALECTS).

The Mongol kingdom known as Čaghatāi was really not founded till many decades after the death of the Khān from whom it took its name. Ḳarā Hūlāgū, a son of the Mütügen who fell at Bāmiyān, was the first to be recognised as head of the dynasty and he was deposed in favour of Yisū-Möngke, a son of Čaghatāi, by order of the Great Khān Guyūk (1246—1248). The events of the year 1251 [cf. the article BĀTŪ-KHĀN p. 682] utterly destroyed the importance of the house of Čaghatāi for a period. All the adult members of the house were either slain or banished. Orghāna the widow of Ḳarā-Hūlāgū, who was re-instated but died soon after, held the regency on the Ili during the following decade during the minority of her son Mubārak-Shāh; but she seems to have exerted no authority over the adjoining lands. As the narrative of Rubruquis (1253—1255) shows, the Mongol empire at this period was practically divided into two separate portions; Bātū, the ruler of the western half, was able to approach the Great Khān almost on terms of equality (although the coins were everywhere struck in the name of the Great Khān Möngke); the territory directly subject to the great Khān began between the rivers Talas and Ču. The above mentioned Mas'ūd-Beg who enjoyed the esteem of both Khāns was governor of all the settled areas between Bishbalïḳ and Khwārizm.

On the death of the Great Khān Möngke in 1259, a different condition of things arose. During the struggle for supremacy between Khubilāi and Arigh-Bukā, the brothers of the late Great Khān, Alghū a grandson of Čaghatāi agreed to take possession of Central Asia for Arigh-Bukā and to support him from there against his enemies. He actually succeeded in bringing the whole of Central Asia under his sway in a brief space of time, including lands like Khwārizm and the modern Afghānistān which had not previously even nominally been numbered among the possessions of the house of Čaghatāi. He had of course won these successes for himself and not for Arigh-Bukā; he everywhere declared himself an independent ruler, particularly after Arigh-Bukā, who tried to assert his rights, was forced finally to vacate this territory in spite of some initial successes. Mas'ūd-Beg was still governor of the settled areas, now no longer in name of the Great Khān however but in name of Alghū.

Alghū may be regarded as the founder of an independent Mongol state in Central Asia; he enjoyed his success for a brief period only, as he died in 664 = 1165-1266; some years after his death the princes of the house of Čaghatāi in this district had to cede the ruling power in this state to Ḳaidū, grandson of Ögedei [cf. the article BURAḲ-KHĀN, p. 795], who ruled it till his death in the beginning of 701 (autumn 1301). We again find Mas'ūd-Beg governing the settled areas of Central Asia in name of Ḳaidū. Mas'ūd-Beg died in Shawwāl 688 = October—November 1289; he was succeeded by his three sons in succession: Abū Bakr (till Sha'bān 697 = May—June 1298), Satilmish-Beg (till 702 = 1302-1303) and Suyūnič; the first two received their powers from Ḳaidū and the third from his successor Čapar.

Čapar was only able to assert his authority for a few years after the death of his father; he was deposed by Duwā, son of Burāḳ-Khān, in 706 = 1306-1307. Duwā must be regarded as the real founder of the kingdom of Čaghatāi. The boundaries of this kingdom dividing it from the other Mongol kingdoms (China, Persia and the kingdom of the Golden Horde) are given on the Chinese map of the year 1331 [cf. the article BISHBALÏḲ, p. 729].

It was some time before this kingdom received an independent organisation of its own. Djamāl al-Dīn Ḳarashī's work written in the reign of Čapar shows that affairs in Central Asia were in much the same condition even at this period, when there had long been a strong Mongol central government in China and Persia, as they had been in the early years of the Mongol conquest. Besides the old family of governors, the earlier local dynasties had also survived even in the Ili valley itself; in the towns, where there was no local dynasty, the *ṣadr* (the chief of the Muhammadan clergy) was at the head of the administrative body.

The Mongols were here apparently less under the influence of Islām and Muhammadan culture and were able to preserve their peculiar features in spite of their conquered subjects longer than in Persia. Except in the land of the Uighūr, Islām was everywhere the state religion by the time of the Mongol conquest, even in the Ili valley; nevertheless these areas had been but little influenced by Arabo-Persian culture. The Mongol conquest, as Rubruquis pointed out, was followed in these lands by an extension of the pasture lands at the expense of the towns and areas under cultivation; at a later period urban life quite disappeared here under the influence of Mongol rule except in Mā warā' al-Nahr and the modern Chinese Turkestān. The Muhammadan civilisation of Mā warā' al-Nahr naturally exercised some influence on the Mongols, particularly the rulers; this influence was not strong enough, however, to induce the mass of the people to change their mode of life. When the ruling family decided to settle in Mā warā' al-Nahr and to break off from the customs of their people, the complete separation of the eastern provinces was brought about.

Even the brief reign of Yisū-Möngke (1246—1251) appears to have been favourable to those who professed Islām. The minister then was a friend of the Khān's youth, a foster-son of Ḥabash-'Amīd, Bahā' al-Dīn Marghīnānī, who was a descendant of the *Shuyūkh al-Islām* of Farghāna and proved more favourable to scholars and poets than his foster-father. He is praised by his contemporary Djuwainī, who was personally acquainted with him, as a Maecenas; his house was the centre of all scientific and literary pursuits. Ḥabash-'Amīd, who was hated by the Khān as an adherent of Ḳarā-Hūlāgū, owed his life to the intercession of Bahā' al-Dīn; nevertheless Bahā' al-Dīn, when, after the events of the year 1251, he had to share the fate of his Khān and was handed over to his foster-father, was executed

in the cruellest fashion by the latter's orders.

Under Orghāna, Ḥabash-ʿAmīd again took the position he had held under Čaghatai; this princess was however favourably inclined to the Muḥammadans: she is described by Waṣṣāf as a protectress of Islām and by Djamāl al-Ḳurashī she is even said to have been a Muḥammadan. Her son Mubārak-Shāh, who was raised to the throne in Mā warāʾ al-Nahr, certainly adopted Islām, as did his rival Burāḳ-Khān some years later. The rule of Alghū seems to have been less favourable to Muḥammadans; Sulaimān-Beg, the son of Ḥabash-ʿAmīd attached himself to the new ruler; on the other hand, Shaikh Burhān al-Dīn, a son of Shaikh Saif al-Dīn Bākharzī was slain at the taking of Bukhārā. The events of the following years put off for some decades the victory of Muḥammadan culture, the way for which had been paved by the conversion of Mubārak-Shāh and Burāḳ. Ḳaidū and Čapar as well as Duwā and the other princes of the house of Čaghatai remained pagans and had their dwellings in the eastern provinces. In the reign of Isan-Būḳā, the son of Duwā, the armies of the great Khān penetrated from China far into Central Asia and ravaged the winter and summer residences of the Khān; the writer of the continuation to Rashīd al-Dīn's *Djāmiʿ al-tawārīkh* in his account of these happenings says that the winter-residence of the Khān was the district on the Issiḳ-Kul, while his summer residence was on the Talas.

Isen Būḳā's successor Khān Kabak (likewise a son of Duwā), who, according to the historians reigned eight years, according to his coins till 726 (1326), was the first to return to the settled lands of Mā warāʾ al-Nahr. Though he did not adopt Islām he is praised by Muḥammadans as a just prince; he is said to have built or restored several towns; he had a palace built for himself in the neighbourhood of the town of Nakhshab or Nasaf, from which the town takes its modern name of Ḳarshī (Mongol = "palace"). He introduced the silver coins afterwards called "*Kabakī*", which may be regarded as the first independent coinage of the Čaghatai kingdom; from the Mongol conquest to his time there had only been the coins of individual towns and dynasties in circulation in Central Asia. This fact also makes it probable that the kingdom was first united on a firm basis by Kabak, although we have no definite statements on this point.

After two brief interregnums, Kabak's brother Tarmāshīrīn was raised to the throne probably as early as 726. This Khān adopted Islām and took the name of ʿAlāʾ al-Dīn; the eastern provinces were entirely neglected by him so that the nomads of these provinces rose against him as he had broken the "*Yāsa*". This rebellion appears to have taken place about 734 = 1333-1334; it is scarcely possible to detail further events, for it is quite impossible to reconcile the accounts of the historians, which are probably little reliable on this period, and Ibn Baṭṭūṭa's account, which is equally tinged with romance (ed. Defrémery and Sanguinetti, iii. 39 *et seq.*). The statements of contemporary missionaries prove that the centre of the kingdom was again transferred for a brief period to the Ili valley and Christians were allowed to spread their religion unhindered and to build churches there in the reign of Djankshī (about 1334—1338); it is even said that a seven year old son of the Khān was baptised with his father's consent and received the name of Johannes. Soon afterwards these missionaries fell victims to a Muḥammadan agitation.

Some years later Nasaf (Ḳarshī) is again mentioned as the residence of the Khān Ḳazān; this Khān soon fell (in 747 = 1346-1347) in battle against the Turkish military aristocracy in his lands, whereupon the rule of his house in Mā warāʾ al-Nahr came to an end. Till 1370, descendants of Čaghatai were placed on the throne by the Turkish Emirs as nominal rulers; in the time of Tīmūr, these rulers were chosen from the family of Ögedei. Nevertheless under Tīmūr and his successors, the nomad population of Mā warāʾ al-Nahr, who, as a warrior caste, enjoyed many privileges (the Spanish envoy Clavijo (1403—1406) gives full details), was still as before called "Čaghatai". When the Čaghatai had been driven out in the x[th] (xvi[th]) century by the "Uzbeg", the name "Čaghatai" was transferred to the Tīmūrids who migrated to India. Up to the end of the xvii[th] century there was a ruling house which claimed to be descended from Čaghatai in the modern Chinese Turkestān (these princes were sometimes able to extend their rule as far as the lands north of the Celestial Mountains (Tiʾen-Shān) as well as to undertake campaigns into Mā warāʾ al-Nahr, Tibet, India and Afghānistān); the subjects of these princes appear to have called themselves not Čaghatai but simply Mongols (Moghul).

Bibliography: Our sources for the history of Čaghatai and his successors are much scantier than the accounts of the Mongol kingdoms in Persia and China; nor have they, meagre as they are, yet been collected or edited. With the exception of Djamāl al-Ḳurashī's *Mulḥaḳāt al-Ṣurāḥ*, which stands quite alone (there are two manuscripts in the Asiatic Museum in St. Petersburg; in Western Europe the work has hitherto been quite unknown; extracts are given in Barthold, *Turkestan* etc. i. 128 *et seq.*), there are no historical works composed in Central Asia during the period of Mongol dominion. Among Persian historians, Djuwainī (*Taʾrīkh-i Djihān-kushāī*; extracts in Defrémery, *Journ. Asiat.* 4[th] Ser. Vol. xx. 381 *et seq.*) and Rashīd al-Dīn (*Djāmiʿ al-tawārīkh*, extracts in Barthold, *Turkestan*, etc., i. 123 *et seq.*) give fairly detailed accounts of Čaghatai and his immediate successors. The statements regarding the house of Čaghatai given by Sharaf al-Dīn Yazdī in the introduction (*muḳaddama*) to his *Ẓafar-nāmah*, are based, apart from numerous chronological inaccuracies, on a historical forgery as was shown by d'Ohsson (*Histoire des Mongols*, ii. 108 *et seq.*). The events after the death of Ḳaidū (including the war between Duwā and Čapar) are most fully given in the *Taʾrīkh-i Waṣṣāf* (Ind. edition p. 449 *et seq.*, 515). On the Catholic missionaries, cf. Moshemii *Historia Tartarorum Ecclesiastica*, Helmstadi, 1741, particularly Append. N°. 78, 80, 84 and 92. Valuable material on the condition of Central Asia is contained in that portion of Ibn Faḍl Allāh al-ʿOmarī's *Masālik al-abṣār*, which has been made known by Quatremère's *Notices et Extraits* xiii. Clavijo's account of his journey has been edited in Spanish and Russian in the *Sbornik otdêlenīya russkago jazika i slovesnosti Imp. Academii Nauk*, Vol. xxviii., (St. Petersburg,

1881); the account of the "Čaghatāi" is given on p. 220 *et seq.* On the Čaghatāi dynasty in Chinese Turkestan, the best authority is the *Ta'rīkh-i Rashīdī* (transl. E. Denison Ross, London, 1895) and the sources discussed by Barthold in the *Zapiski vost. otd. arch. obshč.*, xv. 236 *et seq.* and later by M. Hartmann, *Der Islamische Orient*, i. 290 *et seq.* Cf. also W. Barthold, *Očerk Istorii Semirečya* (*Pamiatnaya knižka Semirečenskoi oblasti*, ii. 74 *et seq.*); S. Lane-Poole, *The Mohammadan Dynasties*, (London, 1894), pp. 241—243; E. E. Oliver, *The Coinage of the Chaghatai Mongols* in the *Journal of the Asiatic Society of Bengal*, 1891.

(W. BARTHOLD.)

ČAGHRĪ BEG b. MIKĀ'ĪL the Saldjūḳ, with the Biblical name of DĀWŪD, which is the one Baihaḳī always calls him by, was with his brother Toghrulbeg [q. v.] the founder of the Saldjūḳ power. A third brother Paighu, who always takes the first place in Baihaḳī, was not so prominent afterwards, although the three brothers were the recognised heads of the Ghuzz tribe of Kinaḳ and were held in high esteem among the other Ghuzz also. They first begin to play an important part in the history of Asia, when, after the death of 'Alī Tegīn in 425 (1034), they were no longer allowed to remain on the latter's territory in Nūr Bukhārā and sent a letter to Abu 'l-Faḍl Sūrī b. al-Mu'tazz, the Ghaznawid governor of Khorāsān, to get permission to settle with their people and cattle in Khorāsān from the Ghaznawid Mas'ūd b. Maḥmūd through his intervention. They had the more reason for expecting a favourable answer as the then Vizier of the Ghaznawids was a personal friend of theirs; but the latter's influence was not sufficient to restrain Mas'ūd from sending his general Bagtughdī with a considerable army against the Saldjūḳs, who by this time were already on Ghaznawid territory. Bagtughdī found the Saldjūḳs by no means unprepared and was severely defeated in the summer of 426 (1035). As a result Mas'ūd entered into negotiations with the Saldjūḳs and not only granted their request but also allotted them certain districts and made them officials of the Ghaznawid government with the title Dihḳān on condition that they remained at peace and restrained the robber Ghuzz from raiding. They were, however, unable to fulfil this condition in a satisfactory fashion, and when complaints became too loud, Mas'ūd ordered the Great Ḥādjib Sübāshī to collect troops and drive out the robber rabble. Sübāshī was able to do little against the swiftly moving nomads, whose numbers were constantly increasing, so that the campaign dragged on and Čaghrī Beg even took Marw in 428 (1037) and had his name mentioned in the *Khuṭba* as lord of the town. Sübāshī then received orders to attack the Saldjūḳs but was put to flight near Sarakhs in 429 (1038). Toghrulbeg entered Nīshāpūr in the same year and had his name mentioned in the *Khuṭba*. Mas'ūd then decided to take the field in person but he shared the fate of his generals and received a decisive reverse at Dandānaḳān on the 8th Ramaḍān 431 (23rd May 1040) [cf. the official account in Baihaḳī, p. 790 *et seq.*].

Though we have detailed accounts of the further successes of the Saldjūḳs in the west under Toghrulbeg, we know very little of the progress of Čaghrī Beg's campaigns in the eastern provinces of what had once been the Caliph's dominions. It fell to him and his famous son Alp Arslān [q. v., p. 320] to continue the campaign against the Ghaznawids, which finally ended in both sides agreeing to a peace, by the terms of which each was to be content with retaining those lands actually in its possession at the time of the conclusion of peace. The whole of Khorāsān and some of the adjoining lands thus fell to Čaghrī Beg who acquired fame not only as a general but also as a ruler. He continued to live on good terms with his brother Toghrulbeg and aided him in his campaigns, which were often only successful through his intervention. He was stoutly supported by his brave son Alp Arslān; his daughter Arslān Khātūn Khadīdja was married in 448 (1056) to the 'Abbāsid Caliph al-Ḳā'im bi Amr Allāh; another son Ḳawurdbeg was the founder of the Saldjūḳ kingdom of Kirmān. Čaghrī Beg died in Radjab 451 (August—September 1059) according to the most probable statement, and left his throne to his son Alp Arslān, who also inherited the domains of his uncle Toghrulbeg when the latter died childless.

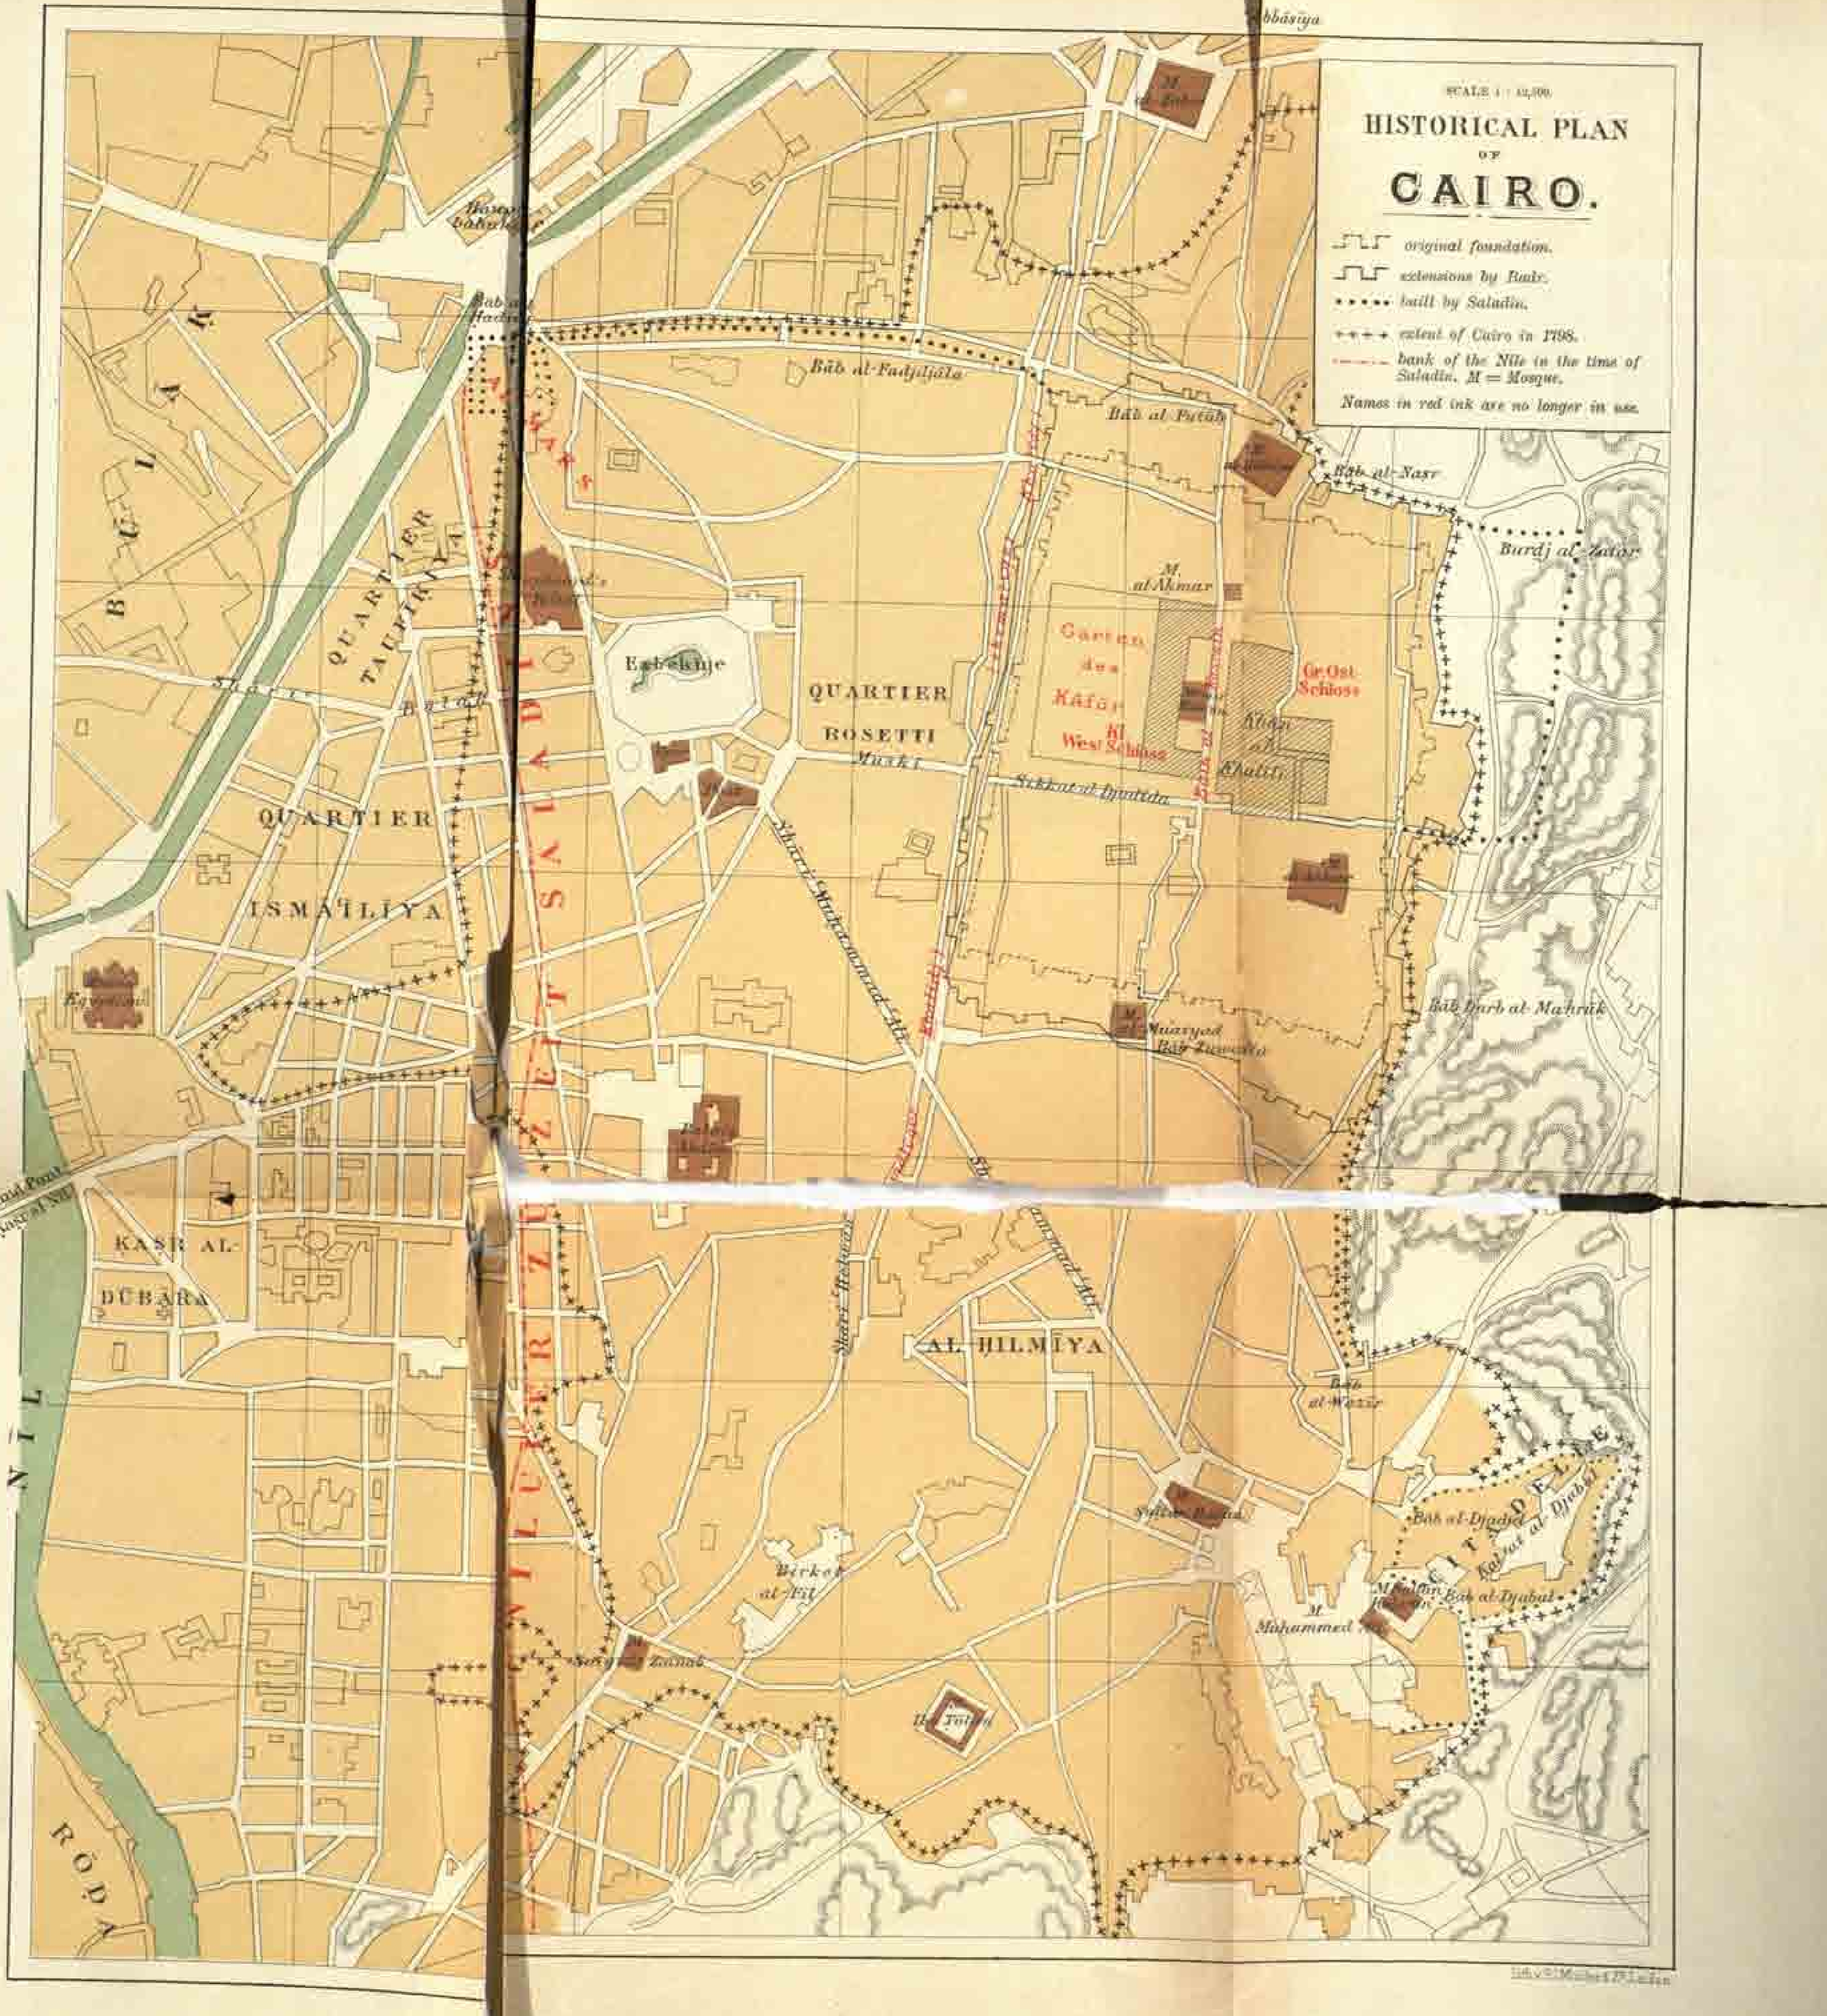
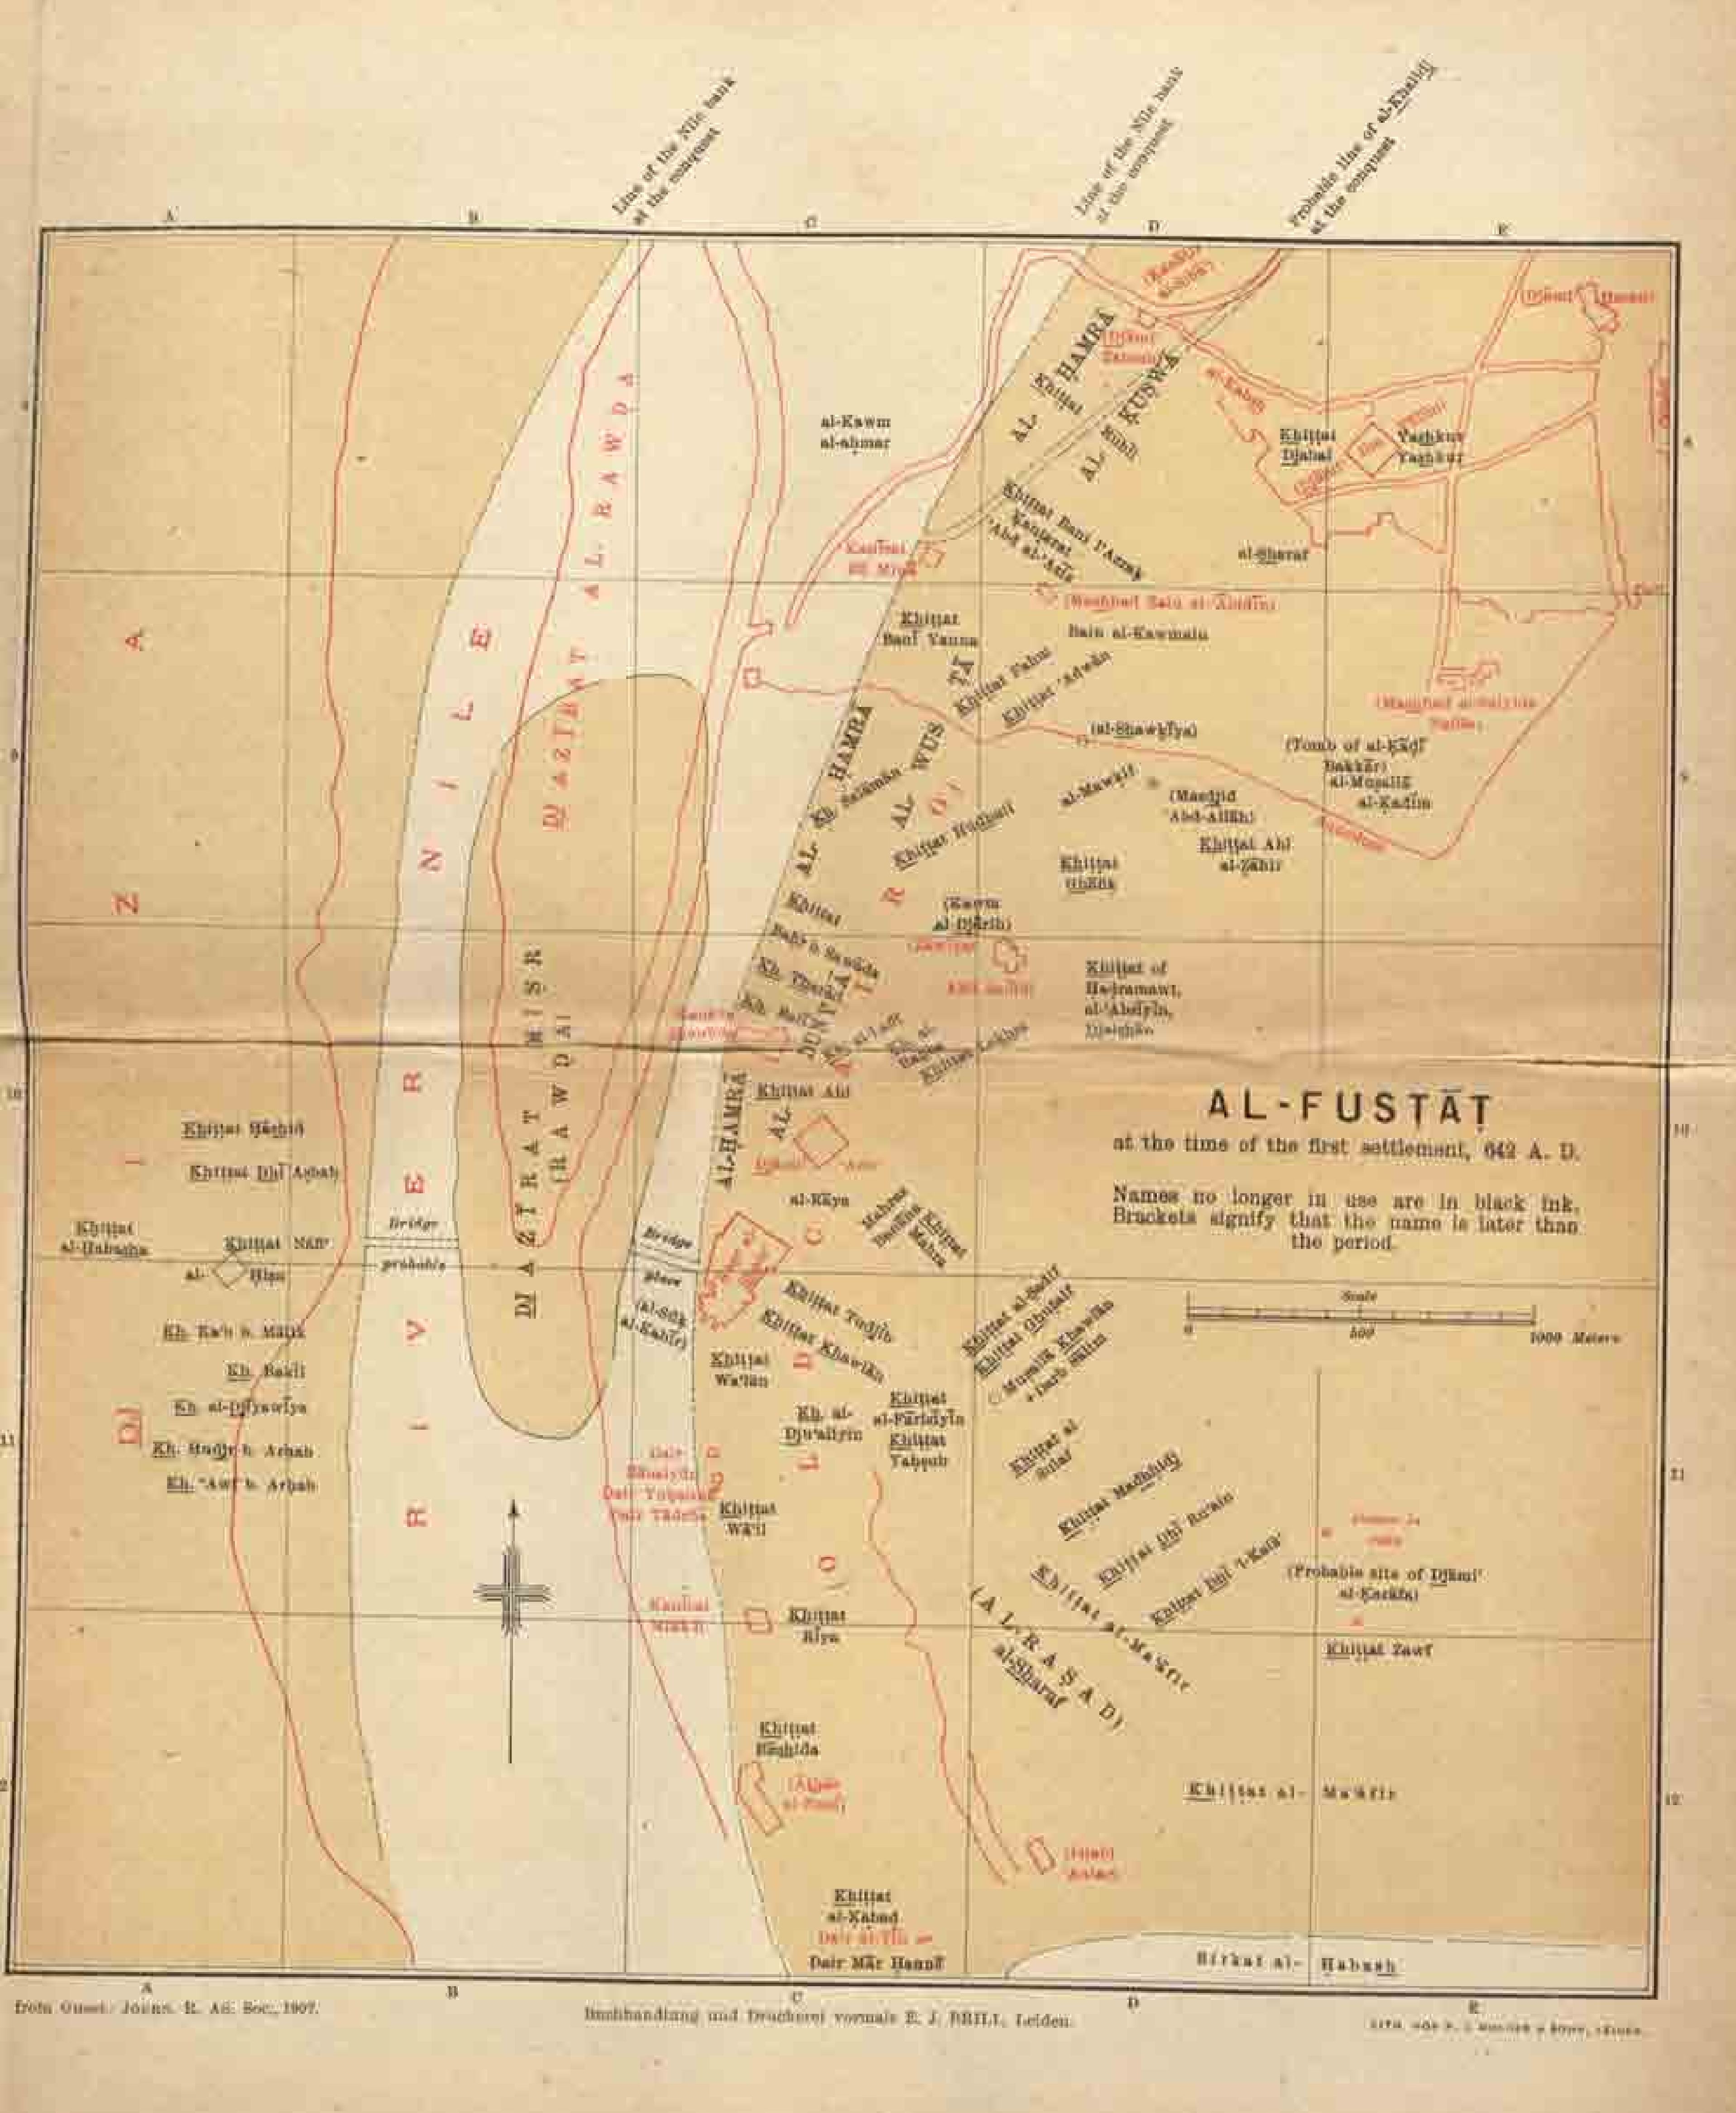
CAIRO, the chief town and seat of the government in Egypt; it is situated in 30° 6' N. Lat. and 31° 26' E. Lng. (Greenw.), about 13 miles south of the head of the Delta at the point where the Muḳaṭṭam range is at its nearest to the Nile. This site is of great strategic importance as it commands the approach to Upper Egypt and was settled and fortified even in ancient times. It was not, however, till after the Arab invasion, that it became of special importance, when the great military camp of Fusṭāṭ was placed here in which other towns and quarters became incorporated in course of centuries. Miṣr al-Ḳāhira was first founded under the Fāṭimids in the year 359 = 969; it was the capital of the Fāṭimids and gave the whole group of towns the name it bears to the present day. In course of time individual parts of the city disappeared while others sprang up in their place. Remains of the ancient Fusṭāṭ still survive in the modern Old Cairo (Maṣr al-'Atīḳa). The expansion of the city took place as a rule from south to north and from east to west. Even at the present day the same process is going on.



1. Topography of the Town at the Time of the Arab Conquest.

The histories of the conquest give us the following picture of the city. In the north of the plain of Cairo lay the ancient town of Heliopolis (On), the 'Ain Shams [q. v., p. 212] of the Arabs, the ruins of which still render the identification certain at the present day. In the south of the plain was the fortress of Babylon [q. v. p. 550] the Chere-Ohe of the ancient Egyptians. In the article Babylon, Casanova's explanation of the name as a grecised form of Pi-Hapi-n-on is followed; Steindorff says in Baedeker's *Egypt*⁶ (p. 39): "The Greeks named it *Babylon*, probably in imitation of the Egyptian name of the island of Rōḍa, viz. *Per-hapi-n-On* or the "Nile City of On" (Heliopolis)"



This Babylon, the ancient Egyptian and Greek fortress, which was much extended by the Romans, has survived to the present day in Old Cairo under the name of Ḳaṣr al-Shamʿ. The name is, according to Butler, probably an Arabicised form of "Babylon an Khemi", i. e. Babylon of Egypt. That *Shamʿ* is a popular etymology of Khemi, sounds very likely when one considers that the high towers of the fortress were used as beacon towers. This fortress remained in a fairly good state of preservation with its strong towers and walls and served as a refuge for the Copts till after the English occupation of Egypt, but it then became very dilapidated till quite recently it was placed under state protection by Max Herz Bey, who has rescued so many Egyptian monuments from destruction. Between Ḳaṣr al-Shamʿ and the Nile there now lies a great portion of Old Cairo, but at the time of the Arab conquest the Nile washed the walls of the castle. The strong fortress was connected by a bridge with an island, also fortified, which lay opposite it and was probably a southern continuation of the present island of Rōḍa and formed with it a fortified barrier which commanded the bridge of boats to Djīza (Gizeh) and controlled all intercourse with the west bank of the Nile. As its ruins still show, this was a very strong fortress; it held out against the Arabs under the conqueror of Egypt for a long period. After a siege of six months Babylon fell on the 9th April 641 = 21st Rabīʿ ii. 20 A. H.; it was not taken by storm however but surrendered peacefully. For further details see the article BABYLON. The name is still found attached to the monastery of Dēr Bablūn south of Old Cairo. Full details and bibliography are given in Butler, *The Arab Conquest of Egypt*, p. 238 *et seq*. Two places, Umm Dunain and Miṣr, are known to have existed at the time of the Arab conquest between ʿAin Shams and Babylon. Umm Dunain probably corresponds to the Ṭaudūnyās mentioned by John of Nikiû. ʿAmr the Conqueror made his headquarters here for a period before the battle of ʿAin Shams. Leone Caetani approximately identifies the site of Umm Dunain with the modern Ezbekīye, which was then situated on the Nile. Farther to the south under the walls of Babylon, the fortress of the Romans, lay the unfortified town of Miṣr. It is not quite certain whether it lay south of the fortress — this is Butler's view — or to the north which is the conclusion come to by Guest in the *Journal of the Royal Asiatic Society* 1907, p. 63 *et seq*. It certainly did not cover the whole plain; otherwise it would have been impossible for the Arabs to pitch their camp in this neighbourhood. We may assume that there were individual settlements, particularly churches, monasteries, gardens and vineyards all over the plain between the Nile and the Muḳaṭṭam.

2. The Foundation of al-Fusṭāṭ.

As had been the case in the ʿIrāḳ where Kūfa and Baṣra were founded as military towns and depots for the Arab armies, far from the earlier seats of government, so in Egypt also it was not Alexandria that was chosen as the seat of the Caliph's representative, but a new town was built near Babylon, the character of which was purely military. The choice of this particular point was probably settled on as a result of the experiences of the period of conquest which had proved the great strategic importance of Babylon. Fusṭāṭ did not, however, arise in a night by command of the authorities as a result of a regular system in the allotment of the quarters (*khiṭaṭ*), but the camp of the army, pitched in quite an aimless fashion at the siege of Babylon, assumed permanent form. The excessive patriotism of the Egyptian historians has given us a wealth of information on the first foundation of Fusṭāṭ, which has enabled Guest (*op. cit.*) to give a clear picture of this Egyptian military town save for one or two uncertain points. The new town lay along the Nile for about three miles with a breadth of about half a mile, from Dēr al-Ṭīn, which bears the same name at the present day and the now dry Birkat al-Ḥabash in the south almost to the top of the Djebel Yashkur on which the Ṭūlūnid Mosque was afterwards built. In a fairly central position to the north-north-east of Babylon was the residential quarter of the governor ʿAmr b. al-ʿĀṣ, a clue to the situation of which is given by the Mosque of ʿAmr, to which additions have of course often been made but the older portions of which date back to the period of the Conquest. This quarter bore the name of *Khiṭṭat Ahl al-Rāya* i. e. "Quarter of the People of the Standards"; the explanation of the name is, that a number of comrades-in-arms, particularly Anṣār and Muhādjirūn, who formed the nucleus of the army and belonged to the oldest branch of the troops of Islām, had assembled here around the standard of the commander-in-chief. The various other groups of the people attached themselves to them to form tribes, as it were. There was a *khiṭṭa* corresponding to each of these tribes and a paylist in the *Dīwān* for each *khiṭṭa*. This ethnic principle of division was only broken among the *Ahl al-Rāya*. These had a tribal roll to themselves although they really belonged to different tribes. Another association of members of various tribes called *al-Lafīf*, organised for a special purpose, also had a separate *khiṭṭa*, but its members went with their own tribes on the paylists. Members of the various tribes arriving at a later date settled in the *khiṭṭa* of their own tribe; when they could not find room with their kinsmen, which often happened, these stragglers were collected as *Ahl al-Ẓāhir* in a separate quarter outside. Tradition says that members of the tribes of Tudjīb, Ghuṭaif, Khawlān and Maʿāfir were appointed to superintend the staking out of the *khiṭṭas*. These must therefore have been the most strongly represented; they are all tribes from the Yaman. The North Arabian element was not strongly represented at the foundation of Fusṭāṭ. It is difficult to get a clear idea of the Khiṭaṭ, as the word is applied both to fairly large tribal quarters and to their internal subdivisions. There were open spaces (*faḍāʾ*), between the individual *khiṭaṭ*, of which in course of time only narrow streets came to be left. It is clear from the history of its origin, why Fusṭāṭ was not laid down on a definite town-plan; it simply developed out of the union of a number of straggling tribal encampments and ran from north to south outside the fortress of Babylon and the main quarter with the great Mosque lying to the north of the latter. It is not quite clear, how far the town of Miṣr was incorporated from the first. An important part of the camp, which was gradually joined up to form a town, was the

bank of the Nile north of Babylon as far as the northern boundary of the town at that period. It was called al-Ḥamrawāt and was divided into al-Ḥamrā al-Dunyā (near Babylon), al-Wusṭā and al-Ḳuṣwā. This district is mentioned in a Greek papyrus of the end of the first century (Bell, *Catalogue of the Greek Papyri in the British Museum*, Vol. iv, p. 331). At this period there must have been a distinction between Babylon and Fusṭāṭ, which was official rather than geographical. The name Fusṭāṭ drove out the older Babylon. The ancient name Miṣr or Maṣr remained in existence alongside of Fusṭāṭ. According to the dictionaries, Fusṭāṭ means tent. The name of the town is given in very different forms, viz. — *Fiṣṭāṭ*, *Fusṭāṭ*, *Fussāṭ*, *Fissāṭ*, but the nomen appellativum also has various forms. Dozy, *Supplément*, s. v. recognised that in *Fusṭāṭ* we have an Arabicised form of a foreign word, the Byzantine φοσσᾶτον i. e. *fossatum* "camp". The Papyri give evidence of the use of φοσσᾶτον as a name for Fusṭāṭ. It can no longer be determined, what historical connection there is between the name of the town and its original meaning. At any rate the city of the army was not at first surrounded by walls and ditches but only by a *Zarība* (Old Arabic *Zarb*), a barricade of thorn-bushes. The ancient name Miṣr is now combined with Fusṭāṭ to form a single name: Miṣr al-Fusṭāṭ. Miṣr or Maṣr, a place-name, which the Arabs found when they came there, was regarded by them as identical with *Maṣr*, *Amṣār*, camp, and also with the Arabic name for Egypt, which had been in use even in pre-Muḥammadan times. Miṣr was popularly pronounced Maṣr and this name was transferred from Maṣr al-Fusṭāṭ to the younger sister town of Maṣr al-Ḳāhira and has remained its usual name to the present day.

3. History of the Town of al-Fusṭāṭ.

The camp gradually developed into an important town by incorporating the towns of Miṣr and Babylon, which dated from pre-Muḥammadan times. The town however remained unfortified, as is evident from the statement that in the year 64 (683) the governor of Ibn al-Zubair had a ditch dug to protect the town from Marwān I's Umaiyads who were advancing on it from Syria. We can hardly imagine how primitive the houses of the Arabs were. Even the original Mosque — there were also places of prayer in the individual khiṭaṭ and besides a Muṣallā outside in the desert for the appointed services at the two great festivals — was naturally a very simple building, though it was increased and embellished in course of time (cf. Schwally, *Zur ältesten Baugeschichte der Moschee des ʿAmr in Alt-Kairo* in *Strassburger Festschrift zur XLVI. Versammlung deutscher Philologen 1901*). Other public buildings were also erected in time. At the end of the first century we hear of great granaries being built (Bell, *Aphrodito Papyri*, p. 52) and of the erection of an αὐλὴ for the Amīr al-Muʾminīn (*ibid.* p. xviii) — it is probably offices for the governor that are meant. Some years later a treasury (*bait al-māl*) was built in Fusṭāṭ (Becker, *Beiträge zur Geschichte Ägyptens*, ii. 162). These are only casual notices which testify to the continual growth of the town. Its development probably dates from the second half of the first century, as under ʿAbd al-Malik's brother, ʿAbd al-ʿAzīz, it was not Fusṭāṭ but Ḥelwān, which was the governor's residence. Although the central part of the town thus expanded, the whole area of the original khiṭaṭ did not remain built upon; for example, the northern quarters, al-Ḥamrā al-Ḳuṣwā, and the district of Djebel Yashkur fell into ruins and became a desert. (Maḳrīzī, *Khiṭaṭ*, i. 304, 25). When on the fall of the Umaiyads (132 = 750) the ʿAbbāsid troops entered Egypt to follow up Marwān II, Marwān burnt the whole of Fusṭāṭ except the great mosque; at least so we are informed by a Christian source, Severus of Ashmūnain, ed. Evetts (*Patrol. Orient.* Tome V., fasc. 1, p. 168). This may possibly be the reason why the ʿAbbāsid governors no longer resided in the ancient Fusṭāṭ but built a new residence, *Dār al-Imāra*, in the above mentioned old quarter al-Ḥamrā al-Ḳuṣwā to the north, around which a new quarter arose which was called al-ʿAskar. The topography of the whole of this district has been particularly studied by C. Salmon (see *Bibliography*). A second Chief Mosque (*Djāmiʿ*) was attached to the *Dār al-Imāra* here, which was at first called *Djāmiʿ al-ʿAskar* and later *Djāmiʿ Sāḥil al-Ghalla*. Large buildings and markets also came to be erected here and al-ʿAskar became united with Fusṭāṭ to form one town. This quarter also had a police station (*Shurṭa*) of its own, the so-called *al-Shurṭa al-ʿUlyā*.

This notice by Maḳrīzī (*Khiṭaṭ* I, 304, 30) is of importance, as it enables one to see that the division of the town into two parts, *ʿAmal Fōḳ* and *ʿAmal Asfal*, which existed throughout the whole period of Fusṭāṭ's prosperity, dates back to the foundation of al-ʿAskar, i. e. to the year 133 (750). Muḳaddasī (ed. de Goeje, p. 199) gives the clearest account of this division of the town. According to him, the Mosque of ʿAmr was distinguished as the *al-Djāmiʿ at-Suflānī* and the Ṭūlūnid Mosque (see below) as *al-Djāmiʿ al-ʿUlyānī*. The boundary between the two divisions was formed by the *Masdjid ʿAbd Allāh*, the site of which can no longer be located — a clue is given in *Khiṭaṭ*, i. 331, 20. — This statement would lead one to regard the southern part of the town as *ʿAmal Asfal* and the northern as *ʿAmal Fōḳ*, but this is not correct. Maḳrīzī (*Khiṭaṭ*, i. 5, 4; ed. Wiet, i. 12, Note 6 and i. 299, 3) tells us of *ʿAmal Fōḳ*, that it had two ends (*ṭarafānī*) and that, beginning to the south of Ḳaṣr al-Shamʿ, it stretched via al-Raṣad and the Ḳarāfa as far as al-ʿAskar and the Ṭūlūnid town. It thus enclosed in a semi-circle the division *ʿAmal asfal*, which formed the older portion of Fusṭāṭ. In these circumstances it is confusing to be told that *ʿAmal Asfal* adjoined Cairo (*Khiṭaṭ*, i. 299, 6). This statement was probably made while the author was thinking of later conditions after the decline of al-ʿAskar, or perhaps *ʿAmal Asfal* stretched eastwards of al-ʿAskar along the Nile. In any case *Asfal* and *Fōḳ* are here not identical with the boundary between Upper and Lower Egypt, but *Asfal* rather refers to the low-lying bank of the Nile, while *Fōḳ* refers to the higher land farther from the river. This is quite clear from *Khiṭaṭ*, i. 343, 9. There was a police-station (*Shurṭa*) corresponding to each of the administrative districts (*ʿAmal*) which was called *Shurṭat Asfal* (Ibn Saʿīd, ed. Vollers, 52, 14) and *Fōḳ* or, as above mentioned, *al-ʿUlyā* for each separately. In times of unrest the merchants used to retire

from *ʿAmal Fôḳ* into *ʿAmal Asfal*, i. e. into the interior of the town. (Musabbiḥî in Becker, *Beiträge*, i. 70, 1). That the ancient Fusṭâṭ remained the real centre of the town even after its burning by Marwân down to the late Fâṭimid period, is evident from all accounts.

Al-ʿAskar, on the other hand, was the residence of the ʿAbbâsid governor till a new period in the history of Egypt began in 254 (868) with Aḥmad b. Ṭûlûn, and a transference of the seat of government and extension of the town became necessary with the new requirements of the court and the military. The site, where this new town which was not to survive its founders, arose, is still defined by the Ṭûlûnid Mosque, which is situated in this great complex of buildings to which the name al-Ḳaṭâʾiʿ was given. As further landmarks, Maḳrîzî (*Khiṭaṭ*, i. 313, 10 *et seq.*) gives the citadel, the Remalla square, and Zain al-ʿÂbidîn, which, according to the map published by Guest and Richmond in the *Journal of the Royal Asiatic Society* 1903 (p. 791 *et seq.*), is to be sought for in the south-east of the Ṭûlûnid Mosque. Al-Ḳaṭâʾiʿ was therefore to the east of al-ʿAskar. The new town is said to have been a square mile in area (Ibn Ḥawḳal) and to have taken its name al-Ḳaṭâʾiʿ (sing. *Ḳaṭîʿa*) from the fact, that the ground adjoining the royal palace was divided into separate allotments (*Ḳaṭîʿa*) and granted for their requirements to the troops and officials of the palace, who were organised partly on a territorial basis and partly according to their occupations. This great expanse of buildings surrounded the great Mosque, a large racecourse (*Maidân*) for polo, and other buildings required by a royal residence. It has hitherto been difficult to form a picture of this royal town, but the results, still unpublished, of the excavations by Sarre and Herzfeld in Samarra may clear up our difficulties in a surprising fashion. That B. Ṭûlûn, who had risen to power in Samarra, built his palace in the style of the caliph's palace is *a priori* probable. Aḥmad also laid down new buildings in al-ʿAskar; his hospital (*Mâristân*), the first of its kind in Egypt, was built in this quarter of the city. His son and successor Khumârawaih took down a part of his father's buildings to re-erect them in a still more splendid fashion. The descriptions of the splendour of his palace, gardens, the pond of quicksilver and his menagerie sound like fairy-tales. The Ṭûlûnid period is one of the most splendid in the history of Fusṭâṭ. When the dynasty fell in 292 (904) and the ʿAbbâsid general Muḥammad b. Sulaimân entered Fusṭâṭ, he had the splendid palace of the rebel Ṭûlûnids razed to the ground, and although al-Ḳaṭâʾiʿ survived, it suffered severely as did Fusṭâṭ itself, the mosque alone remaining unharmed. It may be mentioned, that at first both al-ʿAskar and al-Ḳaṭâʾiʿ were regarded not as quarters of the city but as enclosed groups of buildings outside Fusṭâṭ (*Khiṭaṭ*, i. 304, 32).

After the destruction of the Ṭûlûnid palace the governor's residence was again moved to the *Dâr al-Imâra* of al-ʿAskar, in which the *Dîwân al-Kharâdj* had been under the Ṭûlûnids. The name al-ʿAskar, however, had fallen out of use even in the Ṭûlûnid period and people spoke of the "city of Fusṭâṭ and al-Ḳaṭâʾiʿ" (*Khiṭaṭ*, i. 305, 7), the name al-ʿAskar was only occasionally used, although at first it had been regarded as a separate town. It is evident then, that this whole area must have been very much built over during the Ṭûlûnid period.

The prosperity of Fusṭâṭ, now increased by the incorporation of al-ʿAskar and al-Ḳaṭâʾiʿ, lasted for several centuries more. Even the foundation of the Fâṭimid city of Cairo did not affect it; indeed one rather gathers from the accounts of the travellers, who visited Egypt while the Fâṭimid dynasty was at the height of its glory, that the splendour and particularly the commercial activity of Fusṭâṭ far surpassed those of Cairo. Muḳaddasî, for example, writing in the year 375 (985), describes Fusṭâṭ and its wealth in great detail, while he dismisses Cairo in a few words. He was particularly impressed by its huge population: 10,000 prayed behind the Imâm on Fridays. The main centre of business activity was around the Mosque of ʿAmr (*Zuḳâḳ al-Ḳanâdîl*). He saw houses of four and five stories; in one alone 200 men had their dwelling. Fusṭâṭ was to him the most splendid and most populous city of the Muḥammadan world, yet living was cheap in it as the necessaries of life were constantly being imported from all parts of the world. It must of course be admitted that the pious traveller was not blind to the dark side of the picture of this busy city. About 60 years later (439 = 1046), the Persian traveller Nâṣir-i Khusraw gives a similar account of the city. To him also the richest market in the world was the Sûḳ al-Ḳanâdîl near the Mosque of ʿAmr. He also praises the lofty houses and tells us of the artificial gardens, which were laid out on the roofs on the top of the seventh story. He also, on the other hand, mentions narrow streets which were overshadowed by buildings and had to be lighted artificially all day long. He describes the rare and costly wares, which were sold in Fusṭâṭ, and describes the industries of the city. He praises the peace and security of the city and the authority of the government. Of topographical interest are his statements, that Fusṭâṭ looked like a high mountain from a distance and that the Ṭûlûnid Mosque lay on its edge. The note on the high situation of Fusṭâṭ no doubt refers to the suburbs in *ʿAmal Fôḳ*; for even by this time, the low lying position of *ʿAmal Asfal* had provoked the criticism of contemporary hygienists (Ibn Riḍwân in *Khiṭaṭ*, i. 339).

Nâṣir-i Khusraw saw Fusṭâṭ as late as the reign of the Caliph Mustanṣir, but the Fâṭimid kingdom was still at its zenith. In the second half of the long reign of this prince, it suddenly began to decline. Famine and mutinies among the soldiers destroyed the prosperity of the dynasty and were disastrous to a city like Fusṭâṭ which lived by peaceful commerce. The northern parts of Fusṭâṭ suffered most, the Ṭûlûnid city and the ancient ʿAskar, which were abandoned by its inhabitants and fell into ruins. These districts were found useful at the restoration under Badr al-Djamâlî, when all movable parts of its buildings (*anḳâḍ*) were carried off to be used in the extension of Cairo. It therefore became necessary at a later period to build walls to conceal this dreary expanse of ruins from the view of the Caliph, when he rode to Fusṭâṭ from Cairo. In the Caliphate of Âmir (495—524 = 1101—1130) the Vizier al-Maʾmûn al-Baṭâʾiḥî proclaimed in Cairo and Fusṭâṭ, that whoever possessed a house in ruins,

should repair it and live in it or make it available by selling or letting it; whoever did not do this, was to forfeit all claim to his property. But even these measures only served to promote an extension of the new quarter, adjoining Cairo on the south-east between the Rumaila and the Bāb al-Zuwaila of Cairo. Of al-Kaṭā'i' and al-'Askar there only remained the division of Djabal Yashkur with the Ṭūlūnid Mosque, but the latter was in a hopeless state of neglect; it was even used as a camping-place for Maghribis passing through on pilgrimage, until, in the viith (xiiith) century, it was restored by the Mamlūk Lādjīn. Fusṭāṭ in the larger sense received the final blow, when the Crusaders came to Egypt in the reign of the Fāṭimid 'Āḍid. Cairo was now fortified but Fusṭāṭ quite defenceless. The Vizier Shāwar was afraid the Christians might occupy Fusṭāṭ and use it as a base for their military operations. He therefore ordered it to be set on fire on the 19th Ṣafar 564 = 22nd November 1168. Over 20,000 vessels of naphtha were distributed throughout the city and the fire lasted 54 days. Even this conflagration, however, appears to have spared certain areas and it was not till the reign of the Mamlūk Baibars that these were destroyed and what was valuable of their remains used for a new foundation near the Mosque of 'Amr on the Nile.

According to the usual view, the famine under Mustanṣir and the fire under Shāwar entirely destroyed Fusṭāṭ. It was certainly at this time, that the great mounds of rubbish (*Kōm*, *Kīmān*) arose which still stretch between Cairo and Old Cairo. By the creation of this expanse of ruined buildings, the most northerly division of Fusṭāṭ, the modern citadel, the Ṭūlūnid Mosque and the lands adjoining it on the west, became separated from the main part of the city, which lay around the Mosque of 'Amr. The space, separating these portions of the town from Cairo, which lay somewhat farther north, was less than the distance between them and the quarter around the 'Amr Mosque which stretched round to the south. It was therefore natural, that, with the transference of the mass of the population to Cairo, the remains of the Ṭūlūnid city gradually developed till it became incorporated in Cairo. The beginnings of this process have already been indicated above.

The great city of Fusṭāṭ, which had stretched from the Birkat al-Ḥabash to the citadel and to the Nile in the west, was now a thing of the past. Though Fusṭāṭ once practically adjoined Cairo, at the end of the Aiyūbid period it was estimated by Ibn Sa'īd, that the distance between the two towns was two miles. A dusty road led through the mounds of ruins from the Bāb Zuwaila to the quarter around the Mosque of 'Amr, which soon made a remarkable recovery after the conflagration. Shīrkūh brought back the inhabitants of the burnt city and Saladin restored the Mosque of 'Amr in a splendid fashion. Though plague and scarcity destroyed the gradually increasing prosperity of the town in 565 (1169), between 637 (1240) and 647 (1249), i.e. in the reign of the Aiyūbid Ṣāliḥ, Ibn Sa'īd gives an account of Fusṭāṭ, which, though naturally in striking contrast to the glowing descriptions of Muḳaddasī and Nāṣir-i Khosraw, gives a good idea of the commercial prosperity of Fusṭāṭ (*Khiṭaṭ*, i. 341 *et seq.*). It is true, that the town had a dismal aspect, the city gates and many of the houses were in ruins, the streets narrow and dirty, the mosque neglected and used as a short-cut, but not even this far-travelled man had seen any thing like the array of ships and merchandise, which he saw on the Nile-bank. The sugar and soap industries still flourished as in ancient times. Of great importance is his statement, that Fusṭāṭ was still as in former days the seat of commerce and industry and that goods were landed here and then forwarded to Cairo. Cairo, the brilliant modern city, was essentially a military town in origin. Fusṭāṭ's prosperity in Ibn Sa'īd's time may be partly to be traced to the revival in the prosperity of the island of Rōḍa at this period, of which we shall presently speak.

Soon afterwards troublous times again fell upon Fusṭāṭ. Maḳrīzī mentions the years 696 (1296) 749 (1348), 776 (1374), 776 (1374) and 790 (1388) as being particularly disastrous. But many other changes were brought about by the Mamlūks in the once so brilliant city of Fusṭāṭ. Under them it became the administrative capital of Upper Egypt, while Cairo held the same position for Lower Egypt. This arrangement is most expressly stated in Ibn Duḳmāḳ's work. The Ḳāḍī and Muḥtasib in Cairo had authority in the Delta also, while the corresponding officers in Fusṭāṭ were supreme in Upper Egypt.

Little is known of the further vicissitudes of the town. With the gradual preponderance of Cairo, which ultimately became the chief commercial centre also, Fusṭāṭ gradually declined. Whether it has further decreased since the Mamlūk period appears doubtful, but the relative difference between it and Cairo has naturally been constantly increasing. Indeed, the very name Fusṭāṭ ultimately disappeared, while the popular name Maṣr for Fusṭāṭ as well as for Cairo remained in use. Cairo gradually became so important in comparison with Fusṭāṭ, that the latter became designated in European literature as Old Cairo. Even the scholars with the French expedition talk of "le vieux Kaire" as an established term and quote earlier travellers as authority for its use. The Arabic expression at the end of the xviiith century was *Maṣr al-'Atīḳa*, while the modern *Dictionnaire Géographique* of Boinet Bey gives *Maṣr al-Kadīma*. At the time of the French expedition, Old Cairo had about 10,000 inhabitants, of whom 600 were Copts who had survived here for centuries beside their ancient churches and monasteries. The French scholars also again emphasise, as did Ibn Sa'īd long before, the importance of the harbour, particularly for trade with Upper Egypt. In the xixth century with the general improvement in the country, the population of Old Cairo has also increased. According to the census of 1897, the town had 31,849 inhabitants. It forms a district in the gouvernement of Cairo. At the present day, Old Cairo is a long narrow strip lying along the Nile and its northern limits adjoin the southwest end of Cairo proper.

Between Old Cairo and the Muḳaṭṭam there have lain, since the Fāṭimid period, the mounds of ruins, which form such a characteristic feature of the town, behind which the so-called tombs of the Mamlūks and the "City of the Dead" lie along the Muḳaṭṭam. This vast City of the Dead, the beginnings of which date back to the period of the Conquest, is called al-Ḳarāfa. In the

middle ages it was separated from Fusṭāṭ by a wall. A larger and smaller Ḳarāfa (al-Kubrā and al-Ṣughrā) were distinguished, which stretched from north to south parallel to the Muḳaṭṭam and the city. Al-Ḳarāfa al-Ṣughrā lays nearer the hill and corresponds to the modern City of the Dead which stretches as far as the Mausoleum of the Imām al-Shāfiʿī. On the two Ḳarāfas, their history, tombs and sanctuaries, a monograph was written in 804 (1401) by Ibn al-Zaiyāt entitled *al-Kawākib al-saiyāra fī Tartīb al-Ziyāra fi 'l-Ḳarāfatain al-Kubrā wa 'l-Ṣughrā* (printed Cairo 1325 = 1907).

4. The Nile-Bank, the Island of Rōḍa and Djize (Gizeh).

The task of clearing up the historical topography of Cairo and the neighbourhood is very much complicated by the fact that the Nile has several times changed its bed since the conquest. At that time, as we have seen, its waters washed the Ḳaṣr al-Shamʿ and the Mosque of ʿAmr, but only a few decades later it had retreated so far back that there was sufficient land left dry between the castle and the new bank to be worth utilising. ʿAbd al-ʿAzīz b. Marwān erected buildings here. The struggle with the Nile goes on through the whole mediaeval period in the history of Cairo. Any methods of controlling the river were at this time quite unknown to the Muslims and their amateurish efforts in this direction had at most but a very temporary success. The Nile then flowed, as has been stated, much further east than at the present day and must also have taken a considerable turn to the east in the north of Fusṭāṭ so that great areas of the modern Cairo were then portions of the river-bed. The name al-Kabsh (*Ḳalʿat al-Kabsh*) is given to that quarter of the town near the Ṭūlūnid Mosque. This Kabsh lay immediately to the west of the Djebel Yashkur and was a favourite resort as it lay on the Nile. At the present day it is more than ³/₄ mile distant from the river; and this is a good deal in the plan of a town. The many dried up pools (*birka*) within the modern city also remind one of the gradual shifting to the west of the Nile. First of all, islands arose in the river-bed, then the water-courses which separated them from the banks were cut off from the main-bed; these were only filled with water at periods of flood, then they became *birkas*, till they finally dried up altogether. The areas gained from the river were first of all used as gardens, then finally built on, till now only the ancient name reminds one of the change they have undergone. It is in this way, that the whole area between the modern bed of the Nile and the ancient settlements has arisen within the Muḥammadan period. It is evident that this constant process of change does not facilitate the identification of localities.

At the period of the conquest, there was only one island in the Nile in this neighbourhood, called Djazīrat Miṣr or simply al-Djazīra. This island is in its nucleus identical with the modern island of Rōḍa. With Babylon (see above) it formed a single strong fortress and guarded the passage of the Nile. We have no definite information as to whether the Djazīra was already connected with Djīza also by a bridge in the time of the conquest or only with Babylon. In the time of the Caliph Maʾmūn — this is the earliest date known — there was a bridge over the whole Nile which was even then known as "the Old" and replaced by a new one. This old bridge must therefore — as is *a priori* probable — date back to the beginnings of Muḥammadan rule. In all the centuries following, this bridge crossed the whole Nile. It was a bridge of boats. According to some statements, the Djazīra was at first practically in the centre of the river. The arm which separated it from Babylon soon became silted up however. In the year 336 (947) the Nile had retreated so far that the inhabitants of Fusṭāṭ had to get their water from the Djīza arm of the Nile. It was at this period under Kāfūr al-Ikhshīdī that the deepening of the eastern arm of the Nile was carried out, to be repeated several times in the viith (xiiith) century under the Aiyūbids. In 600 (1203), it was possible to walk dryshod to the Nilometer on the Djazīra. In 628 (1230) the energy of Malik Kāmil brought about a permanent improvement, though Malik Ṣāliḥ also annually took advantage of the period of low water to deepen the arm of the Nile which gradually became a canal. Why did they wish to preserve this particular channel? The reason is to be found in the military importance of the Djazīra. At the conquest the Arabs found a castle here; the Byzantines who were shut in by the Arabs, were able to escape over the Djazīra. After the fall of Babylon, we hear nothing further of the island fortress. In the year 54 = 673 the naval arsenal (*al-Ṣanāʿa*), a dock for warships, was laid down here. This arsenal is mentioned in the papyri of the first century; it was also a kind of naval base. Ibn Ṭūlūn was the first to make the island a regular fortress again, when he thought his power was threatened (263 = 876); but the Nile was more powerful than the will of Ibn Ṭūlūn, and his fortress in the Nile gradually fell into the waters; the remainder was destroyed by Ikhshīd in 323 (934); two years later this prince removed the arsenal also to Fusṭāṭ and the Djazīra became a royal country residence. The island appeared to have become larger in course of time and more people came to settle on it. Under the Fāṭimids it was a flourishing town and one talked of the trio of towns, Cairo, Fusṭāṭ and Djazīra. Al-Afḍal, the son of Badr al-Djamālī, built a pleasure palace with large gardens in the north of the island and called it Rōḍa. This name was gradually extended to the whole island which has retained it to the present day. Later, under the Aiyūbids, the island became a *Waḳf*. This Waḳf-land was rented by Malik Ṣāliḥ who built the third great Nile fortress on it. This new fortress was called *Ḳalʿat al-Rōḍa* or *Ḳalʿat al-Miḳyās*. Malik Ṣāliḥ evicted all the inhabitants of the island and razed a church and 33 masdjids to the ground. In their place he built 60 towers and made the island the bulwark of his power; this was the reason of his regular dredging operations to deepen the canal separating the island from the mainland. There, surrounded by the Nile (*Baḥr*), he dwelled with his Mamlūks who became known as Baḥrī Mamlūks from their citadel [see BAḤRĪ p. 586]; but even this stronghold in the Nile did not ensure his safety. After the fall of the Aiyūbids the Mamlūk Aibak destroyed the fortress; Baibars rebuilt it, but later Mamlūks like Ḳalāʾūn and his son Muḥammad used it as a quarry for their buildings in Fusṭāṭ.

In the 1x[th] (xv[th]) century the proud citadel of the Nile had fallen to pieces and another dynasty was building on its ruins. Rōḍa never again took a prominent part in history.

At the present day the most remarkable sight in Rōḍa is the Nilometer (*Miḳyās*) which dates from the time of the Umaiyad Caliph Sulaimān; its erection was completed in the year 97 (715) by Usāma, the minister of finance. The history of this *Miḳyās* has been written in a masterly fashion by Marcel who took part in Napoleon's expedition, (*Mémoire sur le Meqyas de l'Ile de Roudah* in *Description de l'Egypte*, *Etat Moderne*, 2. ed. Vol. xv. cf. also do. Vol. xviii. p. 555 *et seq.* and xviii. 2, p. 466 *et seq.* and M. van Berchem, *Corpus Inscriptionum Arabicarum*, *Mémoires de la Miss. archéol. franç. au Caire*, xix, p. 18 *et seq.*). Its history, which we owe mainly to Maḳrīzī, is briefly as follows. The building erected in the year 97 (715) had to be repaired in 199 (814) in the caliphate of Ma'mūn and again under Mutawakkil in the years 235 (847) and 247 (861). Up to the latter year, a Copt was in charge of the *Miḳyās*, but in this year Ibn Abi 'l-Raddād was placed in charge of this important instrument, the barometer not only of the prospects of harvest but of the prevailing market prices in the city. The office was hereditary in the family of the Banū Abi 'l-Raddād till the Ottoman period. Almost all the Muḥammadan dynasties of Egypt have built around the Nilometer and some of them have left inscriptions. The Turks, French and English (1893) have also been active in preserving this venerable monument. In modern times a new water-gauge was required for the eastern quay-wall of the island. The historic *Miḳyās* is like an enclosed well in the centre of which rises a marble column on which the scale is marked in ells (*dhirā'*).

At the present day Rōḍa is much built upon and only in the north are there large gardens. Nothing has come of the French expedition's plan of laying out a European quarter here. Before the regulating of the Nile this would have been a dangerous undertaking, for mediaeval writers tell us of occasional inundations of the island, when the Nile was exceptionally high. The idea, which was good in itself, has been put into practice in a still better situation farther north on the Djazīrat Būlāḳ.

From the historical point of view, Rōḍa is inseparably connected with Djīza (Gīze), with which it formed a defence of the passage up the Nile at the time of the conquest, and during the middle ages. Djīza was certainly not a foundation of the Arabs, but portions of the conquering army planted their *Khiṭaṭ* there as did their companions in Fusṭāṭ. On account of its exposed situation to attack from the other side of the river the Caliph ordered Djīza to be fortified. The defences were completed by 'Amr in the year 22 (643). It was probably only a case of restoring or extending Byzantine fortifications. The *Khiṭaṭ* of the tribes were partly outside the fortress which was probably merely a stronghold at the entrance to the bridge. The strongest tribes settled here were the Ḥimyar and Hamdān; in the Masdjid of the latter the Friday service was held; it was only under the Ikhshīdids that a Chief Mosque was built in Djīza in 350 (961). Its military importance naturally went parallel with that of Rōḍa and the bridge over the Nile. This bridge collapsed in the Ottoman period and was only rebuilt by the French. It was afterwards removed and recently a permanent bridge has been built. Djīza itself has always been a flourishing centre. The land behind it is very fertile, and it used to be the chief town of a district (*Kūra*), and afterwards to the present day of a province. The modern province of Djīza comprises the circles al-'Ayāṭ, Embābeh, Djīza and al-Ṣaff, the latter on the right bank of the Nile. The place itself had in 1897, 16,000—17,000 inhabitants.

5. **The Fāṭimid City, Miṣr al-Kāhira.**

The modern Cairo was originally only a military centre, like al-'Askar and al-Ḳaṭā'i', north of the great capital of Miṣr al-Fusṭāṭ. When the Fāṭimids in Ḳairawān saw the precarious position of Egypt under the later Ikhshīdids, they felt the time had come to put into operation their long cherished wish to occupy the Nile valley. On the 11[th] Sha'bān 358 = 1[st] July 969, their general Djawhar overcame the feeble resistance, which the weak government was able to offer him at Djīza, and entered Fusṭāṭ on the day following. He pitched his camp north of the city and for seven days his troops poured in through the city. When on the 18[th] Sha'bān = 9[th] July the whole army had collected around him, he gave orders for a new city to be planned. Such an important undertaking could not be carried out in those days without first consulting the astrologers as to what would be the propitious hour to begin. The historians tell us that a suitable area had been marked off and all the more distant parts of it connected with a bell-pull, so that at the given moment at a sign from the astrologers work might begin everywhere at the same instant. The bell-rope was however pulled before the auspicious moment by a raven and the building began at a moment when the unlucky planet Mars, the Ḳāhir al-Falak, governed the heavens. This calamity could not be undone, so they sought to deprive the evil omen of its malignance by giving the new town the name of Manṣūriya. As a matter of fact, Cairo does appear to have borne this name till the Caliph Mu'izz himself came to Egypt and from his own interpretation of the horoscope saw a favourable omen in the rising of the planet Mars. The new foundation thus received the name al-Ḳāhira al-Mu'izzīya (*Khiṭaṭ*, i. 377).

The process of expansion of the old city of the Fāṭimids can be reconstructed even at the present day without difficulty on a plan. The best is the French plan of the year 1798 in the *Description de l'Egypte*, because it was prepared before Cairo had been modernised, but the map in Baedeker, after which our sketch map is prepared, also gives a clear idea of the town. In the centre between the northern boundary of Fusṭāṭ and Heliopolis ('Ain Shams), there lay at this time the little village of Munyat al-Aṣbagh, where the caravans for Syria used to assemble. Munyat al-Aṣbagh lay on the Khalīdj, a canal which traversed the whole length of the plain, leaving the Nile to the north of Fusṭāṭ, passing the ancient Heliopolis and finally entering the sea at the modern Suez. This canal was probably originally a silted up branch of the Nile, which had been excavated for use as a canal even in ancient times. After the Arab conquest, it was again cleaned out by 'Amr to make a navigable waterway between Fusṭāṭ and

the holy cities to supply the latter with corn. It then received the name of Khalīdj Amīr al-Mu'minīn. This Khalīdj was closed in 69 (688) to cut off the corn-supply of the anti-caliph in Medina and finally abandoned as a waterway to the Red Sea in 145 (762) in the reign of Manṣūr. It was still to remain for a thousand years the water supply of the plain north of Fusṭāṭ and formed the water-road, so famed in song, on the west side and at a later period in the centre of Cairo. After the reign of the Fāṭimid Caliph Ḥākim, who did much for it, it bore the name of Khalīdj al-Ḥākimī; at a still later period it was called by a host of names of different stretches of it, which are given on the French map of 1798. Instead of flowing to the sea, in the latter centuries of its existence it ended in the Birkat al-Djubb in the north of Cairo and in its neighbourhood. It is only quite recently (the end of the xixth century) that it has vanished from the plan of Cairo. Its course is still clearly recognisable; it corresponds to the broad road followed at the present day by the electric tram from the Mosque of Saiyida Zēnab, or rather from a farther point in the south of Cairo to the northern suburb of ʿAbbāsiya (Shāriʿ Ḥelwān).

The Fāṭimid city lay immediately south of Munyat al-Aṣbagh between this canal and the Muḳaṭṭam. Its northern and southern limits are still defined by the Bāb al-Futūḥ and the Bāb Zuwaila. The town founded by Djawhar was rather smaller in compass than the Cairo of the later Fāṭimid period. At first the open space in the south, where the Mu'aiyad Mosque now stands, and the Mosque of Ḥākim in the north were both outside the walls. In the west, the Khalīdj for centuries formed the natural boundary as did the heights in the east. The main part of the Fāṭimid city was defined by a broad series of streets running north and south parallel to the Khalīdj, connecting the two gates just mentioned with one another and dividing the city into two large sections not quite equal in size. This series of streets is also clearly defined at the present day, though it must have been broader originally. It is still known by different names in the various sections, of which the best known is Shāriʿ al-Naḥḥāsīn. At the present day it is crossed at right angles by one of the main channels of traffic of modern Cairo, al-Sikka al-Djadīda, the continuation of the Muskī. Its name, "New" Street, proves what must be particularly emphasised to avoid misconceptions, viz. that the Fāṭimid city had no such main street running from east to west. It only arose in the xixth century.

If Fusṭāṭ had been divided into *Khiṭaṭ*, Cairo was divided into *Ḥāras* or quarters, which is really only another name for the same thing, except that Cairo was intended to be a city from the beginning, while Fusṭāṭ grew out of the chance arrangement of a camp. The altered conditions of the period are shown in the fact that the quarters were no longer allotted to different Arab tribes but to quite different peoples and races. In the north and south lay the quarters of the Greeks (Rūm), to whom Djawhar himself belonged. His settling his countrymen near the main gate of the city was probably intentional. Berbers, Kurds, Turks, Armenians, etc. were allotted other portions of the town. Some late-comers were settled in the Ḥārat al-Bāṭiliya outside the first walls of the city between it and the Muḳaṭṭam. Lastly the negroes, called briefly *al-ʿAbīd*, who formed a rather undisciplined body, were settled north of the Bāb al-Futūḥ beside a great ditch which Djawhar had dug to defend the city against attacks from Syria. This part of the town came to be called *Khandaḳ al-ʿAbīd* from the ditch and those who dwelled near it.

The splendid palaces of the Caliphs, which are indicated on our map, formed the central portion of the town. We must be careful to distinguish between a large eastern palace (*al-Ḳaṣr al-Kabīr al-Sharḳī*) and a smaller western one (*al-Ḳaṣr al-Ṣaghīr al-Gharbī*). Their sites had previously been occupied, to the west of the main series of streets, by the large garden of Kāfūr, to the east by a Coptic monastery (*Dair al-ʿIẓām*) and a small fortress (*Kuṣair al-Shawk*), which were used for the building of the palaces. The East Palace was the first to be built immediately after the foundation of the city. On the 23rd Ramaḍān 362 (28th June 993), the Caliph Mu'izz was able to enter it in state. It was a splendid building with nine doors of which three opened on the west part on the main street. This part was 1264 feet in length and the palace covered an area of 116,844 square yards; it lay 30 yards back from the present street, from which one may gather how much broader the latter must have been. On the other side of the street lay the Garden of Kāfūr, which stretched to the Khalīdj. In it ʿAzīz (365—386 = 975—996) built the smaller western Palace also called *al-ʿAzīzī* after him — the exact year is unknown — its two wings stretched up to the street enclosing a broad square into which the street here expanded. As this series of streets passed between the two palaces in the centre of the town here, it was called *Raḥbat bain al-Ḳaṣrain*, a name which survived the palaces themselves for centuries and was still in use at the time of the French expedition. The whole street was also known more briefly as *Ḳaṣabat al-Ḳāhira*. The two palaces began to fall into ruins in the Aiyūbid period. The history of this part of the town, and of the great palace in particular of which some fragments still survive built into other houses, has been most carefully dealt with by Ravaisse in the *Mémoires de la Mission Archéologique Française au Caire*, Vols. i. and iii.

As Cairo was from the beginning a military and at first not a commercial city at all, even Djawhar must have taken care to fortify it with walls. These walls were afterwards extended in the reign of the Caliph Mustanṣir by the commander-in-chief Badr al-Djamālī and the gates built in the form in which they have survived to the present day. That Badr built all the walls, is disputed — perhaps wrongly — by Casanova. Mention is made in later times of a third building of walls in the reign of Saladin. Djawhar's walls were of brick; no trace of them has survived. Even Maḳrīzī knew only of a few unimportant fragments and says that the last remaining portions of them were destroyed in 803 (1400). In spite of Maḳrīzī's admiring statements (i. 377), Djawhar's wall cannot have survived for any very great length of time, for so early a traveller as Nāṣir-i Khusraw (p. 131) describes Cairo as unfortified. Badr's defences which were begun in 480 (1087) consisted of a brick wall with strong gateways of stone, the portions of the walls adjacent to

them being of stone also. Max van Berchem (*Journal Asiatique*, 1891, 443 *et seq.*) has exhaustively studied these walls and gates and called particular attention to the fact that the great gates, which still command admiration at the present day, the Bāb al-Futūḥ, Bāb al-Naṣr and Bāb Zuwaila, were built by architects from Edessa and differ in a rather marked degree from the later fortifications of Saladin, which appear to be influenced by the Frankish style of the Crusading period. We also owe to van Berchem an accurate delineation of those portions of the walls which still survive at the present day, which date from the Fāṭimid period. The picture we have of the two walls of the Fāṭimid period is as follows. In the west, the town was bounded by the Khalīdj which ran below the walls for 1300 yards and served as a moat. It is a debatable point, whether we may conclude from the street name Bēn al-Sūrēn, which is still in use, that two walls existed here one behind the other. Djawhar's walls were certainly a fair distance from the canal, the space being large enough to allow of pleasure palaces being built on it. There were three (according to Casanova, only two) gates here, from south to north, the Bāb al-Saʿāda, Bāb al-Faradj and the Bāb al-Ḳanṭara. At the latter, near the northwestern stretch of the walls, there was, as the name shows, a bridge over the canal. This connected the town with the suburb and harbour of al-Maks, on the Nile, the ancient Umm Dunain. On al-Maks cf. *Papyri Schott Reinhardt*, i. 53 *et seq.*; the name appears in the Graeco-Arabic papyri of the first century; even before the foundation of Cairo, therefore, this was the harbour at which the customs were collected. Al-Maks must have comprised the modern Ezbekīye and the area adjoining it on the north. The northern side of the town must naturally have been the most strongly fortified. Djawhar had a ditch dug here along the wall. The two gates, Bāb al-Futūḥ and Bāb al-Naṣr, built by him, lay more within the town than the modern gates of the same name which only date from Badr's time. The Mosque of Ḥākim was originally built outside the walls and was first included within the fortified area by Badr. There seem however to be reasons for believing, that Ḥākim was the first to advance the line of fortifications here as well as in the south and to build new gates (Ḳalḳashandī, transl. by Wüstenfeld, p. 70; Salmon (see *Bibliography*) p. 50 *et seq.*). The wall had two gates on the east, the Bāb al-Ḳarrāṭīn (afterwards al-Maḥrūḳ) and the Bāb al-Barḳīya. In this locality Badr's fortification also included the quarters which had arisen after the erection of Djawhar's wall. Finally Badr moved the Zuwaila gate somewhat farther to the south. There were originally two gates. The town as extended by Badr was still anything but large. It may have been about $^2/_3$ of a square mile in area.

The intellectual and religious life of Cairo was concentrated in the great Mosque, the Djāmiʿ al-Azhar, in which the first service was held on the 7th Ramaḍān 361 = 30th October 971. On the history and importance of this Mosque cf. the article AZHAR by Karl Vollers p. 532. The erection of the Mosque above mentioned outside the northern gates had already been begun in the reign of ʿAzīz and was completed by his successor after whom it was called the Mosque of Ḥākim. The building operations lasted from 393 (1002) to 403 (1012). After an earthquake, it was entirely restored by Baibars II in 703 (1303), who added the minarets. It was used by the French as a fortress and at the present day is in ruins. Of the other ecclesiastical buildings of the Fāṭimids only two deserve particular mention: the Mosque of Aḳmar, with its charming stone façade, so important in the history of art (Franz Pasha, *Kairo*, p. 29 *et seq.*). It was finished in 519 (1125), but it was only under the Mamlūks that it received the right of *Khuṭba* in 801 (1398). The second of these two monuments is the older Djayūshī Mosque, built quite outside of Cairo on the summit of the Muḳaṭṭam, which was built in 478 (1085) by Badr al-Djamālī (van Berchem, *Corpus*, Nº. 32; do., *Mémoires de l'Institut Egyptien*, t. ii.). On other buildings and inscriptions of the Fāṭimids cf. the works of van Berchem just quoted. It is impossible to detail here all their buildings, etc. mentioned in literature. Most of them did not survive the dynasty or survived it for a brief period only.

During the Fāṭimid period, Cairo was not yet the economic centre for all Egypt which it was to become under the Aiyūbids and Mamlūks. This rôle was first held, as we have seen, by Fusṭāṭ. On the other hand, Cairo was pre-eminently the seat of a splendid court with all its military pageantry. Ibn Ṭuwair and others have given us vivid pictures, preserved in Maḳrīzī, Ḳalḳashandī and others, of the ceremonial processions and festivals, the magazines, treasuries and stables, the banners and insignia, the members of the royal household, the various classes of officers of state and court officials with all their punctilious ceremonial. Eye-witnesses, like Nāṣir-i Khusraw, confirm these accounts. It must have been a glorious period for Cairo, but was soon followed in Mustanṣir's time by a desolate epoch of anarchy when the economic foundations of its prosperity were destroyed by famine and unrest. A better era dawned on Cairo with the accession of Badr al-Djamālī. Cairo now began slowly to gain over Fusṭāṭ in economic importance, a process which gradually became more definite in succeeding centuries.

6. **The Citadel and Post-Fāṭimid Cairo.**

Quite a new epoch in the history of Cairo as in that of Egypt dawns with the accession of Saladin and the Aiyūbids (see the article EGYPT). The history of the growth of the city only can be discussed here. Saladin twice played a part in this development by erecting large buildings. Casanova has thoroughly dealt with this process in his *Histoire et Description de la Citadelle du Caire* (*Mém. de la Miss. Arch. Franç. au Caire*, Vol. vi.), though his conclusions cannot perhaps be regarded as final on all points. The material is too imperfect. At any rate he is probably right in saying that Saladin in the first instance in 655 (1170) only restored and improved the fortifications erected by Djawhar and Badr. It was only after his return from Syria when he was at the height of his power, that Saladin conceived the colossal plan of enclosing the whole complex of buildings forming the two towns of Fusṭāṭ and Cairo within one strong line of fortifications (572 = 1176). This new foundation was to be commanded by a fortress (*Ḳalʿa*) after the fashion of the strongholds of the Crusaders. This fortress

is the modern Citadel or, to be more accurate, its northern part. In the northwest, Cairo was to be protected by this strong fortress and in the south-west, Fusṭāṭ. The east wall of Cairo was to be advanced farther east to the Muḳaṭṭam and the entrance for inroads from Syria to be definitely closed. A new wall ran along the hills from the new tower in the north-east, the Burdj al-Ẓafar, of which traces still exist. It then took a turn westward towards the old city wall, the fortifications of which were to be extended farther south to the citadel. The north wall of Cairo was to be advanced westwards up to the Nile and to run along it to near the Ḳaṣr al-Sham', which was the extreme south point of the whole system. A wall was to run thence in the east of Fusṭāṭ direct to the citadel. The Ḳal'a itself was to be the residence of the sovereign. Saladin's trusted eunuch Ḳaraḳush was entrusted with the task of carrying out this gigantic undertaking; he had previously carried out building operations for Saladin. The huge undertaking was never completed nor did Saladin avail himself of the citadel, but when in Cairo, as a rule, he lived in the old Vizier's palace of the Fāṭimid city. The most important part was the completion of the north wall which was actually built eastwards as far as the Burdj al-Ẓafar and westwards as far as al-Maks on the Nile. The portion connecting the eastern wall of the Fāṭimid city with the citadel was not completed. The names of several gates in the great wall which was to run from the citadel to the south of Fusṭāṭ, have been handed down, but it can hardly be assumed that they were ever built. The wall along the Nile was never begun at all; but it was probably the least urgently required.

These buildings had considerable influence in two directions. After the north wall had been advanced up to the Nile, the broad stretch of land between the Khalīdj and the Nile was secure from invasion and the way was paved for an extension of the city in this direction. The Khalīdj thus gradually came to be in the centre of this extended city. Through the removal of the forces of defence and later of the court itself to the Citadel, Cairo began to develop in the south also and the union with the northern suburbs of Fusṭāṭ, which has been described in section 3, thus came about. This process was not however completed till the Mamlūk period (*Khiṭaṭ*, i. 378 *et seq.*).

The citadel was first appropriated for the use to which it was originally intended as the residence of the sovereign by Saladin's nephew al-Malik al-Kāmil, who was also the first to build a palatial residence here. He entered the new palace in 604 (1207). From this time onwards, with the exception of the reign of al-Malik al-Ṣāliḥ, whom we have already become acquainted with as the builder of the fortress and royal residence of Rōḍa in the Nile, the citadel remained the abode of all the princes and pashas who ruled Egypt till the Khedives went to live in various palaces they had built for themselves in the plain again. It is difficult, however, to draw a picture of the gradual transformation of the citadel, as the most radical changes were made in the Mamlūk period. The present walls still show that we must divide the whole area into two sections, the original north or northeast citadel, the Ḳal'at al-Djebel proper of the Aiyūbid period, which was and is still separated from the Muḳaṭṭam by a deep ditch, and, in the south extending towards the town, the citadel of the palaces where the Mamlūks built a complicated entanglement of palaces, audience-chambers, stables and mosques. We must therefore distinguish between the citadel proper and the royal town which adjoined the citadel. Of Saladin's buildings, which lasted 7 years, there remains today only a portion of the wall and the so-called Joseph's Well (*Bir Yūsuf*); the latter is a deep shaft from which Ḳaraḳush, the architect of the fortress, obtained water. The machinery for raising the water was driven by oxen. A pathway hewn out of the rock leads down to the bottom of the well. The name Yūsuf is not the praenomen of Saladin but commemorates the Joseph of the Bible, legends of whom are attached to other portions of the citadel also. Great alterations were made in the citadel by Baibars and his successors and their buildings again were completely altered by al-Malik al-Nāṣir Muḥammad b. Ḳalā'ūn, many of whose buildings have still survived, as for example the mosque wrongly called after Ḳalā'ūn, (erected in 718 = 1318) and remains of his palace in black and white, hence called al-Ḳaṣr al-Ablaḳ (built 713-714 = 1313-1314). The same prince also laid down great aqueducts to bring the water of the Nile to the citadel, as the wells were not sufficient to supply the increasing numbers of military quartered there. At a later period Ḳāit Bey took an interest in the citadel again and Ghūrī also laid out a garden here. The Ottoman Pashas built a good deal here also, but they allowed more to fall into ruins. Muḥammad 'Alī was the first to take an energetic interest in the citadel again; he repaired some of the ancient palaces and built the so-called Alabaster Mosque, the Djāmi' Muḥammad 'Alī, in the Turkish cupola style, the minarets of which give the present citadel its characteristic outlines. It was begun in 1829 and finished in 1857 by Sa'īd Pasha. The restoration of the walls also dates back to Muḥammad 'Alī.

It was not only in the citadel but in the city lying at their feet also that the Mamlūks erected numerous splendid buildings. The Cairo created by them was practically the Cairo that existed when the French expedition arrived there. A vivid picture of the home of the Mamlūks in the period of their splendour may be obtained from the plan of 1798. A series of splendid monuments stood here partly built on the ruins of Fāṭimid buildings. We will only mention a few that still exist: on the site of the 'Azīz palace stood Ḳalā'ūn's hospital, the Madrasa and tomb of his son Muḥammad al-Nāṣir and Barḳūḳ's Madrasa. There were also numerous Mamlūk buildings on the site of the great East Palace, including the Khān al-Khalīlī well known at the present day. Of other large buildings at this period there may also be mentioned the Mosque of Ẓāhir, built by Baibars I., of which the massive walls still survive at the entrance to the 'Abbāsiye, the Mosque of Sulṭān Ḥasan at the foot of the citadel (cf. Herz Bey, *La Mosquée du Sultan Hassan au Caire*, Cairo 1895), of great importance in the history of art, the Mu'aiyad Mosque at the Bāb Zuwaila, only completed after the death of its founder and Ḳāit Bey's Madrasa; we cannot detail the numerous tombs outside the town proper nor the many other smaller buildings. What a lamentable contrast to

this period of activity in architecture is afforded by what has been done in the Turkish period (since 1517) in the city of the Mamlūks; only a few Konaks for Pashas have been built, a few Sebīls and one or two smaller Mosques and Tekīyes. The configuration of the town did not however change so much between 1500 and 1800 as in any earlier period of the same length. In spite of the ravages of their soldiers the city must have flourished and increased under the warrior princes of the Mamlūk period. It must have been a busy and splendid city. But the grave damage done by the Mamlūk system could only be repaired by strong rulers. The Ottoman Pashas were not fit for the task and so Cairo slowly declined till Muḥammad ʿAlī and his successors created a new Cairo which gradually became Europeanised.

7. Modern Cairo.

Modern Cairo dates from the period of French occupation (22nd July 1798—25th June 1801). The French scholars were able to make a plan of Cairo as it had existed in mediaeval times. What strikes one most about their excellent plan, is the large number of ponds of not inconsiderable size which were then in the city. These ponds, for example the *Birkat al-Ezbekīye* in the north, and the *Birkat al-Fīl* in the south, were at that time only full of water when the Nile was flooded. They were covered with boats on these occasions, which were illuminated at night for pleasure trips. When the water had run off, the bottom soon became covered with vegetation, which withered in the early summer. The origin of these ponds has already been discussed above. The plan shows the confusion of streets which is still usual at the present day in the native quarters. Only the three great thoroughfares, parallel to the Khalīdj — one of them the ancient great medium of traffic in the Fāṭimid city — divide the town into distinct sections. The city was divided into 35 quarters (*Ḥāra*), which took their names from the chief monuments of architecture in them, from groups of trades, or from particular nationalities settled in them (Greeks, Armenians etc.). There were 71 city-gates. The population was estimated at 250,000—260,000 inhabitants, whose houses numbered 25,000—26,000. There were still gardens lying between the boundary of the city and the Nile. Communication was difficult, and after a riot, the French found themselves forced to make a direct connection between the Ezbekīye and the old Fāṭimid city. It was thus that the modern Muski (properly al-Mawsikī) arose; the Ezbekīye was also connected with the suburb and harbour of Būlāḳ on the Nile — now a part of Cairo with 70,000—80,000 inhabitants — by a broad road. Various old buildings were converted into forts, for example the Mosque of Ḥākim and the Mosque of Ẓāhir; in al-Kabsh — the western slope of the Djebel Yashkur — the Muireur Fort was built and so on. The gradually increasing influx of foreigners (Levantines) which has been going on under the Khedives since the French period, and the modernising of the government which requires ministerial offices, have brought about the foundation of various new quarters of the city; the ground between the western boundaries of the town has been more and more built over and at the same time the boundaries advanced on the north side. The new quarters usually took their names from their founders, for example, the ʿAbbāsīye, the northern Levantine quarter called after ʿAbbās I. (1848—1854), the Ismāʿīlīye, south-east of the Ezbekīye after the Khedive Ismāʿīl (1863—1879). This is adjoined on the south by the quite modern quarter of European houses, the Ḳaṣr al-Dubāra, in which the palace of the English Agent is situated. The Tawfīḳīye quarter was laid out under Tawfīḳ (1879—1892) to the north of the Ismāʿīlīye. The old ponds are now built over, the Ezbekīye, which takes its name from an Emīr Ezbek of the Mamlūk period, was transformed into a beautiful park in 1870, and the finest hotels, the Opera House and other buildings have sprung up around it. A new feature enters the plan of the city in 1889 when the Ezbekīye was connected by a long straight thoroughfare (Shāriʿ Muḥammad ʿAlī) with the citadel. Cairo, which is flourishing rapidly, is constantly extending to the north and west. Heliopolis with its huge hotels has already become a suburb of Cairo, in the west the European population has occupied the Djastrat (Būlāḳ) where the splendid gardens of the royal family have recently been divided up into smaller plots for private owners. A bridge is now being built here. The southern end of the island has long been connected with the east bank (at Ḳaṣr al-ʿAin) by a swing-bridge.

In the south, although still slowly, the city is beginning to advance into the region of the mounds of ruins of the ancient Fusṭāṭ. The railway has now brought the health-resort of Ḥelwān so near the city that, like Heliopolis, it is regarded as a suburb of Cairo.

There has thus arisen in the last century out of the cramped and closely built town of the Mamlūks an extensive and spacious Cairo, planned on a magnificent scale by the Khedive Ismāʿīl. The Levantine quarters are usually built in the South Italian style or after French models. In the most recent quarters, the modern individualistic style is most prominent. A glance at the plan shows by the way the streets run where European architecture has been at work and where the old-fashioned native style survives. Cairo has now over 600,000 inhabitants. It has a governor of its own and in it are all the important government offices. The ʿAbdīn Palace is used for official receptions, but the Khedive lives the greater part of the year in other palaces.

Conclusion: It is only necessary to give a history of the architectural development of the city here as the political history of Cairo will be dealt with in the article EGYPT in connection with the history of the country. Further information regarding economic conditions will also be found there. As regards our plans it should be noted that the plan of Fusṭāṭ is a reproduction of Guest's plan from the *Journal of the Royal Asiatic Society*, 1907, pp. 49—83, while the plan of Cairo is new, being based on Baedeker's with the inclusion of the results of the researches of Ravaisse and Casanova. Its aim is rather to give a systematic but clear view of the history of the town in its general development than to be topographically accurate.

Bibliography: The main sources are: Maḳrīzī, *al-Khiṭaṭ*; Ibn Duḳmāḳ, *Kitāb al-Intiṣār*; ʿAlī Mubārak, *al-Khiṭaṭ al-djadīda*. There are occasional mentions of the city in most of the Arab geographers and travellers. Of European accounts of the town and discussions of the

original authorities, there may be mentioned in addition to those quoted in the text: *Description de l'Egypte, Etat Moderne* (Text and Atlas); A. F. Mehren, *Cahirah og Kerâfat* (Copenhagen 1869) and thereon *Bulletin de l'Acad. Imp. des Sciences de St. Pétersbourg*, t. vi; Henry C. Kay's articles in the *Journ. of the Royal Asiat. Soc.*, xiv, xviii; C. M. Watson, ib. xviii; E. K. ČAKMAK, al-Malik al-Ẓâhir Saif al-Dîn, Sulṭân of Egypt, was in his youth enrolled among the Mamlûks of Sulṭân Barḳûḳ. He gradually rose, till under Sulṭân Barsbey he became Chief Chamberlain (President of the Administrative Council), Chief Master of the Horse, and finally Atâbeg (Commander-in-Chief). On his deathbed in 842 (1438), Barsbey appointed him regent for his infant son al-Malik al-ʿAzîz Yûsuf. The various divisions of the Mamlûks, originating in the bodyguards of the Sulṭâns Barḳûḳ, Nâṣir Faradj, Muʾaiyad Shaikh and Barsbey, were at enmity with one another and their sole aim was to obtain all the wealth and influence they could. In the confusion that arose the only course open to Čaḳmaḳ was to seize the reins of government for himself. Sulṭân Yûsuf was deposed, placed in confinement in the citadel, retaken after an attempt to escape and finally taken to Alexandria and kept under a mild form of custody. Soon afterwards the resistance of the governors of Damascus and Aleppo also collapsed; they had been defending Sulṭân Yûsuf's claims to further their own interests. The Syrian rebels were defeated, the leaders executed and Čaḳmaḳ's supremacy was assured in 843 (1439). Like his predecessor Barsbey [q. v., p. 666] Čaḳmaḳ wished to make war on the Christians under pretence of checking piracy on the north coast and therefore sent ships via Cyprus to Rhodes but the Egyptians had to return as the resistance offered by the Knights of St. John, who were well prepared, was too strong for them. In the years 846 (1442) and 848 (1444) the Egyptians again made unsuccessful attempts to conquer Rhodes, and had finally to make peace with the Knights. Čaḳmaḳ's foreign policy was a successful one; he was on good terms with all Muḥammadan rulers and did not, like Barsbey, fall into the error of causing irritation by petty trickeries. Against the advice of his Emirs, he allowed Timûr's son Shâh Rukh to send a covering for the sacred Kaʿba, although this was a privilege of the Sulṭâns of Egypt (see the article Baibars p. 588). The populace was still so strongly incensed against the Mongols that they actually attacked an embassy which included one of Timûr's widows. He was also on good terms with the Ottomân Sulṭân and the princes of Asia Minor. In his domestic policy, in Egypt itself, he was not quite able to put a stop to the mis-management of the state monopolies [see Barsbey p. 667]. Jews and Christians were tormented with strictly enforced petty regulations. He could not restrain the arrogance and outrages of the Mamlûks so that the only way he could protect women from them on the occasion of festivals, was to forbid them to go out. He himself was an exceedingly frugal and pious man, liberal only to the learned, and thought no price too high for a beautiful book; he left but little property behind him on his death. Through his example the morals of the court improved. When, in the year 854 (1453), he felt the approach of death — he was now over 80 years old — he had homage paid to his son ʿOthmân whom the Caliph chose to be Sulṭân. The Emirs and officials of the court and a large multitude of the people attended his funeral, contrary to the usual custom, sincerely grieving at his loss.

CALATRAVA, Arab. Ḳalʿat Rabâḥ, "Rabâḥ's citadel", called after the *tâbiʿ* and *dâkhil* ʿAlî b. Rabâḥ al-Lakhmî (cf. Calatayud (Bilbilis) = Ḳalʿat Aiyûb from the *tâbiʿ* and *dâkhil* Aiyûb b. Ḥabîb al-Lakhmî) was an important bulwark of Arab power (perhaps built on Roman or Iberian ruins?) north-east of the modern Ciudad Real on the left bank of the upper Guadiana just below the union of the three rivers which form it, the Záncara-Gigüela, Guadiana Alto and Bajo-Azuer; one league north of the modern Carrion de Calatrava. The extensive area of ruins of the ancient Arab Castillo with the town of C. la Vieja would repay more thorough investigation (with pick and shovel also). This Old Calatrava played an important part in the wars of the Emirs of Cordova against Toledo, which was constantly in rebellion, and after its conquest in 1085 as a frontier defence against Castile, till it was itself taken in 1147 by the Emperador Alfonso vii. who handed it over to the Templars, who only held it for 10 years as a frontier fortress of Toledo against Andalusia, when they retired from it on account of the constant attacks of the Almohads (from Morocco). This led to the foundation of the new religious order of Knights of Calatrava in 1158. After the terrible defeat of the Christians at Alarcos [q. v., p. 250] west of Ciudad Real in 1195, the fortress of Calatrava also was taken and destroyed by the Almohads; for the next few years the fortress of Salvatierra was occupied by the Order till it also was lost in 1210. After the brilliant victory of the Christians at las Navas de Tolosa (*waḳʿat al-ʿiḳâb*) in 1212, which broke the power of the Almohads, Old Calatrava was to be rebuilt on the Guadiana; but it was at a spot half a league from Salvatierra, south of the modern La Calzada de Calatrava near Atalaya de la Calzada (3447 feet high) and Puerto de Calatrava, that the still so famous monastery of New Calatrava (Calatrava la Nueva) was founded in 1217; before the splendour of the latter the ancient fortress of the Moors in the north fell totally

into oblivion, so that at the present day there is the greatest confusion between Old and New Calatrava, two places 30 miles apart. Since the beginning of the xvi^th century New Calatrava also has been abandoned by the Knights and has quite fallen into ruins. Only the name Calatrava has survived in the Order of Chivalry, laicised in 1498, and in the geographical designation of the former extensive lands of the order, particularly in the fertile Campo de Calatrava in the broad valleys of the tributaries on the left bank of the Guadiana, Jabalón and the Tirteafuera, south of the present provincial capital Ciudad Real, founded for the first time by Alfonso the Wise in 1252 as Villa Real, east of the ancient Alarcos, which was given the nobler name of Ciudad Real by John II. in 1420. Cf. also Santiago de Calatrava west of Mártos and Jaen in Upper-Andalusia, which came with Mártos into the possession of the Order on the reconquest.

Bibliography: Madoz, *Diccion. geogr.-estad.-hist.*, v. 269—293; Yāḳūt, ii. 747; Idrīsī, *Description de l'Afrique et de l'Espagne*, p. 186 (= 226); *al-Bayān al-Mogh*rib (trad. Fagnan), Index; Burke, *Orders of Knighthood* (London, 1858), pp. 201—306. (C. F. SEYBOLD).

CALCUTTA, or KĀLĪKĀTĀ, the capital of the province of Bengal, and, till 1911, also that of British India, situated on the right bank of the Hugli, the most eastern mouth of the Ganges, which is here navigable by the largest shipping. Area, 20,547 acres; pop. (1901), 847,796, being 41 persons per acre. If all the suburbs and also Howrah on the opposite side of the river be added, the total would be raised to 1,106,738. Muḥammadans form about 29°/₀, of whom the vast majority returned themselves as Shaikhs. Pathāns or Afghāns numbered 12,555, Saiyids 6,798, and Mughals only 1,303. Calcutta is a creation of British rule, having been founded by Job Charnock in 1690. It was never under Muḥammadan rule except when captured in 1756 by Sirādj al-Dawla, who attempted to change its name to ʿAlīnagar. Consequently there are no Muḥammadan buildings of importance. The principal mosque is that built and endowed in 1842, by Prince Ghulām Muḥammad, son of Tīpū Sulṭān. The Madrasa, founded in 1781 by Warren Hastings, receives part of the endowment bequeathed by Muḥammad Muḥsin [q. v.] of Hugli, and in its Arabic department educates more than 300 students, most of whom live in the Elliot Hostel.

(J. S. COTTON.)

ČALDIRĀN, a plain in Ādharbaidjān east of the Lake of Urmia near Tabrīz. It is famous for the battle fought there on the 23rd August 1514 in which the Ottoman Sulṭān Selīm I defeated the Ṣafawid Shāh Ismāʿīl mainly owing to his superior artillery. Shāh Ismāʿīl had to flee, his camp and harem falling into the hands of Sulṭān Selīm; he was only saved from further disaster by a mutiny of the Janissaries who refused to advance any farther and forced the Sulṭān to return from Tabrīz to Constantinople. As a result of this victory, Armenia and Kurdistān came, nominally at least, under Ottoman rule, though in reality the Kurdish Begs ruled practically independently. In the year 1635 there was another battle here between the Turks and Persians, who had been repeatedly trying to regain the frontier lands. On this occasion also the Turks were victorious.

(F. GIESE.)

CALICUT, or KOLIKOD ("cock-fort"), a seaport on the west coast of India, in the Malabar District, Madras Presidency: pop. (1901), 76,981, of whom 40°/₀ were Muḥammadans, mostly Māppillas [q. v.] descended from Hindu mothers by Arab immigrants. From an early date Calicut was a great centre of maritime trade. It was visited by Ibn Baṭṭūṭa (1345) and by ʿAbd al-Razzāḳ (1442), both of whom speak of the security afforded to commerce by its Hindu ruler, the Zamorin, whose descendant still lives here; and it was the first place in India reached by Vasco da Gama in 1498. It contains more than 40 mosques, including the Shekkindō Paḷḷi, built over the tomb of Shaikh Māmu Kōya, said to have been an Arab with a great reputation for sanctity who came from Egypt in the XVIth century; this mosque is constantly resorted to by Māppillas, for the adjustment of civil and other disputes. Calicut has given its name to calico.

CAMBAY (KAMBĀYA), a Feudatory State in the western part of the province of Gudjarāt, India, at the head of the gulf of the same name; area, 350 square miles; population (1901), 75,225, of whom 13°/₀ are Muḥammadans. The Nawwāb, a Shīʿah by sect, traces his descent from Muʾmin Khān, governor of Gudjarāt, who died in 1742. The town of Cambay (population in 1901, 31,780) was in early times one of the chief ports of Gudjarāt and at the time of its conquest by the Musulmans in 1298 is said to have been one of the richest towns in India; but the silting up of the harbour at the close of the xvi^th cent. drove much of the trade to Surat. Cambay is mentioned by al-Masʿūdī, al-Iṣṭakhrī, Ibn Ḥawḳal and other Arab geographers. It cannot now be visited by vessels of more than 50 tons.

Bibliography: *Imperial Gazetteer of India*, s. v.; Elliot-Dowson, *History of India* (Index); for notices of Cambay in Arabic literature, see *Gazetteer of the Bombay Presidency*, i. (Part. 1), 514 *et seq.*; *Archaeological Survey of Western India*, vi. (London, 1876).

CAMIENIEC, in Ottoman Turkish ḲAMINČA, a circle and chief town of a circle in the Russian administrative district of Podolia. It was formerly a strong fortress of the Poles and the scene of many heroic combats between the Poles and the Turks in the frontier wars. In the year 1672, it was taken by the Grand Vizier Aḥmad Pasha Köprülüzāde, in the reign of Sulṭān Muḥammad iv, who took the field in person in Podolia. The Ottoman poet Nābī composed his *Taʾrīkh-i Ḳaminča* (MSS. in London and Vienna, and printed in Constantinople in 1281) in honour of Aḥmad. At the peace of Buczacz (1672) Camieniec with Podolia came into the possession of Turkey, who held it till 1699 i. e. to the peace of Carlowicz [q. v.]. In 1795 it became Russian.

ČAMPĀNĒR, a ruined city of India, in Gudjarāt, Bombay, lying beneath the hill fort of Pāwāgarh. In 1484, Maḥmūd Shāh I of Gudjarāt, after a long siege, captured the hill-fort from its Rādjpūt chief, and founded the city, which he made his capital, under the name of Maḥmūdābād Čāmpānēr. In 1535, it was pillaged by Humāyūn, and shortly afterwards the capital was transferred back to Aḥmadābād. The Bhādar or citadel and the Djāmiʿ Masdjid, both built by Maḥmūd Shāh with other buildings, still remain in fair preservation, though the whole site is overgrown with jungle, and there are no inhabitants.

Bibliography: Sikandar b. Muḥammad, *Mirʾāt-i Sikandari*, pass.; *Indian Antiquary*, xliii, 7, and lxii, 5; *Archaeological Survey of Western India*, vi. (London, 1876). (J. S. Cotton.)

CANNANORE, a seaport on the west coast of India, in the Malabar district of the Madras Presidency; pop. (1901), 27,811, of whom 46%, are Muḥammadans, Māppillas [q. v.] descended from Hindu mothers by Arab immigrants. It is of historic importance as the capital of the Āli Rādjā or "lord of the sea" (*āzhi* = 'sea' in Malayālam), who traces his descent from a Hindu converted to Islām about the end of the xi[th] or beginning of the xii[th] century. The family still resides here, and exercises nominal sovereignty over the Laccadive Islands.

ČARDJŪI, the modern name of the ancient Āmul [q. v. p. 343] on the Oxus. The town appears to have received its present name in the time of the Tīmūrids; in his account of the events of the year 903 = 1477-1478, Bābur (*Bābar-Nāma*, ed. Beveridge, f. 58) mentions the passage of the river at Čārdjū (*Čārdjū guzari*). In the year 910 (1504) the fortress of Čārdjū (in the *Shaibānī-Nāma* of Muḥammad Ṣāliḥ ed. Melioranski, p. 197: *Čārdjū ḳalʿasi*, in the Persian *Shaibānī-Nāma* of Banāʾī, quoted by Samoilovič: *Zapiski vost. otd. arkh. obshč.*, xix. 0173: *Kalʿa-i Čahārdjūi*) had to surrender to the Uzbegs.

In the period of Uzbeg domination as in the middle ages, the most important passage of the Oxus was here; boats were always kept in readiness for this purpose; bridges of boats were occasionally built for the passage of large armies as, for example, for Nādir Shāh's army in 1153 (1740). Čārdjūi is, however, as far as is known, nowhere mentioned in any authority as a large town in this period, still less as the residence of a prince or governor of importance. When Burnes (*Travels*, iii. 7 *et seq.*) was here in the year 1832, the town was governed by a Kalmuck; the number of its inhabitants was not more than 4000—5000, most of whom led a nomadic life on the banks of the Oxus in the hot season. A picturesque citadel was built on the top of a hill commanding the town. The town was of no importance as a commercial centre, and the wares exposed in its market were of but little value.

Burnes certainly is more worthy of credence than Joseph Wolff (*Narrative of a Mission to Bokhara*, p. 162 *et seq.*) who, writing in 1844, says that fourteen years previously, i. e. about 1830, Čārdjūi had a population of 20,000, but had sunk to be an insignificant place with about 2,000 inhabitants through the inroads of the Khivinzes. As long as the ancient caravan route from Persia to Bukhārā through Merv was rendered unsafe by the Khivinzes and Turkomans, it is evident that no town of any great size could arise here. In 1879, when Mushketow (*Turkestan*, St. Petersburg, 1886, p. 606 *et seq.*) visited Čārdjūi, affairs were in much the same condition as before, although the heir to the throne of Bukhārā (Türe-Djān) now lived in Čārdjūi. There were only a few wretched huts in addition to the citadel and the palace (apparently recently built) of the Türe-Djān. The Turkoman robbers ravaged the country almost up to the very gates of the town. The forests, 30 miles from Čārdjūi, from which the inhabitants got their wood, could only be made use of under military protection.

In the year 1884, the Turkomans of Merv had to submit to the Russians; the old caravan route was replaced by a railway which reached the Āmū-Daryā in 1886. The importance of Čārdjūi, as a result, rapidly increased; the town, which is the residence of a Beg of Bukhārā, has now about 15,000 inhabitants. The Russian town of Čārdjūi, built on a piece of ground granted by the Emir of Bukhārā to the Russian government, 12 miles from Old Čārdjūi, beside the railway station of Āmū-Daryā, has now 4000—5000 inhabitants and is the residence of a Russian military governor (*Woyinskiy načalʹnik*). The new railway bridge, opened in 1901, is nearly 1½ miles in length and is the greatest engineering feat of its kind in Russian territory. The town is also of some importance for its shipping; steamers go from here down to Petroalexandrowsk and up to Termez (Tirmidh). Trade is for the most part in the hands of Armenians. Its situation on a railway and at the same time on a great navigable river distinguishes Čārdjūi from all other towns of Turkestān; it was therefore proposed in 1894 to transfer the seat of government from Tāshkent to Čārdjūi, but this proposal has since been dropped. The summer is so hot that cereals and fruit ripen around Čārdjūi earlier than in the other parts of the country; the melons of Čārdjūi are regarded as the best in Turkestān. (W. Barthold.)

CARLOWICZ, in Turkish, Ḳarlofča, a town in Croatia-Slavonia, in the county of Sirmia, with 5490 inhabitants, — almost all Croats and Servs, — on the right bank of the Danube below Peterwardein. It was here that the Peace of Carlowicz was concluded on the 26[th] January 1699 between Austria, Venice, and Poland on the one side and the Turks on the other. Russia also took part in the negotiations but it was not till 1702 that she concluded a separate treaty of peace. Austria received Hungary — except the Banate of Temeshvar, — Siebenbürgen and Croatia and Slavonia with the exception of the eastern part of Sirmia; Venice received the Peloponnese, exclusive of Corinth, and the whole of Dalmatia, except Ragusa, and in addition the Porte renounced its claim to tribute from the island of

Zante; Podolia with Camieniec [q. v., p. 827] and the western part of the Ukrain was ceded to Poland. A truce was to be observed for 25 years. This treaty was of importance as being the first occasion on which Turkey gave up its claim to the so-called „gifts of honour' and availed itself of the intervention of European Powers (England and Holland).

(F. Giese.)

CARMONA, a town in Andalusia, 25 miles east of Seville with a population at the present day of 17,000, is the ancient Roman Carmo (probably previously an ancient Iberian town of the Turdetani, but the name is not to be derived from the Phoenician *kerem*, vineyard, as some fanciful etymologists have proposed). As a strong fortress on a height commanding wide plains, it played a part on Caesar's side and afterwards had the right to strike its own coins. In 712 it was taken by Mūsā b. Nuṣair and henceforth bore the Arabic name Ḳarmūna (pronounced Ḳarmōna in Spain, the modern Carmona). In 763, ʿAbd al-Raḥmān I was besieged for two months in Carmona by the ʿAbbāsid rebel al-ʿAlā b. Mughīth al-Yaḥṣubī, but becoming reckless in desperation he made a sortie and won a brilliant though sanguinary victory (Dozy, *Histoire*, i. 365—367). In 844, the Sevillians fell back here before the Normans. In the time of the rebellions of the renegades against the Emirs of Cordova (end of the ix[th] century) it was like Bobastro, (q. v., p. 736) a safe retreat for the rebels. With the extinction of the Umaiyads and the decay of the Caliphate of Cordova (Reyes de Taifas, *Mulūk al-ṭawāʾif*), Carmona made itself independent under the Berber dynasty of the Banū Birzāl (Birzāl) which possessed practically only the two strong fortresses of Carmona and Écija (Astigi, Estidja) east of Carmona on the Genil with the lands to the north up to the Guadalquivir: Muḥammad b. ʿAbd Allāh 1029—1042, his son Isḥāḳ till about 1054, al-ʿAzīz al-Mustaẓhir till 1067, when Carmona fell into the hands of the ʿAbbādids (q. v.) of Seville. In 1091 Carmona became Almoravid, in 1147 Almohad; in 1247 it was taken by Frederick III the Saint of Castile and repopulated.

(C. F. Seybold.)

CARNATIC, or Karnatak, a term of varied application in Indian geography. As meaning the country where Kanarese is spoken, it seems to have been applied originally to the Hindu kingdom of Vidjayanagar. When the Muḥammadans conquered this kingdom in 1565, they extended the name further south, so that the English erroneously applied it to the Nawwāb who ruled at Arcot, where the language is not Kanarese but Tamil.

(J. S. Cotton.)

CASA BLANCA. [See Dār al-Baiḍā.]

ČAWSH, a Turkish word signifying „usher" „doorkeeper". It was formerly the name of a body of 630 court ushers employed in the various tribunals, who marched at the head of the procession at state ceremonials (*alāi-čawshi*, *dīwān-čawshi*): their chief (*čawsh-bāshi*) was vice-president of the Grand Vizier's court, minister of police, grand-master of ceremonies and introduced ambassadors. He also had command of a company of 200 *gedikli zaʿīm*, who carried orders to the provinces. He also supervised the farming out of taxes during for the lifetime of the purchaser. The same name was also applied to a certain number of musicians drawn from among the pages and wearing the same uniform as the dwarves. In the army the name was given to a body of 330 subordinate officers of Janissaries chosen from the oldest who served as aides-de-camp in time of war and as express messengers in time of peace. They had to carry out the corporal punishments inflicted on officers of Janissaries (*ṣūl-čawshlar*); their chief, the *bāsh-čawsh* commanded the fifth *orta* of *bölüke* [q. v.]. In the present organisation of the army, *čawsh* is a rank corresponding to that of sergeant of infantry or quartermaster of cavalry or artillery; the *bāsh-čawsh* is the sergeant-major.

Finally *čawsh* is also the name of the best sort of grape grown in Turkey; it is said that this variety was brought to Fontainebleau in France and from it has been produced the variety called *chasselas* (*čawsh-aghe*). Vambéry (*Čaghataische Sprachstudien*, p. 276 and *Etymol. Wörterbuch der Türko-Tatarischen Sprachen* p. 130) derives *čawsh* from the Čaghatai *čaw*, „call, proclamation" so that it must have originally denoted a herald or one who proclaimed a royal command.

(Cl. Huart.)

CELEBES, in size the largest of the Great Sunda Islands covering an area of 3258 geographical square miles. Like the island of Halmaheira, it has the peculiar form of a massive nucleus from which four great peninsulas run, north-east, east, south-east and south respectively. The many archipelagoes (768 geogr. sq. miles) surrounding it form continuations of it both geographically and geologically and connecting links with the Philippines, Moluccas and Little Sunda islands. The island is very mountainous (the highest 10,640 feet) and its plains are few and small so that there are no navigable rivers; it is however surrounded by large and deep bays, that of Bone being 1100 fathoms deep and that of Tomini 1875. The mountains are as a rule in ranges; in the centre they run from north to south and in the peninsulas in the direction of their axes. The middle ranges of the centre are of granite, gneiss and crystalline schists, those in the east are of more recent formation of folded sedimentary rocks and those in the west of old volcanic rocks and Tertiary limestones. In the Minahasa and the south there are great volcanic centres. The numerous lakes, and many more have been dried up, give the island a peculiar stamp. They are either tectonic basins in an area where the original rock still exists like Lake Poso (1000 feet deep; 1600 feet above sea-level), Towuti (30 miles long, 12—20 miles broad) and Matano (1800 feet deep) or of volcanic origin like Lake Tondano in the Minahasa.

As regards diffusion of plants, animals and

men, Celebes holds a peculiar position in the Archipelago. The flora shows a transition stage between the Asiatic and Australian region of the Malay Archipelago. In the animal world the large mammals of Western Asia are lacking, only a kind of ape and four forms of Asiatic, true freshwater-fish being found. On the other hand two forms extinct elsewhere are found, the chamois-buffalo (*Anoa depressicornus*) and the hog-deer (*Porcus babirussa*). The Australian part of the Archipelago is represented in Celebes by two kinds of marsupials.

The island of Celebes is now wholly subject to the Netherlands and is divided into the residency of Menado, comprising the northern peninsula, the northern half of the centre and the eastern peninsula, and the Gouvernement of "Celebes and its Dependencies", which consists of the remainder of the island. There are still several native principalities on the north and south peninsulas, such as Gowa, Bone and Luwu in the south, but their ruling houses were deposed in 1906 and 1907 without the slightest opposition on the part of their subjects. Others like Tanette, Sopèng and Sidèngrèng have still a kind of self-government.

Celebes remained much longer unknown to history than the other Sunda Islands; it is not for example mentioned in Chinese annals. It was not till 1572 that Malays and in 1532 the Portuguese settled on the coast of Gowa. In the course of the xvith century the princes of the dual Makasar kingdom of Gowa and Tello succeeded in conquering the whole of south Celebes, a part of the centre and of the Little Sunda Islands. In the reign of Tunidjallo (1565—1590) the Muḥammadan prince of Ternate, Bābullāh, concluded a treaty with them and sought to propagate his religion in Gowa. The first ruler to adopt Islām, however, was Tunidjallo's son, who was converted in 1603 by a Malay named Datu ri Bandang from Mĕnangkabau and reigned till 1639 after taking the name Sulṭān ʿAlā al-Dīn. His minister Karaeng Matowaya followed his example and Muḥammadanism spread rapidly among the many Makasar and Buginese peoples of South Celebes, for the kingdom was at the same time increasing its power considerably.

When the Dutch (after 1607), English (after 1605), Danes (after 1618) and other Europeans began to visit the capital Makasar about this time, they entered into commercial rivalry with the Portuguese, who had long been settled there, and with one another, and tried to gain trading privileges by alliances with the native princes, mainly for the spices of the Moluccas. The Dutch who ruled in the latter islands were not then able entirely to prevent the export of spices to Makasar. The perpetual breaches of contract and occasional murder of Europeans by the Makasars lasted till the second half of the xviith century; Speelman, the General of the Dutch East India Company, in alliance with Bone and Ternate, then succeeded in conquering the heart of the Makasar kingdom in 1667 and 1669 and forcing its princes to sign the treaty of Bangaja, the terms of which were afterwards agreed to by all the kingdoms of South Celebes and until quite recently defined their dependence on the Netherlands. Minahasa was another area more important historically and more highly developed. The Spaniards had settlements here as early as the xvith century but they did not enter much into relations with the heathen population of the interior. With the help of the Dutch East India Company the natives succeeded in freeing themselves from Spanish dominion; their quondam allies have remained there to the present day.

The population of the island of Celebes is estimated at about 1,640,000 souls, or including the islands dependent on it, at about 2,000,000, but its composition differs exceedingly as regards density and development if not in race. As Papuan elements do not appear to exist here, the whole population must be regarded as belonging to the Malay-Polynesian group, unless we allow with the Sarasins (see *Bibliography*) a Toala substratum, the existence of which they believe to have proved over a great part of the island. At any rate the still practically unchanged, heathen Toradja tribes in the centre form the prototype. Their relatives on the southern peninsula have through the influence of Hindus and the Hindu Javanese and later by admixture with Malays become relatively highly developed peoples, the Makasars and the Buginese. The tribes on the south-east and east peninsulas appear to be very strongly mixed with the Toala tribes who are physically and industrially at a low stage of development. The population of Minahasa and the surrounding country are of different origin; their language and other characteristics point to a nearer relationship to the Malay peoples of the Philippines, Formosa and Japan. In the commercial centres like Makasar (1059 Eur., 20,178 natives, 4672 Chin. and 141 Arabs), Donggala, Menado (576 Eur., 6669 natives, 2784 Chin. and 500 Arabs), Gorontalo (145 Eur., 5247 natives, 606 Chin. and 327 Arabs), Sindjai (51 Eur., 3578 natives, 108 Chin. and 23 Arabs), Bonthain (155 Eur., 6544 natives, 197 Chin. and 3 Arabs) we find the usual, very mixed population in which the Buginese form the majority; it is only in the larger centres that we find Europeans, Arabs and numerous Chinese.

The Toradja are settled agriculturists who sometimes also fish and hunt and in their own industries show themselves very clever, highly gifted craftsmen. Their numerous tribes dwell in settlements, strongly fortified on account of the continual warfare, in the vast forests which cover Central Celebes. Their density is estimated at 2—4 per square mile. The Toradjas near the Buginese kingdoms on the coast have become converts to Muḥammadanism, in the North-East Christianity is becoming predominant; the great majority however are still pagans.

The closely allied Muhammadan peoples, the Makasars and Buginese, originally inhabited the southern peninsula, but, being traders and fearless voyagers, they spread over all the coast areas of Celebes and the greater part of the archipelago from east to west. This statement is particularly true of the Buginese. The home of the Makasars is in the west of the southern peninsula, roughly from Maros to Bulukomba including the kingdom of Gowa. The Buginese inhabit the eastern part of this southern end and farther north their lands cover the whole of the peninsula.

The most important of the kingdoms of the Buginese, which were organised on a system of despotic government, were Bone, Wadjo, Luwu and Sopèng, of the Makasars, Gowa, Tanette, and the southern island-group, Saleyer. Besides these

there were and still are numerous smaller kingdoms, which formed alliances with one another and sometimes also were dependent on the larger kingdoms. The ruler of one of these kingdoms is a hereditary prince or princess; he (or she) is aided by a minister and a *hadat*, a council of the most powerful relatives of the ruler and his vassals; subject princes were also members. The power of a prince depends in a great degree on his personality and is associated with the possession of certain regal insignia; the latter is a manifestation of the animistic beliefs still predominant among these peoples. Next in rank to the royal house is a nobility which has sprung from it through polygamy, a class of freemen and one of slaves, who have now been freed, and bondsmen. The latter were as a rule well treated but like the poorer freemen were liable to be plundered and severely ill-treated by the higher classes.

As throughout the Archipelago, the daily life of the people of South Celebes is influenced by animistic beliefs, somewhat altered by Hinduism and Muḥammadanism; but the ancient usages of family law and the law of inheritance have survived more among them than among the other Muḥammadans of the Archipelago. The marriage ceremony is, it is true, performed according to Muhammadan rites but the pagan priests (*bissu*) direct the celebrations which follow, often lasting many days; besides princes and chiefs have a good deal of legal control over marriages and divorces. The position of the married woman is a very honoured one; this and their other privileges of inheritance, divorce etc., are due to the many matriarchal customs which still survive among these peoples. It is only in the larger towns that the Muḥammadan law of inheritance is becoming more and more followed. The economic position of the Buginese and Makasars is one of the highest in the Archipelago; not only are they excellent agriculturists and horse-breeders but their achievements as weavers, smiths and shipbuilders, their commercial ability, and their skill in navigation and fishing are of a high order. The density of population is estimated at 12 in Gowa, 12 in Tanette and 9 in Bone while under the favourable economic conditions in the districts directly under Dutch rule it rises to 25 per square mile.

The Makasar and Buginese languages are written with an alphabet of their own which is derived from a Further Indian one. Their literature is fairly well developed; among the prose a collection of their laws, *rapang* (Mak.) and *latowa* (Bug.), may be mentioned.

There are important Buginese settlements in the Archipelago on the east (Kutei) and west (mouth of the Kapua and Sambas) of the island of Borneo, in the Riouw Archipelago, on the Little Sunda Islands east of the island of Lombok and in North Sumatra.

The Minahasans, who are now Christians, were divided into tribes, organised on a patriarchal basis, but this has to some extent been altered under the influence of Christian missionaries. With their help and a well developed system of education, they have reached a high stage of civilisation which reminds one in many points of European; they enjoy a fair prosperity and the population is about 16 to the square mile, rising in the centre around Lake Tondano to 36. They live mainly by agriculture, cattle-breeding, fishing and fish-rearing, by commerce and to some extent by industries. Like so many native industries, the fine plaited and carved work of the Minahasans has disappeared before the imported products of European manufacture.

The exports are: coffee, copra, Muscat-nuts, damarr, tortoise-shell, tripang, edible birds' nests, horses and gold.

ČELEBI, a Turkish word, of the later cultured period, the origin and original meaning of which have not yet been definitely ascertained. *Čelebi* is probably to be derived from *čalab* (also written *čalăb*) "God"; the latter word is at the present day pronounced *čalap* in Asia Minor and, according to an article by K. Foy (*Mittil. des Or. Seminars, Westas. Stud.*, ii, 124), is the only word for "God" among the Yürüks of Asia Minor. In the written

language *čalab* first appears in the viiith (xivth) century among the Turki poets of Asia Minor; that, as is sometimes (by K. Foy also, *loc. cit.*) stated, it is "not unknown to Čaghatāi", has not yet been proved by quotations. Melioranski (*Zapiski vost. otd. arkh. obshč.*, xv. 042) quotes from the *Khulāṣa-i ʿAbbāsī* (this dictionary is, as Melioranski has elsewhere (*Arab filolog*, p. lix.) shown, extracted by Muḥammad Khōʾī from the *Sanglākh* of Mīrzā Mahdī Khān) the statement, that *čalab* is in Greek (*barūmī*) a name of God (*ism-i djanāb-i bārī*).

The word *čelebi* was used in the Ottoman written language down to the xith (xviith) century as a title or epithet of persons of princely rank, high ecclesiastical officials (particularly those who were at the heads of Derwish orders), famous authors, etc. The first person known to have borne this title is Čelebi Ḥusām al-Dīn (died 683 = 1284), who succeeded Djalāl al-Dīn Rūmī as superior of the Mawlawī order of Dervishes (*Grundr. der iran. Philologie*, ii. 288). In the poems of the poet Ḳāsim-i Anwār, born in Ādharbaidjān (died 835 = 1431-1432), *čelebi* means "beloved" in the Ṣūfī sense, i.e. God (quoted by C. Salemann, *Zapiski* etc. xvii. p. xxxiv). Several Turkish princes and rulers in Asia Minor in the viiith (xivth) and ixth (xvth) centuries were called Čelebi, among them all the sons of Sulṭān Bāyazīd I. (died 805 = 1402). Ibn Baṭūṭa (ed. Defrémery and Sanguinetti, ii. 270) says that *čelebi* "in the language of Rūm" (i.e. in Greek) means "my lord" (*saiyidī* in vulgar Arabic *sīdī*). On the other hand *čelebi* was only known to the Greeks as a Turkish word, according to a gloss on Phrantzes, *čelebi* in the language of the Turks (τῇ τῶν Τούρκων διαλέκτῳ) had the meaning "of noble birth". In the *Khulāṣa-i ʿAbbāsī* (in Melioranski, *Zapiski* etc., xv. 042) *čelebi* is explained as "writer, poet, reader, initiated, of keen intelligence by nature". The word is similarly explained in Aḥmad Wafīḳ Pāshā's *Lahdja-i ʿOthmānīya* (i. 482), with the additional note that *čelebi* in the sense of "skilled in reading" was later supplanted by the word *efendi* borrowed from the Greeks. The quotations from European authors of the xvith century collected by W. Smirnow (*Zapiski* etc., xviii, 13 *et seq*) do, as a matter of fact, show that *čelebi* was then used with the same meaning as the Spanish "Don" and the French "Monsieur", i.e. like the modern *efendi* (from the Greek αὐθέντης). *Efendi* seems to have come into use as an epithet of poets and scholars in place of *Čelebi* about the end of the xviith and beginning of the xviiith century; it would be of importance to investigate (from the narratives of European travellers and other sources) whether it was not till then or previously, that *čelebi* was supplanted by *efendi* in the language of Ottoman society. Such an investigation has, as far as I know, not yet been made.

Apart from the religious meaning which it has retained to the present day (it still denotes the highest rank in the Mawlawī Order; the superior of the order is called *čelebi-efendi*), *čelebi* seems to have had approximately the same meanings as the Persian *mīrzā* (from *Emīr-zāde*), which was applied to princes of the blood as well as to nobles and gentlemen, to prominent scholars as well as to humble writers. At the present day *čelebi* in opposition to *efendi* is only applied to gentlemen who are not Muḥammadans (particularly Europeans); Christian and Jewish ladies call their husbands by this title; in one modern Armenian dialect the bride has to address the bridegroom's brother as *čelebi*. In its earlier general meaning of man of culture, gentleman, the word has only survived in proverbs such as *sen čelebi men čelebi ati kim kashar* "Thou art a gentleman, I am a gentleman, so who shall curry the horse", or the Arabic *ḥalebi čelebi shāmi shūmi miṣri ḥarāmi* "The native of Aleppo is a gentleman, of Damascus a bird of ill-omen, of Egypt a thief" (Kremer, *Mittelsyrien und Damascus*, Vienna, 1853, p. 95).

Aḥmad Wafīḳ Pāshā has proposed an explanation of the words *čalab* and *čelebi* in his *Lahdja-i ʿothmānīya* (l. c.) which has been adopted by many European Orientalists also. In the time of Čingiz-Khān the Tatars and Eastern Turks were first taught to read by Christian priests, i.e. made acquainted with the art of writing; the Turks therefore at this time adopted besides the "Chinese" *tengri* and the Old Turkish *oghan*, the word *čalīpā* (Syr. *ṣelībā*, Arab. *ṣalīb*) also, which properly means "crucifix" as a name for God; for the same reason the word *čelebi*, properly "worshipper of the crucifix" retained the meaning of an "educated man, one able to write". The order in which Redhouse (*Lexicon*, p. 728) gives the various meanings of the word *čelebi*, is based on this explanation: "originally, in Tartary" the word is said to have denoted a Christian priest or "worshipper of the crucifix", "next in Turkey" — a prince, "next", "a man of letters, a Muslim doctor of law and divinity", "later still" a "gentleman of the pen", "ultimately" a "non-Muslim gentleman".

With Aḥmad Wafīḳ Pāshā, Baron Rosen (*Zapiski* etc., v. 305 *et seq.*; xi. 310 *et seq.*) supposes that the words *čalab* and *čelebi* are to be regarded as relics of the missionary activity of Syrian (Nestorian) priests; but this activity must be placed in a much earlier period than the xiiith century; both words were brought from Central Asia to the west by the Saldjūḳs. He argues that the fact that neither of these words has as yet been found among the Turks of Central Asia or even among the Persian Saldjūḳs, is of no importance as these areas have not yet been at all fully investigated.

Another etymology was proposed by Baron Tiesenhausen in 1898 (*Zapiski* etc., xi. 307 *et seq.*). *Čelebi* is, he suggests, to be derived from the Arabic root *djlb* "to bring", "import" (whence *djalab*, "imported goods", *djalab* "slave"); the *čelebi* as "officials able to write" are to be compared to the *djalab* (plur. *djulbān*) mentioned by Ḳuṭb al-Dīn (*Die Chroniken der Stadt Mekka*, ed. Wüstenfeld, iii. 188 *et seq.*, 242), who formed a separate regiment in Egypt in the Mamlūk period, skilled in reading, writing and all the arts, and were frequently called upon to fill the highest offices.

In learned circles this etymology has found no favour; as Baron Rosen remarks, such an explanation would only be justified if it were first proved that there was no connection between *čelebi* and *čalab* "God".

In the article written some years later by P. Melioranski (*Zapiski* etc., xv. 036 *et seq.*) this connection is expressly emphasised, but with the observation that both words must have come to the Turks in their present form, as such a word-formation (with the addition of the termination *i*) is not known in Turkish. The Christian origin of both words suggested by Aḥmad Wafīḳ is "probable but not more"; on the other hand, in opposition

to Baron Rosen, it can safely be maintained that they first appeared not in Central Asia and not under the influence of Nestorian priests but among the Turks of Asia Minor, probably through the influence of their Christian neighbours.

W. Smirnow, again, (*Zapiski* etc., xviii. 1 *et seq.*) tries to prove that *čelebi* has no connection with *čalab* but is the Greek καλλιεπής "speaking, singing or writing well"; even among the Byzantine Greeks this word had taken the meaning of "educated, distinguished gentleman", with which meaning it was borrowed by the Turks.

The latest discussion of the origin of the words *čalab* and *čelebi* is by N. Marr (*Zapiski*, etc., xx. 99 *et seq.*). His investigation is based on the use of the word *čelebi* among the Derwishes of Asia Minor, emphasised by Baron Rosen and on the philological evidence adduced by Melioranski that *čelebi* could only be derived from *čalab* by a non-Turkish people. According to N. Marr, the origin of both words is to be sought for in Kurdish, where the words *šeleb* "God" and *šelebi* "nobleman" also "wandering singer" are still to be found. The word *šeleb* is not Irānian, but must be considered a relic of the pre-Irānian language of the Kurds. This language belongs to a branch of the family called "Japhetic" by the author, closely connected with the Semitic family. The Kurdish *šeleb* goes back to a "South Japhetic" *ṣerb* or *ṣereb*, from which arose the Aramaic *ṣalam* and the Arabic *ṣanam* in Semitic. All the meanings, in which the word *čelebi* was used by the Turks in Asia Minor in the viii[th] (xiv[th]) century, were already possessed by it previously among the Kurds. Its original meaning was "follower of God" (*šeleb*); *čelebi* was also the earlier name of the sect now known as Yazīdī (from the Persian *Īzad* "God"). Kurdish paganism has exercised an unmistakable influence on the religious life of the Muhammadans generally and particularly among the Derwish orders of Asia Minor; the Kurdish sect, widely disseminated in Persia at the present day under the name of *ahl-i ḥaḳḳ* or *ʿAlī-ilāhī*, may be mentioned as proof of this. The fact that there is at the present day a village called "Čelebiler" (the *čelebi*) not only near Siwās in Asia Minor but also in Russian Armenia (in the province of Jelisawetpol), is also important.

Should the question again be taken up from the other side, it ought perhaps to be taken into account that in the Ṣūfī poet Ḳāsim-i Anwār it is not the followers of God who are called *čelebi*, but God himself as the "beloved" in the Ṣūfī sense. Perhaps also the word-formative ending *i* may not be so foreign to Turkish as Melioranski has supposed. Max van Berchem (in a private letter) has called the attention of the writer to the name Alpī (apparently for Alp "hero") among the Turkish Ortuḳids in Mesopotamia (vi[th]—viii[th] = xii[th]—xiv[th] century) and to Čaghri, probably identical with *Čakir* "Sparrow-hawk" among the Saldjūḳs and Ḳarakhānids. (W. BARTHOLD.)

ČELEBI EFENDI, title of Mawlānā Hunkiar Djalāl al-Dīn [q. v.].

ČELEBI ZĀDE, ʿĀṢIM EFENDI ISMĀʿĪL, Shaikh al-Islām and Turkish historian, son of the Raʾīs-Efendi Küčük-Čelebi whence the name by which he is known; he was first of all a judge and teacher of law, was later appointed historiographer to the Ottoman kingdom in place of Rashīd (1130 = 1717), became successively Ḳāḍī in Brusa (1152 = 1739), Medina (1157 = 1744) and Constantinople (1161 = 1748) and finally Shaikh al-Islām (1172 = 1758), which office he held till his death eight months later. His history (printed at Constantinople in 1153 = 1740) covers the period from 1135—1141 (1722—1728); his *Dīwān* contains poems in praise of the Sulṭāns Aḥmad III. and Maḥmūd I., occasional verses on the more important events of the period 1125—1155 (1716—1742) and 88 Ghazals.

(CL. HUART.)

ČENDERELI, the name of a family, five members of which in practically unbroken succession held the office of adviser — or to give its later title, Grand Vizier — to the first Ottoman Sulṭāns. The statement that ʿAlā al-Dīn and Sulaimān, the brother and son respectively of Urkhān were the first Grand Viziers, is certainly a later fiction, the object of which is to show that the office of Grand Vizier was already in existence in the earliest period of the Ottoman kingdom. The statements of the older, still unpublished Ottoman historians regarding the Čendereli family show considerable divergence. Our information regarding its origin and first representative Ḳara Khalīl Čendereli is particularly defective. Of its origin we know nothing. Besides the reading *čendereli* we find *djendereli*, *čenderli* and *čandarli* also in older vocalised texts. Whether these forms show that the family belonged to the Čandārli tribe or merely that they originated in the district of this name (which still survives in the Wilāyet of Aidin), cannot as yet be ascertained. At any rate, the family, which was related to Shaikh Edebali, must have been so influential that it seemed advisable to the shrewd Ottoman Sulṭāns to attach the Čendereli to them as they did the families of Köse Michael and Evrenos, who also were not Ottomans. It may well be presumed that the Čendereli, in addition to their influence, also possessed qualities of statesmanship in a high degree although their merits in this respect are not so frankly recognised by the earlier historians.

Whether Ḳara Khalīl had already played an important part in the reign of Urkhān and whether the foundation of the corps of Janissaries was his idea is quite as uncertain as the rest of the history of the beginnings of the corps of Janissaries. The old anonymous writer, whom I am about to publish, makes him first appear in the reign of Murād. According to him, it was not Kara Khalīl but Ḳara Rustem, the Ḳaramānian, who suggested the foundation of the corps of Janissaries. It seems certain that Khalīl was Ḳāḍī of Biledjik in the reign of Urkhān and under Murād, Ḳāḍī of Iznik, thereafter of Brusa and finally became Ḳāḍī-ʿAsker, before he was created a Pasha and as such took the name Khair al-Dīn. He is said to have died in 1386 when nearly a hundred years of age. Neither he nor his institutions found particular favour among the older ʿUlamāʾ and still less did his son and successor ʿAlī Pasha. The latter flourished in the reign of Bāyazīd Yildirim, in whose various campaigns in Europe and Asia Minor he took an active part. He appears to have been, both as a statesman and as a soldier, the greatest of the Čendereli; but he was not too particular about the means he used to obtain his

ends. The older historians condemn many of his innovations; he is generally reproached with indulgence in unnatural vices and drunkenness and with having been responsible for the vices to which Bāyazīd also was addicted. After the battle of Angora (1402) he attached himself to Prince Sulaimān and died soon after the latter's death in 1411.

His son Ibrāhīm joined Muḥammad I. in the war against Mūsā and after Muḥammad's death remained Grand Vizier for several years under Murād but had occasionally to share the authority with several other viziers. He was employed in the negotiations with the Byzantine Emperors. Thus arose the close relations between the Čendereli and the Byzantine court, which were to prove so fatal to Ibrāhīm's successor Khalīl Pasha.

The latter spent most of his life under Murād II. and it was through him that Murād again took up the reins of government which he had yielded up in favour of Muḥammad, when the incompetence of the young prince became apparent. Although Muḥammad had a grudge against him on this account, he confirmed him in the office of Grand Vizier after Murād's death. Khalīl Pasha was accused of being friendly to the Greeks and of having taken bribes to prevent the conquest of Constantinople. Certain it is that Muḥammad suspected him of this and therefore had him executed shortly after the taking of Constantinople in 1453.

With him the power and prestige of the family passed away, though his son Ibrāhīm Pasha was appointed Grand Vizier to Bāyazīd II. in 1497 and held the office till his death in 1499. After him we hear no more of the Čendereli.

Bibliography: Hammer, *Geschichte des Osmanischen Reiches*[2] (Pest 1834), vol. i., repeated references. The early Ottoman historians who have been utilised for this article are not yet published. (F. GIESE.)

ČEREK, a corruption of *čehāryek* = $^1/_4$, in Turkish has the special meanings of a quarter of an hour, or a coin, which is also called Beshlik [q. v. p. 709]. (F. GIESE.)

ČERKES, MUḤAMMAD PASHA, Grand Vizier of Turkey under Murād IV. in 1033-1034 = 1624. He was brought up in the Imperial Seraglio and after being Siliḥdār of the Sulṭān was appointed Governor of Syria. As Grand Vizier he conducted the war against Ābāza Muḥammad Pasha [q. v. p. 6] and died, after defeating him, in Tokat 1034 (1624).

ČERKESSES (CIRCASSIANS) is a general name for a group of peoples who formerly inhabited the northwestern Caucasus (the Kuban territority) and a part of the east coast of the Black Sea from the Taman peninsula southwards almost as far as Abkhāsia. Of these tribes, which were much more numerous before the Russian conquest of this area, only insignificant remnants remain; most of them migrated to Turkey or rather Asia Minor during the war or at the conclusion of it.

Like most peoples of the Caucasus, the Čerkesses have been known in Europe by very different names in the course of centuries. It is only recent research that has brought order into the chaos by giving us the names used by these peoples themselves. The ancients knew the Čerkesses as Σινδοί, Κερκέται, Ζυγχοί, Ζυγοί etc. The name they themselves use is Adighe (Adayghe). The Adighean people, according to Luller, whom I follow here as the best authority on the Čerkesses, was divided into the following tribes:

1. Abadzekh
2. Shapsug
3. Notkuadj
4. Kabertai
5. Beslenei
6. Mokhosh
7. Kemgui
8. Khatukai
9. Bzhedukh
10. Zhan.

In addition there were the Čobein, Khegaik, and Khetuk (or Adali) but they have long been either merged in other tribes or exterminated by war and pestilence.

The Adighe formerly dwelled on the north and south slopes of the western main chain i. e. the left bank of the Kuban and its tributaries and the coast of the Black Sea as far as the river Shakhe. The few remnants of them, that survive in the Caucasus, still dwell with Tatar tribes, Ossetes, Čečens and Russians (chiefly Cossacks) as their neighbours practically in their ancient territory: the Kabardin main branch in Great and Little Kabarda (Terek territory), in the valley of the Malka, the Baksan and the Čerek, the upper course of the Kuban, the Aksaut and the Zelenčuk, as well as on the right bank of the Terek, where it turns from a northwesterly to an easterly direction. The following tribes live in the south of the Kuban territory: Abadzekh, Bzhedukh, Besmenew, Shapsug, and Natukhai. There are also some Čerkesses on the Black Sea near Tuapse: in all about 200,000.

With the Abkhāz and the Ubykh, who have all emigrated, the Čerkesses form the northwestern branch of the Caucasians proper. Of all their languages only the Kabardin and the Abkhāzian have been made known to us, by Lopatinski and Uslar; of the others we have only isolated and quite inadequate notices. The Adighe proper, according to Lopatinski, may be divided into three dialects: 1. Lower Adighe (Kiakh), to which Luller has given the name "Common" Čerkessian, 2. Middle Adighe (Beslenyewian) which forms a link between Lower Adighe and 3. Kabardin (Upper Adighe). The phonetic character of Čerkessian is unusually harsh: it has many gutturals and sharp hissing aspirates; the weak and strong glottal stop are found in almost every word and the broadened *l* does not contribute to the euphony of the language. Very emphatic sounds are even frequently found at the beginning of a word (*sse* = I, *die* = thou, *ffe* = you).

The grammar is very peculiar and can hardly be fitted into any of the known schemes; certainly not easily into the latest, that of Finck's in his *Haupttypen des Sprachbaus*. The prefixing of the pronominal root and the strong development of moods and tenses are characteristic of the verb: the relations of the nouns to one another which we express by declension or prepositions are expressed by elements quite loosely attached.

The Čerkesses had and, strictly speaking, still have only an oral literature. They had no alphabet; it was only after the Russian conquest that the Russian alphabet was adapted to their language; at the same time a modest attempt was made to found a written literature.

The Folklore of the Čerkesses consists mainly of two classes, the Nartensaga (heroic legends) which they have in common with other Caucasian peoples, e. g. the Ossetes (it has not yet been ascertained which has borrowed it) and heroic-historical ballads.

We have very little reliable information on the history of the Čerkesses. Such as there is, has been handed down by oral tradition only, mainly in ballads and, as is natural among a people of such a warlike disposition, it has been interpreted in a very personal fashion. Schora-Bekmursin-Nogow has collected and published the historical traditions of his people (see *Bibl.*); but there is not a word of it which can be taken without great caution. It is certain that the Čerkesses have frequently played a part in the current of events, north of the Caucasus, but what is truth and what is fiction in their traditions, it is impossible to ascertain. The Warägo-Russians of the Tmutarakan principality on the Taman peninsula, at any rate, came into contact with the Čerkesses at quite an early period (967).

As far as has yet been ascertained, the Čerkesses appear to be anthropologically a mixture of a fair northern race with a dark southern. Pantiuchow regards the typical representatives of the race as subdolichocephalic (index 78-79), among whom there are more light- than dark-eyed. But as has been stated, they are strongly mixed with a dark broad-headed stock. They are described as handsome men, though some observers say that the beauty for which the women are renowned, is over-rated. There is really some truth on both sides, for, as among all Caucasians, we find handsome individuals beside others who have no particular claims to beauty. The export of girls to Turkey which has been going on for centuries must naturally bring about a degeneration of the race.

In former times the Čerkesses practised only cattle-rearing and, to a smaller extent, agriculture. Their horses were and still are famous. Their chief food — the frugality of the Čerkesses is proverbial — was a kind of polenta made of millet. Meat was but little eaten and that only at sacrificial feasts. They made their own cloth and their *burkes* (felt cloaks), in addition to articles of leather which their women were fond of embroidering with gold and silver. Their houses, which as a rule contained only one room, were built in groups. There usually was a room attached to each house for guests.

Hospitality was and still is a sacred duty among the Čerkesses. Among the tribes with a feudal organisation it was mainly the chiefs and nobles who had the right to exercise hospitality. The guest is even regarded as a member of his host's clan as far as the right of protection is concerned, so long as the latter does not give him over to another *kunak* (host). The host is responsible with his life and property for the safety of his guest.

Some tribes in earlier times had a feudal organisation. The Notkuadj, Shapsug and Abadzekh had no chiefs but only nobles while among the other tribes the government was in the hands of princes; these nobles, however, are said to have possessed more power than the princes of the other tribes. Under the influence of Islām which was brought by emissaries from Turkey, the feudal system has been broken down; as early as 1826, Hasan Pasha, the Seraskar of Anapa, took away the privileges of the nobles of the three tribes above mentioned.

The people were divided into four classes: 1. Psho (Pşə) princes, 2. Uork (uorkkh) nobles, 3. Tlokotl who had to obey the Psho's and Uork in certain respects, and 4. Pshitl (Pşətl) = Serfs. Islām with its democratic tendencies struck the first blow at this organisation. Bell appropriately called the Muhammadans among the Čerkesses of his time "Radicals".

The Čerkesses are nominally Muhammadans; there are also a few members of the Orthodox Church amongst them. Islām is not yet 200 years old among them. It was introduced by the Krim Khāns and was first adopted by the Kabardins. At an earlier period Christianity appears to have been propagated amongst them; at least the ruins of churches and certain customs point in that direction. Neither of the religions professed by them are deeply rooted, any more than among the Ossetes. The old heathen religion retained the firmest hold among them, as is still the case to-day among the Ossetes. The following gods were worshipped: Sozeris, the protector of crops, whose feast was held in December practically at our Christmas; Akhin, the protector of cattle; Zelgut who watched over their raids and military enterprises; Mezitkh, the god of huntsmen and the chase, who rides on a boar with golden bristles; Yemish, the patron of shepherds; Tlepsh, the god of smiths — oaths are usually taken in his name —; Khepeguash (sea-nymph); Pseguashakha (water-nymph) worshipped for rain; Khātegwash, the protectress of gardens; Tlokhamish and Sheheris, who are mentioned in prayers after Sozeris (are they perhaps merely secondary presentations of Sozeris himself?); Khakustash who is a kind of patron god of the tribe among the Natukhash and the Shapsug, but also protects the oxen used to plough with; Kodesh is represented in the form of a fish and rules the sea; Pshishaue, Thakhaleik and Thakofeshu correspond somewhat to the Lares and Penates; Meriem, protectress of the bees; she is also represented as mother of the Great God (obviously a transformation of a pre-Christian deity under Christian influence); harvest-festivals also are dedicated to her; Shible, the god of thunder and tempest, to whom those slain by lightning are sacred; and Tha, the supreme god.

The Čerkesses had neither temples nor churches. Prayers were offered up and sacrifices made in sacred groves or under sacred trees. Nor was there any proper priestly class; the sacrificial ceremonies were carried out by an old man elected for life for this duty.

Justice was formerly administered according to traditionary custom (*ʿādat*). There was no separate caste of judges, at least not among the Shapsug and Natukhash. A declaration of innocence on oath used to be accepted; but as perjury was not uncommon, the whole structure of this system of customary law fell to pieces. Society required blood-vengeance for murder as an absolute right and duty; it was however also possible, though difficult, for the murderer to escape blood-vengeance by payment of a fine; the fines prescribed were fixed by the social position of the injured individual. The absence of any limitation of time after which vengeance could not be taken, gave rise to endless vendettas.

A wife was obtained by purchase. If the consent of the bride's parents could not be obtained she was usually carried off by force, as was also done when the bride herself was unwilling. A pretended carrying off of the bride by force still forms an essential part of the marriage ceremony.

As a rule a newly married pair do not appear

in public with one another till after the birth of the first child. Their code of sexual morality is a very strict one. On the wedding-night the bridegroom opens with his *kindjal* the leather corset of the bride which she has worn since her childhood without ever taking it off.

One of the most striking features of Circassian life was the *Atalik*, i. e. the custom of handing children over to strangers immediately after birth to be brought up (the boys till their 17th—18th year and girls till their 15th—16th year). The foster-parents were treated with great reverence, and held a position almost superior to the actual parents. This custom created a kind of foster-kinship, which contributed considerably to the unity of the Circassian tribes. A fugitive who succeeded in touching with his lips the breast of the mistress in the house of a stranger, thus became a member of the family and the head of the house was responsible for his safety. This is probably a point from which one may understand and explain the social and family relations of the Caucasian peoples.

Another factor which contributed to the unification of the Čerkesses was the system of swearing brotherhood, in which the touching the breast of a woman also played the main part; a man universally held in high esteem stepped forward from the one group of those swearing brotherhood while a woman came forward from the other group and offered the man her breast; the ceremony was completed by an oath on the Ḳor'ān.

The Čerkesses were in many ways the teachers of their neighbours. Not only was the masculine dress (sheepskin cap, felt cloak, Čerkesska i. e. overcoat) imitated, but in part also (by the Abkhās and Ossetes for example) the feminine, i. e. the corset, chemise, trousers, upper garment with a deep opening on the breast, girdle and the high cylindrical hat. This dress is now rapidly disappearing as everything is in a state of transition. It may also be supposed that the social organisation and particularly the ancient heathen religion of the Čerkesses exercised a deep influence on their neighbours.

There are also a series of valuable essays in the Russian Ethnographical Review, in the publications of the Caucasus section of the Imperial Russian Geographical Society of Tiflis and in the work describing the localities and tribes of the Caucasus (Tiflis): in vol. xii. of the latter there is a short Kabardin grammar with glossaries (in Russian). (A. Dirr.)

ČESHME, a Persian word meaning "source, fountain" which has passed into Turkish with the same sense. It is the name of a market-town in Asia Minor with a wide and safe natural harbour on the Mediterranean coast, at the entrance to the Gulf of the same name, at the north-western extremity of a peninsula opposite the island of Chios. It is the chief town of a ḳaẓā in the sandjaḳ of Smyrna, Wilāyet Aidin. The town has 5550 inhabitants of whom 4000 are Muhammadans and 1000 Orthodox Greeks; there are 5 mosques, 14 Greek churches and 1 synagogue. The present town, which is quite modern, occupies the site of the ancient harbour of Erythrae, now called Rythri. There are hot-springs at Ilidja.

A Russian fleet of nine ships of the line and seven frigates, divided into three squadrons commanded by Spiritoff, Alexis Orloff and Elphinstone, which had sailed from Kronstadt to aid the revolted Mainots, attacked the Turkish fleet here, consisting of two corvettes, fifteen galleons, five shebeks and eight galleys, commanded by Ḳapūdān-Pasha Husām al-Dīn and Captain Djeza'irli Ḥasan. The Russian and Turkish flagships both caught fire at the same moment and those of the crew, who could, saved themselves by swimming (11th Rabīʿ I. 1183 = 5th July 1770). The remainder of the Turkish fleet was set on fire the following night. This defeat of the Turks at Česhme was the fore-runner of the Peace of Ḳainardje.

CEUTA, a maritime town in Morocco on the Strait of Gibraltar, 10 miles south of Gibraltar, 40 north-west of Tetwān and 140 north of Fās (Fez), with 9694 inhabitants; Lat. 35° 54' N. Long. 5° 18' W. (Greenw.). It is fortified and is the most important of the Spanish *presidios*.

Ceuta is built on a peninsula running from west to east terminating in a rocky mass (Djebel al-Mina) surmounted by a lighthouse. The peninsula itself is dominated in the centre by the Monte del Hacho which rises to a height of 600 feet. The town is divided into two parts, the old town, "Ciudad Antigua" which lies in the hollow of the isthmus and the modern town, Almina, rising like the tiers of an amphitheatre up the slopes of Monte del Hacho. Beyond the isthmus the land rises to form a large plateau cut up by ravines, which in the north descends abruptly to the sea by steep cliffs. This is the Serallo Plateau abutting on the outer spurs of the massif of the Andjera, called by the Spaniards Sierra Bullones and by the Moors Djebel Bū Yūnus or Bū Yūnash. There are two bays, one on the north and the other on the south of the peninsula: the first is fairly large but badly sheltered; the second is smaller but well protected from the winds from the open sea and offers a safe anchorage to ships. In spite of these natural advantages, Ceuta plays quite a secondary part as a commercial town and ranks far below Tangier or even Melilla. On the other hand it is a strategic position of the highest importance, equal, if not superior, to Gibraltar.

Ceuta is called Sabta (سبتة) by the Arab historians and geographers. The etymology of this name is uncertain. The author of the *Bayān* (i. 210) derives it from Sabt, a descendant of Shem, son of Noah: al-Idrīsī (ed. Dozy et de Goeje, p. 199) connects it with the Latin word *septum* on account of the situation of the town, on a peninsula shut in by the sea on all sides except the east. The most probable explanation, however, is that which derives the word Ceuta from *Septem* (*fratres*), the name given by the Romans to the heights on which the town is built.

The position of the peninsula of Ceuta at the entrance to the Mediterranean had early attracted the attention of the Phoenicians who founded the trading settlement of Abyla here. After the Carthaginians, the Romans who succeeded to their heritage established themselves here in their turn and founded the colony of Julia Trajecta. In the vth century of the Christian era, the town was taken by the Vandals, then retaken by the Byzantines who surrounded it with fortifications in the time of Justinian and gave it the name of Septa. At the time of the Arab invasion Ceuta was governed by Count Julian who had succeeded in making himself practically independent there. When 'Okba b. Nāfi' was nearing Ceuta after his victorious march through the Maghrib, Julian came out to meet him bearing a magnificent present, promised to be his tributary and obtained confirmation of his authority from the Arab leader (al-Bakrī, *Description de l'Afrique*, transl. de Slane, p. 236). According to the same author, it was Julian who furnished Ṭārik and his companions with the means of crossing to Spain. A few years later the Arabs were allowed to enter the town and settle there.

The Khāridjī revolt in the middle of the second (viii^th^) century almost brought about the ruin of Ceuta. The Berbers of Tangier invaded the town and drove out the Arabs. "Ceuta" says al-Bakrī "remained abandoned and in ruins with no inhabitants save wild beasts". After the battle of Baḳdūra, Baldj and his companions who had taken refuge there, were closely blockaded by the Berbers. Ceuta finally became a part of the Idrīsid kingdom. It was granted by Muḥammad, son and successor of Idrīs II, to his brother al-Ḳāsim along with Tangier, Tetwān and Başra; it next passed to al-Ḳāsim's brother 'Omar and then to the latter's son 'Alī who reigned over all the Idrīsid kingdom. In the iii^rd^ and iv^th^ century, Ceuta, though nominally part of this kingdom was ruled by a Berber dynasty founded by a certain Mudjakis (Mākesn, according to al-Bakrī). This man, who belonged to the Ghumāra tribe, adopted Islām, established himself in Ceuta and had himself appointed lord of Ceuta by the sovereign of Fās and the town received the name of Madjkisa. For a century it was ruled by his descendants, 'Iṣām, Mudjbir b. 'Iṣām and lastly al-Riḍā b. Mudjbir. The population of the town increased at this period by the influx of Spanish refugees from the neighbourhood of Xeres. When 'Abd al-Raḥmān al-Nāṣir, Caliph of Cordova, took Ceuta in 319 (931), al-Riḍā was forced to abdicate.

From this period on, Ceuta was a bone of contention between the Spanish Moors and the rulers of the Maghrib. The Umaiyads of Cordova held it and, as it was the gateway to Africa, they made all efforts to retain it. 'Abd al-Raḥmān al-Nāṣir surrounded it by a stone wall of great strength; another Caliph built fortifications on the plateau of al-Mīna and tried, but without success, to transplant the inhabitants thither. A large garrison was quartered in it. These precautions proved by no means unnecessary. In 371 (979) Bulukkīn b. Zīrī (q. v. p. 792) advanced on Ceuta but, seeing the immense supplies laid in by the Umaiyads, gave up all thought of undertaking a siege of it. The Ḥammūdid Idrīs, governor of Tangier for his brother Yaḥyā, was more fortunate and succeeded in taking the town. It was won back by the Umaiyads but finally lost to them when the Almoravids seized it. Besieged by al-Mu'izz b. Yūsuf b. Tāshfīn, Ceuta had to surrender after a valiant resistance. The governor Ḍiyā' al-Dawla was put to death by order of the victor in 476 = 1083-1084 A. D.

The Almohads succeeded the Almoravids in Ceuta. In 1140 'Abd al-Mu'min had tried to seize the town, but had been repulsed by Ḳā'id 'Iyāḍ. In 1146, the inhabitants submitted voluntarily and received an Almohad governor. They rose the next year against their new masters, killed the governor and appointed an Almoravid chief Yaḥyā b. Ghāniya as their ruler. This rebellion was quickly put down. 'Abd al-Mu'min regained Ceuta and placed one of his best officers Sīd Abū Sa'īd in command of it. The Caliph Abū Ya'ḳūb afterwards gave this important post to his own brother Abū 'Alī al-Ḥasan. The turbulent spirit of the people of Ceuta frequently manifested itself in revolts against Almohad authority. In the reign of al-Manṣūr, his brother Abū Mūsā had himself proclaimed Caliph at Ceuta under the name al-Mu'aiyad, then made an alliance with the Emir of Murcia, Ibn al-Hūd, whose intervention forced the legitimate Caliph to raise the siege of Ceuta (1234). The Caliph al-Rashīd made an alliance with the Christians in order to overcome the rebels. A Genoese fleet of 70 ships blockaded Ceuta without being able to take it. It was only through the fickleness of its inhabitants that Ceuta was restored to the Almohads; they revolted against Ibn al-Hūd, drove out his representative and opened the gates to their former masters.

In spite of these vicissitudes, Ceuta appears to have enjoyed considerable prosperity during the xi^th^ and xii^th^ centuries A. D. The town, properly speaking, only occupied a portion of the peninsula, the remainder being covered with gardens, vineyards and sugar-plantations (al-Idrīsī *loc. cit.*). In al-Bakrī's time, there could still be seen within the walls remains of ancient monuments, notably ruins of churches and public baths. The population was composed of Arabs of the tribe of Ṣadf and of Berbers who had come originally from the cantons of Başra and Azīla. Its trade in fruit and in the fish caught in the adjoining seas brought it considerable wealth. "There is no coast more productive", says Idrīsī "over a hundred kinds of fish are found there ... the tunny-fishery is particularly important". According to this geographer, coral was also abundant in these waters; worked, polished, rounded and pierced in the bazaars of Ceuta, it was exported as far as Ghāna and the other towns of the Sūdān. Their mercantile pursuits did not however prevent the inhabitants from the pursuit of learning. "Ceuta" says al-Bakrī, "has always been one of those places where the sciences have taken up their abode".

The decline of the Almohad empire brought a

renewed period of disorder for Ceuta. The inhabitants, after recognising the authority of the Ḥafṣids for a time, submitted to the Marinids. Their allegiance however was rather doubtful and on several occasions they threw off the authority of the sovereigns of Fās. Thus we find them in the reign of the Marinid Abū Yūsuf electing al-ʿAzafī their ruler; he finally became master of the town on condition of paying tribute to the Sulṭān of Fās (1273) but was soon overthrown by Ibn al-Aḥmar, king of Granada. The Spanish prince on becoming master of the town encouraged the rebellion of ʿOthmān Abu ʾl-ʿAlā, a Marinid pretender, who took up arms against the Sulṭan Abū Thābit and on being defeated by him, took refuge in Ceuta (1308 A. D.). Abū Thābit then began the siege of the town but died before its walls; it was finally taken by his successor Abū Rabīʿ to whom Don Jayme of Aragon had lent 50 ships and 1000 horsemen. There was another attempt in 1316 by the citizens of Ceuta to restore ʿAzafī to power. This was put down with great rigour by the Sulṭān Abū Saʿīd, who built a fortress called Afrag on the highest point of the peninsula to keep the inhabitants under control. A son of Abū ʿInān, named Mūsā, however landed at Ceuta, and marched on Fās where he was proclaimed Sulṭān. The king of Granada who had supported this pretender seized the opportunity to place a garrison in Ceuta. A Marinid army blockaded the town but was scattered by Abu ʾl-ʿAbbās, a new pretender. The latter finally became lord of Morocco and did not hand Ceuta over to the king of Granada (1387 A. D.).

The Marinids did not long hold Ceuta, which they had thus won back from the Moors of Spain. They were soon supplanted by the Christians. In 1415, João I, King of Portugal, sent an expedition against Ceuta. The Christian fleet after being scattered on the voyage by a storm, succeeded in entering the harbour on the 14th August. The Portuguese took the town in spite of the vigorous resistance of Ḳāʾid Ṣalāḥ, who commanded it, and installed a garrison there under Don Pedro de Meneses. In 1421, Ceuta was constituted a bishopric. As a result of their failure before Tangier (1437) however, the Portuguese signed a treaty by which they agreed to restore Ceuta to the Muḥammadans. This agreement was not however ratified by the Cortes and the place remained in the power of the Portuguese at the price of the liberty of the Infant Don Ferdinand who had been left as a hostage and died in captivity.

The annexation of Portugal in 1580 by Philip II transferred Ceuta to the Spaniards. They retained it after Portugal had regained its independence and had their right to it recognised by the treaty of Lisbon (1668). It was only with the greatest difficulty that they were able to maintain their position there. They had to resist the attacks of Mūlāy Ismāʿīl who had set himself to drive the Christians out of all the points they occupied on the Moroccan coast. After informing the governor Don Francisco Varino of his intention of reconquering Ceuta, the Sharīf laid siege to the town with an army of 30,000 men. He laid out a fortified camp and blockaded the place closely; the garrison consisted only of 600 infantry, 80 cavalry and 120 ecclesiastics. The siege lasted 27 years (1693—1721). Occupied with the war of the Spanish Succession, the Spaniards were too busy to attend to the course of events in Africa and did nothing to help the beleaguered city. In the meanwhile, the English who had taken Gibraltar in 1705, had tried without success to occupy Ceuta in order to hold both keys of the Strait. Finally in 1721 the Marquis de Lèves was sent to Africa with reinforcements, dislodged the Moors from their positions and drove them back to the Sierra Bullones. Some years later the Sharīf Mūlāy ʿAbd Allāh made another attempt to take Ceuta. The army which he sent, at the suggestion, it is said, of the renegade Ripperda, was put to flight.

The Spaniards thus remained in possession of the town, but throughout the xviiith century they were constantly attacked by the neighbouring tribes. To put an end to this state of affairs, the Hispano-Moroccan treaties of 1782 and 1799 granted to Spain a strip of land around the town, a measure which did not however prevent further depredations by the natives which the Makhzen was neither willing nor able to prevent. Napoleon's intervention in Spain seemed at first to deprive the Spaniards of Ceuta. The English, fearing that the Sharīf would seek to profit by the occasion to retake Ceuta and considering that this town "ought to be preserved", occupied it from 1810 to 1814 when they restored it to Spain. The Spaniards, replaced in possession of Ceuta, continued to suffer from the aggressions of the native tribes, particularly the Andjera. The treaty of Larache (1845) did not succeed in improving the situation. Hostilities continued and the destruction by the Andjera of the defences erected by the Spaniards near the town brought about the Hispano-Moorish war of 1859-1860. It was at Ceuta that the Spanish troops were concentrated before marching on Teṭwān and it was around Ceuta (on the Serallo Plateau) that the first fighting in the campaign took place (August—November 1859). By the treaties of Wād Rās and Teṭwān, Spain received an extension of the territory of Ceuta, which now stretched from the sea to the ravine of Andjera in the Sierra Bullones, a distance of about 7 miles.

CEYLON, an island off the southern extremity of the Indian peninsula, situated between 5° 55′ and 9° 51 N. and between 79° 41′ and 81° 54′ E., with an area of 25,481 square miles. The population in 1911 amounted to 3,592,397 of whom 276,361 were Muḥammadans; of these the majority (266,454) are styled Moors or Moormen, and either claim descent from Arab immigrants who intermarried with the women of the country and made converts from among the inhabitants, or are Indian traders who visit the island from the peninsula; the rest are Malays, chiefly descended from soldiers and labourers introduced into the island by the Dutch from Java and Sumatra; there are also a few Afghans and other Muḥammadan settlers.

Ceylon was early known to the Arabs on account of its pearl-fisheries and trade in precious stones and spices, and Arab merchants had formed commercial establishments there centuries before the rise of Islām. Local tradition represents the first Muslim settlement to have been made by some Arabs who were sent into banishment by Muḥammad as a punishment for their cowardice

at the battle of Uḥud. There is of course no historical basis for this legend, but the commercial importance of Ceylon must have caused the knowledge of it to have become known in the Muslim empire at an early period. From the IIIrd cent. of the Hidjra onwards mention of Ceylon is frequent in the works of geographers; it is referred to several times by Ibn Khurradādhbih (about 230 A. H.) in his *Kitāb al-masālik wa'l-mamālik* (*Bibl. geogr. arab.* vi, 63—70), (the oldest work of Arab geography that has come down to us), under the name Sarandīb, a corruption of the Sanskrit Sinhaladvīpa. Sarandīb is also employed in a narrower sense to denote only that district in which Adam's Peak is situated, in which case the island as a whole is called Siyalān (al-Kazwīnī, *Kosmographie*, ed. Wüstenfeld, i. 112; Ibn Baṭṭūṭa, iv, 165, 179). The name Sahīlān is found in *ʿAdjāʾib al-Hind* (Index s. v.); and Ibn Rustah, besides Sarandīb, knows the Greek name of the island, which he writes Ṭabirbānī (Ταπροβάνη). (*Bibl. geogr. arab.* vii, 84, 132.)

Adam's Peak, (a prominent mountain 7420 feet high), is well-known throughout the Muḥammadan world as the first spot on earth touched by the foot of Adam when God drove him out of Paradise (al-Ṭabarī, i. 121); the spices that grow on the island are said to have sprung from the leaves of branches that Adam was allowed to bring away with him from Paradise (id. 125-126). The print of his foot on a rock at the summit of the mountain is a place of pilgrimage for Muslims, as well as for Buddhists and Christians. (Ibn Baṭṭūṭa, iv. 181-182.)

The Arab merchants were undisputed masters of the trade of the island until the appearance of the Portuguese in the Indian seas early in the XVIth cent. It was the Portuguese who first called them Moors and the name has been commonly applied to them since. The rising power of the Arab merchants and their descendants was crushed by the Portuguese, and by the Dutch who succeeded them in the possession of Ceylon (1658); they were forbidden to hold lands and attempts were made to suppress the public exercise of their religion. The British who occupied the island in 1796 were slow to abandon the restrictive policy of their predecessors, and it was not until 1832 that the Moors were allowed to own lands in Colombo.

As a British crown colony, Ceylon is administered by a governor assisted by an executive and a legislative council. One of the members of this legislative council represents the Moormen. The Moormen are mostly engaged in petty trade as shopkeepers and pedlars, or are boatmen, fishermen or coolies; a small section of them are agriculturists. They speak Tamil, with an admixture of Arabic words. The only portions of Muḥammadan law in force in Ceylon are those contained in the Code adopted by the Governor in Council on the 5th August, 1806; this includes Muḥammadan law so far as it has been specially introduced into the island, either by express legislation or by ancient and continuous custom; when the Code of 1806 is silent on any point, resort is had to the Common Law of Ceylon.

CHINA.

The Muḥammadans of China fall into two main ethnic groups: Turks and Chinese, who again may be considerably subdivided. On the Turks of China see the article TURKISH PEOPLES. In this article the Turks will only be dealt with in so far as they have had a share in the development of Chinese Islām. China in this article is the land of the eighteen Provinces.

I. HISTORICAL AND GEOGRAPHICAL SECTION.

The intercourse of the pre-Islāmic world with China was based almost exclusively on the silk-trade; in fact the usual words for silk in Western Asia and Europe are probably only corruptions of the Chinese *sir* or *sïr*. In Western Asia this trade was in the hands of the Persians who were at the same time consumers. The Turks, their neighbours in the western lands of Eastern Asia on the borders of the Chinese Empire, were the carriers of silk and other articles of commerce between China and Western Asia. Some two hundred years before the dawn of Islām, these commercial Turks tried to make a change in the trade route, as they wished to get into direct communication with the consumers west of Persia. The negotiations between the Emperor of Byzantium and Dizabulos, the Khāḳān of the Turks, did not however lead to anything of importance (Menander Protector gives the history of the embassies with the report of Zemarch). At the dawn of Islām the old state of affairs still remained; almost nothing was known on this side of the Tienshan of the wonderful land from which came silks and other articles made by cunning hands, for the goods were only carried by the Chinese as far as the borders of their kingdom; there they were taken over by the people of the Tarim basin who were in the main Turks (with a few Persian colonies). It is most probable that Persians attended to the actual purchase of the goods in China itself (there is important testimony on this point in Hirth, Ms. Sin. Berlin 1, with documents granting foreign merchants permission to import certain goods into Chinese markets) and that they employed Turks as carriers.

We have numerous accounts of the relations of the Muḥammadan world with China, which in part

prove to be very accurate. These sources have not as yet been treated in a critical fashion. To the Arab geographers China is the land of the unknown and mysterious, into which only the boldest may venture. It must be noted that even in the oldest Arab geographers, who deal with China, that have survived to us, the connection of South and North China is known while in earlier times an absolute distinction was made between the land of the Seres and that of the Sinae; it is one and the same land whose coasts are washed by the Indian Ocean (*Baḥr Fāris*, *Baḥr al-Hind*, q. v.) and whose mountains are connected with the mountains of Farghāna and their continuation; so we are told by Balkhī in Iṣṭakhrī and Ibn Ḥawḳal (sea-coasts, p. 40, 103; mountains, p. 109, 240). What the tradition of the Muslims of China itself tells us about the earliest intercourse, is worthless and erroneous, although it is stated in numerous monuments in stone. It deals with the famous companion of the Prophet Sa'd Ibn Abī Waḳḳāṣ, whom it makes a maternal uncle of Muḥammad and whose grave in Canton is revered, although he really never came to China (Thiersant mentions the name Wahb Abū Kabsha in addition to Sa'd Ibn Abī Waḳḳāṣ, without sufficient authority, cf. Broomhall, p. 76 *et seq.*). Tradition also tells of the bringing of Islām to China by land *via* Hami (Ḳamul) by Arab envoys and the exchange of 3000 Arab and Chinese soldiers as a result of a dream of the Emperor T'ai Tsung (627—650 A. D.). These legends have been collected by Thiersant and more critically by Devéria, *Origine*. The oldest document on the beginnings of Islām in China is a stele in the chief Mosque of Singanfu, which professes to have been erected in the first year of T'ien-Pao i. e. according to Broomhall, p. 86, in 742 A. D. According to this, Islām must have been known in China under the Emperor Kai-Huang of the Sui dynasty (581—601 A. D.). Equally impossible dates for the introduction into China of Islām are given in other places also. (Devéria's explanation of the puzzle is that in 753 = 1351, when a new chronological system was proposed, the 753 years were assumed to be Chinese i. e. solar years, so that all dates were thus put back about 23 or 24 years). In any case the inscription is a palpable forgery. It was probably erected when the mosque was repaired, possibly at the renovations undertaken by Sai Tien-ch'e (Saiyid Adjall, see below). The Chinese official tradition found in the dynastic histories is not much more reliable than that of Chinese Islām. These also are full of legendary matter, profoundly influenced by national pride and compiled with the usual Chinese lack of critical judgement; nevertheless they must not be entirely neglected as they contain a few geographical and linguistic data. I would particularly call attention to the fact that in the whole of the older Chinese literature the Muslims are always called *ta-shih* i. e. *Tāzīk* (*tāzīk* is the Middle Persian form of the modern Persian *tāzī*; it is the Persianized form of the Aramaic *ṭaiyāyē*, properly "Arab of the tribe of Ṭai". The change in meaning is explained by the fact that once the Muḥammadan Ṭai Arabs were regarded by one body of Persians as the representatives of the Arab world, their name was extended to all Arabs and thus came to mean 'Arab' or "Muslim". Later they learned to distinguish more accurately between various branches of Muḥammadans and *tāzīk* again became limited in application and was applied to the Muslim inhabitants of North-East Persia; on the modern Tādjīk of the Pamirs see Justi in the *Grundriss der Iran. Phil.*, ii. 401 *et seq.*, with an erroneous derivation of the name from *tādj*, a crownlike headgear). Our Arabic sources are much better. We have such splendid works as Ṭabarī's history, which gives us all the material available in his time so that we can reconstruct the history for ourselves; it is improbable that any important notices from older times have escaped him. The Arabic sources afford a check on the Chinese, which we cannot afford to neglect; they are quite silent regarding the legends handed down by the traditions of Chinese Islām.

The Arab geographers are of particular importance. While no exact definition of the locality of China or its chief towns is given by the historians, the geographers by the very nature of their works have to give this information. Striking differences are found when one compares the different authors, according to the views prevailing when they wrote. Particularly striking is the utter disagreement between the statements of Ibn Rusta (who wrote his *al-A'lāḳ al-Nafīsa* about 290 = 903) and Mas'ūdī (who wrote his geographical work *al-Tanbīh wa 'l-Ishrāf* in 345 = 956). According to Ibn Rusta (p. 96, 3 *et seq.*) the first clime begins in the east in the farthest borders of China, passes over China, thence over the coast lands in the south of the land of Sind etc., the second clime begins (p. 96, 17 *et seq.*) in the east, passes over China, thence over India and thence to the land of Sind etc.; the third clime (p. 97, 1 *et seq.*) begins in the East, passes over Northern China, then over India etc.; Tibet is the first station of the fourth clime (p. 97, 12); the fifth clime begins in the land of Yādjūdj in the East (p. 98, 3 *et seq.*) and passes immediately into Northern Khorāsān; the sixth clime begins in the land of Mādjūdj and passes over the land of the Khazars, the seventh clime (p. 98, 13 *et seq.*) begins in the east with the Northern Yādjūdj, passes over the land of the Turks, the coast lands of the Caspian Sea etc.; Ibn Rusta adds (p. 98, 18 *et seq.*): "what lies behind these climes, in addition to the inhabited areas enumerated by us, begins in the east with the land of Yādjūdj, then passes over the land of the Toghuzghuz (this name appears as Toḳuzoghuz in the old Turkish inscriptions of Mongolia, cf. my *Zur Geschichte Eurasiens: Orient. Lit. Zeitung*, 1904, col. 293; *toghuzghuz* should also be read in the Arabic texts cf. the article GHUZZ) and the land of the Turks, then over the land of the Alans, then over the Abars (the land of the Avars), then over Burdjān (the land of the Bulghārs) and the Ṣaḳāliba (the land of the Slavs) and ends in the Western Ocean". It is clear from this sketch that Ibn Rusta and his contemporaries only knew of South China, which was only reached by sea; China is a country by the sea, and so he speaks (p. 83, 14 *et seq.*) of the Sea of the Indians, Persians and Chinese (*ṣīn* is properly only "people of China", but it is used even without *bilād* for "China"). When he says (p. 87, 10 *et seq.*): "The Sea of the Indians is bounded on the east side [at the beginning (supplied by me on the analogy of line 21)] by the Island of Tizmukrān, at the end by China and is bounded on the west side at the beginning by the Gulf of 'Aden, at the end by

Java", he evidently means that the Indian Ocean is divided into an Eastern and a Western section, the first of which ends on the one side at the island of Tiimukān (behind that there must of course still be water, but this is no longer the "Sea of the Indians") and on the other at China, which is a vast expanse of land reaching in the north to the land of Tibet in the fourth clime and to the land of Yādjūdj and Mādjūdj in the fifth to seventh climes. Characteristic of Ibn Rusta's views is also the statement (p. 88, [illegible], 89, [illegible] *et seq.*) that the sea on which one sails from Baṣra to China is one sea and one water reaching to China, in which India also is situated; it was however thought that there were really seven seas, each of which had its characteristic features, such as different winds, different taste, different colour and different animals; on this opinion cf. Mas'ūdī, i. 325 *et seq.*, where it is stated that the sea is one but is to be navigated in different ways in different parts (this point is not raised on p. 88, [illegible] *et seq.* where probably *al-zābadj* should be read for *al-ṣīn*). Ibn Rusta unconcernedly makes another land adjoin China: Japan and Korea; he says p. 82, [illegible], 83 [illegible]: "Every Muslim who enters a land at the end of China, which is called al-Sīla and where there is much gold, settles there and never comes back again from it", we are also told elsewhere of Muslims who had come to al-Sīlā.

Mas'ūdī is better informed; though there are many confusions in his account of the climes (p. 32 *et seq.*), it is in the main based on a knowledge of the northerly situation of China; according to the general view (p. 31 *et seq.*) the sixth clime is particularly associated with Yādjūdj and Mādjūdj and the seventh with the *Yawamārīs* (?) and the Chinese; on the other hand we find the other view manifesting itself on p. 26, [illegible] *et seq.*, where China and Japan are regarded the last inhabited areas in the east: "the farthest outposts of civilisation in the east are the frontiers of China and al-Sīlā (Japan) up to where they end in the wall of Yādjūdj and Mādjūdj, which Alexander built, and the mountains behind, through the ravines of which the wall runs; Yādjūdj and Mādjūdj used to sweep down on the plains from there: the beginning of this wall is outside the habitable region in the seventh clime... it then takes a southward direction and runs right along till it finally reaches the Dark Ocean". (The notices of the fabulous wall against the eastern Barbarians have been collected by de Goeje in his *De Muur van Gog en Magog*). Mas'ūdī also knows that India and China are near one another: "thither go ships of the Muslims who on the voyage thither and to Djidda and al-Ḳulzum are attacked by the pirates of the land of Sind, called Almaid, on *bawāridj*, which are like the *shawānī* of the Mediterranean" (p. 55, [illegible] *et seq.*). Mas'ūdī gives more information about China in his *Murūdj al-Dhahab* (written in 336 = 947, rewritten 345 = 956). There was no longer a direct connection by sea in his time but ships came from either side to Galla (Point de Galle) which was almost the halfway point, from which Chinese ships sailed to Khānfū (Canton); "in olden times it was otherwise, when the Chinese ships sailed to the land of 'Omān, to Sīrāf, the coasts of Fārs and Baḥrain, to Obolla and Baṣra and ships from these places likewise traded directly with China: it was only after justice could no longer be relied on and the above described state of affairs in China had come about that they began to meet at this intermediate point" (i. 308). The journey was actually undertaken by this route by a contemporary of Mas'ūdī's, a merchant of Samarḳand, whose experiences Mas'ūdī gives (i. 307—312) while a Ḳoraishī in the time of the Slave Revolt in Baṣra (869—879) sailed from Baṣra to India, thence proceeded partly by water and partly by land to China and landed at Khānfū from which he visited the Emperor in his residence Khumdān (*ibid.*). In i. 303, Khānfū (this is the correct reading in place of the خانقو of the text) is also mentioned as an important commercial town up to which ships from Baṣra, 'Omān, Sīrāf, the towns of India, the islands of al-Zābadj and Ṣinf sail from the mouth of the river, some six or seven days' journey distant. At an earlier period Chinese ships came as far as Nadjaf: at least so says Mas'ūdī i. 216: "the great bulk of the water of the Euphrates used to flow into the land of Ḥīra; the ancient bed called *al-'atīḳ*, on which was fought the battle of Ḳādisiya, is still visible: it flowed into the Abyssinian Sea (i. e. the Indian Ocean: it is evidently the Pallakopas which is referred to); in those days the sea came up to the place which is now known as al-Nadjaf and ships from India and China came thither, destined for the Kings of Ḥīra". Reinaud, *Relations*, p. xxxv. does not give this passage quite correctly; there is nothing in Mas'ūdī about a period other than that of the battle of Ḳādisiya. Nor ought Reinaud to have adduced Ḥamza al-Iṣfahānī (p. 102) as evidence for the presence of Chinese ships at Ḥīra; for he only says: "Ḥīra was then the coast region (*sāḥil* is not the seashore) of the Euphrates: for the sea (read *al-baḥr* in place of *al-furāt* which Gottwaldt thoughtlessly transcribed; this error in copying is explained by the *al-furāt* which appeared immediately before) then stretched far into the land (literally, was situated nearer on the northern border of the lowlying coast lands of Babylonia) and even reached as far as Nadjaf". This fanciful distortion of the meaning has led Richthofen to the following erroneous statement (*China*, i. 520): "According to the testimony of Mas'ūdī and Ḥamza of Ispahan Chinese ships used to anchor every year(!) beside ships from India before the houses of Ḥīra".

The roads leading to China have been most fully described by the oldest Arab geographer who has survived to us, Ibn Khurdādhbih, who held the office of chief superintendent of roads (died 233 = 849) in his *Kitāb al-Masālik wa 'l-Mamālik* composed in 232 = 846. According to him relations with China were principally maintained by sea and his account of the ports of South China is surprisingly thorough. After giving the route of the traveller to China from Baṣra to al-Ṣinf on the coast, three days' journey from Ḳomār, he continues (p. 69, [illegible]): "from al-Ṣinf to Lūḳīn, which is the first harbour in China, is 100 farsakh (1 f. = 4 miles) by land and water..... from Lūḳīn to Khānfū, which is the largest port, is a journey of four days by sea and of twenty days by land..... from Khānfū to Khāndjū is an eight days' journey ...... from Khāndjū to Ḳānṭū is a journey of twenty days......, every harbour of China has a large river which the ships sail into; there is ebb and flow of the tide there...... The length of China along the coast from Armābīl to the end

of the land is a journey of two months. There are 300 flourishing towns in China, ninety of which are particularly renowned: the [northern] frontier of China runs from the sea to Tibet and the land of the Turks, in the west to India; to the east of China is the land al-Wakwāk, rich in gold . . . . (p. 70, 7 *et seq.*). At the end of China opposite Kānsū, there are many mountains and many kings, this is the land of al-Sīlā; there there is much gold; the Muslims who enter this land settle in it on account of its attractions (cf. the account of Ibn Rusta p. 841[a] above); it is not known what lies beyond". The whole route from Ceylon to Kānsū is discussed by Sprenger in his *Post- und Reiserouten*, p. 82 *et seq.* (on the route to Ceylon it should be noted that "the harbour between 'Omān and China" is not a place called Kila, to be identified with the town of Malakka, but Galla, which still survives in Point de Galle, cf. p. 841[a] above). Al-Ṣinf (Tshanf) he identifies (with Reinaud and Peschel) with Tshiampa i. e. South Cochin-China and locates Lūkīn at the mouth of the Songkoi. As to the latter part of the route, all has been altered by the critical edition of Ibn Khurdādhbih (*Bibl. Geogr. Arab.*, vi.). The following points are certain: Khānfū, which is undoubtedly Canton, and Kānsū, in which we readily recognise the Khansā of Ibn Baṭūṭa; this latter is clearly Hang-chou (that *hang* formerly appeared as *ḳān* and later as *khan* is not doubted; for the corruption of *chou* to *ṣū* (*sū*) we may perhaps compare the *ṣu* for *chou* in my *Chinesisch-Arabische Glossen*, p. 285). I would identify Khāndjū as Ch'üan-chou, and suppose Khāndjū to be a copyist's mistake for *Djāndjū*; this would agree with the distance and we would then have evidence of the existence of Zaitūn, afterwards so important, in this period (cf. p. 845[a]).

Ibn Khurdādhbih was however also acquainted with the land-routes to China. He only briefly describes the route followed by the Jewish merchants of Rādhān in connection with the route followed by them by sea from the land of the Franks (Mediterranean — al-Faramā — carrying their goods on their backs over the isthmus to al-Ḳulzum = Suez) (p. 155, 4 *et seq.*) "beyond Rūm into the land of the Slavs, then to Khamlīdj, the capital of the Khazars, then across the Caspian Sea, then to Balkh and Trans-oxania, then to the *wurut* (i. e. *yurt* = land) of the Toghuzghuz and thence to China". He is much more detailed in describing the roads which lead from Transoxania to the east, and gives a vivid picture of a journey by the main route from the lands of the west to the east (p. 178 *et seq.*). At the ford on the upper course of the Oxus where it separates the Pamirs from Tokhāristān (Badakhshān) the Turks used to wait on the Pamir side and watch for foreign merchants appearing and signalling to them on the summit of the mountains opposite; they crossed the river and brought back the strangers and their goods to set them on their journey again to China or to India; he describes in thrilling fashion the skill with which these mountain Turks travelled through the great deserts of rocks where no path was visible; this agrees pretty closely with what modern travellers tell us about the Pamir districts Darwāz and Shugnān, which is the locality referred to by Ibn Khurdādhbih; even the name has survived, for we may easily recognise Shugnān in the *Shikinān* of Ibn Khurdādhbih (p. 179) who calls the Turks of this district *Shiknī* (p. 178, 12). Ibn Khurdādhbih also gives the name of the district in the form *Shikīnān* (p. 37, 173). Perhaps we also have *al-Shaḳīna* in the *al-Safīna* of Iṣṭakhrī, p. 290 (de Goeje proposed to read *al-Saḳīna*, *Bibl. Geogr. Arab.*, iv. 426). Al-Bīrūnī mentions a *Shignān Shāh* as the prince of Shugnān (*India*, p. 101, 6). The Chinese transliterate the name *Shi-ḳi-ni*, see Yule in the *Journ. of the Roy. As. Soc.*, vi. 97, cf. 113). When Ibn Khurdādhbih calls the *Shigīnī* Turks (p. 178, 14: *al-Turk alladhīna yusammawna Shigīna*), he is using the word in a very general sense; the inhabitants of Shugnān as well as of the whole of the rest of Tokhāristān were certainly Aryans and probably spoke the same dialect (*Shignī*) as they do at the present day. He was probably dealing with the road over the Barogil Pass and the Wachdjir Pass, on which see my *Chinesisch Turkestan*, p. 61 *et seq.*

Ibn Khurdādhbih's account makes it quite clear how distinctly the difference between China and the land of the Turks was understood in his time. This is all the more remarkable, as in his time the influence of China in the Turkish lands between China proper and the Tien-Shan was not inconsiderable; the Khāḳān and the lesser Turkish princes were regarded by China as vassals and they certainly never hesitated to put themselves under the protection of the Chinese Faghfūr (on this word which Neumann first recognised as *baghpur* = Son of Heaven *T'ien-tzŭ*, see Yule, *Cathay*, i. cxii. note 2) when it was to their advantage, for example, when they had to defend themselves against vigorous attacks from the Muslim world. Probably also the Turkish princes used occasionally to pose as Chinese to the Muslims. Through intercourse with the harbours of China, the Muslims were well enough acquainted with the characteristics of the Chinese to understand the differences between them and the Turks. The division of the earth into four continents by Ibn Khurdādhbih is characteristic, (p. 155): Arūfā (Europe), Lūbiya (Africa), Ithyūbiya (Ethiopia) with Tihāma, Yemen, Sind, India and China, and Iskūtiya (Scotia) with Armenia, Khorāsān, the land of the Turks and the land of the Khazars, which sum up Asia in a peculiar fashion.

There are also other important sources of information on the connections by sea extant, namely the accounts collected by Abū Zaid al-Sīrāfī in his *Akhbār al-Ṣīn wa 'l-Hind* (the older literature on the subject is discussed by Yule in his *Cathay and the Way Thither*, i. cii.). Though the first part of this work is merely a repetition of the notes compiled in 237 (851) by Sulaimān the merchant (Reinaud, ii. 61) supplemented from Abū Zaid's own materials, the second part deals with the changes that had taken place in commerce by sea, in their relation to history and gives the narrative of the Ḳuraishī Ibn Wahb (of the clan of Habbār). This narrative is of no geographical importance: only two towns are fully dealt with, *viz.*, Khānfū, which has just been discussed above and shown to be Canton, and Khamdān (= *Khān* "Emperor" + *Tang* "court"?) the capital of the kingdom, Singanfu, which Ibn Wahb visited. In the *Relations*, Khānfū is the great centre of trade between the Arabs (the word is of course not to be taken literally, but means Muslims generally) and the Chinese; on account of the frequent fires and

shipwrecks, the goods exposed were not numerous, however; trade was also seriously hampered by piracy (ii. 12); Sulaimān is quoted as authority for the statement that a Muslim was appointed law-giver to the Muḥammadan colony by the King of China; this judge was also Imām and prayed for the Caliph. His decisions were universally respected (ii. 13). The voyage from the Gulf to Khānfū was made in fresh water (ii. 19); the Chinese governor of Khānfū bore the title *dīfū* (ii. 37); the revolt of the Banshua was a disastrous period in the history of Khānfū; he attacked the town which lay in the interior, a few days' journey from the coast, on a large river; this was in 264 = 878; after the capture of the town by the rebels over 120,000 souls perished from among the foreigners alone, Muslims, Christians, Jews and Magians (ii. 63 *et seq.*); it was possibly this blow to Khānfū which brought Ch'üan-chou, the nearest commercial town to the north, to the front. Lastly Abū Zaid tells of a native of Khorāsān who came with his wares to Khānfū and from there visited the capital Khumdān, more than two months journey distant (ii. 106 *et seq.*).

It is not till a later period that the seaport of Zaitūn appears in Arabic literature, probably for the first time in Ibn Sa'īd whose statements Abu 'l-Fidā' (p. 365, Transl. ii. 124) has utilised along with those of one who had been there, probably a fellow countryman and subject. It is next described by Ibn Baṭūṭa (iv. 268 *et seq.*), who first stepped ashore on Chinese soil at Zaitūn and made it his centre for his journeys into the interior. The identity of Zaitūn with Ch'üan-chou-fu was suggested long ago by Martini and Deguignes and established in the learned note 2 to Chap. lxxxii. of the Yule-Cordier edition of Marco Polo (*Book of Ser Marco Polo*[3], ii. 237 *et seq.*). We now have a record in stone from Ch'üan-chou, which proves the existence of a mosque there in 1010, if we may trust the inscription of 1310 which professes to be a renewal of an older one of 1010 (see van Berchem in *T'oung Pao*, xii. (1911) p. 704 *et seq.*). Abu 'l-Fidā''s reference to Zaitūn as "identical with Shindjū" (note the *i*, which appears to be the *ü* of *ch'üan*) points to the fact that the town was known in the West in his time by its Chinese name (of which I suppose Zaitūn to be a corruption: *zai* or *zi* is a corruption of *ch'üan*, and *tūn* was added, thus making a word familiar to every Muslim from Ḳor'ān, xcv. 1). I must point out here that Abu 'l-Fidā''s other statements on China show some confusion; he mixes up Canton and Hang-chou-fu, as his "al-Khansā', identical with Khānḳū (read Khānfū") shows (see above p. 842[a]). He only mentions Khamdān and Khānbāliḳ in his "notes" and is not aware that his Khānḳū (ii. 122 *et seq.*) confuses two quite different towns, *viz.*: Khānbāliḳ in the north (= Pekin; cf. Ibn Baṭūṭa's account on p. 845[a] below) and Canton in the south, which should really be called Khānfū.

Lastly must be mentioned the description of the land route connecting Transoxania with China which is given in a work by Abū Sa'īd 'Abd al-Ḥaiy Ibn Ḍuḥāk Gardīzī (Marquart, *Streifzüge*, writes Gurdīzī, but see Rieu, *Cat. Pers. Brit. Mus.* 1071_a and Raverty, *Ṭabaḳāt-i Nāṣirī*, p. 901), the importance of which has been recognised by Barthold who has published a portion of this author's valuable *Zain al-Akhbār* (composed about 1050 A.D.) in *Otčet o poězdkě v Srednjuju Aziju*, 1893-1894, St. Petersb. 1897). Gardīzī's description of China occupies pp. $92,_{17}$—$94,_{5}$. The most important part is the itinerary from Turfān to Khamdān, $92,_{5-16}$: Čināndjket (i.e. Turfān-Kara Khodjo) in the land of the Toghuzghuz to Ḳumul, 8 days; at Bagh Shūrā (we may recognise in *bagh*, the Persian *bāgh* "garden"; the word *shūrā* is probably identical with the *šura* which frequently appears in Turkish names) the river has to be crossed by boat; thence it is 7 days' journey across the steppe, which has springs and pasture, to Shačau (Sha-chou, on maps usually Sa-tshou, in Prjewalski, *Reise in Westchina*, ii. 159, note 5, "Scha-tschou (Sa-tschou)" with the remark that the town was called Dun-chuan (Tung-huan) down to the beginning of the vii[th] century: at the present day the road goes by An-hsi-fu, N.E. of Sha-tshou); thence three days to a rocky desert (*sengl(ākh*); thence 7 days to Sukhčau (= Su-chou; the *sukh* is a corruption of an older pronunciation which we find in the form *sūkdjū* ("4 days from Ḳāmdjū = Kan-chou") in Abu 'l-Fidā', p. 366, transl. ii. 125); thence 3 days to Khamčau (= Kan-chou, the modern capital of Western Kansu, *Ḳāmdjū* in Abu 'l-Fidā'); thence 8 days to Kučā (?); then in 15 days to a river, which is called Ḳiyān (= Hoang?) and has to be crossed by boat. From Baghshūrā to Khamdān, which is the capital of China, is a month's journey (this total does not agree with the preceding figures even if we suppose that the last river-crossing was at Khamdān i.e. Singanfu; for the total of days travelled is 43); there are good rest-houses at the stations on the road". There is still much that is not clear in this record; but some stations can be identified. This road was certainly always the main route by land from China to the west. It appears that the Mongol Emperors when setting out from their residence at Karakorum to the lands in the west, used to take the road to the north of the T'ien-Shan *via* Bishbaliḳ (which can no longer be identified with Urumči but is to be located 6 miles north of Tsi-mu-sa; see Barthold in the article BISHBALIḲ, p. 728), Almaliḳ (Wjernyi), Talas, Sairam and Tashkend (see Bretschneider, *Mediaeval Researches*, part 4, cf. my *Islam. Orient*, i. 84). Although in the Mongol period we hear of a great deal of traffic on the great roads of Central Asia, it must not be assumed that this is evidence of great commercial activity. It is almost entirely military movements that are referred to; commerce certainly declined when anarchy and lawlessness became rampant everywhere in the states into which the the Mongol Empire had been broken up.

The above analysis of the accounts of the land of China by Muḥammadan writers will facilitate the investigation of the history of Islām in China. For the older period our investigation must be undertaken in two quite separate fields. The two routes by which Islām came to China were quite different in character and object: the land route, which led into Northern China, brought Islām into the western parts of the northern kingdom only and did not send out colonies to the coast; the route by sea ran along the coast of China as far as Ḳānsā (i.e. Hang-chou-fu, cf. p. 842[a]) founding colonies everywhere, which carefully avoided any attempt to advance into the interior. This is one of the features of the advance of Islām; when it came by water, it remained on the coast, and

when it came by land, it remained in the interior. Islâm has as a rule been afraid of the sea; from the very beginning it was impressed with a sense of the supremacy of the unbelievers on the ocean and made practically no efforts to dispute their dominion. When we do find Muḥammadans undertaking naval expeditions, they were almost always disastrous: all attacks on Byzantium, for example, from the sea failed. It was not till the Mongol period that Islâm began to advance through the interior of China, indeed one might almost say that but for the Yüan dynasty the conversion to Islâm of large tracts of the interior of China would have been impossible, for it was the first to break away from the policy of splendid isolation.

The advance of Islâm by sea was, one might say, an automatic process. As soon as the Muslims had conquered South Babylonia, and the principal towns on the Persian Gulf, they found themselves forced to carry on the seafaring traditions of these lands unless they wished to leave their newly won position unprotected. There was naturally no immediate change in the management and manning of the ships and as a rule they seem to have continued as before. If the experienced old sailors would not adopt the new religion, men to take their place were found from among their countrymen. It must not be imagined that the Arabs had taken up navigation; the *ʿArab* proper i. e. the inhabitants of the Ḥidjāz and the Syrian steppe were quite useless as sailors. The crews of the ships must have been recruited from the peoples of the South Arabian coast and the Persian Gulf. (We may perhaps find evidence of the preponderance of the Persian element in the fact that in the older Arabic literature the word for "captain of a ship" is *nākhudā*, see Vullers, *Lex. Pers.* s. v. and Dozy, *Supplément*). There was nothing against seafaring in the teaching of Muḥammad; on the contrary, the almost reverent mention of the ships which God causes to sail upon the sea (Ḳorʾān, x. 23) might rather have encouraged it. The advance of Islâm by land was governed by other motives than its expansion by sea. The primary cause in this case was the divine command: "Fight the unbelievers till ye are victorious over them", in combination with the rapacity of the Beduin hordes and the commercial instincts of the townsmen of the Ḥidjāz. There were practically no limits to the movement thus set up; as soon as one infidel people had been subjected, another was discovered beyond them which had also to be converted or conquered. This process continued till some insuperable obstacle stood in the way. The economic side of the movement was not systematically developed in the Arab period. Under the influence of the ideals of Arab nationalism, a system of Arab colonisation was pursued, which though not deliberate, proved highly effective from its earnest convictions and the necessity for expansion. But the lack of a sound system of political economy among the Arabs, and their ignorance of the organisation of capital, with the unbridled individualism of their character prevented them reaching a dominating position in the world's commerce. On the other hand, after the fall of the Arab kingdom and the union of all intellectual and economic forces in the ʿIrāḳ, we may certainly speak of an Islâmic Capitalism, which took advantage of the conquests of the Muslim hosts with the greatest energy, deliberateness and penetration, to secure a footing everywhere, at the same time facilitating the advance of the armies of Islâm by assuring that Muslims would find co-religionists everywhere. Of course, when unusually difficult physical conditions made advance practically impossible or where a strong hostile power, conscious of the danger threatening it, sought to prevent systematically the entrance of any Muḥammadan elements whatever, even the keenest business man could do nothing. This was the case with China and her outlying provinces i. e., the lands of the Turks, which lay between Transoxania and the entrance to China in Western Kansu (Yü-men-hsien); long after Transoxania had been conquered, the towering mountain wall of the Tienshan in the east continued to form an obstacle to more lively commercial intercourse. The desire to exchange certain wares from the Far East for others from the lands of Islâm, however, had always forced a few enterprising traders to surmount the obstacles; this was done even in ancient times and Islâm merely took up the heritage on entering these lands. The hostile collisions of Islâm with the great Power of the East and its vassals interrupted this traffic for a brief period only and in the long run they appear rather to have stimulated it. We saw above (p. 842ª) how the tremendous difficulties of the journey through these pathless mountains were overcome by the traders with the help of the Turks just as they are at the present day by bold and experienced travellers, but the second great obstacle was not so easily vanquished *viz.*, the resistance offered to everything foreign by the cautious Chinese government; for travellers were wholly dependent on the mediation of the people of that immense land which separated them from the gates of China proper. These Turks were half Chinese; they knew exactly how to deal with their Chinese masters; they alone understood the web of subterfuges and tricks, thousands of years old, with which the worthy Chinese bureaucrats evaded the regulations for the exclusion of foreigners. This was not however calculated to cheer the Muḥammadan traders as their Turkish friends were very unreliable allies and the stranger was not safe from attacks on his life or property while among them nor even when he had reached China, the goal of his journey; nowhere could he hope to get justice. A better state of affairs came about when the great Uigur kingdom arose, a clearer view of whose history we may now obtain from the German excavations in Ḳara Khodjo (the ancient capital Ḳoshan) near Turfan. We now know that from about 900 A. D. to the Mongol invasion there was a powerful kingdom here which afforded protection to all civilisations and where Buddhist, Christian and Muḥammadan priests were allowed to expound their doctrines and propagate them in writing also. Confidence in the administration of justice, the rule of a strong arm from Pekin to the heart of Transoxania and of a powerful and intelligent government which understood the requirements of commerce had finally been established when Čingiz Khān with his body of Mongol and Turkish followers, which rapidly swelled into an avalanche, made his first decisive advances on east and west from his home Karakorum in the Northern Mongolia. It seems that at the beginning of the xiiith century, that is, just before the rise of Mongol power, the overland traffic had attained

special importance because the princes of Hurmūz and Kīsh at the entrance to the Persian Gulf were then fighting for supremacy at sea and severely harassing foreign trading-vessels. The seaborne trade did not, however, become permanently affected thereby. The sea-route for imports to China offered this immense advantage, that the official supervision of commerce in the Chinese ports was in the hands of special officials, whose daily business it was and who possessed a regular routine. There was also the political situation to be considered: the rule of the Mongols (Yüan Dynasty 1206—1368) who were favourable to the influx of Muslims. It may be presumed that the participation of Muḥammadans in the sea-trade with China reached its zenith about the time when Vasco da Gama discovered the sea-route to India. About 150 years before this event, which was to effect such a great transference of trade, Ibn Baṭṭūṭa had visited many Chinese seaports, in all of which he found Muslim colonies (Yule, *Cathay*, ii. 477—510, has given a critical account on his journey to China; on his trustworthiness, *ibid.* ii. 433 *et seq.*; on the various places visited by him see Yule, *Marco Polo*[3] passim); he landed in China at Zaitūn = Ch'üan-chou-fu, from there made an excursion to *Ṣīn al-Ṣīn* ("China of the Chinese", "Original-China") also called *Ṣīnī Kalān* ("great China") = Canton, and next went from Zaitūn by boat *viâ* Kandjanfū (which is perhaps only Han-jen-fu "town of the Chinese"?), 10 days' journey, Baiwam (Pei-wang?), Kuṭlū, 4 days, al-Khansā = Hang-chou-fū, 17 days, to Khānbālīḳ (i. e. "King's town") also called Khānīḳū = Pekin, 64 days, and back. The discovery of the sea-route to India by the Portuguese was a heavy blow to Muḥammadan trade with the Far East, and was all the more severe because the power which discovered the route was a very strong one both politically and commercially and was ready and able to take full advantage of its power at once. The coast of East Africa, the shores of the Persian Gulf and the west coast of India were occupied by the Portuguese, and these Franks were by no means willing to recognise the right to trade in these waters as a Muslim monopoly. It was rather their intention to secure the whole of the trade for Portuguese ships. No one of the Muḥammadan powers could offer effective resistance to this ambition. At this period a great shifting of the balance of power was going on in Western Asia; the Mamlūk kingdom was tottering to its fall; the ʿOthmānli Turks, that vigorous, young race, which had made a stormy entrance into the world's history about a century before, had established its position and was able to risk an encounter with Egypt which was still a world-power and to make all its territory an Ottoman province. This did not directly affect Portuguese power at sea very much, as the Turco-Egyptian fleet in the Red sea was not strong enough. Even at a later period the Turks were unable to harm the Portuguese. They proved themselves incapable of pursuing an effective naval policy; an end was made at Lepanto of their feeble attempt to found a great navy. Islām's trade by sea with the Far East had been destroyed by the time Albuquerque's power in the Persian Gulf was at an end. The Dutch and, soon afterwards, the British gained control of the trade with the Far East.

In the preceding paragraphs the commercial factors have been discussed but there still remain to be treated the purely political and general cultural movements which must be dealt with in connection with the history of the advance of Islām in China.

The earliest notices of the relations of Islām with China, that are worthy of mention, are connected with the political events which arose out of the expansion of Islām. The last Sāsānian king, Yezdegird III had fled to China after the decisive battle of Nihāwand in 642 and sought to persuade the Emperor to take action on his behalf. His prospects seemed on the whole not unfavourable, as an important revolution had just been accomplished in China at this time; the Sui Dynasty had been superseded by the T'ang (619 A. D.) whose first Emperors were pursuing an energetic career of conquest. Muḥammad and his successors were similarly engaged in the west. The fact that the huge mountain wall of the T'ien-shan formed a barrier between these two new powers and that on the Chinese side between it and China proper lay the inhospitable Tarim basin, did not prevent Muslim legend from supposing that the Prophet and his companions entered into relationships with the distant empire. According to an oft repeated tradition (see Goldziher, *Moh. Stud.*, i. 270 *et seq.*) Muḥammad issued a warning against provoking the Turks, whose name he possibly did not even know. Such stories are later inventions whose object it is to increase the prestige of the Apostle of God by crediting him with foreseeing later events. The Chinese were accustomed to hold aloof when under exceptional circumstances strangers entered their territories or when their armies would have to be sent beyond the natural frontier. They followed this policy in the case of Yezdegird. The Emperor T'ai Tsung (627—652) refused his request for help (this we may assume from Ṭabarī, i. 2685 *et seq.* even if the report of the envoy is legendary; cf. i. 2876). The spirit of Islām, on the other hand, urged its adherents to unprovoked aggression as soon as it seemed possible to risk it and by 713 the great general Ḳutaiba b. Muslim had led an army out of the conquered Ferghāna across the mountains into the adjoining land of the Turks. His campaign was unsuccessful; the comparison of the original authorities in Ṭabarī, i. 1275—1279, shows that his expedition did not result in the conquest of Kāshghar. The story of the sending of an ambassador to the Emperor of China (Hsüan-Tsung 712—756) which Ṭabarī gives (ii. 1277 *et seq.*) in the traditional form adorned with well known motives, is probably historical; but we find no mention of a return embassy from the Chinese (at an earlier period Chinese ambassadors had appeared at the Sāsānian court in the time of Khusraw Anōsharwān, see Ṭabarī, i. 89 = Nöldeke, p. 167). The Muslims under the Omaiyads had a good deal of indirect intercourse with China, in as much as the Khāḳān of the Turks and the Yabghū (in Ṭabarī everywhere corrupted to Djighūya, cf. on this reading, the *hayāṭila* of the manuscripts and printed editions, which F. W. K. Müller has ingeniously recognised as *habāṭila* = Ephthalites), were vassals of the Emperor; the scene between Naizek and the Yabghū on the one hand and Shadd (the *shad* of the Orkhon inscriptions) and the *sebel* (probably to be compared with the Σιζάβουλ of Theophanes, see Chavannes, *Tou-*

kius Occidentaux, ii. 28) on the other, in which the Shadd made the Kow-tow before the Yabghū, has been described in a classical passage by Ṭabari, ii. 1224, (year 91 = 710); the Yabghū was sent to Damascus and was probably the first Chinese, or rather Chinese Turk whom the Syrians had ever seen. It may be regarded as certain that Chinese policy supported the resistance of the Khāḳān of the Turks and the smaller states in Transoxania dependent on him or directly feudatory to China; the Muslims were thus forced to fight continually. The Khottal who are probably to be located in the Pamirs were not defeated before 750 (see Ṭabari, iii. 74); al-Ikhrīd (with this form cf. Ikhshīd), the king of Kashsh, was killed in 751 and his treasures, valuable articles of Chinese manufacture, were sent to Samarkand to Abū Muslim (Ṭabari, iii. 79 *et seq.*). When with the fall of the Arab Empire, the energy of Muhammadan expansion began to abate and the central authorities devoted themselves to the defence of and establishment of order in the territories they had won, and contemporaneously, on the Chinese side under the later T'ang Emperors, the power of the central government began to weaken, powerful buffer states soon arose between the two kingdoms, first that of the Uigurs, later that of the Ilak-Khāns (Karākhānids). The situation thus produced was a most unfavourable one for the advance of Islām into China; for however weak the Chinese dynasties, that succeeded the T'ang, were, the country still held fast by the motto: "No foreign religion in China". If Buddhism overcame the great resistance offered to its introduction, it was because it was in the first place to a certain extent similar to the philosophical Li-cult, hardly to be called a religion, which was the most widely professed, and secondly because it adopted elements congenial to the Chinese mind and thus fitted itself in with the prevailing tone of feeling. Islām with its rigid doctrine of the One God, which made no concessions and repelled by the overbearing, provocative attitude of those who professed it, which was above all, unlike Buddhism, essentially a political religion, could only find a footing in the land under the protection of a strong arm. It was not till under the rulers of the Mongol empire founded by Čingiz Khān that this opportunity arose. The Mongol princes were without a religion i.e. their religion was the worship of their own lucky star combined with an unusual energy in calling down this star from heaven. Čingiz Khān himself considered only the advantages of a general lack of homogeneity among his subjects and mingled sections of peoples with one another without regard to race or religion whenever it served his purposes. It was above all necessary for him as a Mongol to break up the Chinese elements and mix the population so that no strong alliance of various sections could be formed against him. Besides his own countrymen he found helpers in the carrying out of his operation in the various Muslim nations of the west, who were famous for their bravery. Among these the Turks were the most important as regards numbers, influence, skill in the use of weapons and discipline; we may presume that among these were Afghān mercenaries, for the Afghāns, the Paṭhans of India, used to go abroad as mercenaries (cf. the Afghāns in the army of Ya'ḳūb Beg of Kāshghar), like the Swiss, though unlike the latter, they were notorious for their treachery and brutality; bodies of his followers may also have come from the mountains of Persia, the fastnesses of the Kurds; these were not however Persians in the stricter sense of the word i.e. the inhabitants of the Persian plains, who were not particularly noted for their valour. It is scarcely possible to ascertain the exact details of the composition of the hosts of Čingiz Khān and his successors: for the great Mongol sovereigns were not given to clerical work; their main concern was the soldiers themselves and not that they should be neatly numbered in lists. We can only suppose that the adjoining lands supplied the greatest number of recruits and these were, besides the land of the Turks between the Great Wall and the T'ien-Shan (Chinese Turkestan), Transoxania and Khorāsān. This does not sufficiently explain the remarkable fact that from that time to the present day the Persian language has been regarded by the Muslims of China as the language of polite speech, and that the popular Chinese written by these Muslims is strongly mixed with Persian words. (A good example of this language is to be found in the small Chinese manuscript M.S. Sin. Hartmann, 1, in the Royal Library in Berlin which contains a Chinese text in Arabic script, published by Forke in *T'oung-Pao* Ser. ii. vol. viii. N°. 1). It cannot be supposed that the greater part of these invaders were Persians, who lost their mother tongue after settling in China but retained a memory of it in the numerous relics that have survived. The admixture of Persian found in their language is rather due to the fact that all these barbarous and semi-barbarous peoples of Western Asia, who pressed to join the standards of the Mongol leaders, had a superstitious respect for the Persian language (it is well-known that Persian was the court and official language in the Central Asian and Indian kingdoms and it is a remarkable sign of the strength of the individuality of the Ottomans that they supplanted the polished Persian of their Saldjūḳ predecessors by their own uncouth Turkish tongue). Their introduction of Persian elements into Chinese, the language they had adopted, may be compared to the admixture of French, which would have been introduced by a Pole or Russian adopting German in the xviiith century because the former was to him the language of literature. There is also the following factor to be taken into account. As soon as Khubilāi Khān had established his throne in China, he appointed large numbers of Persians as officers of the court and state. Marco Polo and Ibn Baṭṭūṭa both treat at some length of these foreigners in Chinese service. One of them made himself very disagreeable: Achmath (Aḥmad) the Bailo, whose story is given not only in Chinese sources (see de Mailla, ix. 412 *et seq.*), which we might expect to be prejudiced, but also in the faithful narrative of the incomparable Venetian (see Yule, *Marco Polo*[3], i. 415 *et seq.*). These Muslims must have been for the greater part Persians, and they contributed to preserve the prestige of the Persian language and to carry it into the interior of the country. It is impossible even to make a guess at the number of Muslims introduced into China by the Mongol rulers. We have one example attested by numerous documents of the combinations that were produced by the introduction of Muslim elements by the Mongol Emperors, and of how a great strengthening of

Islām in China might thus have been produced. Čingiz Khān took as one of his officers a man who was said to come from Bukhārā and claimed to be a descendant of the Prophet, namely Shams al-Dīn ʿOmar, known as Saiyid-i Adjall. We have several biographies of this man; the principal is that in the *Yüan-shï*, the official history of the Mongol dynasty (Book cxxv. Biography 12) which Vissière has discussed in d'Ollone, p. 25 *et seq.*; there are others in the *T'ien-hsi* (ii. 1, p. 25 *et seq.*) with notices of his sons Nāṣir al-Dīn, the Nescradin of Marco Polo, and Ḥusain, and in the great biography *Ta-ch'ing-yi-t'ung-chi* (translated by Vissière in the *Rev. Monde Mus.*, February, 1908); of special importance is the biography by Fa-Hsiang, which has been critically discussed by Lepage in d'Ollone, p. 50 *et seq.*; lastly must be mentioned a passage in Rashīd al-Dīn, which is given in Blochet's translation in d'Ollone, p. 26 *et seq.* According to Fa-Hsiang, Saiyid-i Adjall was the fifth descendant of a certain Su Fei-êrh (Safair?) and 26th in line from the Prophet (Vissière has discussed the ancestors and descendants of Saiyid-i Adjall in a separate essay in d'Ollone, pp. 176—183). He was called Shams al-Dīn ʿOmar and was called to high office by Khubilai (1260—1294). The Emperor gave him the name Sai Tien-ch'e, a transliteration of Saiyid-i Adjall "illustrious lord" and appointed him governor of Yünnan to restore order there. He was afterwards also given the honorary title "Prince of Hsien Yang". He left five sons and nineteen grandsons. Lepage rightly doubts the authenticity of the genealogical table in Fa-Hsiang. It is not improbable that it was invented by the later chroniclers, partly to give their hero more prestige and partly to conceal the connection of the rise of the family with the invasion of the hated Mongols. According to the usual statements Saiyid-i Adjall came originally from Bukhārā and governed Yünnan from 1273 till his death in 1279; he was buried in Wo-êrh-to near his capital. His tomb here with its inscriptions was first discovered by the d'Ollone expedition and aroused great interest particularly as there was a second tomb, also with inscription, in Singan-fu. It has now been ascertained that the second grave in Shensi is a cenotaph which only contained the court-dress of the dead governor (see Vissière, *Études Sino-Mahométanes*, p. 41, note 1).

Although Saiyid-i Adjall certainly did much for the propagation of Islām in Yünnan, it is his son Nāṣir al-Dīn to whom is ascribed the main credit for its dissemination. He was a minister and at first governed the province of Shensi: he later became governor of Yünnan where he died in 1292 and was succeeded by his brother Ḥusain. The other sons also held high offices of state and so did the grandsons. Among the further descendants may be mentioned Ma Chu (c. 1630—1710) (in the fourteenth generation) who was a learned scholar and published his famous work "The Magnetic Needle of Islām" in 1685; he supervised the renovation of the tomb and temple of his ancestor Saiyid-i Adjall; one of the inscriptions on the tomb is by him. The present head of the family is Na Wu-Ch'ing, Imām of a mosque in the province (d'Ollone, p. 182). Whether or not the systematic expansion of Islām took place under the Sai provincial dynasty, it may be regarded as certain that the predominance of Islām in Yünnan dates from that period. There have been scarcely any appreciable influxes from outside since that period. It cannot be too strongly emphasised that the direction of this movement was from the interior, from the north. The Muḥammadan colonies on the coast were hardly affected by it. On the other hand it may safely be assumed that the Muslims of Yünnan remained in constant communication with those of the northern provinces of Shensi and Kansu. The trade of *mafu*, i. e. hirer of animals for riding and transport purposes, still pursued at the present day by the Muslims of China, which brings them into contact with numerous foreigners, was no doubt followed by them quite early and they are particularly well adapted for it by their energy and endurance.

If these Muslims were left to themselves and received no additions through immigration from other Muslim countries, the fact that there are so many of them is remarkable. The number of Muslims in China used to be very much over-estimated, however. There are certainly not 20—30 millions of them ($^1/_{20}$—$^1/_{13}$ of the whole population). The d'Ollone expedition found them much below this figure in the districts it visited and these were those which had been most subject to Muḥammadan influence. D'Ollone estimates the Muslims at 1% of the population on the route followed by him, but gives a higher figure for Yünnan and Kansu. Davies, *Yunnan*, 1908, estimates 3% for Yünnan, i. e. 300,000 in 10 millions, but gives a much lower figure for Sse-Ch'uan which has four times the population of the other two provinces together. We thus arrive at an estimate of 4,000,000 for the whole of China (d'Ollone, p. 429 *et seq.*).

The estimates in Broomhall are only approximations which are quite unreliable, and give no clue to the proportion of Muslims to the rest of the population; for we have no reliable statistics for the total population. Broomhall sent forms of inquiry to over 800 people in China and received 200 replies from various parts of the empire. As a result we have the following figures for the individual provinces.

Kansu: minimum 2,000,000, maximum 3,500,000; the Muslims are irregularly distributed; they are more numerous in the west and they increase more rapidly than the Chinese. Many districts have been depopulated as a result of the revolts. In the important town of Liang-chou-fu, the seat of the government, there are only 70 Muhammadans, who are allowed to live there. In Hsi-ning-fu, including the administrative district, there are said to be 250,000 Muslims while there are 25,000 in Lan-chou-fu, the capital. There are several mosques in most of the larger towns; in some places Muhammadans are not allowed to live within the town so that the mosques are in the outskirts; this is the case in Ning-hsia and Ping-liang.

Shensi: Before the risings there were said to be 1,000,000; but after these a great migration to Kansu took place. Official figures give 9480 for Singanfu and 26,000 for the whole province. There are certainly not more than 500,000. Singanfu has 7 mosques and Han-chung-fu 3.

Shansi: From the statistics for individual districts the total may be estimated at 25,000.

Chihli: The figures differ considerably and the total varies from 250,000 to 1,000,000. Pekin, with 30—40 mosques (the Chief Mosque is Niu-chieh, in which the Turk ʿAlī Riḍā teaches), and

over 10,000 Muslims; there are large colonies north and south of Pekin; north of the Great Wall there are Muslims in the district on the Mongolian frontier and they form dreaded robber bands.

Shantung: between 100,000 and 200,000; there are few in the east, but in the centre and west, the Muslims are numerous. We have detailed statistics given by a Mullah for Chi-nan, Chi-ning, Yen-chou-fu, Ta-yan-fu, Tsa-chou-fu, Sin-ching-chou, Sai-chou and Ching-chou-fu, which have in part been proved fairly accurate.

Honan: probably rather more than 200.000; there are 40,000 Muslims in Huai-ching-fu and the surrounding villages are all Muhammadans; Cheng-chou has 10,000 (prolific families); the whole population of Huai-tien-chi is Muḥammadan; mosques are numerous, almost every Hsien town has one.

Kiangsu: the estimate is very uncertain, perhaps 250,000; in Nan-king there are 10,000 with 25 mosques; almost every town of any size has one; we have no statistics for Su-chao.

Sze-chuan: the districts for which we have figures, give a total of about 50,000; as the province is a very large one, we may assume the total to be 250,000; the great Muḥammadan centre is in the northwest (Sung-pan-t'ing etc.) and Islām is making remarkable progress on the Tibetan frontier. In Cheng-tu the Lao (Kiu)-chiao appears to be represented (with 12 Imāms and 100 Ahongs) as well as the Hsin-chiao (with 15 Ahongs).

Kuei-chou: hardly more than 10,000; there are only 4 mosques in the whole province.

Yunnan: the estimates vary from 100,000 to 1,000,000; the rebellion made great gaps; the Muslims probably had to give low estimates in order not to arouse the suspicions of the Chinese. Muslims form scarcely more than 3% of the whole population (cf. the note in Davies's work, p. 847[b] above); the Muḥammadans of Yunnan are said not to be distinguishable by dress or mentality from the Chinese. According to Davies they are ten times as numerous in the plains as in the highlands; he estimates the total population at 10 millions, so that if we take the proportion at 3% the Muḥammadans number about 300,000 which is a striking contrast to Thiersant's 4,000,000. Soulié however (*Rev. du Monde Mus.*, Oct. 1909) estimated the number at 800,000 to 1,000,000 and the missionary Rhodes at 1,000,000. Mosques have not been allowed since the risings, though previously the Muḥammadans had important places of worship (a temple in Ta-li-fu was used as a mosque).

Hupeh: scarcely more than 10,000; there are 3 mosques in Wu-chang and 2 in Han-kou.

Kiangsi: not more than 2,500.

Anhui: estimated at 40,000; they are most numerous in the north; there are 6000 and 2 mosques in Anking and the neighbourhood.

Chekiang: about 7500; Hang-chou-fu, which is mentioned by all the older Arab geographers and where there was a large and prosperous Muḥammadan colony in Ibn Baṭṭūṭa's time, has now only 120—1000 families (including the surrounding country) and 3 (4) mosques.

Hunan: about 20,000; the largest colony appears to be in Chang-te where there are 3000 with 3 mosques.

Kuang-tung (with Hainan): about 25,000; the great city of Canton, the Khānfū of the geographers, the *ṣīnī kalān* of Ibn Baṭṭūṭa has at the present day (including the district around) 7000—10,000 with 5 mosques. Hainan has two places with mosques.

Kuangsi: 15,000—20,000 of whom 8000 are in the capital Kuei-lin, who have probably immigrated from the north; there are 6 mosques in Kuei-lin and in Wu-chou.

Fukien: probably only 1000; there are mosques in Amoy, Fu-chou and Chang-chou-fu; the 40 or 50 Muslims in Amoy belong to the official class.

Manchuria: about 200,000; Mukden 17,000, Kai-yuan 2000, Hsin-min-fu 2500, Chin-chou-fu 3500, Fa-ku-men 2000, Liao-yang 2500, Kuang-ning 7500.

Mongolia: there are Muslims in the south only; no figures are available.

Although Turkestan does not fall within the scope of this article [see above, p. 839[b]], it may be mentioned that the estimate varies from 1,000,000 to 2,400,000.

These figures give, exclusive of Turkestan, a minimum of 3,700,000 and a maximum of 7,400,000. It is remarkable that the missionaries living in the country give very discrepant figures; some evidently found centres of Islām and quite important schools where others saw nothing.

II. Sociology.

If we regard the Muḥammadan population of China as a social unit, the five phases of life under which any society may be dealt with are as follows.

1. **Relations of the Sexes (marriage, family, kinship)**. The relations of the sexes are governed by the Sharī'a law binding on the whole Islāmic world, in the scholastic form developed by the Ḥanafī school, but the details of the code are not well known to the great mass of the Muḥammadans of China nor are they observed as far as they are known. How far alterations have been produced by the influence of the surrounding Chinese cannot be ascertained from the meagre details at our disposal; it would be in any case impossible to generalise from these as the influences at work differ in the different localities. Thiersant's (ii. 266 note 1) remark on the well known law that the Muslim may have not more than four wives and have slaves as concubines, "in China Muḥammadans are forced to observe the laws of the Empire in regard to mariage" is certainly incorrect, if it implies that the Chinese government would interfere in this domain of private law, although the Chinese marriage laws may lay claim to be universally observed (these have been digested in P. Hoang, *Le Mariage Chinois au point de vue légal: Var. Sinolog.*, N°. 14. Shanghai, 1890. I have been unable to find in this work a definite statement that Muḥammadans occupy a special position). The general position of woman, too, is not uniform but differs according to rank and locality. According to d'Ollone, the prescribed wearing of a veil is not followed and the women go about unveiled; this was previously noted by Grenard, who, however, made an exception for the wives of rich men; it was only in Ho-chou that d'Ollone found another custom prevailing, where the women wear a veil of black silk below the eyes (this appears to me to be connected with adherence to the teachings of

Ma-Hua-lung); they also appear in the streets on horseback instead of in carriages (p. 247). As to binding the feet d'Ollone found no distinction between Muslim and Chinese women; particularly in Kansu, this custom was very prevalent among Muḥammadans. The fact that the woman is not a Muḥammadan, is not an obstacle to marriage; it is even thought to be meritorious to bring women of other faiths over to the true religion by marrying them. On the other hand Muslim women are strictly forbidden to marry a man of another faith, and such a union is looked upon as a most heinous sin (see for example the short catechism in Wassiljew-Stübe p. 108, § 6, also in Thiersant, II. 266 note 1); even here compromises are made with heaven: for example, the Emperor Ch'ien-lung received a Turkish princess into his harem and when I was passing through Minjol (a day's journey west of Kāshghar) in 1902, I saw a Chinaman with his Turkī wife. Illicit intercourse of the sexes no more receives the punishment prescribed by law (40 lashes with a whip, or stoning) than in other Muḥammadan countries. It must not be supposed however that morality is particularly lax, nor are the unnatural vices, common among the Chinese (thereon see the instructive chapter in Matignon, *Superstition, Crime et Misère en Chine*, Lyons 1902, p. 185 *et seq.*), so widespread among the Muslims. Special attention is not paid to the bringing up of children. A striking feature of family life is the honour paid to the parents and the reverence in which the ancestors are held. These virtues are extolled, for example, in the Chinese Arabic Ms. Sin. Hartmann 1, published by Forke, and find expression in forms of prayer for parents and ancestors; ancestral tablets in Chinese fashion are also used. Social distinctions are not defined by pedigree except in the case of descendants of the Prophet. The mischief which has been produced in other Muḥammadan lands by the exaggerated respect for this nobility of birth and the obtaining entry to it by false means, is not found among the Chinese Muslims nor is the Saiyid system developed here. This is explained by the fact that the people know they have for the most part been converted to Islām or are descended from converts (*tungan*). Any traces of the Saiyid system that exist in China seem to date from the *hsin chiao* when the sectarian Ma-hua-lung declared himself a Saiyid (see p. 852[b]). Whether the Muslims of China may be distinguished by the common possession of inherited physical characteristics (by race) is a question which cannot yet be satisfactorily answered. The usual supposition is that there are ethnic peculiarities and it is even said that the Muslim shows a special type, which may be recognised at once (this is the substance of Broomhall's remarks pp. 221 *et seq.*; cf. also the Muslims of Singanfu, who differ considerably in appearance and regard themselves as brothers by race of the Europeans, Berthelot, *Comptes-Rendus de l'Ac. des Inscr. et Belles-Lettres* 1905, p. 188). We must however take into account the opposite view adopted by d'Ollone; it is true that he gives pictures of Chinese Muslims whose faces have something of the Arab or Turk, but he lays stress on the fact that it is only the exceptions he is showing to his readers and emphasises (p. 430) that the great mass of Muḥammadans are quite like other Chinese; it may however be noted that it is impossible to speak of a general Chinese type; there are numerous different types in China and this diversity is naturally seen among Muḥammadans also. An Arab and a Turkish type are due to immigration and natural increase without any connection with the Chinese stock; as a matter of fact, however, most of the Muslims belong to the latter. There can be no question of the preservation of the type of the immigrants, because since the first great immigrations of Muslims, many fearful devastations of the districts in which the population is mixed have taken place. We have already spoken of the marriage of Muslim men with Chinese women; the children are of course Muslim and repeat the process so that after several generations there is but little foreign blood left in the individual. In the great majority of cases there is not one drop. Generally the Muslim is a Chinese who has been adopted or purchased as a child by a believer and brought up to Islām (on the purchase of children see also my *Isl. Orient.* i. 45). Conversions of adults are also frequent (cf. p. 851[a]).

II. Language and Ethnic Relations. If the possession of a common speech be a sign of the same nationality, then the Muḥammadans of China are undoubtedly Chinese, for Chinese is the language, which they write and speak; although they are said to possess dialectic peculiarities (according to Broomhall, p. 223 *et seq.* the Muslim is frequently recognisable by his speech), that their language is essentially the same as that of their Chinese neighbours is not to be denied. But religion forms so sharp a dividing line between Muslims and the other Chinese, that each of these groups feels itself to be a separate people (cf. the Ottomans of Turkish descent and the Turkish-speaking Armenians, who are sometimes scarcely distinguishable from real Turks and in whose language also there is practically no perceptible difference). In this respect the Muslims feel themselves far superior to their Chinese compatriots and the Chinese will hardly grant the Muslims the name *han-jên*. They are more usually called *Hui-hui* or *Hui-tzŭ*, though they do not tolerate this name themselves but call themselves *pei-chan* "white-band" i. e. wearers of white turbans. Whether there is a connection between *huitzu* and the name for the Uigurs, written very variously in Chinese, is doubtful (cf. Chavannes, *Les Tou-kiue Occidentaux*, p. 87—94). Only one group of Muslims in China are distinguished by their language, viz. the Salar who live in Hsün-hua-t'ing (Playfair, 31, 10) on the right bank of the Hoang-ho and in the surrounding villages and are also to be found on one portion of the road from Hsi-ning-fu to Ho-chou. They differ considerably from the average type of Chinese Muslim: the figure is lank and tall, the nose large and not flat, the eyes black and level, the cheekbones not prominent, the face long, the eyebrows thick, the beard full and black, the forehead retreating, the skull flattened behind, the skin brown but never yellow; they are therefore very like the Turks of Chinese Turkestan. Their most remarkable characteristic is their language which might be called a corrupt Turkī (cf. the specimens in Grenard and Potanin). In religion they are strict Ḥanafis and show great respect to their clergy (*achons*), but for the rest they are rather given to the drinking of

spirits. Even the lowest classes are acquainted with the Arabic alphabet. They do not burn incense nor allow the Imperial tablet to be exhibited in their mosques. They are said to have received their present form of religion from a reformer named Ma-Ming-hsin (Muḥammad Amin) who preached about 1750: he laid special stress on praying aloud (cf. p. 853ª) and much confusion was thereby brought about. The Salars are bold robbers and consort with the riffraff on the upper Hoang-ho, to whom they are bound by a common hatred of the Chinese. The above account is from Grenard in *Mission*, ii. 457 *et seq*. D'Ollone's account, p. 245, is different. According to him they dwell only in twelve villages in the district of Hsün-hua-t'ing on the right bank of the Hoang-ho, but have most intercourse with the left bank, particularly with Hsi-ning-fu; there are only five Salar families in Hsi-ning-fu, they do not shave the head entirely but wear the pigtail; they do not wear the four-cornered cap but the Chinese turbanlike headgear; they have frequently played a part in revolutions and claim to have originally come from Samarkand. D'Ollone, p. 307 *et seq*. has collected historical notices of them from Chinese sources. The Tungans are not to be considered as a separate linguistic group. According to most travellers the name is limited to the Chinese Muslims of the provinces of Kansu and Shensi. According to my own observations, the name is applied to all Chinese Muslims by the Turks of Chinese Turkestan. This is really quite natural; for *tungan* means "returned" i. e. to the true faith (according to the common Muḥammadan idea, every man is born a Muslim and his conversion from another religion in which he has been brought up by his parents, is really only a return to his original faith); it corresponds exactly to *dönme*, the name given by the Ottomans to the Jews in Smyrna and Salonica, who became converts to Islām in 1650. The term *tungan* is regarded as an insult by the Chinese Muslims, just as *dönme* is among the Muslims of Salonica; the explanation of the word as from *turkan* (d'Ollone, p. 250 and 317) is to be utterly rejected.

III. **Trades and Occupations**. The stronger physique and greater energy of many of the Muslims of China explains their fondness for entering the Chinese army in which there actually are a fair number of Muslim officers. The civil service is less sought after as the examinations require a familiarity with the religious and social views of the government. With the breaking away from the old tradition which set in at the end of 1911, the Muḥammadan elements will probably play a greater part in the development of the country by taking an active part in the government service; they must however give up any thought of the supremacy of Islām and look upon religion as a private affair entirely, the practice of which must always be placed second to the requirements of the state.

There are, however, certain trades at the present day which are entirely in the hands of Muslims and assure them a comfortable livelihood so that it is only under exceptional circumstances that a great movement into the civil service may be anticipated. The occupation most commonly followed by Muslims is that of *ma-fu*, i. e. horse-keeper; he may have a large number of transport animals and a number of servants to attend to them or he may have only a couple of animals and execute his commissions himself. The business requires prudence and energy and the Muslim *ma-fus* have the reputation of sticking at nothing, not even violence, to extricate themselves from difficulties. (See Broomhall, p. 225, for an account of the thrashing of weakly Chinese by a Muḥammadan driver). On the Tibetan frontier (Sung-p'an-t'ing) the tea trade is in the hands of Chinese. Agriculture is only followed by the Muslims of Kansu, Shensi and Yünnan; they are said to be inferior to the Chinese in this pursuit but to surpass them in cattle-rearing. Inn-keeping must also be mentioned; this is usually followed with the observation of the prescriptions of Islām. The sign of the Muslim inn-keeper therefore bears a waterjar as a sign of religious purity; one missionary however tells of a Muslim inn, in Chin-chiang, where pork was served. (Broomhall, p. 226).

IV. **Religious Life**. Religion, with the Muslims of China as in other parts of the world, dominates their whole view of life. From his earliest childhood the child of Muslim parents has it impressed upon him that he is a Muslim and as such better than the infidel Chinese. It cannot be denied that the consciousness of belonging to the great Islāmic community gives the Muslims of China a feeling of pride which makes their gait nobler, their eyes brighter and their bearing more dignified. On this point all observers are agreed. These haughty men are, however, very shrewd and have always been ready to make concessions to the ruling class and the religious and political system under which they live, in order to obtain security for their lives and property. Those who enter the government service take part in the ritual formalities, a procedure which Mickie, in his *Missionaries in China* recommends for imitation to Chinese Christians. At the same time there is a great gulf between the Chinese and Muslims, who are suspected of wishing to form a state within the state. Where their fanaticism has not yet been aroused, the Muslims are favourably disposed to Europeans and frequently regard them as of the same race as themselves in opposition to the Chinese or "blackheads". Though individual Muslim officials of high rank have been conspicuous for their hatred of foreigners, this is, as in the case of non-Muslim Chinese, due, not to religious motives, but to resentment at the strong arm with which foreigners are interfering in the internal affairs of China. The attitude of Muslim generals is frequently simply due to a quite mean desire for rank and wealth. For example Tung Fu-Hsiang was not a "fanatical Muslim" at all but an adventurer, who gathered adherents around him during the anarchy of the rebellion of 1861—1874 and in return for the rank of Mandarin became a tool of the Viceroy Tso-Tsung-T'ang and the General Lu-Song-shan. He beheaded the instigator of the rebellion, Ma Hua-Lung, the prophet of the "new religion", who fell into his hands in a sortie from his town of Xin-ki-pu-Tung on this occasion gained huge estates. In 1895 again, it was Tung, who put down the rising in Hsi-ning-fu and Ho-Chou, and enriched himself in the usual way with the plunder which he took as victor from his co-religionists. He received the title of generalissimo (*ta jue*) and was practically king of the land. When in 1900 the Boxer rising broke out in Pekin, he hastened

thither, with his minions, among whom was the notorious Ma An-liang, Tongling of Ho-Chou, and distinguished himself by his fanatical and malignant attitude to foreigners; the latter only saw in him a Muslim with a body of Muslim followers and knew nothing of his real relationship to Islām. He was officially "banished" as a punishment to Kansu where he lived the life of a *grand seigneur*; he had two strong castles at Kin-ki-pu and a bodyguard of 500 old soldiers, while around he had tenants on the estates which he had taken from the Muslims. The governors of Kin-ki-pu and Lin-chou dared do nothing without his consent. When he died in February 1908, all the titles, which had been taken from him under European pressure, were restored to him and his body was interred with the highest honours in Kou-yuen, his birthplace. Another Muslim who held high military rank in recent times was Ma Ti-kai, a native of Yünnan, nephew of the sectarian Ma Hua-lung, and general commanding the army in Sze-Chuan.

Taught cunning by oppression, the Muslims of China have been working from the earliest times, and particularly keenly during the last 250 years, to increase their numbers by other means than natural reproduction. Their main instrument has been conversion. To obtain children to convert to Islām, they adopted the simple plan of buying them from their Chinese parents when the latter were in great penury (on this and parallels from the practice of Christian missions see "*China und der Islam*" in my *Islam. Orient*, i. p. 45 and note 2.). Many hundreds of thousands of Chinese children have thus become members of the Islāmic community. We have already mentioned the marriage and conversion of Chinese women by Muslims (see above, p. 849ᵃ). With adults it is not the preaching of the true faith, which the Muslims would, as a matter of fact, hardly dare practise, that is effective, but dependence on some influential Muḥammadan; thus, for example, soldiers are often converted by Muslim officers; Muḥammadan mandarins are less often able to make converts, owing to their frequent change of residence. D'Ollone met several Muslims, who were recent converts, others could trace their faith to some ancestor who had been converted and were even able to say who he was. The number of converts has varied in different periods according to the power of the Muḥammadan officials. At the present day conversions are rare, because the court is suspicious of Muslims since the great rising, and they have fallen into discredit (d'Ollone, p. 431). What will be the effect of the new *régime* cannot yet be stated but it will certainly keep a sharper eye on any separistic movements. When in the middle of January 1912 the demand of the Chinese revolutionaries was published, viz. that "Manchus, Mongols, Muḥammadans, Tibetans and Chinese should be treated with perfect equality" it was the Turks of Chinese Turkestan who were meant by "Muḥammadans"; they were to lose a few petty privileges in the process of equalisation. The Muslims of China proper are not affected by it. It may safely be said that Islām is by no means uncongenial to the Chinese temperament in spite of its many inconveniences (the prohibition of pork, alcohol, opium and ancestor-worship). One must be cautious, however, in accepting the far reaching possibilities suggested by d'Ollone (p. 432) and it is very questionable if even a Muslim Emperor of China could bring about the conversion of the greater part of the Empire to Islām. For the history of the country shows us that China assimilates foreign elements and rejects what it cannot perfectly assimilate; it would thus be an Islām which was no longer Islāmic that we would have to deal with; this is, however, improbable, for throughout the whole Muḥammadan world there are signs of a distinct movement towards ecclesiastical reform in the sense of a stricter observation of the precepts of Islām; an Islām, transformed by the Chinese temperament, would certainly no longer be felt to be Islām by the whole community. The question of founding a new mixed religion would more probably arise. Some of the works, which have been collected by Vissière in his *Ouvrages chinois mahométans* in d'Ollone, p. 393 *et seq.*, are distinctly characterized by an endeavour to reconcile Islām with the teaching of Confucius through a kind of philosophy of religion (cf. particularly nos. 7 and 9; a similar work belonging to Pfarrer Hackmann is at present in my keeping). Conversions from Islām to the religion of the country are not to be thought of, for although throughout the whole population of China we find an inclination to form unions and societies, this happens also to be in a particular degree a Muḥammadan characteristic. The Muslims in China form a great friendly society, in which every one helps the other (the *ta'āwun* which is recommended in the Ḳur'ān). Community in Islām offers so many advantages to its members, that they have no cause to leave it even if their beliefs did not keep them faithful to it. The present state of affairs has naturally a good deal of light thrown upon it by its historical development, which has already been discussed above. D'Ollone rightly remarks the striking silence of the Chinese historians with regard to the Muslims while they mention Buddhist and Chinese missionaries; he also recognises the worthlessness of the epigraphic tradition. He is also right in pointing out, that there has never been any expansion of Islām inland from the coast, but rather that the Muslims of the colonies in the seaports were content with the privilege afforded them of practising their religion and kept apart from the rest of the population. D'Ollone draws conclusions from the mention of the *ta-chi* "Arabs" = Muslims under the T'ang and of the *Hui-ho* under the Liao and Chin dynasties (cf. also the mention of the Hui-hui under the Liao in Bretschneider, *Mediaeval Researches*, i. 267, and under the Chin in Thiersant, i. 6, though problematic); but this only points to a knowledge of the Muslims of the west and is no proof of Muslim immigration. The Sufair in d'Ollone who came from Bukhārā with several thousand Muslims and settled on the borders of Mongolia and China is a fictitious character. As a matter of fact (cf. above, p. 847ᵃ) there is no reason to believe there was any appreciable immigration of Muḥammadans before Saiyid-i Adjall 'Omar. Marco Polo only once mentions the presence of Muslims in the province of Yünnan through which he travelled a year after the death of the Saiyid while everywhere else he speaks of idolators (cf. p. 846ᵇ above). The Saiyid built the two first mosques in Yünnan (d'Ollone, p. 35) and the Muslims of Yünnan trace their origin to him and his son Nāṣir al-Dīn. Khubilāi also was

surrounded by Muslims in his court; the history of the notorious Aḥmad has already been mentioned (p. 846[b]). In 1335 a grandson of Saiyid-i Adjall obtained a decree from the Emperor that Islām should be recognised as *ch'ing-chen-chiao* "the true and pure religion", as it is still called at the present day; in 1420 another grandson of the Saiyid was commissioned by the Emperor to built mosques in the provincial capitals Singanfu and Nanking. A later descendant of the Saiyid, the Ma-chu already mentioned, presented a petition to the Emperor in 1683-1684 asking to rank equally with the descendants of Confucius. This brings us within the period of the Manchu dynasty. One can hardly be wrong in supposing that with the end of the Ming dynasty (1644) and beginning of the Manchu there was a great increase in the activity of Islām and a corresponding reaction on the part of the Imperial government. This is undoubtedly connected with the activity and desire of the early Manchu Emperors for expansion. The risings that took place in the province of Kansu in 1648 and 1783 were reactions against the action of the governing authorities. It was also natural that the Muslims of Kāshghar, who had been practically independent under the Kalmucks (Kalmaḳ) of Ili, repeatedly tried to throw off Chinese rule, under which they had fallen on the destruction of the Kalmuck kingdom (about 1750) (cf. "*Ein Heiligenstaat im Islam*" in my *Islamischer Orient*, i.); of the later risings the following ought to be mentioned: 1820—1828 in Kansu and in Turkestan (the connection between these two movements is, however, uncertain; the Muslims of Kansu, who are called *Tungan* by the Turks, have on several occasions taken the field against the Muslims of Turkestan); 1855—1873 in Yünnan; 1862—1877 in Kansu, Shensi and Turkestan; 1895 in Kansu. I leave it an open question whether the conclusion is correct, that there have only been risings of Muslims since about 1644, because they did not feel their number large enough before. It appears to be correct, however, that it has only been under the Manchus that a deliberate policy in regard to religion has been followed by the Muslims, with the systematic increase of their numbers by the purchase of children and bringing a mild pressure to bear on possible converts; this policy was, however, very soon met by an equally deliberate policy of suppression on the part of the wily Chinese. The placing of a greater development of Islām in this period receives important corroboration from the fact that to all appearances, the literature of the Muslims in China does not begin till the end of the Ming dynasty; at least the *cheng chiao chen ch'üan* "Veracious Exposition of the True Religion", the preface of which is dated 1643, appears to be the oldest monument of this literature (Nº. 1 in Vissière's list in d'Ollone, p. 393 *et seq.*). Since that time the production of books of instruction in religion has never ceased. It was not till 1783, however, that the attention of the Imperial government was attracted to the literary activity of the Muslims, and the Emperor Ch'ien Lung ordered the Marshall A-Kui to investigate the books of the Muslims, on which the latter was able to make a favourable report. That no one has troubled about this literature, shows what little importance was attached to the Muslims.

If we may suppose that with the change of dynasty in 1644, a new stratum appeared in the Islām of China, this perhaps explains the gradual emergence of a separate religious movement, which has still to reckon with the ancient Islām of the country, but which may be defined with some degree of certainty by the researches and observations of the d'Ollone expedition. The Muslims of the three chief Muslim provinces of China, Kansu, Sze-chuan and Yünnan are actually divided into two great sections, who are hostile to one another; the followers of the *lao chiao* "the old religion" and the followers of the *hsin chiao* or "the new religion". However grateful one may be for the extensive materials collected by d'Ollone on these two movements, though he gives them with all reserve, it will only be possible to come to a final conclusion as to the essential difference between them when further material has been collected by specialists. D'Ollone's view that the new religion is characterised by the cult of saints and their tombs and the recognition of heads of the community, to whom God has given special grace is supported by parallels from other Muḥammadan lands. It is an axiom that the supremacy of the democratic principle in the life of the community is the earlier, the strong organisation under leaders, who appear as supermen, the later development. The older view seems to be still the predominant one among the Muslims of China. Travellers are all agreed (for D'Ollone's notice see p. 438 *et seq.*) that the total lack of organisation is one of the most remarkable features of Chinese Islām. The various communities are quite independent of one another; they recognise no authority, neither in their province nor in the Empire, nor anywhere at all; they know nothing of a Caliph; the Sharīf of Mecca is, they grant, a worthy servant of religion but they do not recognise his authority. In brief, there is no spiritual hierarchy and none of the Imāms (*Ahongs*) of China takes precedence of the others except through learning or renown. Those who officiate among the communities are dependent on the believers, who elect, support and dismiss them without the slightest interference from any one (d'Ollone, p. 439).

Of the details of the division into *hsin chiao* and *lao chiao*, I can only mention here that the "new religion" was founded by the Ma Hua-lung who was slain during the rising in Kansu. His adherents in Kansu where they are numerous, and in Sze-chuan, where they are as yet few in number, regard him as the true successor of Muḥammad. His descendants or disciples possess supernatural powers. The essence of the "new doctrine" is not yet properly known. One is inclined to find Shī'ism represented in it or at least a very strong vein of Ṣūfism. The notices in d'Ollone make it clear that the teaching of Ma Hua-lung is orthodox Sunnī and that any special variety of mystic contemplation, such as is found over all Central Asia, is not present in it. Ma Hua-lung apparently belonged to the class of fanatical impostors who are typically represented in Chinese Turkestan by the Khodjas, i. e. the descendants of Makhdūm-i A'ẓam, whose religious and secular conception of the state I have fully discussed in *Ein Heiligenstaat im Islām* in my *Islam. Orient*, i. 195 *et seq.* Whether Ma Hua-lung was influenced by the doctrine of Mahdism is not certain; there is no definite reference to this in d'Ollone. In

any case Ma Hua-lung was regarded as an incarnation of the Spirit, as a *sheng jen* "holy man" or "Prophet", equal to the Prophet Muḥammad or superior. It is greatly to the credit of the Muslims of Kansu that only the lower classes allowed themselves to be deceived by this impostor, who, though he had never had the least education, appeared to know everything and had an answer for every question. As the founder of a new sect, Ma Hua-lung had to prescribe some external distinctions so that his adherents might be readily recognised; he chose that they should pray with aloud voice and hold the hands flat and horizontal in the *ḳiyām* attitude of prayer in opposition to the low voice and the hollowed hands usual elsewhere; from their custom of praying aloud, is derived the usual name for the followers of Ma Hua-lung: *Djahrīye* (corrupted to *Chaikerinye*) "one who prays in public" in opposition to *Khafīye* (popularly *Hufeye*) "one who prays in secret". In these external distinctions, Ma Hua-lung appears to have associated himself with a movement in the West, which had entered China at an earlier period; 150 years previously, a certain Muḥammad Amīn from Turkestān, known in China as Ma Ming-hsin had appeared as a reformer among the Salars (see above p. 850[a]), and introduced praying aloud which led to a good deal of strife (see Grenard, *Note sur l'Ethnographie du Kansu* in Dutreuil de Rhins, *Mission Scientifique dans la Haute Asie*, ii. 458). Ma Hua-lung did not definitely forbid attendance at mosques but he allowed prayers to be offered up in private houses in the common hall without the observation of any particular formalities of dress. Three or four houses usually have a common place of prayer, a room specially reserved for this purpose; this arrangement was instituted with a view to accustoming his followers to pray more. In Sung-p'an-t'ing the followers of the new religion go to the same mosques as those of the old, but in Shensu the schism is complete. The d'Ollone mission had a very bad reception in the mosque of Ch'eng-tu; the followers of the new doctrine have the reputation everywhere of being hostile to Franks while Muslims, as a rule, are friendly to them. After Ma Hua-lung's death (in 1871) a schism arose; his son-in-law, Ma Ta-hsi, and his grandson Ma Eurh-hsi, disputed the sacred heritage: Ma Ta-hsi, who was 55 years old in 1898, had the majority on his side and his home Cha-kou near Ku-yuen is a religious centre of importance and also has a Madrasa. Ma Hua-lung's teaching was introduced into Yünnan by Talaman (Talamasan) his younger brother or nephew, who subsequently fell in battle against Ma Yu-lung. The number of adherents in Yünnan seems to be less than in Szechuan, where d'Ollone found people of the *hsin chiao* from the frontiers of Yünnan to the borders of Kansu. In addition to the two sects: *Hufeye* and *Chaikerinye* there are two others: *Kuberinye* and *Katerinye*; the meaning of *Kuberinye* cannot be ascertained (for *kubārī*?); *Katerinye* is certainly = *Ḳādirīye*, adherents of ʿAbd al-Ḳādir Gīlānī. According to one *Ahong* the four sects are connected with the four caliphs and each of the four is said to have instituted one form of worship; Abū Bakr the *Hufeye*, ʿOthmān the *Chaikerinye*, ʿOmar the *Kuberinye* and ʿAlī the *Katerinye*. The name *Katerinye* is also said to be applied to those who pay reverence to tombs. As in most Muḥammadan countries, here also the tombs of famous holy men, who are represented as saints, are reverenced; for example, about a mile north of Sung-p'an-t'ing is the tomb of an *Ahong* from Medina, who came thither in 1668, lived for a time in Shensi, released the land from a drought by his prayers in 1673 and died in 1680. An *Ahong* attends to this tomb. There is also another smaller tomb within the Mausoleum. The orthodox Mullas preach violently against the reverence of tombs. It is supposed by d'Ollone that the reverence of tombs is one of the characteristics of the new teaching. We cannot agree to this, however; besides it is in contradiction to other statements of the same writer. It is rather the case that the reverencing of tombs is wide spread in these areas and the fact that Ho-chou, the centre of the new teaching, is rich in tombs, is an accident. It must also be investigated whether the name *kumbe-chiao* of the new doctrine which d'Ollone mentions and on which he bases his conclusions in part is to be understood as emphasising this "teaching regarding graves" as a distinguishing feature. On the religious position of the Salars, who are ethnically distinct, see above p. 849[b]. The Muslims of China as a whole are quite ignorant of the control of the whole Islāmic world by a Caliph. But the efforts of Stambul at the end of last century had some result: Yaʿḳūb Beg recognised ʿAbd al-ʿAzīz as "commander of the faithful", and Sulaimān, the Muḥammadan king of Yünnan, sought the help of the Caliph, though vainly as it happened. On the intrigues of ʿAbd al-Ḥamīd, see below p. 854[a].

As the intellectual life of the Muslim is closely bound up with his religion, the object of elementary education is to instil the elements of religious knowledge into the children by the reading of the Ḳorʾān and by short catechisms. Two languages are used in this process: the language of the country and that of the Ḳorʾān, or rather a mixture of Arabic and Persian. There are numerous books of selections from the Ḳorʾān with or without Chinese translations in use in the country, and little volumes, in which the main principles of Islām are given in one or two languages (I have fully discussed a book of selections from the Ḳorʾān and a Persian handbook on prayer in *Zwei Islamische Kantondrucke* in my *Islam. Orient*, i. 69 *et seq.*; a small bilingual catechism (in Arabic and Chinese with scraps of Persian) is in my possession). Of works of a didactic nature in Chinese, the d'Ollone expedition brought back 36 examples (block-prints), which Vissière (in d'Ollone, p. 393 *et seq.*) has described, with the inclusion of all other available material. In the list given by Broomhall, p. 301 *et seq.* there are only three works with which Vissière was not acquainted. According to Vissière in d'Ollone, p. 379 *et seq.*, there is a Muḥammadan newspaper published in Peking entitled *cheng tsung ai kuo pao* "Patriotic Gazette". Arabic and Turkish publications find their way among the Muslims of China in fair numbers (d'Ollone, p. 380 *et seq.*). Art has no place in the life of Chinese Muslims. In one field only is there any attempt at decorative work viz. in Arabic calligraphy; the letters are elaborated into many elegant forms, influenced by the Chinese style of writing: angles and loops are made as in the Chinese way of writing (particularly the 'grass' or rapid hand). These Muslims are fond of producing beautifully written

Arabic tablets which frequently differ so much from the ordinary hand that they can only be read with great difficulty (even so experienced a scholar as Blochet read an *r* wrongly for a *y* in one of these tablets, see *Rev. Monde Mus.*, v. p. 291).

V. Political Life. The Muslims in China proper have never formed an independent state and even in Turkestan since the annexation of the land about 1750 there has only once been an Islāmic state and that an ephemeral one (under Ya'ḳūb Beg, see above p. 853ᵇ). The rising in Kansu and Shensi 1863—1874, which was a condition of Ya'ḳūb Beg's successes, had the same object. It failed and indeed was doomed to failure from the first; for a permanent state can only be founded on a national basis. This foundation is not possible among the Muslims of China. The possibility has been suggested that the Muslim Chinese might force their religion upon their non-Muslim fellow-countrymen and thus a great Muḥammadan Chinese Empire might be formed. It is true that the Muslims are not lacking in inclination to realise some such scheme and that in certain Muḥammadan circles this ambition will always lead to risings against the government of the country. Unfortunately this feeling has been abused for purposes of political intrigue. 'Abd al-Ḥamid conceived the fantastic notion of bringing the Muslims of China under his authority. His first step in this direction was to send his Adjutant Enwer Pasha to China (at the end of 1900), at the time of the European coalition against China to carry on propaganda with a view to his recognition as Caliph. This failed utterly: Enwer compromised himself from the beginning and besides he was not sufficiently supplied with money (*Rev. Monde Musul.*, i. 394). Afterwards 'Abd al-Ḥamid was induced by the visit to Stambul of an important *Ahong*, Wang Hao-Shan also called Wang Kuan, alias 'Abd al-Raḥmān, from Pekin, to send two 'Ulamā, 'Alī Riḍā and Ḥasan Ḥāfiẓ to Pekin where they established a school in 1907 (*Rev. Monde Musul.*, iii. 613 *et seq.*; vi. 698 *et seq.*). They also travelled about the country but did not, however, visit Kansu and Shensi, the two great Muslim centres. The Chinese government has apparently foiled the Turkish intrigue most cleverly. The incident of the "few Osmanlis in China" who sought German protection at the German Embassy in Pekin, how the German Embassy in Constantinople promised Turkey to afford this protection and how the Chinese government suddenly declared they knew nothing of it and had no wish to know of it, is within recent memory. These two emissaries, however, of whom it has been proved that they were Ottoman officials with a monthly allowance of 200 taels = £ 25, applied, when 'Abd al-Ḥamid left them in the lurch, to the French embassy and are said to have been successful there. They returned to Stambul at the end of 1908. Even in the new constitutional Turkey the question has been raised of sending an Ottoman Embassy to Pekin, a vain dream which has not the slightest prospect of being realised.

Although the future of Islām in China cannot be precisely defined at present, it is abundantly clear that its victory over the other religions of the country and ultimate supremacy of the Muslims over the other peoples of the Empire is a mere dream, to follow which will bring only misfortune and destruction upon the Muslims. Even if through some unforeseen chain of circumstances, their hope should be realised even for a brief period, this would be a grave disaster to the whole Chinese Empire. Islām is not a religion compatible with civilisation; it is emphatically the bitter enemy of Frankish culture and it is this which China is about to adopt. If the Muslims should attach themselves to some extent to the party of reform, two results are possible; they will either adopt entirely the new ideas and work in unity with the Han for a strong regenerated China on an ethnic basis in which case they will do no harm, or they will secretly cherish schemes for the supremacy of Islām, in which case they will be crushed without mercy as soon as they are discovered; for Muslims will always form an infinitely small proportion of the leaders of the reform movement. Nevertheless the Chinese nation will be well advised to keep a watch on the Islāmic elements in their midst and particularly to prevent their increase by the purchase of Chinese children.

(MARTIN HARTMANN.)

CHOCIM (CHOTIN, Turk. Khōtīn), the capital of a district in Bessarabia, famous in history for the fierce but unsuccessful attack by Sulṭān 'Othmān II on the strong encampment of the Poles there in September 1621 (1030). In 1084 (1673) there was further fighting around Chocim, in which the Turks were again unsuccessful, but finally in the beginning of 1674 it had to surrender to the Ottoman troops. In 1182-1183 = 1769, the town was besieged by the Russians and captured but afterwards given back to the Turks. This was repeated in 1788. It was not till after their capture of it in 1806 that Chocim was definitely ceded to Russia in 1812.

ČIFT, a Turkish word (from the Persian *djuft*, Avestan *yukhta*), meaning "pair", "couple" and in particular, the "pair of oxen yoked to the plough", whence it comes to mean "cultivated fields", "ploughing", and "the amount of ground

that can be tilled by a pair of oxen in a day". As an abbreviation for *čift aḳčesi* it means a definite tax on certain tributary land.

Bibliography: M. d'Ohsson, *Tableau de l'Empire Othoman*, vol. vii. p. 234; Belin, *Étude sur la Propriété Foncière*, in the *Journ. As.*, vth Ser. Vol. xix. 1862, p. 206. (CL. HUART.)

ČIFTLIK, cultivated land, hence country farm i. e. the dwelling-house of the farmer and the lands attached to it; the farms on the Imperial estates are known in the official language as *čiftliklāt-i humāyūn*. In Bosnia, a *čiftlik* of land of the first quality contained from 60 to 80 *dönüm* (a *dönüm* being 40 paces square), of the second quality from 90 to 100 and of the third from 130 to 150. (CL. HUART.)

ČIGHALEZĀDE SINĀN PASHA, an Italian renegade, who was brought as a prisoner to Constantinople with his father. They belonged either to Messina or Genoa, where a prominent family of the name Cicala is known to have existed. According to Gerlach, *Türkisches Tagebuch*, p. 17 and 244, the father was „Visconti Zicala of Genoa a powerful Corsair and holding high rank in the service of the King of Spain". The *Ḥadīḳat al-Wuzarā* calls him a captain of the republic of Genoa. Gerlach relates that he was taken prisoner off Majorca on the journey from Naples to Spain — by Piale Pasha, according to the *Ḥadīḳat*. The father died soon afterwards in the prison of Yedikule. His son, whose Christian name according to the *Ḥadīḳat* was Scipio, became a convert to Islām, took the name Sinān and was brought up among the pages. In 1575 when 28 years of age he became an Agha of Janissaries having previously married a daughter of Aḥmad Pasha, a grand-daughter of Rustam and an Ottoman princess. He had played a prominent part in campaigns in various parts of the Turkish empire: Moldavia, Hungary, Erzerūm, Baghdād and Van. In 1589, he became Kapudan Pasha, and in 1596 after the battle of Kereczies, Grand-Vizier which office he only held for four weeks however. He made himself intolerable by ill advised measures, particularly his great strictness with the Janissaries and was banished to Aḳshehir. He again became Kapudan Pasha and held this rank for four years. After a rather unsuccessful campaign on the Persian frontier he died in Diyārbekr in 1605. He was the type of unscrupulous renegade who without any personal ability used to succeed in attaining high rank by his connections at court and his wealth.

Reiches*[2] (Pesth 1841), ii. numerous references; Gerlach, *Türkisches Tagebuch* (Frankfurt, 1674); Sāmī, *Ḳāmūs al-a'lām* (Constantinople 1306); 'Othmānzāde, *Ḥadīḳāt al-Wuzarā* (Constantinople 1271). (F. GIESE.)

ČILLA, a fast lasting forty days (*quadragesima*) which pious ascetics and derwishes spend in seclusion, prayer, and fasting. Cf. Jacob, *Die Bektaschijje*, p. 36.

ČĪM, the name of a variant of the letter Djīm [q. v.] which the Persians have invented to express the fricative *t* + *š* (cf. the article, ARABIA (ARABIC WRITING, p. 391[a]). This derivative of the letter *djīm* is noteworthy for the pronunciation of ج in the time and district in which it was made. Other peoples, who use the Arabic alphabet, have borrowed čīm from the Persians.

ČIMKENT, the capital of a district in Russian Turkestān, Lat. 42° 16′ N. and Long. 69° 30′ E. (Greenw.), 1550 feet above sea-level, on the right bank of the Badam which flows into the Aris, a tributary of the Sir-Daryā. At the time of the Russian conquest (1281 = 1864) the town had a circumference of about 4 miles and was surrounded by a low wall of clay; the citadel was on a high mound in the south east. According to the most recent census the number of houses in the old town is 1886, while there are 105 in the Russian quarter. The present population is 12,500 of whom 800 are Russians and 150 Jews. The town which is pleasantly situated, is distinguished by its temperate climate and excellent water from most of the other towns of Central Asia and is visited by many Russian families from Tāshkent as a summer resort. The post and military routes to Tāshkent from European Russia (*viâ* Orenburg, Kazalinsk and Turkestān) and from Siberia (*viâ* Wjernij and Awliyā-Ātā) meet at Čimkent so that the town used to be of some importance as a trading-centre; Čimkent was not touched by the Orenburg-Tāshkent railway, opened in 1905. Trade is, as usual in Turkestān, mainly in the hands of Tatars (Nogai).

Since the last decade of the xixth century there have been 17 Russian villages in the district of Čimkent, which are almost all fairly prosperous. The most important of the native villages is Sairām, the Asbīdjāb or Asfīdjāb of the Arab geographers (now pronounced Isfīdjāb, in Persian manuscripts frequently Sindjāb) with many tombs of an earlier period, now chiefly noted for its horse-market.

Of cereals, wheat is the most cultivated, the best quality being produced in Sairām and the Russian villages. Since 1897, cotton has been grown particularly in the immediate neighbourhood of Čimkent; formerly it used to be thought that cotton could not be grown in this part of Turkestān on account of its northerly situation; in the first year 320,000 kg. was produced which has now risen to 800,000 kg. The district of Čimkent is now the only area in the world where the medicinal plant *Artemisia cinae*, from which santonin is prepared, survives; the whole annual yield goes to Hamburg; there and not in Russia are the prices fixed for the whole world.

Čimkent (sic) is mentioned in the *Ẓafar-Nāma* of Sharaf al-Dīn Yazdī (Ind. ed. i. 166) as "a village near Sairām", in later sources also, at least down to the first half of the xviiith century (in 1723 Sairām was taken by the Kalmucks) it is always Sairām and not Čimkent which appears as the "town" of this district; the changes, by which Čimkent became a town and Sairām sunk to a village, can only have come about in the last two centuries. In 1864, Sairām was sacked as a punishment for a treacherous attack on a small body of Russians.

(W. Barthold.)

ČINGĀNE, one of the names applied to the Gypsies in the East, which has passed into various European languages in more or less modified forms. The origin of the name is still disputed. It is supposed that the Sāsānian Bahrām V Gōr (420—438) first brought the gypsies from India to Persia and that they spread thence over the world. In the passages referring to this in Firdawsī and Hamza Iṣpahānī these Indians are called Lūrī or Zoṭṭ. Other names commonly used are Nawar in Syria, Ghurbat or Ḳurbat in Aleppo, Persia, Egypt and elsewhere. In Egypt the name Ghadjar is also in use, while the gypsies of Egypt are fond of calling themselves Barāmika (descendants of the Barmakides). Other less known names may be found in the works of P. Anastase and de Goeje cited below.

As in other countries, the Gypsies of the East are farriers, coppersmiths, tinkers, pedlars, jugglers and musicians; some are sedentary while others lead a wandering life. There are no reliable statistics on their numbers but they are certainly fairly numerous in Persia and Turkey. Some are nominally Muḥammadans, others Christians, but in reality they have their own religion and political organisation, which need not be discussed here as they are outside the scope of this work.

Anastase in *Mashriḳ* 1902; de Goeje, *Mémoires d'histoire et de Géographie Orientales*, N°. 3.

ČINGIZ-KHĀN, frequently written Činkkiz-Khān, Mongol conqueror and founder of the Mongol world-empire, was born in 1155 A. D. (according to the Turco-Mongol animal cycle in the year of the pig, 549-550 A. H.), on the right bank of the Onon in the district of Dülün-Boldaḳ (now in Russian territory, about 115° E. of Greenwich). He is said to have received his original name of Temüčin from the name of a prince who was conquered by his father Yisükäi-Bahādur about the time of his birth. What else is related of his ancestors and his early youth was not written till afterwards and is influenced by his later career; even the oldest form of the Mongol tradition contains the story that the future conqueror of the earth came into the world with a piece of clotted blood in his hand.

The people, who in the first half of the xiii[th] century shook the foundations of every kingdom from China to the Adriatic Sea in their campaigns, are called Tatars in all contemporary sources, whether Chinese and Muḥammadan or Russian and Western European. It seems to be the case that the Mongols before Čingiz-Khān's time called themselves by this name (the word Tatar appears as early as in the Orkhon inscriptions of the viii[th] century A. D. as the name of a people). The Chinese distinguish three divisions of the Tatar people viz., the white, black and "wild" Tatars. This classification is obviously based neither on their origin nor their political divisions but on the respective degrees of civilisation attained by the three groups thus formed. The white Tatars who lived near the Great Wall of China were under the influence of Chinese culture; the black Tatars led a nomadic life in the district north of the Gobi desert; and the "wild" Tatars, the "peoples of the forest" of Mongol tradition dwelled in the most northern parts of the present Mongolia and in Transbaikalia, which is now under Russian rule; the life of the cattle-rearer was quite as distasteful to these hunter tribes as that of the peasant bound down to till the soil is to the nomad. According to the Chinese view Temüčin belonged to the "black Tatars"; Mongol tradition numbers his fellow tribesmen, the Täidjiyüt among the "tribes of the forest"; in any case it is certain that their abode (on the Onon and Kerulen) was on the frontier between the lands of these two divisions; they were certainly on a lower level than many other tribes of the black Tatars, such as the Keräyit, who were converts to Christianity (on the upper course of these rivers and on the Tola) but were more civilised than their neighbours in the north.

The name Mongol (in the Muḥammadan sources Moghol or Moghūl) first came into use as the name of a dynasty and kingdom under Čingiz-Khān and later came also to be used as the name of a people, being attached, as it seems, to a small principality of the xii[th] century, the ruler of which had risen against the Kin dynasty then ruling in North China. In the *Annals of the Kin Dynasty* (*Kin-Shi*) a treaty of peace concluded with these Mongols in 1147 is mentioned, and in 1161 a campaign against the Meng-ku-ta-ta (Mongol Tatars). It is apparently to the same principality that the notices in Mongol tradition refer, of the princes who were defeated in battle against the Kin and the Tatars on the Lake of Buyir-Nor and whom Čingiz-Khān is said to have afterwards avenged and gained renown thereby. Kutula-Kaān (this form was used by the Mongols for the Turkī *ḳaghan*) is mentioned as the last of these princes; his son Altān is mentioned among the followers of Temüčin (he afterwards, like many others attached himself to the opponents of this upstart and fell in the ensuing conflict).

According to the Mongol tradition, Yisükäi (of the family of Ḳiyāt) was also connected with this house; whether the relationship actually existed or is a later invention, is a moot point. It is equally uncertain whether Yisükäi himself, as the tradition would have us believe, was during the latter years of his life the leader of a large confederacy of tribes. He died in 1167, when his eldest son Temüčin was only 12 years old; immediately after his death the confederacy led by him is said to have broken up. Temüčin, his mother and brothers and sisters, forsaken by all, had to live by hunting and fishing. Čingiz-Khān therefore must have laid the foundations for his later sovereignty alone without having inherited anything from his father. He therefore did not enter on his real career till he was at a much more advanced age than all other conquerors; up to his fiftieth year his name could hardly have been known to any one outside Mongolia.

The founder of the greatest empire, that the world has ever seen, first appears as the leader of a body of adventurers, some of noble birth who had elected him their "Khān". The accounts of this part of his life are scanty and very un-

reliable; yet the manner in which the "Khān" and his "subjects" are said to have worded their pledges to one another is characteristic. His subjects are related to have said to the Khān on his coronation: "If thou wilt be our ruler, we will fight in the forefront in every battle against countless enemies; should we gain beautiful women and girls and noble steeds as booty, we will surrender them to thee. In the chase we will outstrip all others and hand over to thee the animals we take". In the days of his misfortune the Khān, deserted by his faithless followers, spoke in a similar strain; he said he had fulfilled his promises to them: "I have won many herds of horses and sheep, women and children and given them to you; when we were hunting in the steppe, I organised drives for you and drove the game from the mountains down towards you". Even in the days of his greatness, Čingiz-Khān had advanced but little from these primitive views; it was always his greatest delight to ride the steeds of his conquered enemies and to kiss their wives (cf. the Persian text of Rashīd al-Dīn, ed. Berezin, *Trudi vost. otd. arkh. obshl.*, xv. 194). He nowhere claims, like the Turkish Khān in the Orkhon inscriptions of the viii[th] century, to have undertaken his campaigns of conquest for the good of his people as a whole, to have made the people, that was few in number, numerous, the poor rich, and to have clothed the naked.

The events in Mongolia in the second half of the xii[th] century, were, apart from local causes, provoked by the policy of the Chinese government. Like many other Chinese dynasties, the Kin practised the principle of putting down one insubordinate nomad prince with the help of other branches of the same people. The Tatars on the Buyir-Nor, with whose help the Mongol princes were slain, had just at this time become too powerful for the Chinese; in the war against this enemy we find Temüčin, who was afterwards to wage war against the Kin dynasty to avenge the Mongol princes, with whom he claimed relationship, with the prince of the Christian Keräyits, figuring as the faithful ally of the Chinese government. In the year 1194 (the year of the tiger) the war was decided in favour of the allies; as a reward, the Keräyit prince received the title of king (Chin. *wang*, *ung* or *ong* among the Mongols as among the Turks of the viii[th] century) from the Chinese general (*Jing-siang*), while his son received the military rank of *tsiang-kün* (Mong. *sengün*). The original names of these two princes seem to have been quite supplanted by these Chinese titles; Temüčin also was given a similar title of honour, which however never attained the same popularity.

The following decade was a period of domestic strife in Mongolia. Apart from the countless feuds between individual princes and tribes, in which Temüčin always fought as a faithful ally by the side of the Keräyit prince (he is said to have called him "father"), a more serious quarrel is mentioned; in 1201 (the year of the cock) a considerable number of tribes attached themselves to Temüčin's former blood-brother (*anda*) Djamuka, who was elected ruler by his followers with the title Gürkhān. This movement is evidently to be explained as a war of the masses against the aristocracy; unlike Temüčin and his allies, Djamuka did not espouse the cause of the aristocratic "horseherds", but of the poor and despised "shepherds". The army collected by Djamuka was soon defeated and scattered; but he afterwards succeeded in winning the confidence of the Sengün and his father and estranging them from their former ally. This breach had the gravest consequences for Temüčin; abandoned by almost all his followers, he had to retire with a small body of faithful retainers to the small lake of Baldjiyūna and drink its bad water. Nevertheless he succeeded in cunningly baffling his opponents and surprising them by an unexpected attack. Ung-Khān and his son Sengün had to save themselves by flight and afterwards perished in distant lands, the father in the west of Mongolia and the son in the district between Kāshghar and Khotan. All the tribes in the eastern half of Mongolia had to acknowledge Temüčin as their lord (1203: year of the pig).

The faithful few, who had remained true to Temüčin even in the dark days at Baldjiyūna, afterwards enjoyed great privileges as "Baldjiyūntü" in the empire founded by Čingiz-Khān. It is important to note that three Muḥammadans are mentioned among them: Dja'far-Khodja, Ḥasan and Dānishmand-Ḥādjib; the two latter accompanied their sovereign many years later on his campaign against the kingdom of the Khwārizmshāh and rendered great service to him by carrying on the negotiations between him and the inhabitants of these lands; Dānishmand must have been much younger than Temüčin, for he survived him by 25 years and is mentioned as tutor to his grandson Melik (one of Ögedei's sons). These Muḥammadans could only have come to this part of the world as traders; indeed we are expressly told by a contemporary Chinese writer (Meng-hung), that the trade between Mongolia and China was in the hands of Muḥammadan merchants from the west. These merchants, called by the Mongols by the Turkish word *ortaḳ* (lit. 'middleman') enjoyed the favour of Čingiz-Khān at a later period also; in the sayings ascribed to him he advises his captains to have their sons instructed in all the arts of war so that they may enter on their campaigns with the same confidence as a merchant, sure of the value of his goods, on a trading journey. It may almost be assumed that the counsels of these men, obviously much superior in education and experience to the Mongols, had some influence on Čingiz-Khān's policy and on the institutions of his empire; but we have no certain information on this point.

The subjection of the western half of Mongolia was only completed in 1206 (year of the tiger) after the conquest of the powerful tribe of the Nāimān (likewise Christians); in the same year according to Chinese authorities, Temüčin adopted the "title of Emperor". As a matter of fact, however, neither he nor his immediate successors, ever regarded themselves as Emperors of China, even after the destruction of the Kin dynasty, but always as the rulers of a kingdom of nomads only. Like many nomad princes before him (his successors did not follow the custom however) Temüčin also adopted a new name when he became sovereign. Mongol tradition gives us no reliable details as to when he first took the name "Čingiz-Khān" and what "Čingiz" really means. According to some, Temüčin already bore this name as "Khān" of a band of adventurers, according to

others it was only taken by him after his victory over the Kerāyit in 1203 and according to others again not till 1206 when he overcame the Nāimān. His Chinese contemporary Meng-hung considered the word "Čingiz" to be a corruption of the Chinese T'ien-tze ("Son of heaven"); another Chinese etymology (Ching-sze, i. e. perfect warrior) is given by R. K. Douglas (*The Life of Jenghiz Khan*, London 1877, p. 54). According to the Mongol etymology given by Rashīd al-Dīn (cf. the text in the edition by Berezin, *Trudi vost. otd. arkh. obshč.*, xv, p. 12), *Čingiz* is explained as a plural formation from the adjective *čing* "strong". As Temučin is said to have received his title as sovereign from a shaman, the word "Čingiz" is probably taken from the domain of the religious ideas of the Mongols (which has as yet not been properly investigated).

All authorities agree in stating that it was not till 1206, after he had united the whole of Mongolia under his sway, that Čingiz-Khān summoned his first parliament (*kuriltai*) and that it was on this occasion that the insignia of his sovereignty and the institutions of his Empire were first definitely established. As a symbol of the power of the Khān, a banner with nine white horsetails was erected in his camp; according to Chinese authors, there was a black moon represented on this banner.

Čingiz-Khān is credited with saying: "He, who is able to keep his own house in order, is also able to create order in an empire; he, who is able to command ten men in a proper fashion, may also be entrusted with the command over 1000 and 10,000 men". In his own life, Čingiz-Khān exemplified this saying (which is of course not always applicable) possibly as no one else ever did. Just as he did when leader of a marauding band, when Emperor, he was able to surround himself with a narrower circle of men from among his vassals, on whom he could rely as upon himself and who continued his work with the same success after his death (unlike the history of all other conquests which were not connected with migrations of peoples). Of especial importance for the military successes of the Mongols was the creation of a numerous bodyguard, which attained its final form in 1206. The duties of these guards (10,000 strong) in the Khān's camp were defined to the smallest details; discipline was maintained with the greatest strictness; in the empire these troops were a privileged aristocracy; a private in the bodyguard was higher in rank than the commander of 1000 men of other troops. No officer dared inflict capital punishment on those under him without the sentence receiving confirmation from the Khān. Out of these guards was chosen a special regiment of 1000 men who were in immediate attendance on the Khān and only went to war when the Khān himself took the field with the army. A valuable means of maintaining discipline, and of training and testing the soldiers, were the hunting expeditions organised on a great scale, in which all the prescriptions of military discipline were observed with the same exactness as in actual warfare. How strongly developed the spirit of discipline among the Mongol troops was, is best evidenced by the work on Mongol history composed about 1240 from Mongol tradition. The unknown author shows the greatest independence of the princes of the ruling house and freely reproaches them with their faults and crimes; he shows little interest in the conquest of distant lands and gives the meagrest details about these wars of conquest; yet a trifling offence against military discipline committed in Khorāsān (also mentioned in Muḥammadan sources; a body of troops had against the Khān's orders, stayed behind to plunder a field) seems to him of sufficient importance to be specially mentioned.

It is characteristic of the whole home policy of Čingiz-Khān (if this expression may be used here), that he, unlike the Khān of the Orkhon inscriptions, the helper of the "poor and naked", in the utterances ascribed to him, only emphasises his services to the establishment of order and discipline among his people and in the army. Before his time, the son had not obeyed the father, the younger brother the elder, the daughter-in-law the mother-in-law nor the subjects their ruler, nor on the other hand had the rulers fulfilled their obligations to those under them; under Čingiz-Khān order was created everywhere and his position allotted to each.

It was in the land of the Nāimān that Čingiz-Khān first became acquainted with the use of seals and the art of writing. His Muḥammadan merchants were apparently unable to write, as is the case at the present day with most merchants in the east even though their trading enterprises cover much wider areas. There was a Uighur secretary in the service of the Khān of the Nāimān; Čingiz-Khān took him into his service, introduced the use of the Uighūr alphabet into his kingdom and had his sons and other young Mongols of high rank taught it. The Mongol Empire does not appear to have been at this period directly influenced by the Chinese civil service system. That the Chinese Empire enjoyed great prestige among the nomads is quite natural. The princess of the house of Kin, who had been given to Čingiz-Khān as a wife shortly before the taking of Pekin and who survived her husband by over 30 years, was not fair of face nor did she present any children to her husband; nevertheless, as the "daughter of a great Emperor", she was treated with great respect throughout her life, even after the fall of her fatherland (cf. the text of Rashīd al-Dīn, *Trudi vost. otd. arkh. obshč.*, xiii. 151). Even long after the foundation of his sovereignty, Čingiz-Khān had no representative of Chinese culture at his court. As Meng-hung tells us, it was only after 1219 that the Chinese alphabet, even in negotiations with China, began to be used by the Mongols; hitherto any political documents sent to China had been written exclusively in Uighūr. Nor does Čingiz-Khān appear to have had Persian officials in his service before the conquest of Mā warā' al-Nahr (cf. the anecdote given by d'Ohsson, *Histoire des Mongols*, i. 413 *et seq.*, from Rashīd al-Dīn). Even in Čingiz-Khān's lifetime, there were young Mongols who had, to all appearance at least perfectly adopted the culture of their conquered foes and were able to speak several languages; the civilisation of the nations he subjected always remained foreign to the Khān himself; he never learned a language other than his Mongol mother-tongue.

It cannot be positively proved that Čingiz-Khān had ever cherished any great schemes of conquest during his early career in Mongolia. His first campaigns against the adjoining settled lands were

raids whose only object was plunder; it was only at a much later period that Mongol rule was permanently established in these lands. The campaigns to the west were, in the first place, undertaken in pursuit of enemies who had fled thither; it was only through the course of events that these campaigns gradually developed into a deliberate war of conquest.

In 1205, Čingiz-Khān undertook his first campaign against a settled country, viz. Tangut, the kingdom of Hsia or Hsi-hsia of the Chinese, and returned with rich booty. The war with Tangut was afterwards repeatedly renewed; in 1210 the king of Hsia had to give Čingiz-Khān his daughter to wife. Hostilities did not cease till a much later period and it was only in the last year of the conqueror's life that an end was made of the kingdom of Hsia.

The war which was begun in 1211 with the powerful Kin dynasty in North China lasted equally long. Almost all the forces available were employed from the beginning on this war; only 2000 men remained in Mongolia; the Khān himself and his four sons took the field with the army. After several successes the several divisions of the Mongol army united before Pekin in 1213 (according to Rashīd al-Dīn) or 1214 (according to the Chinese dynastic annals); a treaty of peace was concluded and a matrimonial alliance arranged between Čingiz-Khān and a Chinese princess; the war was renewed again, however, after five months; in 1215 Pekin had to surrender to the victorious Khān after a long siege. In 1216 he returned to Mongolia; and immediately after his departure the Kin succeeded in regaining a great part of their kingdom. The continuation of the war was then entrusted to the general Mukuli; but in spite of all its reverses the kingdom of the Kin survived and was only finally destroyed by Čingiz-Khān's successor.

During the years 1211—1216, when all the Mongol forces were required in China, the pursuit of the enemies who had fled to the west had to be suspended. All successes of the Mongol arms in the west were therefore attained either before 1211 or after 1216.

On the immediate west, Mongolia and China were bounded by the great kingdom of the Gürkhān of the Kara-Khitāi, which comprised all the lands from the Uighur territory (see BESHBALIK, p. 729) to the Sea of Aral. This kingdom was first invaded by the hordes who fled from Mongolia and by their pursuers; the power of the Gürkhān, which had already been considerably weakened by the secession of several Muhammadan rulers, notably Muhammad Khwārizmshāh, was finally destroyed by these invaders. The prince (*Idikut*) of the Uighūr submitted to Čingiz-Khān in 1209 as did Arslān-Khān, prince of the Karluk in the northern part of the modern Semirječye (the first Muhammadan ruler to pay homage to the Mongols) in 1211 and later (after 1216) the prince of Almālik in the Ili valley also. Mā warā' al-Nahr was conquered by the Khwārizmshāh Muhammad; the remaining parts of the kingdom of the Kara-Khitāi were occupied by Küčlük, prince of the Naimān. During the years following, Küčlük was able to consolidate his power in these lands without hindrance. Like most of his tribe, he had originally been a Christian; in the kingdom of the Kara-Khitāi, he became a convert to "idolatry" (probably Buddhism). He persecuted severely the Muhammadans of the modern Chinese Turkestan, who had only submitted to him after a long resistance; public worship was entirely suppressed and the population forced to adopt the Khitai dress; rebellious or suspected people, had, like the Protestants under Louis XIV., military billeted upon them.

It was not till 1216 that Čingiz-Khān again found himself free to turn his attention to the west. He entrusted his eldest son Djüči with the task of following up his enemies who had taken refuge there: the latter's first campaign was not, however, directed against the Naimān but against their former allies the Merkit; this people had been driven by the Mongols out of the land to the east of Baikal and had found an asylum in the modern Kirghiz steppe. Fighting first took place in the western part of this steppe, the present Turgai territory, and the Merkit were there almost exterminated; immediately afterwards, however, the Mongol army was attacked by a great army of the Khwārizm-shāh which had undertaken a campaign from the lower course of the Sir-Daryā against the Kipčak the predominant people in this neighbourhood. Nasawī, the only historian, who seems well acquainted with the place of the battle and the physical conditions of the site, expressly says that this battle took place in 612 = 1215-1216, not, as the other authorities say, after the massacre of Otrār. The battle was undecided; in the following night, the Mongols vacated the camp, leaving their camp fires burning to deceive the enemy, thereby gained a start and could not be overtaken by their enemies. That Djüči did not seek this battle we are expressly told; the Khwārizmshāh is said to have declared that he considered all unbelievers his enemies; still it is very probable that this attack was not premeditated by him. Whether, how, or when Čingiz-Khān received news of this attack, is not known; in any case it did not affect the relations between the two countries; this encounter was probably regarded by both sides as due to a regrettable misunderstanding. It was not till some years later and quite independent of this event, that Čingiz-Khān undertook his great campaign against the kingdom of the Khwārizmshāh, which was to prove so fateful to the Muhammadan world.

The causes of this campaign have been often previously discussed, but usually without a sufficient knowledge of the original authorities. Even in the most recent scholarly works, the embassy said to have been sent by the Caliph Nāṣir lidīn Allāh to summon the Mongols against his enemy, the Khwārizmshāh, is represented to be a historical fact, although we only have a full but certainly legendary account of it in Mirkhond (*Vie de Djinghis Khan*, ed. Jaubert, p. 102 *et seq.*); in the original sources, the story of some such action by the Caliph is only mentioned as a vague rumour, which had become current in the Muhammadan world, just as two centuries later the same charge was laid in Europe by the adherents of the Pope against Frederick II, and by those of the emperor against the Pope (cf. the quotations in L. Cahun, *Introduction à l'histoire de l'Asie*, Paris 1896, p. 356 *et seq.*). Čingiz-Khān actually did receive a Muhammadan embassy in Pekin, in the year 1215 or 1216; but it was not sent by the Caliph but by the Khwārizmshāh himself. The

news of the Mongol successes in China had penetrated to Central Asia; the Khwārizmshāh also had heard of them and through this embassy hoped to ascertain more accurate details of the power of the new conqueror. The only historian who gives an account of this embassy (Djuzdjānī, *Ṭabaḳāt-i Nāṣirī*, transl. by Raverty, p. 270 *et seq.*, 963 *et seq.*), received his information from the ambassador himself (Bahā al-Dīn Rāzī).

The caravan of merchants mentioned by Djuwainī (cf. the text in Schefer, *Chrestomathie Persane*, ii. 106 *et seq.*) must have arrived about the same time; whether these merchants had met the Khān in Mongolia or previously in China, is not related. The first steps towards the establishment of commercial relations between the two kingdoms were therefore made from the land of the Khwārizmshāh; the despatch of an embassy and of a caravan from Mongolia to Central Asia can only be regarded as an answer to these overtures. The fact, that even before 1203 Muḥammadan merchants had found their way to Čingiz-Khān, is sufficient proof that these commercial relations were of much greater importance on both sides than has generally been supposed.

In the year 1218, there appeared in Mā warā' al-Nahr, as envoys from the Mongol Khān, three Muḥammadans of whom one had been born in Khwārizm, the second in Bukhārā and the third in Otrār. They were commissioned to bear rich presents to the Khwārizmshāh in the name of their sovereign and to announce to him that the Khān regarded him "as the dearest of his sons". Muḥammad must have felt insulted by this comparison as the word "son" in intercourse between princes in East Asia as well as in the Muḥammadan world denoted the relation of vassal to suzerain; but it is at least very doubtful if Čingiz-Khān, as has been stated, deliberately intended thereby to irritate the Khwārizmshāh and to make war inevitable. In any case the breach between the two sovereigns was not brought about by this incident. Muḥammad is said not to have displayed his indignation during the interview but only in the following night in conversation with one of the envoys, from whom he received a reassuring explanation and dismissed the envoys with a favourable answer.

The caravan consisted of 450 men, all Muḥammadans; at their head were four merchants, 'Omar Khōdjā of Otrār, Hammāl of Marāgha (in Ādharbaidjān), Fakhr al-Dīn Dizakī of Bukhārā and Amīn al-Dīn of Herāt. All these merchants were massacred in the frontier town of Otrār and their goods seized. Whether this massacre was caused by the cupidity of the governor or ordered by the Sulṭān himself, is not certain; at any rate, it is nowhere stated that these traders had in any way merited such treatment, either by espionage or any other conduct requiring punishment. Čingiz-Khān is said to have sent another embassy to demand satisfaction; Muḥammad had this embassy also or at least one of its members put to death.

War against the Khwārizmshāh was thus rendered inevitable. According to the Muḥammadan historians, Čingiz-Khān took the field with a host of 600,000 or 700,000 men; these figures are, of course, much exaggerated though the Mongols naturally brought as great an army as possible against their formidable opponent; this is evident from the fact that, as in 1211, the Khān himself and his four sons were with the army; but the eastern parts of his empire could not be entirely denuded of troops, as the war in China was still being continued. Almost half (62,000) of the Mongol army of 129,000 men was at the disposal of the general Muḳali; of this army, it is probable that few or no divisions were sent out of China, otherwise the Kin would have made better use of this period. The number of the Mongol standing army which took part in the campaign against the Khwārizmshāh, must there have been not much more than 70,000 men; the levies of subjected peoples were probably rather more numerous; two Muḥammadan princes, Arslān Khān prince of Ḳarluḳ and Saghnāḳ-Tegīn, prince of Almālīḳ, were forced by the Mongols to fight with their armies against their co-religionists. What we can ascertain regarding the composition of the Mongol army during the wars in Mā warā' al-Nahr and other lands, makes it probable that the Mongols and their allies together can hardly have numbered more than 200,000 men. The army of the Khwārizmshāh was undoubtedly superior to that the Mongols; but the individual sections were at variance with their ruler and with one another and thus were unable to resist the troops led by Čingiz-Khān and his generals.

The victorious advance of the Mongol host through the lands of Islām, in which Čingiz-Khān himself went westwards as far as Bukhārā and southwards to the banks of the Indus near Peshāwar, while bodies of his troops even reached the Sea of Azov, has already been several times fully discussed; there is little to be added to what has been done by d'Ohsson (*Histoire des Mongols*, i. 216 *et seq.*). The destruction of the kingdom of Küčlük by Čingiz-Khān's general Djebe in the autumn of 1218 cannot have failed to influence the course of future events. In Kāshghar and other towns the inhabitants rose against their oppressors and welcomed the Mongols as liberators; in contrast to the religious persecutions which the Mongols had suffered in Küčlük's reign, the Mongol general announced that every one would be free to follow his father's faith. The news of these happenings must have penetrated to Mā warā' al-Nahr; as only Muḥammadans had fallen victims to the massacre at Otrār, the Khwārizmshāh, who had in any case no easy task to persuade his subjects that war against the Mongols was a meritorious war in defence of their faith, found his task now made much more difficult.

The manner of warfare employed by the Mongols in all settled lands (China, Western Asia and afterwards in Russia) was always the same; everywhere the defenceless inhabitants of the villages were driven in large numbers to assist the Mongols in besieging the fortified towns; in storming fortifications the Mongols used to drive those unfortunate wretches in front of them so that they received the brunt of the hail of arrows and prepared the way for the army following them. Sometimes banners were distributed amongst them to give the enemy the idea of a numerous army. At the siege of Khodjand the number of Mongols present is said to have been only 20,000 while the number of prisoners made to accompany them was 50,000.

Mongol supremacy in Mā warā' al-Nahr and Khwārizm was firmly established in Čingiz-Khān's

time; the other lands of the Khwārizm-Shāh had to be again subjugated at a later period. Muḥammad himself practically never came in contact with the hostile army: the accounts of his death and flight are probably to be interpreted as meaning that his pursuers lost track of him, otherwise their troops would easily have found their way to the island in the Caspian Sea which was quite near the mainland. The work of the anonymous Mongol writer of the year 1240 shows that the Mongols regarded Muḥammad's successor Djalāl al-Dīn as the king by whom the Mongol envoys had been slain: Ibn Baṭṭūṭa heard similar stories in Central Asia a century later (ed. Defrémery and Sanguinetti, iii. 23 *et seq.*). Čingiz-Khān himself and those immediately around him must have been better informed.

The army, which Čingiz-Khān himself commanded, suffered not a single reverse during the whole of the war: it was only against the smaller divisions of the invading host that the Muḥammadan generals had any ephemeral successes. We have well authenticated accounts of the general progress of the war; on individual points it is not always easy to settle the relation of the chronicles to the facts, as most of them are based on one source, the *Ta'rīkh-i Djihān-Kushāi* of Djuwainī which was not written till 658 = 1260; this interval of 40 years was more than sufficient for many legends to arise, particularly concerning the deeds and sayings of the Khān himself. The story has been frequently been repeated even in the most recent scholarly works, of how Čingiz-Khān (who was only able to speak his native Mongol tongue!) addressed the people from the *minbar* of the place of prayer (*muṣallā*) at the taking of Bukhārā and described himself as the scourge of God sent to men as a punishment for their sins (in Schefer, *Chrest. Persane*, ii. 124). It is sufficient to point out that we possess accounts of the capture of Bukhārā, by three historians whose works are earlier than that of Djuwainī and that this striking picture is not to be found in any of them.

Some information on the condition of the devastated lands, on the enactments made by the Khān himself and his sons, and on the date of the Khān's return from the neighbourhood of the Hindū-Kush to Mā warā' al-Nahr is given by the Chinese hermit Čang-čun, a follower of Taoism, who at the Khān's request had to undertake the journey from China to the Hindū-Kush. Čingiz-Khān seems to have interpreted the teaching of this sect regarding the means to obtain immortality literally: when he received from Čang-čun, in answer to his queries, the reply "There is a way of preserving life; but there is no way of obtaining immortality", it must have been a great disappointment to him; it is evidence of great self-control that he nevertheless treated the hermit with favour, praised his uprightness and even continued to receive his teaching and advice with the greatest reverence, even if he did not always follow it. In March 1223, Čingiz-Khān had been in peril of his life while hunting (he had fallen from his horse and was attacked by an infuriated wild boar); the hermit tried to persuade him to give up this sport on account of his advanced years; the Khān promised him to do so but was only able to keep his promise for two months.

Čingiz-Khān spent the summer of 1223 in the Ḳulān-Bāshī steppe (in the eastern part of the modern Sir Daryā territory north of the Alexander Mountains), and the summer of 1224 on the Irtish: it was not till the year 1225 that he returned home, only to set out again in the same year on his last campaign against the kingdom of Hsia. There, in the modern Chinese province of Kan-su not far from the town of Tsin-čou, a few days before the final surrender of the capital of the kingdom of Hsia, death overtook Čingiz-Khān in the first half of Ramaḍān 624 = August 1227 (the date is variously given). His body was brought to Mongolia and interred in the mountain of Burkhān-Khaldun, in the area in which the Onon and Kerulen rise; the place of burial was, according to Mongol custom, kept secret. Some of his successors were afterwards buried in the same neighbourhood and effigies of them erected. Much farther to the south in Ordos (between the Great Wall and the Hoang-ho) on the river Djamkhak there stand at the present day two hide *yurts* in which the bones of the conqueror (according to some in a copper, to others in a silver box), his saddle, his cup and his pipe(!) are preserved and sacrifices are made on certain days to his *manes*. That this cult and these relics are of late origin, is not of course to be doubted: to what period the first mention of them belongs has not yet been ascertained.

Of the physical appearance of the conqueror we possess accounts, for the last decade of his life only, the preservation of which we owe to the Chinese historian Meng-hung and the Persian Djūzdjānī. He was distinguished from his countrymen by his great stature, his broad forehead and his long beard. Djūzdjānī also mentions his strong physique and his "cat's eyes"; only a few grey hairs remained on his head.

Even in his lifetime Čingiz-Khān had appointed his third son Ögedei as his successor. In the empire founded by him, as in all nomad states, the principle remained in force that the empire belonged not to the ruler, but to the ruling family, and that each member of this family had a right to an *ulūs* (a number of tribes), a *yurt* (an estate) and an *indju* (an income suitable to the requirements of his court and his troops). This principle was also followed by Čingiz-Khān himself; with the exception of the youngest son who, according to Mongol custom, was to inherit his father's "house", i. e. his original estates (the eastern part of Mongolia), each of his sons was allotted definite lands in their father's lifetime. As long as Čingiz-Khān lived and his will remained law, the unity of the state seems to have suffered little from these dispositions of territory; his sons appear, not as rulers of separate areas, but as retainers and faithful followers of their father, who was able to entrust each of them with a special branch of administration. Djūčī was supreme in the hunting-field, Čaghatāi in the administration of the Mongol tribal law (*yāsā*) and Tūlī on the battlefield. Just shortly before his death a breach arose between Čingiz-Khān and his son Djūčī, the only one who had not returned to Mongolia after the conquest of the lands of the west. Whether Djūčī had actually rebelled against his father and disobeyed his orders, or whether, as Mongol tradition states, the estrangement was brought about by slanderous tongues is not clear; certain it is that Čingiz-Khān was preparing to go to war against his son when the news of the prince's death

reached Mongolia. According to later authorities he died only six months before his father.

Bibliography: In addition to the works quoted and used by d'Ohsson, *Histoire des Mongols*, Vol. i. the following are particularly worthy of mention: Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*, text in the *Bibliotheca Indica* (Calcutta 1864) and translation by Raverty (London 1881); the account by the Chinese writer Meng-hung has been translated by W. Wasil'ew in the *Trudi vost. otd. Arkh. obshl.*, Vol. iv.; the Chinese hermit Čang-čun's account of his journey is translated by Palladius, *Trudi rossijskoi dukhovnoi missii v Pekine*, Vol. iv. and by E. Bretschneider, *Mediaeval Researches from Eastern Asiatic Sources*, i. 35 *et seq.*; the work, by an unknown Mongol author, entitled *Yüan-čao-mi-shi* (*A Secret History of the Yüan Dynasty*) exists in a Chinese transcription and translation and has been translated into Russian by Palladius, *Trudi rossijskoi dukhovnoi missii*, Vol. iv. W. Barthold, utilising all these sources has attempted to draw a clear picture of the personality and activities of the conqueror, cf. *Zapiski vost. otd. arkh. obshl.*, x. 105 *et seq.*; *Turkestan v epokhu mongol'skago nashestviya*, ii. 409 *et seq.*, and the author's notices in the *Mitteilungen des Seminars für orientalische Sprachen*, Vol. i. *Ostas. Stud.*, p. 196 *et seq.*; Vol. iv. *Westas. Stud.*, p. 179 and the review by M. Hartmann, *Orientalistische Litteraturzeitung*, vi. 246 *et seq.*; cf. also Skrine and Ross, *The Heart of Asia* (London 1899), p. 149 *et seq.* and R. Stübe, *Tschinghiz-Chan, seine Staatsbildung und seine Persönlichkeit* (*Neue Jahrbücher für das klassische Altertum* etc., 1908, p. 532 *et seq.*). On the cult in Ordos, cf. G. N. Potanin, *Pominki po Čingis-khane* (*Izv. Imp. Russk. Geogr. Obshl.*, Vol. xxi.). (W. BARTHOLD.)

ČIRĀGH DIHLĪ, with his real name NAṢĪR AL-DĪN MAḤMŪD B. YAḤYĀ, was born in Oudh in India and when he was nine years old, his father died. His mother sent him to Mawlānā ʿAbd al-Karīm Shirwānī to acquire learning. After the death of his teacher, he sat at the feet of Iftikhār al-Dīn Gīlānī. At the age of forty he came to Dihlī and became the disciple of Niẓām al-Dīn Awliyā who esteemed him very highly and called him Čirāgh Dihlī (the light of Dihlī) by which title he is known in India. His many discourses have been collected in A. H. 756 = A. D. 1355 by his disciple Ḥamīd under the title of *Khair al-Madjālis*. He died in A. H. 757 = A. D. 1356.

Bibliography: ʿAbd al-Ḥaḳḳ, *Akhbār al-Akhyār*, p. 80; Dārā Shikōh, *Safīnat al-Awliyā*, p. 100; Imām al-Dīn Muḥammad, *Taʾrīkh al-Awliyā*, p. 200. (M. HIDAYET HOSAIN).

ČIRĀGHĀN (Plur. from the Persian *čirāgh*, "torch, lamp or light"), "illumination of gardens and kiosks"; the name of a palace built by Dāmād Ibrāhīm Pasha, Grand Vizier of Sulṭān Aḥmad III, on the European shore of the Bosporus between the villages of Beshik-tāsh and Ortaköi, into which Sulṭān Maḥmūd II moved from Top-ḳapū and which was rebuilt by ʿAbd al-ʿAzīz. The name is derived from the festivities which used to be celebrated there nightly. The 'feast of tulips' was particularly famous; it was the most brilliant of all the illuminations which Dāmād Ibrāhīm used to prepare for his sovereign (von Hammer, *Geschichte des Osmann. Reiches*, vii. 281, French transl., xiv. 64). The palace is built entirely of marble and consists of several blocks of buildings, surrounded by gardens and high walls. The façade facing the Bosporus is over 300 yards long. The interior was magnificently decorated in the Indian-Moslem style. It was in this palace that the Sulṭān ʿAbd al-ʿAzīz was assassinated in 1876 and the deposed Murād V. was kept there for 27 years. It was used as a Parliament House for the Senate and the Chamber of Deputies but was completely destroyed by fire three months later on Wednesday, 7th Muḥarram 1328 = 19th January 1910.

For other meanings see Vullers, *Dict. Pers. Lat.*, s. v.

CIRCASSIANS. [See ČERKESSES, p. 834.]

ČISHTĪ, MUʿĪN AL-DĪN MUḤAMMAD, founder of a Ṣūfī brotherhood, widely disseminated throughout India and one of the greatest of the saints of India, as the name Aftāb-i Mulk-i Hind (Sun of the kingdom of Hind), which is given him, shows. Muʿīn al-Dīn belonged to Sīstān and was born in 537 (1142); when he was fifteen years of age, his father Ghiyāth al-Dīn Ḥasan died; he then lived in various towns in Khorāsān and finally came to Baghdād. During this period he made the acquaintance of the most famous Ṣūfīs of the time, including Nadjm al-Dīn Kubrā, Shihāb al-Dīn al-Suhrawardī, and Awḥad al-Dīn Karmānī. In 589 (1193) he came to Dihlī but almost immediately moved to Adjmīr where he died in 633 (1236); his tomb there became a very popular place of pilgrimage; the great Emperor Akbar made a pilgrimage to it on foot. A splendid mausoleum (*dargāh*) was erected which is much visited to this day.

He is not, however, the only Indian saint, who bears the name Čishtī; we need only mention Salīm Čishtī, the contemporary of Akbar, whose *dargāh* at Fatḥpūr Sīkrī is likewise held in great reverence. Other individuals who bore the *nisba* Čishtī are cited under their names.

Bibliography: Abu 'l-Faẓl, *Akbarnāmah*, ed. Calcutta, ii. 154 *et seq.*; *Āʾīn-i Akbarī*, transl. Jarrett, iii. 361; *Taʾrīkh-i Firishta*, ii. 711 *et seq.*

ČĪTAL, the name, no longer in use, of a small Indian copper coin, worth 1/25 of a *dām* [q. v.]; cf. Yule and Burnell, *Hobson-Jobson*, s. v. Jeetul, p. 457.

ČITRĀL = CHITRĀL in its usual acceptation denotes the upper valley of the Kunār River, from the Bārōghil Pass (Lat. 36° 50′ N.) to Arnawai at the confluence of the Bashgōl River with the Kunār, (Lat. 35° 10′ N.). This valley, formerly called Kāshkār, has received the name Čitrāl by extension from the group of villages in its most fertile part. In its widest extension the name also includes Yāsīn as far east as the boundary of Punyāl, which was politically united with Čitrāl for a time. Including this territory its east and west extension was from Long. 71° 10′ E. to 73° 50′ E. The Shandur Range crossed by a pass 12,250 feet in height bounds Čitrāl on the East. On the N. W. the boundary is the main Hindū-Kush range, culminating in Tirač-mīr (24 428 ft.) south of which the Durāh pass at the

head of the Lutkhō valley leads into Kāfiristān and Badakhshān. In the South the principal approach from the plains of India is by Swāt, the Pundjkōra River, Dīr and the Lawarai Pass (10350 ft.) The most accessible side is by the lower Kunār valley and Asmār to Djalālābād on the Kābul River. The whole of this route is, by the boundary laid down in 1895, included in Afghānistān. This secluded valley has of recent years been included within the British Empire of India, though still under its own Mihtars or princes.

Races and languages. The principal race is known as *Khō*, which occupies the whole of Kāshkār and spreads southwards over the Lawarai nearly to Dīr and E. over the Shandur to Ghizr. The Khō are the cultivators and herdsmen, and above them in rank is a privileged race, the Ashimādak or 'food-giver' so-called from their duty of supplying the Prince and his followers with food. Above them again are the Zundrī or Rōnōs, perhaps of Arab descent, who generally supplied a Wazīr to the Prince. The ruling tribe is the Shāh-Sangālīs to which belong the Katōr family of Čitrāl, and the Khushwakht, who long ruled in Upper Kāshkār and Yāsīn. They are related families, both claiming descent from Shāh Sangali who first established the power of the family and himself was descended from Bābā Aiyūb, an adventurer from Khurāsān, who first assumed the title of Mihtar.

The mass of the people are of Aryan race, slender, with well formed features and abundant hair, pleasant and attractive in their manners but treacherous and given to crimes of violence and passion. The women are good looking, and till recently were frequently sold as slaves. The upper classes are perhaps of Iranian descent, but all are assimilated to the common type and speak the same language, the Khōwār. In Yāsīn this language follows the race as far as Ghizr. The rest of the people are Shīns except in the North or Warshigūm country, where the Burushaski, a language of Mongolian type, is spoken. The Khō-wār and Shīnā languages belong to the family described by Grierson as Pishācā, and he (agreeing with Kuhn) considers that they are Aryan languages neither Indian nor Iranian, but representing a stage before the differentiation of these branches. Konow however maintains that they are mainly Eranian.

A purely Eranian language, the Yūdghā (akin to the Munjani of the Ghalča group), is spoken by a small number of persons in the Lutkho valley, while in the extreme south a number of Kāfirs speaking the Kalāshā language are found.

Čitrāl was a Buddhist country before the extension of Islām, and traces of Buddhism are still found. The population is now purely Musalman, even the so-called Kalāshā Kāfirs having been converted. The Mawlāi Sect, identical with the widely-spread Isma'īlī heresy, is very powerful.

History. The name Katōr as applied to the ruling family seems to have been originally a title, perhaps existing before the rise of the present family. Cunningham and others have identified it with ancient names such as Kidāra and Kitolo used by the later Kushāns. Vague traditions also exist as to descent from Alexander, due probably to the undoubted fact that Alexander used the route by the Kunār valley and thence to Swāt in his invasion of India.

In modern times the family has been divided into two branches, the Katōr of Čitrāl and the Khushwakht of Yāsīn and Upper Kāshkār. The two branches were frequently at war all through the sixth cent., and Yāsīn was often invaded by the Katōrs. The Yāsīn chiefs were exposed also to attacks from Kashmīr through Gilgit on their eastern side. The murder of the English traveller Hayward at Darkōt by Mīr Walī in 1870 led to his expulsion by his brother Pahlwān, who finally fell in 1880, being attacked at once by Kashmīr and by Amān al-Mulk Katōr. The later had come into power in 1857 and gradually extended his dominions. In 1877 he began to enter into relations with the British Government through Major Biddulph, agent at Gilgit, and further agreements were made through Capt. Durand who visited Čitrāl in 1889.

After Amān al-Mulk's death in 1892 a series of intrigues and assassinations, in which the late Mihtar's brother (Shēr Afḍal) and his sons were involved, led to the deputation of *G.* (now Sir G.) Robertson to Čitrāl. Afḍal al-Mulk who first succeeded, was killed by Shēr Afḍal, who was shortly driven out by Niẓām al-Mulk the eldest son of Amān al-Mulk, and took refuge in Kābul. At his instigation a third brother Amīr al-Mulk murdered Niẓām al-Mulk, and made himself Mihtar. Shēr Afḍal again appeared on the scene and Umra Khān the powerful Afghān Chief of Djandōl who had seized Dīr, now crossed the Lawarai Pass into Čitrāl.

At this time Robertson was in Gilgit and Lieut. Gurdon with a small escort was in Čitrāl. There were small detachments at Ghizr and Mastūdj in the upper valley. Robertson hastened to Čitrāl and arrived in time to be besieged there with his small force. Some small detachments on the way from Gilgit were destroyed and others besieged. The old fort built of stone and wood, was defended with great difficulty and gallantry by its small garrison from March 3rd to April 20th 1895, when a body of about 400 Sikhs under Col. Kelly arrived from Gilgit having crossed the snow bound Shandur Pass after great suffering and fought actions near Mastūdj and in the Nisā Gōl defile. A larger force was on its way from India via the Malakand Pass, Swāt, the Pandjkora river and the Lawarai Pass, and was opposed by Umra Khān, who was defeated and fled into Afghānistān, where he was interned by the Amīr. Shīr Afḍal also fled but was captured by the Khān of Dīr and interned in British India.

The young Mihtar Amīr al-Mulk, who had taken refuge with Robertson in the fort of Čitrāl during the siege, abdicated and his younger brother Shudjā' al-Mulk took his place. He was afterwards formally installed in Sept. 1895 by order of the Indian Government under the suzerainty of Kashmīr, and has since ruled successfully. The road made over the Lawarai is kept up by the Indian Government and relations with Čitrāl are managed by the Pol. Agent for Dīr, Swāt and Čitrāl under the orders of the Chief Commissioner of the Northwest Frontier Province. The Yāsīn Country however is under the management of the Agent at Gilgit. The road was closed for a time during the Swāt rising of 1897 but Čitrāl itself was not troubled.

(M. LONGWORTH DAMES.)

ČITTAGONG or ČATTAGRAM, a town and district of India, in Eastern Bengal, at the head of the Bay of Bengal, extending south along the coast towards Arakan. Area of district, 2,429 sq. m.; pop. (1901), 1,353,250, of whom 72% are Muhammadans. The town, on the right bank of the Karnaphuli river, 12 m. from the sea, is the second seaport in Bengal after Calcutta, and its importance has been increased by the opening of railway communication with Assam. In 1905 it was created the subordinate capital of the new province of Eastern Bengal and Assam. Pop. (1901), 22,140. Lying on the borderland between Bengal and Arakan, Čittagong was not permanently conquered by the Muḥammadans until 1666, when Shāyista Khān was victorious over both the Arakanese or Mughs and their Portuguese allies or Firinghis. He changed the name of the town to Islāmābād, and his son built the Djāmiʿ Masdjid. There are three other old mosques.

Bibliography: *Chittagong Gazetteer* (Calcutta, 1908.) (J. S. COTTON.)

ČIWĪZĀDE, the name of two Ottoman ʿUlamā — father and son — each of whom rose to be Shaikh al-Islām. Čiwī was müderris in Menteshe (Asia Minor). His son Muḥyī al-Dīn Čiwīzāde had acted as müderris and Ḳāḍī in various towns throughout the Turkish Empire before he became Ḳāḍī-ʿAskar of Anatolia in 944 and Shaikh al-Islām in 945. After holding this office for three years and nine months, he was deposed because he had placed himself at variance with the whole body of ʿUlamā, over a *fatwā*. He then undertook the *ḥadjdj*, became Ḳāḍī-ʿAskar of Rumili in 952 and died in 954.

His son Muḥammad Čiwīzāde, born in 937, received his education from his father and made the pilgrimage to Mecca with him; he passed through the various grades of ʿUlamā and ultimately became Shaikh al-Islām in 989. He died in 995.

Ḥādjdjī Khalīfa, iv. 429, mentions only one Shaikh Muḥammad b. Ilyās Čiwīzāde and seems to have confused the two. Except a few *fatwās*, which are preserved in collections of *fatwās*, no products of their scholarship have survived.

COIL. [See ALIGARH, p. 299.]

ČOKA-ADASI "cloth Island", the Turkish name of the island of Cerigo (Cythera).

COMORAS, a group of four islands (Great Ḳomōro or Angazidja, Mōheli, Anjuan, and Māyōta) now under French protection, northwest of Madagascar, included by the Arabs with the latter (see Ferrand, *op. cit.*, i. 44 *et seq.*) under the name *Djazīrat* or *Djazāʾir al-Ḳumr* (frequently explained as *ḳamar* "Moon" Island). They were possibly first brought into contact with Islām by merchants or emigrants from South Arabia in the early centuries of the Hidjra. It is not known when Islām was completely adopted in these islands but it was certainly brought from the African mainland or the islands lying off it. In the beginning of the xvi[th] century the Comora islands are said to have come under the sway of the so-called Shīrāzī princes, who had settled at an earlier period in East Africa (see C. H. Becker in *Islam*, ii. 9). The inhabitants of the islands are — in spite of temporary Ibāḍī influence — like the Suaheli whose language is allied to theirs, followers of the Shāfiʿī sect. Cf. G. Ferrand, *Les Musulmans de Madagascar et aux Iles Comores*, i.—iii. (Paris 1891—1902), particularly iii. 130 *et seq.*

CONSTANTINE (Arabic ḲUSṬANṬĪNA, with numerous variants) a town in Algeria, the capital of the *département* of Constantine, 330 miles east of Algiers and 50 miles southeast of Philippeville, which is the port of Constantine and is connected with it by railway; it lies in 36° 22′ N. Lat. and 18° 56′ E. Long. (Greenwich). In 1906 the population was 52,247, of whom 15,779 were Europeans, 8,427 Jews and 28,041 natives.

The situation of Constantine makes the town a natural fortress. It is built on a rocky plateau in the form of a trapezoid, bounded on the S. E., N. E. and N. W., by deep ravines and connected with the surrounding country on the S. E. only by a narrow isthmus. The plateau itself declines rapidly from north to south. The Ḳaṣba on its highest point is 2500 feet above sea-level while the Marabut of Sīdī Rāshid not a mile away is only 2170 feet high. Of the ravines which represent the moats of this natural fortress the most remarkable is that which runs along the southeast and northeast faces of the plateau, at the bottom of which the Rummel flows. This river runs along a narrow gully, a real 'cañon', the walls of which rise sheer upright to a height of 500 to 600 feet, disappears for 1½ miles under three subterranean passages which the water has hollowed out, makes its exit in waterfalls and descends to the verdant plain of al-Ḥamma. Across this gorge above which on the right bank rises the plateau of Manṣūra (2340 feet), the Romans threw a bridge which existed for several centuries after the Arab conquest. Al-Bakrī (*Description de l'Afrique*, transl. de Slane, p. 150) mentions it and al-Idrīsī (ed. de Goeje, p. 111) describes it as one of the most remarkable works which it had ever been granted him to see. Consisting of two rows of arches, one above the other, 217 feet high, a road and an aqueduct bringing the water necessary for the town ran across it. It collapsed in the xiii[th] century, was rebuilt in the xviii[th] by order of Ṣalāḥbey under the supervision of a Spanish engineer and on finally breaking down in 1847 it was replaced by an iron bridge 423 feet long crossing the Rummel at a height of 528 feet. Another bridge is at present being constructed, farther up the river, to connect the plateau of Manṣūra where the station and the European quarter are built, with the quarters previously in existence to the S. W. of the town on the flanks and flat summit of Kūdiat-Aty, a height which commands the entrance to Constantine from this side.

Although these works have sensibly modified the general appearance of the town, it nevertheless

preserves an originality of aspect which is in striking contrast to that of other Algerian towns. It resembles a great Kabyl village rather than an Oriental city. It is an agglomeration of houses with clay roofs, penetrated by an irregular system of narrow tortuous streets, which sometimes descend like stairways to the edge of the ravine, the heights of which are crowned by houses. A noisy throng of Kabyls, Jews and Mzābites fill the streets and markets. A few monuments of no artistic interest recall the past history of Constantine. The great mosque dates from the time of the first Ḥafṣid sovereigns (xiii[th] century A. D.). The mosques of Sūḳ al-Ghazal, now a cathedral, of Sidi Lakhdar and of Sidi al-Kattānī, all of which were built in the xviii[th] century, belong to the Turkish period as does the palace built by Aḥmad, the last Turkish Bey, just before the French conquest.

The origins of Constantine are obscure. But in all probability, the site must have been occupied at a very early period by the natives. The classics mention the existence of a town named Cirta at this place. The Semitic origin of the name (*kart* = town) would lead one to suppose that the Carthaginians had established a colony there. In any case Cirta appears in the period of the Punic wars as the capital of the kings of Numidia; Syphax had a palace there. Masinissa and his successors erected important buildings in it and invited Greek and Roman merchants thither. During the civil wars of the 1[st] century B. C., P. Sittius Nucerianus, an adventurer, seized Cirta on Caesar's behalf and on the latter's ultimate triumph received the town and territory. Cirta then became a Roman colony under the name of Colonia Cirta Julia or Cirta Sittianorum. Juba II. made it his capital after the restoration of the kingdom of Numidia by Augustus and lived there for seven years (24—17 B. C.), till he was forced to exchange Numidia for Mauretania. Cirta still remained the capital of the republic of the 'four colonies', then in the third century A. D. it became that of the province of Numidia Civilis or Numidia Cirtensis established by Maximianus Hercules in 297 A. D. In the course of the civil wars which followed the abdication of Diocletian, the inhabitants recognised the authority of the usurper Alexander and gave him asylum after he had been driven from Carthage and thus brought upon their heads the wrath of Maxentius. The latter took Cirta and razed the town to the ground in 311 A. D. It was rebuilt in 313 by Constantine, the conqueror of Maxentius, and received the name of Constantine which it has retained to the present day. At the Vandal invasion, Constantine was occupied by the Barbarians but given back in 442 by Geiserich to the Emperor. After the destruction of the Western Empire, Constantine remained independent, till the Byzantines, victorious over the Vandals, brought Northern Africa under their sway in 533. It remained subject to them till the invasion of North Africa by the Arabs.

The chroniclers are silent as to the date at which it fell into the hands of the Muḥammadans. It is probable, however, that it was not affected by the first Arab incursions but was only occupied at the end of the vii[th] century at the same time as Carthage and the other Byzantine strongholds which were the last to surrender. Included in the province of Ifriḳiya, Constantine owned the rule successively of the governors of Ḳairawān, the Aghlabids, the Fāṭimids, then, when al-Mu'izz had transferred the seat of the Caliphate to Egypt, of the Zīrids. The latter retained it even after the Ḥammādids had deprived them of a portion of the eastern Maghrib. They lost it entirely at the Hilālī invasion. The Ḥammādid al-Mu'izz took advantage of their troubles to seize the town and include it among his own possessions. The successors of al-Mu'izz retained the town for a century in spite of a revolt instigated by Bel Bar, uncle of the Emir al-Nāṣir. After the capture of Bougie by the Almohads, Yaḥyā, the last king of Bougie, sought refuge in Constantine, then giving up any idea of further resistance, surrendered to 'Abd al-Mu'min whose troops took possession of the town. Attacked unsuccessfully by 'Alī b. Ghāniya in 1185 A. D., Constantine remained faithful to the Almohads till the final collapse of the empire founded by 'Abd al-Mu'min.

At this period, Constantine was a very prosperous city: "Ḳosanṭīna" says al-Bakrī, "is a large and ancient town with a numerous population; .... it is inhabited by various families who were originally part of the Berber tribes established at Mila, in the land of Nefzāwa and in that of Ḳasṭīliyā, but it belongs to certain Ketāmian tribes. It has rich bazaars and a prosperous trade" (*op. cit.*, p. 150). Al-Idrīsī describes Constantine as a populous and commercial town. "The inhabitants" he continues "are rich; they have agreements with the Arabs and co-operate with them for the cultivation of the soil and the preservation of the harvests. Their subterranean storehouses are so good that corn may be kept in them for a century without suffering any deterioration. They collect large quantities of honey and butter, which they export to foreign countries...." (*op. cit.*, p. 111).

When the Almohad Empire was broken up, Constantine recognised the authority of the Ḥafṣid Abū Zakarīyā who was proclaimed at Tunis in 1230 A. D. (cf. the article Ḥafṣids). The history of the town under the Ḥafṣids (xiii[th]—xvi[th] centuries) is very confused and disjointed. The rulers of Tunis attached great importance to the possession of Constantine; they frequently lived there and delighted in improving it; they usually entrusted its government to princes of their own family. Nevertheless in spite of their precautions and trouble they lost it on several occasions; in 1282 A. D. for example, in the reign of Abū Isḥāḳ, the governor Ibn al-Wazīr rose against the sovereign of Tunis, who had to send his son, Abū Fāris, to retake the town by force. In 1284, its inhabitants opened their gates to the pretender Abū Zakarīyā of Bougie; in 1305 at the suggestion of the governor Ibn al-Amīr, they submitted to the Ḥafṣid sovereign of Tunis, whom they cast off almost immediately afterwards, however, to place themselves again under the authority of the King of Bougie, Abu 'l-Baḳā. The latter succeeded in restoring to his own advantage the unity of the Ḥafṣid kingdom in 1309 A. D. and for some years maintained peace in the Eastern Maghrib. But new troubles were not long in arising. From 1312 to 1319, Constantine was almost independent under the authority of the vizier Ibn Ghamr, who succeeded in placing on the throne of Tunis a prince of his own choosing, Abū Yaḥyā. In 1325, the revolt of another vizier, Ibn al-Ḳālūn, exposed the inhabitants to an attack,

which proved unsuccessful, from the ʿAbd al-Wādites. The wars which then broke out in the Eastern Maghrib between the Marīnids and the ʿAbd al-Wādites as well as the good government of the governors Abū ʿAbd Allāh and Abū Zaid, son and grandson of Abū Yaḥyā, king of Tunis, gained Constantine a few years of respite. But peace, which had only been established with difficulty, was again broken in the middle of the xivth century by Marīnid expeditions. Abu 'l-Ḥasan entered Constantine without striking a blow and supplanted Ḥafṣid authority by his own in 1347. The defeat of Abu 'l-Ḥasan at Ḳairawān brought about a revival in favour of the Ḥafṣids and one of them, al-Faḍl, took advantage of the occasion to seize the town. He held it for only a short time. The former Ḥafṣid governor, Abū Zaid, set at liberty by Abū ʿInān, retook Constantine, then abandoning his protector, proclaimed Sulṭān a son of al-Ḥasan named Tāshfīn. Soon afterwards, Abū Zaid's brother, Abu 'l-ʿAbbās, overthrew him and dethroned Tāshfīn. He in his turn took the title of Sulṭān, repulsed the Dawāwida and Sadwīkash Arabs, who had laid siege to Constantine in 1355, but could not prevent the town being taken by Abū ʿInān, who came in person against it. He regained it from the Marīnids in 1360. Becoming Sulṭān of Tunis in 1370, Abu 'l-ʿAbbās maintained peace in the province of Constantine till his death. His successor Abū Fāris had on the other hand twice to reconquer Constantine from his brother Abū Bakr, who had seized it with the help of the Arab tribes.

We have no exact details on the history of Constantine in the xvth century. Rebellions against Ḥafṣid rule were, it seems, less frequent than in the preceding century but its authority was more nominal than real. During this period the real masters of Constantine were the chiefs of the Awlād Sawla, a section of the Arab tribe of Dawāwida. In the town itself the exercise of authority was in the hands of a few families, clients of the Awlād Sawla. Such, for example, were the family of ʿAbd al-Muʾmin of Marabut origin, whose chiefs exercised by hereditary right the functions of Shaikh al-Islām and Amīr al-Rakab, (leader of the caravan of pilgrims to Mecca); the family of Ben Bādīs, whose members had arrogated to themselves the duties of Ḳāḍī, that of the Ben al-Faggūn (or Lafgūn), famous as legal authorities.

The arrival of the Turks in Northern Africa reopened an era of troubles for Constantine. There were two parties in the field. The one, led by the ʿAbd al-Muʾmin, was favourable to the maintenance of Ḥafṣid suzerainty; the other, led by the Lafgūn, invited the Turks thither. According to M. Vayssettes, a first attempt by the Turks to occupy the town was made as early as 1517. According to M. Mercier, Ḥasan, one of Khair al-Dīn's lieutenants, forced the people of Constantine to recognise his master's authority in 1519 or 1520. The submission of the town was only an ephemeral one, however, for in 1526 a representative of the Ḥafṣid sovereign of Tunis was residing in the town. It is not till 1534 that the establishment of a garrison definitely marks the occupation of Constantine by the Turks. Their authority was not firmly established without difficulty. The partisans of the Ḥafṣids did not bow at once to the Turkish yoke but sought to rid themselves of their new masters. At the end of 1567 or in the early months of 1568 they massacred the Turkish garrison and expelled their supporters. To restore order, the Pasha Muḥammad had to lead an expedition against Constantine, the inhabitants of which did not dare resist but opened the gates without showing fight. Another rebellion broke out in 1572 and was suppressed with the greatest rigour. The ʿAbd al-Muʾmin who had instigated it, were deprived of their privileges, and from that date ceased to play a predominant part in the affairs of the town. They resigned themselves to their fall with a very bad grace. We find them again in 1642, taking advantages of the difficulties caused to the Turks by the revolt of the Kabyls and the insubordination of the great Arab chiefs to stir up risings again which were, however, speedily put down. After being selected as the capital of the Beylik of the East in the xvith century, Constantine enjoyed complete tranquillity for the half century following the period of government of the Bey Farḥat (1637). But the intervention of the Algerians in the affairs of Tunisia ended in exposing Constantine to the reprisals of its neighbours. In 1700, Murād Bey of Tunis, victorious in two battles against ʿAlī Khōdja Bey of Constantine, laid siege to the town and blockaded it for three months. The Dey of Algiers at length received warning of the precarious situation of the town by a messenger, who had succeeded in escaping from Constantine after being let down the cliff by a rope, and sent an army to its help, the arrival of which the Tunisian general did not dare await.

The xviiith century marks the zenith of Turkish domination at Constantine. The beylik was held during this period by men of energy and intellect, ruling like independent sovereigns rather than as docile representatives of the Dey of Algiers. Such were Kalīān Ḥasan Bey, called Bū-Kamia, (1713—1736), Ḥasan b. Ḥusain called Bū-Ḥanak (1736—1754), Aḥmad al-Ḳollī (1756—1771) and above all Ṣālaḥ Bey (1771—1792). Constantine owes to them many public works and buildings of general interest. Bū-Kamia built the mosque of Sūḳ al-Ghazāl; Bū-Ḥanak made new streets and built the Mosque of Sīdī Lakhḍar. Ṣālaḥ Bey rebuilt the bridge over the Rummel and the Roman aqueduct bringing the waters of the Djebel Wash to the city; he also built the mosque and madrasa of Sīdī al-Kattānī and commissioned Italian artificers to built him a palace adorned with faiences and marble columns purchased in Italy.

A period of anarchy and disorder succeeded this brilliant epoch. Ṣālaḥ Bey himself, deposed by the Dey of Algiers, to whom he had given offence, tried to stir up a rebellion but perished miserably. Seventeen Beys ruled Constantine in the period 1792—1826. Some of them only held office a few months or even a few days; almost all were distinguished by their cruelty and rapine. Constantine suffered much from this state of affairs; public works were abandoned; commerce was ruined; the lives and property of the inhabitants were continually endangered. To the internal disorder were soon added attacks by the surrounding peoples. The Kabyl hordes of the Marabut Bal Arash (Ibn al-Aʿrash) rose against the Turks and advanced up to the walls of Constantine in 1804. A Tunisian army commanded by Slimān Kiakhyā besieged the town three years later. It was blockaded

for two months (April—May 1807) and was once bombarded. The approach of a relieving army from Algiers caused the Tunisians to raise the siege and in their retreat they lost 1567 prisoners and all their artillery.

Aḥmad, the last Bey of Constantine, possessed those qualities which were lacking in his predecessors. Intellectual, active, ambitious and energetic, he unfortunately made himself hated by his acts of cruelty and by the exactions levied by him to raise funds to built a palace in Constantine to replace the old Dār al-Bey. After the French occupation of Algiers, he sought to profit by the disappearance of the *Odjaḳ* to create an independent principality in the east of the Regency and had the title of Pasha given him by the Ottoman Porte. Deposed by a decree from General Clauzel on the 15th December 1830, he nevertheless retained possession of Constantine. The hesitation on the part of the French government, which tried to come to terms with him for his voluntary submission and after the failure of these negotiations did not wish to enter on a dangerous campaign, delayed his fall. But in 1836, Marshall Clauzel, then governor-general of Algeria, obtained permission to undertake an expedition against Constantine. Leaving Bone on the 2nd November the French troops arrived without difficulty in sight of the town and took up a position on the heights of Manṣūra and Kūdiat. Two sorties by the besieged led by Bin Aïssa (ʿĪsā), Khalīfa of the Bey, were repulsed; on the other hand, two attacks by the French in the night of the 22nd-23rd December also failed. Clauzel decided to raise the siege and returned to Bone after a retreat which was rendered very difficult by bad weather. This check was made good the following year. An army under General Damrémont laid siege to Constantine on the 6th October 1837. Batteries were planted on Kūdiat Atī, so as to make a breach in the south-east front of the town. Damrémont was killed on the 12th October; but his successor, General Valée, ordered an assault on the 13th. The town was taken after fierce fighting by columns led by Colonels Combe and Lamoricière. Aḥmad Bey who had left Constantine on the approach of the French troops, retired to the south where he held the country against the French for eleven years longer. It is said that the siege of 1837 was the ninetieth that Constantine had to endure.

After the French occupation, Constantine, the administration of which had been entrusted to a *Ḥākim* under the supervision of the military authorities, became the headquarters of a *commandement supérieur* and the base of French operations in the eastern province. At first under military law, it was not given a municipal government till 1848 and became the capital of the *département* in 1849. Since then the town has developed considerably, but in spite of the growth of the European population, the natives still hold a more important position in it than in other townships of Algeria with the exception of Tlemcen. Constantine has in fact remained a market and centre of supplies for the tribes of the east; its native industries have survived and supply the population of the surrounding country with cotton stuffs and articles of leather.

CONSTANTINOPLE.

CONSTANTINOPLE TO THE OTTOMAN CONQUEST (1453).

The Name. The city, which Constantine the Great on the 11th May 330 raised to be the capital of the Eastern Empire and which was called after him, was known to the Arabs as *Ḳosṭanṭinīye* (in poetry also *Ḳosṭanṭīna*, with or without the article); the older name *Byzantion* (*Būzanṭia*, in various spellings) was also known to them as well as the fact that the later Greeks, as at the present day, used to call Constantinople simply ἡ πόλις as "the city" par excellence (Masʿūdī, ix. 337; Ibn al-Athīr, i. 235; Abu 'l-Fidā, ii. 1, 39; Dimishḳī, p. 241, 259; Ibn Baṭṭūṭa, ii. 431). From εἰς τὴν πόλιν arose the Turkish إستانبول *Stambul* (*Istanbūl* in Ibn al-Athīr and in *Ḳāmūs*; *Iṣṭanbūl* in Abu 'l-Fidā, Dimishḳī, Yāḳūt, Ibn Baṭṭūṭa; Clavijo, p. 22, ed. Braun: *Escomboli*; Schiltberger, p. 45, ed. Langmantel: "Constantinopel hayssen die Chrichen *Istimboli* und die Thürcken hayssends *Stambol*"). In the xvith century we find the form *Islāmbol* "Islām-full" appearing. *Ḳosṭanṭiniya*, with the variant *Ḳosṭanṭinīya*, has remained the official designation to the present day on coins and firmans; the form *Islāmbol* appeared on coins from Aḥmad III to Selim III; in the written language and in more refined conversation the form *dar-i-saʿādat*, less frequently *āsitāna-i-saʿādat*, "the Gate of Bliss" is used. Stambul has survived in everyday speech and in the narrower sense is applied to Constantinople proper, in opposition to the suburbs, viz. Galata and Pera, as was the usage even in Ibn Baṭṭūṭa's times.

The Campaigns of the Arabs against Constantinople. It is said that the Prophet himself had foretold the conquest of Constantinople by the faithful. The Ottoman historians adduce the following *ḥadīth* "Ye shall conquer Constantinople; peace be upon the prince and the army to whom this shall be granted!" (ʿAlī, *Kunh al-akhbār*, v. 252 *et seq.*; Ṣolaḳzāde, p. 194; Ewliyā, i. 32 *et seq.*, 73; ʿAlī Sātiʿ, *Ḥadīḳat al-djewāmiʿ*, i, 2 *et seq.*); Suyūṭī's *al-Djāmiʿ al-ṣaghīr* is given as authority; older references are wanting. As a matter of fact, the Umaiyads set about this enterprise with the energy and valour, that inspired the early warriors of Islām. In the year of the world 6146 (beginning 1st Sept. 653), according to Theophanes, p. 345, a fleet was equipped in Tripolis "against Constantinople" which under the leadership of Ἀβουλαθάρ (i. e. Busr Ibn Abī Arṭāt) defeated the Greek fleet at Phoenix (Finika) on the Lycian coast; but it did not reach Constantinople; at the same time Muʿāwiya had invaded Byzantine territory.

In the year 44 A. H. or 6156 of the world (664 A. D.) took place the campaign of ʿAbd al-Raḥmān b. Khālid who advanced as far as Pergamon; the admiral Busr Ibn Abī Arṭāt, ac-

cording to Arabic sources, is said to have reached Constantinople (Ṭabarī, ii. 86).

In the course of the next years, Faḍāla b. ʿUbaid advanced as far as Chalcedon, and Yazīd, son of Muʿāwiya was sent after him (according to Theophanes in the year 6159 of the world, beginning 1st Sept. 666; according to Elias of Nisibis Yazīd appeared before Constantinople in 51 A. H., which began on the 18th January 672); a fleet commanded by Busr Ibn Abī Arṭāt supported this enterprise. In 672 a strong fleet cast anchor off the European coast of the Sea of Marmora under the walls of the city. The Arabs attacked the town from April to September; they spent the winter in Cyzicus and renewed their attacks in the following spring until they finally retired "after seven years' fighting". A great part of the fleet was destroyed by Greek fire; many ships were wrecked on the return journey (Theoph., p. 353 *et seq.*). There are difficulties in the chronological arrangement in Theophanes of the various phases of this seven years' blockade. The land army seems to have appeared before Constantinople in 667 and the fleet to have finally retired in 673. The Arab historians vary between the years 48, 49, 50 and 52 A. H. and place the death of Abū Aiyūb in the year 50, 51, 52 or even 55 A. H. As the fighting around Constantinople was spread over several years, the difference in the estimates is not so unaccountable.

This siege has acquired particular renown in the Arab world as the Anṣārī Abū Aiyūb Khālid b. Zaid fell in it and was buried before the walls of Constantinople; the finding of his tomb during the final siege by Meḥemmed II was an event only comparable to the discovery of the holy lance by the early Crusaders at the siege of Antioch. (The grave of Abū Aiyūb is first mentioned by Ibn Ḳutaiba, p. 140; according to Ṭabarī, III, 2324, Ibn al-Athīr, III, 381, Ibn al-Djawzī and Ḳazwīnī, p. 408, the Byzantines respected it and made pilgrimages to it in times of drought to pray there for rain (*istisḳāʾ*); the Turkish legend is given very fully in Leunclavius, *Hist. Mus.*, p. 41 *et seq.* and in the painstaking monograph by Ḥādjdjī ʿAbd Allāh, *al-Āthār al-madjīdiya fi ʾl-Manāḳib al-Khālidiya*, Stambul 1257 A. H.).

There was a truce for over 40 years between Byzantines and Arabs until in 97 A. H. (beginning 5th October 715) Sulaimān b. ʿAbd al-Malik came to the throne. A *ḥadīth* was at this time current, according to which a Khalīfa who should bear the name of a Prophet was to conquer Constantinople. Sulaimān took the prophecy to refer to himself and equipped a great expedition against Constantinople. His brother Maslama led the army which was equipped with siege artillery through Asia Minor, crossed the Dardanelles at Abydos and surrounded Constantinople. The Arab armada anchored partly near the walls on the coast of the Sea of Marmora and partly in the Bosporus; the Golden Horn was barred by a chain. The siege began on the 25th August 716 and lasted a whole year; Maslama then found himself forced to retire owing to the attacks of the Bulghars and the scarcity of provisions (Theophanes, p. 386—399; full details in Ibn Miskawaihi, ed. de Goeje, p. 24—33; cf. also Ṭabarī, ii. 1314 *et seq.*; Ibn al-Athīr, iv. 17 *et seq.*; cf. the vivid account in Gelzer, *Pergamon unter Byzantinern und Osmanen*, p. 49—64). There are many references to Maslama's hazardous march among the later Arabs. Even several centuries later they knew of "Maslama's Well" at Abydos where he had encamped (Masʿūdī, ii. 317, Ibn Khurdādhbih, 104), and the mosque built by him there (Yāḳūt, i. 374). ʿAbd Allāh b. Taiyib, the first Muslim to lead an attack on the "Gate of Ḳosṭanṭīniya" was one of Maslama's comrades (Ibn Ḳutaiba, p. 275). Maslama is said to have made the building of a house near the Imperial palace for the Arab prisoners of war one of the conditions of the treaty of peace and to have built the first mosque in Stambul (Muḳaddasī, p. 147, Ibn al-Athīr, x. 18, Dimishḳī, p. 227); finally he is credited with building the Tower of Galata (Dimishḳī, p. 228) and the ʿArab Djāmiʿ in Galata (Ḥādjdjī Khalfa, *Taḳwīm al-Tawārīkh*, year 97 A. H.). Ewliyā and his authority have made two sieges out of Maslama's campaign and embellished their narrative with incredible stories. Nerkesī (died 1044 A. H. = 1634) discusses Maslama's campaigns in the fourth section of his Pentas, following Muḥyī ʾl-Dīn al-ʿArabī's *Musāmarāt*.

Only on one other occasion did an Arab host appear within sight of Constantinople, namely in 782 A. D. Hārūn, the son of the Caliph al-Mahdī, had marched through Asia Minor unopposed and encamped at Chrysopolis (Scutari). The Empress Irene who was acting as Regent for her son Constantine, hastened to make peace and agreed to pay tribute (Theophanes, p. 455 *et seq.* under the year 6274 of the world (781-782); Balādhorī, p. 168; Ṭabarī, iii. 504 *et seq.*; Ibn al-Athīr, vi. 44: A. H. 165, beginning 26th August 781). Ewliyā and his authority (Muḥyī ʾl-Dīn Djamālī, died 957 = 1550 according to Rieu, *Catalogue* etc., p. 46 *et seq.*) have made no less than four regular sieges of Constantinople out of the campaigns of the Arabs under al-Mahdī and Hārūn against the Greeks. After the second, Hārūn gained a quarter in Stambul by a trick similar to that by which Dido gained the site of Carthage (Leunclavius l. c. 54; Ewliyā, i. 81 = *Travels* etc., i. 1, 25); the same story is given by Clavijo, p. 23 of the settlement of the Genoese in Galata, and Ewliyā, *Travels* etc., i. 2, 66 of the building of Rumeli Ḥiṣār by Meḥemmed II.

The Arab accounts of Constantinople date from the xth century. They considered the Dardanelles, the Sea of Marmora and the Bosporus as a single 'Canal' (*khalīdj*), connecting the Mediterranean with the Black Sea. Iṣṭakhrī and others mention the great chain which prevented the entrance of Arab ships; this is probably the chain, which was stretched between Galata and Stambul in time of war that is referred to (see below). The high double walls of the city with their towers and gateways, including the Golden Gate, the Aya Sofia, the Hippodrome with its monuments (notably the Egyptian Obelisk), the four brazen horses at the entrance to the palace, and the great equestrian statue in bronze of "Constantine" (really of Justinian, the so-called Augusteus) are described by them in greater or less detail. Ibn Ḥawḳal and Muḳaddasī devote particular attention to the Praetorium where their countrymen, prisoners of war, were kept under a mild custody and the Mosque attributed to Maslama (cf. Yāḳūt, i. 709, s. v. *Balāṭ* and Constantinos Porphyrogenitus, *de Cerim.*, i. 592 and 767). The most detailed account is that of Ibn al-Wardī (xivth century): he men-

tions the bronze Obelisk of Porphyrogenitus, the Pillar of Arcadius and the Aqueduct of Valens and also knew that the Golden Gate was closed. Ibn Baṭūṭa (ii. 431—444) described from his own observation the monastic life of his time; the latest notices are given by Fīrūzābādī (died 817 A. H.) in his dictionary.

Apart from prisoners of war, numerous Muḥammadan merchants and envoys from the Caliphs and other Muḥammadan rulers sojourned in Byzantium; the Mamlūk Sulṭāns occasionally banished thither troublesome persons with their families; Saldjūḳ Sulṭāns and pretenders (Ḳilidj Arslān II, Kaikhusraw I, Kaikawus II) repeatedly spent long periods in Constantinople; remarkable details of their life in the capital are given by Byzantine writers and in the Saldjūḳ historians.

No definite traces have as yet been discovered of the two sieges by the Arabs and the residence of Arabs and other Muḥammadans in Constantinople; in particular the Mosque of Maslama has not come to light; it is first mentioned by Const. Porphyr., *de Adm.*, ch. xxii. (Bonn *Corpus*, p. 101, 22); it was destroyed in a popular rising in 1200 and pillaged by the Crusaders in 1203 (Nicetas Chon., p. 696 and 731, ed. Bonn). According to Ibn al-Athīr, ix. 381, cf. x. 18 (whence Abu 'l-Fidā derives his information) it was restored in 441 A. H. (1049-1050) by Constantine Monomachus at the request of the Saldjūḳ Toghrul-Beg. According to Maḳrīzī (i. 177, ed. Quatremère) Michael VIII Palaeologus built a mosque about 660 (1261-1262) which the Mamlūk Sulṭān Baibars equipped in splendid style. The accounts of the 'Arabdjāmi' and other buildings by the Arabs in Stambul belong to the domain of fable.

Constantinople and the Ottomans.

The Conquest. More than 600 years had passed since the Arabs under Hārūn had encamped on the Bosporus, when the Ottomans made their first attempt to take Constantinople, which with its immediate neighbourhood formed all that was left of the great Eastern Empire.

Bāyazīd I. besieged the town in 1396 for several months but raised the siege on hearing of the approach of a relieving army of French and Hungarians under Sigismund I. After the defeat of this army at Nikopolis (25th September 1396) the siege became a close blockade, which lasted several years till the Emperor submitted to Bāyazīd's demands (about 1400); among other concessions the Turks were allowed to have a quarter of their own, to be under the separate jurisdiction of their Ḳāḍī and to build a mosque. Byzantium was relieved of its tormentors by the appearance of Timurlang and the capture of Bāyazīd in the battle of Angora (20th July 1402). (The only certain date is that of the siege in 1396; the accounts in the original authorities of the events after the battle of Nikopolis are incoherent and the proper chronological order cannot be determined).

Murād II was the first to lay siege to the city again but he attacked it from June to the beginning of September 1422 in vain. A peace was made which lasted till the death of the Sulṭān.

It was reserved for Meḥemmed II, the son of Murād II, to conquer Constantinople and overthrow the Byzantine Empire.

To cut off supplies and possible relief by sea, in the year 1452 he built the castle of Rumeli-Ḥiṣār (then called *boghaz-kesen* "the barrier of the strait") on the European shore of the Bosporus. The siege began on the 9th April 1453 and ended on Thursday the 29th May. The main attack was directed against the land-walls between Topkapu, the "Gate of the Cannon", and the Gate of Adrianople, where the heavy artillery of the besiegers had made a great breach. Two episodes of the siege have become particularly renowned: the entry of the Turkish fleet into the Golden Horn, which was closed by a great chain, by being dragged overland (from the Bay of Dolma-Baghče over the ridge of Pera into the valley of Ḳāsim-Pasha) on the night of the 21st-22nd April and the discovery of the grave of the Anṣārī Abū Aiyūb by Shaikh Aḳ-Shams al-Dīn.

The conquered city was given over to plunder and devastation for three days; the Sulṭān then made his entry, offered up the Friday prayer in the Aya Sofia and returned to Adrianople after appointing a *subashi* (governor of the city).

The Genoese suburb of Galata which had remained neutral during the siege capitulated a few days after the fall of Constantinople.

On only two occasions since it passed under Ottoman sway has a hostile foreign force appeared before the capital: on the 20th February 1807, the English Admiral Duckworth, who however retired 10 days later without making a serious attack, and in 1877 the Russian army which did not occupy the city but encamped in the suburb of San Stefano.

Constantinople under Ottoman Rule. The Serai and the Government Buildings. In the years immediately following the conquest, Meḥemmed II. employed himself in repeopling the deserted town and making it the royal residence. From the inhabitants who were transplanted from Ḳaraman, arose the names Ḳaraman and Aḳserai of two quarters in Stambul; the Conqueror also brought the inhabitants of Kaffa, Mytilene and other islands to the capital; there was also a great influx of Armenians, Persians and other races to the city. In the period following, large numbers of Jews and Arabs, who had been driven from Spain, settled there (cf. the very fantastic statements in Ewliyā, *Travels* etc., i. 48 *et seq.*). The Greeks, who had left the city before and after the last siege, gradually returned. The imperial Byzantine palaces were allowed to fall into ruins; in their place Meḥemmed built a Serai in the centre of the city on the third hill (Critobulus, ii. ch. 1, § 2; Ducas, p. 317; according to Ewliyā, *Travels* etc., i. 1, 50: from 858—862 = 1454—1458); at a later period after the completion of the new Serai it was called the *Eski* (old) *Serai* and was used for several centuries — till the reign of Maḥmūd II. — to provide apartments for the ḥarems of dead or dethroned Sulṭāns; it then became the residence of the Seraskerat and was taken down early in 1870; on its site was built the Seraskerat, but the ancient name — Eski Serai — is still popularly applied to the latter.

Comparatively early — in 872 A. H. = 1467-1468 it is said — Meḥemmed began to build a second Serai in the midst of extensive gardens on the promontory between the Sea of Marmora, the entrance to the Bosporus and the Golden Horn and cut off the whole on the landside by

a strong, high wall (completed in Ramaḍān 883 A. H., which began on the 26th Nov. 1478); on the side next the sea, the sea walls marked the limits of the Serai. Of the buildings of the Conqueror only the Činili (i. e. faience)-Kiosk, finished in September 1472, has survived; it is now attached to the Imperial Museums. On the site of the New Serai and its individual buildings, cf. the authoritative essay by ʿAbdurraḥman Sheref in Vols. I and II of the *Revue Historique de l'Institut d'Histoire Ottomane* (with a Map).

Within this area the Serai proper, situated on the top of the pre-Byzantine Acropolis, formed a separate complex of buildings with three great courts, which were entered by as many gates (*Bāb-i Humāyūn*, *Orta-Kapusi*, also called *Bāb-i Salām*, and *Bāb-i Saʿādat*). Around the third court were the private apartments of the Sulṭān with the Ḥarem, the treasury, the chambers containing the sacred relics of Islām (*Khirka-i Sherif Odasi*) and in the court itself was the hall of audience (*ʿArẓ odasi*); the hall of the Dīwān was built on the second court with the "outer treasury" (*Tashrakhazinesi*); the first court contained amongst other buildings the armoury of the Serai (*Djebkhāna*, formerly the church of Irene, now a museum of arms) and after 1623 the mint (*Ẓarbkhāna*). The later Sulṭāns laid out a whole series of palaces and kiosks, partly on the heights, partly in the lower lying parts of the Serai, and close to the sea at the "Gate of the Cannon" (Topkapu); the best known are the Baghdād Kiosk outside the third court of the Serai, built by Murād IV, the Indjuli Kiosk on the Sea of Marmora and the Yali Kiosk on the Golden Horn, the two latter now being destroyed. The palace of Topkapu which was used as the Sulṭān's winter residence till the beginning of the xixth century, perished in flames in 1862. Maḥmūd II was the first to reside in Beshiktash; his successor, ʿAbd al-Madjīd, built the splendid palace of Dolmabaghče there, and his successor ʿAbd al-ʿAzīz the palace of Čirāghān which was destroyed by fire in 1910; ʿAbd al-Ḥamīd II (dethroned in 1909) returned to the Yildiz Kiosk on the heights above Beshiktash. Since then Meḥemmed V has occupied the palace of Dolmabaghče. To distinguish it from these modern palaces, the area, which has just been described, with its buildings is called Old Serai by Europeans; the Turks give it the name Topkapu Serai, formerly Yeni Serai.

Down to the year 1654, the Grand Viziers had no special official buildings allotted to them; the business of state, which did not come before the Dīwān, was transacted in the Grand Vizier's private house. In 1654, Meḥemmed IV presented the Grand Vizier Derwīsh Meḥemmed Pasha with a large building opposite the Alāi Kiosk near the Serai; this became the office of the Grand Vizier under the name "Sublime Porte" (*Bāb-i ʿĀlī*, in popular language, *Babali* or *Pasha Kapusi*; *Fulgida Porta*, *Hohe Pforte*). In the course of centuries it has been repeatedly destroyed wholly or in part by fires, the last occasion being on the 6th February 1911.

Besides the Grand Vizier the Agha of the Janissaries had also his separate Porte, the *Agha Kapusi* near the Janissary barracks and the Sulaimāniya-Mosque; built by Sulaimān I, it was burned in 1750 along with the "Fire Kiosk" (*yanghin köshki*) and rebuilt by Maḥmūd I. After the disbandment of the corps of Janissaries the building was given to the Shaikh al-Islām in 1825 as an official residence (*Shaikh al-Islām Kapusi*, *Bāb-i Fetwāpanāhi*) and the famous Fire Kiosk was taken down, the Seraskar Tower being built on the site.

The government offices which were instituted in the xixth century on a European model are now housed in various buildings, mostly quite modern of no historic interest; only the Defter-Khāna (land-registry office) on the Atmaidān with the registers compiled by Sulaimān I, the so-called كوتكان, for the whole kingdom, deserves mention.

The Mosques. 1. The Aya Sofia, see the separate article, p. 524.

2. The Meḥemmedīye, built by the Conqueror on the site of the Church of the Apostles and the Mausoleum of the Byzantine Emperors on the fourth hill in the years 867—875 (1462—1470), famous for the various endowments attached to it, including the "Eight Medreses". At the Mosque there is also the türbe of the Conqueror; a second türbe contains the tombs of Gülbahār Sulṭān, mother of Bāyazīd II, of two *Seraili* (odalisks) and of a daughter of Meḥemmed II. According to a tradition, which is not corroborated elsewhere, the architect was a Greek, named Christodoulos; for various legends according to which the Sulṭān had the architect slain or mutilated, see Kantemir, *Gesch. des Osm. Reiches*, p. 158 and Ewliyā, *Travels* etc., i. 68. — The step-mother of the Conqueror, the Servian princess Maria, daughter of George Brancović, who remained a Christian even after entering the Sulṭān's harem, is said to be interred in the first türbe.

The earthquake of the 22nd May 1766 caused the cupola of the Mosque to collapse and the türbe of the Conqueror was severely injured; the Mosque was then subjected to a thorough renovation which occupied almost five years (1767—1771).

3. The Mosque of Bāyazīd II on the Great Bāzār with the türbes of the builder and his daughter Saldjūk Sulṭān, built from 1501—1506, famous for the market, which is held in the outer court during Ramaḍān and for the pigeons which nest in it.

4. The Selīmīye, on the fifth hill, above the Fanar quarter, with the türbe of Selīm I, completed by Sulaimān I in 1522; in it is also the tomb of Sulṭān ʿAbd al-Madjīd.

5. The Mosque of the Prince, (*Shāhzāde Djāmiʿ*), on the third hill, built for Sulaimān I by the architect Sinān [q. v.] in 955 (1548-1549) in memory of Prince Meḥemmed who died in 949 A. H., with the türbe of this prince and his brother Djahāngīr (died 960 A. H.) and the tombs of numerous Viziers.

6. The Sulaimānīye, whose commanding situation on one of the highest hills of the city and great size give it an imposing appearance, built for Sulaimān by Sinān in the years 1550—1557 with four medreses, an ʿimāret and other buildings; the four Minārets have 10 spiral stairways (*sherefe*), presumably because the builder was the tenth Ottoman Sulṭān. The türbe of Sulaimān I is in the court of the Mosque and Sulaimān II, Aḥmed II and various Sulṭānesses are also buried in it.

7. The Aḥmedīye, on the Atmaidān, famous for the number of its minarets (six), completed

by Aḥmed I in 1617; it encloses the türbe of its builder who died in the same year, in which his sons Osmān II, Murād IV and their mother the famous Kösem Wālide (Māhpeiker) as well as several other princes also lie. This Mosque was in days gone by "the State Mosque, the cathedral, the scene of the great festivals of the church and ceremonious processions of the court" (von Hammer, *Const. u. Bosp.* I, 421).

8. The Yeni (New) Djāmi', on the shore of the Golden Horn at the 'Jews' Gate' (*Čifut Kapusi*) which has now disappeared, was begun by Kösem Wālide and afterwards completed by Terkhān Khadīdja Sulṭān, the mother of Meḥemmed IV, in 1074 (1663-1664). Amongst other tombs in it are those of the Sulṭāns Meḥemmed IV, Muṣṭafā II, Aḥmed III and Osmān III.

9. The Nūr-i Osmāniye, on the second hill near the Great Bāzār, begun by Maḥmūd I in 1748 and finished by Osmān III in 1755.

10. The Lāleli Mosque, the smallest of the imperial Mosques, built in the interior of the city towards the Sea of Marmora near the Lāleli Česhme ("Tulip Fountain") in the years 1761—1764, on the plan of the Selīmiye, with two türbes in which the builder, his children (including Selīm III) and wives are buried.

The Mosques just mentioned are the "Great Imperial Mosques" within the walls of Stambul; of the others — over 500 in all — the following are worthy of special mention:

1. Küčük Aya Sofia ("the little Aya Sofia") on the Sea of Marmora, formerly the church of SS. Sergius and Bacchus, but transformed into a Mosque in the reign of the Conqueror.

2. Zeirek Djāmi' on the Golden Horn, above Unkapan, formerly the famous monastery of Pantokrator, was used for a period after the conquest as a tannery, and was then made a Mosque by the Conqueror; it is called after the neighbouring cell (Zāwiya) of Zeirek Mullā Meḥemmed.

3. Maḥmūd Pasha Djāmi', near the Nūr-i Osmāniye, occupying the site of a church which was taken down in 868 (1463-1464), and completed by the famous Grand Vizier whose name it bears and whose türbe it contains.

4. Murād Pasha Djāmi', in the Aḳserai quarter, built in 870 A. H. (1465-1466); the founder was one of the Conqueror's viziers.

5. Wefā Djāmi', on the Golden Horn, built by Bāyazīd II in 881 A. H. (1476-1477) for the Zainiye Shaikh Muṣṭafā Wefā.

6. Dā'ūd Pasha Djāmi', on the Sea of Marmora, finished in 890 (1485-1486).

7. Kodja Muṣṭafā Pasha Djāmi', in the Psamatia quarter, changed in 895 (1489-1490) from a Byzantine church into a Mosque; its founder, whose name it bears, originally a Christian, is said to have been the same man as poisoned Prince Djem. The Mosque is noted for the legends attached to the cypress with the chain and to the wells in the outer court.

8. Eski (or 'Atīḳ) 'Alī Pasha Djāmi', at the Čemberli Tash, built in 902 (1496-1497), with the tombs of numerous Grand Viziers.

9. The Mosque of Mihrimāh Sulṭān daughter of Sulaimān I, who died in 965 (1557-1558) on the highest point in the city near the Adrianople Gate, whence it is also called Edirne Kapusi Djāmi'; it is one of Sinān's works.

10. The Mosque of Rustam Pasha in the Takhtakal's quarter on the Golden Horn is famous for its faïence work; the founder, who was for long Grand Vizier to Sulaimān I and husband of Mihrimāhsulṭān, is well known from Busbek's account of him; he died in 1561; the Mosque was built by Sinān.

11. The Mosque of the Grand Vizier Sokolli Meḥemmed Pasha, southwest of the Hippodrome, formerly a Byzantine church, was finished in 979 (1571-1572).

12. The Fetḥiye Djāmi', on the fifth hill, formerly a church of the *Pammakaristos* and, after the conquest, the residence of the Greek Patriarch, was transformed into a Mosque by Murād III in 1587, whence it bore the name Murādiye for a time.

13. The Mosque of Djerrāḥ Meḥemmed Pasha, on the seventh hill near the 'Awretbāzār, built in 1002 A. H. (1593-1594).

Of the Byzantine churches, about 400 in number, which are traditionally said to have existed, only about 50 can still be identified; of these only one (the so-called "Muchliōtissa", of the xiii[th] century) has remained in the possession of the Greeks; one was occupied by the Armenians in the xvi[th] century (*Sulu Monastir*), the others all became Mosques in the first two centuries after the conquest, while one — the church of Irene in the Serai — is now used for secular purposes.

Among the churches which are now Mosques the following may be mentioned here: the Kilise Djāmi', formerly S. Theodor which has been a Mosque since the end of the xv[th] century, the Ḳahriye Djāmi', renowned for its mosaics, formerly the monastery τῆς Χώρας, at the Adrianople Gate, made a Mosque in the reign of Bāyazīd II, as was the Mīrakhōr Djāmi', formerly the monastery of the Studios near Yedi-kule; lastly the Güldjāmi' ("Mosque of Roses") on the Golden Horn near the Aya Kapusi, which became a Mosque in the xvi[th] century in the reign of Selīm II.

Before the Aiwānserai Gate, in the suburb of Aiyūb on the Golden Horn, stands the particularly sacred Mosque of Abū Aiyūb Anṣārī with his türbe on the place where tradition says Shaikh Aḳ Shams al-Dīn found his grave during the siege by Meḥemmed II. In 863 (1458-1459) the Conqueror built a Mosque on the spot, which was replaced in 1213—1215 (1798—1800) by an entirely new building on the same plan as the original edifice; the türbe of the saint was last repaired by Maḥmūd II in 1235 (1819-1820). Among other relics preserved in the Mosque are an impression of the Prophet's foot (*ḳadem-i sherīf*), and in the türbe, the flagstaff of the holy banner *sandjaḳ-i sherīf*) is preserved. In it the ceremony of binding on the sword (*taḳlīd-i Saif*) is celebrated at coronations.

The cemetery of Aiyūb is famous, with its numerous tombs of Sulṭānesses, scholars, poets, viziers etc.

The türbes of most of the Sulṭāns are in the Imperial Mosques; exceptions are the beautiful mausoleum of Sulṭān 'Abd al-Ḥamīd I (at Baghče Kapusi) who died in 1789, in which Muṣṭafā IV (died 1807) is also interred, and the splendid mausoleum of Maḥmūd II (1839) on the Dīwān-yolu; 'Abd al-'Azīz (died 1877) is also buried in the latter.

The Dervish monasteries, some large, some

small, are very numerous (*khānḳāh, tekke, zāwiye*); in 1885 there were 260 such monasteries in Stambul and the suburbs, including the villages on the Bosporus, which belong to the most different orders. The most important are the Mewlewi monastery on the Yenikapu (built in 1006 = 1597-1598), the Sünbüli monastery of Merkez Efendi in the same place, founded by Shaikh Muṣliḥ al-Dīn Merkez Mūsā who died in 959 (1552), and the Mewlewikhāna of Pera, which will be mentioned later.

Medreses (Colleges): von Hammer, *Gesch. d. Osm. R.*, ix. 145 *et seq.*, gave the names of 275 Medreses; in 1885 there were 168 in Stambul and Aiyūb, one each in Beshiktash, Top-khāne and Scutari, or only 171 in all with 7,148 occupants. The most largely attended were: Aya Sofia (148), S. Aḥmad (200), the Medreses of the Sulaimānīye (644 in all), and those attached to the Meḥemmediye (902 in all).

The Hospitals and Asylums, (*Shifā-khāne, Tābkhāne, Timārkhāne*) which used to be attached to the Mosques, have now been replaced by modern institutions on the European model (the hospitals of Gülkhāne, Ḥaidar Pasha etc.; cf. Rieder Pasha, *Für die Türkei*, Jena 1904); the best known were the hospital of the Meḥemmediye and the Asylum of the Aḥmediye. — The *'imārets* (public-kitchens) which used to be attached to the Mosques have also lost their importance; Parliament has just (1911) decided to reduce the number to three.

Libraries. In 1882 there were in Stambul, Aiyūb and Top-khāne, 45 public libraries with 64,162 volumes in all — almost exclusively Islāmic manuscripts —; most of these belonged to Mosques, or rather to the Medreses attached to them. The richest were: the Aya Sofia (4864), the Meḥemmediye (4885), Nūr-i Osmānīye (4382), Es'ad Efendi (3853), Köprüli (2777) and Rāghib Pasha (1733) volumes; these figures do not include the collections in the Old (Topkapu) Serai and "public" Library (*'umūmī*, containing many printed books) founded since that date; catalogues of these libraries (with the exception of the Serai libraries) have since been published in Stambul. The first fairly accurate list was given by von Hammer in his *Gesch. d. Osm. Reiches*, ix. 169 *et seq.*; the older catalogues, manuscript as well as printed, (cf. Flügel's edition of Ḥādjdjī Khalfa, vol. vii), have not lost their value in spite of the modern catalogues. — The two most important collections of the Serai are in the Baghdād Kiosk (ca. 1500 volumes) and in the library built by Aḥmed III in 1719 (*Enderūnī humāyūn kutubkhānesi*, ca. 3000 volumes). The Serai Library has been famous in Europe since the xvi[th] century for its wealth in Greek and Latin Mss. (now 37), because it was hoped to discover among these the lost works of classical authors.

The covered Bazaars with open shops (*Tārshū, bezestān*), as well as the *khāns* (like the Italian *fonduchi*, both storerooms and shops) in Stambul all appear to date from the Turkish period. The Great Bazaar, laid out by Meḥemmed II, was in earlier times repeatedly ravaged by fire; great damage was also done by the earthquake of the 10[th] July 1894. A similar Oriental character to that of the Great Bazaar is borne by the Egyptian Bazaar laid out by Sulaimān I in 1560, and rebuilt in 1609 in stone by Aḥmed I after a fire (*Mıṣr Čārshūsi*, bazaar for drugs and spices) near the Yenidjāmi' on the harbour side.

The oldest and largest khāns lie on the streets leading from the harbour to the Great Bazaar, for example the famous Wālida-Khān (built in 1646 by Kösem Wālide-Sulṭān as a waḳf for the Yenidjāmi'), the great resort of Persian merchants with about 400 rooms, the Büyük Yeni Khān, built by Muṣṭafā III with 320—350 rooms, the Sünbüllü-Khān, the Maḥmūd-Pasha-Khān, etc.; of the others we may mention the Wezīr Khān (in the Tauḳbāzār quarter) built by Köprülü Aḥmed Pasha and that of Pertew Pasha in the Takhtaḳal'a quarter. The number of these buildings dating from the older period and still in use may be estimated at 200.

The Caravanserais (likewise called khāns) have almost entirely disappeared from Stambul, or have lost their importance as resting-places for travellers; the largest used to be in Scutari. Among them was the Elči-Khān ("Khān of the Ambassadors"), taken down in 1883, which was on the Diwanyolu opposite the so-called "Burnt Pillar" (*Čemberli Tash*); down to the second half of the xvii[th] century (according to von Hammer, *Gesch. d. Osm. Reiches*, v. 391, till 1644) the Emperor's envoys were quartered or rather interned there.

Water Supply. The oldest aqueducts were laid down by the Emperors Hadrian and Valens; the picturesque remains of the Aqueduct of Valens, *Bozdoghān Kemeri*, are preserved between the third and fourth hills. The Byzantine Emperors arranged for a perfect supply by bringing water through new aqueducts and pipes from the distant springs on the European shore of the Bosporus to the town. The Sulṭāns, who succeeded them, still further extended these waterworks, which were particularly important on account of the usages of the Muslims; the first to do so was the Conqueror himself (Kritobulos, ii. 10 § 2). Sulaimān I. described the building of waterworks as one of the three great tasks of his life (the two others were the building of his great Mosque and the conquest of Vienna). He ordered his architect Sinān to lay down five aqueducts (*Bendkemeri, Uzun kemer, Mu'allaḳ k., Güzeldje k.* and the *Kemeri* of *Müderrisköi*) with the pipes connected with them and a great reservoir — *hawuż* حوض —. Osmān II built the Pyrgos reservoir in 1620; to Aḥmad III is attributed the building of the great dams (*bend*) in the source area of the Belgrade forest; Maḥmūd I built the dam of Baghče-Koi in 1732 and the aqueduct which supplies Pera, Galata and Top-Khāne. In addition to these works, water has been brought for the last thirty years from the lake of Derkos by private enterprise. The Oriental style of architecture of the older works appears in the *Taḳsim* (water-distributor) buildings and in the *Suterazi* (water-balances) pillars. The best known are the Taḳsīm of Pera (Maḥmūd I) and the one outside the Egri Kapu gate on the landwalls of Stambul.

Of all the Byzantine cisterns (over a dozen have now been discovered), which were used to collect water for periods of scarcity — droughts, sieges, etc. — and were fed from the great aqueducts, only one, that of Yere-batan-Serai ("the sunken Serai"), has remained in use; the others, at least those that are roofless, have been turned into vegetable gardens (*čukūr bostān*); the others are used, as for example the largest of them,

formerly the cistern of Philoxenus, now called *Bin Bir Direk* ("1001 pillars"), as workshops for silk spinners on account of their moist atmosphere. In the Turkish period, thousands of fountains (*češme*, *sebīlkhāne*) have arisen, some of them being real works of art, both as regards their architecture and decoration; particularly worthy of mention is the fountain of Aḥmed III before the main entrance to the Serai (Bāb-i Humāyūn) with an inscription composed by the builder himself in 1141 (1728-1729).

None of the Byzantine Baths have survived; their place has been taken by the well known hot baths of Orientals (*ḥammām*); at the end of the xviii^th^ century, the number of such institutions in Stambul was estimated at 130 — there are probably about the same number to day.

The old Byzantine city walls, although they have long been worthless for the defence of the city, have survived practically unaltered on the west side. Meḥemmed II had them repaired a few years after the conquest and built the fortress of the seven towers (Yedikule). The castle of Yedikule (Grelot aptly calls it the Bastille of Constantinople) had a garrison under a Dizdār and was used down to the xvii^th^ century as a treasury and to the xix^th^ as a prison for high officers of state, foreign envoys and prisoners of war. In it Maḥmūd Pasha, Meḥemmed's II famous Grand Vizier, was interned and put to death and Osmān II was strangled by his executioners; in 1247 (1831-1832) the lions from the menagerie (*Arslānkhāne*) on the Atmaidān were transferred here; it is now left to fall to pieces.

The great earthquake of 14th September 1509 did great damage to the walls, and forced Bāyazīd II to repair them (von Hammer, *Gesch. d. Osm. Reiches*, II, 350). In the reign of Murād IV (in 1635) the sea walls, which had been repeatedly damaged, were rebuilt by Bairām Pasha and whitewashed (cf. Ewliyā, *Travels* etc. i. 1, 12 *et seq.*). A thorough renovation of the sea walls and the harbour walls as far as Egrikapu took place in the reign of Aḥmed III in 1722—1724 (Čelebizāde, fol. 67 b. *et seq.*).

Since that date nothing has been done for their preservation; a great part of the sea walls was removed when the Eastern railways were laid, the walls on the Golden Horn have been almost entirely covered by the houses that have been built over them, or destroyed by fires and only in a few places have portions of any size survived.

The Gates of the City-Walls.

a. on the Golden Horn from East to West:

1. Baghče Kapu (Garden Gate); 2. Čifut K. (Jews' Gate) before the Yeni Djāmi'; 3. Balikbāzār K. (Fishmarket Gate); these three are now destroyed; 4. Yemish iskelessi K. ("the Gate of the pier for fruitships") usually called Zindān K. (Prison Gate) on account of the adjoining debtors' prison, which was also used as a female prison (changed in 1247 = 1831-1832 into a Karakol watchhouse); near it is the tomb of Baba Dja'far, the patron saint of the prisoners; 5. Odun K. (Wooden Gate); 6. Yeni or Ayazma K., built in the xvi^th^ century; 7. Unkapan K. (Gate of the flour storehouse); 8. Djebbali K., so-called after جبه علي who took part in the siege under the Conqueror; 9. Aya K. (Saints' Gate, from the neighbouring church of Saint Theodosia, now the Güldjāmi'); 10. Fener K. (at the entrance to the Fanar quarter); 11. Petri K., which in the Byzantine period led into the fortified Petrion; 12. Ičeri yeni kapu ("the new gate leading into the interior of the Golden Horn"); 13. Balat K., so called after the palace of the Blachernae, which was situated there; in the xvi^th^ century it still bore its Byzantine name τοῦ Κυνηγοῦ (Hunter's Gate); 14. Aiwanserai K. (corrupted from Aiyūb Anṣārī, as it leads to the suburb of Aiyūb), in the xvi^th^ century also called Xyloporta by the Greeks.

b. The Gates of the land walls, from north to south:

1. Egrikapu ("Oblique Gate"). At Egrikapu, adjoining the citywalls are the ruins of the Tekfur Serai, the palace built by Constantine Porphyrogennetos (x^th^ century). After the conquest it was used in turn as a stable for elephants, a workshop for the manufacture of Nicean faïence and glass, and has become famous by the finding of the Čoban tashi, the most valuable diamond among the Ottoman crown jewels; 2. Edirne K. ("Adrianople Gate"); 3. Topkapu (Cannon Gate); 4. Mewlewikhāne Yeni K. (New Gate of the Derwish monastery; 5. Siliwri K. (Siliwri Gate); 6. Kapali K. (the "Walled-up" Gate, now reopened); 7. Salākh-Khāne K. (Slaughterhouse Gate) usually called Yedikule K.

The Golden (Triumphal) Gate of Theodosius II, has been walled up since the Turkish conquest; the basreliefs, which adorned it as late as the beginning of the xix^th^ century, have now entirely disappeared.

c. Gates on the sea walls, from west to east:

1. Narli K.; 2. Samatia (Psamatia) K.; 3. Dā'ūd Pasha K.; 4. Bostān K. (now destroyed); 5. Langa Yeni K.; 6. Kum K.; 7. Čatladi K., called the gate "with the bears" by the Greeks in the xvi^th^ century after the stone lions placed above it; 8. Akhir K.

d. Gates of the Serai walls along the Sea of Marmora and the Golden Horn:

1. Balik Khāne K.; 2. Deirmen K.; 3. Khastalar K.; 4. Oghrun (Odun) K.; 5. Topkapu (on the highest point of the Serai, now destroyed); 6. Yali-kioshk K., now destroyed.

These gates were only used for communication with the Serai.

The sacred and profane buildings which have been enumerated, give a clear idea of the changes that have been brought about in Constantinople through its occupation by a people of different race, religion and culture with totally different requirements of everyday life. This revolution which spared nothing, has also affected the numerous monuments and works of art which once adorned the streets and public places of Byzantium. The Conqueror ordered the great equestrian statue of Justinian (*bakir at* "the brazen horse") to be taken down from its pedestal and the metal melted down to make cannons; the other statues met the same fate.

Of the other pillars etc. the following have survived — almost by a miracle, probably because they were regarded as talismans. On the Atmaidān there still stand the Egyptian obelisk, the Snake Column and the core of the obelisk of Constantine Porphyrogennetos; the latter has however lost its coating of bronze. The Snake Column survived to

the beginning of the xviii[th] century with its three heads with gaping jaws almost unhurt; in 1703, while a Polish embassy was quartered on the At-maidān, the three heads were cut off by some Vandals who were never discovered. The foreign guests were suspected of having committed this act of vandalism (*quod non fecerunt barbari, fecere Barberini*). One of the heads had lost its upper jaw long before this time; according to the usual story, it was cut off by the pages of Ibrāhīm Pasha, Sulaimān I's Grand Vizier; others say it was done by Meḥemmed II, and others still by Selim II or Murād IV.

The porphyry pillar of Constantine the Great on the Taukbazar, called *Čemberlitash* by the Turks, has survived in spite of the damage done to it by lightning, fire and earthquake; so has Marcian's pillar (*ḳiz tashi*, columna virginea) near the Saddler's Hall (*Serrādj Khāne*); the shapeless base which supports it, is believed by the Turks to be the grave of the daughter of Constantine the Great. Of the Column of Arcadius, (the columna historiata, so called from the reliefs which cover the shaft as on Trajan's column) only the base has survived; the column was destroyed at the beginning of the xviii[th] century and the bas-reliefs disappeared. On the various columns see C. Gurlitt, *Antike Denkmalsäulen in Konstantinopel* (1909); on the vicissitudes of the Snake Column in ancient and modern times, see O. Frick, *Das Plataeische Weihgeschenk zu Konstantinopel* (Leipzig, 1859); Fabricius in *Jahrbuch des Deutschen Arch. Inst.*, i. p. 176—191 (1886). Old views and plans of Constantinople as well as some engravings of the beginning of the xvi[th] century make it clear that at that time many monuments still survived, of which we have now no further details. On the monuments of the Atmaidān and the statues removed by Ibrāhīm Pasha from Pest and set up there, see Wiegand's paper in the *Jahrbuch des Deutschen Arch. Inst.*, xxiii. (1908).

The ancient harbours of the city on the Sea of Marmora have disappeared under the Ottomans; the largest of them, the harbour of Eleutherius, was quite filled up in the year 1760 and is now a large market garden (*wlanga bostān*). The "Galley harbour" (*kadirga limani*, harbour of Julian or of Sophia) was used as a naval harbour and arsenal, till Selim I and Sulaimān I built the arsenal on the Golden Horn.

The Golden Horn (*tersāne boghazi*) has since become the naval and commercial harbour of Constantinople. In the Byzantine period the entrance was repeatedly closed to hostile fleets by a chain (see van Millingen, p. 229 *et seq.*). A connection between the two shores was maintained by small boats at the place where the New Bridge has been erected.

Fragments still remained in the xvi[th] century at Aiyūb of the stone bridge built by Justinian which Ibn Baṭūṭa II, 431 mentions as destroyed; there were one or more bridges in the innermost branch of this arm of the sea, at the "sweet waters" (*Kiat-khāne*). The "Déspina" bridge and the Bridge of Elephants (*Fil Köprüsi*) are mentioned as existing within the Turkish period.

Sulṭān Maḥmūd II built the first bridge, of wooden pontoons, between Stambul (Unkapan) and Galata (Azap Kapu); it was opened with great ceremony on the 3[rd] September 1836. The second great bridge, the New or Wālide bridge between the Square of Emīnönü near the Wālidedjāmi' (on the Stambul side) and Karaköi (Galata), was built in 1845 by Sulṭān 'Abd al-Madjīd's mother. Both bridges have been repeatedly repaired and the wooden pontoons replaced by iron ones.

A third bridge between Aiyūb and Khāṣṣköi (the so-called "Jews' Bridge") was destroyed by fire in 1862 after being only ten years in existence.

Selim I built the Arsenal (*Tersāne*) on the north shore of the Golden Horn in 922 (1516) in what was afterwards to be the suburb of Ḳāsim Pasha. It was first considerably extended by Sulaimān I and by the Great Admirals Djazā'irli Hasan Pasha (in the reign of 'Abd al-Ḥamid I) and Ḥusein Pasha (in the reign of Selim III) and now extends with the buildings connected with it — docks, workshops, barracks, the *Dīwān-khāne* (the office of the Kapudanpasha and later of the Naval Ministry) etc. — from Khāṣṣköi to Galata (Azapkapu).

To the west of the Dīwānkhāne was the notorious bagnio for the galley slaves.

On the heights above the Arsenal is the Okmaidān (archery ground) said to have been laid out by Meḥemmed II, on which the archers including many Sulṭāns, notably Selim III, used to practise; their skill and prowess are recorded on the numerous stone pillars (*nishān-tashi*) with inscriptions in prose and verse. The open place of prayer (*namāzgāh*) noted for the fine view it commands, was built by Aḥmad III in 1127 (1715); it was to it that processions in time of drought and pestilence went; in September 1720 celebrations were held there for fourteen days on account of the circumcision of the Imperial princes.

Of the Mosques in this neighbourhood, we need only mention the Mosque of Kapudanpasha Piāle, the Conqueror of Chios and victor of Djerbe, built in 1572 on a picturesque site above Ḳāsim Pasha and richly endowed.

The Suburb of Galata. The origin of the name, which supplanted the older *Sykai* at a very early period, is uncertain; the name Pera ("on the other side") remained in use alongside of it in various forms. After the restoration of the Byzantine Empire, Michael VII Palaeologus granted Galata to the Genoese in 1261; they founded an autonomous colony there under a Podesta and afterwards surrounded the town with walls and ditches; the tower of Galata, over 150 feet high, stands on a height, and is the last imposing relic of the ancient fortifications. The great tower was used for long after the conquest as a prison and afterwards, as it still is, as a watchtower for fires; after being severely damaged by fire in 1208 (1793-1794), it was restored in its original form and its height raised by several yards; the famous Muftī Faiḍallāh (beginning of the xviii[th] century) wanted the Jesuit father Besnier to erect an observatory on the top of it.

The walls of Galata were pierced by the following gates: on the Golden Horn (from W. to E.): Azap Kapu, Köteкdji K., Yagh Kapan K., Balik-bazar K., Karaköi K., Kurshunlu Makhzen K., Mumkhāne K., Kireč K., Egri K.; on the land-side (from W. to E.): Meit Iskelesi K., Büyük and Küčük Kule K., Top-Khāne K.; in the inner walls: Küčük Karaköi K., Mahal K., Meidāndjik K., Kilise K., Iki Azap K., Ṣarīḳ K. In the years 1857—1860 the walls with their towers were almost entirely taken down; a similar fate awaits

the khâns of the Genoese period that have survived in the Pers̲h̲embebâzâr. The originally Frankish (Italian) population formed the nucleus of the later so-called Latin community of Pera; Greeks (particularly from Chios), Jews and Armenians afterwards settled here; after the foundation of the Arsenal and the gun-foundry of Top-K̲h̲âne, Muḥammadans from the east and west also forced their way in and took possession of the larger Catholic and Greek churches which they found there. Only St. Pierre, St. Georges and St. Benoît have remained to the Catholics; the others, viz: St. Paul, now the *'Arab Djâmi'* (a Mosque since 1523 or 1535), St. Maria de Draperis (confiscated in 1663), St. François (since 1697 the Mosque of Wâlide), St. Anna (confiscated in 1697), St. Sebastian, St. Clara, disappeared in the course of the xvi[th] and xvii[th] century. Of the Greek churches the best known was the Χριστοσωτῆ; it disappears in the xvii[th] century. The Turks have 14 Mosques in Galata of which 4 were originally churches.

Galata with its taverns and other places of amusement was, as Pera now is, much visited by Turks who wished to enjoy themselves there a la franca. Meḥemmed II used occasionally to visit the Catholic churches to see the services.

As early as the beginning of the xvi[th] century, the ambassadors of Venice and France as well as other foreigners also settled on the heights north of Galata in the "vignes de Péra". Pera, abbreviated from this phrase, became the name of the new settlement and then fell into disuse as the name of Galata, to which it was originally applied. Luigi Gritti, the adviser and agent of Ibrâhîm Pas̲h̲a, Grand Vizier to Sulaimân I, had his residence there equiped in oriental splendour; the name by which he was known to the Turks, *beyoghlu* ("Son of a prince" as he was son of a Doge) is still the Turkish name for Pera. The Greek name is *Stavrodrómi*, "the crossroads", because at the entrance to Pera, the main road from Pera is crossed by the road from Top-K̲h̲âne to the Arsenal.

Pera has since been constantly expanding and with its 100,000 inhabitants forms the real European residential quarter; Galata has remained the commercial quarter and seaport. The Turkish population which at an earlier period had settled on the western and eastern slopes of the high ridge of Pera, is gradually disappearing and only a few, small Mosques in the centre of the Christian quarter remind one that Muḥammadans also were once settled here.

Two other foundations of the earlier period have survived: the Galata Serai and the Mewlewi monastery on the road between Galata and Pera. The former, built by Bâyazîd II, was used as a training school for the Imperial pages; in the reign of Selîm II and again in that of Meḥemmed IV (in 1076 A. H. = 1665-1666) it was closed till Aḥmad III revived it in 1714; the old building was taken down in 1820, the new one built in 1827 as a medical school with polyclinic; since 1867 it has been the Lycée Impérial, instituted on the French model.

The Mewlewi monastery, the oldest settlement of this order in the capital, called "Galata Mewlewik̲h̲ânesi" as the district of Galata included Pera also, was built in 897 (1491-1492), burned down in January 1765 and finally rebuilt by Selîm III in its present form in 1210 (1795-1796). It is best known to Europeans as containing the tomb of the renegade Aḥmad Pas̲h̲a (Bonneval, q. v. p. 744) and to Muḥammadans by the tomb of Ismâ'îl Anḳarawî, the commentator on the *Mathnawî*.

Close to Galata, to the east on the seashore, is the suburb of T o p - K̲h̲â n e so-called after the gun-foundry erected there by the Conqueror himself and much extended by Sulaimân I. The present building, which is only used at the present day for government offices, as artillery are now procured from foreign countries, dates from 1745. Just opposite it, Kapudan Pas̲h̲a Kilidj 'Alî built his great Mosque in 1580 with a türbe, both the work of Sinân; the tomb, which is built in the Frankish fashion in bad taste, probably dates from a later period. In 1732 Maḥmûd I built opposite the Mosque a handsomely decorated fountain; and at some distance, on the open space, is the Nusratiye Mosque built by Maḥmûd II in 1823—1826 in memory of the massacre of the Janissaries.

The site of the oft-mentioned observatory, which the astronomer Taḳî al-Dîn built above Top-K̲h̲âne by command of Murâd III and which was destroyed in February 1580 on the representations of the historiographer Sa'd al-Dîn, cannot be more definitely located.

In the same neighbourhood in the Findikli quarter is the Mosque built by Sulaimân I in 967 (1559-1560) in memory of Prince Djihângîr who perished in 1553 on the Persian campaign and called after him; it is a well known landmark and has been several times destroyed by fire; it was last rebuilt in 1823.

"K a b a t a s̲h̲" "the Rough Rock", was the name of a dangerous cliff near the shore at Dolmabaghče, the *Petra Thermastis* of the ancients (von Hammer, *Const. u. Bosp.*, i. 191); a certain Muṣṭafâ Nedjîb, who had a villa there on the shore, built a pier to it early in the xix[th] century. It was finally rendered safe by the building of a small haven in 1267 (1851) but the name has remained.

D o l m a - B a g h č e ("the well-filled garden"; the translation "Gourd-garden" — which first appears in von Hammer, *Const. u. Bosp.*, ii. 190 — is based on an amusing misunderstanding). The area which is now occupied by the palace built in 1853 by 'Abd al-Madjîd and the open space in front of it, was originally a deep gulf between the gardens of Kara Bâlî and Bes̲h̲iktas̲h̲, often mentioned in the xvi[th] century. It was regained from the sea in 1614 within three months by Kapudan Pas̲h̲a K̲h̲alîl. It was from this bay that the conqueror's ships were dragged into the Golden Horn in 1453 (see above p. 869[b]). At a later period the admirals used to anchor here for several days when the fleet was about to sail and give farewell festivals. — The above-mentioned palace was used as the Imperial residence by Sulṭân 'Abd al-Madjîd and his successor 'Abd al-'Azîz till the latter built the palace of Čirâghân; the reigning Sulṭân Meḥemmed V has again returned to Dolma-Baghče.

B i b l i o g r a p h y: on the C o n q u e s t, see Ducas, Phrantzes and Chalcocondyles in the Bonn *Corpus*, also *Monumenta Hung. Hist.*, xxi. *et seq.* (ed. Dethier); A. D. Mordtmann, *Belagerung und Eroberung Constantinopels* .... 1453 (Stuttgart 1858).

The main source for the history of the Mos-

ques of Stambul and its suburbs is the *Ḥadīḳat al-Djawāmi'* the "Garden of Mosques" by Ḥāfiẓ Ḥusein Efendi of Aiwanserai (flourished in the second half of the xviii^th century), which was first made known in Europe by von Hammer (cf. *Gesch. des Osman. Reiches*, ix. 46—144); it was printed in Stambul in 1281 (1864-1865) with the additions made by 'Alī Sāṭi' which come down to the reign of 'Abd al-Madjīd. The earliest descriptions of any value with pictures were given by Grelot in his *Relation nouvelle d'un Voyage à Constantinople* (Paris 1672); there are fine engravings in d'Ohsson, *Tableau de l'Empire Othoman*, Vol. iii. of the folio edition. The section in von Hammer's *Constantinopolis u. der Bosporus*, i. 335—446, although in many places out of date, still deserves to be consulted; see also *L'Architecture Ottomane*, Ouvrage publié sous le patronage de S. E. Edhem Pacha (Constantinople 1873); Cornelius Gurlitt, *Die Baukunst Konstantinopels* (about to be published); Paspati has discussed the Byzantine churches which are now Mosques in his Βυζαντιναὶ Μελέται (Cp. 1877); lastly J. Ebersolt, *Étude sur la Topographie et les Monuments de Constantinople* (Paris 1909).

On the aqueducts the authoritative work is still Andréossy, *Voy. à l'Embouchure de la Mer Noire* (Paris 1818; second edition entitled: *Constantinople et le Bosphore de Thrace*, ibid. 1828); cf. thereon von der Goltz's map of the environs of Constantinople (Berlin 1897); cf. also v. Hammer, *Const. u. Bosp.*, i. 560—582, the baths are specially dealt with on p. 530 *et seq.* and by White (see below), iii. 296—313.

On the city-walls: A. van Millingen, *Byzantine Constantinople* (London 1899); A. Zanotti, *Autour des murs de Constantinople* (Paris 1911).

On Galata: A. Belin, *Histoire de la Latinité de Constantinople* (Paris 1894); L. F. Belgrano, *Documenti riguardanti la colonia Genovese di Pera* (Genoa 1888); Covels, *Notes on Galata* (*Ann. Brit. School at Athens*, N^o. xi. 1904-1905); Sauli, *Della Colonia dei Genovesi in Galata* (Torino 1831).

General works: Cosimo Comidas de Carbognano, *Descrizione topografica di Constantinopoli* (Bassano 1794); v. Hammer, *Constantinopolis und der Bosporos* (2 Vols., Pesth 1822; not yet obsolete); do., *Geschichte des osmanischen Reiches* (10 Vols., Pest 1827—1835); Charles White, *Three Years in Constantinople* (3 vols., London 1845); Skarlatos Byzantios, Κωνσταντινούπολις (Athens 1851—1869; in Modern Greek; an industrious but uncritical compilation); E. A. Grosvenor, *Constantinople* (2 Vols., London 1895); Eugen Oberhummer, *Constantinopolis*, Stuttgart 1899 (reprint from Pauly-Wissowas *Real-Encyklopädie*, Vol. iv.); Djelal Essad, *Constantinople. De Byzance à Stamboul* (Paris 1909).

Among Oriental authorities Ewliyā Čelebi (xvii^th century) may be mentioned; there are three recensions: 1. منتخبات (Stambul 1239 H.; contains only the first sections); 2. Ewlijā Efendi, *Narrative of Travels in Europe, Asia and Africa*, transl. by von Hammer, London 1850 (incomplete); 3rd edition in 6 vols.: Stambul 1314—1318 A. H.

An almost complete survey of the older travel literature is given by Lüdeke, *Beschreibung des türk. Reiches* (Leipzig 1780), i. 399 *et seq.*, ii. 93 *et seq.*; cf. v. Hammer, *Const. u. Bosp.*, vol. i. preface.

Plans of the City. On the older plans see Oberhummer, *op. cit.*, p. 25; the first real plan is that completed by F. Kauffer in the year 1776 and revised in 1786, which appears in its original form in Choiseul-Gouffier, *Voy. Pittoresque de la Grèce*, Vol. ii. and J. B. Lechevalier, *Voy. de la Propontide* (Paris 1800). H. Kiepert's map, *Constantinopel u. der Bosporus* (Berlin 1853) utilises Moltke's surveys of the years 1836-1837. The latest plan by C. F. Stolpe is practically based in its details on that of Kauffer.

Views: Eugen Oberhummer, *Konstantinopel unter Sulaiman dem Grossen* (München 1902; contains the drawing by Melchior Lorichs of the year 1559); Choiseul-Gouffier, *Voy. Pittoresque de la Grèce*; Pertusier, *Promenades Pittoresques dans Constantinople et sur les Rives du Bosphore* (Paris 1815); Melling, *Voyage Pittoresque de Constantinople* (Paris 1819).

(J. H. MORDTMANN.)

CONSUL (Arabic *ḳonṣul*, Persian *ḳonsūl*, Turkish *ḳonsolos*), the accredited administrative and commercial agent to the local authority in a commercial town. Turkey gives its consuls the title of *shah-bender* and Persia that of *kār-pardāz*. In Muḥammadan countries, the consul as well as those, who claim his jurisdiction, have the right of extra-territoriality; he is the judge of the latter, who are exempt from the jurisdiction of the local courts, except in mixed cases. The old Venetian capitulations granted the republic the right of maintaining at the Porte a consul called the *bailo* (cf. the article BALYOS, p. 640), an official who had previously existed at the Byzantine court; in 1304, the Genoese Podesta had the title "*potestas sive consul*" (Sauli, ii. 212). There was a Venetian consul in Egypt as early as 636 (1238); his right of jurisdiction was confirmed by the treaty concluded with the Sulṭān al-Malik al-'Ādil II. (1238—1240 A. D.). The French capitulations, which reserved for French citizens the privileges formerly granted to Venetians (last renewed in 1740), have fixed the position of consuls in the Ottoman empire: the right of deciding lawsuits between their own citizens, without the intervention of the local authority (Art. 15 and 26); the Sublime Porte reserves the right of judging cases in which the consul is a party, but he cannot be imprisoned nor the seals placed upon his dwelling (Art. 16); they may make wine in their houses or import it from abroad without any one interfering (Art. 40) or levying duties upon it (Art. 51). They shall employ such native dragomans and such janissaries (*yasaḳḳī*) as they please (Art. 45 and 50). They are to be allowed to hoist their flag on residences which they have lived in for some time [except in certain towns such as Damascus] (Art. 49). They are to examine the papers of vessels of their nationality (Art. 54), levy the consulate dues (Art. 64), deliver and examine passports (Art. 63); they shall be present at the searching of his domicile in connection with any crime committed by one of their country men (Art. 65 and 70).

viii. (1876), p. 386 *et seq.*; *Capitulations et Traités de la France*, p. 37, 55 *et seq.*

(CL. HUART.)

CORAN. [See KOR'ĀN.]

ČORBĀDJI, a title applied to colonels of the regiments of Janissaries (*orta*) [see the article JANISSARIES] and to prominent individuals in the smaller townships of Turkey on whom it devolved to entertain passing strangers. At the present day it is used only as a title of Christian country gentlemen.

Bibliography: Muradgea d'Ohsson, *Tableau Général de l'Empire Othoman*, (Paris 1788—1824); von Hammer, *Des Osmanischen Reiches Staatsverfassung* (Vienna 1815); do., *Geschichte des Osm. Reiches* (Pest 1836).

(F. GIESE.)

CÓRDOBA, French CORDOUE, English, Italian and German CORDOVA (KORDOVA), Arabic KURṬUBA, Latin CORDŪBA (370 feet above sea-level) on the right (north) bank of the central course of the Guadalquivir (from the Arabic Wād al-Kabīr "the great river"), the ancient Baetis, with 60,000 inhabitants, is at the present day the capital of the province of the same name which lies on both sides of the river in the heart of Andalusia. The southern and smaller half of the province, practically the famous La Campiña (*Iḳlīm al-Kanbāniya*, Idrīsī, Arabic text, p. 174), rising in the south east to a height of over 1200 feet, is more level, hot and fertile, being especially devoted to viniculture, while the northern, larger half which begins in the Sierra de Córdoba immediately to the north of the town, rises to heights over 2900 feet high in the central Sierra Morena (Mariani Montes) with the plateau of los Pedroches which inclines in a northerly direction to the Zújar valley in the west and the Guadalmez valley in the east; this plateau is called *Iḳlīm al-Balālīṭa* by Idrīsī and by others *Fāḥṣ al-Ballūṭ* "oakfield" and in it lies the little town of Pedroche known to the Arabs as Biṭrawdj or Boṭrūsh (whence al-Biṭrūdjī, q. v. above p. 735). The north has a more temperate climate and includes great stretches of hill country, suited for sheep and horse breeding (caballos cordobeses) and rich deposits of coal and minerals. The name Córdoba has frequently been explained as from the Phoenician-Punic קרת טובה, "good town" since Conde first suggested this etymology in his *Descripcion de España de Xerif Aledris*, Madrid, p. 161 (for even rasher etymologies see Madoz, vi. 646 and Maḳḳarī, i. 355). The name is certainly not Semitic but Old-Iberian (cf. Salduba the Old-Iberian name for Caesar-Augusta, whence Saragossa, Zaragoza; there is a Salduba = Marbella in the south between Malaga and Gibraltar). After the second Punic war it became known as an important and wealthy commercial city (*aes Cordubense*) under the name Κορδύβη or Κορδούβα or Corduba. It was finally taken for Rome by M. Marcellus in 152 B. C., colonised with Roman citizens and as Colonia Patricia raised to be the capital of the Provincia of Hispania Ulterior. As Córdoba had taken the side of Pompey, it was severely punished by Caesar after the battle of Munda in 49 B. C., but in Imperial times it remained the capital of the province (it was the home of the two Senecas and Lucan) alternately with Hispalis (Seville) and Italica (later the Arabic Ṭāliḳa). Lewigild king of the Visigoths took it in 571 from the Byzantines who had been settling in Southern Spain since the time of Justinian, but although it was a see of a Bishop it remained unimportant under the Goths.

In 711 Cordova was captured by Mughīth al-Rūmī, a manumitted slave — it was betrayed by the Jews — but 400 Goths held out for three months longer northwest of Cordova in the fortified church of San Acisclo. The town was treated very leniently by the Arabs (Simonet, *Historia de los Mozárabes*, p. 49).

As early as the year 100 (719), al-Samḥ b. Mālik al-Khawlānī, the sixth of the 23, mostly ephemeral, Umaiyad governors, transferred the seat of government definitely from Seville to Cordova and repaired the ancient Roman bridge. When the last governor Yūsuf b. ʿAbd al-Raḥmān al-Fihrī (129—138 = 747—756) was overthrown by the Umaiyad prince ʿAbd al-Raḥmān I b. Muʿāwiya al-Dākhil [q. v., p. 53], who had escaped the massacre of his house in Syria, the great period of prosperity of the city began, and lasted throughout the Umaiyad dynasty [q. v.] of Cordova, which was independent of the ʿAbbāsids in Baghdād (138—403 or 422 = 756—1013 or 1031). This incomparable period of splendour of the western rival of Baghdād, the city of the Caliphs, is uniquely perpetuated in the great mosque lying just in front of the lofty ancient Moorish bridge-head, the fortress-tower of Calahorra (Arabicised from the Iberian Calagurris), the Kaʿba of the west; although, at the re-conquest in 1236, it became a Christian cathedral and was disfigured by alterations, it has on the whole faithfully retained its Arabic character with its forest of pillars, its outer court (Patio de los Naranjos), the wall which encircles it as if it were a fortress or monastery, the bell-tower, which was however renewed in 1593 and 1763, along with its popular name of La Mezquita "the Mosque" while all the other splendid buildings and monuments of this world-famed period of splendour in the early middle ages have disappeared except for a few wretched fragments. When the shrewd ʿAbd al-Raḥmān I had laid the foundations for the supremacy of his dynasty in circumstances of exceptional difficulty, by attaining some success in putting a stop to the rivalries and quarrels of not only the Arabs of North and South but also between them and the Berbers of North Africa, the Spanish renegades and the Mozarabs who remained a constant weakness to Arab rule in Spain and brought about its ultimate fall, he began the building of the great mosque in the last two years of his life 785 and 786. His son and successor Hishām I 172—180 = 788—796 completed it, and built the minaret (often called in Spain *ṣawmaʿa* and *manār* = *manāra*), but ʿAbd al-Raḥmān II. (206—238 = 822—852), son and successor of the Amīr al-Hakam I. (180—206 = 796—822), found himself forced to enlarge the building; by extending the 11 naves southwards he added 7 transepts with 10 rows of pillars and built the second *miḥrāb* into the south wall, west of the present Capilla de Nuestra Señora de Villaviciosa (833—848), while his son and successor Muhammad I. (238—273 = 852—886) had in 852—856 thoroughly to overhaul the older building, which had been too hurriedly put up; he devoted particular attention to the decoration of the doors and walls, railed off the *maḳṣūra* reserved for the Amīr and the court in front of the *miḥrāb* by a wooden screen

and built a covered passage (*sābāṭ*) from Alcázar, the palace to the west of the mosque, to provide a direct and private entrance to the maḳṣūra at the daily prayers. ʿAbd al-Raḥmān III. al-Nāṣir (300—350 = 912—961), the "Khalifa" [q. v. p. 53], who marks the zenith of the Arab epoch in Spain, rebuilt the minaret, which had been severely damaged by the earthquake of 880, in splendid fashion; he was also the builder of the celebrated country house Madīnat al-Zahrā (now called Córdoba la Vieja) for his beloved al-Zahrā, 1½ hours' journey northwest of Cordova at the foot of the Sierra (near the convent de San Gerónimo which has been built out of the ruins of the palace), but practically nothing is now left of it (cf. Maḳḳarī, i. 344 *et seq.*). The most beautiful extension of the mosque proper (almost doubling it) was carried out by the learned and scholarly Caliph al-Ḥakam al-Mustanṣir billāh (350—366 = 961—976), son and successor of the great ʿAbd al-Raḥmān III, who ordered his Prime Minister or Grand Vizier (called *ḥādjib* in Spain) Djaʿfar al-Ṣaḳlabī (the Slav) to extend the colonnades in the mosque to the south by the addition of 14 transepts, and built a splendid new *maḳṣūra*, a new *sābāṭ* and the third noble *miḥrāb*, which alone has survived in its entirety. The last great extension was made by Hishām II al-Muʾaiyad's (366—399 = 976—1009) powerful vizier, the regent al-Manṣūr (Almanzor, died 1002), who added seven colonnades to the whole length of the building in the east and thereby raised the total number of naves (previously 11) to 19, but threw the miḥrāb out of its proper place at the end of the central axis of the sanctuary (on account of the precipitous slope down to the Guadalquivir it was found impossible to extend the building further to the south). Like al-Zahrā in the N. W., al-Madīnat al-Zāhira ("the flourishing city"), founded to the east of Cordova by al-Manṣūr to be the seat of the government and its offices, was destroyed in the period of revolution in the beginning of the xith century and has now quite disappeared.

After the complete extinction of the Umaiyads with Hishām III al-Muʿtadd (418—422 = 1027—1031), Cordova became a republic under the presidency of three Djahwarids: Abu 'l-Ḥazm Djahwar b. Muḥammad b. Djahwar, 1031—1043, Abu 'l-Walīd Muḥammad, 1043—1064, and ʿAbd al-Malik, 1064—1070. In the latter year it passed to the ʿAbbādids of Seville; in 1091 to the Almoravids and in 1148 to the Almohads. With its conquest by Ferdinand III of Castile in 1236 it was doomed to gradual decline.

Of the countless Arab scholars who belonged to Cordova, we will only mention here Ibn Ḥazm, died 1044, Averrhoës (Ibn Rushd), died 1126, and Maimonides, died 1204.

Bibliography: Maḳḳarī devotes a whole book to Cordova, i, 297—462 (epitomised in Gayangos, *History of the Mohammedan Dynasties in Spain*, i. 200—249), though it contains many literary and historical notes referring to other places; Idrīsī, *L'Afrique et l'Espagne* (1866), p. 208—214 (arab.) = traduction 256—266; Yāḳūt, *Muʿdjam al-Buldān*, iv. 58—61; al-Ḳazwīnī, *Āthār al-Bilād*, p. 370; Madoz, *Diccionario geogr.-estadist. hist.*, vi. 646—660; Schack, *Poesie und Kunst der Araber in Spanien und Sicilien* ², ii. 182—224; Contreras, *Estudio descriptivo de los monumentos árabes de Granada, Sevilla y Córdoba ó sea La Alhambra, El Alcázar y la gran Mezquita de Occidente*, 3. ed., Madrid 1885 (2. ed. 1878) (con grabados y planos), p. 40—108; Rodrigo Amador de los Rios, *Inscripciones árabes de Córdoba*, 1. ed., Madrid 1879, 3. ed. 1892; do., *Una excursion á las ruinas de Medina Az-Zahrâ* in *La España Moderna*, 1. Julio 1906, p. 19—48; K. E. Schmidt, *Cordoba und Granada*, Leipzig—Berlin 1902 (Seemann's *Berühmte Kunststätten*, No. 13); Baedeker's *Spanien und Portugal* ³, 1906, p. 346—355 (with an excellent plan of the city and of the mosque); A. F. Calvert, *Moorish Remains in Spain*, London 1906, p. 1—233 (text inaccurate; the numerous illustrations, some coloured, are very successful, most of them excellent); A. F. Calvert and Walter M. Gallichan, *Cordova, a City of the Moors*, with 160 illustrations, London 1907. On older, rarer descriptions of the town see E. Redel, *Ambrosio de Morales, estudio biográfico*, Córdoba 1908, p. 427.
(C. F. Seybold.)

COROMANDEL, the name adopted by European geographers for the eastern coast of India. It is a corruption of *Chōramandala*, "the kingdom of Chora or Chola", which is found in Tamil inscriptions of the xith cent. at Tandjore. The early Muḥammadan name for the same coast is Maʿbar [q. v.]. (J. S. Cotton.)

CRAC, Crath, a mediaeval Frankish corruption of the place-name Karak [q. v.]; crac des chevaliers see Ḥiṣn al-Akrād.

CRETE.

1. Present Conditions and Constitution.

Crete, the geography and pre-Muḥammadan history of which will not be dealt with here, was called اقريطش by the Arabs and Kirid by the Turks. At the present day it is an autonomous state, owning the suzerainty of the Porte but paying no tribute and governed on behalf of the four protecting Powers, Britain, France, Italy and Russia, by a High Commissioner (till 1906 Prince George of Greece, who was followed by Zaïmis; the post is at present unoccupied). The High Commissioner is assisted by an Administrative Council of three members (*sumbūlās*), who control the departments of Justice, Finance, Education and Home Affairs. They are appointed and dismissed by the High Commissioner, are responsible to the Chamber and may be impeached before a special tribunal. According to the constitution which was granted on the 16th—28th April 1899 and modified on the 8th—12th February 1907, the Chamber of Deputies (*ḳevkā*) was created to represent the people. One deputy is elected by each 5000 inhabitants. The Chamber meets annually on the 1st May for 2—3 months. There are elections every two years. Parliament has control of finance and approves taxes.

The four protecting Powers control the foreign affairs of the island.

Crete is divided into 5 *nomoi*, formerly called *sandjaḳ*: Canea, Candia, Rethymnos (Turk. Resmo) Sphakia and Lasithi (Turk. Lashīd) each of which is under a Nomarch. Canea is the capital.

Ecclesiastical affairs are controlled by the Synod, which consists of the Metropolitan and seven bishops of the island. They meet in Candia (Herakleion).

Justice is administered on the French model. Muḥammadan judges retain their jurisdiction in matters of religion, marriage and inheritance as well as in of the wardship of minors. The police and militia are commanded by Greek officers.

According to the last census, that of the 4th-5th June 1911 the population is as follows: 307,812 Christians, 27,852 Muḥammadans, 487 Jews, in all 336,151.

2. History.

The Muḥammadans first came in contact with the island on their earliest campaigns against the Byzantines and occupied it temporarily in 673. We know very little of the history of this early period. It was not till 825, that Abū Ḥafṣ ʿOmar b. ʿĪsā b. Shuʿaib al-Ballūṭī [q. v. p. 87] permanently won Crete for Islām. Abū Ḥafṣ ʿOmar was the leader of the malcontents, who had to flee after an unsuccessful rising against Ḥakam in Córdoba. On his raids on the Mediterranean coasts, he landed at Crete which he gradually subjected with the exception of the territory held by the Sphakiots. In spite of repeated attempts by the Byzantine Emperors to drive them out, the Muslims retained their newly won possession for 135 years. To render their footing on the island more secure, they built the new capital of Khandaḳ, which later became Candia, near the promontory of Charax. This name was commonly applied to the whole island down to the most recent times.

In 961 the Byzantine general Nikephoros Phokas succeeded in taking Candia after besieging it for several months and soon after subjecting the rest of the island. The last Amīr ʿAbd al-ʿAzīz died in Constantinople and his son Anemas entered the service of the Emperor. The Muḥammadan population left the island or in a short time adopted Christianity.

After the conquest of Constantinople by the Latins, Crete fell to Count Boniface of Montferrat who sold it to the Venetians in 1204. Down to the Turkish conquest in 1669 it remained under Venetian rule, which, although very unpopular with the inhabitants and on several occasions guilty of acts of great cruelty, nevertheless produced a period of prosperity such as it has never again reached.

In 1645 began the Ottoman conquest. The pretext given was an attack which the Venetians and Maltese had made on the Ḳizlar Aghasi Topal Agha when he was on the way to Egypt with a slave and her child, whose father was said to be Sulṭān Ibrāhīm. Their intention to occupy the island was however of much longer standing. After a siege of 57 days the Turks took Canea, then Rethymnos and after long and heavy fighting and a desperate resistance on the part of the Cretans they finally occupied Candia (1648—1669). The whole western world sent assistance to the Venetians under Morosini. Nevertheless the town had to surrender on the 27th Sept. 1669 to the Grand Vizier Aḥmad Köprülü. By the terms of the treaty of peace the Venetians only retained Grabusa, Suda, and Spinalonga. It was not till 1715 that the latter finally passed to the Turks.

At first the Cretans had hailed the Turks as liberators from the hated Venetian yoke and aided them in many ways, but soon saw that they had only made their position worse. Many of them sought to advance themselves by adopting Islām. These Muḥammadan Cretans, who were hated by their former coreligionists, the Christians, even more than the immigrant Turkish elements, who were on the whole less numerous, were the real cause of oppression. They became the possessors of the land; the Janissaries of the island were recruited from them, and were the real rulers of the island, as the Ottoman government could do nothing against them. We really know very little about Turkish rule in Crete up to the beginning of last century. Small risings had often taken place but it was not till 1770 that there was a serious revolution. It was begun in the hope of receiving support from the Russian Empress Catherine II, who ordered Admiral Orloff to cruise in Greek waters, and was put down by the Turks with great rigour. In 1813 the governor Ḥādjdjī ʿOthmān with the help of the Christians managed to suppress the Janissaries for a brief period. He was however misrepresented in Constantinople and recalled. The Janissaries then became masters of the island again. Crete took a prominent part in the wars which began in 1821 for the freedom of Greece. The rising assumed such compass that the Sulṭān (1813) had to summon Muḥammad ʿAlī from Egypt to his help. When, in 1830, the Conference of London established Greece's independence of the Sulṭān, Crete was not, as was hoped, given to Greece but to Muḥammad ʿAlī. Muṣṭafā Pasha, an Albanian, governed the island from 1832—1852, even after it was returned to Turkey in 1840. His rule was on the whole the best that Crete has had. After various smaller disturbances, the greatest revolution the island had yet seen broke out in 1866. It was only by great sacrifices on the part of Turkey and the granting of various demands of the inhabitants that peace was restored in 1868. In the so-called "Organic Statute", a national assembly, mixed courts and other reforms were introduced. When Turkey was occupied in 1878 with the war with Russia, Crete rose again. The Treaty of Berlin did not grant the wishes of the Cretans and Greeks, but only bound the Sulṭān to carry out the provisions of the "Organic Statute". On the 15th August of the same year, the Pact of Chalepa (Halepa near Canea) was signed by which the Cretans were practically granted self-government. Affairs however were not improved thereby; on the contrary they became worse. A period of purely party government followed during which the finances particularly suffered. In 1889 a revolution again broke out. The Pact of Chalepa was nominally modified, but practically annulled, and the island was governed by the governor sent from Constantinople. In 1894 Karatheodory Pasha, a Christian, was appointed governor, because the Cretans wanted a Christian; but he also was powerless. Almost the whole island was in revolution. He therefore sent in his resignation which was accepted in February 1896. Disorder increased more and more; at Whitsuntide there was fighting in the streets of Canea between Muḥammadans and Christians so that the Great Powers sent their warships to the island, which arrived on the 26th May. On the 20th July the Christian deputies declared themselves ready to adopt the scheme of autonomy prepared by the representatives of the Christian Powers and the Porte, but the revolutionary committee of the rebels in Campi was against this and the Muslims also were not satisfied. On the 3rd February 1897, there was again fighting in

the streets of Canea, and at the same time the town was set on fire in several places. The foreign Powers landed troops from their ships. Greek warships soon afterwards appeared, which attacked a Turkish transport. Greek troops were landed. During the war between Greece and Turkey which ended so disastrously for the former, affairs in Crete remained unsettled. In 1898, Germany and Austria withdrew their troops. The remaining Powers (Britain, France, Italy and Russia) divided the island into four sections each of which was ruled by one Power. After a rising of the Muhammadans of Candia and an attack on the English, the Powers demanded that the Turkish soldiers should be removed from the island by the 15th Nov. 1898, which was done. Prince George of Greece was then installed as High Commissioner for three years. Peace reigned at first but the Muhammadans emigrated in large numbers. Discontent had been increasing since 1901 and in 1905 there was again a rising. The clamour for union with Greece became stronger and stronger. The Powers were determined to maintain the status quo. On the 1st Oct. 1906, Zaïmis, a former Prime Minister of Greece, became High Commissioner. On the 20th March 1908 he announced to the Powers that the conditions for the withdrawal of their troops had been fulfilled, namely: 1. the creation of a national gendarmerie, 2. the maintenance of order, 3. the complete security of the Muhammadan population. The Powers therefore resolved to withdraw their troops. In several places risings of the Muhammadans took place, who believed themselves to be left defenceless at the mercy of the Christians. On the 12th Oct. 1908, the Cretan National Assembly proclaimed a union with Greece. The Powers protested and on the 13th July 1909 resolved to station four warships to protect the Muhammadans and preserve the suzerain rights of Turkey. The last note of the Powers to the executive committee on the 1st—14th Sept. 1911 announces: "Les Puissances Protectrices de la Crète ont décidé de ne pas pourvoir au poste de Haut Commissaire laissé vacant par Mr. Zaïmis et de ne rien changer au statu quo de l'île". Neither side has been satisfied with or pacified by this decision.

CROJA. [See ak ḥiṣār 3, p. 224.]

ČU, a river in Russian Turkestan, rising in the Terskei-Alatau mountains and called Ḳočḳar on the upper part of its course, approaches within 4 miles of the west end of the Isiḳ-Kul and sends out a branch, the Kutemaldi, to this lake; the river itself rushes through the Buam (Bughām) ravine, receives the waters of the Great and Little Kebin on its right bank and on its left the Aḳsu and Kuragati with their tributaries and after a course of about 650 miles falls into the small lake of Saumal-Kul, about 80 miles from the bed of the Sir-Daryā. The Čū forms the northern boundary of the Sir-Daryā territory from the neighbouring districts of Semipalatinsk and Akmolinsk, and a part of its eastern boundary from the Semirečye territory.

From the mouth of the Kuragati to the Saumal-Kul, the Čū flows through a dreary waste, which has never been of any economic importance; at the present day the banks of the river in this area are visited by a few nomads in winter only. On the other hand the pastures on the upper course of the river have always been of great importance for the nomads; below the Buam ravine, the geographical conditions favour the development of agriculture, so that permanent settlements were made here at a very early period; the water used for irrigation purposes is, as in the valley of the Āmū-Daryā and Sir-Daryā also, not for the most part taken from the main stream but from its tributaries.

Even in the pre-Muḥammadan period, in the viith century A. D., there were villages and even a town which was a centre of commerce here: as we know from Hüan-čuang's journal, the culture of this district had developed under the influence of Transoxanian civilisation; the land from the Čū to the valley of the Āmū-Daryā is regarded by Hüan-čuang as being under the same civilisation. In his time, two great trade-routes led through the valley of the Čū from China to Western Asia: one *via* the Ili valley and the Kastek pass, and the other through Chinese Turkestan to Aḳsū, thence over the Bedel pass and along the south side of the Isiḳ-Kul. In the valley of the Čū some pre-Muḥammadan geographical names have

survived to the present day, such as that of the village of Merke or the river Ashpara.

Even in the oldest Arab itineraries (Ibn Khordādhbih, ed. de Goeje, p. 29; Ḳudāma, ibid., p. 206) several towns are mentioned in this neighbourhood including Nawāka<u>th</u>, which is also mentioned by Ṭabarī (ii. 1593, ult.). The valley of the Čū was only affected in the extreme West, and that only temporarily, by the Arabs on their campaigns of conquest (campaign against Kūlān, the modern Tarti, in 194 = 810, mentioned in Ibn al-Athīr, ed. Tornberg, vi. 164); Islām does not appear to have penetrated here till the Sāmānid period. The Čū itself (called Sui-ye or Sui-she in Chinese sources) is not mentioned in Muḥammadan literature before the Mongol period; but the name of the town Sūyāb (*Sui* + pers. *āb*, "water, river") is apparently connected with that of the river. The name Djil, of the Buam ravine, mentioned by Gardīzī (in Barthold, *Otčet o poězdkě v Srednjuju Aziju*, p. 89) seems to have survived at the present day in Djil-arīḳ (the name of the entrance to the ravine); the word *djil* according to Gardīzī meant "narrow" (probably in a local dialect). The name *Buzghaw* first appears in the *Ẓafar-Nāmah* of Sharaf al-Dīn Yazdī (Indian edition, i, 274), as does the name *Ḳočḳar* (ibid.).

Down to the time of the Mongol conquest, the town of Balāsāghūn [q. v. p. 614] in the Čū-valley was the residence of most of the nomad rulers of Turkestān, of the Muḥammadan Ilak-Khāns (or of one of their branches) as well as after the vi^th^ (xii^th^) century of their heathen conquerors of the Ḳarā-Khiṭāi stock. Almost all conquerors of Eastern Asiatic origin, who have invaded the western part of Central Asia, have passed through this district. The revolt against the Ḳarā-Khiṭāi in 607 = 1210 and the destruction of the town of Balāsāghūn probably affected the other settlements considerably, although only temporarily. In 1218 the land submitted to the Mongols without resistance. Three years later the Chinese pilgrim Čang-čun crossed the Čū on a wooden bridge; at this time there was a small Muḥammadan town immediately to the south of the Kastek pass and a number of villages between the Čū and the Talas; in addition to agriculture, viniculture and the breeding of silkworms were the only occupations followed. In 1259 again the Chinese traveller Čang-te found a numerous population here but there were already many ruined sites which seems to show that a decline had set in. According to Rashīd al-Dīn (the passage given by Barthold, *Otčet* etc., p. 38, note 2 is wanting in most manuscripts, and even in Blochet's edition), "Čāy" was in his time still a land with many villages which was governed by the princess Ḳutulūn, daughter of the Khān Ḳāidū who had died at the beginning of 701 = autumn 1301.

To the same period (vii^th^-viii^th^ = xiii^th^-xiv^th^ centuries) belong, as the dated epitaphs show, the Christian cemeteries discovered at Pishpek and Toḳmaḳ. That the district on the Čū had some importance in the history of Nestorian Christianity, is clear from the title of the Bishop Metropolitan of Kāshghar in the *Tabula Amri*: "Metropolita Chasemgarae et Nuachetae" (obviously the Nawāka<u>th</u> mentioned above). The inscriptions on the tombs are composed partly in Syriac and partly in Turkī (in the Syriac alphabet); an Armenian epitaph of the same date has also been found in this neighbourhood. When and how Christianity was definitely destroyed by Islām is unknown. The Catholic monk Paschalis speaks of a religious persecution in the year 1338, in the following year several Catholic missionaries perished in these persecutions. According to the inscriptions the land was visited in the same years by a pestilence (it has been supposed that this was the "Black Death" which appeared nine years later in Western Europe); but no mention is made of it by Paschalis who must have passed through this district on his route from Urgenč to Almālïḳ nor in the historians.

Certain it is that the constant wars and struggles for the throne in the viii^th^ = xiv^th^ century [cf. the article ČAGHATAI-KHĀN, p. 814] proved fatal to prosperity and civilisation, both Muḥammadan and Christian, in these lands. Even in the history of Tīmūr's campaigns neither towns nor villages are mentioned on the Čū. In the time of Muḥammad Ḥaidar, the author of the *Ta'rīkh-i Rashīdī* (about the middle of the xth = xvi^th^ century), there were only the ruins of ancient towns in this districts; their very names had been forgotten. Muḥammad Ḥaidar mentions an inscription on a tomb of the year 711 = 1311-1312 and several buildings, including a minaret, a madrasa and some domed buildings, all of which were in ruins; these ruins were called *Manāra* apparently from the highest building among them. The only mediaeval building that has survived on this site (not far from Toḳmaḳ) at the present day, is a high tower, called Burana. This tower has been frequently described and reproduced (cf. e. g. Barthold, *Otčet* etc., Plate VI) and is apparently to be identified as the minaret of the Friday Mosque; even its name, as Petrowski suggests (*Zapiski vost. otd. Imp. Russk. arkh. obshč.*, viii, 352) may be derived from the Arabic *manāra*.

Down to the xix^th^ century, various nomad peoples have occupied the Čū valley in turn; for a period the land was under the rule of the pagan Kalmucks; even their successors, the Turkish Ḳarā-Ḳirghiz, were but superficially affected by Islām before the Russian conquest. After the Khāns of Khoḳand had succeeded in subduing all the nomadic peoples on the lower course of the Sir-Daryā as far as the Ili valley, several settlements were again founded on the Čū and its tributaries by colonists from Mā warā' al-Nahr, two of which, Pishpek (Pishkek in the historians of Khoḳand) and Toḳmaḳ, were fortified. When the Russians penetrated into the Čū valley over the Kastek pass (the Ashtak of the historians of Khoḳand) from the Ili valley, both strongholds were taken in 1860 and destroyed. Pishpek is under Russian rule the capital of the district. A post road now runs north from Pishpek across the Čū and the easy pass of Kurdai into the Ili valley; the old route *via* Toḳmaḳ and the Kastek pass is no longer used, so that the district around the modern Toḳmaḳ, north and south of the main stream, has no longer the importance it had in the middle ages. In the last few decades a considerable number of emigrants from Russia in Europe have settled here; lands in the Čū valley have also been allotted to the Dungans who fled from Chinese Turkestān.

(W. Barthold.)

ČŪPĀN, Čopan (Čaghatāi) or Čoban (Othmanli and Krim-tatar), a Perso-Turkī word for "herdsman"; it is applied particularly to shepherds and cowherds in opposition to horseherds (Pers. *kalabān*). The Čūpān is considered the type of the lowest class of the people in a contemptuous sense, when the rude and uncultured people are contrasted with the classes chosen to rule (cf. the sayings ascribed to Čingiz-Khān in Rashīd al-Dīn, ed. Berezin, *Trudi vost. otd. arkh. obšč.*, xv. 179), as well as in epic tales in which the representative of the inherent strength of the people appears as the faithful ally and rescuer of his selfish and ungrateful master (e. g. in the *Kitāb-i Dada Korkud*, *Zap. vost.* etc. xii. 038 *et seq.*). The word "Čūpān" is also found as the name even of persons of the highest rank (*cf.* for example, Emīr Čūpān, regent of Persia under Abū Sa'īd 1316—1327 A. D. and founder of a dynasty).

(W. Barthold.)

ČŪPĀN-ATĀ (Turk. "father-herdsman"), a ridge of hills on the south bank of the Zarafshān near Samarkand. The modern name is apparently connected with the legend given in the *Kitāb-i Kandiya*. Samarkand is said to have been attacked by a hostile force over a 1000 years before Muhammad; the inhabitants prayed to God and his prophets for help; when they awoke on the following morning, not a trace was left of the enemy's army, but before the city was a mountain which no had seen before and on it a shepherd was grazing his sheep. It appeared that the mountain had been brought by divine providence from Syria in a night and placed on top of the whole army of the besiegers with their horses, weapons, and baggage, so that not one escaped. In other legends the Čūpān-Atā appears as a Muhammadan saint. When the story and the cult connected with it arose, is unknown; the building of the tomb which now stands on the summit of Čūpān-Atā, is ascribed to Tīmūr. The use of "Čūpān-Atā" as a geographical name cannot be quoted before the xiith century; even in the xiith (xviiith) century the literary language appears to know only the mediaeval name "Kūhak" (Pers., little mountain) for the hill. On account of the important part played by Čūpān-Atā on the course of the Zarafshān (the irrigation of the whole valley west of Samarkand is regulated by the dam built there and repaired annually), the name Kūhak was transferred to the river itself; its modern name only came into use in the written language in the xiith (xviiith) century.

At Čūpān-Atā, not far from the modern railway bridge (130 yards long), have survived the ruins of a mediaeval bridge; at the time of the Russian conquest two arches were still standing, now there is only one. It cannot be exactly ascertained to what period this bridge belongs; like all buildings of any size in Turkestān it is popularly ascribed to Tīmūr or to 'Abd Allāh Khān; but no such building is mentioned in the histories of either of these rulers. It is possibly the bridge called Djird by Ibn Hawkal (ed. de Goeje, p. 371, l. 13), dating from the Sāmānid period; but this cannot be proved, for the Arabic geographers give only very confused accounts of the course of the Zarafshān and seem to confuse the main stream with the Siyāh canal (for further details see the article Samarkand).

On the 1st-13th May 1868 the army of the Amīr of Bukhārā took up a position on the heights to ward off the attack of the Russians under K. v. Kaufmann, but was easily driven from its point of vantage and put to flight with little loss (2 dead and 31 wounded), whereupon Samarkand surrendered next day to the victor.

(W. Barthold.)

CYPRUS, Arabic Kubrus or Kubrus, Turkish Kibris, an island in the east of the Mediterranean, is geologically a plateau which has remained while the surrounding land has been submerged, consisting of two mountain chains running from east to west (rising to heights of 3142 and 6020 feet respectively) belonging to the Taurus system and the plain lying between them (4124 square miles in area). The island, which greatly facilitated the primitive coasting traffic between the Syrian and Egyptian coasts and the Aegean Sea, has, owing to the commercial importance of its position and the export of copper, for which it was particularly noted in ancient times, and to which it gave its name, always been an important centre of civilisation. The Greek settlement of the island, the foundation of Phoenician colonies, its political relations with the great powers of Egypt and Assyria, the wars of the Greeks and Persians for its possession, the vicissitudes of Cyprus in the Hellenistic, Roman, and early Byzantine period, testify to the importance of the island as a commercial centre.

When the expansion of Islām began, the island was under Byzantine rule. The first expedition against Cyprus was sent by Mu'āwiya in the year 28 = 649 (following Wellhausen, *loc. cit.*; tradition gives various dates). It did not result in the

permanent occupation of the island but was merely a robber raid. The town of Salamis-Constantine was destroyed on this occasion. The result was, if we may believe the Arab sources, that the island had henceforth to pay the same tribute to the Muslims as to the Byzantines. The Anṣārī Umm Ḥarām, wife of ʿUbāda b. al-Ṣāmit, had taken part in the expedition and died during its course; a tomb which is said to be hers near Larnaca is still revered as the greatest Muslim sanctuary in the island (see *Journ. of the Royal As. Soc.*, 1897, p. 81—101). A second expedition in the year 33, according to Balādhurī, led to the first steps towards the settlement of Muslims and the extension of Islām to the island. Muʿāwiya's successor Yazīd again vacated the island, according to the Arab accounts, the correctness of which is doubted by Wellhausen. One of the conditions of peace between ʿAbd al-Malik b. Marwān and the Emperor Justinian II in 69 (688) was (Theophanes, ed. de Boor, p. 363) the division of the Cypriote tribute between the two powers. In 125 (743) Walīd II is said to have deported Cypriotes to Syria.

From these accounts it is clear that Cyprus in the Umaiyad period, apart from occasional Arab razzias and quite ephemeral occupations, retained a fairly independent position between the two great powers, to which it was materially bound by the payment of tribute, on which point the sympathies of its Christian inhabitants were rather with Byzantium than Islām. Under the ʿAbbāsids the situation became still more favourable to the Byzantines. It is true that we read of successful expeditions against Cyprus, under Hārūn al-Rashīd, for example, and even later. It is clear that on these occasions the permanent occupation of the island was not thought of. But Byzantine influence always soon became preponderant again (Byzantine conquest, 874—876). The population remained Christians as before; their trade assured them friendly relations on either side. The island was however used as a naval base by whichever side happened to be predominant at sea for the time. After Nicephorus Phocas (963—969) we find it again in the possession of the Byzantines.

When Richard I's fleet passed Cyprus in 1191, Isaac, a scion of the ruling house of Comnenus, was ruling there independently. The plundering of the ships of his fleet, which had been wrecked there, was followed by the conquest of Cyprus by Richard; he sold the island to the Templars, who soon passed it on to Guido of Lusignan. Franks held the island for almost 400 years; massive fortifications and churches still remain as witnesses of their rule. The Frankish kingdom of Cyprus was a powerful ally for the Crusaders; on the other hand it formed a permanent menace to the Mamlūk kingdom of Egypt and Syria.

Baibars I, the real founder of the Mamlūk kingdom, therefore sent a fleet against Cyprus in 679 = 1270, but this was wrecked off al-Limsūn = Limassol. The first serious blow to the Lusignan kingdom was struck by the Genoese who occupied Famagusta in 1373. It was not till the third decade of the xvth century that the Mamlūks took serious steps to retaliate for the repeated raids by the Cypriotes. After Sulṭān Barsbey [q. v., p. 666] had temporarily taken a part of Limassol in 827 = 1424 with his fleet, a large expedition appeared the following year before al-Māghūṣa = Famagusta and after brief fighting at the salt-pans (*al-Mallāḥa*, not far from Marina = Larnaca) destroyed the citadel of Limassol. The most disastrous blow to the Lusignan kingdom was struck in 829 = 1426. The Sulṭān's army again occupied Limassol. A decisive battle was fought between this town and al-Mallāḥa at Khoirakoitia, in which king James was taken prisoner. The Muslims devastated the sanctuary of Stavrowuno (*Djebel al-Ṣalīb*) and even captured al-Afḳosiya (= Leukosia, Nikosia). They did not however think of occupying the island permanently. They were content with exacting tribute, an arrangement which several times afterwards gave the Mamlūk Sulṭāns an excuse for armed intervention. The kingdom of Cyprus thus continued to survive; indeed in the reign of James II, Famagusta was again incorporated in it. Caterina Cornaro, the widow of the king, ceded the island to Venice in 1489. It was still in the latter's possession when the Ottomans under Sulṭān Selīm II prepared to conquer it. The Bosnian Lala Muṣṭafā occupied Nikosia in September 1570; Famagusta held out till the following August. Turkish rule which was established by a *fetwā* was introduced with the greatest cruelty — though the Venetians were not entirely blameless in this matter — and was a period of great decline. On several occasions (1665, 1690, 1764—1766) risings had to be put down by force. The decline of the importance of the island, which had begun with the exhaustion of the copper mines in quite early times, was sealed by the development of steamships. In 1832 Muḥammad ʿAlī occupied Cyprus and was formally granted it in the following year, but had to return it to the Sulṭān in 1840.

By the convention of the 4th June 1878, Cyprus passed under English administration, the Turks retaining a nominal suzerainty, in return for which England pledged herself to guarantee the Asiatic possessions of Turkey against Russia.

The island is governed in the name of the King by a High Commissioner, who is assisted by a Legislative Council of 18 members (6 *ex officio* and 12 elected: 3 by Muḥammadan, and 9 by non-Muḥammadan voters) and by an Executive Council (of 3 members; only advisory). For administrative purposes the island is divided into 6 districts: Nicosia, Famagusta, Larnaca, Limassol, Paphos and Kyrenia.

With good government, Cyprus has again revived. Between 1878 and 1901, the population rose from 186,000 to 237,000. The majority of the inhabitants are Greek Christians; the number of Turks in 1901 was 48,000, and of Muslims 51,300. The economic prosperity of the island is also developing. Roads have been made and a railway from Famagusta to Morphu via Nicosia laid down. In commerce which almost doubled between 1900 and 1907, imports practically balanced exports (chiefly carobs and barley) with totals of £ 620,054 and £ 603,530 respectively.

(R. HARTMANN.)

D.

ḌABBA B. UDD B. ṬĀBIKHA B. ALYĀS B. MUḌAR was the ancestor of the well known tribe of that name. The name (which means a lizard, *lacerta caudiverbera*) is borne also by Ḍabba b. ʿAmr of Hudhail, Ḍabba b. al-Ḥārith b. Ḳuraish, and others (cf. Ṭabarī, i. 2710—2712; iii. 1359). Ḍabba b. Udd was brother of ʿAbd Manāt and of Muzaina (strictly ʿAmr) and uncle of Tamīm b. Murr. He is sometimes included amongst the Ribāb which strictly denotes the three sons of ʿAbd Manāt only.

The pasturing grounds of this tribe lay in al-Yamāma, but included the Wādī ʿAḳīl in Nadjd (Wüstenfeld, *Genealog. Tabellen*). During the war between ʿAbs and Dhubyān, the former at one time settled amongst Ḍabba, but, owing to a quarrel, they had to leave, and after the outbreak of the war between the Banū Tamīm and the Banū ʿĀmir b. Ṣaʿṣaʿa, ʿAbs entered the territory of the latter tribe. Upon this the tribes of Dhubyān, Asad and most of Tamīm, together with Ḍabba and the Ribāb, united in an attack upon ʿĀmir and ʿAbs. They were, however, defeated at the battle of Djabala. This happened some time about the year 579 A. D.

When, in the Caliphate of Abū Bakr, the prophetess Sadjāḥ appeared, her claims were admitted by many branches of Tamīm, especially Yarbūʿ b. Ḥanẓala, but Ḍabba and the Ribāb held aloof. On the defeat and death of Abū ʿUbaid at the Battle of the Bridge in the year 12 A. H., or 634 A. D., Ḍabba is mentioned as one of the Badawī tribes who cast in their lot with al-Muthannā; and they distinguished themselves by their defence of ʿĀʾisha in the Battle of the Camel in which they lost a thousand men. They settled in Baṣra and took their full share in the repeated disturbances in that town. They opposed Mukhtār and were engaged in the wars of the Khawāridj. When Salm b. Ḳotaiba held Baṣra for the Umaiyads in 132 A. H. Ḍabba were opposed to the ʿAbbāsid cause. They took a half-hearted part in the expedition of ʿAbbās b. ʿAmr al-Ghanawī against the Ḳarmaṭians in 287 A. H.

A few members of the tribe migrated to Spain (Maḳḳarī, i. 185). Ḍabba is one of the three Djamarāt al-ʿArab, who did not form alliances with other tribes. Eventually, however, they became absorbed in the Ribāb (*Ḳāmūs: Djamra*; and Lane).

Ḍabba b. Udd, the eponymous hero of the tribe was the originator of several expressions which became proverbial (Maidānī, *Arab. Prov.*, i., 350, 599, 601).

(T. H. WEIR.)

DĀBBA, any animal that walks, creeps or crawls upon the earth. "And God hath created every Dābba of water, and some of them go upon their belly, and some go upon two legs, and some upon four". (Sūra 24, 44). Here the word is used of both rational and irrational creatures. But *Dābba* particularly applies to 'a beast that is ridden', especially the horse, mule, or ass; it signifies both the male and female.

Dābbat al-Arḍ is one of the greater signs of the resurrection. It is said to be a beast 60 cubits high, the parts of whose body belong to different animals, — the head of a bull, the ears of an elephant, the legs of a camel etc. It is to appear in Tihāma or between al-Ṣafā and al-Marwa. On the face of the unbeliever it will put a black mark and on the face of the believer a white mark. These marks will spread until the whole of the face becomes white or black, and thus believers will be distinguished from unbelievers. It is said that the beast will bring with it the rod of Moses and the seal of Solomon. With the first it will strike believers on the face and mark them with the word *muʾmin*; with the latter it will stamp the word *kāfir* on the face of the unbeliever.

These traditions are based on Sūra 27, 84: "When the sentence shall be ready to fall upon them, we will cause a beast to come forth unto them from out of the earth" etc. — On the *Dābbat al-Arḍ* mentioned Sūra 34, 13 s. supra 418b, Art. *Araḍa*.

(A. S. FULTON.)

AL-**ḌABBĪ**, ABU DJAʿFAR AḤMAD B. YAḤYĀ B. AḤMAD B. ʿAMĪRA (not al-Ḳurṭubī), a Spanish Arab scholar of the vith (xiith) century, was born at Vélez (Rubio, Blanco) west of Lorca, as appears practically certain from references to himself and his family in his work, and began his studies in the latter town when not yet 10 years of age: except for his journeys to North Africa — Sebta (Ceuta), Marrākush, Bidjāya (Bougie), and Alexandria — he seems to have spent most of his life in Mursiya (Murcia) and to have died at the end of Rabīʿ ii. 599 = beginning 1203. Of his writings there has only survived a valuable biographical dictionary of the Arab scholars of Spain prefaced by a brief survey of the history of the Arabs in Spain, which is supplemented by ʿAbd al-Wāḥid al-Marrākushī's introduction (*History of the Almohades*, ed. Dozy). For the rest, al-Ḍabbī follows closely al-Ḥumaidī's *Djadhwat al-Muḳtabis* (which comes down to 450 = 1058) and expands it by the addition of biographies for the next 150 years. The work entitled *Bughyat al-Multamis* (not *Mutalammis*, as stated by Brockelmann, i. 340) *fī taʾrīkh ridjāl ahl al-Andalus* was published by Codera and Ribera in 1885 from the good, old but in part badly preserved unique manuscript in the Escurial as the third volume of the *Bibliotheca Arabico-Hispana*.

Bibliography: Fr. Pons Boigues, *Ensayo bio-bibliográfico sobre los historiadores y geógrafos arábigo-españoles* (Madrid 1898), N°. 212, p. 257—259. In addition to the two unskilful copies, made by Maronites in the second half of the xviiith century, of the unique manuscript in the Escurial and the copy belonging to the Société Asiatique in Paris of which I know nothing further, for completeness there may be mentioned the equally defective Faustino de Muscat y Guzman copy in Copenhagen, N°. 163, which is not mentioned in any bibliography. (C. F. SEYBOLD.)

AL-ḌABBĪ, ABŪ ʿIKRIMA ʿĀMIR B. ʿIMRĀN, author of a commentary on the Mufaḍḍaliyāt. [See the article al-MUFAḌḌAL.]

DABĪḲ, a town in mediaeval Egypt famous for its manufactures of cloth, belonging to the district of Damietta and later to the province of G̲h̲arbiya (Ibn Duḳmāḳ, *Kitāb al-Intiṣār*, v. 89; Ibn Djīʿān, *al-Tuḥfa al-Saniya*, p. 76). The name is variously given (cf. Idrīsī, ed. de Goeje and Dozy, p. 156 note 1; Yāḳūt, *Muʿdjam*, ii., 546, 548). As no exact details of its situation are given and as Dabīḳ is regarded as one of the manufacturing towns belonging to Damietta and Tinnis, it may perhaps be identified with the modern Dabīdj (pronounced Debīg or Dibīg) which is placed 8 miles south of Sinbellawain on the large scale map (1:50,000) of the Survey Department, sheet N. F. V., ii in 31° 30′ N. Lat. (cf. Boinet Bey, *Dictionnaire Géographique*, p. 165) and only about 35 miles from the site of the ancient Tinnis. The Dabīḳī cloth was woven of linen but seems to have been occasionally or regularly interwoven with gold and silk. Originally a name denoting only the place of origin, like Tinnīsī, Dimyāṭī, S̲h̲aṭawī, Dabīḳī soon came to be the name of particular kinds of cloth, which were also made in Asyūṭ for example (Yāḳūt, *op. cit.*, i., 272). But there were even more costly stuffs in Egypt as one may conclude from the customs duties paid at Djidda (Muḳaddasī, ed. de Goeje, *Bibl. Geogr. Arab.* iii., 104, 11). In the reign of the Fāṭimid ʿAzīz, turbans made of Dabīḳī cloth of gold were worn, the gold of which alone without the silk and the cost of weaving was worth 500 dinars. The length of one of these turban cloths was 100 ells (Maḳrīzī, *Khiṭaṭ*, i., 226, —). The material (*s̲h̲arb*) must therefore have been very thin. There were also thick materials for garments, which were likewise called Dabīḳī (Yaʿḳūbī, ed. de Goeje, *Bibl. Geogr. Arab.*, vii. 338, 1). The Egyptian Dabīḳī was an important and well-known article of commerce (*Maḥāsin al-Tidjāra*, [ed. Cairo 1318], p. 26). (C. H. BECKER.)

DĀBIḲ, a locality in northern Syria, in the district of ʿAzāz (Yāḳūt, ii. 513) on the road from Manbidj to Antakiya (Ṭabarī, iii. 1103), on the Nahr Ḳuwaiḳ above Ḥalab (Idrīsī, *Zeitschrift des Deutsch. Pal.-Vereins*, viii. ٢٥). These statements suffice to establish the identity of its site with that of the modern village of Dābiḳ (near it is Duwaibiḳ = Turkish Ṭaipuḳ). Dābiḳ was the headquarters of the army and the base of operations for campaigns of the Marwānids and early ʿAbbāsids against Rūm. The Caliph Sulaimān b. ʿAbd al-Malik in particular spent a good deal of time here. He died in Ṣafar 99 = September 717 and was buried there. After his death the pious Radjā b. Ḥaiwa had homage as future caliph paid in the mosque at Dābiḳ to the man whom Sulaimān decreed should succeed him; and when this was done, a will was produced which designated ʿOmar b. ʿAbd al-ʿAzīz as this man (see Wellhausen, *Arab. Reich*, p. 165 *et seq.*). The ʿAbbāsids dishonoured Sulaimān's tomb in Dābiḳ after their victory (Masʿūdī, *Murūdj al-Dhahab*, v. 471).

The name is best known however by the decisive battle fought between the Ottoman Sulṭān Selim I. and the Mamlūk Ḳānṣūwa al-G̲h̲ūrī on the 25th Radjab 922 = 24th August 1516 on the field of Dābiḳ (*Mardj Dābiḳ*) not far from the sanctuary of Nabī Dāʾūd which is still highly revered at the present day (cf. Yāḳūt, iv. 537, 18 *et seq.* and *Maḳrīzī*, xii. 902, N°. 5). The Mamlūk Sulṭān fell and the fate of the Egyptian kingdom was sealed (see v. Hammer, *Gesch. des Osm. Reiches*, ii. 474 *et seq.*; Jorga, *Gesch. der Osm.*, ii. 336; Weil, *Gesch. der Chalifen*, v. 413).

There is a popular legend that a decisive battle will once again be fought on the blood stained field of Dābiḳ, in which Turks and Franks will fight for the mastery.

Bibliography: G. le Strange, *Palestine under the Moslems*, p. 61, 426, 503; M. Hartmann in *Zeitschr. der Ges. für Erdkunde*, xxix. 488, 518, 520, 521 and in the *Zeitschr. des Vereins für Volksk.*, i. 102. (R. HARTMANN.)

DABĪL. [See DOVIN.]

DABĪR, the poetical name of Mīrzā Salāmat ʿAlī, son of Mīrzā G̲h̲ulām Ḥusain, of Lucknow. He was a pupil of Muẓaffar Ḥusain, called Ḍamīr, and is noted chiefly as a writer of *marthiyas*, or elegiac poems on the death of the martyrs of Karbala. (J. F. BLUMHARDT.)

DABISTĀN, the title of a Persian work, which describes the various religions with special reference to religious conditions in India in the xith (xviith) century. It is based partly on the sacred books of the various creeds, and partly on oral statements of their adherents or the author's own observations; the older Muḥammadan literature on the subject has also been used in many chapters. The religion of the Pārsīs is first discussed with special thoroughness; next follows that of the Hindus and after very short chapters on the Tibetans, Jews and Christians, Islām and its sects is treated of; the work concludes with sections on the philosophers (Peripatetics and Neoplatonists) and the Ṣūfīs. Muḥsin Fānī was long erroneously regarded as the author; the author really seems to have belonged to an enlightened Pārsī sect and probably those manuscripts are correct which agree with Sirādj al-Dīn Muḥammad Ārzū (in his *Tadhkira*) in ascribing the work to Mūbad S̲h̲āh or Mullā Mūbad. From internal evidence it is clear that the author was born in India shortly before 1028, came to Agra in his youth, spent many years in Kas̲h̲mīr and Lahore, visited Persia (Mas̲h̲had) and was also acquainted with the west and south of India. The work was concluded between 1064 and 1067.

Bibliography: *Dabistān al-madhāhib* (Calcutta 1224 = 1809; — other editions have been printed in Teheran, Bombay and Lucknow); *The Dabistan or School of Manners*, translated... by David Shea and Anthony Troyer

(Paris 1843), i—iii. (not always accurate); *Journ. As.*, iv. Série, vi. (1845), 406—411; Rieu, *Catalogue of the Persian Manuscripts of the British Museum*, i. 141 *et seq.*; Ethé, *Catalogue of the Persian Manuscripts of the India Office Library*, i. 1369. (J. HOROVITZ.)

ḌĀBIṬ (Arabic "one who holds fast") is the Turkish name for an officer in the army, and also of a civil officer (as in the expression *ḍābiṭān-i ḳalem* "higher officials of the government"). (CL. HUART.)

DĀBŪYA (DĀBŌĒ), founder of a Persian dynasty in Gīlān. After the death of his father Gīl Gāwbāra, a descendant of the royal Sāsānid house (the genealogy is Gāwbāra b. Farrukhān Gīlān-shāh b. Fīrūz b. Narsī b. Djāmāsp, who according to Nöldeke, *Sasaniden*, p. 428, reigned from 496—498), Dābūya became ruler in Gīlān and his brother Pādhūspān (Arab. Bādūsapān, really a title not a proper name, see Nöldeke, *op. cit.*, p. 151, note 2) in Rūyān. Dābūya reigned from 660—676; he was followed by his brother Khurshīd 676—709, who was succeeded by his son Farrukhān 709—722. Of his successors there are also mentioned: Dād burz mihr (Dāzmihr) b. Farrukhān 722—734, and Khurshīd, who came into conflict with the ʿAbbāsid Caliph al-Manṣūr. The result of the struggle was that Khurshīd had to flee and committed suicide by taking poison in 142 (759). Cf. Ṭabarī (ed. Leiden), iii. 139 *et seq.*

The descendants of Pādhūspān continued to reign over Rūyān, Rustamdār, Nūr and Kudjūr till 1453, when they broke into two lines which survived till 1567 and 1576 respectively.

Ges.*, xix. 490 *et seq.*; Melgunof, *Das südliche Ufer des Kaspischen Meeres*, p. 48 *et seq.*; *Grundriss d. iran. Philologie*, ii. 548.

ḌĀD, the fifteenth letter of the ordinary Arabic alphabet (as a numeral = 800; cf. the article ABDJAD). Ḍād is in form a variant of Ṣād (see the article ARABIA, ARABIC WRITING, p. 383ᵇ). In Sībawaihi's time, Ḍād seems to have been pronounced as a voiced velar spirant, in which the air found an exit on both sides of the back of the tongue while the tip of the tongue lay close to the gum of the upper incisors. There was also a partial variety the so-called "weak Ḍād". In modern dialects Ḍād is either a voiced velar alveolar explosive or a voiced velar interdental (also postdental) spirant (for further information see the article ARABIA, ARABIC DIALECTS, p. 396ᵇ). — The correct pronunciation of Ḍād used to be regarded as a sign of pure Arab descent; according to tradition the Prophet prided himself on this point. Cf. A. Schaade, *Sībawaihi's Lautlehre*, Index. (A. SCHAADE.)

AL-**DADJĀDJA**, the domestic fowl. The chickens are covered with down when they come out of the egg, quick in their movements and able to take care of themselves (autophagous); they follow when called. After a time however they become stupid and ugly and ultimately are only useful for crowing, laying eggs and eating. They have no fear of beasts of prey; but if they see a jackal they run in front of its feet. They sleep very lightly and like best to perch on a high place such as a wall, a beam, etc. They combine the characters of birds of prey and graminivorous birds, for they eat meat and flies as well as corn. The hen lays throughout the year except in the two winter months; many hens lay twice a day. It requires ten days to perfect the egg; the shell is still soft when the egg is laid but it at once becomes hard in the air. Between the white of the egg and the yolk is a thin membrane. The white of the egg corresponds to the seed while the embryo derives its nourishment mainly from the yolk. The eyes, brains, and head are first formed from the white of the egg, then a covering (*lufāfa* = tegument) which becomes the skin of the body, while a second covering is formed out of the yolk which becomes the umbilical cord of the chicken. Two chickens are produced from double-yolked eggs. If the hen while sitting hears thunder, the eggs are spoiled; if she is old and weak, the eggs have no yolk and produce no chickens. She also lays eggs without being covered by the cock but such eggs produce no chickens. When hens become fat they no longer lay, just as fat women do not become pregnant. Eggs keep fresh a long time, if they are placed in straw in winter (chopped straw) and in bran in summer. — The uses of flesh, eggs, eyes, gall and dung etc. in medicine are very numerous. Half-cooked eggs (*nīm-birisht*) are credited with special efficacy as an aphrodisiac.

The Arab astronomers give the name al-Dadjādja to the constellation of the Swan, which is also called *al-Ṭāʾir*.

Bibliography: Ḳazwīnī (ed. Wüstenfeld), i. 32 and 413; Damīrī: *Ḥayāt al-Ḥayawān*. (J. RUSKA.)

AL-**DADJDJĀL**, a fabulous personage in Muhammadan eschatology, a kind of Antichrist.

According to Arab legend, he dwells in one of the islands of the empire of the Mahārādj or the Zābadj (Java). The sailors of Sīrāf and of ʿOmān say that, in passing near this island, beautiful music is heard, produced on the lute, the oboe, the tambourine and other instruments, accompanied by dancing and the clapping of hands. This story is widely diffused; it is found in Ibn Khordādhbih, al-Bīrūnī, Ḳazwīnī, Dimashḳī, Djurdjānī, Ibn Iyās, Masʿūdī's *Prairies d'Or* (Meynard et de Courteille, i. 343) and *Kitāb al-Tanbīh* (*Livre de l'Avertissement*, transl. Carra de Vaux, p. 92), the *ʿAdjāʾib al-Hind*, etc. It also appears in the story of Sindbād the Sailor. Ibn Khordādhbih (p. ٦٨, 48) calls this island Bradjāʾil; the *Abrégé des Merveilles* (pp. 38 and 57) gives it the same name and adds that cloves are bought there; commerce is carried on without the inhabitants being seen; they place their goods on the shore and the merchants take what they want, leaving an equivalent for them. According to the same work (p. 150), the Dadjdjāl is tied to a rock in an island in the sea and demons bring him his food. He is said to have been visited by Tamīm al-Dārī, a contemporary of the prophet, cf. the *Prairies d'Or*, iv. 28.

All are agreed that this being is a monster; but accounts differ as to his appearance, his iden-

lity and the place where he is to manifest himself at the end of time. According to some, he is a Jewish contemporary of the Prophet of the name of Ṣā'if b. Ṣā'id (Ibn al-Wardī, p. 143-144); others say he is son of the sorcerer Shiḳḳ, the first of this name (*Abrégé des Merveilles*, *loc. cit.*). Ṭabarī in his chronicle (Persian synopsis, ed. Zotenberg, i. 67 *et seq.*) makes him a kind of Dhu 'l-Ḳarnain, a giant, king of the Jews who is to rule the whole universe; in this passage the author applies to Dadjdjāl the Jewish prophecies relating to the Messiah. He is to appear, mounted on an ass as large as himself, when Gog and Magog break through the wall. His reign is only to last for forty days; nevertheless he will have time to go over the whole world from East to West and from North to South. His power and also his gigantic stature will disappear before Jesus and the Mahdī; the Mahdī shall slay him. Ṭabarī's account says that Dadjdjāl's real name is 'Abd Allāh al-Ṣayyād.

He is to appear either in Khorāsān, or at Kūfa or in the Jewish quarter of Iṣpahān (Ibn al-Wardī, *loc. cit.*); cf. also al-Bīrūnī, *Chronology*, p. 195-196.

(B. CARRA DE VAUX.)

DAF, a Balōčī word meaning 'mouth', and hence applied in local nomenclature to a gorge or defile. It is used as an equivalent to the Pers. *dahāna* which is similarly employed, and to which it is etymologically related (c.f. Av. *zafan*). Example of use: Gandakin Daf, near the Bolān Pass, often spelt 'Duff' in maps.

(M. LONGWORTH DAMES.)

DĀGH, the poetical name of Nawwāb Mirzā Khān of Dihlī, one of the most distinguished Urdu poets of modern times. He was the son of Nawwāb Shams al-Dīn Khān, and grandson of Nawwāb Aḥmad Bakhsh Khān, and was born in A. D. 1831. He obtained an excellent education under Mawlawī Ghiyāth al-Dīn, the author of the *Kashf al-Lughāt*, and also studied Persian with Nawwāb Yūsuf 'Alī Khān, ruler of Rampur, during his stay at Dihlī. Dāgh had a remarkable aptitude for poetical composition, and, under the tutorship of Shaikh Ibrāhīm Dhawḳ, he became so proficient in the art that, when only 12 years of age, he used to take part in the *mushā'aras*, or poetical contests, of renowned poets, which were held under the patronage of the emperor of Dihlī. On the deposition and exile of Wādjid 'Alī Shāh, Dāgh left Dihlī and went to Rampur, where he became the intimate friend of Nawwāb Kalb 'Alī Khān, the son of Nawwāb Yūsuf 'Alī Khān. On the death of his father in A. D. 1865 Dāgh was appointed to be one of the Court officials at Rampur, and had ample opportunities for writing poetry and associating with the leading poets of Lucknow and other cities, who used to assemble at Rampur. In A. H. 1305 (A. D. 1888) Dāgh went to Haidarabad, and was honoured by becoming the poetical instructor of the Niẓām and members of his staff. He died there in A. H. 1322 (A. D. 1904). His biography has been written in Urdu, with copious extracts from his works, and obituary press notices, by Muḥammad Nithār 'Alī, Shuhrat, formerly Director of the Educational Department of Jammu and Kashmir, and was published at Lahore in 1905.

(J. F. BLUMHARDT.)

DĀGH (T.) "Mountain".

DAGHESTAN, properly Dāghistān (Mountain land; Snouck Hurgronje, *Mekka*, ii. 245 noted in Mecca that the name was pronounced Daghistan even by people who belonged to it), a Russian territory (*oblast'*) on the west shore of the Caspian Sea between 43° 30' and 41° N. Lat., has an area of 13 228 square miles and a population of about 700,000. Its boundaries are, in the north the Sulak, in the south the Samur, in the west the watershed between these rivers and the Alazan, a tributary of the Kura; the territory is divided into nine districts (*okrug*). Its present boundaries and its constitution as a Russian territory date from 1860 after the war with the mountain tribes; its name which is probably a unique linguistic phenomenon (Turk. *dāgh* = mountain, with the Persian termination used to form the names of places) appears to be first found in the xth (xvith) century. Temir-Khān Shūra is the capital of the territory and the residence of the Russian military governor, but the number of its inhabitants is much less than those of the coast towns Derbend and Petrowsk (now the only harbour in Daghestan).

The highlands and lowlands on the coast were never united for any length of time in the possession of one people or under one dynasty before the Russian conquest. The lowlying coastland itself is divided into two parts by the Pass of Derbend, only $1\frac{1}{2}$ miles broad, of which the southern belonged to the settled states of western Asia, and the northern to the nomadic kingdoms of Southern Russia. Neither the peoples of the south nor those of the north have had any appreciable influence on the ethnographical conditions of the highlands. Before Russian supremacy was established, no foreign conqueror had succeeded in permanently subduing the highlands; from time to time the mountain tribes succeeded in conquering portions of the lowlands, but this always led in a short time to the severance of the political bond between these conquerors and their relatives who had remained behind in the highlands.

In ancient times the southern portion of the coastlands as far as Derbend belonged to Albania; to the north, apparently in the mountains, lived the peoples called Λῆγαι and Γῆλαι by Strabo (Ch. 503). The Romans, and after them from the ivth century A. D. the Persians, had to fortify the pass of Derbend against the nomad tribes. The state of the country when conquered by the Arabs leads one to conclude that the civilisation of the Sāsānian Empire and probably Mazdaism also had been not without influence on the neighbouring mountain-tribes. Several rulers of these regions are mentioned by Persian titles, e. g. the Ṭabarsarān-Shāh, the ruler of the district now called Tabasaran (west of Derbend); in the same neighbourhood dwelled the Zirihgarān (from the Persian *zirih*, coat of mail) who were famous smiths, the modern Kubachi (Turk. Kübečī), whose burial customs have been described by Abū Ḥāmid al-Andalusī (text in Barthold, *Zapiski vost. otd. arkh. obshč.*, xiii. 0103) and seem to have arisen under the influence of the Iranian religion. Whether Christianity had been brought from Albania and had any influence on the peoples of the mountains and steppes at this early period, cannot be ascertained from the documents we possess.

In spite of individual successes of Arab arms in the northern parts of Daghestan (particularly under the Caliph Hishām, 105—125 = 724—743, whose brother Maslama was the first to establish Arab rule in Derbend), even in the Arab period,

Derbend still retained the position as a border fortress which it had held under the Sāsānians. Trade with the neighbouring peoples seems to have become much more active, as was the case elsewhere also, after the Arab conquest than before; but it was at first only Christians and Jews and not till later Muḥammadans who profited thereby. As early as the time of the Armenian Patriarch Sahak III. (677—703 A. D.) the "Huns", i. e. the Khazars, are said to have adopted Christianity; in the reign of Hārūn al-Rashīd (170—193 = 786—809) the Jews succeeded in converting the ruler and nobility of this people to their religion.

The geographers of the ivth = xth century give us fuller details of the ethnographic and political conditions in Daghestan as well as of the dissemination of the three religions. The Arabs only possessed, in addition to Derbend, the neighbouring castles which, according to Mas'ūdī (*Murūdj*, ii. 40) were only three miles (one *farsakh*) distant from Derbend. In Mas'ūdī's time (ibid. ii. 7) a Muslim, the sister's son of the Emir of Derbend 'Abd al-Malik, was ruling in Ṭabarsarān. The prince of the adjoining Khaidān (this is the correct reading according to Marquart, *Osteuropäische und ostasiatische Streifzüge*, p. 492) professed all three religions, according to Ibn Rusta (ed. de Goeje, p. 147 *et seq.*) and observed Friday with the Muḥammadans, Saturday with the Jews and Sunday with the Christians; in Mas'ūdī (*Murūdj*, ii. 39), he appears as a Muslim and is even said to have invented an Arab genealogy for himself; but there was no follower of Islām except himself in his country; this principality belonged to the Khazar empire (ibid ii. 7); the prince bore the title Salīfān. Farther north ruled the Barzbān, prince of the Gurdj, also a Muslim; north of his lands were the Christian Ghumiḳ and farther north still lay the impenetratable mountain lands of Zirīgarān (or Zirihgarān) where all three religions had adherents, and lastly the land of the Christian prince of Sarīr who bore the title Fīlānshāh (or Kīlānshāh). According to Ibn Rusta, only the inhabitants of the capital on a high mountain were Christians, the other sections of the people heathen. Ibn Rusta gives the title 'Awār' to the ruler. According to Iṣṭakhrī (ed. de Goeje, p. 223), the frontier of Sarīr was only two farsakh from the town of Samandar on the coast; the Christian ruler of Sarīr had made peace with the Jewish ruler of Samandar, a relative of the king of the Khazars, as well as with the Muḥammadans in Derbend. According to Iṣṭakhrī Samandar was four, and to Mas'ūdī eight days' journey from Derbend and is described as a flourishing city; there were 4000, or according to others 40,000 vineyards there; the Muslims had their mosques, the Christians their churches, and the Jews their synagogues there. In the west the land of the Sarīr bordered on the land of the Alans.

Samandar seems to have lain in the northern part of the coastlands, near the later Tarḳi or Tarkhū and the modern Petrowsk. The land of the Sarīr lying next to this part of the coast corresponds to the district now inhabited by Avar tribes (cf. the regal title mentioned by Ibn Rusta); the chief town in this district, formerly the residence of the Avar Khān, is Khūnzaḳ which is said to have been founded by the Arabs. Mas'ūdī does not appear to define the location of the land of the Zirihgarān accurately; the corresponding name Köbeči (from Turk. *köbe* = a coat of mail) is now borne by a village much farther to the south, in the district (*okrug*) of Kaitak-Tabasaran. The name Ghumiḳ is apparently to be connected with that of the village of Kumukh, the capital of Ghāzī-Kumukh or Ghāzī-Ghumiḳ; whether it is only an accident that the Turkish Ḳumiḳ in the northern part of the modern Daghestan bear the same name as this Lezgian people, is still uncertain. The name Khaidān, according to Marquart (*loc. cit.*), corresponds to the name of the Ḳaitāḳ, and the capital of this region to the modern village of Madjalis.

All these peoples are now comprised under the name "Lezgians". The Arabs seem to have applied the name Lakz to a particular tribe, whose territory cannot now be exactly located. According to Balādhurī (ed. de Goeje, p. 205), the land of the Lakz was in the plain between the Samur and the town of Shābirān, i. e. south of the modern Daghestan; on the other hand, Mas'ūdī (*Murūdj*, ii. 5) describes the Lakz as a numerous people living in the highest mountains of this region; there were "unbelievers" among them, who were not subject to the prince of Shīrwān; "strange tales" were told of their family life and customs. The association with Shīrwān shows that Mas'ūdī thought the Lakz lived in the mountainous region on the upper Samur. The Russians also originally applied the name "Lezgians" only to the peoples of Southern Daghestan in opposition to the "hill-folks" of the northern territories (*Tawli*, from Turk. *taw* = "hill").

In the centuries following, Islām seems to have continued to make but slow progress in Daghestan. The power of the Khazar kingdom was broken by the Russians in 354 = 965 A. D.; even the most southern part of the kingdom with Samandar was on this occasion laid waste; the Christian Alans seem to have profited by the occasion, as at the time of the Mongol conquest their territories stretched much farther to the east than in the ivth (xth) century. On their early raids into this region, the Mongols (Ibn al-Athīr, ed. Tornberg, xii. 252) first came in contact with the Lakz, north of Derbend, who at this period also consisted of "Muḥammadans and unbelievers", then after passing through some other peoples farther north, they reached the Alans. According to William of Rubruck, who visited this region in November 1254, the Christian Alans lived in the mountains and "between the mountains and the sea" the Saracen i. e. Muḥammadan Lezgians (*Lesgi*); yet William himself describes a fortress lying in the coast region, only a day's journey from Derbend as a "castellum Alanorum". The Mongols had not yet succeeded in subduing these tribes; the passes leading from the mountains to the plains had to be guarded by special troops to protect the herds grazing on the steppes from the raids of the mountaineers (cf. Fr. M. Schmidt, *Rubruk's Reise*, Berlin 1885, p. 54 *et seq.*).

In the xiiith and xivth century, the land as far as the pass of Derbend and sometimes also the lands to the south of it also belonged to the kingdom of the Golden Horde. The names of the two most important tribes in Daghestan, the Ḳaitāḳ (or Ḳaitāgh) and the Ḳāzī-Ḳumūḳ first appear in their modern form in the history of the campaigns of Tīmūr (797-798 = 1395-1396). The land of the Ḳaitāḳ lay next the pass of Derbend and

belonged to the kingdom of Toktamish; the Kaitāk are described by Sharaf al-Dīn Yazdī (*Ẓafar-Nāma*, Ind. ed., i. 742 *et seq.*) as a people "without religion" (*bī dīn*) or "with a bad religion" (*bad kīsh*) so that Islām was not then the dominant faith among them. According to Barbaro (Ramusio, *Viaggi*, ii. 109ᵛ) even in the xvᵗʰ century, there were still many Christians — Greek, Armenian and Roman Catholic — among the Kaitāk; on the other hand the ruler of the Kaitāk (Khalīl-Beg) mentioned in the account of his journey by Afanasij Nikitin bears a Muḥammadan name.

The Ḳāzī-Ḳūmūḳ were Muḥammadans and were regarded as the outposts of Islām against the neighbouring heathen tribes; their prince was called Shawkal. North of the Ḳāzī-Ḳūmūḳ dwelled the Ashkūdja; the Ḳāzī-Ḳūmūḳ had helped the latter against Tīmūr; they were therefore reproached by him with having stained their reputation as warriors of the faith by their alliance with these unbelievers (*Ẓafar-Nāma*, i. 777 *et seq.*). The Ashkūdja therefore had not at this time adopted Islām. In the history of these campaigns the town of Tarki is mentioned. The Zirihgarān lived between the Ḳāzī-Ḳūmūḳ and the Kaitāk, i. e. in the district of the modern Kōbečī; they still retained their ancient fame as armourers and brought coats of mail which they had made, as offerings to the conqueror (*ibid.* i. 782).

The tribal name Ashkūdja may safely be connected with the name of the village Akūsha, the capital of the district of Dargo (*Darginskiy okrug*). The language of this region at the present day shows only dialectic differences from that of the Kaitāk; but the inhabitants were never subject to the prince of the Kaitāk and have never obeyed any authority but that of the elders of their tribes.

The account of the campaigns of Tīmūr affords conclusive proof that the conditions found by the Ottomans in the brief period of their rule in Daghestan (986—1015 = 1578—1606) could only date from the ixᵗʰ (xvᵗʰ) or xᵗʰ (xviᵗʰ) centuries. Nevertheless the historical tradition which was first invented about this time depicts this state of affairs as having existed in the early centuries of the Hidjra. Just as the Jews possibly even before the Arab conquest had located various events in the history and tradition of their people in Daghestan (cf. Marquart, *Streifzüge*, p. 20), and as at the present day the so-called "mountain Jews" (Dagh-Čufut) say their forefathers were brought hither by their Assyrian and Babylonian conquerors, so all the Muḥammadan tribes claim to have been converted by Abū Muslim to Islām, and their rulers to be descended from Arab governors left behind by Abū Muslim. The title *maisum* of the ruler of Tabasaran was explained as the Arabic Ma'ṣūm; Arabic etymologies were also found for the title of the Usmī of the Kaitāk ("nameable" from the Arabic *ism* "name") and of the Shāmkhāl of the Ḳāzī-Ḳūmūḳ (now written Ghāzī-Ghumūḳ). The word Shāmkhāl was said to be derived from Shām = Syria; various explanations were given of the second syllable. There was also another etymology (Shāh-Ba'l). It is not impossible that the pronunciation of the various titles became influenced by such etymologies. It certainly is not an accident that the title of the ruler of the Ḳāzī-Ḳūmūḳ appears in the oldest Russian documents in the same form (Shewkal or Shawkal) as in Sharaf al-Dīn Yazdī; it is obvious that both Persians and Russians could not have independently corrupted Shāmkhāl to Shawkal; it is much more probable that the present form of the title only arose out of the above mentioned etymology. The subjects of the Shāmkhāl, the Ḳāzī-Ḳūmūḳ, now claim to have distinguished themselves fighting for the true faith under Abū Muslim and to have received at this early period the complimentary appellation "Ghāzī" from the Arabs. The Chief Mosque of the village of Kumukh is said to have been built by Abū Muslim as is evidenced by an inscription (which is of course much later) on the interior of the main entrance. In Khūnzakh, the Avar capital, Abū Muslim's tomb is still shown as well as his sword and cloak, on which the date 150 A. H. is said to be inscribed. The scholars were of course aware of the fact that Abū Muslim never was in Daghestan; to reconcile the legend with history, it has been asserted that it is not Abū Muslim Marwazī that is referred to here but another Abū Muslim; on account of the similarity of names, this Abū Muslim was confused with Maslama, so that in historical works and even in inscriptions "Abū Muslim b. 'Abd al-Malik" sometimes appears as conqueror of Daghestan and builder of Mosques. A Shaikh Abū Maslama is said to be buried in Khūnzakh, who lived in the vᵗʰ century A. H. Even Russian scholars have hitherto been misled by the invented tradition and the irresponsible compilations of native scholars.

The first historical prince of the Kaitāk, who bore the title Usmī, appears to have been the Sulṭān Aḥmad Khān who died in 996 = 1587-1588. He is said to have founded the village of Madjālis, where the members of his tribe assembled to transact their business (whence the name); by his orders the provisions of the customary law were collected to form a code which the judge "*Ḳāḍī*" had to observe, a proceeding which Mīrzā Ḥasan Efendi, the author of the *Āthār-i Dāghistān* (p. 65), regarded as "gross impertinence" (*djasārat-i 'aẓīma*). Among this prince's innovations is mentioned the law by which the sons of a Beg, whose mother was not of princely birth, were to be excluded from inheriting their father's estate.

About the middle of the xiᵗʰ century (c. 1640), a part of the Kaitāk separated from their compatriots and migrated to the lands lying south of Daghestan; Ḥusain-Khān, the leader of these emigrants, succeeded in founding a new principality in Sāliyān and Ḳūba; Fatḥ 'Alī Khān, prince of Ḳūba and Derbend, in the xviiiᵗʰ century, was descended from this branch of the Kaitāk. The Ottoman traveller Ewliyā-Čelebi (*Siyāḥat-Nāma*, ii, 291 *et seq.*) in 1647 met these transplanted Kaitāk between Shakī (the modern Nucha) and Shamākhī; the vocabulary given by Ewliyā-Čelebi shows that the Kaitāk did not then speak Lezgian as they now do, but Mongol. Unless there is some inconceivable error here, this fact is of great importance for settling the question of the origin of Kaitāk.

The Shāmkhāls of the Ḳāzī Ḳūmūḳ (or Ghāzī Ghumūḳ) gradually extended their power from their mountain home in a north-easterly direction to the coast; in the xᵗʰ (xviᵗʰ) century these princes used to spend the winter in the lowland at Būinaḳ and the summer in Kumukh. The Shāmkhāl Čūbān died in 986 (1578) at Būinaḳ and his lands were divided among his sons. The power of the house

was thereby much weakened; the Ghāzi-Ghumūk who remained in the mountains gradually made themselves quite independent of their former rulers. Since the death of the Shāmkhāl Sūrkhāi-Mīrzā in 1049 (1639-1640), the Shāmkhāls have only ruled on the coast in Būināḳ or Tūrkhū (Tarḳi); none of these princes came to Kumukh where the tombs of the early rulers of the dynasty may still be seen.

The name Ghumūḳ is still borne by a village in the new possessions of the Shāmkhāl, not far from Temir Khān Shūra, the present capital of Daghestan; this village is now called Kāfir-Kumūḳ. The following story is told to explain the origin of this name: at the same time as the Ottomans, the Krim Tatars invaded Daghestan by command of the Sulṭān; 'Ādil-Girāi, a brother of the Khān Muḥammad Girāi, was defeated by the Persians in Shirwān and ended his life in confinement. His mother wished to release her son and therefore undertook the journey to Persia, bearing rich gifts but arrived too late; on her return journey she was robbed in the land of the Shāmkhāl for the sake of the presents she had brought for the Shāh, and died in this village; for this injustice done to a woman, its inhabitants are still branded as "unbelievers".

The inhabitants of Daghestan never in any way impressed the Ottoman conquerors as pious Muḥammadans. The historian 'Ālī Čelebi, who took part in the campaign of the year 1578 and has described it in his *Nuṣrat-Nāme*, called the attention of the Shāmkhāl to the barbarous practices of his subjects; one section of the inhabitants which was called *It-il* ("dog-tongued") on account of its unintelligible language, is accused by him of having had community of wives (cf. v. Hammer, *Geschichte des Osmanischen Reiches*, 2nd ed., ii. 486).

To the same period belong the earliest Russian attempts to subdue from Astrakhan the lands of the northern Caucasus, including Daghestan. In 1594, a Russian army under Prince Khworostinin, succeeded in taking Tūrkhū and building a fortress on the Koi-su or Sulaḳ, but the Russians were soon afterwards defeated by the sons of the Shāmkhāl and had to retreat over the Sulaḳ. An attack on Tūrkhū in 1604 under Buturlin and Pleshčeyew had still less success.

Since that time three powers, Persia, Turkey and Russia, have claimed supremacy over Daghestan as well as over the other lands on the western shore of the Caspian Sea; the native rulers made alliances sometimes with one and sometimes the other power; it was not till the 19th century that the struggle was finally decided in favour of Russia. After 986 = 1578, in addition to the Shāmkhāl and the Usmī, the ruler of Tabasarān (the name even at this time is still written Tabarsarān) and the ruler of the Avars had submitted to the Sulṭān. When Shāh 'Abbās brought Persian rule here in 1015 (1606), he was joined by the Usmī Rustam-Khān, while the Shāmkhāl remained faithful to the Turks; amongst other provisions of the treaty of peace made in 1021 (1612), it was provided that the Shāmkhāl and the other princes subject to the Porte should not be interfered with by the Persians. The same Rustam-Khān went over to the Turks in 1048 (1638) on which account his enemy, the Shāmkhāl, was favoured by the Shāh and confirmed in his rank; he had already received confirmation from the Czar Michael (*Āthār-i Dāghistān*, p. 81).

When the Ṣafawī empire began to decline under the weak rule of Shāh Ḥusain, a revolution against Persian rule broke out in Daghestan also. At the head of the movement was Čulāḳ-Sūrkhāi-Khān, who a short time previously had founded a new principality in the land of the Ghāzi-Ghumūḳ. Allied with the Usmī and the leader of a popular movement, the Mudarris Ḥādjdjī Dā'ūd Efendi, he succeeded in taking Shamākhī in 1124 = 1712, whereupon the allies sent an embassy to Constantinople, received robes of honour, titles and firmans from there and were adopted as subjects of the Sulṭān. Affairs took another turn on account of the intervention of Russia. 300 Russian merchants had been slain at the taking of Shamākhī; as Russia had received no satisfaction, Peter the Great undertook a campaign to Persia at the end of the Northern war and occupied Derbend in 1722; soon afterwards the other provinces on the west bank of the Caspian Sea had also to submit to Russia; by the Partition Treaty of 1724, Russia's claims to these coastlands were recognised by the Porte also.

Russian rule did not last long on this occasion; when Nādir Shāh had succeeded in establishing the unity of Persia, all the lands south of the Kura were given back to him by the treaty of the year 1732, and by that of 1735, the land between the Kura and the Sulaḳ also. The Porte also had withdrawn its claims in 1733 after an advance on Daghestan by the Krim Tatars which was foiled by the Russians, but hostilities were renewed at a later period; the native population also, particularly in the highlands, stubbornly resisted the new Shāh. It was only in the coastlands that Nādir Shāh was able to establish his authority permanently. The Shamkhāl 'Ādil-Girāi had taken the oath of allegiance to Peter the Great in 1718 and given him his assistance in the campaign of 1722, but had afterwards risen against the Russians; in 1725 he was sent to Lapland and the rank of Shāmkhāl was declared abolished; the rank was now restored by Nādir Shāh and given to Khās-Fūlād-Khān, the son of the banished ruler. In spite of fierce fighting (particularly in 1742 and 1744) the population of the highlands remained independent.

After the assassination of Nādir Shāh (1160 = 1747) there was no strong government in Persia for half a century, which might have maintained Persian suzerainty in this region. Even the inner provinces of the kingdom could not be protected from the robber raids of the princes of Daghestan; for example, the town of Ardabīl was plundered by Usmī Amīr Ḥamza. In spite of the treaty of 1735, Russia again made its influence supreme in Daghestan. When the traveller Gmelin was captured in the land of the Usmī and died there in 1774, the land was ravaged in the following year by an army under Medem. In 1784 the Shāmkhāl Murtaḍā 'Alī again attached himself to Russia. In 1785, Russian power in these regions was strengthened by the creation of a Caucasian governorship. Daghestan was only superficially affected by a religious movement under Shaikh Manṣūr, provoked by the Turks in 1199 = 1784-1785; most of the rulers took up a hostile attitude to this movement.

When the Ḳādjārs had succeeded in again bringing all the provinces of Persia into one kingdom, the Caucasus lands were intended to be included

in it also; but Russia was not now inclined to give up its claims without a war, as it had done in the time of Nādir Shāh. War broke out in the last year of the reign of the Empress Catherine II (1796): Derbend was occupied by the Russians, vacated soon after by order of the Czar Paul, but occupied again in 1806, whereby Persian rule in Daghestan finally came to an end; although it was not till 1813 that the Persian government finally gave up its claims to these lands by the treaty of peace signed at Gulistān.

The resistance offered by the native rulers and particularly by the people, lasted much longer. In 1818 almost all the rulers in Daghestan with the exception of the Shamkhal made an alliance against the Russians; the rising was put down by the Governor Jermolow, not without difficulty. In 1819 the title of Uṣmi of the Ḳaitaḳ and in 1828 that of Maʿṣūm of Tabasaran was abolished; the remaining rulers have had Russian officers given them as joint-rulers since the thirties of last century. The resistance offered by the mass of the people incited by their religious leaders against the infidels was much fiercer. The members of the Dervish order of Naḳshbandiya had found their way into Daghestan and spread their doctrines there with great success; about 1830 a movement was started in the land of the Avars by the leaders of the order, which was directed against the ruling dynasty as well as against the rule of the infidels. The Sharīʿat law was to become supreme, all provisions of customary law which were in contradiction to it were to be abrogated. The first leader of the rebels, Ghāzī Muḥammad, called Kazi-Mullah by the Russians, is praised by his disciples as a great authority on Arab sciences (ʿUlūm ʿArabīya); he is said to have composed a book directed against the customary law entitled *Iḳāmat al-Burhān ʿalā Irtidād ʿUrafāʾ Dāghistān*.

On the 17th—29th October 1832, Ghāzī Muḥammad was surrounded by a Russian army in the village of Gimri and slain; his successor Ḥamza-Beg fell soon after in 1834 at Khunzaḳ; the third leader Shāmil-Efendi was more fortunate; though inferior to his predecessors as a scholar, he was far superior as a ruler and general. He held out against the Russians for 25 years in his native mountains; his greatest successes were won in the years 1843-1844, when the Russians were reduced to the coastlands and the southern districts; all the Russian fortresses in the mountains were taken, and the Lezgians captured many prisoners, weapons (including 35 cannon) and supplies. After 1849 Shāmil was again driven back to the western part of the highlands but was able to continue the war for ten years longer.

His strict rectitude won him great respect among his people. But even in a state like this ruled by a Shaikh, it was impossible to observe perfectly the principle that only the Sharīʿat law should be valid; the taxes levied by the Avar Khāns on the grazing lands were retained by Shāmil also although they were founded not on a religious law but only on customary law.

After Shāmil submitted to Prince Barjatinskij on the 25th Aug. (= 6th Sept.) 1859, the power of the Avar rulers was restored by the Russians for a brief period. It seemed advisable to Prince Barjatinskij to strengthen the hands of the rulers and nobles, to break the influence of the clergy by their help; but the Russian authorities soon departed from this principle. The Avar ruling house was deposed in 1869 and soon afterwards the rulers who still remained, including the Shamkhal, in 1867 had to give up even their nominal rule. The district was organised on the lines, on which it is still governed. In 1877, during the Russo-Turkish war, the people of the highlanders again took to arms; on the 8th (20th) Sept. they took the fortress of Kumukh; the representatives of the ancient ruling houses in Ḳaitaḳ and Tabasaran again took the titles of Uṣmi and Maʿṣūm; but as about this time the war against Turkey took a favourable turn for Russia, the revolt was soon suppressed.

The works of Baron P. v. Uslar (since 1863) have remained authoritative on the study of linguistic relationships in Daghestan. The Lezgians do not form a linguistic unity as perhaps do the Čerkesses and Čečentses; following Uslar five different languages are distinguished among them, although these are related to one another: the Avar, the language of the Ghazi Ghumuḳ or Lak, the language of Dargha (which is divided into the dialects of the Ḳaitaḳ and of the Akusha), the language of Küre and the language of Tabasaran; the latter language was almost extinct even in Uslar's time. The Tāt who have immigrated from Persia speak an Irānian dialect strongly mixed with Turkish words, as do the so-called "mountain Jews". Turkish is the language most commonly spoken on the coastlands, Ādharbaidjān Turkish in and around Derbend, and in the northern districts west-Turkish (or according to the views of the author of the *Āthār-i Dāghistān*, Čaghatāī-Turkī) dialects of the Ḳumiḳ and Nogai. How these linguistic conditions are to be explained from the history of the land, which has just been surveyed, what traces, for example, the rule of the Khazars, the Alans and the Mongols has left, still requires to be specially investigated. At the present day Ādharbaidjānī is becoming predominant everywhere as the written language. The standard of education is naturally a very low one; the author of the *Āthār-i Dāghistān* (p. 232) says, probably with some exaggeration, that he has seen no traces of old manuscripts in any town or village; no one is said to have had a library in Daghestan since the year 1000 A. H. On the other hand, owing to the activity of the Naḳshbandiya order, a knowledge of Arabic is much more widespread at the present day than in most Muḥammadan countries where it is not the native language. Several of the scholars, who lectured in the Kaʿba in the winter of 1884-1885 and are mentioned by Snouck Hurgronje, were born in Daghestan.

Bibliography: In addition to works on the Caucasus in general (e. g. Erckert, *Der Kaukasus und seine Völker*, Leipzig, 1888; G. Wallenbaum, *Putevoditel' po Kavkazu*, Tiflis, 1888), the writings of E. Kozubskij who died recently may be specially mentioned: *Pamjatnaja Knižka Dagestanskoi oblasti* (Temir-Khan-Shura 1895); *Dagestanskij Sbornik*, vip. i (ibid. 1902), vip. ii (ibid. 1904); *Istorija goroda Derbenta* (ibid. 1906). The bibliographical and statistical material collected in these works is particularly valuable. J. Marquart's long promised "*Historische Ethnologie des Daghestan*" (*Osteuropäische und Ostasiatische Streifzüge*, Leipzig 1903, p. 285; cf. also in his earlier work

Erzähler, Berlin 1901, p. 95) has as far as I know not yet (April 1912) appeared. In the xixth century Daghestan produced a native historian, Mirza Ḥasan-Efendi b. al-Ḥādjdj ʿAbd Allāh Efendi al-Alkadārī al-Dāghistānī, whose *Kitāb-i Āthār-i Dāghistān* (in the Ādharbaidjānian dialect) was written in 1307 = 1889-1890 and printed in 1312 = 1894-1895 at the expense of the millionaire Tagijew in St. Petersburg, but apparently not published till later; the permit of the Russian Censor on it is dated 5th August 1902. The author tells us that he was born on the 11th Djumādā II 1250 = 15th October 1834 in the Avar territory, later lived with his parents at their home in the district of Küre (the village of Alkadar is in it), was banished to Spask in the gouvernement of Tambow "justly or unjustly" (*ḥaḳḳ nāḥaḳḳ*) for taking part in the events of the year 1294 = 1877 and spent four years there till he received permission to return to his home. The work is not without talent and contains much valuable material, particularly on the recent history of Daghestan. (W. BARTHOLD.)

DAHEKAN, TAHEGAN (Arm.) = Pers. DAHGĀNĪ, a gold (and silver) coin = dīnār [q. v.].

AL-**ḌAḤḤĀK** B. ḲAIS AL-FIHRĪ, chief of the tribe of Ḳais, an ardent partisan of Muʿāwiya. In the year 39 = 659-660 by the latter's orders he undertook an expedition with 3000 men against the partisans of ʿAlī in the Ḥidjāz and barred the way for pilgrims to Mecca, till ʿAlī sent Ḥudjr b. ʿAdī al-Kindī against him, who put al-Ḍaḥḥāk to flight. In the year 55 = 674-675 or according to another authority in 54 he was appointed governor of Kūfa. After filling this office for some time, he was dismissed in 58 = 677-678. After the death of al-Muʿāwiya in 60 = 680, al-Ḍaḥḥāk, who delivered the late caliph's funeral oration, in obedience to his dying wish, effected the election of his son, Yazīd b. Muʿāwiya, as his successor. During Muʿāwiya II's illness, he was appointed by him to lead the prayer in Damascus till a new Caliph could be chosen. Al-Ḍaḥḥāk also played a part in the intrigues in Syria on the death of Muʿāwiya II in 64 = 684; but all the details are not clear. The Caliph left no children and his nearest relative was his sixteen-year old brother Khālid b. Yazīd, whose claims were championed by Yazīd's maternal uncle, the powerful Ḥassān b. Mālik b. Baḥdal al-Kalbī. ʿAbd Allāh b. al-Zubair on the other hand was recognised as Caliph in the ʿIrāḳ and he had also many supporters elsewhere. Then Marwān b. al-Ḥakam, who had intended to go to Mecca to bear in person the homage of the Syrians to Ibn al-Zubair, allowed himself to be persuaded by ʿUbaid Allāh b. Ziyād to come forth as a claimant himself, as he was the oldest and most respected among the Umaiyads. According to some, al-Ḍaḥḥāk who was by this time provisional regent in Damascus, had always been a partisan of Ibn al-Zubair, according to others he preferred to remain neutral in order to be able to appear as a claimant to the vacant throne when a suitable occasion should arise. In any case after some hesitation he openly took the side of Ibn al-Zubair. According to a statement which is certainly not improbable he was induced by the cunning ʿUbaid Allāh to demand that homage should be paid to himself. He thereby lost the confidence of the people however; this plan had soon to be given up and al-Ḍaḥḥāk again took the side of Ibn al-Zubair. When Marwān was elected Caliph in Djābiya on condition that after his death the throne should pass to Khālid b. Yazīd, the struggle had to be decided by the sword. The hostile armies met at Mardj Rāhiṭ, the Ḳais led by al-Ḍaḥḥāk and the Kalb by Marwān, in 64 = 684. After skirmishing for 20 days, the latter was victorious; al-Ḍaḥḥāk was slain and his followers had to take to flight.

(K. V. ZETTERSTÉEN.)

AL-**ḌAḤḤĀK** B. ḲAIS AL-SHAIBĀNĪ, a Khāridjī. When the chief of the Khāridjīs, Saʿīd b. Baḥdal al-Shaibānī, died in 127 (745) of plague on the road to Kūfa, al-Ḍaḥḥāk was proclaimed his successor. The Khāridjīs flocked to his standard from all sides, and when al-Ḍaḥḥāk advanced against Kūfa with his followers, Marwān II's governor there, al-Naḍr b. Saʿīd al-Ḥarashī, and the governor of Ḥīra, ʿAbd Allāh b. ʿOmar, united their forces, but were defeated in Radjab 127 = April 745, although they are said to have had an army of about 30,000 men, and had to flee while al-Ḍaḥḥāk occupied Kūfa. Ibn al-Ḥarashī went to Marwān in Syria, while Ibn ʿOmar remained in Wāsiṭ, where he was besieged by al-Ḍaḥḥāk. In Shawwāl = August of the same year he had to capitulate after a siege which lasted several months and conclude a peace with al-Ḍaḥḥāk by the terms of which Ibn ʿOmar received Kaskar, Maisān, Dastmaisān, the land on the lower Tigris, al-Ahwāz and Fārs, as governor. Al-Ḍaḥḥāk then returned to Kūfa while Ibn ʿOmar remained in Wāsiṭ. In the following year the people of Mosul applied to al-Ḍaḥḥāk and begged him to take the town. After an absence of twenty months, it is said, he set off and drove Marwān's governor out of Mosul, which then fell into his hands. As he was able to give high pay, recruits flocked to him and according to the probably somewhat exaggerated accounts of the Oriental historians, had an army of 120,000 men at his disposal. The Caliph, who at this time was in Syria, occupied with the siege of Ḥimṣ, sent his son ʿAbd Allāh against the victorious Khāridjī leader. The former came as far as Naṣībīn; but after an unsuccessful encounter he had to retire into this town, where he was besieged by al-Ḍaḥḥāk. After the conquest of Ḥimṣ, Marwān himself took the field and came upon al-Ḍaḥḥāk at Kafartūthā towards the end of 128 (about Sept. 746). The battle lasted the whole day; al-Ḍaḥḥāk was slain and when his successor al-Khaibarī sought to renew the attack, he was also killed, whereupon the Khāridjīs retired to Mosul. According to another account, al-Ḍaḥḥāk and al-Khaibarī did not fall till 129 = 746-747.

DAHLAK, the name of the principal island of the group of the same name in the Red Sea opposite Maṣṣawa. The origin of the word is uncertain; it is hardly possible to derive it from the name Elaea (Ἐλαία) of this group mentioned by Artemidorus and in the *Periplus Maris Erythraei* or from the Allaea which appears in the elder Pliny (L. v. xxxiv. 2). The population is of Tigre origin and speaks this language. Islām was brought to Dahlak at quite an early period: it was used as a place of banishment under the Umaiyads: the poet al-Aḥwaṣ and the Medina jurist Arāk were banished thither. This use of the island survived under the ʿAbbāsids; but Dahlak was lost to the caliphate under their rule and fell to the dynasty of the Princes of Zabīd, whose vicissitudes it shared. Trade with Abyssinia brought wealth to this outpost; for after the 4th century we find Arabic inscriptions here, the monuments of which have only been partly collected by Valentia, Salt, Rüppel and Malmusi. The island became independent under rulers to whom Maḳrīzī gives the title of "king"; these entertained relations with the Mamlūk Sulṭāns, probably to be the more easily able to resist the claims of the Yemen. Dahlak was nevertheless under the suzerainty of Yemen again when Affonso d'Albuquerque and the Portuguese arrived in 1513. Aḥmad, the prince then reigning, whose name is known to us from an epitaph, appeared to give them a friendly welcome but really meditated treacherous designs. As a punishment the island was laid waste in 1520 but the inhabitants had left it. Peace was come to however: Shaikh Aḥmad was allowed to gain possession of the island again on condition that he paid tribute to the Portuguese, which did not prevent him from attaching himself to Aḥmad Grāñ when the latter had become lord of the whole Ethiopian kingdom and receiving the governorship of Dahono (Arkiko). His successor followed his example and on the approach of a Portuguese fleet under Don Estevam da Gama in 1541 had to flee with the entire population of the island. The further history of the island till the conquest of Yemen whose lot it shared, by the expedition of the Turkish Pasha Ozdemir, is unknown. In the period following, Dahlak's history is that of Maṣṣawa; it passed under Egyptian suzerainty and was finally ceded to Italy. The population is estimated at 1900 souls; the pearl-fisheries are almost abandoned.

(RENÉ BASSET.)

DAḤLĀN, AḤMAD B. ZAINĪ, was born in Mecca towards the beginning of the nineteenth century. From 1871 he held the offices of Muftī of the Shāfiʿites and Shaikh al-ʿUlamā' there. When in 1886 the Grand Sharīf ʿAwn al-Rafīḳ retired to Medina on account of the opposition of ʿOthmān Pasha, Daḥlān accompanied him, but, as in the case of the Prophet, the fatigues of the journey proved too much for his strength, and he died there in the same year. He was not only a prolific author of works dealing with the old-world sciences of the Muslims, but took an interest in the history of his time and issued *fatwās* concerning questions of his own day. Most of his works were published at Cairo at the end of the thirteenth and beginning of the fourteenth centuries, A. H., 1875—1895, though some of them were composed at a much earlier date, e. g. a treatise on Logic written at Medina in 1278 (1861 A. D.) and printed with two others in Cairo in 1292. The following are the most important of his historical writings: *Duwal al-Islāmiya bil-Djadāwil al-Marḍiya*, (Cairo, 1306), in which, instead of following the usual chronological order, he takes up one dynasty after another, beginning with the Prophet and Orthodox and Shīʿa Caliphs down to his own time, with special reference to Arabia and Egypt. The *Khulāṣat al-Kalām*, a history of the Ḥidjāz from the time of the Prophet to the end of the thirteenth century (Cairo 1305, Mekka 1311), is partly a recapitulation of the history of the Ḥidjāz by al-Sindjārī (wrote 1005 A. H., 1684 A. D.), but for the last two centuries it is original, and is one of the best known works on that period. It continues Wüstenfeld's *Chronicles of Mecca* (Cf. Snouck Hurgronje, *Mekka*, i. xvi). The *Sīrat al-Nabawiya*, composed in Mekka in 1278 and printed in Cairo in 1292, is generally known as the *Sīrat al-Daḥlāniya* in distinction from the *Sīrat al-Ḥalabiya*, on the margin of which it is printed. The *Futūḥāt al-Islāmiya* is a political history of Islām printed at Mecca a year before the death of the author. The *Fatḥ al-Mubīn* (Cairo 1302) is one of the best compendia of the history of the first century, A. H., especially on the legality of the first four chalifs.

Other works are the *Durar al-Saniya* directed against the Wahhābīs (Cairo, 1299), a *Risāla* against Sulaimān Efendi, an East Indian mystic living in Mecca (Snouck-Hurgronje, *Mekka*, ii. 241 *et seq.*); *Sīghat Ṣalawāt*, on prayers for the Prophet used by ʿAbd al-Ḳādir and others (Būlāḳ 1292); *Tanbīh al-Ghāfilīn*, an abridgement of the *Minhādj al-ʿĀbidīn* of al-Ghazzālī (Cairo 1298); a commentary on the *Adjurrūmiya*; and other treatises on dogmatics, metaphysics and religion.

Bibliography: Snouck Hurgronje, *Een Rector der Mekkaansche Universiteit*; *Bijdr. t. d. Taal- Land- en Volkenkunde van Nederl. Indië*, 5e Volgr. ii. 344—405 (cited in Brockelmann, *Geschichte d. Arab. Litt.*, ii. 499); Van Dyck, *Iktifā' al-Ḳanūʿ bimā huwa Maṭbūʿ* (Cairo, 1896) by index.

(T. H. WEIR.)

DAHNĀ, "the Red" so called from the colour of its sands, the great desert of Arabia, known to geographers by the name Rubʿ al-Khālī or "empty space". It stretches southward from the district Ḥarīḳ ("Burning") to the confines of Yemen and Ḥaḍramawt, and eastward from the Wādī Dawāsir to ʿOmān — an area said to be about 50 000 square miles. It is entirely desolate but for small clusters of bushes and stunted palms which appear at wide intervals. Great sand waves, intersected and broken by lesser formations, cross its surface from north to south; at right angles, that is, to the path of the prevailing east winds. Owing to its tropical position and its general low level, this desert is said to endure terrific heat both by day and night. Not even do the Bedouins traverse its whole extent.

(A. S. FULTON.)

al-**DAHNADJ** (Mod. Pers. *dahna*), Malachite, green copper ore. The description of this mineral in the *Ikhwān al-Ṣafā* may be traced to the *Petrology* of Aristotle. It is said to be formed in the copper mines from the sulphur dust which combines with the copper and forms stratified layers. It is a soft mineral and shows the greatest variety of all shades of green. Tīfāshī, following Balīnās, says that *dahnadj*, *lāzward* and *shādhanadj*, i. e. malachite, copper lazuli [not lapis lazuli here] and red copper ore (not red iron ore, hematite) were originally copper, which first of all became shādhanadj; when this is affected by heat, it becomes green like dahnadj, if a little moisture still remains in it, or blue lazur, when as a result of the great dryness of the earth black is mixed with it. The finest copper is therefore obtained from these stones. We may clearly recognise in these descriptions, if the ambiguous names are correctly applied, the association of minerals found in certain copper mines. Tīfāshī says, it is chiefly found in Kermān and Sidjistān as well as in the land of the Banī Sulaim in Arabia Deserta; he also describes the agatelike designs on the beautiful varieties which are used for vases, dagger-hilts etc.; in course of time the stone loses its brilliance as it is not very hard.

It is said to belong to that group of stones which are clear in a good light and clouded in a dim light. It is also said to cause a clouding of the colour of the emerald. The statement in the *Ikhwān* and in Aristotle's *Petrology* that it solders broken gold — it is even more effective with borax — shows a connection with the ancient chemical tradition (χρυσοκόλλα); in Ḳazwīnī, quite the contrary statement is made.

It is considered a poison for people in good health but it is also an effective antidote, taken internally with vinegar and applied externally for bee-stings etc., leprosy and as an ophthalmic.

(J. Ruska.)

DAHR. This word is used by the philosophers to mean "eternity" in opposition to time. Time is regarded as something transitory and fleeting and eternity on the other hand as abiding. Time is the abode of that which changes or alters; it is measured by the movements of the heavenly bodies. Things, which do not move and are eternal, have their place not in time but in eternity, like the "Ideas" of Plato. The latter, philosophers tell us, is in a sense the basis of time; it is the "inner principle of time", *bāṭin al-zamān* (cf. my *Avicenne*, p. 189).

The book of the *ta'rīfāt* gives the following definition of the word *dahr*. "It is the permanent moment in which the divine presence expands; it is the basis of time and enfolds in itself eternity and perpetuity". (B. Carra de Vaux.)

DAHRĪYA (A.) a name applied with reference to Ḳor'ān xlv. 23 (where it is said of the unbelievers: And they say: "There is no other than our present life; we die and we live and nothing but the course of time (*al-dahr*) destroyeth us") to those people who not content with repudiating the belief in one God, the creation of the world by Him and His Providence, and denying the postulates of any positive religion (divine laws, a future life, retribution), teach the eternity of time and of matter and ascribe all that happens in the world merely to the operation of natural laws (or the movement of the spheres). As the most characteristic principle of their teaching on which all the others depend, stress is laid on their doctrine that time is without beginning (*Mafātīḥ al-'Ulūm*, ed. van Vloten, p. 35, penult., 40,). It would be difficult to give a satisfactory translation of the term *dahrīya* in the sense in which it is used in Islāmic literature, for (as is also the case with the application of the term *zindīḳ*) its connotation is not rigidly defined and it is easier to define it in negative than in positive terms. Discrepancies are by no means absent in theological literature as regards the details of their teaching. Shahrastānī in one passage says of them that they deny the existence of intelligible entities (*ma'ḳūlāt*) and only allow those which can be perceived by the senses (*maḥsūsāt*) (ed. Cureton, 201,) and in another he contradicts this by saying that they also allow *intelligibilia* (202,). We even find a definition of the Dahrīya according to which they grant the existence of God but explain the origin of the world from the random concurrence of atoms whirling about in space: Atomists (Djamāl al-Dīn al-Ḳazwīnī, *Mufīd al-'ulūm wa-mubīd al-humūm* [Cairo 1310] p. 37). One comes nearer the meaning of the name *Dahrīya* by translating it Materialists or Naturalists; the meaning Fatalists, formerly much in vogue, is quite wide of the mark. — The oldest definition of the meaning of *dahrīya*, which we have in the main followed above, is to be found in Djāḥiẓ's *Kitāb al-ḥayawān* (Cairo 1325, vii. 5) where (with reference to Sūra xlv. 22: "he who taketh his desires for his God") they are credited with a hedonistic view of life in addition to Atheism and Naturalism using the terms in their most general sense: "he (the *dahrī*) knows no distinction between man and beast, only what stands in the way of his desires is evil in his sight; everything with him turns upon the question of pleasure and pain; that alone is right which is to his advantage, though it should cost a thousand men their lives". It follows from their general doctrines that they deny popular superstitions and scoff at the existence of demons and angels, the interpretation of dreams and the efficacy of magic (Djāḥiẓ, ibid. ii. 50, , *et seq.*); on the other hand many of them are said to grant the possibility of the metamorphosis of men into animals (*masḵh*) on rationalistic grounds, (ibid. iv. 24, , *et seq.*). As do the Mutakallimūn generally, the Jewish Arabic theologian Sa'adyah (died 942) also repeatedly combats the *dahrīya*; first in the introduction to his commentary on the *Sēfer Yeṣīrah* (ed. Lambert, Paris 1891), afterwards in the first book of his *Kitāb al-amānāt wa 'l-i'tiḳādāt* (ed. Landauer, Leiden 1880, p. 63—65) in connection with his refutation of those who deny the origin of the world within time, and in the latter place he devotes particular attention to contradicting their limitation of the perceptible to that which is perceptible by the senses. In his translation of Job, he refers characteristically xxii, 15 to the *Dahrīya* and trans-

lates the *traḳh ʿtlāsa* of the text by *madhāhib al-dahriyīna*; cf. also several passages in his commentary on Proverbs (B. Heller, in *Revue des Études Juives*, xxxvii. 229).

The origin of the *Dahriya* is traced to the Greek schools of philosophy; they are distinguished by Ghazālī (*al-Munḳidh min al-Ḍalāl*, Cairo, 1309, complete vol., N°. 8) from the *ṭabīʿiyūn* (φυσικοί) who while granting the existence of a creating and controlling Deity, deny the substantiality of the soul and in consequence its immortality, and from the *ilāhiyūn* (θεολόγοι, Socrates, Plato, Aristotle). — With the penetration of European natural science among oriental scholars, Darwinism, Materialism etc. have made great advances among them (translation of Büchner's *Kraft und Stoff* into Arabic by Shiblī Shumail al-Lubnānī, Alexandria 1884, and the pamphlet "*al-Ḥaḳīḳa*", by the latter s. d.). A literature combatting these tendencies has also been produced of which may be mentioned the anti-Darwinian writings of Ibrāhīm al-Ḥawrānī of Beyrout (*Manāhij al-ḥukamāʾ, fī ibṭāl madhhab Dārwīn wa-uṣūl al-falāsifat al-māddiyīn*, Bairūt 1884; *al-Ḥaḳḳ al-yaḳīn*, Bairūt 1887, a reply to Shiblī). While these writings and their refutations have been produced in Christian circles, the materialistic philosophy which has also found its way among Muhammadans has been combatted as *Dahriya* by the Afghān scholar and agitator Djamāl al-Dīn al-Ḥusainī [q. v.] in a pamphlet, which originally appeared in Persian (Bombay 1298, lith.), was afterwards translated into Urdu (Calcutta 1883) and into Arabic (by Muḥammad ʿAbduh) and in the latter form was printed first in Beyrout (1303) and again in a new edition at Cairo (1312; 76 pp. 8°.) under the title *Risālat fī ibṭāl madhhab al-dahriyīn wa-bayān mafāsidihim wa-ithbāt anna-l-dīn asās al-madaniya wa-l-kufr fasād al-ʿumrān* and has been widely disseminated in Muhammadan circles. To this literature also belongs *al-Durra al-saniya fi-l-radd ʿalā-l-māddiya wa-ithbāt al-nawāmīs al-sharʿiya bi-ʾl-adillat al-ʿaḳliya* by ʿAbdallāh ʿAlāʾ al-dīn al-Baghdādī al-Dihlawī (Cairo 1313; 192 pp. 8°.). It is clear then that in this connection *Māddiya* (materialists) and *Dahriya* are used as synonymous. Philologists allow that the latter word may also be pronounced *duhriya* according to a vowel change common in *nisbas* (Sībawaihi, ed. Derenbourg, ii. 64, 15 ff.).

(I. GOLDZIHER.)

DAHSHŪR, a place in the Egyptian province of Djīza (district of al-ʿAyāṭ) on the west bank of the Nile southwest of Cairo. Dahshūr has been famed since ancient times for its pyramids, the building of which is ascribed by the Arab geographers to mythical kings (like Kafṭarīm and Shaddāt b. ʿAdīm). Abū Ṣāliḥ mentions a Christian monastery and a church of Moses there; the latter was afterwards turned into a mosque while the monastery was over-whelmed by the Nile. Before the making of the railway, the place was one of the stations for caravans going from the Faiyūm to Cairo. ʿAlī Mubārak mentions Dahshūr among other places as being visited by pilgrims who visit the tombs there of the heroes of the faith who had fallen in the battles with the Byzantines: in honour of these a *mawlid* is celebrated annually.

(E. GRAEFE.)

DĀʿĪ. This title means "missionary", literally, "he who calls", he who summons to the true faith. It is frequently found in the history of the Ismāʿīlis, the Karmaṭians and the Druzes.

The *Dāʿī* are fifth in the scale of dignitaries in the Ismāʿīlī sect; beside them are the *Ḥudjdja* (proof) or *Naḳīb* whose duty it is to spread their doctrines. The five ranks in the sect correspond to five metaphysical principles: that of the *dāʿī* corresponds to time and that of the *Ḥudjdja* to space.

Among the Druzes, according to the system of Ḥamza, the *dāʿī* are not included among the five superior ministers; nor are they, like them, incarnations or representations of spiritual principles. They are at the head of the lower ministers and have the *Maʾdhūn* and *Mukassir* below them to aid them in their missions; they hold their powers from the fifth minister, called the *tālī*. The *dāʿī* are sometimes surnamed *al-djidd* ("the application") because they have zealously studied the true doctrine or also *dāʿī ʾl-tadjlīl* (missionaries of glorification") because it is believed that the Antichrist will also have missionaries who will be called "missionaries of the blind Dadjdjāl".

Muḳtanā (the Servant) who exercised supreme authority over the Druzes after the retirement of Ḥamza, recommended that twelve *dāʿī* and six *maʾdhūn* should be appointed as soon as possible to each diocese. The heads of missions receive from the masters of the sect the letters destined to be read to the faithful.

The name *dāʿī* is also used to designate persons of different rank, one of whom is subordinate to the other. We find the title Grand *Dāʿī* or *Dāʿī* of *dāʿī* in the histories of the Karmaṭians and Fāṭimids. When ʿUbaid Allāh, after being proclaimed Mahdī, came to Raḳḳāda" in 297 A. H., a certain Sharīf, surrounded by *dāʿī*, held a public assembly; he thus acted as Grand Dāʿī.

We learn from Maḳrīzī and Nuwairī how these missionaries went about their work. They spoke to people in a manner suitable to their mental attitude and degree of education, tried to awaken doubts about their religion in their minds, taught them that one should judge by reason rather than by traditions, explained the systems of ancient philosophy and ended by representing the rites of religion as mere symbols. If the listener accepted these premisses, he was asked to become utterly subservient to the Imām and was then initiated. Among the Ismāʿīlis, the greater part of the *dāʿī* themselves were not completely initiated; the ceremony of initiation had at first seven steps and afterwords nine. Many missionaries stopped at the sixth.

On must be careful not to think of these missionaries as purely religious; they accompanied

expeditions and many of them have been military leaders of considerable eminence.

The most celebrated *dāʿī*s are: ʿAbdān and Hamdān Ḳarmaṭ, Ismāʿīlī missionaries who founded the Karmatian sect; Hamdān was the first Grand Dāʿī of the ʿIrāḳ; — Zikrawaih, Dāʿī of the Western ʿIrāḳ; he was able, thanks to the missionaries he had with him, to collect a force powerful enough to ravage the frontier towns of Syria and the ʿIrāḳ; he was finally defeated and slain in 294; — Abū Saʿīd al-Djannābī, who defeated the troops of the Caliph Muʿtaḍid near Baṣra, conquered all the towns of Baḥrain, and brought the caliphate within an ace of its fall, and died in 300 A. H.; — Abū ʿAbd Allāh, who, beginning as a missionary of the lowest rank, succeeded by his zeal and military genius in putting himself at the head of the powerful tribe of the Katāma and conquered all North Africa on behalf of ʿUbaid Allāh; he had the latter recognised as Mahdī and thus founded the Fāṭimid dynasty in 296 A. H.; ʿUbaid Allāh, jealous of him, put him to death in the year after his accession (298 A. H.); — DARAZI (see separate article).

DAIBUL (DĒWAL), a commercial town and seaport in Sind, mentioned even in Sāsānian history; the Arabs on the occasion of the first Arab expedition (15[4]) to India won a victory at Daibul and it was finally conquered by Muḥammad b. al-Ḳāsim in 93[4]. The Arab geographers, some of whom had personal acquaintance with Daibul, describe its situation (not far from the mouth of the Mihrān) and emphasise its importance as a commercial harbour; in Muḳaddasī's time the merchants spoke Sindī and Arabic. Yāḳūt gives the names of traditionists who belonged to Daibul and it is mentioned by the Persian historians of India down to the time of Awrangzīb. It is mentioned by European travellers also as late as the xvii[th] century. In spite of all the notices in geographical and other works it is not easy to locate the exact site of Daibul as the Indus has considerably changed its course; the old name may also have been transferred to other places in later times. The identifications with Karāčī, Tatta and Lāhōrī Bandar cannot be maintained; Haig believes he has identified Daibul in the ruins of Kakar Bukēra on the right bank of the Baghār Canal.

Index; Raverty in *Journ. As. Soc. of Bengal*, Vol. xli. pt. i. (1892), p. 206 *et seq.* and 317, note 315; Haig, *The Indus Delta Country* (London 1894), p. 42 *et seq.* (J. HOROVITZ).

ḌAʿĪF (A.) weak, frail or unsound. In Ḳurʾān iv. 32 "Man was created weak", the word is held to mean "swayed by desires". The dual *al-ḍaʿīfān* (the two weak ones) refers to the woman and the slave. It denotes weakness of mind, poverty of intelligence (*ḥumḳ*) and also physical blindness. As an epithet of defective poetry it refers to the misuse of the letters ا, و, ى as Rawī. In the science of Tradition it is applied to such traditions as are considered of feeble authority (s. ḤADĪTH). (A. S. FULTON.)

DAILAM (in Ptolemy Δελυμαῖς), the mountainous part of Gīlān, which is inhabited by a tribe of the same name (the Δελυμαῖοι of Polybius); it is bounded on the north by Gīlān proper, in the east by Ṭabaristān or Māzandarān, in the west by Ādharbaidjān and the land of al-Rān, in the south by the districts of Ḳazwīn and Ṭārm and in part by Raī. The kings of the land belonged to the Djastān family and resided in Ṭārm. The Dailamites were heathen and therefore exposed to slave-hunters, till they elected the ʿAlid al-Ḥasan b. Zaid as their suzerain (in 250 = 864; Ibn al-Athīr, vii. 85; Masʿūdī, *Murūdj*, vii. 342). Another ʿAlid, al-Ḥasan b. ʿAlī Uṭrūsh (the deaf) converted a section of them to Islām (301 = 913; Masʿūdī, *Murūdj*, viii. 279; ix. 5). The Dailamites rendered assistance to Mardāwīdj (q. v.). They supplied numerous mercenaries to the armies of the ʿAbbāsid Caliphs; led by Aḥmad b. Buwaih they deposed the Caliph Mustakfī (334 = 946; Masʿūdī, *Murūdj*, viii. 410). Khorzād, who was entrusted by Khusraw I. with the task of conquering Yemen with the rank of Wahriz, had been *Marzbān* of Dailam (Masʿūdī, *Tanbīh*, transl. by Carra de Vaux, p. 345).

Bibliography: Ibn Ḥawḳal, p. 267; Mehren, *Manuel de la Cosmographie du Moyen Age*, p. 368; J. Marquart, *Ērānšahr*, p. 126; G. Le Strange, *The Lands of the Eastern Caliphate*, p. 173 *et seq.*; Ibn Isfandiyār, *History of Ṭabaristān*, transl. Browne, p. 164 *et passim*. (CL. HUART.)

DAIR, a Christian convent or monastery; also the cloister or cell of a monk. Hence *raʾs al-dair* (lit. the head of the convent) is applied to one who is chief among his companions. This expression and the word *dair* itself is Syriac. (A. S. FULTON.)

DAIR AL-ʿĀḲŪL, a town in Babylonia, 17 parasangs (= c. 64 miles) south east of Baghdād. In the Arab middle ages the town which had grown up around a Christian monastery was the capital of the district (*ṭassūdj*) of Central Nahrawān and in Muḳaddasī's time (c. 375 = 985) was regarded as the most important place on the Tigris between Baghdād and Baṣra. When Yāḳūt wrote (beginning of the vii[th] = xiii[th] century) the period of Dair al-ʿĀḳūl's prosperity was was already past, for which the alterations that had taken place in the course of the Tigris must have been largely to blame; for while the older Arab geographers locate the town close to the west bank of the Tigris, Yāḳūt finds it on the east side of the river, one Arab mile (2000 yards) from it. Dair al-ʿĀḳūl ultimately became utterly deserted; its site may however be readily identified at the present day by ruins 3000 feet in diameter, called al-Dair, which lie among the swamps on the high east bank of the Tigris.

The name Dair al-'Āķūl can hardly be explained, as has been done, from the Arabic as "monastery of the camel-thorn" (Arabic *'āķūl*, popularly *'adjūl*) but must certainly like so many other pre-Muḥammadan place-names in the 'Irāķ be of Aramaic origin. The Arabic *al-'āķūl* reproduces the Aram. *'āķūlā* = "bend"; therefore the name means "the "monastery at the bend of the river"; and refers to a settlement which was founded at a place where the Euphrates takes a decided turn. In any case 'Āķūlā exists elsewhere as a place-name in Babylonia, as the name of a suburb of the Arab town of Kūfa (this word itself seems to be merely a translation of the Aramaic); that this name was given on account of a well marked bend in the Euphrates there, is expressly stated in Syriac sources. Cf. on this point, Nöldeke in the *Sitz. Ber. der Wien. Akad. d. Wissensch.*, Vol. 128, Abh. ix, p. 43. Al-Zawrā' "the winding", an epithet given to Baghdād is perhaps to be similarly explained (see above p. 563).

Dair al-'Āķūl is famous in history for the decisive battle fought there in 262 = 876 between Ya'ķūb b. Laith al-Ṣaffār and the army of the Caliph al-Mu'tamid, led by the able general Muwaffaķ, in which the rebellious governor suffered his first serious defeat and the great danger which threatened the Caliphate was averted. On this battle cf. Ṭabarī, iii. 1893; Mas'ūdī, *Murūdj al-Dhahab* (ed. Paris), viii. 41 *et seq.*; Weil, *Gesch. der Chalif.*, ii. 441; Müller, *Der Islam im Morgen- und Abendlande*, i. 583; Nöldeke, *Sketches from Eastern History* (1892), p. 195 *et seq.*

Bibliography: Yāķūt, *Mu'djam* (ed. Wüstenfeld), ii. 676; *Marāṣid al-iṭṭilā'* (ed. Juynboll, *Lugdun. Batav.*, 1850 *et seq.*), i. 435; v. 556; Streck, *Babylonien nach den Arab. Geographen*, ii. 289—295; G. Le Strange, in the *Journ. of the Roy. Asiat. Society*, 1895, p. 41; do., *The Lands of the Eastern Caliphate* (1905), p. 35; K. Ritter, *Erdkunde*, x. 191. 232; H. Kiepert in the *Zeitschr. der Gesellsch. für Erdkunde*, xviii. (Berlin 1882), p. 18 (cf. also p. 444). (M. STRECK.)

DAIR AL-DJAMĀDJIM, a Christian monastery in Babylonia, 7 parasangs (c. 28 miles) from Kūfa, according to Yāķūt, on the edge of the desert on the road to Baṣra. Near it was another monastery, called Dair al-Ķurra, which may be identified with the al-Ķurra in Ķādisīya (cf. Yāķūt, ii. 685; iv. 76). The distance between Ķādisīya and Kūfa was 5 parasangs (20 miles); cf. H. Wagner in the *Nachr. der Götting. Gesellsch. der Wissensch.*, 1902, p. 257 *et seq.* From a story in the *Kitāb al-Aghānī* it may be deduced that Dair al-Djamādjim was near the bank of the Euphrates and apparently on its west side. According to these data, the site of this monastery should be sought for south of Kūfa (the ruins of which are 6—8 miles east of Mashhad 'Alī = Nadjaf) somewhere in the southeastern part of the modern Baḥr al-Nadjaf, a swampy lake which has arisen on the west bank of the former channel of the Euphrates.

Dair al-Djamādjim means "monastery of the skulls". There are various stories in the Arab authors of the origin of this name. All are agreed that the name originated in skulls of men slain in a battle there, buried or piled up; but as to the actual event, which is placed in pre-Muḥammadan times, and those who took part in it, opinions differ. Sometimes it is said that the skulls in question belonged to members of the Banū Tamīm, who met their death here in a tribal feud; sometimes they are said to have belonged to Persians slain by the Iyād. A third tradition says that it was the Iyād and Ķuḍā'a who were concerned; their bodies covered the field in an encounter between the two tribes and were buried in the monastery. Whether the name really owes its origin to some such incident, may be doubted. It may more probably be derived from the skulls of martyrs and saints buried and reverenced in the monastery. In any case the analogous name *al-Djumdjuma* = "the skull", which is borne at the present day by a village at the south end of the ruins of Babylon, should be compared. There are two different views on the origin of this latter name; cf. on the one hand, J. Cl. Rich, *Collected Memoirs* (1839), p. 61; on the other Meissner in the *Archiv für Religionswissensch.*, v. 232, , and in the *Mitteil. des Seminars für Orient. Sprach.* (Berlin), iv. (1901), Abteil. ii p. 137, .

In Muḥammadan history the "monastery of the skulls" is memorable for the battles fought in its neighbourhood in 82 (701) between al-Ḥadjdjādj, the governor of 'Abd al-Malik, and the rebel 'Abd al-Raḥmān b. Muḥammad b. al-Ash'ath [q. v., p. 56]. The former had his headquarters at the above-mentioned monastery of Dair Ķurra, while 'Abd al-Raḥmān occupied a strong position at Dair al-Djamādjim. The opposing armies skirmished with one another for more than three months. Although 'Abd al-Raḥmān's force was raised to over 100,000 by the addition of the troops from 'Irāķ, he had finally to quit the field, when the last, decisive battle was won for Ḥadjdjādj's Syrian troops by a powerful cavalry charge by Sufyān.

Batav.*, 1850 *et seq.*), i. 427; v. 540; Balādhorī, *Kitāb al-Futūḥ* (ed. de Goeje), p. 283; Mas'ūdī, *Murūdj al-Dhahab* (ed. Paris), v. 304—310, 348, 355, 358; Farazdaķ, *Dīwān* (ed. Boucher), p. 210 or 631 (transl.); *Kitāb al-Aghānī* (Guidi, tabl. alphab.), p. 752; Th. Nöldeke in Benfay's *Orient und Occident*, i. (Göttingen, 1862), p. 692 or p. 705 (extract from the *Kitāb al-Aghānī*); Weil, *Gesch. der Chalifen*, i. 454—457; A. Müller, *Der Islām im Morgen- und Abendlande*, i. 391; Wellhausen, *Das Arabische Reich und sein Sturz* (1902), p. 147—149. (M. STRECK.)

DAIR AL-DJĀTHALĪĶ (= monastery of the Catholic), a Christian monastery in Babylonia, at some distance from the west bank of the Tigris, in the area watered by the canal of al-Dudjail which flows off from the latter south of Sāmarrā and runs parallel with it. The old building was built on a piece of high ground near al-Maskin, the capital of a district (*ṭassūdj*) in the province of Astān al-Āl. Maskin is to be located about 9—10 parasangs (= c. 36—40 miles); its site is perhaps marked by the present ruins of Abū Ṣakhr.

Dair al-Djāthalīķ owes its fame in Arab history to the decisive battle fought in its immediate neighbourhood in 72 = 691, in which the Caliph 'Abd al-Malik defeated Muṣ'ab b. al-Zubair, the

ʿIrāḳ governor of the Anti-Caliph ʿAbd Allāh b. al-Zubair. Muṣʿab, on whose side the poet Ibn Kais al-Rukaiyāt fought, was slain after a desperate resistance, after being deserted by the majority of his followers. A chapel (*mashhad*) was built on the spot where he was buried, which soon became an object of pilgrimage. The name "monastery of the Catholic" points to the fact that the head of the Nestorians stayed here at times. There was a monastery of the same name in Baghdād; cf. Streck, *op. cit.*, i. 167; Le Strange, *Baghdād*, p. 210.

DAIR MURRĀN, a place the site of which cannot be identified with certainty; at the present day the name is unknown in Damascus. From the vth century A. H. onwards the Arab writers are ignorant of its exact site. Some of them have wrongly tried to locate it at Dummar, at the entrance to the Baradā valley. Dair Murrān belonged to the Ghūṭa in the district around Damascus; it was built not far from and in sight of (*ẓāhir*) the capital, on an elevated piece of ground among vineyards and luxurious gardens near the foot of the Djabal Ḳāsiyūn. At a short distance from it was the ʿAḳaba or Pass of Dair Murrān. In poems written after the Umaiyad period, the place is frequently mentioned, along with certain villages, all in the immediate neighbourhood of Damascus. Dair Murrān was "opposite Bāb al-Farādīs", i. e. in order to get there one had to pass through this gate. During the rising against the Umaiyad Walīd II, we find the inhabitants of Dair Murrān entering Damascus by this gate. These data point to Dair Murrān having been in the northeast of Damascus, not far from where the Baradā enters the Ghūṭa at the western end of the present large quarter of Ṣāliḥiya.

As the name shows, Dair Murrān possessed a monastery, adorned with mosaics and precious marbles, and occupied by a large number of monks. At the conquest the monastery was not interfered with. The country residence of the Umaiyads at Dair Murrān is frequently celebrated in their poems, particularly by Yazīd I; he spent a while there shortly before his departure for the siege of Constantinople. Dair Murrān must have belonged to the estates of the Ghūṭa on behalf of which this caliph dug or enlarged the canal derived from the Baradā, called the *Nahr Yazīd*. Walīd I died there. Walīd II chose Dair Murrān as his country residence. The Caliph Hārūn al-Rashīd used to go there to drink wine and hear the adventures of the Umaiyads related to him. After the ivth century the name only survives in the *Kaṣīdas* of the poets of Damascus as that of a place of no historical importance, if indeed it still existed at all.

AL-**DAḲAHLĪYA**, also pronounced Daḳheliye at the present day, is an Egyptian province of the Eastern Delta. It is called after the town of Daḳahla; Amélineau (*Géographie de l'Égypte*) traces this name to the Coptic Tkehli. Abū Ṣāliḥ counted the Daḳahlīya as one of the provinces of Egypt, and estimates its revenue at 53,761 dīnārs; on the other hand Yāḳūt calls it a district (*kūra*). In the time of Nāṣir b. Kalāʾūn it seems to have formed with Murtāḥiya the province of Ushmūm Tannāḥ. At the present day the Daḳahlīya province has, according to Boinet Bey, 9 districts and about 736,000 inhabitants. Its chief town is Manṣūra.

DAKHAN (DECCAN), derived from the Sanskrit word *dakshina*, 'the south'. As applied to India it means, etymologically, the whole of the southern part of the country, but convention has restricted its application to the tract bounded on the north by the Vindhya mountains and the Godāvarī, the natural boundaries between northern and southern India, on the east and west by the sea, and on the south by the river Krishna, the country to the south of that river being known as the Peninsula. The Dakhan consists of several natural and ethnographical divisions. The narrow strip of country between the western Ghāṭs and the Indian Ocean is known as the Konkan, and the country above the Ghāṭs as Mahārāshṭra, the home of the peoples speaking Marāṭhī. Eastward of Mahārāshṭra and extending to the Bay of Bengal, lies Telingāna, the land of the Telingas, a Dravidian race. On the north of the Dakhan lies Gondwāna, the country of the Gonds, a forest tribe of Dravidian origin, and the northeastern and southwestern angles of the tract are occupied by the races speaking Uṛiya and Kanarese.

According to Hindu legend the greater part of the Dakhan was ruled in prehistoric times by a king who had his capital at Vidarbha, probably the modern Bīdar. In historical times the country has been ruled by the Mauryas of northern India, in whose empire it was included, and, on the decline of their power, by a number of local dynasties, the Čendhras, Śakas, Pahlavas, Yavanas, Rāshṭrakūṭas, Vākāṭakas, Čālukyas, Yādavas, and Kākatiyas.

The Muslims first appeared in the Dakhan in A. D. 1294 when ʿAlāʾ al-Dīn, nephew and son-in-law of Fīrūz Khaldjī of Dihlī led a raid into the kingdom of Devagiri, and compelled Rāmačandra, the radja, to agree to pay tribute to Dihlī. The two principal southern kingdoms at this

time were Devagiri or Mahārāshtra, governed by the Yādavas, and Warangal or Telingāna, governed by the Kākatiyas. The former were finally overthrown in 1318, and their kingdom annexed to Dihli. The Muḥammadan conquests in the south were greatly extended by Muḥammad b. Taghlaḳ, but in 1347 his officers in the Dakhan, goaded to desperation by his tyranny, rebelled, and under Ḥasan Khān who, under the title of 'Alā' al-Dīn Bahman Shāh, founded the Bahmanī dynasty, established the independence of the Dakhan. The kingdom of Telingāna was finally subdued by Aḥmad I of this dynasty in 1424-1425. In 1490 the weakness of Bahman Shāh's descendants led to the disruption of their kingdom and between this year and 1525 the Dakhan was divided into the independent kingdoms of Bidjāpūr, Aḥmadnagar, Golkonda, Berār, and Bīdar, under the 'Ādil Shāhī, Niẓām Shāhī, Ḳuṭb Shāhī, 'Imād Shāhī, and Barīd Shāhī dynasties, founded by the provincial governors under the later Bahmanī kings. Berār was subsequently absorbed by Aḥmadnagar and Bīdar by Bidjāpūr, and in the reign of the Emperor Akbar the Dakhan was invaded by the imperial troops and Berār was annexed, but the further advance of the Mughals was long stayed by the ability and energy of Malik 'Ambar the African, who was nominally the minister of the later representatives of the Niẓām Shāhī dynasty, and it was not until after his death that the dynasty was overthrown and the kingdom annexed by Shāhdjahān's officers in 1633. The remaining kingdoms of Bidjāpūr and Golkonda contrived, by intrigues with the Marāṭhas and by bribing the corrupt imperial officers in the Dakhan, to maintain a precarious existence for another half century. Awrangzīb captured Bidjāpūr in 1686 and Golkonda in 1687, and the whole of the Dakhan was incorporated in the Mughal empire, but the authority of the imperial officers was set at naught by the rising power of the Marāṭhas, who established their independence in the western Dakhan and overran and levied blackmail in the Mughal dominions. In 1723 Ḳilidj Khān Niẓām al-Mulk, who had been appointed viceroy of the Dakhan, defeated at Shakarkhelḍa in Berār Mubāriz Khān, who had been appointed by the two Saiyids then dominant at the court of Dihli to supersede him, and established the virtual independence of his family in the Dakhan. In the eighteenth and the early part of the nineteenth centuries the eastern and western districts of the Dakhan passed into the hands of the British, as a result of their wars and treaties with the French and the Marāṭhas, and in 1903 Berār, the northernmost province of the Niẓām's dominions, was leased in perpetuity to the Government of India, but the Niẓām of Ḥaidarābād still governs the greater part of the Dakhan.

Bibliography: T. W. Haig, *Historic Landmarks of the Deccan*. (T. W. Haig.)

DAKHANI, also spelt Deccani, Dekhani or Dekkani, the form of Hindustani spoken by the Muḥammadan inhabitants of the Dakhan, or Southern India, more especially of the Ḥaidarābād State. The language is that of Western Hindi, with an admixture of Persian and Arabic words, phrases and grammatical forms, introduced into it by the Mughal conquerors, who formed a large accession to the Hindu population of this part of India. The structure of sentences also differs from that of the modern and more polished style of Hindustani as spoken in Upper India. Thus we find the Persian termination *ān* to express the plural numbers of Hindi names, whether denoting persons or things, as *lokān* 'people', *ankhān* 'eyes'. The use of the Agent case (*ne*), and the construction of the transitive verb — peculiarly characteristic of the polished style — is, as a rule, not observed in Dakhani.

Dakhani Hindustani was the language in which Urdu literature took its rise in the beginning of the 17th century, A. D. The early poets of the Dakhan were of the Shī'a creed, and their works — written in the Persian character — consisted chiefly of versions of popular Persian or Arabic theological treatises, stories of Muḥammad, the Caliphs and saints, and adaptations or translations of popular romances or legendary stories. The earliest extant compositions of Dakhani poets are the *Ḳiṣṣa-i Saif al-Mulūk*, and a translation of Muḥammad Ḳādirī's Persian abridged version of the *Tūṭināma*, or "Tales of a Parrot". These two works were written by Ghawwāṣī, a poet at the court of 'Abd Allāh Ḳuṭb Shāh, Sultan of Golkonda in Ḥaidarābād. The first is dated A. H. 1027 (A. D. 1618), the other A. H. 1049 (A. D. 1639). During the reign of the same ruler Ibn Nishāṭī wrote, in A. H. 1066 (A. D. 1655-56), a romance called *Phulban*, translated from the Persian *Basātīn*; and Nuṣratī, the court poet of Bidjapur, wrote the romance of Prince Manohar and Madhumālatī, entitled *Gulshan-i 'ishḳ* (A. H. 1068 = A. D. 1657-1658), and *'Alīnāma*, a eulogy of his sovereign 'Alī 'Ādil Shāh II (A. H. 1071 = A. D. 1660-61). Several other minor Dakhani poets, viz: 'Ādjiz, Sewak, 'Azīz, Ghulām 'Alī Khān Laṭīf of Hyderabad, and others flourished about the same time.

Shāh Walī of Aḥmadabad in Gudjarat, the most distinguished poet of the Dakhan, flourished in the time of the emperor 'Ālamgīr I, in the beginning of the 18th century. He enjoys the distinction of being the first to compose an Urdu Dīwān in accordance with the Persian system of prosody, which form of poetical composition was universally adopted by the poets of Lucknow, Dihli and other principal cities of the Mughal kingdom.

(J. F. Blumhardt.)

al-**DĀKHIL**, an epithet of 'Abd al-Raḥmān I of Cordova [q. v., p. 53].

DAKHIL, is a metrical term applied to a vocalised consonant preceded by an *alif* (here called *alif al-ta'sīs*) and followed by a *rawī* or rhyming consonant (vocalised or quiescent). Thus, for example, in a verse which ends with *mushārikū*, *mushārukū* or *tashārukū*, the Alif (ā) is the *alif al-ta'sīs* the Rā the *dakhīl* and the Kāf (k) the *rawī*.

(Moh. Ben Cheneb.)

DĀKHLA, is one of the southern groups of oases in the Lybian Desert [cf. the article baḥriye, p. 586]. The oasis of Farāfra, four days' journey to the north, is also sometimes included in it. The Dākhla at the present day forms part of the province of Asyūṭ; the most important place in it is Mūṭ with about 1300 inhabitants. Little is definitely known about the history of the oasis; the accounts we find are mostly fantastic tales of mythical rulers and all sorts of marvels. Thus the lake is located there into which all birds which fly over it irresistibly fall; we are also told that whoever approached the gates of the town guarded by four idols of copper, fell at

once into a deep sleep from which he could only be awakened by being breathed upon by the inhabitants. According to Ibn Waṣīf Shāh, Mūsā b. Nuṣair unsuccessfully attacked for seven days a fortified town, which had been built in ancient times to afford protection against the Deluge. While al-Bakrī speaks of the great fertility and large population of the oasis, which was apparently at one end of a road to Ghāna which has been engulfed by the desert since the xth century, Idrīsī a few generations later describes its dreary desolation. There can be no doubt that much flourishing land has been covered by sand as occasional allusions show. Maḳrīzī points out, *inter alia*, that the feuds which arose through the intermingling of the original population with Berbers were considered the cause of its decline. Al-Ḳaṣr and al-Ḳalamūn are the towns most frequently mentioned. The oasis now comprises 12 villages and has about 17,000 inhabitants.

(E. Graefe.)

DAḲĪḲĪ, Abū Manṣūr Muḥammad b. Aḥmad, a Persian poet belonging to Ṭūs. He began an epic in the *mutaḳārib* metre for the Sāmānid ruler Nūḥ II b. Manṣūr and had completed 1000 couplets (covering the reign of Gushtasp and the preaching of Zoroaster), when he was murdered by a Turkish slave, his favourite, in 341 (952). These 1000 couplets were incorporated by Firdawsī in his *Shāhnāmah* (ed. Turner Macan, iii. 1065—1103; ed. Vullers, iii. 1495—1553). He also wrote lyrical poems of which a few fragments have been preserved by ʿAwfī (ed. Browne, ii. p. 11—13). It has been supposed from a verse in one of his poems that he was a Mazdean; but it is more probable that what he really admired in Zoroastrianism was the liberty to drink wine.

Bibliography: Riḍā-Ḳulī-Khān, *Madjmaʿ al-Fuṣaḥāʾ*, i. 214; Ethé, *Rūdagī's Vorläufer und Zeitgenossen*, p. 59; Nöldeke, *Das Iranische Nationalepos*, p. 18; Horn, *Gesch. der Pers. Litter.*, p. 81; Edw. G. Browne, *A Literary History of Persia*, i. 123, 459. (Cl. Huart.)

DAKKA, a village in Nubia on the west bank of the Nile opposite the mouth of the Wādī al-ʿAllāḳī [q. v., p. 311], famous for its gold mines. It was probably to its situation here that the ancient Per-selket, called by the Greeks Pselchis, owed its importance; ruins of temples of the Hellenistic period still exist not far from Dakka. Cf. Baedeker, *Egypt*[6], p. 385 *et seq.*; E. A. W. Budge, *Egyptian Sūdān*, i. 549; ii. 110—114, 168, 297, 329 *et seq.*

DĀL, the eighth letter of the usual Arabic Alphabet, and fourth of the Abdjad (whence its numerical value = 4). It is pronounced at the present day as in Old Arabic as a voiced dental explosive. Cf. A. Schaade, *Sībawaihi's Lautlehre*, Index.

(A. Schaade.)

DALLĀL (a.) "broker, commission agent". Dallāl, literally "a finger-post", is the popular Arabic word for *simsār*, *samsal*. The *Tādj al-ʿArūs* says on *simsār*: "this is the man whom the people call dallāl; he points the way for goods to the buyer and for prices to the seller". The Arabic notices of the occupation of *samsal*, which is of great importance in the history of commerce, and corresponded to the Byzantine μεσίτης, are very scanty; as there are no systematic materials available, we can only give here a few casual notes. In the law-books, the samsals are cautioned against trickeries usual in trade (Ibn al-Ḥādjdj, *Kitāb al-Madkhal*, iii. 75). They often commend highly to the buyers goods which they know to be worth less than the price placed on them and, just as the modern dragoman still does, they made common cause with the dealer against the buyer. Their occupation, which under certain conditions was of an official character, was called *dalāla*. Al-Dallāl appears quite early in names (*Tādj al-ʿArūs*). In the Fāṭimid period certain goods could only be sold through the intermediary of a *samsal* (Muḳaddasī, ed. de Goeje, *Bibl. Geogr. Arab.*, iii. 213, 6). In the Mamlūk period a tax was laid on the 2% commission (*udjrat al-dallāl*) which had been usual in Cairo from ancient times, by which the dallāl had to give up half of his profits, a tax which he naturally managed to make the public pay. This was called *niṣf al-samsara* (Maḳrīzī, *Khiṭaṭ*, i. 89, -). A somewhat similar arrangement existed in North Syria (cf. Sobernheim in van Berchem's *Corpus Inscriptionum Arabicarum*, ii. N°. 55, and my review in *Der Islam*, i. 100). The most important transactions were made at the customs offices at the seaports. Here the samsals were also interpreters in commerce with the Franks. The relations of these samsals and the interpreters were minutely defined in the treaties of commerce (Amari, *Diplomi Arabi*, 106, 203). Heyd, *Levantehandel*, i. collects all the available information on these points. On the western Mediterranean cf. de Mas Latrie, *Traités de Paix et de Commerce* (Paris 1866), p. 189. The business of broking was then taken over by the west (cf. Schaube, *Handelsgeschichte der romanischen Völker des Mittelmeers*, p. 761).

It is not only in commerce with foreigners but among themselves also that Orientals employ the dallāl but in this case he appears also as an independent dealer, e. g. in old clothes (*Description de l'Egypte, Etat Moderne*, xviii. 2, p. 421). The auctioneer in the secondhand market is also called dallāl, as more frequently is the small broker and commission agent. His manner of business is well described by Lane in his *Manners and Customs of the Modern Egyptians*[5], ii. 13. Women brokers (*dallāla*) are also found who do business with the better-class harems (Lane, *op. cit.*, i. 200, 239, 242). For other meanings of the word see Dozy, *Supplément*, s. v. (C. H. Becker.)

al-**DALW** (a.) a "water-jar"; also the name of the constellation Aquarius, cf. al-Ḳazwīnī, *ʿAdjāʾib al-Makhlūḳāt* (ed. Wüstenfeld, i. 37).

DĀM is the name of an Indian copper coin. *Damṛā* and *damṛī* are diminutives applied to fractional parts of a *Dām*.

The first coinage of dāms was under Shēr Shāh and his successors of the Sūrī dynasty and it was continued by Akbar and his successors up to the fall of the dynasty. Damṛī is the popular name

in N. India for a small coin at the present day. Dāms were issued in great abundance by Shēr Shāh and Akbar, and in smaller number afterwards, in fact so scarce were those of the later Mughals that they were unrepresented till lately in the principal European collections. During the past twenty years owing to the researches of C. J. Rodgers, Oliver, Burn, Wright, White King and others numerous specimens have come to light. Akbar's dāms weigh from 303 to 327 grains (= from grammes 19,8364 to 21,3896) these being the lowest and highest recorded weights. There were also according to Abu'l-Faḍl half, quarter and $1/8$th dāms called respectively *adhēlā* or *niṣfī*, *pāulā* or *damṛā*, and *damṛī*. There was also a double dām, a specimen of which weighing 625 gr. is given by C. J. Rodgers (*Journ. of the As. Soc. of Beng.* xlix (1). Pl. xx.) On Akbar's currency the name dām does not appear, the coins being described simply as *fulūs*. The names damṛā and damṛī however are found on some of the small coins. According to Abū 'l-Faḍl 360 dāms went to the *mukar* and 40 to the rupee.

(M. Longworth Dames.)

DĀMĀD, son-in-law of the Sulṭān. Under the early Ottoman Sulṭāns, princesses (*sulṭān*) of the royal house were occasionally given in marriage to the vassal princes of Asia Minor, for example, to the Ḳaramānoghlu, and even to the viziers and generals of the sovereign; the case of the saint Amīr Sulṭān of Brusa, who married a daughter of Bāyazīd I is quite unique not only for that but also for later periods. We afterwards find Grand Viziers, Kapudan Pashas, Aghas of Janissaries, Bostāndjībashis and other high officials as sons-in-law of the Sulṭān; the best known are: Ibrāhīm Pasha, the favourite of Sulaimān I, Rustem Pasha (husband of Mihrimāh), Sokolli Meḥemmed Pasha (husband of Esmākhān), Ibrāhīm Pasha (son-in-law of Meḥemmed III.) and Ibrāhīm Pasha under Aḥmed III. etc. (cf. v. Hammer, *Gesch. d. Osm. Reiches*, x. 607 s. v. *Sulṭānin*). The name *dāmād* is applied to some of them by their contemporaries and in history, as is still the usual fashion (e.g. Dāmād Maḥmūd Pasha, Dāmād Ferīd Pasha etc.). The marriage ceremonies were celebrated with great splendour and are minutely described in the native annals as well as by western travellers (cf. v. Hammer, *Gesch. d. Osm. Reiches*, cf. Vol. x. Index s. v. *Hochzeit und Vermählung*); the dowry had been fixed by Sulaimān I at 100,000 ducats and the appanage brought in 1000—1500 aspers daily. (Venetian *Report* of 1608 in the collection by Barozzi and Berchet, p. 72; v. Hammer, *op. cit.* viii. 211); in addition a large palace was usually bestowed on the princesses. Till the time of Sulaimān I. the Dāmād were usually sent into the provinces as governors to prevent them having any personal influence on the affairs of the Sublime Porte, (Koćibey, ed. of 1303, p. 94, 97). Etiquette compelled the Dāmād to put away the wives he already had and to take no further wives (cf. the Venetian *Report* already quoted, p. 103 *et seq.* and v. Hammer, *op. cit.*, iv. 103); he became the slave of his wife and this relationship finds expression in the forms of address used between the spouses (cf. the above reports, p. 72, 104; de la Mottraye, *Voy.*, p. 338 *et seq.*; von Hammer, *Osm. Staatsverfsg.*, i. 476—484 = *Gesch. d. Osm. Reiches*, viii. 211—213; C. White, *Three Years in Constantinople*, iii. 180 *et seq.*). The statement that sons born of such marriages were done away with at birth (Eton, *Survey of the Turkish Empire*, 3. ed., p. 101; v. Hammer, *Gesch. d. Osm. Reiches*, iv. 463), may be disproved (cf. Djewdet, vi. 196 *et seq.*, the Venetian *Reports* l. c., p. 181, 372), only in earlier times they were debarred from all public offices (Venetian *Reports* l. c. 181).

(J. H. Mordtmann.)

DĀMAGHĀN, a town in Persia, the capital of Ḳūmis. There used to be works there for distributing among the villages the waters rising in a cavern but these were destroyed by the Afghāns in 1136 (1723-1724). It is said to occupy the site of Hecatompylos, one of the capitals of the Parthians. It is on the boundary between 'Irāḳ 'Adjamī and Khorāsān and is frequently mentioned in Firdawsī's *Shāhnāmah*.

A day's journey from it among the mountains are the ruins of the fortress of Girdakūh, which used to be a stronghold of the Ismā'īlīs. In the northwest there is an important spring, called Čashma-i 'Alī, around which Fatḥ 'Alī Shāh built waterworks in 1217 (1802) and which is an object of pilgrimage because it is believed that the mark of the shoe of the Prophet's horse may be seen on a stone over which the water falls.

Near it on the hill of Mahrūkār are the ruins of a fortress.

(Cl. Huart.)

ḌAMĀN "security, bail", is an agreement by which a man pledges himself to the creditor (*al-maḍmūn lahu*) to pay the debts of a third person (*al-maḍmūn 'anhu*) if the latter does not do so. The guarantor (*ḍāmin* or *ḍamīn*) can only demand compensation from the debtor when he pays his debts if he becomes security for him with the latter's consent; otherwise he is considered a guarantor "for the sake of God". The latter is the case amongst others when a man becomes security for the debts of a dead Muslim. — *Ḍamān* in the books on *Fiḳh* further means responsibility for things, the loss of or damage to which must be compensated to the creditor.

Bibliography: Besides the chapter on Ḍamān in the collections of Tradition and Fiḳh books: Dimishḳī, *Raḥmat al-Umma fi-'khtilāf al-A'imma* (Būlāḳ, 1300), p. 81.

(Th. W. Juynboll.)

DAMĀN, a Pers. word meaning 'skirt' applied to the low lands lying along the base of a mountain range, fully written *dāmān-i-kōh* 'skirt of the mountains'. This is especially used to designate a tract in the Dēradjāt, now part of the Dēra Ismā'īl Khān District,

N. W. Frontier Province, India. The dāmān is the high plain below the mountains, and does not include the low lands of the Indus known as *naghāb* or *kachī*. The eastern part of this raised plain formerly called *Makkalwād* is now included in the Dāmān. In the similar tract farther South (in the Dēra Ghāzī Khān Dist.) the corresponding tract is also called Dāmān occasionally, but more usually *Pachādh* or West. The Dāmān is a level parched-up plain with little vegetation, intensely hot in summer, very dry with scanty rainfall. Irrigation from torrents is carried on by an elaborate system of embankments which catch the flow after rain and divert it on to the fields. In a few places there is irrigation from permanent hill-streams (*kālāpānī*), the chief of which are the Takwāra near Tānk, the Gōmal (called the Lūnī where it issues into the plains) and the Vahōā. The principal towns in the Dāmān are Kulāčī, Drāband, Čandhwān and Tānk. The population is mainly Afghān, speaking the southern dialect of Pashto, with numerous communities of Djaṭs, speaking Lahndā, especially in the tract near Tānk known as the Djaṭathar. There are also some Balōčes, and the Khētrāns an aboriginal tribe assimilated by Afghāns at Vahōā. The principal Afghan tribes are the Gandāpur, Miānkhēl, Bābar, Ustarāna and Kundī. The Pawindah or nomad Afghān traders enter this tract every year in the autumn by the Gōmal Pass and spread through the Dāmān where they camp and graze their camels while their traders wander through India. When the hot weather commences they return to the highlands of Afghānistān. These traders are mainly Sulaimānkhēl and Kharōtī.

(M. LONGWORTH DAMES.)

DAMANHŪR, Coptic TIMINHŌR "city of Horus", the name of a number of places in Egypt, mostly in the Delta of which only the most important are mentioned here.

The Damanhūr al-Shahīd or Damanhūr Shubrā, mentioned by Yāḳūt, i. 601, and placed by Ibn Djīʿān in the suburbs of Cairo, deserves special mention on account of the Christian "Festival of the Martyrs", also frequented however by Muslims, observed on the 8th Pashons, in which the Christians used to throw a wooden box containing the finger of a saint into the Nile to bring about its rise, apparently a corruption of some ancient festival of Osiris and Horus. In 702 = 1302 the festival was forbidden, but in 738 = 1338 permission was again granted until in 755 = 1354 the relic itself was burned (see *Notices et Extraits*, Vol. iv, p. vii.—xi.; Maḳrīzī, *Sultans Mamlouks*, trad. Quatremère, ii. 2, p. 213).

Muḳaddasī speaks of a Damanhūr in the Rīf; as Būṣīr Banā, which gives a clue in the Coptic texts to the locality of a Damanhūr, was certainly in the Rīf, we would be inclined to regard the two places as the same and further to identify them with Damanhūr Waḥshī (in Boinet Bey: Damanhūr al-Waḥsh) which the later Arab geographers locate in the province of Gharbīya. This is unfortunately rendered uncertain by the fact that at the present day there are two places bearing the name Damanhūr in Gharbīya.

The Damanhūr al-Waḥsh of the Arab authors must not be confused with the above mentioned Damanhūr Waḥshī; the former (the ancient Hermopolis Parva), is by far the best known of the places of this name. According to the later division into provinces which still exists, it was the capital of the province of Buḥaira [q. v., p. 772], was fortified in 792 (1392) by Barḳūḳ, and lay on the western road, the so-called *Ṭarīḳ al-Ḥādjir* (see Quatremère in Maḳrīzī, *Sultans Mamlouks*, ii. 2. p. 188), now on the railway from Cairo to Alexandria. This fine town, which forms the centre of a large system of railway lines, is of importance in the cotton trade and for its industries.

(R. HARTMANN.)

DAMASCUS, Arabic DIMISHḲ, DIMASHḲ, DIMASHḲ AL-SHĀM, also like Syria briefly called AL-SHĀM, the largest city in Syria, situated in 36° 18', East Long. (Greenw.) and 33° 21' N. Lat., 2130 feet above sea-level on the edge of the Syro-Arabian desert, close behind the double mountain wall of Libanon and Antilibanon with Hermon. The spurs of these mountains (the nearest is Djebel Ḳāsiyūn) shelter the plain of Damascus in the north and south; in the south the Djebel al-Aswad and Djebel al-Manīʿ afford a certain amount of shelter but on the east it is quite exposed. The climate of Damascus, which has not yet been properly studied, cannot be described as particularly healthy (east winds predominate; but there are also west winds bringing snow and rain and in spring occasionally the burning Khamsīn; great variation of temperature from 6° C. in the middle of January to 27° in the middle of July) but on the whole it compares advantageously with the country adjoining it on the east.

The importance of its site lies in the fact that the Baradā [q. v., p. 652] has here created an extensive oasis, the celebrated Ghūṭa [q. v.] where it debouches from the Antilibanon into a country with a low rainfall (average estimated at 14 inches yearly) before its waters are finally lost farther to the west in the swamps of ʿAtaiba. This splendid district, a veritable garden, naturally forms a centre of civilisation for the broad steppe-like hinterland. Owing to the incomparable fertility of its natural surroundings the town, lying on the north-south road through Inner Syria, was able to attract the trade of North Syria and Mesopotamia, of Arabia and Babylonia with the Mediterranean and Egypt from the natural routes farther north and south respectively and to make itself the centre of this traffic.

With such a favourable situation Damascus has naturally been a centre of culture of the first rank from the very earliest times. The name (in the Thutmosis-list: Timasḳu, Assyrian Dimashḳi, Timashgi, Hebrew דַּמֶּשֶׂק, later — as in Syriac with dissimilation of the double consonant — דַּרְמֶשֶׂק) is obviously pre-Semitic. In the Old

Testament the name early appears in connection with the story of Abraham (Genesis, xiv, 15). This association was further extended in Tradition and even at the present day, Muslims honour the Masdjid Ibrāhīm in Berze north of Damascus (probably the *'Αβράμου οἴκησις* of Josephus) as the birthplace of Abraham. After the 10th century B.C. we find an Aramaean kingdom of Damascus, mentioned in the Old Testament and in Assyrian texts, which was destroyed by the Assyrians in 732 B.C. For the history of this kingdom as well as of the later vicissitudes of Damascus under Assyro-Babylonian, Persian, Greek and Roman masters, the reader may be referred to J. Benzinger's article in *Pauly-Wissowa's Real-Encyclopaedie*, iv. 2042—2048 and the authorities there given. Here we are only concerned with Damascus in relation to the Arabs. About 85 B.C. the town passed for the first time under Nabathaean rule (Aretas III. Philhellen). The Nabathaean kingdom owed its possession of Damascus for the second time to Rome (between 37 and 54 A.D., under Aretas IV. Philopator; cf. *Second Corinthians*, xi. 32). Arabic influence made itself strongly felt at quite an early period in the town which was too much exposed to the desert (Justin: τῆς Ἀραβικῆς γῆς ἦν καὶ ἔστιν). This gravitation towards the desert was probably also the reason why Damascus under Roman rule never became the capital of a province. According to the later division into provinces it belonged to Phoenike Libanesia, the political metropolis of which was Emesa (Ḥimṣ). On the other hand the strongly Hellenised town was never directly subject to one of the Arab phylarchs ruling in the neighbourhood, not even to the Ghassānids; yet the latter were the lords of the immediate neighbourhood (Djilliķ [q. v.] cf. Nöldeke, *Ghassān. Fürsten*, p. 47) and there was always a lively intercourse between the Beduins and their great market. They were acquainted with Damascus, looked upon it as the ideal of earthly splendour and gazed with wondering and envious eyes upon the treasures of the town. It is therefore no wonder that at a later period the Muslim Arabs not only referred passages in the Ķor'ān like xvii. 4 and xxiii. 52, the name *Iram dhāt al-ʿImād* (Ķor'ān lxxxix, 6) to Damascus but increased its glory by many sayings put into the mouth of the Prophet.

We have no accurate descriptions of the Damascus of antiquity. Even Julian who praises the situation and buildings of the city in words of amazement, gives us no details. We can hardly be wrong however in supposing that the general plan of the town had been the same for centuries before as it was at the Arab invasion. The town had suffered considerably shortly before from the Persian invasion, but this had certainly not brought about any radical alteration in its configuration. Since the Muslim conquest the walls and essential features of the town have been practically unchanged. This striking fact is largely due to the natural situation of Damascus; for it lies at the point where the road through Inner Syria from north to south crosses the Baradā which runs from east to west. A regular arrangement of streets was thus formed. This feature was further emphasized by the gigantic complex of the ancient quadrangular temple (of the Sun?) in which Theodosius or Arcadius built the Church of St. John. We must look upon the city as having existed since Roman times in its present day form, as an elongated rectangle on the right (south) bank of the Baradā, which was cut through by a road along its greatest length which is still called the "Straight Street", by foreigners (in allusion to *Acts*, ix. 11). In the northern part lay the real centre of the town, the great sanctuary. The foundations of the citadel in the northwest corner probably also date from ancient times. We do not now know where to locate the armouries founded by Diocletian. Even the city-gates, which were there before the Arab conquest have in part survived to this day. Balādhurī (following Wāķidī?) mentions, in connection with the siege of Damascus, beginning with the Bāb al-Sharķī at the east end of the main street, on the north side the Bāb Tūmā, the Bāb al-Farādīs, then the Bāb al-Djābiya in the west at the end of the street running lengthways and the Bāb al-Ṣaghīr and Bāb Kaisān in the south.

The Conquest by the Muslims.

After the battles of Baisān and Fiḥl in Dhu 'l-Ķa'da 13 = January 635 the Arab hosts advanced on Damascus along the Djawlān road. They met with no resistance until they reached Mardj al-Ṣuffar north of al-Ṣanamain. The Byzantines were at first successful in surprising the Muslim advance guard but were finally forced to fall back on Damascus (Muḥarram 14 = February 635). Fourteen days later the Arabs appeared before Damascus. Khālid b. al-Walīd, the commander-in-chief, made his headquarters north or northeast of the city at Dair Ṣalībā or Dair Khālid (see Ibn Shaddād, quoted by de Goeje, *op. cit.*, p. 94; the predominant tradition placed his camp at quite an early period farther east at the tomb of Shaikh Arslān, see Porter, i. 55 and *Journ. Asiat.*, ixth Ser. v. 405; vi. 449). It was necessary at all costs to prevent the union of the troops who had been driven back on Damascus with an army of relief which might come from the north; and this object was attained. The consequence was that in Radjab 14 = September 635, the inhabitants of the city (perhaps through the bishop, as Balādhurī says, or al-Manṣūr the grandfather of John of Damascus, as Eutychius says) secretly opened the eastern gate to Khālid's Muslims whereupon the Greek garrison retired to the north and the city passed under Muḥammadan sway.

A wealth of irreconcilable traditions exists concerning the taking of the city. Only the most important can be mentioned here. The usual view, which has been disseminated in the east by Ibn 'Asākir and in the west by A. von Kremer, is that Khālid b. al-Walīd conquered the eastern part of the town by force of arms from the Bāb al-Sharķī, while the Bāb al-Djābiya side of the town was surrendered to Abū 'Ubaida. The two generals met in the ancient church of St. John and thus the eastern part of this building with the eastern part of the town came to be occupied by the Muslims, while the western remained to the Christians. The untenability of this late story which is in contradiction to all better older traditions has now long been recognised.

Balādhurī's account seems more worthy of credence, according to which Abū 'Ubaida seized the Bāb al-Djābiya and was met by Khālid, who had entered by the east gate, which had either been surrendered or treacherously handed over to him, at the Maķsillāt Church (s. *Journ. As.*, ix.

Ser. vii. 376, 381, 404: at the *Three Ḳanāṭir*; cf. v. Kremer, *Topographie*, ii. 6: *Taḥt al-Ḳanāṭir*) in al-Barīṣ (de Goeje = *Bāṣir*, probably the *via recta*).

The credit of having conclusively shown, in his exhaustive examination of the point, that Abū ʿUbaida was really never in Syria at all in the year 14, is due to Caetani. It was Khālid to whom the city was surrendered. The story of the meeting of the two leaders in the centre of the city, so persistent in Tradition, therefore falls through, unless we, giving a new turn to a suggestion of Lammens (*Mélanges de la Faculté Orientale*, Beyrouth, iii. 255), replace Abū ʿUbaida by Yazīd b. Abī Sufyān who according to the usual story had entered at the Bāb al-Ṣaghīr. There can be no question of the falseness of the story of a partition of the city, particularly of the church of St. John. The Christians were rather guaranteed the possession of their property, their houses and churches and only pledged to pay tribute.

The Arabs spent the winter in Damascus, but had to vacate it on the approach of the large army of Heraclius in the spring of 636. A second siege of Damascus was therefore necessary after the decisive battle on the Yarmūk in Radjab 15 = August 636, in which Abū ʿUbaida commanded the operations. Caetani therefore places the incidents which are said to have taken place at the Bāb al-Djābiya, in this second siege. In any case the city surrendered for a second time in Dhu ʾl-Kaʿda 15 = December 636 under conditions which were perhaps somewhat harsher: it was possibly on this occasion that the number of churches to be left to the Christians was fixed at 15.

The fall of Damascus, this earthly paradise, was an event of incalculable importance. The Muslims took up their abode in the houses abandoned by the Byzantines. Here, if anywhere were the conditions requisite for the assimilation of Hellenic culture by the Arabs in a great centre of civilisation, in the neighbourhood of which tribes of Arab stock had long been settled. It was fortunate for Islām as for the city, that it received as governor a man of the Meccan family, which proved itself capable before all else of bringing civilisation into the Umma of the Prophet, the Umaiyad Yazīd b. Abī Sufyān.

Damascus under the Umaiyads.

Yazīd succumbed in the year 18 to the plague of ʿAmwās. His heir was his brother Muʿāwiya who united all Syria under his rule in 31 A. H. He succeeded in making his position so strong in his governorship that after the assassination of ʿOthmān in 36 he was able to wage a war against the Caliph ʿAlī to avenge ʿOthmān, in which he was finally victorious in 41 (661) after the death of ʿAlī and the abdication of his claims to the throne by his son Ḥasan. Damascus became the capital of the new empire. Never before and never again was Damascus so prominent in the history of the world as in the Umaiyad period. How far the city immediately benefitted by this, is difficult to say. Muʿāwiya does not seem to have shown any activity in building on a large scale in Damascus. The area around the Church of St. John or rather the Umaiyad Mosque as it afterwards became, continued to form the centre of the town as it had previously been and still is to the present day. Here close together lay the Old Mosque, the Church of St. John, and Muʿāwiya's new palace al-Khaḍrāʾ. The only contemporary account of Damascus is given us by the Gallic bishop Arculf. According to the account transmitted to us by the monk Adamnan, he describes Damascus as follows: *in qua* [sc. *civitate*] *Saracenorum rex adeptus eius principatum regnat, et ibidem in honorem Sancti Johannis baptistae grandis fundata ecclesia est. Quaedam etiam Saracenorum ecclesia incredulorum et ipsa in eadem civitate, quam ipsi frequentant, fabricata est* (*Itinera Hierosolymitana saeculi III—VIII*, ed. Geyer, p. 276). The mosque was therefore quite distinct from the church. That they were close together is clear from the Arab accounts of later events. The Khaḍrāʾ adjoined them; from it Muʿāwiya had direct access to the mosque and it was near enough the church for him to be disturbed in his sleep in his old age by the noise of the *nāḳūs* (Ibn Ḳutaiba, *ʿUyūn al-Akhbār*, p. 238). According to Ibn Djubair, (ed. de Goeje, p. 269) it was on the left hand, going out of the Umaiyad Mosque by the Bāb al-Ziyāda (cf. the plan in Baedeker), on the site of the later coppersmiths' bazaar, which probably, corresponds to the modern goldsmiths' bazaar (cf. also the *Kitāb al-Aghānī*, vi. 159, 3 *et seq.*).

Muʿāwiya's son and successor Yazīd I. did not particularly care for the city; nevertheless he earned the gratitude of the environs by making or extending the Canal of Yazīd (see the article BARADĀ, p. 652; cf. *Journ. Asiat.*, ixth Ser., vii. 400 *et seq.*).

After the death of Muʿāwiya II. (64 = 683) there was no one left of the Sufyānid branch of the Umaiyad house, who could be seriously considered as a successor to the Caliphate. The succession was disputed by various factions. In Damascus where al-Ḍaḥḥāk b. Ḳais [q. v., p. 892] played a double rôle, a riot broke out during and after divine service between his party and the partisans of the Umaiyads, represented by Ḥassān b. Mālik b. Baḥdal, which became celebrated as the "Day of Djairūn". According to Yāḳūt ii. 175, the Djairūn was a hall with pillars dating from pre-Muḥammadan times, after which the east door of the great mosque bears the name Bāb Djairūn. This celebrated building, which survived till 559 = 1164 when it was destroyed by fire, lay to the east of the modern mosque, for the building of which according to Masʿūdī, *Murūdj*, iii. 271, portions of it were used. It can hardly be doubted that the pillared halls were part of the ancient temple buildings, of which the Church of St. John only occupied a part, and from which came the isolated pillars and groups of columns which exist to this day in other buildings (on Djairūn cf. also de Sacy in his translation of ʿAbd al-Laṭīf, p. 442 *et seq.*). If we add the fact that the scene famed as the "Day of Djairūn" apparently took place in the mosque itself (Ṭabarī, ii. 470 *et seq.*) it is natural to suppose that the Djairūn was really the old mosque itself. The latter's site is then really, as Tradition says, to be sought in the east of the present Umaiyad Mosque. What exactly was the position of the mosque with regard to the Church of St. John in detail, cannot be definitely ascertained. The location of the site of the Church seems to be even more difficult than that of the old mosque (cf. the new theory proposed by Thiersch: *Pharos*, p. 104); however

simple it may appear from Caetani, *Annali dell' Islām*, iii. 390 *et seq.* (but see also ibid., p. 349 and cf. Becker in *Islam*, ii. 397), the solution is by no means so easy.

The hostilities which began with the Day of Djairūn, led to the bloody battle on Mardj Rāhiṭ which secured the Caliphate for the Marwānid branch of the Umaiyad house. With the decrease in the personal importance of the Caliphs and the decline in their actual power, which marked the following period, there went hand in hand a gradually increasing necessity to make an external display of empire. It is therefore now that the most brilliant epoch for the Caliphate and the capital begins although in secret its decomposition had already set in. The city owes its greatest claim to fame, the Umaiyad Mosque, to the Caliph al-Walīd b. ʿAbd al-Malik, the most important builder among the Umaiyads. The old mosque had only been a makeshift; the capital of the empire was at last to receive a place of worship worthy of it. The site on which it was to be built was already indicated. The centre of the town was still, as it had always been even in the days of Paganism and Christianity, the neighbourhood of the great temple. The first thing to do was to deprive the Christians of their church and build the new mosque on the site occupied by it and the old mosque, with the material that still remained in the ruins of splendid ancient buildings. This was then done. In 86 (705), the Christians were forced to give up the church; this was partly destroyed and the new building, which was afterwards celebrated as the third wonder of the world, erected on its ruins. It used to be thought that the building was left practically unaltered and only the decoration was the work of Walīd. Objections have recently (see in particular, Thiersch, *Pharos*, p. 104 and 214) been rightly raised against this view. Careful examination of the building has actually shown that more particularly the colonnades and the transept cannot well be pre-Muḥammadan (see Dickie in the *Quarterly Statement of the Palestine Exploration Fund*, 1897, pp. 268—282). Walīd's expenditure on the building was enormous. Hosts of workmen were brought from Constantinople particularly for the mosaics. Papyri recently found show that materials and skilled workmen were brought from Egypt (see *Islam*, ii. 274, 374). Probably only very essential parts of the old walls were retained, but these, if Thiersch is correct, need not have been the walls of the church itself, and the western and eastern towers as minarets. It is very doubtful, if, as appears probable from the Arabic sources, the whole of the old mosque was incorporated in the new edifice. Absolute clearness in detail may be obtained with good fortune by renewed expert examination on the spot with judicious utilisation of Tradition. In any case al-Walīd's work certainly was the building up of the present mass of buildings at the mosque into a whole, the erection of the northern minaret Miʾdhanat al-ʿArūs, used as a beacon tower, as we learn from later writers, the building of the Muṣallā with its beautiful mosaics in a form essentially the same as it has at present, as a basilika with three naves and a transept, above which rises the celebrated Ḳubbat al-Nasr (on this name, see *Zeitschrift der Deutschen Morgenl. Ges.*, lx. 369, 702; lxiv. 661). On the artistic importance of the Mosque, cf. also H. Saladin, *Manuel d'Art Musulman*, i. 80—87, van Berchem and Strzygowski, *Amida*, p. 326 *et seq.*

The later Caliphs did not do a great deal for Damascus. Several of the Marwānids transferred their capital to another place, while others spent at least a considerable part of the year in *bādiye* [q. v., p. 557] in their palaces in the desert. Those of the splendid palaces in Damascus which might have served to preserve the glory of the Umaiyads were sacrificed to the fury with which the ʿAbbāsids sought to extinguish the memory of their predecessors. At a later period there was a prison on the site of the Khaḍrāʾ. Only one other Umaiyad palace may be particularly mentioned here as the great road to the southwestern suburb of al-Maidān bore its name to modern times, the Ḳaṣr al-Ḥadjdjādj, called after al-Ḥadjdjādj b. ʿAbd al-Malik b. Marwān, which lay outside the Bāb al-Ṣaghīr and Bāb al-Djābiya (Yāḳūt, iv. 110, according to which von Kremer's statement, *Topographie*, i. 14, is unsatisfactory; cf. *Journ. Asiat.*, ixth Series, vii. 379).

A. von Kremer, *Culturgeschichte*, i. 114, has given a very attractive if perhaps somewhat too splendid a picture of life in the city of the Caliph. Unfortunately we know very little about the time and rate of the Muḥammadanising of the city. But it is quite obvious that the number of Muslims settling in it immediately after the conquest must have been quickly much increased by immigration. Under the earlier Umaiyads at least, religion did not however form an unsurmountable barrier. We find Christians on terms of intimacy with the Caliphs and filling the highest offices. The family of the Byzantine surveyor of taxes, which played a part in the surrender of the city, and to which John of Damascus belonged, may be specially mentioned (see Caetani, iii. 376; Lammens in the *Mélanges de la Fac. Or.*, iii. 248 *et seq.*). Here were the conditions requisite for the adjustment of relations between the two religions. How strongly Christianity had inspired Muslim theology just then developing, may be clearly seen from the writings of John of Damascus, which are in part clearly the outcome of disputations between Christians and Muslims (see Becker in *Zeitschr. für Assyriologie*, xxvi. 175 *et seq.*).

The end of the Umaiyad period with its civil dissensions brought misfortunes to the town. On several occasions in 122 (740) turbulent ʿIrāḳīs set fire to it and laid various quarters in ashes (Ṭabarī, ii. 1814; Theophanes, ed. de Boor, p. 412). In 126 Yazīd b. al-Walīd succeeded in gaining the capital of the Empire and therewith the Caliphate by a coup de main, but this seems to have passed off without bloodshed. After Yazīd's death Marwān II. (127 = 844) occupied Damascus without opposition, his opponent Sulaimān b. Hishām taking to flight. But when the new Caliph moved the capital to Ḥarrān, Syria rose against him. The rebellion was put down and, according to Theophanes, the walls of Damascus were razed as a punishment. It had played its part as capital of the Islāmic Empire.

From 750 to 1150.

Two years after Marwān appeared to have made his empire secure, it fell before the ʿAbbāsids. After a short siege, Damascus was taken by ʿAbd Allāh b. ʿAlī, an uncle of the new Ca-

liph, on the 1st Ramaḍān 132 = 28th April 750. The 'Abbāsids gave vein to their hatred and dishonoured the tombs of the Umaiyads. According to the Arab historians it was now that the old walls of Damascus were destroyed. The new rulers resided in the 'Irāḳ, and Damascus sunk to be the capital of a province. The western parts of the empire were often — not to their advantage — granted as a governorship to a prince or favourite in Baghdād who only sent his deputy to the provinces.

The notices of Damascus in the following period are not numerous. It is clear that the split between Ḳais and Yemen in Syria which had been gradually increasing in the days of the Marwānids, continued (in 176 the Barmakid Mūsā was sent to Damascus and in 180 his brother Dja'far). The occasional visits of the Caliph did not of course restore the ancient glory of Damascus as the capital of the Arab empire and al-Mutawakkil's plan of again making Damascus the capital (244 = 858) was given up after the Caliph had made but a brief stay in the Syrian city.

The empire was rapidly approaching its dissolution. When in 254 (868) a strong personality in Aḥmad b. Ṭūlūn became governor of Egypt, the independence of this province soon became an actual fact and in 264 (878) Syria with Damascus also passed into his hands. The Ṭūlūnid supremacy only lasted about a quarter of century; this at first so brilliant period for Egypt can hardly have been the same for the more exposed Syria, although we read of a palace which Khumārawaih built for himself near Damascus below Dair Murrān [q. v. p. 898] on the Nahr Thōra: the palace in which he was assassinated in Dhū 'l-Ḥidjdja 282. The latter, ill-fated period of the Ṭūlūnids coincided with the ravages of the Karmaṭians who had been constantly appearing before the gates of Damascus since 289 (903), until they were routed by the forces of the Caliph, which next made an end of Ṭūlūnid rule also.

A scion of the Transoxanian dynasty of Ikhshīds, who had proved himself a trusty officer, had been governor in Damascus under Khumārawaih: Tughdj b. Djuff. His son, the Ikhshīd Muḥammed (from 323 (935) governor in Egypt), was destined again to play the Ṭūlūnid drama in Egypt and Syria. The latter was always a dangerous and insecure possession. The Ikhshīds finally fell before a power which also disputed the religious title of the helpless Khalīfa; the Shī'ī Fāṭimids had long been ready to pounce on Egypt. When the Karmaṭians were again ravaging Syria, al-Mu'izz saw his opportunity had arrived. Egypt fell in 358 = 969; Damascus fell in the same year, only to slip from his grasp almost immediately. The city was first taken by the Karmaṭians. Their overthrow was followed by a state of anarchy in which great parts of the city were destroyed by fire. Even at a later period the century of Fāṭimid rule does not seem to have been a happy one for Damascus; we read of frequent changes of governor, of risings, which are certainly not to be solely ascribed to the restless spirit of its inhabitants. One of these disturbances resulted in 461 (1068) in the burning of the Umaiyad Mosque.

In 468 (1076) the Saldjūḳ general Atsīz seized Damascus. The town was for ever lost to the Fāṭimids. The name of the 'Abbāsid Caliph again appeared in the *khuṭba* in the pulpit. Atsiz is said to have built the citadel (*Journ. Asiatique* 11th Series vii., 375) but its foundations at least are certainly older [see above p. 903]. His rule lasted only a few years. In 471 (1079) he had to vacate the city in favour of the Saldjūḳ prince Tutush (see his inscriptions in van Berchem, *Inscr. Arabes de Syrie*, p. 12 *et seq.*, 90 *et seq.*, and in *Beiträge zur Assyriologie*, vii. 1, p. 149). After his death, the Amīr Ṭughtegīn governed for his son Duḳāḳ, to whom are ascribed a hospital (*Journ. As.* 11th Ser., iii., 282) and a Khānḳāh (ibid, v., 282) and from whose time the oldest madrasa in the city is said to date (ibid iv., 266), till he finally became really an independent prince, after the death of Duḳāḳ in 479 (1104) and shortly afterwards his son also, and founded the Būrid dynasty [q. v. p. 800], which ruled Damascus for half a century.

The stormy period of the Frankish invasion was not suited for architectural activity on a great scale (cf. however the collection of inscriptions of this dynasty made by van Berchem in *Florilegium de Vogüé*, p. 29—43). Ṭughtegīn earned the gratitude of the principal sanctuary in the city by rescuing the supposed original codex of the Ḳor'ān of 'Othmān and bringing it to Damascus from Ṭabariya which was threatened by the Crusaders in 492 (1099). Ṭughtegīn's successors showed themselves more and more unfitted to cope with the dangers threatening them. Sometimes Damascus was being attacked by the Franks (e. g. in 523 = 1129, and in 543 = 1148), sometimes the Būrids were calling upon the Franks for help against Zangī (534 = 1139) and his son Nūr al-Dīn (546 = 1151) of Ḥalab until the latter finally succeeded in capturing the city in 549 = 1154.

The Damascus of Nūr al-Dīn and Ṣalāḥ al-Dīn.

The period of Nūr al-Dīn opens a new era of prosperity for Damascus. The two reigns of Nūr al-Dīn and Ṣalāḥ al-Dīn are the most brilliant in the history of Damascus, but its glory is different in character from that of the days of the Umaiyads. The whole period was influenced by the religious wars. The first care therefore was for the fortification of the city and alongside of this for the cultivation of pious learning; the profane branches of knowledge were not however entirely neglected; this is for example the period of Ibn 'Asākir, the great historian of Damascus. But gradually all the subjects cultivated became theological. The turmoil of the Crusades contributed largely to quicken the spirit of fanaticism. Damascus became the great bulwark of Islām.

Although the name of Damascus is inseparably associated for later ages with Ṣalāḥ al-Dīn and the glory of the city as his residence is celebrated even in contemporary western poets, it was really rather his predecessor Nūr al-Dīn who gave the new Damascus its character. The defence of the city was improved by the renovation of the walls with their towers and gates. North of the citadel, in which he built a mosque, he opened a new gateway, the Bāb al-Faradj. Not far from it, according to von Kremer, *Topographie*, i. 14; ii. 14, probably on the site of the present military Serai, lay the Dār al-'Adl (also called Dār al-Sa'āda; cf.

Journ. As., ix[th] Ser., vii. 246; Ḥadjdjī Khalīfa, *Djihān numā*, p. 572) built by him and used as late as the Turkish period as the governor's palace. But by far the most famed were the buildings he erected for pious purposes, of which only the most important can be mentioned here: the oldest school devoted to the science of Tradition, in which Ibn 'Asākir taught (cf. Goldziher, *Muh. Studien*, ii. 186 *et seq.*) and the celebrated hospital, the Māristān of Nūr al-Dīn. In the Madrasa called Nūriya after him his tomb is still held in reverence.

With the death of Nūr al-Dīn in 569 (1174) the greater part of his kingdom including Damascus fell to Ṣalāḥ al-Dīn b. Aiyūb, who had already been reigning independently in Egypt. His brilliant victories brought Damascus triumphs previously undreamed of; but although the architectural activity begun by Nūr al-Dīn did not actually cease, the incessant wars left little energy for peaceful development. Six months after the conclusion of peace with Richard I. Coeur-de-Lion, Ṣalāḥ al-Dīn died on the 27[th] Ṣafar 589 (4[th] March 1193) and was at first interred in the citadel, but a few years later his remains were removed to his final resting place in the Madrasa al-'Azīziya.

The fierce struggle between Ṣalāḥ al-Dīn's sons al-Afḍal [q. v., p. 145] and al-'Azīz [q. v., p. 540] and his brother al-'Ādil [q. v., p. 137] in which the town had to suffer several sieges, wrought great havoc on it. It was only after the death of al-'Azīz and the final defeat of al-Afḍal that Damascus began to enjoy peace again under al-'Ādil (extension of the citadel, foundation of the Djāmi' al-'Idain, cf. *Journ. Asiat.*, ix[th] Ser., vii. 231). Under his son and successor al-Mu'aẓẓam 'Īsā, danger from the Franks again threatened it but passed away. A few years later internecine wars again broke out in the house of Aiyūb, which finally led to the alliance, so hated by the Muslim population, of al-Ṣāliḥ Ismā'īl of Damascus with the Christians against al-Ṣāliḥ Aiyūb of Egypt, who with the help of the Khwārizmians defeated the allies at Ghazza in 643 = 1244 and again united Damascus to Egypt. After the death of al-Ṣāliḥ Aiyūb's son al-Mu'aẓẓam Tūrānshāh in 648 = 1250, al-Nāṣir Yūsuf, the ruler of Ḥalab, seized the capital of southern Syria. He was the last Aiyūbid prince of Damascus.

In spite of the turbulence of the period the architectural activity begun by Nūr al-Dīn was not affected. Princes and princesses of the house of Aiyūb as well as the nobles of the kingdom vied with one another in pious foundations. Damascus became a city of madrasas. Ibn Djubair, who visited the city in the time of Ṣalāḥ al-Dīn, counted about 20 madrasas, but the number soon became multiplied many times. These buildings however have more interest for the history of Muḥammadan scholarship or rather piety than for the history of the town proper. We will therefore here only refer the reader to Sauvaire's translations in the *Journ. Asiat.*, ix[th] Ser., iii.—vii., with which may also be compared *Zeitschr. der Deutsch. Morgenl. Ges.*, viii. 346—374.

The Mamlūk Period.

Soon after the middle of the vii[th] (xii[th] century) the invasion of Hūlāgū's Mongol hordes made an end of the Aiyūbid kingdom of Damascus. In Rabī' I 658 = March 1260 the city, empty of troops, opened its gates to the victors; the only obstacle the latter met was a vain resistance in the citadel. The victory of the Mamlūks of Egypt at 'Ain Djālūt [q. v. p. 212] made the latter masters of Syria. The Mongols fled and the native Christians atoned for the good reception they had given them by the destruction of the long famed Church of St. Mary (see Abū Shāma: *Rec. Hist. Crois., Or.*, v. 192).

In the following period, Damascus became the centre of the most important Mamlūk province in Syria, the *Mamlakat Dimashk*, which practically included the whole of southern Syria from the Egyptian frontier up to Bairūt, Ḥimṣ, Tadmur, al-Raḥba on the Euphrates (afterwards moved to Ḥalab) with the exception of the little *mamlakas* of al-Karak and Ṣafad (for a period also Ghazza and Ḥimṣ).

Under al-Ẓāhir Baibars [q. v. p. 588], the great organiser of the Mamlūk kingdom, brighter days again dawned on the city. This indefatigable monarch often held his court in Damascus. He not only rebuilt the ruined walls and citadel but also built a new palace for himself on the Maidān al-Akhḍar on the Baradā, the famous Ḳaṣr al-Ablaḳ, which is said to have served as a model for al-Nāṣir b. Ḳalā'ūn's [see above p. 524] building of the same name in Cairo, on the site of the modern Tekkiya (see Quatremère in Maḳrīzī, *Sultans Mamlouks*, i. 2, p. 44; *Journ. Asiat.* ix[th] Ser. vii. 253; Ibn Shākir, *Fawāt al-Wafayāt*, i. 109). Baibars died in 676 (1277) in Damascus and was buried in the Madrasa al-Ẓāhiriya built by command of his son al-Sa'īd by 'Izz al-Dīn Aidamur, governor of Damascus, northwest of the Umaiyad Mosque (Maḳrīzī, *Sultans Mamlouks*, i. 2, p. 162; *Journ. Asiat.* ix[th] Ser., iii. 420 *et seq.*).

Baibars' reign had been for Damascus a worthy continuation of the prosperity it had enjoyed since Nūr al-Dīn; sciences were also steadily cultivated as evidence of which we need only recall the name of Nawawī [q. v.]. But under the later Mamlūk Sulṭāns a decline set in. Damascus remained unrivalled as the second city in the empire and this, the most important governorship, was naturally filled only by most distinguished Mamlūks; but this too readily resulted in a rivalry between the Sulṭān in Egypt and his officer in Damascus. To prevent this, the commander of the citadel was appointed by the Sulṭān himself, independent of the governor, which naturally produced a constant strained relationship between these two officials. Immediately on the deposition of Baibars' son Sa'īd and the accession of Ḳalā'ūn, Sonḳor al-Ashḳar (678 = 1179) rose in rebellion, supported by a *fatwā* from the Ḳāḍī 'l-Ḳuḍāt Ibn Khallikān, but this rising was put down in the following year. During the confusion which followed the assassination of al-Ashraf Khalīl, Sulṭān Katboghā was surrounded by troops devoted to Lādjīn in the citadel of Damascus and forced to surrender in 696 (1297). A fugitive Nā'ib from Damascus, Ḳipčaḳ, is said to have been the man who brought about the Mongol Ghāzān's campaign in 699 (1300), in the course of which Damascus suffered terrible devastation in the fights between the Mongols who occupied the Mosque and the Mamlūks who stubbornly defended themselves in the citadel while the suburbs like al-Ṣāliḥiya [q. v.] were utterly destroyed. The garrison of the citadel levelled the whole neigh-

bourhood from the Bāb al-Naṣr to the Bāb al-Faradj, and the Mongols burned great stretches of the city including Nūr al-Dīn's Dār al-Ḥadīth. The Mongols soon retired and Ḳipčaḳ, who was left behind by Ghāzān as governor submitted to Sulṭān al-Nāṣir. Damascus escaped with only a fright from the Mongol invasion of the year 702 (1303). As regards the intellectual life of Damascus in this period, we may note the activity of Ibn Taimiya [q. v.], whose puritanical ideas ultimately brought him into conflict with the government.

During al-Nāṣir's third reign, Tangiz, the governor of Damascus, to whom the other Syrian Nā'ibs were subordinate was for a quarter of a century (712—740 = 1312—1339) regent in Syria with practically unlimited power. In 717 he founded the Tangiziya Mosque on the site of the present military buildings behind the military Serai (*Journ. Asiat.*, ix[th] Ser., vii. 237 *et seq.*), and in 739 a school for the study of the Ḳor'ān and the Ḥadīth (*Journ. Asiat.*, ix[th] Ser., iii. 284); he repaired the damaged southwest wall of the Umaiyad Mosque and is also said to have widened the streets. While he was occupied in repairing the damage done in the city by a fire, he fell into disgrace and was finally shamefully put to death in prison in Alexandria.

A period of anarchical praetorian rule again followed the peaceful reigns of al-Nāṣir and Tangiz, during which rival Amīrs were struggling for the mastery. Damascus (753, 762, 790) also was the scene of these wars. In 791 (1389) the decisive battle between the all-powerful minister Mintash and the dethroned Sulṭān Barḳūḳ was fought before the gates of the city, by which the latter won back his throne. His son Faradj had to win back the town in 801 (1399). Under the youthful Sulṭān the rivalries of the Amīrs again broke out, so that Syria fell an easy prey to Tīmūr. In Djumādā I, 803 = December 1400, his forces encamped before Damascus. When Faradj, owing to a rebellion in his camp, left the city and fled to Egypt, the result of the campaign was decided. The city surrendered but the citadel continued to offer a stubborn resistance for a long time. Contrary to the terms of the capitulation Damascus was entirely given over to plunder and a fire in which numberless lives were lost laid the greater part of the town in ashes. The Bavarian Johan Schiltberger, who long served as a Mamlūk in Tīmūr's army, says that 30,000 men, women and children were shut up in the great Mosque which was then set on fire. It is certain at least, that its sack by Tīmūr was the heaviest blow this much harassed city had suffered for centuries.

The latter part of the reign of Faradj was again filled with anarchy by the rebellious Amīrs, whose operations chiefly centred around the ill-fated Damascus. During the whole of the last century of Mamlūk rule these turmoils were constantly recurring. The change of ruler in Cairo was usually the signal for the rebellion of the governor in Damascus. It is therefore no wonder that the town did not so rapidly recover from the devastation wrought by Tīmūr. Ḳalḳashandī (died 821 = 1418) says that only a part around the Mosque was rebuilt in his time and the remainder of the city still lay in ashes (*Ḍaw' al-Ṣubḥ*, p. 283). Nevertheless new schools and mosques were constantly being founded and the names of the Sulṭāns are perpetuated in numerous inscriptions, which tell of new buildings and restorations of ruined buildings, of pious endowments and royal proclamations. To this period Damascus owes buildings like the beautiful Ṣābūniya in the Maidān Road (*Journ. Asiat* ix[th] Ser. iii. 264), the Ilbogha Mosque northwest of the citadel (ibid., p. 236, 431 *et seq.*). The western minaret of the Umaiyad Mosque also dates in its present form from the time of Ḳā'it Bāi as this part had been burned down in 884. But even the more energetic Mamlūk rulers were no longer able to revive a real and permanent period of prosperity for the city.

The Turkish Period.

A few weeks after the defeat of the Mamlūks at Dābiḳ on the 25[th] Radjab 922 = 24[th] August 1516, Damascus opened its gates to the victorious Ottomans. Previously under the Mamlūks of Egypt it had still been only the capital of a province but now it passed entirely under foreign rule. From this period the land ceases to be the scene of the great events of history. It is hardly right to ascribe its decline solely to Turkish misrule, for its resources had already been exhausted by the wars of the preceding centuries. The Turkish period deserves a place of honour in the history of the architecture of Damascus, as some of the finest monuments of Muḥammadan architecture in the modern city date from it. The Egyptian style had become very predominant under the Mamlūks, but now Turkish influence began to make itself felt. Sulaimān I. in 962 = 1554 built the Tekkīye before the western gates of the city on the site and from the ruins of the ancient Ḳaṣr al-Ablaḳ; this beautiful building picturesquely situated on the Baradā is built in the Turkish style (see *Journ. As.* ix[th] Ser. vii., 253 *et seq.*; Saladin, *Manuel de l'Art Musulman*, i. 174). Only two of the most celebrated mosques in Damascus may be mentioned here which owe their origin to Turkish Pashas: Both lie on the Maidān Road. The first is the Darwishiya begun by Darwish Pasha in 979 = 1571 (*Journ. As.* ix[th] Ser. vii., 260) and the second the Sinānīya, so famed on account of its faience work, built by Sinān Pasha in 994 (1585) on the site of the ancient Masdjid al-Baṣal (*Journ. As.*, ix[th] Ser. vii., 262), according to von Kremer, *Topographie*, i. 48, the finest in Damascus next to the Umaiyad Mosque. In fact, architectural activity in Damascus never seems to have ceased, although we have but scanty sources at our disposal for its history in the last few centuries.

The re-awakening of the East is associated with the appearance of Muḥammad 'Alī. From 1832—1840, Damascus was in the hands of the Egyptians. Ibrāhīm Pasha strenuously set about restoring peace and order to the ruined country. Trade and industries began to flourish. Buildings for administrative and more particularly military purposes were erected, for which unfortunately however ancient and venerable edifices were often sacrificed. Thus, for example, the Tangiziya was altered to form a military school and the Ilboghā Mosque became a biscuit factory. The modern Military Serai was built on the site of Nūr al-Dīn's Dār al-'Adl. The enmity between Druses and Maronites in Lebanon, which had been gradually increasing during the Turco-Egyptian wars in the time of Bashīr Shihāb, lead in 1860 to a terrible massacre of Christians in Damascus, in

which 'Abd al-Kādir [q. v.] who had been banished from Algeria placed the Christians greatly in his debt. In recent years one may mention the brief period of government by the reformer Midhat Pasha (1878); education was improved though the system soon in part broke down again; a permanent reform was the replacing of the old narrow bazaar alleys by broad streets. As had been the case innumerable times in earlier centuries, the development of the city has again in quite recent times been affected by great outbreaks of fire. In 1893 the Umaiyad Mosque was burned down to its walls and in April 1912 considerable portions of the new bazaars perished in the flames.

The through commerce of Damascus was considerably affected by the opening of the Suez Canal. The railways, which since 1894 have connected the city with corn-producing Ḥawrān, since 1895 with Bairūt, and since 1905 with Ḥaifā, have afforded a certain compensation, while the main line of the Ḥidjāz railway does not yet seem to have produced any considerable effect on its economic prosperity. Although the continuation of the Syrian railway system will more and more completely ruin the caravan traffic, yet a great development of the narrower hinterland may certainly be expected, which will probably assure the city permanent prosperity if it does not also bring it back its erstwhile predominance. According to the English *Consular Reports* the total trade of Damascus for 1909 and 1910 was roughly of the value £ 1,000,000 both for exports and imports.

Damascus which, as the capital of the Wilāyet of Syria with the four sandjaḳs, Damascus, Ḥamā, Ḥawrān and Karak, is the seat of a Wālī and the headquarters of an army corps staff, is credited in the last edition of Baedeker (1912) with 300,000 inhabitants (exclusive of 3—4000 garrison) which is probably too high.

THE CONFIGURATION OF THE MODERN CITY.

As has already been pointed out, the ground-plan of the heart of the city has hardly altered in any essential features in spite of the numerous ravages of fire and sword since the Umaiyad period. A sketch of the modern city will therefore be a supplement to the historical survey. That the eastern part of the city has practically not yet grown beyond the bounds of the walls is probably in a sense the result of the fact that the Christian and Jewish quarters are here; but the reverse is still more likely, that these quarters are here because the ruling Muslims preferred the western parts as they were situated on the roads to the more cultured lands of Syria. The city soon exceeded its ancient boundaries. At quite an early period we read of the suburb of al-'Uḳaiba northwest of Damascus. When, after the time of Nūr al-Dīn, a new period of prosperity dawned, new suburbs grew up before the Bāb al-Djābiya expanding towards the Maidān al-Akhḍar (Gök Maidān) westwards and the Maidān al-Ḥaṣā (corresponding to the modern suburb of al-Maidān) to the southwest. Gradually the old western boundary became the military and administrative centre, while the business activities of the native population continued to be concentrated as before in the quarter around the Umaiyad Mosque. This evolution has been slowly but steadily going on from the time of Nūr al-Dīn to the present day.

The great vein of traffic from east to west, the "street which is called Straight" ends in the east of the city at the ancient Bāb al-Sharḳī. From this point, the city wall, still well preserved, runs past the tomb of Shaikh Arslān (see *Journ. Asiat.*, ixth Ser., v. 404) northwards as far as the Baradā, which it reaches at the Bāb Tūmā. It then follows the southern of the two arms of the river, which here enclose an island, up to the Bāb al-Salām(a). Between the two last named gates there was once, according to Ibn Shākir (*Journ. Asiat.*, ixth Ser., vii. 373 *et seq.*) a gate Bāb al-Djinīḳ, called after the quarter of the same name which forcibly reminds one of the ancient poetic name of Damascus, Djillīḳ. The traces of the courses of two walls may still be followed, although now built over in many places, westwards from the Bāb al-Salām, between which runs the Bain al-Sūrain road up to the Bāb al Farādīs, to which there was according to Porter, i. 53 a second gate farther inside and the Bāb al-'Amāra outside across the Baradā. This gate takes its name from the suburb al-'Amāra which began at the Bāb al-Salām and gradually developing by the incorporation of originally isolated quarters like al-'Uḳaiba not far from the Maḳbarat al-Daḥdāḥ (*Journ. Asiat.*, ixth Ser., vii. 451), al-Baḥṣa, etc., now sends out a thoroughfare to the northwest up to al-Ṣāliḥiya (cf. *Journ. Asiat.*, ixth Ser., iv. 473 *et seq.*), which had arisen at the foot of Djebel Ḳāsiyūn before 600 (1200). The city wall must have been somewhere here linked up with the citadel. The manifold alterations, one of which is witnessed to by Nūr al-Dīn's erection of the Bāb al-Faradj (on the site of an older Bāb al-'Amāra, cf. *Journ. Asiat.*, ixth Ser., vii. 374) probably owe their origin to the desire to protect the quarters which were gradually growing and becoming linked up to the city. But the city constantly expanded beyond the bounds drawn round it; and Porter and v. Kremer have not succeeded in definitely locating the course of the ancient walls in this part of the city. While the ancient Bāb al-Ḥadīd was incorporated in the citadel in the course of al-'Ādil's alterations in it, the ancient name was transferred to the gate formerly called Bāb al-Naṣr, a little farther to the south and has thus survived to the present day. The wall then ran close along the east side of the Maidān road up to the Bāb al-Djābiya, which corresponds to the west end of the great street running the whole length of the city, and without a doubt continued a considerable distance farther in the same direction, although all traces of it here have now utterly disappeared, following the Sūḳ al-Sinānīya until it turned eastwards at the Bāb al-Ṣaghīr. At the present day the suburb of al-Maidān with numerous beautiful mosques stretches for a mile or two southwards on this side, as far as Bawwābat Allāh, the starting point of the Ḥadjdj route, not far from the Masdjid al-Ḳadam, where Tradition sought to locate the grave of Moses and footprints are pointed out which used (see Ibn Djubair, ed. de Goeje, p. 281 *et seq.*; Ibn Baṭūṭa, i. 226 *et seq.*) to be said to be those of Moses and at a later period of Muḥammad (cf. von Kremer, *Topographie*, ii. 22; *Zeitschr. des Deutschen Palästina-Vereins*, xii. 284). It does not appear quite certain, although according to Yāḳūt, ii. 236, very probable, that the ancient Bāb al-Ṣaghīr is identical with the modern Bāb al-Shāghūr, at which a double doorway is further evidence for the former existence

of a double ring of walls. Although the name Bāb al-Ṣaghīr for the gate has now disappeared, it is preserved in that of the most celebrated cemetery in Damascus, the Maḳbarat Bāb al-Ṣaghīr, where a number of companions of the Prophet, and several wives of Muḥammad as well as his daughter Fāṭima found their last restingplace. The very memory of the tomb of Mu'āwiya which was once here has utterly disappeared, while not far from the neighbouring Djāmi' al-Djarrāḥ, in which — probably merely owing to some misunderstanding — the grave of Abū 'Ubaida is shown, the alleged tomb of Yazīd I. remained as an object of vituperation (von Kremer, *Topographie*, ii. 20; cf. *Zeitschr. der Deutsch. Morgenl. Ges.*, xv. 360). From this point to the now closed Bāb Kaisān, where legend locates the scene of *Acts*, ix. 25, and thence to the east gate, the wall is still fairly well preserved with many towers but only as a single line of defence, although it seems to have been once double here also, cf. Thévenot; *Suite du Voyage de Levant* (Paris 1673), p. 25 *et seq*. The alleged tomb of Bilāl b. Rabāḥ [q. v., p. 719] and a Christian sanctuary of St. George, which is however also reverenced by Muslims, are situated in the gardens south of the city.
